CASE NO. 3:22-CV-01213

VERSUS

JUDGE TERRY A. DOUGHTY

JOSEPH R. BIDEN JR., ET AL.

MAG. JUDGE KAYLA D. MCCLUSKY

**MEMORANDUM RULING ON REQUEST
FOR PRELIMINARY INJUNCTION**

At issue before the Court is a Motion for Preliminary Injunction [Doc. No. 10] filed by Plaintiffs.¹ The Defendants² oppose the Motion [Doc. No. 266]. Plaintiffs have filed a reply to the opposition [Doc. No. 276]. The Court heard oral arguments on this Motion on May 26, 2023 [Doc. No. 288]. Amicus Curiae briefs have been filed in this proceeding on behalf of Alliance Defending Freedom,³ the Buckeye Institute,⁴ and Children’s Health Defense.⁵

¹ Plaintiffs consist of the State of Missouri, the State of Louisiana, Dr. Aaron Kheriaty (“Kheriaty”), Dr. Martin Kullendorff (“Kullendorff”), Jim Hoft (“Hoft”), Dr. Jayanta Bhattacharya (“Bhattacharya”), and Jill Hines (“Hines”).

² Defendants consist of President Joseph R Biden (“President Biden”), Jr, Karine Jean-Pierre (“Jean-Pierre”), Vivek H Murthy (“Murthy”), Xavier Becerra (“Becerra”), Dept of Health & Human Services (“HHS”), Dr. Hugh Auchincloss (“Auchincloss”), National Institute of Allergy & Infectious Diseases (“NIAID”), Centers for Disease Control & Prevention (“CDC”), Alejandro Mayorkas (“Mayorkas”), Dept of Homeland Security (“DHS”), Jen Easterly (“Easterly”), Cybersecurity & Infrastructure Security Agency (“CISA”), Carol Crawford (“Crawford”), United States Census Bureau (“Census Bureau”), U. S. Dept of Commerce (“Commerce”), Robert Silvers (“Silvers”), Samantha Vinograd (“Vinograd”), Ali Zaidi (“Zaidi”), Rob Flaherty (“Flaherty”), Dori Salcido (“Salcido”), Stuart F. Delery (“Delery”), Aisha Shah (“Shah”), Sarah Beran (“Beran”), Mina Hsiang (“Hsiang”), U. S. Dept of Justice (“DOJ”), Federal Bureau of Investigation (“FBI”), Laura Dehmlow (“Dehmlow”), Elvis M. Chan (“Chan”), Jay Dempsey (“Dempsey”), Kate Galatas (“Galatas”), Katharine Dealy (“Dealy”), Yolanda Byrd (“Byrd”), Christy Choi (“Choi”), Ashley Morse (“Morse”), Joshua Peck (“Peck”), Kym Wyman (“Wyman”), Lauren Protentis (“Protentis”), Geoffrey Hale (“Hale”), Allison Snell (“Snell”), Brian Scully (“Scully”), Jennifer Shopkorn (“Shopkorn”), U. S. Food & Drug Administration (“FDA”), Erica Jefferson (“Jefferson”), Michael Murray (“Murray”), Brad Kimberly (“Kimberly”), U. S. Dept of State (“State”), Leah Bray (“Bray”), Alexis Frisbie (“Frisbie”), Daniel Kimmage (“Kimmage”), U. S. Dept of Treasury (“Treasury”), Wally Adeyemo (“Adeyemo”), U. S. Election Assistance Commission (“EAC”), Steven Frid (“Frid”), and Kristen Muthig (“Muthig”).

³ [Doc. No. 252]

⁴ [Doc. No. 256]

⁵ [Doc. No. 262]

I. INTRODUCTION

I may disapprove of what you say, but I would defend to the death your right to say it.

Evelyn Beatrice Hill, 1906, *The Friends of Voltaire*

This case is about the Free Speech Clause in the First Amendment to the United States Constitution. The explosion of social-media platforms has resulted in unique free speech issues—this is especially true in light of the COVID-19 pandemic. If the allegations made by Plaintiffs are true, the present case arguably involves the most massive attack against free speech in United States’ history. In their attempts to suppress alleged disinformation, the Federal Government, and particularly the Defendants named here, are alleged to have blatantly ignored the First Amendment’s right to free speech.

Although the censorship alleged in this case almost exclusively targeted conservative speech, the issues raised herein go beyond party lines. The right to free speech is not a member of any political party and does not hold any political ideology. It is the purpose of the Free Speech Clause of the First Amendment to preserve an uninhibited marketplace of ideas in which truth will ultimately prevail, rather than to countenance monopolization of the market, whether it be by government itself or private licensee. *Red Lion Broadcasting Co., v. F.C.C.*, 89 S. Ct. 1794, 1806 (1969).

Plaintiffs allege that Defendants, through public pressure campaigns, private meetings, and other forms of direct communication, regarding what Defendants described as “disinformation,” “misinformation,” and “malinformation,” have colluded with and/or coerced social-media platforms to suppress disfavored speakers, viewpoints, and content on social-media platforms. Plaintiffs also allege that the suppression constitutes government action, and that it is a violation

of Plaintiffs' freedom of speech under the First Amendment to the United States Constitution. The

First Amendment states:

Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof: **or abridging the freedom of speech**, or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances. (emphasis added).

First Amendment, U.S. Const. amend. I.

The principal function of free speech under the United States' system of government is to invite dispute; it may indeed best serve its high purpose when it induces a condition of unrest, creates dissatisfaction with conditions as they are, or even stirs people to anger. *Texas v. Johnson*, 109 S. Ct. 2533, 2542–43 (1989). Freedom of speech and press is the indispensable condition of nearly every other form of freedom. *Curtis Pub. Co. v. Butts*, 87 S. Ct. 1975, 1986 (1967).

The following quotes reveal the Founding Fathers' thoughts on freedom of speech:

For if men are to be precluded from offering their sentiments on a matter, which may involve the most serious and alarming consequences, that can invite the consideration of mankind, reason is of no use to us; the freedom of speech may be taken away, and dumb and silent we may be led, like sheep, to the slaughter.

George Washington, March 15, 1783.

Whoever would overthrow the liberty of a nation must begin by subduing the free acts of speech.

Benjamin Franklin, *Letters of Silence Dogwood*.

Reason and free inquiry are the only effectual agents against error.

Thomas Jefferson.

The question does not concern whether speech is conservative, moderate, liberal, progressive, or somewhere in between. What matters is that Americans, despite their views, will not be censored or suppressed by the Government. Other than well-known exceptions

to the Free Speech Clause, all political views and content are protected free speech.

The issues presented to this Court are important and deeply intertwined in the daily lives of the citizens of this country.

II. FACTUAL BACKGROUND

In this case, Plaintiffs allege that Defendants suppressed conservative-leaning free speech, such as: (1) suppressing the Hunter Biden laptop story prior to the 2020 Presidential election; (2) suppressing speech about the lab-leak theory of COVID-19's origin; (3) suppressing speech about the efficiency of masks and COVID-19 lockdowns; (4) suppressing speech about the efficiency of COVID-19 vaccines; (5) suppressing speech about election integrity in the 2020 presidential election; (6) suppressing speech about the security of voting by mail; (7) suppressing parody content about Defendants; (8) suppressing negative posts about the economy; and (9) suppressing negative posts about President Biden.

Plaintiffs Bhattacharya and Kulldorff are infectious disease epidemiologists and co-authors of The Great Barrington Declaration (“GBD”). The GBD was published on October 4, 2020. The GBD criticized lockdown policies and expressed concern about the damaging physical and mental health impacts of lockdowns. They allege that shortly after being published, the GBD was censored on social media by Google, Facebook, Twitter, and others. Bhattacharya and Kulldorff further allege on October 8, 2020 (four days after publishing the GBD), Dr. Frances Collins, Dr. Fauci, and Cliff Lane proposed together a “take down” of the GBD and followed up with an organized campaign to discredit it.⁶

Dr. Kulldorff additionally alleges he was censored by Twitter on several occasions because of his tweets with content such as “thinking everyone must be vaccinated is scientifically flawed,”

⁶ [Doc. No. 10-3 and 10-4]

that masks would not protect people from COVID-19, and other “anti-mask” tweets.⁷ Dr. Kulldorff (and Dr. Bhattacharya⁸) further alleges that YouTube removed a March 18, 2021 roundtable discussion in Florida where he and others questioned the appropriateness of requiring young children to wear facemasks.⁹ Dr. Kulldorff also alleges that LinkedIn censored him when he reposted a post of a colleague from Iceland on vaccines, for stating that vaccine mandates were dangerous, for posting that natural immunity is stronger than vaccine immunity, and for posting that health care facilities should hire, not fire, nurses.¹⁰

Plaintiff Jill Hines is Co-Director of Health Freedom Louisiana, a consumer and human rights advocacy organization. Hines alleges she was censored by Defendants because she advocated against the use of masks mandates on young children. She launched an effort called “Reopen Louisiana” on April 16, 2020, to expand Health Freedom Louisiana’s reach on social media. Hines alleges Health Freedom Louisiana’s social-media page began receiving warnings from Facebook. Hines was suspended on Facebook in January 2022 for sharing a display board that contained Pfizer’s preclinical trial data.¹¹ Additionally, posts about the safety of masking and adverse events from vaccinations, including VAERS data and posts encouraging people to contact their legislature to end the Government’s mask mandate, were censored on Facebook and other social-media platforms. Hines alleges that because of the censorship, the reach of Health Freedom Louisiana was reduced from 1.4 million engagements per month to approximately 98,000. Hines also alleges that her personal Facebook page has been censored and restricted for posting content

⁷ [Doc. No. 10-4]

⁸ [Doc. No. 10-3]

⁹ [Id.]

¹⁰ [Id.]

¹¹ [Doc. No. 10-12]

that is protected free speech. Additionally, Hines alleges that two of their Facebook groups, HFL Group and North Shore HFL, were de-platformed for posting content protected as free speech.¹²

Plaintiff Dr. Kheriaty is a psychiatrist who has taught at several universities and written numerous articles. He had approximately 158,000 Twitter followers in December 2021 and approximately 1,333 LinkedIn connections. Dr. Kheriaty alleges he began experiencing censorship on Twitter and LinkedIn after posting content opposing COVID-19 lockdowns and vaccine mandates. Dr. Kheriaty also alleges that his posts were “shadow banned,” meaning that his tweets did not appear in his follower’s Twitter feeds. Additionally, a video of an interview of Dr. Kheriaty on the ethics of vaccine mandates was removed from YouTube.¹³

Plaintiff Jim Hoft is the owner and operator of The Gateway Pundit (“GP”), a news website located in St. Louis, Missouri. In connection with the GP, Hoft operates the GP’s social-media accounts with Twitter, Facebook, YouTube, and Instagram. The GP’s Twitter account previously had over 400,000 followers, the Facebook account had over 650,000 followers, the Instagram account had over 200,000 followers, and the YouTube account had over 98,000 followers.

The GP’s Twitter account was suspended on January 2, 2021, again on January 29, 2021, and permanently suspended from Twitter on February 6, 2021. The first suspension was in response to a negative post Hoft made about Dr. Fauci’s statement that the COVID-19 vaccine will only block symptoms and not block the infection. The second suspension was because of a post Hoft made about changes to election law in Virginia that allowed late mail-in ballots without postmarks to be counted. Finally, Twitter issued the permanent ban after the GP Twitter account posted video footage from security cameras in Detroit, Michigan from election night 2020, which showed two delivery vans driving to a building at 3:30 a.m. with boxes, which were alleged to

¹² [Id.]

¹³ [Doc. No. 10-7]

contain election ballots. Hoft also alleges repeated instances of censorship by Facebook, including warning labels and other restrictions for posts involving COVID-19 and/or election integrity issues during 2020 and 2021.

Hoft further alleges that YouTube censored the GP's videos. YouTube removed a May 14, 2022 video that discussed voter integrity issues in the 2020 election. Hoft has attached as exhibits copies of numerous GP posts censored and/or fact checked. All of the attached examples involve posts relating to COVID-19 or the 2020 election.

In addition to the allegations of the Individual Plaintiffs, the States of Missouri and Louisiana allege extensive censorship by Defendants. The States allege that they have a sovereign and proprietary interest in receiving the free flow of information in public discourse on social-media platforms and in using social-media to inform their citizens of public policy decisions. The States also claim that they have a sovereign interest in protecting their own constitutions, ensuring their citizen's fundamental rights are not subverted by the federal government, and that they have a quasi-sovereign interest in protecting the free-speech rights of their citizens. The States allege that the Defendants have caused harm to the states of Missouri and Louisiana by suppressing and/or censoring the free speech of Missouri, Louisiana, and their citizens.

The Complaint,¹⁴ Amended Complaint,¹⁵ Second Amended Complaint,¹⁶ and Third Amended Complaint¹⁷ allege a total of five counts. They are:

Count One – Violation of the First Amendment against all Defendants.

Count Two – Action in Excess of Statutory Authority against all Defendants.

¹⁴ [Doc. No. 1]

¹⁵ [Doc. No. 45]

¹⁶ [Doc. No. 84]

¹⁷ [Doc. No. 268]

Count Three – Violation of the Administrative Procedure Act against HHS, NIAID, CDC, FDA, Peck, Becerra, Murthy, Crawford, Fauci, Galatas, Waldo, Byrd, Choi, Lambert, Dempsey, Muhammed, Jefferson, Murry, and Kimberly.

Count Four – Violation of the Administrative Procedure Act against DHS, CISA, Mayorkas, Easterly, Silvers, Vinograd, Jankowicz, Masterson, Protentis, Hale, Snell, Wyman, and Scully.

Count Five – Violation of the Administrative Procedure Act against the Department of Commerce, Census Bureau, Shopkorn, Schwartz, Molina-Irizarry, and Galemore.

Plaintiffs also ask for this case to be certified as a class action pursuant to Federal Rules of Civil Procedure 23(a) and 23(b)(2). For the reasons discussed herein, it is only necessary to address Count One and the Plaintiffs’ request for class action certification in this ruling.

The following facts are pertinent to the analysis of whether or not Plaintiffs are entitled to the granting of an injunction.¹⁸

Plaintiffs assert that since 2018, federal officials, including Defendants, have made public statements and demands to social-media platforms in an effort to induce them to censor disfavored speech and speakers. Beyond that, Plaintiffs argue that Defendants have threatened adverse consequences to social-media companies, such as reform of Section 230 immunity under the Communications Decency Act, antitrust scrutiny/enforcement, increased regulations, and other measures, if those companies refuse to increase censorship. Section 230 of the Communications Decency Act shields social-media companies from liability for actions taken on their websites, and Plaintiffs argue that the threat of repealing Section 230 motivates the social-media companies to comply with Defendants’ censorship requests. Plaintiffs also note that Mark Zuckerberg

¹⁸ The Factual Background is this Court’s interpretation of the evidence. The Defendants filed a 723-page Response to Findings of Fact [Doc. No. 266-8] which contested the Plaintiffs’ interpretation or characterizations of the evidence. At oral argument, the Defendants conceded that they did not dispute the validity or authenticity of the evidence presented.

(“Zuckerberg”), the owner of Facebook, has publicly stated that the threat of antitrust enforcement is “an existential threat” to his platform.¹⁹

A. White House Defendants²⁰

Plaintiffs assert that by using emails, public and private messages, public and private meetings, and other means, the White House Defendants have “significantly encouraged” and “coerced” social-media platforms to suppress protected free speech posted on social-media platforms.

(1) On January 23, 2021, three days after President Biden took office, Clarke Humphrey (“Humphrey”), who at the time was the Digital Director for the COVID-19 Response Team, emailed Twitter and requested the removal of an anti-COVID-19 vaccine tweet by Robert F. Kennedy, Jr.²¹ Humphrey sent a copy of the email to Rob Flaherty (“Flaherty”), former Deputy Assistant to the President and Director of Digital Strategy, on the email and asked if “we can keep an eye out for tweets that fall in this same genre.” The email read, “Hey folks-Wanted to flag the below tweet and am wondering if we can get moving on the process of having it removed ASAP.”²²

(2) On February 6, 2021, Flaherty requested Twitter to remove a parody account linked to Finnegan Biden, Hunter Biden’s daughter and President Biden’s granddaughter. The request stated, “Cannot stress the degree to which this needs to be resolved immediately,” and “Please remove this account immediately.”²³ Twitter suspended the parody account within forty-five minutes of Flaherty’s request.

¹⁹ [Doc. No. 212-3, citing Doc. No. 10-1, at 202]

²⁰ White House Defendants consists of President Joseph R. Biden (“President Biden”), White House Press Secretary Karine Jean-Pierre (“Jean-Pierre”), Ashley Morse (“Morse”), Deputy Assistant to the President and Director of Digital Strategy Rob Flaherty (“Flaherty”), Dori Salcido (“Salcido”), Aisha Shah (“Shah”), Sarah Beran (“Beran”), Stuart F. Delery (“Delery”), Mina Hsiang (“Hsiang”), and Dr. Hugh Auchincloss (Dr. Auchincloss”)

²¹ [Doc. No. 174-1, Exh. A. at 1]

²² [Id. at 2]

²³ [Doc. No. 174-1, Exh. A. at 4]

(3) On February 7, 2021, Twitter sent Flaherty a “Twitter’s Partner Support Portal” for expedited review of flagging content for censorship. Twitter recommended that Flaherty designate a list of authorized White House staff to enroll in Twitter’s Partner Support Portal and explained that when authorized reporters submit a “ticket” using the portal, the requests are “prioritized” automatically. Twitter also stated that it had been “recently bombarded” with censorship requests from the White House and would prefer to have a streamlined process. Twitter noted that “[i]n a given day last week for example, we had more than four different people within the White House reaching out for issues.”²⁴

(4) On February 8, 2021, Facebook emailed Flaherty, and Humphrey to explain how it had recently expanded its COVID-19 censorship policy to promote authoritative COVID-19 vaccine information and expanded its efforts to remove false claims on Facebook and Instagram about COVID-19, COVID-19 vaccines, and vaccines in general. Flaherty responded within nineteen minutes questioning how many times someone can share false COVID-19 claims before being removed, how many accounts are being flagged versus removed, and how Facebook handles “dubious,” but not “provably false,” claims.²⁵ Flaherty demanded more information from Facebook on the new policy that allows Facebook to remove posts that repeatedly share these debunked claims.

(5) On February 9, 2021, Flaherty followed up with Facebook in regard to its COVID-19 policy, accusing Facebook of causing “political violence” spurred by Facebook groups by failing to censor false COVID-19 claims, and suggested having an oral meeting to discuss their policies.²⁶ Facebook responded the same day and stated that “vaccine-skeptical” content does not

²⁴ [Doc. No. 174-1 at 3]

²⁵ [Id. at 5–8]

²⁶ [Id. at 6–8]

violate Facebook’s policies.²⁷ However, Facebook stated that it will have the content’s “distribution reduced” and strong warning labels added, “so fewer people will see the post.”²⁸ In other words, even though “vaccine-skeptical” content did not violate Facebook’s policy, the content’s distribution was still being reduced by Facebook.

Facebook also informed Flaherty that it was working to censor content that does not violate Facebook’s policy in other ways by “preventing posts discouraging vaccines from going viral on our platform” and by using information labels and preventing recommendations for Groups, Pages, and Instagram accounts pushing content discouraging vaccines. Facebook also informed Flaherty that it was relying on the advice of “public health authorities” to determine its COVID-19 censorship policies.²⁹ Claims that have been “debunked” by public health authorities would be removed from Facebook. Facebook further promised Flaherty it would aggressively enforce the new censorship policies and requested a meeting with Flaherty to speak to Facebook’s misinformation team representatives about the latest censorship policies.³⁰ Facebook also referenced “previous meetings” between the White House and Facebook representatives during the “transition period” (likely referencing the Biden Administration transition).³¹

(6) On February 24, 2021, Facebook emailed Flaherty about “Misinfo Themes” to follow up on his request for COVID and vaccine misinformation themes on Facebook. Some of the misinformation themes Facebook reported seeing were claims of vaccine toxicity, claims about the side effects of vaccines, claims comparing the COVID vaccine to the flu vaccine, and claims downplaying the severity of COVID-19. Flaherty responded by asking for details about

²⁷ [Id.]

²⁸ [Id.]

²⁹ [Id.]

³⁰ [Id. at 6]

³¹ [Id. at 5]

Facebook’s actual enforcement practices and for a report on misinformation that was not censored. Specifically, his email read, “Can you give us a sense of volume on these, and some metrics around the scale of removal for each? Can you also give us a sense of misinformation that might be falling outside your removal policies?”³² Facebook responded that at their upcoming meeting, they “can definitely go into detail on content that doesn’t violate like below, but could ‘contribute to vaccine hesitancy.’”³³

(7) On March 1, 2021, Flaherty and Humphrey (along with Joshua Peck (“Peck”), the Health and Human Services’ (“HHS”) Deputy Assistant Secretary) participated in a meeting with Twitter about misinformation. After the meeting, Twitter emailed those officials to assure the White House that Twitter would increase censorship of “misleading information” on Twitter, stating “[t]hanks again for meeting with us today. As we discussed, we are building on ‘our’ continued efforts to remove the most harmful COVID-19 ‘misleading information’ from the service.”³⁴

(8) From May 28, 2021, to July 10, 2021, a senior Meta executive reportedly copied Andrew Slavitt (“Slavitt”), former White House Senior COVID-19 Advisor, on his emails to Surgeon General Murthy (“Murthy”), alerting them that Meta was engaging in censorship of COVID-19 misinformation according to the White House’s “requests” and indicating “expanded penalties” for individual Facebook accounts that share misinformation.³⁵ Meta also stated, “We think there is considerably more we can do in ‘*partnership*’ with you and your team to drive behavior.”³⁶

³⁵ [Doc. No. 71-4 at 6–11]

³⁶ [Id. at 10] (emphasis added)

(9) On March 12, 2021, Facebook emailed Flaherty stating, “Hopefully, this format works for the various teams and audiences within the White House/HHS that may find this data valuable.”³⁷ This email also provided a detailed report and summary regarding survey data on vaccine uptake from January 10 to February 27, 2021.³⁸

(10) On March 15, 2021, Flaherty acknowledged receiving Facebook’s detailed report and demanded a report from Facebook on a recent Washington Post article that accused Facebook of allowing the spread of information leading to vaccine hesitancy. Flaherty emailed the Washington Post article to Facebook the day before, with the subject line: “You are hiding the ball,” and stated “I’ve been asking you guys pretty directly, over a series of conversations, for a clear accounting of the biggest issues you are seeing on your platform when it comes to vaccine hesitancy and the degree to which borderline content as you define it – is playing a role.”³⁹

After Facebook denied “hiding the ball,” Flaherty followed up by making clear that the White House was seeking more aggressive action on “borderline content.”⁴⁰ Flaherty referred to a series of meetings with Facebook that were held in response to concerns over “borderline content” and accused Facebook of deceiving the White House about Facebook’s “borderline policies.”⁴¹ Flaherty also accused Facebook of being the “top driver of vaccine hesitancy.”⁴² Specifically, his email stated:

I am not trying to play ‘gotcha’ with you. We are gravely concerned that your service is one of the top drivers of vaccine hesitancy-period. I will also be the first to acknowledge that borderline content offers no easy solutions. But we want to know that you’re trying, we want to know how we can help, and we want to know that you’re not playing a shell game with us when we ask you what is going on.

³⁸ [Id.]

³⁹ [Id. at 11]

⁴⁰ [Id. at 11–12]

⁴¹ [Id.]

⁴² [Id. at 11]

This would all be a lot easier if you would just be straight with us.⁴³

In response to Flaherty's email, Facebook responded, stating: "We obviously have work to do to gain your trust... We are also working to get you useful information that's on the level. That's my job and I take it seriously – I'll continue to do it to the best of my ability, and I'll expect you to hold me accountable."⁴⁴

Slavitt, who was copied on Facebook's email, responded, accusing Facebook of not being straightforward, and added more pressure by stating, "internally, we have been considering our options on what to do about it."⁴⁵

(11) On March 19, 2021, Facebook had an in-person meeting with White House officials, including Flaherty and Slavitt.⁴⁶ Facebook followed up on Sunday, March 21, 2021, noting that the White House had demanded a consistent point of contact with Facebook, additional data from Facebook, "Levers for Tackling Vaccine Hesitancy Content," and censorship policies for Meta's platform WhatsApp.⁴⁷ Facebook noted that in response to White House demands, it was censoring, removing, and reducing the virality of content discouraging vaccines "that does not contain actionable misinformation."⁴⁸ Facebook also provided a report for the White House on the requested information on WhatsApp policies:

You asked us about our levers for reducing virality of vaccine hesitancy content. In addition to policies previously discussed, these include the additional changes that were approved last week and that we will be implementing over the coming weeks. As you know, in addition to removing vaccine misinformation, we have been focused on reducing the virality of content discouraging vaccines that do not contain actionable misinformation.⁴⁹

⁴⁶ [Id. at 15]

⁴⁷ [Id.]

⁴⁸ [Id. at 15]

⁴⁹ [Id. at 15]

On March 22, 2021, Flaherty responded to this email, demanding more detailed information and a plan from Facebook to censor the spread of “vaccine hesitancy” on Facebook.⁵⁰ Flaherty also requested more information about and demanded greater censorship by Facebook of “sensational,” “vaccine skeptical” content.⁵¹ He also requested more information about WhatsApp regarding vaccine hesitancy.⁵² Further, Flaherty seemingly spoke on behalf of the White House and stated that the White House was hoping they (presumably the White House and Facebook) could be “partners here, even if it hasn’t worked so far.”⁵³ A meeting was scheduled the following Wednesday between Facebook and White House officials to discuss these issues.

On April 9, 2021, Facebook responded to a long series of detailed questions from Flaherty about how WhatsApp was censoring COVID-19 misinformation. Facebook stated it was “reducing viral activity on our platform” through message-forward limits and other speech-blocking techniques.⁵⁴ Facebook also noted it bans accounts that engage in those that seek to exploit COVID-19 misinformation.⁵⁵

Flaherty responded, “I care mostly about what actions and changes you are making to ensure you’re not making our country’s vaccine hesitancy problem worse,” accusing Facebook of being responsible for the Capitol riot on January 6, 2021, and indicating that Facebook would be similarly responsible for COVID-related deaths if it did not censor more information.⁵⁶ “You only

⁵⁶ [Id. at 17–21]

did this, however, after an election that you helped increase skepticism in, and an insurrection which was plotted, in large part, on your platform.”⁵⁷

(12) On April 14, 2021, Flaherty demanded the censorship of Fox News hosts Tucker Carlson and Tomi Lahren because the top post about vaccines that day was “Tucker Carlson saying vaccines don’t work and Tomi Lahren stating she won’t take a vaccine.”⁵⁸ Flaherty stated, “This is exactly why I want to know what ‘Reduction’ actually looks like – if ‘reduction’ means ‘pumping our most vaccine hesitant audience with Tucker Carlson saying it does not work’... then...I’m not sure it’s reduction!”⁵⁹

Facebook promised the White House a report by the end of the week.⁶⁰

(13) On April 13, 2021, after the temporary halt of the Johnson & Johnson vaccine, the White House was seemingly concerned about the effect this would have on vaccine hesitancy. Flaherty sent to Facebook a series of detailed requests about how Facebook could “amplify” various messages that would help reduce any effects this may have on vaccine hesitancy.⁶¹

Flaherty also requested that Facebook monitor “misinformation” relating to the Johnson & Johnson pause and demanded from Facebook a detailed report within twenty-four hours. Facebook provided the detailed report the same day.⁶² Facebook responded, “Re the J & J news, we’re keen to amplify any messaging you want us to project about what this means for people.”⁶³

(14) Facebook responded to a telephone call from Rowe about how it was censoring information with a six-page report on censorship with explanations and screen shots of sample posts of content that it does and does not censor. The report noted that vaccine hesitancy content

⁵⁷ [Id. at 17]

⁵⁹ [Id. at 22]

⁶⁰ [Id. at 23]

⁶¹ [Id. at 30–31]

⁶² [Id. at 31]

⁶³ [Id. at 31–32]

does not violate Facebook’s content-moderation policies, but indicated that Facebook still censors this content by suppressing it in news feeds and algorithms.⁶⁴ Other content that Facebook admitted did not violate its policy but may contribute to vaccine hesitancy are: a) sensational or alarmist vaccine misrepresentation; b) disparaging others based on the choice to or not to vaccinate; c) true but shocking claims or personal anecdotes; d) discussing the choice to vaccinate in terms of personal or civil liberties; and e) concerns related to mistrust in institutions or individuals.⁶⁵ Facebook noted it censors such content through a “spectrum of levers” that includes concealing the content from other users, “de-boosting” the content, and preventing sharing through “friction.”⁶⁶ Facebook also mentioned looking forward to tomorrow’s meeting “and how we can hopefully partner together.”⁶⁷

Other examples of posts that did not violate Facebook’s policies but would nonetheless be suppressed included content that originated from the Children’s Health Defense, a nonprofit activist group headed by Robert F. Kennedy, Jr. (labeled by Defendants as one of the “Disinformation Dozen”).⁶⁸

(15) On April 14, 2021, Slavitt emailed Facebook executive Nick Clegg (“Clegg”) with a message expressing displeasure with Facebook’s failure to censor Tucker Carlson. Slavitt stated, “Not for nothing but the last time we did this dance, it ended in an insurrection.”⁶⁹ The subject line was “Tucker Carlson anti-vax message.”⁷⁰ Clegg responded the same day with a detailed report about the Tucker Carlson post, stating that the post did not qualify for removal under Facebook

⁷⁰ Id. at 33]

policy but that the video was being labeled with a pointer to authoritative COVID-19 information, not being recommended to people, and that the video was being “*demoted*.”⁷¹

After Brian Rice (“Rice”) of Facebook forwarded the same report on the Tucker Carlson post to Flaherty on April 14, 2021, Flaherty responded to Rice wanting a more detailed explanation of why Facebook had not removed the Tucker Carlson video and questioning how the video had been “demoted” since there were 40,000 shares.⁷² Flaherty followed up six minutes later alleging Facebook provided incorrect information through Crowd Tangle.⁷³

Two days later, on April 16, 2021, Flaherty demanded immediate answers from Facebook regarding the Tucker Carlson video.⁷⁴ Facebook promised to get something to him that night. Facebook followed up on April 21, 2021, with an additional response in regard to an apparent call from Flaherty (“thanks for catching up earlier”).⁷⁵ Facebook reported the Tucker Carlson content had not violated Facebook’s policy, but Facebook gave the video a 50% demotion for seven days and stated that it would continue to demote the video.⁷⁶

(16) On April 21, 2021, Flaherty, Slavitt, and other HHS officials, met with Twitter officials about “Twitter Vaccine Misinfo Briefing.” The invite stated the White House would be briefed by Twitter on vaccine information, trends seen generally about vaccine information, the tangible effects seen from recent policy changes, what interventions were being implemented, previous policy changes, and ways the White House could “partner” in product work.⁷⁷

⁷¹ [Id. at 36]

⁷⁶ [Id. at 33, 36]

⁷⁷ [Doc. No. 71-7 at 86].

Twitter discovery responses indicated that during the meeting, White House officials wanted to know why Alex Berenson (“Berenson”) had not been “kicked off” Twitter.⁷⁸ Slavitt suggested Berenson was “the epicenter of disinfo that radiated outwards to the persuadable public.”⁷⁹ Berenson was suspended thereafter on July 16, 2021, and was permanently deplatformed on August 28, 2021.⁸⁰

(17) Also on April 21, 2021, Flaherty, Slavitt, and Fitzpatrick had a meeting with several YouTube officials. The invitation stated the purpose of this meeting was for the White House to be briefed by YouTube on general trends seen around vaccine misinformation, the effects of YouTube’s efforts to combat misinformation, interventions YouTube was trying, and ways the White House can “partner” in product work.⁸¹

In an April 22, 2021, email, Flaherty provided a recap of the meeting and stated his concern that misinformation on YouTube was “shared at the highest (and I mean the highest) levels of the White House.”⁸² Flaherty indicated that the White House remains concerned that YouTube is “funneling people into hesitancy and intensifying people’s vaccine hesitancy.”⁸³ Flaherty further shared that “we” want to make sure YouTube has a handle on vaccine hesitancy and is working toward making the problem better.⁸⁴ Flaherty again noted vaccine hesitancy was a concern that is shared by the highest (“and I mean the highest”) levels of the White House.⁸⁵

Flaherty further indicated that the White House was coordinating with the Stanford Internet Observatory (which was operating the Virality Project): “Stanford” has mentioned that it’s recently

Vaccine Passports and J&J pause-related stuff, but I’m not sure if that reflects what you’re seeing.”⁸⁶ Flaherty praised YouTube for reducing distribution of content: “I believe you said you reduced watch time by 70% on borderline content, which is impressive.”⁸⁷ However, Flaherty followed up with additional demands for more information from YouTube. Flaherty emphasized that the White House wanted to make sure YouTube’s work extends to the broader problem of people viewing “vaccine-hesitant content.”⁸⁸ Flaherty also suggested regular meetings with YouTube (“Perhaps bi-weekly”) as they have done with other “platform partners.”⁸⁹

(18) On April 23, 2021, Flaherty sent Facebook an email including a document entitled “Facebook COVID-19 Vaccine Misinformation Brief” (“the Brief”), which indicated that Facebook plays a major role in the spread of COVID vaccine misinformation and found that Facebook’s policy and enforcement gaps enable misinformation to spread.⁹⁰ The Brief recommended much more aggressive censorship of Facebook’s enforcement policies and called for progressively severe penalties. The Brief further recommended Facebook stop distributing anti-vaccine content in News Feed or in group recommendations. The Brief also called for “warning screens” before linking to domains known to promote vaccine misinformation.⁹¹ Flaherty noted sending this Brief was not a White House endorsement of it, but “this is circulating around the building and informing thinking.”⁹²

On May 1, 2021, Facebook’s Clegg sent an email to Slavitt indicating Facebook and the White House met recently to “share research work.”⁹³ Clegg apologized for not catching and

⁹³ [Doc. No. 214-1]

censoring three pieces of vaccine content that went viral and promised to censor such content more aggressively in the future:

I wanted to send you a quick note on the three pieces of vaccine content that were seen by a high number of people before we demoted them. Although they don't violate our community standards, we should have demoted them before they went viral, and this has exposed gaps in our operational and technical process.

Notably, these three pieces of information did not violate Facebook's policies. Clegg told Slavitt that Facebook teams had spent the past twenty-four hours analyzing gaps in Facebook and were making several changes next week.⁹⁴

Clegg listed—in bold—demands that the White House had made in a recent meeting and provided a response to each. The demands were: a) address Non-English mis/disinformation circulating without moderation; b) do not distribute or amplify vaccine hesitancy, and Facebook should end group recommendations for groups with a history of COVID-19 or vaccine misinformation; c) monitor events that host anti-vaccine and COVID disinformation; and d) address twelve accounts that were responsible for 73% of vaccine misinformation.⁹⁵ Facebook noted that it was scrutinizing these accounts and censoring them whenever it could, but that most of the content did not violate Facebook's policies.⁹⁶ Facebook referred to its new policy as their “Dedicated Vaccine Discouraging Entities.”⁹⁷ Facebook even suggested that too much censorship might be counterproductive and drive vaccine hesitancy: “Among experts we have consulted, there is a general sense that deleting more expressions of vaccine hesitancy might be more

⁹⁴ [Doc. No. 214-1 at ¶ 116].

⁹⁷ [Id.]

counterproductive to the goal of vaccine uptake because it could prevent hesitant people from talking through their concerns and potentially reinforce the notion that there's a 'cover-up.'"⁹⁸

(19) On May 5, 2021, then-White House Press Secretary Jen Psaki ("Psaki") publicly began pushing Facebook and other social-media platforms to censor COVID-19 misinformation. At a White House Press Conference, Psaki publicly reminded Facebook and other social-media platforms of the threat of "legal consequences" if they do not censor misinformation more aggressively. Psaki further stated: "The President's view is that the major platforms have a responsibility related to the health and safety of all Americans to stop amplifying untrustworthy content, disinformation, and misinformation, especially related to COVID-19 vaccinations and elections."⁹⁹ Psaki linked the threat of a "robust anti-trust program" with the White House's censorship demand. "He also supports better privacy protections and a robust anti-trust program. So, his view is that there's more that needs to be done to ensure that this type of misinformation; disinformation; damaging, sometime life-threatening information, is not going out to the American public."¹⁰⁰

The next day, Flaherty followed up with another email to Facebook and chastised Facebook for not catching various COVID-19 misinformation. Flaherty demanded more information about Facebook's efforts to demote borderline content, stating, "Not to sound like a broken record, but how much content is being demoted, and how effective are you at mitigating reach, and how quickly?"¹⁰¹ Flaherty also criticized Facebook's efforts to censor the "Disinformation Dozen":

⁹⁸ [Id. at 42]

⁹⁹ [Doc. No. 266-6 at 374]

¹⁰⁰ [Id.]

¹⁰¹ [Doc. No. 174-1 at 41]

“Seems like your ‘dedicated vaccine hesitancy’ policy isn’t stopping the disinfo-dozen – they’re being deemed as not dedicated – so it feels like that problem likely coming over to groups.”¹⁰²

Things apparently became tense between the White House and Facebook after that, culminating in Flaherty’s July 15, 2021 email to Facebook, in which Flaherty stated: “Are you guys fucking serious? I want an answer on what happened here and I want it today.”¹⁰³

(20) On July 15, 2021, things became even more tense between the White House, Facebook, and other social-media platforms. At a joint press conference between Psaki and Surgeon General Murthy to announce the Surgeon General’s “Health Advisory on Misinformation,”¹⁰⁴ Psaki announced that Surgeon General Murthy had published an advisory on health misinformation as an urgent public health crisis.¹⁰⁵ Murthy announced: “Fourth, we’re saying we expect more from our technology companies. We’re asking them to operate with greater transparency and accountability. We’re asking them to monitor misinformation more closely. We’re asking them to consistently take action against misinformation super-spreaders on their platforms.”¹⁰⁶ Psaki further stated, “We are in regular touch with these social-media platforms, and those engagements typically happen through members of our senior staff, but also members of our COVID-19 team,” and “We’re flagging problematic posts for Facebook that spread disinformation.”¹⁰⁷

Psaki followed up by stating that the White House’s “asks” include four key steps by which social-media companies should: 1) measure and publicly share the impact of misinformation on

¹⁰² [Id.]

¹⁰³ [Id. at 55]

¹⁰⁴ [Doc. No. 210-1 at 16 (Waldo Depo, Exh. 10)]

¹⁰⁷ [Id. at 376–77]

their platforms; 2) create a robust enforcement strategy; 3) take faster action against harmful posts; and 4) promote quality information sources in their feed algorithms.¹⁰⁸

The next day, on July 16, 2021, President Biden, after being asked what his message was to social-media platforms when it came to COVID-19, stated, “[T]hey’re killing people.”¹⁰⁹ Specifically, he stated “Look, the only pandemic we have is among the unvaccinated, and that they’re killing people.”¹¹⁰ Psaki stated the actions of censorship Facebook had already conducted were “clearly not sufficient.”¹¹¹

Four days later, on July 20, 2021, at a White House Press Conference, White House Communications Director Kate Bedingfield (“Bedingfield”) stated that the White House would be announcing whether social-media platforms are legally liable for misinformation spread on their platforms and examining how misinformation fits into the liability protection granted by Section 230 of the Communications Decency Act (which shields social-media platforms from being responsible for posts by third parties on their sites).¹¹² Bedingfield further stated the administration was reviewing policies that could include amending the Communication Decency Act and that the social-media platforms “should be held accountable.”¹¹³

(21) The public and private pressure from the White House apparently had its intended effect. All twelve members of the “Disinformation Dozen” were censored, and pages, groups, and accounts linked to the Disinformation Dozen were removed.¹¹⁴

Twitter suspended Berenson’s account within a few hours of President Biden’s July 16, 2021 comments.¹¹⁵ On July 17, 2021, a Facebook official sent an email to Anita B. Dunn (“Dunn”), Senior Advisor to the President, asking for ways to “get back into the White House’s good graces” and stated Facebook and the White House were “100% on the same team here in fighting this.”¹¹⁶

(22) On November 30, 2021, the White House’s Christian Tom (“Tom”) emailed Twitter requesting that Twitter watch a video of First Lady Jill Biden that had been edited to make it sound as if the First Lady were profanely heckling children while reading to them.¹¹⁷ Twitter responded within six minutes, agreeing to “escalate with the team for further review.”¹¹⁸ Twitter advised users that the video had been edited for comedic effect. Tom then requested Twitter apply a “Manipulated Media” disclaimer to the video.¹¹⁹ After Twitter told Tom the video was not subject to labeling under its policy, Tom disputed Twitter’s interpretation of its own policy and added Michael LaRosa (“LaRosa”), the First Lady’s Press Secretary, into the conversation.¹²⁰ Further efforts by Tom and LaRosa to censor the video on December 9, 13, and 17 finally resulted in the video’s removal in December 2021.¹²¹

(23) In January 2022, Facebook reported to Rowe, Murthy, Flaherty, and Slavitt that it had “labeled and demoted” vaccine humor posts whose content could discourage vaccination.¹²² Facebook also reported to the White House that it “labeled and ‘demoted’ posts suggesting natural immunity to a COVID-19 infection is superior to vaccine immunity.”¹²³ In January 2022, Jesse

¹²³ [Doc. No. 71-3 at 10–11]

Lee (“Lee”) of the White House sent an email accusing Twitter of calling the President a liar in regard to a Presidential tweet.¹²⁴

At a February 1, 2022, White House press conference, Psaki stated that the White House wanted every social-media platform to do more to call out misinformation and disinformation, and to uplift accurate information.¹²⁵

At an April 25, 2022, White House press conference, after being asked to respond to news that Elon Musk may buy Twitter, Psaki again mentioned the threat to social-media companies to amend Section 230 of the Communications Decency Act, linking these threats to social-media platforms’ failure to censor misinformation and disinformation.¹²⁶

On June 13, 2022, Flaherty demanded Meta continue to produce periodic COVID-19 insight reports to track COVID-19 misinformation, and he expressed a concern about misinformation regarding the upcoming authorization of COVID-19 vaccines for children under five years of age. Meta agreed to do so on June 22, 2022.¹²⁷

(24) In addition to misinformation regarding COVID-19, the White House also asked social-media companies to censor misinformation regarding climate change, gender discussions, abortion, and economic policy. At an Axios event entitled “A Conversation on Battling Misinformation,” held on June 14, 2022, the White House National Climate Advisor Gina McCarthy (“McCarthy”) blamed social-media companies for allowing misinformation and disinformation about climate change to spread and explicitly tied these censorship demands with threats of adverse legislation regarding the Communications Decency Act.¹²⁸

¹²⁷ [Doc. No. 71-3 at 5–6]

¹²⁸ [Doc. No. 214-15]

On June 16, 2022, the White House announced a new task force to target “general misinformation” and disinformation campaigns targeted at women and LBGTQI individuals who are public and political figures, government and civic leaders, activists, and journalists.¹²⁹ The June 16, 2022, Memorandum discussed the creation of a task force to reel in “online harassment and abuse” and to develop programs targeting such disinformation campaigns.¹³⁰ The Memorandum also called for the Task Force to confer with technology experts and again threatened social-media platforms with adverse legal consequences if the platforms did not censor aggressively enough.¹³¹

On July 8, 2022, President Biden signed an Executive Order on protecting access to abortion. Section 4(b)(iv) of the order required the Attorney General, the Secretary of HHS, and the Chair of the Federal Trade Commission to address deceptive or fraudulent practices relating to reproductive healthcare services, including those online, and to protect access to accurate information.¹³²

On August 11, 2022, Flaherty emailed Twitter to dispute a note added by Twitter to one of President Biden’s tweets about gas prices.¹³³

(25) On August 23, 2021, Flaherty emailed Facebook requesting a report on how Facebook intended to promote the FDA approval of the Pfizer vaccine. He also stated that the White House would appreciate a “push” and provided suggested language.¹³⁴

B. Surgeon General Defendants¹³⁵

Surgeon General Murthy is the Surgeon General of the United States. Eric Waldo (“Waldo”) is the Senior Advisor to the Surgeon General and was formerly Chief Engagement Officer for the Surgeon General’s office. Waldo’s Deposition was taken as part of the allowed Preliminary Injunction-related discovery in this matter.¹³⁶

(1) Waldo was responsible for maintaining the contacts and relationships with representatives of social-media platforms. Waldo did pre-rollout calls with Twitter, Facebook, and Google/YouTube before the Surgeon General’s health advisory on misinformation was published on July 15, 2021.¹³⁷ Waldo admitted that Murthy used his office to directly advocate for social-media platforms to take stronger actions against health “misinformation” and that those actions involved putting pressure on social-media platforms to reduce the dissemination of health misinformation.¹³⁸ Surgeon General Murthy’s message was given to social-media platforms both publicly and privately.¹³⁹

(2) At a July 15, 2021 joint press conference between Psaki and Murthy, the two made the comments mentioned previously in II A(19), which publicly called for social-media platforms “to do more” to take action against misinformation super-spreaders.¹⁴⁰ Murthy was directly involved in editing and approving the final work product for the July 15, 2021 health advisory on misinformation.¹⁴¹ Waldo also admitted that Murthy used his “bully pulpit” to talk about health misinformation and to put public pressure on social-media platforms.¹⁴²

¹³⁵ Surgeon General Defendants consists of Dr. Vivek H. Murthy (“Murthy”) and Katharine Dealy (“Dealy”).

¹⁴⁰ [Id. at 33–35]

¹⁴¹ [Waldo depo at 14–17]

¹⁴² [Id. at 29]

(3) Waldo’s initial rollout with Facebook was negatively affected because of the public attacks by the White House and Office of the Surgeon General towards Facebook for allowing misinformation to spread.¹⁴³ Clegg of Facebook reached out to attempt to request “de-escalation” and “working together” instead of the public pressure.¹⁴⁴ In the call between Clegg and Murthy, Murthy told Clegg he wanted Facebook to do more to censor misinformation on its platforms. Murthy also requested Facebook share data with external researchers about the scope and reach of misinformation on Facebook’s platforms to better understand how to have external researchers validate the spread of misinformation.¹⁴⁵ “Data about misinformation” was the topic of conversation in this call; DJ Patil, chief data scientist in the Obama Administration, Murthy, Waldo, and Clegg all participated on the call. The purpose of the call was to demand more information from Facebook about monitoring the spread of misinformation.¹⁴⁶

(4) One of the “external researchers” that the Office of Surgeon General likely had in mind was Renee DiResta (“DiResta”) from the Stanford Internet Observatory, a leading organization of the Virality Project.¹⁴⁷ The Virality Project hosted a “rollout event” for Murthy’s July 15, 2021 press conference.¹⁴⁸

There was coordination between the Office of the Surgeon General and the Virality Project on the launch of Murthy’s health advisory.¹⁴⁹ Kyla Fullenwider (“Fullenwider”) is the Office of the Surgeon General’s key subject-matter expert who worked on the health advisory on misinformation. Fullenwider works for a non-profit contractor, United States’ Digital Response.¹⁵⁰

¹⁴³ [Id. at 91–94]

¹⁴⁴ [Doc. No. 210 at 95–98]

¹⁴⁵ [Id.]

¹⁴⁶ [Doc. No. 210 at 95–98]

¹⁴⁷ The Virality Project will be discussed later in greater detail.

¹⁴⁸ [Id. at 36–38]

¹⁴⁹ [Id. at 38]

¹⁵⁰ [Id. at 39, 59, 85]

Waldo, Fullenwider, and DiResta were involved in a conference call after the July 15, 2021 press conference where they discussed misinformation.¹⁵¹ The Office of the Surgeon General anticipated that social-media platforms would feel pressured by the Surgeon General’s health advisory.¹⁵²

(5) Waldo and the Office of the Surgeon General received a briefing from the Center for Countering Digital Hate (“CCDH”) about the “Disinformation Dozen.” CCDH gave a presentation about the Disinformation Dozen and how CCDH measured and determined that the Disinformation Dozen were primarily responsible for a significant amount of online misinformation.¹⁵³

(6) In his deposition, Waldo discussed various phone calls and communications between Defendants and Facebook. In August of 2021, Waldo joined a call with Flaherty and Brian Rice of Facebook.¹⁵⁴ The call was an update by Facebook about the internal action it was taking regarding censorship.¹⁵⁵ Waldo was aware of at least one call between Murthy and Facebook in the period between President Biden’s election and assuming office, and he testified that the call was about misinformation.¹⁵⁶ Waldo was also aware of other emails and at least one phone call where Flaherty communicated with Facebook.¹⁵⁷

(7) The first meeting between the Office of the Surgeon General and social-media platforms occurred on May 25, 2021, between Clegg, Murthy, and Slavitt. The purpose of this call was to introduce Murthy to Clegg. Clegg emailed Murthy with a report of misinformation on Facebook on May 28, 2021.¹⁵⁸

¹⁵⁶ [Id. at 55–56]

¹⁵⁷ [Id. at 64–65]

¹⁵⁸ [Doc. No. 210-4]

Policy updates about increasing censorship were announced by Facebook on May 27, 2021.¹⁵⁹ The Office of the Surgeon General had a pre-rollout (i.e., before the rollout of the Surgeon General’s health advisory on misinformation) call with Twitter and YouTube on July 12 and July 14, 2021.¹⁶⁰ The Office of the Surgeon General had a rollout call with Facebook on July 16, 2021. The July 16 call with Facebook was right after President Biden had made his “[T]hey’re killing people” comment (II A (19), above), and it was an “awkward call” according to Waldo.¹⁶¹

Another call took place on July 23, 2021, between Murthy, Waldo, DJ Patil, Clegg, and Rice. Clegg shared more about the spread of information and disinformation on Facebook after the meeting. At the meeting, Murthy raised the issue of wanting to have a better understanding of the reach of misinformation and disinformation as it relates to health on Facebook; Murthy often referred to health misinformation in these meetings as “poison.”¹⁶² The Surgeon General’s health advisory explicitly called for social-media platforms to do more to control the reach of misinformation.¹⁶³

On July 30, 2021, Waldo had a meeting with Google and YouTube representatives. At the meeting, Google and YouTube reported to the Office of the Surgeon General what actions they were taking following the Surgeon General’s health advisory on misinformation.¹⁶⁴

On August 10, 2021, Waldo and Flaherty had a call with Rice calling for Facebook to report to federal officials as to Facebook’s actions to remove “disinformation” and to provide details regarding a vaccine misinformation operation Facebook had uncovered.¹⁶⁵

¹⁵⁹ [Id. at 78, Exh. 3]

¹⁶³ [Id. at 107–08]

¹⁶⁴ [Doc. No. 210-4 at 33]

¹⁶⁵ [Id.]

Another meeting took place between Google/YouTube, Waldo, and Flaherty on September 14, 2021, to discuss a new policy YouTube was working on and to provide the federal officials with an update on YouTube's efforts to combat harmful COVID-19 misinformation on its platform.¹⁶⁶

(8) After the meetings with social-media platforms, the platforms seemingly fell in line with the Office of Surgeon General's and White House's requests. Facebook announced policy updates about censoring misinformation on May 27, 2021, two days after the meeting.¹⁶⁷ As promised, Clegg provided an update on misinformation to the Office of Surgeon General on May 28, 2021, three days after the meeting¹⁶⁸ and began sending bi-weekly COVID content reports on June 14, 2021.¹⁶⁹

On July 6, 2021, Waldo emailed Twitter to set up the rollout call for the Office of the Surgeon General's health advisory on misinformation and told Twitter that Murthy had been thinking about how to stop the spread of health misinformation; that he knew Twitter's teams were working hard and thinking deeply about the issue; and that he would like to chat over Zoom to discuss.¹⁷⁰ Twitter ultimately publicly endorsed the Office of the Surgeon General's call for greater censorship of health misinformation.¹⁷¹

Waldo sent an email to YouTube on July 6, 2021, to set up the rollout call and to state that the Office of the Surgeon General's purpose was to stop the spread of misinformation on social-media platforms.¹⁷² YouTube eventually adopted a new policy on combatting COVID-19

¹⁷² [Doc. No. 210-8]

misinformation and began providing federal officials with updates on YouTube’s efforts to combat the misinformation.¹⁷³

(9) At the July 15, 2021 press conference, Murthy described health misinformation as one of the biggest obstacles to ending the pandemic; insisted that his advisory was on an urgent public health threat; and stated that misinformation poses an imminent threat to the nation’s health and takes away the freedom to make informed decisions.¹⁷⁴ Murthy further stated that health disinformation is false, inaccurate, or misleading, based upon the best evidence at the time.¹⁷⁵

Murthy also stated that people who question mask mandates and decline vaccinations are following misinformation, which results in illnesses and death.¹⁷⁶ Murthy placed specific blame on social-media platforms for allowing “poison” to spread and further called for an “all-of-society approach” to fight health misinformation.¹⁷⁷ Murthy called upon social-media platforms to operate with greater transparency and accountability, to monitor information more clearly, and to “consistently take action against misinformation super-spreaders on their platforms.”¹⁷⁸ Notably, Waldo agreed in his deposition that the word “accountable” carries with it the threat of consequences.¹⁷⁹ Murthy further demanded social-media platforms do “much, much, more” and take “aggressive action” against misinformation because the failure to do so is “costing people their lives.”¹⁸⁰

(10) Murthy’s July 15, 2021 health advisory on misinformation blamed social-media platforms for the spread of misinformation at an unprecedented speed, and it blamed social-media

¹⁷³ [Doc. No. 210-8].

¹⁷⁹ [Id.]

¹⁸⁰ [Id.]

features and algorithms for furthering the spread.¹⁸¹ The health advisory further called for social-media platforms to enact policy changes to reduce the spread of misinformation, including appropriate legal and regulatory measures.¹⁸²

Under a heading entitled “What Technology Platforms Can Do,” the health advisory called for platforms to take a series of steps to increase and enable greater social-media censorship of misinformation, including product changes, changing algorithms to avoid amplifying misinformation, building in “frictions” to reduce the sharing of misinformation, and practicing the early detection of misinformation super-spreaders, along with other measures.¹⁸³ The consequences for misinformation would include flagging problematic posts, suppressing the spread of the information, suspension, and permanent de-platforming.¹⁸⁴

(11) The Office of the Surgeon General collaborated and partnered with the Stanford University Internet Observatory and the Virality Project. Murthy participated in a January 15, 2021 launch of the Virality Project. In his comments, Murthy told the group, “We’re asking technology companies to operate with great transparency and accountability so that misinformation does not continue to poison our sharing platforms and we knew the government can play an important role, too.”¹⁸⁵

Murthy expressly mentioned his coordination with DiResta at the Virality Project and expressed his intention to maintain that collaboration. He claimed that he had learned a lot from the Virality Project’s work and thanked the Virality Project for being such a great “partner.”¹⁸⁶

¹⁸¹ [Doc. No. 210-11]

¹⁸⁵ [Doc. No. 210-13, Doc. No. 210, at 206–07].

¹⁸⁶ [Doc. No. 210-1 at 213]

Murthy also stated that the Office of the Surgeon General had been “partnered with” the Stanford Internet Observatory for many months.¹⁸⁷

(12) After President Biden’s “[T]hey’re killing people” comment on July 16, 2021, Facebook representatives had “sad faces” according to Waldo. On July 21, 2021, Facebook emailed Waldo and Fullenwider with CrowdTangle data and with “interventions” that created “frictions” with regard to COVID misinformation. The interventions also included limiting forwarding of WhatsApp messages, placing warning labels on fact-checked content, and creating “friction” when someone tries to share these posts on Facebook. Facebook also reported other censorship policy and actions, including censoring content that contributes to the risk of imminent physical harm, permanently banning pages, groups, and accounts that repeatedly broke Facebook’s COVID-19 misinformation rules, and reducing the reach of posts, pages, groups, and accounts that share other false claims “that do not violate our policies but may present misleading or sensationalized information about COVID-19 and vaccines.”¹⁸⁸

On July 16, 2021, Clegg emailed Murthy and stated, “I know our teams met today to better understand the scope of what the White House expects of us on misinformation going forward.”¹⁸⁹ On July 18, 2021, Clegg messaged Murthy stating “I imagine you and your team are feeling a little aggrieved—as is the [Facebook] team, it’s not great to be accused of killing people—but as I said by email, I’m keen to find a way to deescalate and work together collaboratively. I am available to meet/speak whenever suits.”¹⁹⁰ As a result of this communication, a meeting was scheduled for July 23, 2021.¹⁹¹

¹⁸⁷ [Doc. No. 210-1 at 213]

¹⁸⁸ [Doc. No. 210-15]

¹⁸⁹ [Doc. No. 210-16]

¹⁹⁰ [Doc. No. 210-17]

¹⁹¹ [Doc. No. 210-18]

At the July 23, 2021 meeting, the Office of the Surgeon General officials were concerned about understanding the reach of Facebook’s data.¹⁹² Clegg even sent a follow-up email after the meeting to make sure Murthy saw the steps Facebook had been taking to adjust policies with respect to misinformation and to further address the “disinfo-dozen.”¹⁹³ Clegg also reported that Facebook had “expanded the group of false claims that we remove, to keep up with recent trends of misinformation that we are seeing.”¹⁹⁴ Further, Facebook also agreed to “do more” to censor COVID misinformation, to make its internal data on misinformation available to federal officials, to report back to the Office of the Surgeon General, and to “strive to do all we can to meet our ‘shared’ goals.”¹⁹⁵

Evidently, the promised information had not been sent to the Office of the Surgeon General by August 6, 2021, so the Office requested the information in a report “within two weeks.”¹⁹⁶ The information entitled “How We’re Taking Action Against Vaccine Misinformation Superspreaders” was later sent to the Office of the Surgeon General. It detailed a list of censorship actions taken against the “Disinformation Dozen.”¹⁹⁷ Clegg followed up with an August 20, 2021 email with a section entitled “Limiting Potentially Harmful Misinformation,” which detailed more efforts to censor COVID-19 Misinformation.¹⁹⁸ Facebook continued to report back to Waldo and Flaherty with updates on September 19 and 29 of 2021.¹⁹⁹

(13) Waldo asked for similar updates from Twitter, Instagram, and Google/YouTube.²⁰⁰

²⁰⁰ [Doc. No. 210, Waldo depo. at 257–58]

(14) The Office of the Surgeon General also collaborated with the Democratic National Committee. Flaherty emailed Murthy on July 19, 2021, to put Murthy in touch with Jiore Craig (“Craig”) from the Democratic National Committee who worked on misinformation and disinformation issues.²⁰¹ Craig and Murthy set up a Zoom meeting for July 22, 2021.

(15) After an October 28, 2021 Washington Post article stated that Facebook researchers had deep knowledge about how COVID-19 and vaccine misinformation ran through Facebook’s apps, Murthy issued a series of tweets from his official Twitter account indicating he was “deeply disappointed” to read this story, that health misinformation had harmed people’s health and cost lives, and that “we must demand Facebook and the rest of the social-media ecosystems take responsibility for stopping health misinformation on their platforms.”²⁰² Murthy further tweeted that “we need transparency and accountability now.”²⁰³

(16) On October 29, 2021, Facebook asked federal officials to provide a “federal health contract” to dictate “what content would be censored on Facebook’s platforms.”²⁰⁴ Federal officials informed Facebook that the federal health authority that could dictate what content could be censored as misinformation was the CDC.²⁰⁵

(17) Murthy continued to publicly chastise social-media platforms for allowing health misinformation to be spread on their platforms. Murthy made statements on the following platforms: a December 21, 2021 podcast threatening to hold social-media platforms accountable for not censoring misinformation;²⁰⁶ a January 3, 2022 podcast with Alyssa Milano stating that “platformers need to step up to be accountable for making their spaces safer”,²⁰⁷ and a February

14, 2022 panel discussion hosted by the Rockefeller Foundation, wherein they discussed that technology platforms enabled the speed, scale, and sophistication with which this misinformation was spreading.²⁰⁸

On March 3, 2022, the Office of the Surgeon General issued a formal Request for Information (“RFI”), published in the Federal Register, seeking information from social-media platforms and others about the spread of misinformation.²⁰⁹ The RFI indicated that the Office of the Surgeon General was expanding attempts to control the spread of misinformation on social media and other technology platforms.²¹⁰ The RFI also sought information about censorship policies, how they were enforced, and information about disfavored speakers.²¹¹ The RFI was sent to Facebook, Google/YouTube, LinkedIn, Twitter, and Microsoft²¹² by Max Lesko (“Lesko”), Murthy’s Chief of Staff, requesting responses from these social-media platforms.²¹³ Murthy again restated social-media platforms’ responsibility to reduce the spread of misinformation in an interview with GQ Magazine.²¹⁴ Murthy also specifically called upon Spotify to censor health information.²¹⁵

C. CDC Defendants²¹⁶

(1) Crawford is the Director for The Division of Digital Media within the CDC Office of the Associate Director for Communications. Her deposition was taken pursuant to preliminary-

²¹³ [Id.]

²¹⁴ [Id. Exh. 51]

²¹⁵ [Exh. 52]

²¹⁶ The CDC Defendants consist of the Centers for Disease Control & Prevention, Carol Crawford (“Crawford”), Jay Dempsey (“Dempsey”), Kate Galatas (“Galatas”), United States Census Bureau (“Census Bureau”), Jennifer Shopkorn (“Shopkorn”), the Department of Health and Human Services (“HHS”), Xavier Becerra (“Becerra”), Yolanda Byrd (“Byrd”), Christy Choi (“Choi”), Ashley Morse (“Morse”), and Joshua Peck (“Peck”).

injunction related discovery here.²¹⁷ The CDC is a component of the Department of Health and Human Services (“HHS”); Xavier Becerra (“Becerra”) is the Secretary of HHS.²¹⁸ Crawford’s division provides leadership for CDC’s web presence, and Crawford, as director, determines strategy and objectives and oversees its general work.²¹⁹ Crawford was the main point of contact for communications between the CDC and social-media platforms.²²⁰

Prior to the COVID-19 pandemic, Crawford only had limited contact with social-media platforms, but she began having regular contact post-pandemic, beginning in February and March of 2020.²²¹ Crawford communicated with these platforms via email, phone, and meetings.²²²

(2) Facebook emailed State Department officials on February 6, 2020, that it had taken proactive and reactive steps to control information and misinformation related to COVID-19. The email was forwarded to Crawford, who reforwarded to her contacts on Facebook.²²³ Facebook proposed to Crawford that it would create a Coronavirus page that would give information from trusted sources including the CDC. Crawford accepted Facebook’s proposal on February 7, 2020, and suggested the CDC may want to address “widespread myths” on the platform.²²⁴

Facebook began sending Crawford CrowdTangle reports on January 25, 2021. CrowdTangle is a social-media listening tool for Meta, which shows themes of discussion on social-media channels. These reported on “top engaged COVID and vaccine-related content overall across Pages and Groups.”²²⁵ This CrowdTangle report was sent by Facebook to Crawford

²¹⁷ [Doc. No. 205-1]

²²⁵ [Id. at 49–52]

in response to a prior conversation with Crawford.²²⁶ The CDC had privileged access to CrowdTangle since early 2020.²²⁷

Facebook emailed Crawford on March 3, 2020, that it intended to support the Government in its response to the Coronavirus, including a goal to remove certain information.²²⁸ Crawford and Facebook began having discussions about misinformation with Facebook in the Fall of 2020, including discussions of how to combat misinformation.²²⁹

The CDC used CrowdTangle, along with Meltwater reports (used for all platforms), to monitor social media's themes of discussion across platforms.²³⁰ Crawford recalls generally discussing misinformation with Facebook.²³¹ Crawford added Census Bureau officials to the distribution list for CrowdTangle reports because the Census Bureau was going to begin working with the CDC on misinformation issues.²³²

(3) On January 27, 2021, Facebook sent Crawford a recurring invite to a “Facebook weekly sync with CDC.”²³³ A number of Facebook and CDC officials were included in the invite, and the CDC could invite other agencies as needed.²³⁴ The CDC had weekly meetings with Facebook.²³⁵

(4) On March 10, 2021, Crawford sent Facebook an email seeking information about “Themes that have been removed for misinfo.”²³⁶ The CDC questioned if Facebook had info on the types of posts that were removed. Crawford was aware that the White House and the HHS

²³⁶ [Doc. No. 205-44 at 2–3]

were also receiving similar information from Facebook.²³⁷ The HHS was present at meetings with social-media companies on March 1, 2021,²³⁸ and on April 21, 2021.²³⁹

(5) On March 25, 2021, Crawford and other CDC officials met with Facebook. In an email by Facebook prior to that meeting, Facebook stated it would present on COVID-19 misinformation and have various persons present, including a Misinformation Manager and a Content-Manager official (Liz Lagone).²⁴⁰ Crawford responded, attaching a PowerPoint slide deck, stating “This is a deck Census would like to discuss and we’d also like to fit in a discussion of topic types removed from Facebook.”²⁴¹ Crawford also indicated two Census Bureau officials, Schwartz and Shopkorn, would be present, as well as two Census Bureau contractors, Sam Huxley and Christopher Lewitzke.²⁴²

The “deck” the Census Bureau wanted to discuss contained an overview of “Misinformation Topics” and included “concerns about infertility, misinformation about side effects, and claims about vaccines leading to deaths.”²⁴³ For each topic, the deck included sample slides and a statement from the CDC debunking the allegedly erroneous claim.²⁴⁴

(6) Crawford admits she began engaging in weekly meetings with Facebook,²⁴⁵ and emails verify that the CDC and Facebook were repeatedly discussing misinformation back and forth.²⁴⁶ The weekly meetings involved Facebook’s content-mediation teams. Crawford mainly inquired about how Facebook was censoring COVID-19 misinformation in these meetings.²⁴⁷

²⁴⁶ [Doc. No. 205-9 at 1–4]

²⁴⁷ [Doc. No. 205-1 at 68–69]

(7) The CDC entered into an Intra-Agency Agreement (“IAA”) with the Census Bureau to help advise on misinformation. The IAA required that the Census Bureau provide reports to the CDC on misinformation that the Census Bureau tracked on social media.²⁴⁸ To aid in this endeavor, Crawford asked Facebook to allow the Census Bureau to be added to CrowdTangle.²⁴⁹

(8) After the March 2021 weekly meetings between Facebook, the CDC, and Census Bureau began, Crawford began to press Facebook on removing and/or suppressing misinformation. In particular, she stated, “The CDC would like to have more info... about what is being done on the amplification-side,” and the CDC “is still interested in more info on how you view or analyze the data on removals, etc.”²⁵⁰ Further, Crawford noted, “It looks like the posts from last week’s deck about infertility and side effects have all been removed. Were these evaluated by the moderation team or taken down for another reason?”²⁵¹ Crawford also questioned Facebook about the CrowdTangle report showing local news coverage of deaths after receiving the vaccine and questioned what Facebook’s approach is for “adding labels” to those stories.²⁵²

On April 13, 2021, Facebook emailed Crawford to propose enrolling CDC and Census Bureau officials in a special misinformation reporting channel; this would include five CDC officials and four Census Bureau officials. The portal was only provided to federal officials.²⁵³

On April 23, 2021, and again on April 28, 2021, Crawford emailed Facebook about a Wyoming Department of Health report noting that the algorithms that Facebook and other social-media networks are using to “screen out postings of sources of vaccine misinformation” were also screening out valid public health messages.²⁵⁴

²⁴⁸ [Doc. No. 205-1 at 71–72, 110]

²⁵² [Doc. No. 205-9 at 1]

²⁵³ [Doc. No. 205-11 at 2]

²⁵⁴ [Doc. No. 205-38 at 2]

On May 6, 2021, Crawford emailed Facebook a table containing a list of sixteen specific postings on Facebook and Instagram that contained misinformation.²⁵⁵ Crawford stated in her deposition that she knew when she “flagged” content for Facebook, they would evaluate and possibly censor the content.²⁵⁶ Crawford stated CDC’s goal in flagging information for Facebook was “to be sure that people have credible health information so that they can make the correct health decisions.”²⁵⁷ Crawford continued to “flag” and send misinformation posts to Facebook, and on May 19, 2021,²⁵⁸ Crawford provided Facebook with twelve specific claims.

(9) Facebook began to rely on Crawford and the CDC to determine whether claims were true or false. Crawford began providing the CDC with “scientific information” for Facebook to use to determine whether to “remove or reduce and inform.”²⁵⁹ Facebook was relying on the CDC’s “scientific information” to determine whether statements made on its platform were true or false.²⁶⁰ The CDC would respond to “debunk” claims if it had an answer.²⁶¹ These included issues like whether COVID-19 had a 99.96% survival rate, whether COVID-19 vaccines cause bells’ palsy, and whether people who are receiving COVID-19 vaccines are subject to medical experiments.²⁶²

Facebook content-mediation officials would contact Crawford to determine whether statements made on Facebook were true or false.²⁶³ Because Facebook’s content-moderation policy called for Facebook to remove claims that are false and can lead to harm, Facebook would

²⁵⁵ [Doc. No. 205-10 at 1–3]

²⁶³ [Doc. No. 205-12 at 2]

remove and/or censor claims the CDC itself said were false.²⁶⁴ Questions by Facebook to the CDC related to this content-moderation included whether spike proteins in COVID-19 vaccines are dangerous and whether Guillain-Barre Syndrome or heart inflammation is a possible side effect of the COVID-19 vaccine.²⁶⁵ Crawford normally referred Facebook to CDC subject-matter experts or responded with the CDC's view on these scientific questions.²⁶⁶

(10) Facebook continued to send the CDC biweekly CrowdTangle content insight reports, which included trending topics such as Door-to-Door Vaccines, Vaccine Side Effects, Vaccine Refusal, Vaccination Lawsuits, Proof of Vaccination Requirement, COVID-19 and Unvaccinated Individuals, COVID-19 Mandates, Vaccinating Children, and Allowing People to Return to Religious Services.²⁶⁷

(11) On August 19, 2021, Facebook asked Crawford for a Vaccine Adverse Event Reporting System (“VAERS”) meeting for the CDC to give Facebook guidance on how to address VAERS-related “misinformation.”²⁶⁸ The CDC was concerned about VAERS-related misinformation because users were citing VAERS data and reports to raise concerns about the safety of vaccines in ways the CDC found to be “misleading.”²⁶⁹ Crawford and the CDC followed up by providing written materials for Facebook to use.²⁷⁰ The CDC eventually had a meeting with Facebook about VAERS-related misinformation and provided two experts for this issue.²⁷¹

(12) On November 2, 2021, a Facebook content-moderation official reached out to the CDC to obtain clarity on whether the COVID-19 vaccine was harmful to children. This was

²⁶⁴ [Doc. No. 205-26 at 1–4]

²⁶⁵ [Doc. No. 205-18]

²⁷⁰ [Doc. No. 205-21]

²⁷¹ [Doc. No. 205-1 at 151–52]

following the FDA’s emergency use authorization (“EUA”) related to the COVID-19 vaccine.²⁷²

In addition to the EUA issue for children, Facebook identified other claims it sought clarity on regarding childhood vaccines and vaccine refusals.²⁷³

The following Monday, November 8, 2021, Crawford followed up with a response from the CDC, which addressed seven of the ten claims Facebook had asked the CDC to evaluate. The CDC rated six of the claims “False” and stated that any of these false claims could cause vaccine refusal.²⁷⁴

The questions the CDC rated as “false” were:

- 1) COVID-19 vaccines weaken the immune system;
- 2) COVID-19 vaccines cause auto-immune diseases;
- 3) Antibody-dependent enhancement (“ADE”) is a side effect of COVID-19 vaccines;
- 4) COVID-19 vaccines cause acquired immunodeficiency syndrome (AIDS);
- 5) Breast milk from a vaccinated parent is harmful to babies/children; and
- 6) COVID-19 vaccines cause multi-system inflammatory syndrome in children (MIS-C).

(13) On February 3, 2022, Facebook again asked the CDC for clarification on whether a list of claims were “false” and whether the claims, if believed, could contribute to vaccine refusals.²⁷⁵ The list included whether COVID-19 vaccines cause ulcers or neurodegenerative diseases such as Huntington’s and Parkinson’s disease; the FDA’s possible future issuance of an EUA to children six months to four years of age; and questions about whether the COVID-19 vaccine causes death, heart attacks, autism, birth defects, and many others.²⁷⁶

(14) In addition to its communications with Facebook, the CDC and Census Bureau also had involvement with Google/YouTube. On March 18, 2021, Crawford emailed Google, with the

²⁷² [Doc. 205-23 at 1–2]

²⁷³ [Id.]

²⁷⁴ [Doc. No. 205–24]

²⁷⁵ [Doc. No. 205-26 at 1]

²⁷⁶ [Id. at 1–4]

subject line “COVID Misinfo Project.” Crawford informed Google that the CDC was now working with the Census Bureau (who had been meeting with Google regularly) and wanted to set up a time to talk and discuss the “COVID Misinfo Project.”²⁷⁷ According to Crawford, the previous Census project referred to the Census’ work on combatting 2020 Census misinformation.²⁷⁸

On March 23, 2021, Crawford sent a calendar invite for a March 24, 2021 meeting, which included Crawford and five other CDC employees, four Census Bureau employees, and six Google/YouTube officials.²⁷⁹ At the March 24, 2021 meeting, Crawford presented a slide deck similar to the one prepared for the Facebook meeting. The slide deck was entitled “COVID Vaccine Misinformation: Issue Overview” and included issues like infertility, side effects, and deaths. The CDC and the Census Bureau denied that COVID-19 vaccines resulted in infertility, caused serious side effects, or resulted in deaths.²⁸⁰

(15) On March 29, 2021, Crawford followed up with Google about using their “regular 4 p.m. meetings” to go over things with the Census.²⁸¹ Crawford recalled that the Census was asking for regular meetings with platforms, specifically focused on misinformation.²⁸² Crawford also noted that the reference to the “4 p.m. meeting” refers to regular biweekly meetings with Google, which “continues to the present day.”²⁸³ Crawford also testified she had similar regular meetings with Meta and Twitter, and previously had regular meetings with Pinterest. Crawford stated these meetings were mostly about things other than misinformation, but misinformation was discussed at the meetings.²⁸⁴

²⁸⁴ [Id. at 181]

(16) On May 10, 2021, Crawford emailed Facebook to establish “COVID BOLO” (“Be on The Lookout”) meetings. Google and YouTube were included.²⁸⁵ Crawford ran the BOLO meetings, and the Census Bureau official arranged the meetings and prepared the slide deck for each meeting.²⁸⁶

The first BOLO meeting was held on May 14, 2021; the slide deck for the meeting was entitled “COVID Vaccine Misinformation: Hot Topics” and included five “hot topics” with a BOLO note for each topic. The five topics were: the vaccines caused “shedding”; a report made on VAERS that a two-year old child died from the vaccine; other alleged misleading information on VAERS reports; statements that vaccines were bioweapons, part of a depopulation scheme, or contain microchips; and misinformation about the eligibility of twelve to fifteen year old children for the vaccine.²⁸⁷ All were labeled as “false” by the CDC, and the potential impact on the public was a reduction of vaccine acceptance.

The second BOLO meeting was held on May 28, 2021. The second meeting also contained a slide deck with a list of three “hot topics” to BOLO: that the Moderna vaccine was unsafe; that vaccine ingredients can cause people to become magnetic; and that the vaccines cause infertility or fertility-related issues in men. All were labeled as false by the CDC, and possibly impacted reduced vaccine acceptance.²⁸⁸

A third BOLO meeting scheduled for June 18, 2021, was cancelled due to the new Juneteenth holiday. However, Crawford sent the slide deck for the meeting. The hot topics for this meeting were: that vaccine particles accumulate in ovaries causing fertility; that vaccines contain

²⁸⁸ [Doc. No. 214-24 at 3–7] SEALED DOCUMENT

microchips; and because of the risk of blood clots to vaccinated persons, airlines were discussing a ban. All were labeled as false.²⁸⁹

The goal of the BOLO meetings was to be sure credible information was out there and to flag information the CDC thought was not credible for potential removal.²⁹⁰

On September 2, 2021, Crawford emailed Facebook and informed them of a BOLO for a small but growing area of misinformation: one of the CDC's lab alerts was misinterpreted and shared via social media.²⁹¹

(17) The CDC Defendants also had meetings and/or communications with Twitter. On April 8, 2021, Crawford sent an email stating she was "looking forward to setting up regular chats" and asked for examples of misinformation. Twitter responded.²⁹²

On April 14, 2021, Crawford sent an email to Twitter giving examples of misinformation topics, including that vaccines were not FDA approved, fraudulent cures, VAERS data taken out of context, and infertility. The list was put together by the Census Bureau team.²⁹³

On May 10, 2021, Crawford emailed Twitter to print out two areas of misinformation, which included copies of twelve tweets.²⁹⁴ Crawford informed Twitter about the May 14, 2021 BOLO meeting and invited Twitter to participate. The examples of misinformation given at the meeting included: vaccine shedding; that vaccines would reduce the population; abnormal bleeding; miscarriages for women; and that the Government was lying about vaccines. In a

²⁹⁴ [Doc. No. 205-34]

response, Twitter stated that at least some of the examples had been “reviewed and actioned.”²⁹⁵ Crawford understood that she was flagging posts for Twitter for possible censorship.²⁹⁶

Twitter additionally offered to enroll CDC officials in its “Partner Support Portal” to provide expedited review of content flagged for censorship.²⁹⁷ Crawford asked for instructions of how to enroll in the Partnership Support Portal and provided her personal Twitter account to enroll. Crawford was fully enrolled on May 27, 2021.²⁹⁸ Census Bureau contractor Christopher Lewitzke (“Lewitzke”) also requested to enroll in the Partner Support Portal.²⁹⁹

Crawford also sent Twitter a BOLO for the alleged misinterpretation of a CDC lab report.³⁰⁰

(18) Crawford testified in her deposition that the CDC has a strong interest in tracking what its constituents are saying on social media.³⁰¹ Crawford also expressed concern that if content were censored and removed from social-media platforms, government communicators would not know what the citizen’s “true concerns” were.³⁰²

D. NIAID Defendants³⁰³

The NIAID is a federal agency under HHS. Dr. Fauci was previously the Director of NIAID. Dr. Fauci’s deposition was taken as a part of the limited preliminary injunction discovery in this matter.³⁰⁴

²⁹⁵ [Id.]

²⁹⁶ [Doc. No. 205-1 at 211]

²⁹⁷ [Id. at 211–12]

²⁹⁸ [Id. at 211–18]

²⁹⁹ [Doc. No. 201-34 at 2]

³⁰⁰ [Doc. No. 201-35]

³⁰¹ [Doc. No. 201-1 at 57–58]

³⁰² [Id. at 75]

³⁰³ The NIAD Defendants consist of the National Institute of Allergy and Infectious Disease and Dr. Hugh Auchincloss (“Dr. Auchincloss”).

³⁰⁴ [Doc. No. 206]

1) Dr. Fauci had been the director of the NIAID for over thirty-eight years and became Chief Medical Advisor to the President in early 2021.³⁰⁵ Dr. Fauci retired December 31, 2022.

1. Lab-Leak Theory

Plaintiffs set forth arguments that because NIAID had funded “gain-of-function”³⁰⁶ research at Dr. Fauci’s direction at the Wuhan Institute of Virology (“Wuhan lab”) in Wuhan, China, Dr. Fauci sought to suppress theories that the SARS-CoV2 virus leaked from the Wuhan lab.³⁰⁷

(1) Plaintiffs allege that Dr. Fauci’s motive for suppressing the lab-leak theory was a fear that Dr. Fauci and NIAID could be blamed for funding gain-of-function research that created the COVID-19 pandemic. Plaintiffs allege Dr. Fauci participated in a secret call with other scientists on February 1, 2020, and convinced the scientists (who were proponents of the lab-leak theory) to change their minds and advocate for the theory that the COVID-19 virus originated naturally.³⁰⁸ A few days after the February 1, 2020 call, a paper entitled “The Proximal Origin of COVID-19” was published by Nature Medicine on March 17, 2020. The article concludes that SARS-CoV2 was not created in a lab but rather was naturally occurring.

On February 2, 2020, Dr. Fauci told the other scientists that “given the concerns of so many people and the threat of further distortions on social media it is essential that we move quickly. Hopefully, we can get the WHO to convene.”³⁰⁹ Dr. Fauci emailed Dr. Tedros of the WHO and two senior WHO officials, urging WHO to quickly establish a working group to address the lab-leak theory. Dr. Fauci stated they should “appreciate the urgency and importance of this issue

³⁰⁵ [Doc. No. 206-1 at 10 (Deposition of Dr. Anthony S. Fauci)]

³⁰⁶ “Gain-of-function” research involves creating a potentially dangerous virus in a laboratory.

³⁰⁷ [Doc. No. 212-3 at 151–85]

³⁰⁸ [Id. at 165]

³⁰⁹ [Doc. No. 206-9 at 2]

given the gathering internet evident in the science literature and in mainstream and social media to the question of the origin of this virus.” Dr. Fauci also stated WHO needed to “get ahead of ...the narrative of this and not reacting to reports which could be very damaging.”³¹⁰ Numerous drafts of “The Proximal Origin of COVID-19” were sent to Dr. Fauci to review prior to the article being published in Nature Medicine.³¹¹

(2) On February 9, 2020, in a joint podcast with Dr. Peter Daszak of the Eco Health Alliance,³¹² both Drs. Fauci and Daszak discredited the lab-leak theory, calling it a “conspiracy theory.”³¹³

(3) Three authors of “The Proximal Origins of SARS-CoV2,” Robert Garry, Kristian Anderson, and Ian Lipkin, received grants from NIH in recent years.³¹⁴

(4) After “The Proximal Origins of SARS-CoV2” was completed and published in Nature Medicine, Dr. Fauci began discrediting the lab-leak theory. “This study leaves little room to refute a natural original for COVID-19.” “It’s a shining object (lab-leak theory) that will go away in times.”³¹⁵

At an April 17, 2020 press conference, when asked about the possibility of a lab-leak, Dr. Fauci stated, “There was a study recently that we can make available to you, where a group of highly qualified evolutionary virologists looked at the sequences there and the sequences in bats as they evolve. And the mutations that it took to get to the point where it is now is totally consistent

³¹⁰ [Doc. No. 206-9 at 1]

³¹² [Doc. No. 206-16 at 1]

³¹³ [Doc. No. 206-16 at 1; 206-17 at 1]

³¹⁴ [Doc. No. 214-30]

³¹⁵ [Doc. No. 206-27 at 3-4]

with jump of a species from animal to a human.”³¹⁶ “The Proximal Origin of SARS-CoV2” has since become one of the most widely read papers in the history of science.³¹⁷

(5) Twitter and Facebook censored the lab-leak theory of COVID-19.³¹⁸ However, Dr. Fauci claims he is not aware of any suppression of speech about the lab-leak theory on social media, and he claims he does not have a Twitter or Facebook account.³¹⁹

(6) On March 15, 2020, Zuckerberg sent Dr. Fauci an email asking for coordination between Dr. Fauci and Facebook on COVID-19 messaging. Zuckerberg asked Dr. Fauci to create a video to be used on Facebook’s Coronavirus Information Hub, with Dr. Fauci answering COVID-19 health questions, and for Dr. Fauci to recommend a “point person” for the United States Government “to get its message out over the platform.”³²⁰

Dr. Fauci responded the next day to Zuckerberg saying, “Mark your idea and proposal sounds terrific,” “would be happy to do a video for your hub,” and “your idea about PSAs is very exciting.” Dr. Fauci did three live stream Facebook Q&A’s about COVID-19 with Zuckerberg.³²¹

2. Hydroxychloroquine

Plaintiffs further allege the NIAID and Dept. of HHS Defendants suppressed speech on hydroxychloroquine. On May 22, 2020, The Lancet published an online article entitled “Hydroxychloroquine or chloroquine with or without a macrolide for treatment of COVID-19: a multi-national registry analysis.”³²² The article purported to analyze 96,032 patients to compare persons who did and did not receive this treatment. The study concluded that hydroxychloroquine

³¹⁶ (Video of April 17, 2020, White House Coronavirus Task Force Briefing, at <https://www.youtube.com/watch?v=brbArPX8=6I>)

³¹⁷ [Doc. No. 214-30]

³¹⁸ [Doc. No. 206-32 at 1–2; Doc. No. 206-33 at 3]

³¹⁹ [Doc. No. 206-1 at 210]

³²⁰ [Doc. No. 206-24 at 3]

³²¹ [Doc. No. 201-1 at 177]

³²² [Doc. No. 206-36 at 1]

and chloroquine were associated with decreased in-hospital survival and an increased frequency of ventricular arrhythmias when used for treatment of COVID-19.³²³

Dr. Fauci publicly cited this study to claim that “hydroxychloroquine is not effective against coronavirus.”³²⁴ He then publicly began to discredit COVID-19 treatment with hydroxychloroquine and stated whether the treatment of COVID-19 by hydroxychloroquine was effective could only be judged by rigorous, randomized, double-blind, placebo-based studies. He testified the same on July 31, 2020, before the House Select Subcommittee on Coronavirus Crisis.³²⁵

(2) When America’s Frontline Doctors held a press conference criticizing the Government’s response to the COVID-19 pandemic and spouting the benefits of hydroxychloroquine in treating the coronavirus,³²⁶ Dr. Fauci made statements on Good Morning America³²⁷ and on Andrea Mitchell Reports³²⁸ that hydroxychloroquine is not effective in treating the coronavirus. Social-media platforms censored the America’s Frontline Doctors videos. Facebook, Twitter, and YouTube removed the video.³²⁹ Dr. Fauci does not deny that he or his staff at NIAID may have communicated with social-media platforms, but he does not specifically recall it.³³⁰

3. The Great Barrington Declaration

(1) The GBD was published online on October 4, 2020. The GBD was published by Plaintiffs Dr. Bhattacharja of Stanford and Dr. Kulldorff of Harvard, along with Dr. Gupta of

³²³ [Id.]

³²⁴ [Doc. No. 206-35 at 1]

³²⁵ <https://www.youtube.com/watch?v=RUNCNQD2UE>

³²⁶ [Doc. No. 207-2 at 5]

³²⁷ [Doc. No. 207-1 at 2]

³²⁸ [Doc. No. 207-1 at 2–3]

³²⁹ [Doc. No. 207-2 at 6]

³³⁰ [Doc. No. 206-1 at 238]

Oxford. The GBD is a one-page treatise opposing reliance on lockdowns and advocating for an approach to COVID-19 called “focused protection.”³³¹ It criticized the social distancing and lockdown approaches endorsed by government experts. The authors expressed grave concerns about physical and mental health impacts of current government COVID-19 lockdown policies and called for an end to lockdowns.³³²

(2) On October 8, 2020, Dr. Francis Collins emailed Dr. Fauci (and Cliff Lane) stating:

Hi Tony and Cliff, See <https://gbdeclaration.org/>. This proposal from the three fringe epidemiologists who met with the Secretary seems to be getting a lot of attention – and even a co-signature from Nobel Prize winner Mike Leavitt at Stanford. There needs to be a quick and devastating published take down of its premises. I don’t see anything like that online yet- is it underway? Francis.³³³

The same day, Dr. Fauci wrote back to Dr. Collins stating, “Francis: I am pasting in below a piece from Wired that debunks this theory. Best, Tony.”³³⁴

Dr. Fauci and Dr. Collins followed up with a series of public media statements attacking the GBD. In a Washington Post story run on October 14, 2020, Dr. Collins described the GBD and its authors as “fringe” and “dangerous.”³³⁵ Dr. Fauci consulted with Dr. Collins before he talked to the Washington Post.³³⁶ Dr. Fauci also endorsed these comments in an email to Dr. Collins, stating “what you said was entirely correct.”³³⁷

On October 15, 2020, Dr. Fauci called the GBD “nonsense” and “dangerous.”³³⁸ Dr. Fauci specifically stated, “Quite frankly that is nonsense, and anybody who knows anything about

³³¹ [Doc. No. 207-5 at 3]

³³² [Id.]

³³³ [Doc. No. 207-6]

³³⁴ [Doc. No. 207-7]

³³⁵ [Doc. No. 207-9]

³³⁷ [Doc. No. 207-10]

³³⁸ [Doc. No. 207-11 at 1]

epidemiology will tell you that is nonsense and very dangerous.”³³⁹ Dr. Fauci testified “it’s possible that” he coordinated with Dr. Collins on his public statements attacking the GBD.³⁴⁰

(3) Social-media platforms began censoring the GBD shortly thereafter. In October 2020, Google de-boosted the search results for the GBD so that when Google users googled “Great Barrington Declaration,” they would be diverted to articles critical of the GBD, and not to the GBD itself.³⁴¹ Reddit removed links to the GBD.³⁴² YouTube updated its terms of service regarding medical “misinformation,” to prohibit content about vaccines that contradicted consensus from health authorities.³⁴³ Because the GBD went against a consensus from health authorities, its content was removed from YouTube. Facebook adopted the same policies on misinformation based upon public health authority recommendations.³⁴⁴ Dr. Fauci testified that he could not recall anything about his involvement in seeking to squelch the GBD.³⁴⁵

(4) NIAID and NIH staff sent several messages to social-media platforms asking them to remove content lampooning or criticizing Dr. Fauci. When a Twitter employee reached out to CDC officials asking if a particular account associated with Dr. Fauci was “real or not,”³⁴⁶ Scott Prince of NIH responded, “Fake/Imposter handle. PLEASE REMOVE!!!”³⁴⁷ An HHS official then asked Twitter if it could “block” similar parody accounts: “Is there anything else you can also do to block other variations of his (Dr. Fauci’s) name from impersonation so we don’t have this

³³⁹ [Id. at 3]

³⁴⁶ [Doc. No. 207-17 at 2]

³⁴⁷ [Id.]

occur again?”³⁴⁸ Twitter replied, “We’ll freeze this @handle and some other variations so no one can hop on them.”³⁴⁹

On April 21, 2020, Judith Lavelle of NIAID emailed Facebook, copying Scott Prince of NIH and Jennifer Routh (“Routh”), and stated, “We wanted to flag a few more fake Dr. Fauci accounts on FB and IG for you I have reported them from NIAID and my personal FB account.”³⁵⁰ Both Lavelle and Routh are members of Dr. Fauci’s communications staff.³⁵¹ Six of the eight accounts listed were removed by Facebook on the same day.³⁵²

(5) On October 30, 2020, a NIAID staffer wrote an email connecting Google/YouTube with Routh, “so that NIAID and the ‘Google team’ could connect on vaccine communications—specifically misinformation.”³⁵³ Courtney Billet (“Billet”), director of the Office of Communications and Government Relations of NIAID, was added by Routh, along with two other NIAID officials, to a communications chain with YouTube.³⁵⁴ Twitter disclosed that Dina Perry (“Perry”), a Public Affairs Specialist for NIAID, communicates or has communicated with Twitter about misinformation and censorship.³⁵⁵

(6) Dr. Fauci testified that he has never contacted a social-media company and asked them to remove misinformation from one of their platforms.³⁵⁶

4. Ivermectin

(8) On September 13, 2021, Facebook emailed Carol Crawford of the CDC to ask whether the claim that “Ivermectin is effective in treating COVID is false, and if believed, could

³⁴⁸ [Id. at 1]

³⁴⁹ [Id.]

contribute to people refusing the vaccine or self-medicating.”³⁵⁷ The CDC responded the next day and advised Facebook that the claim that Ivermectin is effective in treating COVID is “NOT ACCURATE.”³⁵⁸ The CDC cited the NIH’s treatment guidelines for authority that the claims were not accurate.³⁵⁹

5. Mask Mandates

(9) Plaintiffs maintain that Dr. Fauci initially did not believe masks worked, but he changed his stance. A February 4, 2020 email, in which Dr. Fauci responded to an email from Sylvia Burwell, stated, “the typical mask you buy in a drugstore is not really effective in keeping out the virus, which is small enough to pass through mankind.”³⁶⁰ Dr. Fauci stated that, at that time, there were “no studies” on the efficacy of masking to stop the spread.³⁶¹ On March 31, 2020, Dr. Fauci forwarded studies showing that masking is ineffective.³⁶²

Plaintiffs allege that Dr. Fauci’s position on masking changed dramatically on April 3, 2020, when he became an advocate for universal mask mandates.³⁶³ Dr. Fauci testified his position changed in part because “evidence began accumulating that masks actually work in preventing acquisition and transmission,”³⁶⁴ although Dr. Fauci could not identify those studies.³⁶⁵

³⁶⁴ [Id.]

³⁶⁵ [Id. at 318]

6. Alex Berenson

Alex Berenson (“Berenson”) was a former New York Times Science reporter and critic of government messaging about COVID-19 vaccines. He was de-platformed from Twitter on August 28, 2021.³⁶⁶

Dr. Fauci had previously sought to discredit Berenson publicly during an interview with CNN.³⁶⁷ Dr. Fauci does not deny that he may have discussed Berenson with White House or federal officials, but does not recall specifically whether he did so.³⁶⁸

E. FBI Defendants³⁶⁹

(1) The deposition of Elvis Chan (“Chan”) was taken on November 29, 2021.³⁷⁰ Chan is the Assistant Special Agent in charge of the Cyber Branch for the San Francisco Division of the FBI.³⁷¹ In this role, Chan was one of the primary people communicating with social-media platforms about disinformation on behalf of the FBI. There are also other agents on different cyber squads, along with the FBI’s private sector engagement squad, who relay information to social-media platforms.³⁷²

Chan graduated from the Naval Postgraduate School in 2020 with a M.A. in Homeland Security Studies.³⁷³ His thesis was entitled, “Fighting Bears and Trolls. An Analysis of Social Media Companies and U.S. Government Efforts to Combat Russian Influence Campaigns During the 2020 U.S. Elections.”³⁷⁴ His thesis focuses on information sharing between the FBI, Facebook,

³⁶⁶ [Doc. No. 207-23 at 4]

³⁶⁷ [Doc. No. 207-24 at 1–2]

³⁶⁸ [Doc. No. 206-1 at 341–43]

³⁶⁹ FBI Defendants include Elvis Chan (“Chan”), the Federal Bureau of Investigation (“FBI”), Lauren Dehmlow (“Dehmlow”), and the U.S. Department of Justice (“DOJ”).

³⁷⁰ [Doc. No. 204-1]

³⁷¹ [Id. at 8]

³⁷² [Id. at 105]

³⁷³ [Id. at 10]

³⁷⁴ [Doc. No. 204-2 at 1]

Google, and Twitter.³⁷⁵ Chan relied on research performed by persons and entities comprising the Election Integrity Partnership, including Graphika,³⁷⁶ and DiResta of the Stanford Internet Observatory. Chan communicated directly with DiResta about Russian disinformation.³⁷⁷

Chan also knows Alex Stamos (“Stamos”), the head of the Stanford Internet Observatory, from when Stamos worked for Facebook.³⁷⁸ Chan and Stamos worked together on “malign-foreign-influence activities, on Facebook.”³⁷⁹

(2) Chan stated that the FBI engages in “information sharing” with social-media companies about content posted on their platforms, which includes both “strategic-level information” and “tactical information.”³⁸⁰

(3) The FBI, along with Facebook, Twitter, Google/YouTube, Microsoft, Yahoo!, Wikimedia Foundation, and Reddit, participate in a Cybersecurity and Infrastructure Security Agency (“CISA”) “industry working group.”³⁸¹ Representatives of CISA, the Department of Homeland Security’s Intelligence & Analysis Division (“I&A”), the Office of Director of National Intelligence (“ODNI”), the FBI’s FITF, the Dept. of Justice National Security Division, and Chan participate in these industry working groups.³⁸²

Chan participates in the meetings because most social-media platforms are headquartered in San Francisco, and the FBI field offices are responsible for maintaining day-to-day relationships with the companies headquartered in its area of responsibility.³⁸³

³⁷⁵ [Id. at 18]

³⁷⁶ [Doc. No. 204-1 at 145]

³⁷⁷ [Doc. No. 204-1 at 51–52, 85]

³⁷⁸ [Id. at 54]

³⁷⁹ [Id. at 55]

³⁸⁰ [Id. at 16–19]

³⁸¹ [Id. at 18, 23–24]

³⁸² [Id. at 24, 171]

³⁸³ [Id. at 24]

Matt Masterson (“Masterson”) was the primary facilitator in the meetings for the 2022 election cycle, and Brian Scully (“Scully”) was the primary facilitator ahead of the 2022 election.³⁸⁴ At the USG-Industry (“the Industry”) meetings, social-media companies shared disinformation content, providing a strategic overview of the type of disinformation they were seeing. The FBI would then provide strategic, unclassified overviews of things they were seeing from Russian actors.³⁸⁵

The Industry meetings were “continuing” at the time Chan’s deposition was taken on November 23, 2022, and Chan assumes the meetings will continue through the 2024 election cycle.³⁸⁶

(4) Chan also hosted bilateral meetings between FBI and Facebook, Twitter, Google/YouTube, Yahoo!/Verizon, Microsoft/LinkedIn, Wikimedia Foundation and Reddit,³⁸⁷ and the Foreign Influence Task Force.³⁸⁸ In the Industry meetings, the FBI raised concerns about the possibility of “hack and dump” operations during the 2020 election cycle.³⁸⁹ The bilateral meetings are continuing, occurring quarterly, but will increase to monthly and weekly nearer the elections.³⁹⁰

In the Industry meetings, FBI officials meet with senior social-media platforms in the “trust and safety or site integrity role.” These are the persons in charge of enforcing terms of service and content-moderation policies.³⁹¹ These meetings began as early as 2017.³⁹² At the Industry

³⁸⁴ [Id. at 25–26]

³⁸⁵ [Id. at 156–57]

³⁸⁶ [Id. at 285–86]

³⁸⁷ [Id. at 23–24]

³⁸⁸ [Id. at 39]

³⁸⁹ [Id.]

³⁹⁰ [Id. at 40]

³⁹¹ [Id. at 43–44]

³⁹² [Id. at 87–89]

meetings, in addition to Chan and Laura Dehmlow (“Dehmlow”), head of the FITF, between three and ten FITF officials and as high as a dozen FBI agents are present.³⁹³

(5) On September 4, 2019, Facebook, Google, Microsoft, and Twitter along with the FITF, ODNI, and CISA held a meeting to discuss election issues. Chan attended, along with Director Krebs, Masterson, and Scully. Social media’s trust and safety on content-moderation teams were also present. The focus of the meeting was to discuss with the social-media companies the spread of “disinformation.”³⁹⁴

(6) Discovery obtained from LinkedIn contained 121 pages of emails between Chan, other FBI officials, and LinkedIn officials.³⁹⁵ Chan testified he has a similar set of communications with other social-media platforms.³⁹⁶

(7) The FBI communicated with social-media platforms using two alternative, encrypted channels, Signal and Teleporter.³⁹⁷

(8) For each election cycle, during the days immediately preceding and through election days, the FBI maintains a command center around the clock to receive and forward reports of “disinformation” and “misinformation.” The FBI requests that social-media platforms have people available to receive and process the reports at all times.³⁹⁸

(9) Before the Hunter Biden Laptop story breaking prior to the 2020 election on October 14, 2020, the FBI and other federal officials repeatedly warned industry participants to be alert for “hack and dump” or “hack and leak” operations.³⁹⁹

³⁹³ [Id. at 109–10]

³⁹⁴ [Id. at 151]

³⁹⁵ [Doc. No. 204-3]

³⁹⁶ Doc. No. 204-1 at 288]

³⁹⁷ [Id. at 295–296]

³⁹⁸ [Id. at 301]

³⁹⁹ [Doc. No. 204-1 at 172, 232–34]

Dehmlow also mentioned the possibility of “hack and dump” operations.⁴⁰⁰ Additionally, the prospect of “hack and dump” operations was repeatedly raised at the FBI-led meetings with FITF and the social-media companies, in addition to the Industry meetings.⁴⁰¹

Social-media platforms updated their policies in 2020 to provide that posting “hacked materials” would violate their policies. According to Chan, the impetus for these changes was the repeated concern about a 2016-style “hack-and-leak” operation.⁴⁰² Although Chan denies that the FBI urged the social-media platforms to change their policies on hacked material, Chan did admit that the FBI repeatedly asked the social-media companies whether they had changed their policies with regard to hacked materials⁴⁰³ because the FBI wanted to know what the companies would do if they received such materials.⁴⁰⁴

(10) Yoel Roth (“Roth”), the then-Head of Site Integrity at Twitter, provided a formal declaration on December 17, 2020, to the Federal Election Commission containing a contemporaneous account of the “hack-leak-operations” at the meetings between the FBI, other natural-security agencies, and social-media platforms.⁴⁰⁵ Roth’s declaration stated:

Since 2018, I have had regular meetings with the Office of the Director of National Intelligence, the Department of Homeland Security, the FBI, and industry peers regarding election security. During these weekly meetings, the federal law enforcement agencies communicated that they expected “hack-and-leak” operations by state actors might occur during the period shortly before the 2020 presidential election, likely in October. I was told in these meetings that the intelligence community expected that individuals associated with political campaigns would be subject to hacking attacks and that material obtained through those hacking attacks would likely be disseminated over social-media platforms, including Twitter. These expectations of hack-and-leak operations

⁴⁰⁰ [Id. at 175]

⁴⁰¹ [Id. at 177–78]

⁴⁰² [Id. at 205]

⁴⁰³ [Id. at 206]

⁴⁰⁴ [Id. at 249]

⁴⁰⁵ [Doc. No. 204-5, ¶¶ 10-11, at 2–3]

were discussed through 2020. *I also learned in these meetings that there were rumors that a hack-and-leak operation would involve Hunter Biden.*⁴⁰⁶

Chan testified that, in his recollection, Hunter Biden was not referred to in any of the CISA Industry meetings.⁴⁰⁷ The mention of “hack-and-leak” operations involving Hunter Biden is significant because the FBI previously received Hunter Biden’s laptop on December 9, 2019, and knew that the later-released story about Hunter Biden’s laptop was not Russian disinformation.⁴⁰⁸

In Scully’s deposition,⁴⁰⁹ he did not dispute Roth’s version of events.⁴¹⁰

Zuckerberg testified before Congress on October 28, 2020, stating that the FBI conveyed a strong risk or expectation of a foreign “hack-and-leak” operation shortly before the 2020 election and that the social-media companies should be on high alert. The FBI also indicated that if a trove of documents appeared, they should be viewed with suspicion.⁴¹¹

(11) After the Hunter Biden laptop story broke on October 14, 2020, Dehmlow refused to comment on the status of the Hunter Biden laptop in response to a direct inquiry from Facebook, although the FBI had the laptop in its possession since December 2019.⁴¹²

The Hunter Biden laptop story was censored on social media, including Facebook and Twitter.⁴¹³ Twitter blocked users from sharing links to the New York Post story and prevented users who had previously sent tweets sharing the story from sending new tweets until they deleted

⁴⁰⁶ (emphasis added)

⁴⁰⁷ [Doc. No. 204-1 at 213, 227–28].

⁴¹³ [Doc. No. Doc 204-5 at ¶ 17]

the previous tweet.⁴¹⁴ Further, Facebook began reducing the story’s distribution on the platform pending a third-party fact-check.⁴¹⁵

(12) Chan further testified that during the 2020 election cycle, the United States Government and social-media companies effectively limited foreign influence companies through information sharing and account takedowns.⁴¹⁶ Chan’s thesis also recommended standardized information sharing and the establishment of a national coordination center.

According to Chan, the FBI shares this information with social-media platforms as it relates to information the FBI believes should be censored.⁴¹⁷ Chan testified that the purpose and predictable effect of the tactical information sharing was that social-media platforms would take action against the content in accordance with their policies.⁴¹⁸ Additionally, Chan admits that during the 2020 election cycle, the United States Government engaged in information sharing with social-media companies.⁴¹⁹ The FBI also shared “indicators” with state and local government officials.⁴²⁰

Chan’s thesis includes examples of alleged Russian disinformation, which had a number of reactions and comments from Facebook users, including an anti-Hillary Clinton post, a secure-border post, a Black Lives Matter post, and a pro-Second Amendment post.⁴²¹

Chan also identified Russian-aligned websites on which articles were written by freelance journalists. A website called NADB, alleged to be Russian-generated, was also identified by the FBI, and suppressed by social-media platforms, despite such content being drafted and written by

⁴¹⁹ [Id. at 19]

⁴²⁰ [Id. at 50]

⁴²¹ [Id.]

American users on that site.⁴²² The FBI identified this site to the social-media companies that took action to suppress it.⁴²³

(13) “Domestic disinformation” was also flagged by the FBI for social-media platforms. Just before the 2020 election, information would be passed from other field offices to the FBI 2020 election command post in San Francisco. The information sent would then be relayed to the social-media platforms where the accounts were detected.⁴²⁴ The FBI made no attempt to distinguish whether those reports of election disinformation were American or foreign.⁴²⁵

Chan testified the FBI had about a 50% success rate in having alleged election disinformation taken down or censored by social-media platforms.⁴²⁶ Chan further testified that although the FBI did not tell the social-media companies to modify their terms of service, the FBI would “probe” the platforms to ask for details about the algorithms they were using⁴²⁷ and what their terms of service were.⁴²⁸

(14) Chan further testified the FBI identifies specific social-media accounts and URLs to be evaluated “one to five times a month”⁴²⁹ and at quarterly meetings.⁴³⁰ The FBI would notify the social-media platforms by sending an email with a secure transfer application within the FBI called a “Teleporter.” The Teleporter email contains a link for them to securely download the files from the FBI.⁴³¹ The emails would contain “different types of indicators,” including specific

⁴²² [Id. at 144–46]

⁴²³ [Doc. No. 204-1 at 141-43]

⁴²⁴ [Id. at 162]

⁴²⁵ [Id. at 163]

⁴²⁶ [Id. at 167]

⁴²⁷ [Id. at 88]

⁴²⁸ [Id. at 92]

⁴²⁹ [Id. at 96]

⁴³⁰ [Id. at 98]

⁴³¹ [Id.]

social-media accounts, websites, URLs, email accounts, and the like, that the FBI wanted the platforms to evaluate under their content-moderation policies.⁴³²

Most of the time, the emails flagging the misinformation would go to seven social-media platforms. During 2020, Chan estimated he sent out these emails from one to six times per month and in 2022, one to four times per month. Each email would flag a number that ranged from one to dozens of indicators.⁴³³ When the FBI sent these emails, it would request that the social-media platforms report back on the specific actions taken as to these indicators and would also follow up at the quarterly meetings.⁴³⁴

(15) At least eight FBI agents at the San Francisco office, including Chan, are involved in reporting disinformation to social-media platforms.⁴³⁵ In addition to FBI agents, a significant number of FBI officials from the FBI's Foreign Influence Task Force also participate in regular meetings with social-media platforms about disinformation.⁴³⁶

Chan testified that the FBI uses its criminal-investigation authority, national-security authority, the Foreign Intelligence Surveillance Act, the PATRIOT Act, and Executive Order 12333 to gather national security intelligence to investigate content on social media.⁴³⁷

Chan believes with a high degree of confidence that the FBI's identification of "tactical information" was accurate and did not misidentify accounts operated by American citizens.⁴³⁸ However, Plaintiffs identified tweets and trends on Twitter, such as #ReleasetheMemo in 2019, and indicated that 929,000 tweets were political speech by American citizens.⁴³⁹

⁴³⁷ [Id. at 111–12]

⁴³⁸ [Id. at 112]

⁴³⁹ [Doc. No. 204-2 at 71]

(16) Chan testified that he believed social-media platforms were far more aggressive in taking down disfavored accounts and content in the 2018 and 2020 election cycles.⁴⁴⁰ Chan further thinks that pressure from Congress, specifically the House Permanent Select Committee on Intelligence and the Senate Select Committee on Intelligence, resulted in more aggressive censorship policies.⁴⁴¹ Chan also stated that congressional hearings placed pressure on the social-media platforms.⁴⁴²

Chan further testified that Congressional staffers have had meetings with Facebook, Google/YouTube, and Twitter and have discussed potential legislation.⁴⁴³ Chan spoke directly with Roth of Twitter, Steven Slagle of Facebook, and Richard Salgado of Google, all of whom participated in such meetings.⁴⁴⁴

(17) Chan testified that 3,613 Twitter accounts and 825 Facebook accounts were taken down in 2018. Chan testified Twitter took down 422 accounts involving 929,000 tweets in 2019.⁴⁴⁵

(18) Chan testified that the FBI is continuing its efforts to report disinformation to social-media companies to evaluate for suppression and/or censorship.⁴⁴⁶ “Post-2020, we’ve never stopped...as soon as November 3 happened in 2020, we just pretty much rolled into preparing for 2022.”⁴⁴⁷

E. CISA Defendants⁴⁴⁸

The deposition of Brian Scully was taken on January 12, 2023, as part of the injunction-related discovery in this matter.

(1) The CISA regularly meets with social-media platforms in several types of standing meetings. Scully is the chief of CISA’s Mis, Dis and Malinformation Team (“MDM Team”). Prior to President Biden taking office, the MDM Team was known as the “Countering Foreign Influence Task Force (“CFITF”).⁴⁴⁹ Protentis is the “Engagements Lead” for the MDM Team, and she is in charge of outreach and engagement to key stakeholders, interagency partners, and private sector partners, which includes social-media platforms. Scully performed Protentis’s duties while she was on maternity leave.⁴⁵⁰ Both Scully and Protentis have done extended detail at the National Security Council, where they work on misinformation and disinformation issues.⁴⁵¹

(2) Scully testified that during 2020, the MDM Team did “switchboard work” on behalf of election officials. “Switchboarding” is a disinformation-reporting system provided by CISA that allows state and local election officials to identify something on social media they deem to be disinformation aimed at their jurisdiction. The officials would then forward the information to CISA, which would in turn share the information with the social-media companies.⁴⁵²

The main idea, according to Scully, is that the information would be forwarded to social-media platforms, which would make decisions on the content based on their policies.⁴⁵³ Scully further testified he decided in late April or early May 2022 not to perform switchboarding in 2022.

⁴⁴⁸ CISA Defendants consist of the Cybersecurity and Infrastructure Security Agency (“CISA”), Jen Easterly (“Easterly”), Kim Wyman (“Wyman”), Lauren Protentis (“Protentis”), Geoffrey Hale (“Hale”), Allison Snell (“Snell”), Brian Scully (“Scully”), the Department of Homeland Security (“DHS”), Alejandro Mayorkas (“Mayorkas”), Robert Silvers (“Silvers”), and Samantha Vinograd (“Vinograd”).

⁴⁴⁹ [Doc. No. 209-1 at 12]

⁴⁵⁰ [Id. at 18–20]

⁴⁵¹ [Id. at 19]

⁴⁵² [Id. at 16–17]

⁴⁵³ [Id. at 17]

However, the CISA website states the MDM Team serves as a “switchboard for routing disinformation concerns to social-media platforms.”⁴⁵⁴ The switchboarding activities began in 2018.⁴⁵⁵

(3) The MDM Team continues to communicate regularly with social-media platforms in two different ways. The first way is called “Industry” meetings. The Industry meetings are regular sync meetings between government and industry, including social-media platforms.⁴⁵⁶ The second type of communication involves the MDM Team reviewing regular reports from social-media platforms about changes to their censorship policies or to their enforcement actions on censorship.⁴⁵⁷

(4) The Industry meetings began in 2018 and continue to this day. These meetings increase in frequency as each election nears. In 2022, the Industry meetings were monthly but increased to biweekly in October 2022.⁴⁵⁸

Government participants in the USG-Industry meetings are CISA, the Department of Justice (“DOJ”), ODNI, and the Department of Homeland Security (“DHS”). CISA is typically represented by Scully and Hale. Scully’s role is to oversee and facilitate the meetings.⁴⁵⁹ Wyman, Snell, and Protentis also participate in the meetings on behalf of CISA.⁴⁶⁰ On behalf of the FBI, FITF Chief Dehmlow, Chan, and others from different parts of the FBI participate.⁴⁶¹

In addition to the Industry meetings, CISA hosts at least two “planning meetings:” one between CISA and Facebook and an interagency meeting between CISA and other participating

⁴⁵⁹ [Id. at 25]

⁴⁶⁰ [Id. at 28]

⁴⁶¹ [Id. at 29]

federal agencies.⁴⁶² The social-media platforms attending the industry meetings include Facebook, Twitter, Microsoft, Google/YouTube, Reddit, LinkedIn, and sometimes the Wikipedia Foundation.⁴⁶³ At the Industry meetings, participants discuss concerns about misinformation and disinformation. The federal officials report their concerns over the spread of disinformation. The social-media platforms in turn report to federal officials about disinformation trends, share high-level trend information, and report the actions they are taking.⁴⁶⁴ Scully testified that the specific discussion of foreign-originating information is ultimately targeted at preventing domestic actors from engaging in this information.⁴⁶⁵

(5) CISA has established relationships with researchers at Stanford University, the University of Washington, and Graphika.⁴⁶⁶ All three are involved in the Election Integrity Partnership (“EIP”).⁴⁶⁷

When the EIP was starting up, CISA interns came up with the idea of having some communications with the EIP. CISA began having communications with the EIP, and CISA connected the EIP with the Center for Internet Security (“CIS”). The CIS is a CISA-funded, non-profit that channels reports of disinformation from state and local government officials to social-media platforms. The CISA interns who originated the idea of working with the EIP also worked for the Stanford Internet Observatory, another part of the EIP. CISA had meetings with Stanford Internet Observatory officials, and eventually both sides decided to work together.⁴⁶⁸ The “gap”

⁴⁶² [Id. at 36–37]

⁴⁶³ [Id. at 39]

⁴⁶⁴ [Id. at 39–41]

⁴⁶⁵ [Id. at 41]

⁴⁶⁶ [Id. at 46, 48]

⁴⁶⁷ [Id. at 48]

⁴⁶⁸ [Id. at 49–52]

that the EIP was designed to fill concerned state and local officials' lack of resources to monitor and report on disinformation that affects their jurisdictions.⁴⁶⁹

(6) The EIP continued to operate during the 2022 election cycle. At the beginning of the election cycle, the EIP gave Scully and Hale, on behalf of CISA, a briefing in May or June of 2022.⁴⁷⁰ In the briefing, DiResta walked through what the plans were for 2022 and some lessons learned from 2020. The EIP was going to support state and local election officials in 2022.

(7) The CIS is a non-profit that oversees the Multi-State Information Sharing and Analysis Center ("MS-ISAC") and the Election Infrastructure Information Sharing and Analysis Center ("EI-ISAC"). Both MS-ISAC and EI-ISAC are organizations of state and/or local government officials created for the purpose of information sharing.⁴⁷¹

CISA funds the CIS through a series of grants. CISA also directs state and local officials to the CIS as an alternative route to "switchboarding."⁴⁷² CISA connected the CIS with the EIP because the EIP was working on the same mission,⁴⁷³ and it wanted to make sure they were all connected. Therefore, CISA originated and set up collaborations between local government officials and CIS and between the EIP and CIS.

(8) CIS worked closely with CISA in reporting misinformation to social-media platforms. CIS would receive the reports directly from election officials and would forward this information to CISA. CISA would then forward the information to the applicable social-media platforms. CIS later began to report the misinformation directly to social-media platforms.⁴⁷⁴

⁴⁶⁹ [Id. at 57]

⁴⁷⁰ [Id. at 53–54]

⁴⁷¹ [Id. at 59–61]

⁴⁷² [Id. at 61–62]

⁴⁷³ [Id. at 62–63]

⁴⁷⁴ [Id. at 63–64]

The EIP also reported misinformation to social-media platforms. CISA served as a mediating role between CIS and EIP to coordinate their efforts in reporting misinformation to the platforms. There were also direct email communications between the EIP and CISA about reporting misinformation.⁴⁷⁵ When CISA reported misinformation to social-media platforms, CISA would generally copy the CIS, who, as stated above, was coordinating with the EIP.⁴⁷⁶

(9) Stamos and DiResta of the Stanford Internet Observatory briefed Scully about the EIP report, “The Long Fuse,”⁴⁷⁷ in late Spring or early Summer of 2021. Scully also reviewed copies of that report. Stamos and DiResta also have roles in CISA: DiResta serves as “Subject Matter Expert” for CISA’s Cybersecurity Advisory Committee, MDM Subcommittee, and Stamos serves on the CISA Cybersecurity Advisory Committee, as does Kate Starbird (“Starbird”) of the University of Washington.⁴⁷⁸ Stamos identified the EIP’s “partners in government” as CISA, DHS, and state and local officials.⁴⁷⁹ Also, according to Stamos, the EIP targeted “large following political partisans who were spreading misinformation intentionally.”⁴⁸⁰

(10) CISA’s Masterson was also involved in communicating with the EIP.⁴⁸¹ Masterson and Scully questioned EIP about their statements on election-related information. Sanderson left CISA in January 2021, was a fellow at the Stanford Internet Observatory, and began working for Microsoft in early 2022.⁴⁸²

⁴⁷⁵ [Id. at 63–66]

⁴⁷⁶ [Id. at 67–68]

⁴⁷⁷ [Doc. 209-2]

⁴⁷⁸ [Doc. No. 209-1, at 72, 361; Doc. No. 212-36 at 4 (Jones Deposition-SEALED DOCUMENT)]

⁴⁷⁹ [Doc. No. 209-4 at 4]

⁴⁸⁰ [Scully depo. Exh. at 17]

⁴⁸¹ [Doc. No. 209-1 at 76]

⁴⁸² [Id. at 88–89]

(11) CISA received misinformation principally from two sources: the CIS directly from state and local election officials; and information sent directly to a CISA employee.⁴⁸³ CISA shared information with the EIP and the CIS.⁴⁸⁴

(12) CISA did not do an analysis to determine what percentage of misinformation was “foreign derived.” Therefore, CISA forwards reports of information to social-media platforms without determining whether they originated from foreign or domestic sources.⁴⁸⁵

(13) The Virality Project was created by the Stanford Internet Observatory to mimic the EIP for COVID.⁴⁸⁶ As previously stated, Stamos and DiResta of the Stanford Internet Observatory were involved in the Virality Project. Stamos gave Scully an overview of what they planned to do with the Virality Project, similar to what they did with the EIP.⁴⁸⁷ Scully also had conversations with DiResta about the Virality Project.⁴⁸⁸ DiResta noted the Virality Project was established on the heels of the EIP, following its success in order to support government health officials’ efforts to combat misinformation targeting COVID-19 vaccines.⁴⁸⁹

(14) According to DiResta, the EIP was designed to “get around unclear legal authorities, including very real First Amendment questions” that would arise if CISA or other government agencies were to monitor and flag information for censorship on social media.⁴⁹⁰

(15) The CIS coordinated with the EIP regarding online misinformation and reported it to CISA. The EIP was using a “ticketing system” to track misinformation.⁴⁹¹ Scully asked the social-media platforms to report back on how they were handling reports of misinformation and

⁴⁸³ [Id. at 119–20]

⁴⁸⁴ [Id. at 120–21]

⁴⁸⁵ [Id. at 122–23]

⁴⁸⁶ [Id. at 134]

⁴⁸⁷ [Id. at 134–36]

⁴⁸⁸ [Id. at 139]

⁴⁸⁹ [Doc. No. 209-5 at 7]

⁴⁹⁰ [Id. at 4]

⁴⁹¹ [Doc. No. 209-1 at 159]

disinformation received from CISA.⁴⁹² CISA maintained a “tracking spreadsheet” of its misinformation reports to social-media platforms during the 2020 election cycle.⁴⁹³

(16) At least six members of the MDM team, including Scully, “took shifts” in the “switchboarding” operation reporting disinformation to social-media platforms; the others were Chad Josiah (“Josiah”), Rob Schaul (“Schaul”), Alex Zaheer (“Zaheer”), John Stafford (“Stafford”), and Pierce Lowary (“Lowary”). Lowary and Zaheer were simultaneously serving as interns for CISA and working for the Stanford Internet Observatory, which was the operating the EIP.⁴⁹⁴ Therefore, Zaheer and Lowary were simultaneously engaged in reporting misinformation to social-media platforms on behalf of both CISA and the EIP.⁴⁹⁵ Zaheer and Lowary were also two of the four Stanford interns who came up with the idea for the EIP.⁴⁹⁶

(17) The CISA switchboarding operation ramped up as the election drew near. Those working on the switchboarding operation worked tirelessly on election night.⁴⁹⁷ They would also “monitor their phones” for disinformation reports even during off hours so that they could forward disinformation to the social-media platforms.⁴⁹⁸

(18) As an example, Zaheer, when switchboarding for CISA, forwarded supposed misinformation to CISA’s reporting system because the user had claimed “mail-in voting is insecure” and that “conspiracy theories about election fraud are hard to discount.”⁴⁹⁹

CISA’s tracking spreadsheet contains at least eleven entries of switchboarding reports of misinformation that CISA received “directly from EIP” and forwarded to social-media platforms

⁴⁹² [Doc. No. 209-6 at 11]

⁴⁹⁹ [Doc. No. 209-6 at 61–62]

to review under their policies.⁵⁰⁰ One of these reports was reported to Twitter for censorship because EIP “saw an article on the Gateway Pundit” run by Plaintiff Jim Hoft.⁵⁰¹

(19) Scully admitted that CISA engaged in “informal fact checking” to determine whether a claim was true or not.⁵⁰² CISA would do its own research and relay statements from public officials to help debunk postings for social-media platforms. In debunking information, CISA apparently always assumed the government official was a reliable source; CISA would not do further research to determine whether the private citizen posting the information was correct or not.⁵⁰³

(20) CISA’s switchboarding activities reported private and public postings.⁵⁰⁴ Social-media platforms responded swiftly to CISA’s reports of misinformation.⁵⁰⁵

(21) CISA, in its interrogatory responses, disclosed five sets of recurring meetings with social-media platforms that involved discussions of misinformation, disinformation, and/or censorship of speech on social media.⁵⁰⁶ CISA also had bilateral meetings between CISA and the social-media companies.⁵⁰⁷

(22) Scully does not recall whether “hack and leak” or “hack and dump” operations were raised at the Industry meetings, but does not deny it either.⁵⁰⁸ However, several emails confirm that “hack and leak” operations were on the agenda for the Industry meeting on September 15, 2020,⁵⁰⁹ and July 15, 2020.⁵¹⁰

⁵⁰⁰ [Doc. No. 214-35 at 5–6, Column C]

⁵⁰¹ [Id. at 4–5, Column F, Line 94]

⁵⁰² CISA also became the “ministry of truth.”

⁵⁰³ [Doc. No. 209-1 at 220–22]

⁵⁰⁴ [Doc. No. 209-7 at 45–46]

⁵⁰⁵ [Doc. No. 209-1 at 291–94; 209–49]

⁵⁰⁷ [Doc. No. 209-1 at 241]

⁵⁰⁸ [Id. at 236–37]

⁵⁰⁹ [Doc. No. 209-13 at 1]

⁵¹⁰ [Doc. No. 209-14 at 16]

(23) In the spring and summer of 2022, CISA’s Protentis requested that social-media platforms prepare a “one-page” document that sets forth their content-moderation rules⁵¹¹ that could then be shared with election officials—and which also included “steps for flagging or escalating MDM content” and how to report misinformation.⁵¹² Protentis referred to the working group (which included Facebook and CISA’s Hale) as “Team CISA.”⁵¹³

(24) The Center for Internet Security continued to report misinformation to social-media platforms during the 2022 election cycle.⁵¹⁴

(25) CISA has teamed up directly with the State Department’s Global Engagement Center (“GEC”) to seek review of social-media content.⁵¹⁵ CISA also flagged for review parody and joke accounts.⁵¹⁶ Social-media platforms report to CISA when they update their content-moderation policies to make them more restrictive.⁵¹⁷ CISA publicly stated that it is expanding its efforts to fight disinformation-hacking in the 2024 election cycle.⁵¹⁸

(26) A draft copy of the DHS’s “Quadrennial Homeland Security Review,” which outlines the department’s strategy and priorities in upcoming years, states that the department plans to target “inaccurate information” on a wide range of topics, including the origins of the COVID-19 pandemic, the efficacy of COVID-19 vaccines, racial justice, the United States’ withdrawal from Afghanistan, and the nature of the United States’ support of Ukraine.⁵¹⁹

⁵¹¹ [Doc. No. 209-14]

⁵¹² [Doc. No. 209-15 at 41, 44–45]

⁵¹³ [Doc. No. 209-15 at 39]

⁵¹⁸ [Doc. No. 209-20 at 1–2]

⁵¹⁹ [Doc. No. 209-23 at 1–4]

(27) Scully also testified that CISA engages with the CDC and DHS to help them in their efforts to stop the spread of disinformation. The examples given were about the origins of the COVID-19 pandemic and Russia’s invasion of Ukraine.⁵²⁰

(28) On November 21, 2021, CISA Director Easterly reported that CISA is “beefing up its misinformation and disinformation team in wake of a diverse presidential election a proliferation of misleading information online.”⁵²¹ Easterly stated she was going to “grow and strengthen” CISA’s misinformation and disinformation team. She further stated, “We live in a world where people talk about alternative facts, post-truth, which I think is really, really dangerous if people get to pick their own facts.”⁵²²

Easterly also views the word “infrastructure” very expansively, stating, “[W]e’re in the business of protecting critical infrastructure, and the most critical is our ‘cognitive infrastructure.’”⁵²³ Scully agrees with the assessment that CISA has an expansive mandate to address all kinds of misinformation that may affect control and that could indirectly cause national security concerns.⁵²⁴

On June 22, 2022, CISA’s cybersecurity Advisory Committee issued a Draft Report to the Director, which broadened “infrastructure” to include “the spread of false and misleading information because it poses a significant risk to critical function, like elections, public health, financial services and emergency responses.”⁵²⁵

⁵²⁰ [Doc. No. 209-1 at 323–25]

⁵²¹ [Doc. No. 209-1 at 335–36]

⁵²³ [Id.]

⁵²⁴ [Doc. No. 209-1 at 341]

⁵²⁵ [Doc. No. 209-25 at 1]

(29) In September 2022, the CIS was working on a “portal” for government officials to report election-related misinformation to social-media platforms.⁵²⁶ That work continues today.⁵²⁷

F. State Department Defendants⁵²⁸

1. The GEC

(1) Daniel Kimmage is the Principal Deputy Coordinator of the State Department’s Global Engagement Center (“GEC”).⁵²⁹ The GEC’s front office and senior leadership meets with social-media platforms every few months, sometimes quarterly.⁵³⁰ The meetings focus on the “tools and techniques” of stopping the spread of disinformation on social media, but they rarely discuss specific content that is posted.⁵³¹ Additionally, GEC has a “Technology Engagement Team” (“TET”) that also meets with social-media companies. The TET meets more frequently than the GEC.⁵³²

(2) Kimmage recalls two meetings with Twitter. At these meetings, the GEC would bring between five and ten people including Kimmage, one or more deputy coordinators, and team chiefs from the GEC and working-level staff with relevant subject-matter expertise.⁵³³ The GEC staff would meet with Twitter’s content-mediation teams, and the GEC would provide an overview of what it was seeing in terms of foreign propaganda and information. Twitter would then discuss similar topics.⁵³⁴

⁵²⁶ [Doc. No. 210-22]

⁵²⁷ [Id.]

⁵²⁸ The State Department Defendants consist of the United States Department of State, Leah Bray (“Bray”), Daniel Kimmage (“Kimmage”), and Alex Frisbie (“Frisbie”).

⁵²⁹ Kimmage’s deposition was taken and filed as [Doc. No. 208-1].

⁵³⁰ [Doc. No. 208-1 at 29, 32]

⁵³¹ [Id. at 30]

⁵³² [Id. at 37]

⁵³³ [Id. at 130–31]

⁵³⁴ [Id. at 133–36]

(3) The GEC’s senior leadership also had similar meetings with Facebook and Google. Similar numbers of people were brought to these meetings by GEC, and similar topics were discussed. Facebook and Google also brought their content-moderator teams.⁵³⁵

(4) Samaruddin Stewart (“Stewart”) was the GEC’s Senior Advisor who was a permanent liaison in Silicon Valley for the purpose of meeting with social-media platforms about disinformation. Stewart set up a series of meetings with LinkedIn to discuss “countering disinformation” and to explore shared interests and alignment of mutual goals regarding the challenge.⁵³⁶

(5) The GEC also coordinated with CISA and the EIP. Kimmage testified that the GEC had a “general engagement” with the EIP.⁵³⁷

(6) On October 17, 2022, at an event at Stanford University, Secretary of State Anthony Blinken mentioned the GEC and stated that the State Department was “engaging in collaboration and building partnerships” with institutions like Stanford to combat the spread of propaganda.⁵³⁸ Specifically, he stated, “We have something called the Global Engagement Center that’s working on this every single day.”⁵³⁹

(7) Like CISA, the GEC works through the CISA-funded EI-ISAC and works closely with the Stanford Internet Observatory and the Virality Project.

⁵³⁵ [Id. at 141–43]

⁵³⁶ [Id. at 159–60]

⁵³⁷ [Id. at 214–215]. The details surrounding the EIP are described in II 6(5)(6)(7)(8)(9)(10)(15) and (16). Scully Ex. 1 details EIPS work carried out during the 2020 election.

⁵³⁸ [Doc. No. 208-17 at 5]

⁵³⁹ [Id.]

2. The EIP

(8) The EIP is partially-funded by the United States National Science Foundation through grants.⁵⁴⁰ Like its work with CISA, the EIP, according to DiResta, was designed to “get around unclear legal authorities, including very real First Amendment questions” that would arise if CISA or other government agencies were to monitor and flag information for censorship on social media.⁵⁴¹

The EIP’s focus was on understanding misinformation and disinformation in the social-media landscape, and it successfully pushed social-media platforms to adopt more restrictive policies about election-related speech in 2020.⁵⁴²

The government agencies that work with and submit alleged disinformation to the EIP are CISA, the State Department Global Engagement Center, and the Elections Infrastructure Information Sharing and Analysis Center.⁵⁴³

(9) The EIP report further states that the EIP used a tiered model based on “tickets” collected internally and from stakeholders. The tickets also related to domestic speech by American citizens,⁵⁴⁴ including accounts belonging to media outlets, social-media influencers, and political figures.⁵⁴⁵ The EIP further emphasized that it wanted greater access to social-media platform’s internal data and recommended that the platforms increase their enforcement of censorship policies.⁵⁴⁶

⁵⁴⁰ [Id. at 17]

⁵⁴¹ [Doc. No. 209-5 at 4]

⁵⁴² [Doc. No. 209-5, Exh. 1; Ex. 4 at 7, Audio Tr. 4]

⁵⁴³ [Doc. No. 209-2 at 30]

⁵⁴⁴ [Id. at 11]

⁵⁴⁵ [Id. at 12]

⁵⁴⁶ [Id. at 14]

The EIP was formed on July 26, 2020, 100 days before the November 2020 election.⁵⁴⁷ On July 9, 2020, the Stanford Internet Observatory presented the EIP concept to CISA. The EIP team was led by Research Manager DiResta, Director Stamos and the University of Washington’s Starbird.⁵⁴⁸

(10) EIP’s managers both report misinformation to platforms and communicate with government partners about their misinformation reports.⁵⁴⁹ EIP team members were divided into tiers of on-call shifts. Each shift was four hours long and led by one on-call manager. The shifts ranged from five to twenty people. Normal scheduled shifts ran from 8:00 a.m. to 8:00 p.m., ramping up to sixteen to twenty hours a day during the week of the election.⁵⁵⁰

(11) Social-media platforms that participated in the EIP were Facebook, Instagram, Google/YouTube, Twitter, TikTok, Reddit, Nextdoor, Discord, and Pinterest.⁵⁵¹

(12) In the 2020 election cycle, the EIP processed 639 “tickets,” 72% of which were related to delegitimizing the election results.⁵⁵² Overall, social-media platforms took action on 35% of the URLs reported to them.⁵⁵³ One “ticket” could include an entire idea or narrative and was not always just one post.⁵⁵⁴ Less than 1% of the tickets related to “foreign interference.”⁵⁵⁵

(13) The EIP found that the Gateway Pundit was one of the top misinformation websites, allegedly involving the “exaggeration” of the input of an issue in the election process. The EIP did

⁵⁵⁵ [Id. at 53]

not say that the information was false.⁵⁵⁶ The EIP Report cites The Gateway Pundit forty-seven times.⁵⁵⁷

(14) The GEC was engaging with the EIP and submitted “tickets.”⁵⁵⁸

(15) The tickets and URLs encompassed millions of social-media posts, with almost twenty-two million posts on Twitter alone.⁵⁵⁹ The EIP sometimes treats as “misinformation” truthful reports that the EIP believes “lack broader context.”⁵⁶⁰

(16) The EIP stated “influential accounts on the political right...were responsible for the most widely spread of false or misleading information in our data set.”⁵⁶¹ Further, the EIP stated the twenty-one most prominent report spreaders on Twitter include political figures and organizations, partisan media outlets, and social-media stars. Specifically, the EIP stated, “All 21 of the repeat spreaders were associated with conservative or right-wing political views and support of President Trump.”⁵⁶² The Gateway Pundit was listed as the second-ranked “Repeat Spreader of Election Misinformation” on Twitter. During the 2020 election cycle, the EIP flagged The Gateway Pundit in twenty-five incidents with over 200,000 retweets.⁵⁶³ The Gateway Pundit ranked above Donald Trump, Eric Trump, Breitbart News, and Sean Hannity.⁵⁶⁴

The Gateway Pundit’s website was listed as the domain cited in the most “incidents”; its website content was tweeted by others in 29,209 original tweets and 840,740 retweets.⁵⁶⁵ The Gateway Pundit ranked above Fox News, the New York Post, the New York Times, and the

Washington Post.⁵⁶⁶ The EIP report also notes that Twitter suspended The Gateway Pundit’s account on February 6, 2021, and it was later de-platformed entirely.⁵⁶⁷

(17) The EIP notes that “during the 2020 election, all of the major platforms made significant changes to election integrity policies—policies that attempted to slow the spread of specific narratives and tactics that could ‘potentially mislead or deceive the public.’”⁵⁶⁸ The EIP was not targeting foreign disinformation, but rather “domestic speakers.”⁵⁶⁹ The EIP also indicated it would continue its work in future elections.⁵⁷⁰

(18) The EIP also called for expansive censorship of social-media speech into other areas such as “public health.”⁵⁷¹

(19) The EIP stated that it “united government, academic, civil society, and industry, analyzing across platforms to address misinformation in real time.”⁵⁷²

(20) When asked whether the targeted information was domestic, Stamos answered, “It is all domestic, and the second point on the domestic, a huge part of the problem is well-known influences... you... have a relatively small number of people with very large followings who have the ability to go and find a narrative somewhere, pick it out of obscurity and ... harden it into these narratives.”⁵⁷³

Stamos further stated:

We have set up this thing called the Election Integrity Partnership, so we went and hired a bunch of students. We’re working with the University of Washington, Graphika, and DFR Lab and the vast, vast majority we see we believe is domestic. And so, I think a much bigger issue for the platforms is elite disinformation. The staff that

⁵⁷³ [Doc. No. 276-1 at 12]

is being driven by people who are verified that are Americans who are using their real identities.⁵⁷⁴

(21) Starbird of the University of Washington, who is on a CISA subcommittee and an EIP participant, also verified the EIP was targeting domestic speakers, stating:

Now fast forward to 2020, we saw a very different story around disinformation in the U.S. election. It was largely domestic coming from inside the United States... Most of the accounts perpetrating this... they're authentic accounts. They were often blue check and verified accounts. They were pundits on cable television shows that were who they said they were ... a lot of major spreaders were blue check accounts, and it wasn't entirely coordinated, but instead, it was largely sort of cultivated and even organic in places with everyday people creating and spreading disinformation about the election.⁵⁷⁵

3. The Virality Project

(22) The Virality Project targeted domestic speakers' alleged disinformation relating to the COVID-19 vaccines.⁵⁷⁶ The Virality Project's final report, dated April 26, 2022, lists DiResta as principal Executive Director and lists Starbird and Masterson as contributors.⁵⁷⁷

According to the Virality Project, "vaccine mis- and disinformation was largely driven by a cast of recurring [sic] actors including long-standing anti-vaccine influencers and activists, wellness and lifestyle influence, pseudo medical influencers, conspiracy theory influencers, right-leaning political influencers, and medical freedom influencers."⁵⁷⁸

The Virality Project admits the speech it targets is primarily domestic, stating "Foreign ... actor's reach appeared to be far less than that of domestic actors."⁵⁷⁹ The Virality Project also calls for more aggressive censorship of COVID-19 misinformation, calls for more federal agencies to

⁵⁷⁴ [Id.]

⁵⁷⁵ [Doc. No. 276-1 at 42]

⁵⁷⁶ [Doc. No. 209-3]; Memes, Magnets, Microchips, Narrative Dynamics Around COVID-19 Vaccines.

⁵⁷⁷ [Doc. No. 209-3 at 4]

⁵⁷⁸ [Id. at 9]

⁵⁷⁹ [Id.]

be involved through “cross-agency collaboration,”⁵⁸⁰ and calls for a “whole-of-society response.”⁵⁸¹ Just like the EIP, the Virality Project states that it is “multistakeholder collaboration” that includes “government entities” among its key stakeholders.⁵⁸² The Virality Project targets tactics that are not necessarily false, including hard-to-verify content, alleged authorization sources, organized outrage, and sensationalized/misleading headlines.⁵⁸³

(23) Plaintiff Hines of the Health Freedom Louisiana was flagged by the Virality Project to be a “medical freedom influencer” who engages in the “tactic” of “organized outrage” because she created events or in-person gatherings to oppose mask and vaccine mandates in Louisiana.⁵⁸⁴

(24) The Virality Project also acknowledges that government “stakeholders,” such as “federal health agencies” and “state and local public health officials,” were among those that “provided tips” and “requests to access specific incidents and narratives.”⁵⁸⁵

(25) The Virality Project also targeted the alleged COVID-19 misinformation for censorship before it could go viral. “Tickets also enabled analysts to qualify tag platform or health sector partners to ensure their situational awareness of high-engagement material that appeared to be going viral, so that those partners could determine whether something might merit a rapid public or on-platform response.”⁵⁸⁶

(26) The Virality Project flagged the following persons and/or organizations as spreaders of misinformation:

- i. Jill Hines and Health Freedom of Louisiana,⁵⁸⁷
- ii. One America News,⁵⁸⁸

- ix. Robert F. Kennedy, Jr.;⁵⁹⁵
- x. Dr. Simone Gold and America’s Frontline Doctors; and⁵⁹⁶
- xi. Dr. Joyce Mercola.⁵⁹⁷

(27) The Virality Project recommends that the federal government implement a Misinformation and Disinformation Center of Excellence, housed within the federal government, which would centralize expertise on mis/disinformation within the federal government at CISA.⁵⁹⁸

III. LAW AND ANALYSIS

A. Preliminary Injunction Standard

An injunction is an extraordinary remedy never awarded of right. *Benisek v. Lamone*, 138 U.S. 1942, 1943 (2018). In each case, the courts must balance the competing claims of injury and must consider the effect on each party of the granting or withholding of the requested relief. *Winter v. Nat. Res. Def. Council, Inc.*, 555 U. S. 7, 24, 129 S. Ct. 365 (2008).

The standard for an injunction requires a movant to show: (1) the substantial likelihood of success on the merits; (2) that he is likely to suffer irreparable harm in the absence of an injunction; (3) that the balance of equities tips in his favor; and (4) that an injunction is in the public interest. *Benisek*, 138 U.S. at 1944. The party seeking relief must satisfy a cumulative burden of proving

⁵⁸⁹ [Id.]

⁵⁹⁰ [Id. at 54, 57, 49, 50]

⁵⁹¹ [Id. at 57]

⁵⁹² [Id. at 91]

⁵⁹⁴ [Id.]

⁵⁹⁵ [Id.]

⁵⁹⁶ [Id. at 87–88]

⁵⁹⁷ [Id. at 87]

⁵⁹⁸ [Id. at 150]

each of the four elements enumerated before an injunction can be granted. *Clark v. Prichard*, 812 F.2d 991, 993 (5th Cir. 1987). None of the four prerequisites has a quantitative value. *State of Tex. v. Seatrain Int'l, S.A.*, 518 F.2d 175, 180 (5th Cir. 1975).

B. Analysis

As noted above, Plaintiffs move for a preliminary injunction against Defendants' alleged violations of the Free Speech Clause of the First Amendment. Plaintiffs assert that they are likely to succeed on the merits of their First Amendment claims because Defendants have significantly encouraged and/or coerced social-media companies into removing protected speech from social-media platforms. Plaintiffs also argue that failure to grant a preliminary injunction will result in irreparable harm because the alleged First Amendment violations are continuing and/or there is a substantial risk that future harm is likely to occur. Further, Plaintiffs maintain that the equitable factors and public interest weigh in favor of protecting their First Amendment rights to freedom of speech. Finally, Plaintiffs move for class certification under Federal Rule of Civil Procedure 23.

In response, Defendants maintain that Plaintiffs are unlikely to succeed on the merits for a myriad of reasons. Defendants also maintain that Plaintiffs lack Article III standing to bring the claims levied herein, that Plaintiffs have failed to show irreparable harm because the risk of future injury is low, and that the equitable factors and public interests weigh in favor of allowing Defendants to continue enjoying permissible government speech.

Each argument will be addressed in turn below.

1. Plaintiffs' Likelihood of Success on the Merits

For the reasons explained herein, the Plaintiffs are likely to succeed on the merits of their First Amendment claim against the White House Defendants, Surgeon General Defendants, CDC Defendants, FBI Defendants, NIAID Defendants, CISA Defendants, and State Department

Defendants. In ruling on a motion for Preliminary Injunction, it is not necessary that the applicant demonstrate an absolute right to relief. It need only establish a probable right. *West Virginia Highlands Conservancy v. Island Creek Coal Co.*, 441 F.2d 232 (4th Cir. 1971). The Court finds that Plaintiffs here have done so.

a. Plaintiffs' First Amendment Claims

The Free Speech Clause prohibits only governmental abridgment of speech. It does not prohibit private abridgment of speech. *Manhattan Community Access Corporation v. Halleck*, 139 S. Ct. 1921, 1928 (2019). The First Amendment, subject only to narrow and well-understood exceptions, does not countenance governmental control over the content of messages expressed by private individuals. *Turner Broadcasting System, Inc. v. F.C.C.*, 512 U.S. 622, 641 (1994). At the heart of the First Amendment lies the principle that each person should decide for himself or herself the ideas and beliefs deserving of expression, consideration, and adherence. *Id.* Government action, aimed at the suppression of particular views on a subject that discriminates on the basis of viewpoint, is presumptively unconstitutional. The First Amendment guards against government action “targeted at specific subject matter,” a form of speech suppression known as “content-based discrimination.” *National Rifle Association of America v. Cuomo*, 350 F. Supp. 3d 94, 112 (N.D. N.Y. 2018). The private party, social-media platforms are not defendants in the instant suit, so the issue here is not whether the social-media platforms are government actors,⁵⁹⁹ but whether the government can be held responsible for the private platforms’ decisions.

Viewpoint discrimination is an especially egregious form of content discrimination. The government must abstain from regulating speech when the specific motivating ideology or the perspective of the speaker is the rationale for the restriction. *Rosenberger v. Rectors and Visitors*

⁵⁹⁹ This is a standard that requires the private action to be “fairly attributable to the state.” *Lugar v. Edmondson Oil Co.*, 457 U.S. 922 (1982).

of University of Virginia, 515 U.S. 819, 829 (1995). Strict scrutiny is applied to viewpoint discrimination. *Simon & Schuster, Inc. v. Members of the New York State Crime Victim's Board*, 505 U.S. 105 (1991). The government may not grant the use of a forum to people whose views it finds acceptable, but deny use to those wishing to express less favored or more controversial views. *Police Department of Chicago v. Moseley*, 408 U.S. 92, 96 (1972).

If there is a bedrock principal underlying the First Amendment, it is that the government may not prohibit the expression of an idea simply because society finds the idea itself offensive or disagreeable. *Matal v. Tam*, 137 S. Ct. 1744, 1763 (2017); *see also R.A.V. v. City of St. Paul*, 505 U.S. 377 (1996). The benefit of any doubt must go to protecting rather than stifling speech. *Citizens United v. Federal Election Commission*, 130 S. Ct. 876, 891 (2010).

i. Significant Encouragement and Coercion

To determine whether Plaintiffs are substantially likely to succeed on the merits of their First Amendment free speech claim, Plaintiffs must prove that the Federal Defendants either exercised coercive power or exercised such significant encouragement that the private parties' choice must be deemed to be that of the government. Additionally, Plaintiffs must prove the speech suppressed was "protected speech." The Court, after examining the facts, has determined that some of the Defendants either exercised coercive power or provided significant encouragement, which resulted in the possible suppression of Plaintiffs' speech.

The State (i.e., the Government) can be held responsible for a private decision only when it has exercised coercive power or has provided such "significant encouragement," either overt or covert, that the choice must be deemed to be that of the State. Mere approval or acquiescence in the actions of a private party is not sufficient to hold the state responsible for those actions. *Blum v. Yaretsky*, 457 U.S. 991, 1004 (1982); *Rendell-Baker v. Kohn*, 457 U.S. 830, 1004–05 (1982);

National Broadcasting Co. Inc v. Communications Workers of America, Afl-Cio, 860 F.2d 1022 (11th Cir. 1988); *Focus on the Family v. Pinellas Suncoast Transit Authority*, 344 F.3d 1213 (11th Cir. 2003); *Brown v. Millard County*, 47 Fed. Appx. 882 (10th Cir. 2002).

In evaluating “significant encouragement,” a state may not induce, encourage, or promote private persons to accomplish what it is constitutionally forbidden to accomplish. *Norwood v. Harrison*, 413 U.S. at 465. Additionally, when the government has so involved itself in the private party’s conduct, it cannot claim the conduct occurred as a result of private choice, even if the private party would have acted independently. *Peterson v. City of Greenville*, 373 U.S. at 247–48. Further, oral, or written statements made by public officials could give rise to a valid First Amendment claim where the comments of a governmental official can reasonably be interpreted as intimating that some form of punishment or adverse regulatory action will follow the failure to accede to the official’s request. *National Rifle Association of America*, 350 F. Supp. 3d at 114. Additionally, a public official’s threat to stifle protected speech is actionable under the First Amendment and can be enjoined, even if the threat turns out to be empty. *Backpage.com, LLC v. Dart*, 807 F. 3d at 230–31.

The Defendants argue that the “significant encouragement” test for government action has been interpreted to require a higher standard since the Supreme Court’s ruling in *Blum v. Yaretsky*, 457 U.S. 991 (1982). Defendants also argue that Plaintiffs are unable to meet the test to show Defendants “significantly encouraged” social-media platforms to suppress free speech. Defendants further maintain Plaintiffs have failed to show “coercion” by Defendants to force social-media companies suppress protected free speech. Defendants also argue they made no threats but rather sought to “persuade” the social-media companies. Finally, Defendants maintain the private social-media companies made independent decisions to suppress certain postings.

In *Blum*, the Supreme Court held the Government “can be held responsible for a private decision only when it has exercised coercive power or has provided such significant encouragement, either overt or covert, that the choice in law must be deemed to be that of the state.” *Blum*, 457 U.S. at 1004. Defendants argue that the bar for “significant encouragement” to convert private conduct into state action is high. Defendants maintain that *Blum*’s language does not mean that the Government is responsible for private conduct whenever the Government does more than adopt a passive position toward it. *Skinner v. Ry. Labor Execs. Ass’n.*, 489 U.S. 602, 615 (1989).

Defendants point out this is a question of degree: whether a private party should be deemed an agent or instrument of the Government necessarily turns on the “degree” of the Government’s participation in the private party’s activities. 489 U.S. at 614. The dispositive question is “whether the State has exercised coercive power or has provided such significant encouragement that the choice must in law be deemed to be that of the State.” *VDARE Fund v. City of Colo. Springs*, 11 F.4th 1151, 1161 (10th Cir. 2021).

The Supreme Court found there was not enough “significant encouragement” by the Government in *American Manufacturers Mutual Ins. Co. v. Sullivan*, 526 U.S. 40 (1999). This case involved the constitutionality of a Pennsylvania worker’s compensation statute that authorized, but did not require, insurers to withhold payments for the treatment of work-related injuries pending a “utilization” review of whether the treatment was reasonable and necessary. The plaintiffs’ argument was that by amending the statute to grant the utilization review (an option they previously did not have), the State purposely encouraged insurers to withhold payments for disputed medical treatment. The Supreme Court found this type of encouragement was not enough for state action.

The United States Court of Appeal for the Fifth Circuit has also addressed the issue of government coercion or encouragement. For example, in *La. Div. Sons of Confederate Veterans v. City of Natchitoches*, 821 F. App'x 317 (5th Cir. 2020), the Sons of Confederate Veterans applied to march in a city parade that was coordinated by a private business association. The Mayor sent a letter asking the private business to prohibit the display of the Confederate battle flag. After the plaintiff's request to march in the parade was denied, the plaintiff filed suit and argued the Mayor's letter was "significant encouragement" to warrant state action. The Fifth Circuit found the letter was not "significant encouragement."

In determining whether the Government's words or actions could reasonably be interpreted as an implied threat, courts examine a number of factors, including: (1) the Defendant's regulatory or other decision-making authority over the targeted entities; (2) whether the government actors actually exercised regulatory authority over the targeted entities; (3) whether the language of the alleged threatening statements could reasonably be perceived as a threat; and (4) whether any of the targeted entities reacted in a manner evincing the perception of implicit threat. *Id.* at 114. As noted above, a public official's threat to stifle protected speech is actionable under the First Amendment and can be enjoined, even if the threat turns out to be empty. *Backpage.com, LLC v. Dart*, 807 F.3d 229, 230-31 (7th Cir. 2015); *Okwedy v. Molinari*, 333 F.3d 339, 340-41 (2d. Cir. 2003).

The closest factual case to the present situation is *O'Handley v. Weber*, 62 F.4th 1145 (9th Cir. 2023). In *O'Handley*, the plaintiff maintained that a California agency was responsible for the moderation of his posted content. The plaintiff pointed to the agency's mission to prioritize working closely with social-media companies to be "proactive" about misinformation and the flagging of one of his Twitter posts as "disinformation." The Ninth Circuit rejected the argument

that the agency had provided “significant encouragement” to Twitter to suppress speech. In rejecting this argument, the Ninth Circuit stated the “critical question” in evaluating the “significant encouragement” theory is “whether the government’s encouragement is so significant that we should attribute the private party’s choice to the State...” *Id.* at 1158.

Defendants cited many cases in support of their argument that Plaintiffs have not shown significant coercion or encouragement. *See VDARE Found v. City of Colo. Springs*, 11 F.4th 1151 (10th Cir. 2021), *cert. denied*, 142 S. Ct. 1208 (2022) (city’s decision not to provide “support or resources” to plaintiff’s event was not “such significant encouragement” to transform a private venue’s decision to cancel the event into state action); *S.H.A.R.K. v. Metro Park Serving Summit Cnty.*, 499 F.3d 553 (6th Cir. 2007) (government officials’ requests were “not the type of significant encouragement” that would render agreeing to those requests to be state action); *Campbell v. PMI Food Equip, Grp., Inc.*, 509 F.3d 776 (6th Cir. 2007) (no state action where government entities did nothing more than authorize and approve a contract that provided tax benefits or incentives conditioned on the company opening a local plant); *Gallagher v. Neil Young Freedom Concert*, 49 F.3d 1442 (10th Cir. 1995) (payments under government contracts and the receipt of government grants and tax benefits are insufficient to establish a symbiotic relationship between the government and a private entity). Ultimately, Defendants contend that Plaintiffs have not shown that the choice to suppress free speech must in law be deemed to be that of the Government. This Court disagrees.

The Plaintiffs are likely to succeed on the merits on their claim that the United States Government, through the White House and numerous federal agencies, pressured and encouraged social-media companies to suppress free speech. Defendants used meetings and communications with social-media companies to pressure those companies to take down, reduce, and suppress the

free speech of American citizens. They flagged posts and provided information on the type of posts they wanted suppressed. They also followed up with directives to the social-media companies to provide them with information as to action the company had taken with regard to the flagged post. This seemingly unrelenting pressure by Defendants had the intended result of suppressing millions of protected free speech postings by American citizens. In response to Defendants' arguments, the Court points out that this case has much more government involvement than any of the cases cited by Defendants, as clearly indicated by the extensive facts detailed above. If there were ever a case where the "significant encouragement" theory should apply, this is it.

What is really telling is that virtually all of the free speech suppressed was "conservative" free speech. Using the 2016 election and the COVID-19 pandemic, the Government apparently engaged in a massive effort to suppress disfavored conservative speech. The targeting of conservative speech indicates that Defendants may have engaged in "viewpoint discrimination," to which strict scrutiny applies. *See Simon & Schuster, Inc.*, 505 U.S. 105 (1991).

In addition to the "significant encouragement" theory, the Government may also be held responsible for private conduct if the Government exercises coercive power over the private party in question. *Blum*, 457 U.S. at 1004. Here, Defendants argue that not only must there be coercion, but the coercion must be targeted at specific actions that harmed Plaintiffs. *Bantam Books v. Sullivan*, 372 U.S. 58 (1963) (where a state agency threatened prosecution if a distributor did not remove certain designated books or magazines it distributed that the state agency had declared objectionable); *see also Backpage.com, LLC v. Dart*, 807 F.3d 229 (7th Cir. 2015) (where a sheriff's letter demanded that two credit card issuers prohibit the use of their credit cards to purchase any ads on a particular website containing advertisements for adult services); *Okwedy v.*

Molinari, 333 F.3d 339 (2d Cir. 2003) (per curium) (where a municipal official allegedly pressured a billboard company to take down a particular series of signs he found offensive).

The Defendants further argue they only made requests to the social-media companies, and that the decision to modify or suppress content was each social-media company's independent decision. However, when a state has so involved itself in the private party's conduct, it cannot claim the conduct occurred as a result of private choice, even if the private party would have acted independently. *Peterson v. City of Greenville*, 373 U.S. 244, 247–248 (1963).

Therefore, the question is not what decision the social-media company would have made, but whether the Government “so involved itself in the private party's conduct” that the decision is essentially that of the Government. As exhaustively listed above, Defendants “significantly encouraged” the social-media companies to such extent that the decision should be deemed to be the decisions of the Government. The White House Defendants and the Surgeon General Defendants additionally engaged in coercion of social-media companies to such extent that the decisions of the social-media companies should be deemed that of the Government. It simply makes no difference what decision the social-media companies would have made independently of government involvement, where the evidence demonstrates the wide-scale involvement seen here.

(1) White House Defendants

The Plaintiffs allege that by use of emails, public and private messages, public and private meetings, and other means, White House Defendants have “significantly encouraged” and “coerced” social-media platforms to suppress protected free speech on their platforms.

The White House Defendants acknowledged at oral arguments that they did not dispute the authenticity or the content of the emails Plaintiffs submitted in support of their claims.⁶⁰⁰ However, they allege that the emails do not show that the White House Defendants either coerced or significantly encouraged social-media platforms to suppress content of social-media postings. White House Defendants argue instead that they were speaking with social-media companies about promoting more accurate COVID-19 information and to better understand what action the companies were taking to curb the spread of COVID-19 misinformation.

White House Defendants further argue they never demanded the social-media companies to suppress postings or to change policies, and the changes were due to the social-media companies' own independent decisions. They assert that they did not make specific demands via the White House's public statements and four "asks"⁶⁰¹ of social-media companies.⁶⁰² Defendants contend the four "asks" were "recommendations," not demands. Additionally, Defendants argue President Biden's July 16, 2021 "they're killing people" comment was clarified on July 19, 2021, to reflect that President Biden was talking about the "Disinformation Dozen," not the social-media companies.

Although admitting White House employee Flaherty expressed frustration at times with social-media companies, White House Defendants contend Flaherty sought to better understand the companies' policies with respect to addressing the spread of misinformation and hoped to find out what the Government could do to help. Defendants contend Flaherty felt such frustration

⁶⁰⁰ [Doc. No. 288 at 164–65]

⁶⁰¹ The White House four "asks" are: (1) measure and publicly share the impact of misinformation on their platform; (2) create a robust enforcement strategy; (3) take faster action against harmful posts; and (4) promote quality information sources in their feed algorithm.

⁶⁰² [Doc. No. 10-1 at 377–78]

because some of the things the social-media-companies told him were inconsistent with what others told him, compounded with the urgency of the COVID-19 pandemic.

Explicit threats are an obvious form of coercion, but not all coercion need be explicit. The following illustrative specific actions by Defendants are examples of coercion exercised by the White House Defendants:

- (a) “Cannot stress the degree to which this needs to be resolved immediately. Please remove this account immediately.”⁶⁰³
- (b) Accused Facebook of causing “political violence” by failing to censor false COVID-19 claims.⁶⁰⁴
- (c) “You are hiding the ball.”⁶⁰⁵
- (d) “Internally we have been considering our options on what to do about it.”⁶⁰⁶
- (e) “I care mostly about what actions and changes you are making to ensure you’re not making our country’s vaccine hesitancy problem worse.”⁶⁰⁷
- (f) “This is exactly why I want to know what “Reduction” actually looks like – if “reduction” means pumping our most vaccine hesitance audience with Tucker Carlson saying it does not work... then... I’m not sure it’s reduction.”⁶⁰⁸
- (g) Questioning how the Tucker Carlson video had been “demoted” since there were 40,000 shares.⁶⁰⁹
- (h) Wanting to know why Alex Berenson had not been kicked off Twitter because Berenson was the epicenter of disinformation that radiated outward to the persuadable public.⁶¹⁰ “We want to make sure YouTube has a handle on vaccine hesitancy and is working toward making the problem better. Noted that vaccine hesitancy was a concern. That is shared by the highest (‘and I mean the highest’) levels of the White House.”⁶¹¹

- (r) “I’ve been asking you guys pretty directly over a series of conversations if the biggest issues you are seeing on your platform when it comes to vaccine hesitancy and the degree to which borderline content- as you define it, is playing a role.”⁶²⁰
- (s) “I am not trying to play ‘gotcha’ with you. We are gravely concerned that your service is one of the top drivers of vaccine hesitancy-period.”⁶²¹
- (t) “You only did this, however after an election that you helped increase skepticism in and an insurrection which was plotted, in large part, on your platform.”⁶²²
- (u) “Seems like your ‘dedicated vaccine hesitancy’ policy isn’t stopping the disinfo dozen.”⁶²³
- (v) White House Communications Director, Kate Bedingfield’s announcement that “the White House is assessing whether social-media platforms are legally liable for misinformation spread on their platforms, and examining how misinformation fits into the liability protection process by Section 230 of The Communication Decency Act.”⁶²⁴

These actions are just a few examples of the unrelenting pressure the Defendants exerted against social-media companies. This Court finds the above examples demonstrate that Plaintiffs can likely prove that White House Defendants engaged in coercion to induce social-media companies to suppress free speech.

With respect to 47 U.S.C. § 230, Defendants argue that there can be no coercion for threatening to revoke and/or amend Section 230 because the call to amend it has been bipartisan. However, Defendants combined their threats to amend Section 230 with the power to do so by holding a majority in both the House of Representatives and the Senate, and in holding the Presidency. They also combined their threats to amend Section 230 with emails, meetings, press conferences, and intense pressure by the White House, as well as the Surgeon General Defendants. Regardless, the fact that the threats to amend Section 230 were bipartisan makes it even more

⁶²⁰ [Id. at 11]

⁶²¹ [Id.]

⁶²² [Doc. No. 174-1 at 17–20]

⁶²³ [Id. at 41]

⁶²⁴ [Doc. No. 10-1 at 477–78]

likely that Defendants had the power to amend Section 230. All that is required is that the government's words or actions "could reasonably be interpreted as an implied threat." *Cuomo*, 350 F. Supp. 3d at 114. With the Supreme Court recently making clear that Section 230 shields social-media platforms from legal responsibility for what their users post, *Gonzalez v. Google*, 143 S. Ct. 1191 (2023), Section 230 is even more valuable to these social-media platforms. These actions could reasonably be interpreted as an implied threat by the Defendants, amounting to coercion.

Specifically, the White House Defendants also allegedly exercised significant encouragement such that the actions of the social-media companies should be deemed to be that of the government. The White House Defendants used emails, private portals, meetings, and other means to involve itself as "partners" with social-media platforms. Many emails between the White House and social-media companies referred to themselves as "partners." Twitter even sent the White House a "Partner Support Portal" for expedited review of the White House's requests. Both the White House and the social-media companies referred to themselves as "partners" and "on the same team" in their efforts to censor disinformation, such as their efforts to censor "vaccine hesitancy" spread. The White House and the social-media companies also demonstrated that they were "partners" by suppressing information that did not even violate the social-media companies' own policies.

Further, White House Defendants constantly "flagged" for Facebook and other social-media platforms posts the White House Defendants considered misinformation. The White House demanded updates and reports of the results of their efforts to suppress alleged disinformation, and the social-media companies complied with these demands. The White House scheduled numerous Zoom and in-person meetings with social-media officials to keep each other informed about the companies' efforts to suppress disinformation.

The White House Defendants made it very clear to social-media companies what they wanted suppressed and what they wanted amplified. Faced with unrelenting pressure from the most powerful office in the world, the social-media companies apparently complied. The Court finds that this amounts to coercion or encouragement sufficient to attribute the White House's actions to the social-media companies, such that Plaintiffs are likely to succeed on the merits against the White House Defendants.

(2) Surgeon General Defendants

Plaintiffs allege that Surgeon General Murthy and his office engaged in a pressure campaign parallel to, and often overlapping with, the White House Defendants' campaign directed at social-media platforms. Plaintiffs further allege the Surgeon General Defendants engaged in numerous meetings and communications with social-media companies to have those companies suppress alleged disinformation and misinformation posted on their platforms.

The Surgeon General Defendants argue that the Surgeon General's role is primarily to draw attention to public health matters affecting the nation. The SG took two official actions in 2021 and in 2022. In July 2021, the Surgeon General issued a "Surgeon General's Advisory." In March 2022, the Surgeon General issued a Request For Information ("RFI"). Surgeon General Defendants argue that the Surgeon General's Advisory did not require social-media companies to censor information or make changes in their policies. Surgeon General Defendants further assert that the RFI was voluntary and did not require the social-media companies to answer.

Additionally, the Surgeon General Defendants contend they only held courtesy meetings with social-media companies, did not flag posts for censorship, and never worked with social-media companies to moderate their policies. Surgeon General Defendants also deny that they were involved with the Virality Project.

As with the White House Defendants, this Court finds that Plaintiffs are likely to succeed on the merits of their First Amendment free speech claim against the Surgeon General Defendants. Through public statements, internal emails, and meetings, the Surgeon General Defendants exercised coercion and significant encouragement such that the decisions of the social-media platforms and their actions suppressing health disinformation should be deemed to be the decisions of the government. Importantly, the suppression of this information was also likely prohibited content and/or viewpoint discrimination, entitling Plaintiffs to strict scrutiny.

The Surgeon General Defendants did pre-rollout calls with numerous social-media companies prior to publication of the Health Advisory on Misinformation. The Advisory publicly called on social-media companies “to do more” against COVID misinformation Superspreaders. Numerous calls and meetings took place between Surgeon General Defendants and private social-media companies. The “misinformation” to be suppressed was whatever the government deemed misinformation.

The problem with labeling certain discussions about COVID-19 treatment as “health misinformation” was that the Surgeon General Defendants suppressed alternative views to those promoted by the government. One of the purposes of free speech is to allow discussion about various topics so the public may make informed decisions. Health information was suppressed, and the government’s view of the proper treatment for COVID-19 became labeled as “the truth.” Differing views about whether COVID-19 vaccines worked, whether taking the COVID-19 vaccine was safe, whether mask mandates were necessary, whether schools and businesses should have been closed, whether vaccine mandates were necessary, and a host of other topics were suppressed. Without a free debate about these issues, each person is unable to decide for himself or herself the proper decision regarding their health. Each United States citizen has the right to

decide for himself or herself what is true and what is false. The Government and/or the OSG does not have the right to determine the truth.

The Surgeon General Defendants also engaged in a pressure campaign with the White House Defendants to pressure social-media companies to suppress health information contrary to the Surgeon General Defendants' views. After the Surgeon General's press conference on July 15, 2021, the Surgeon General Defendants kept the pressure on social-media platforms via emails, private meetings, and by requiring social-media platforms to report on actions taken against health disinformation.

The RFI by the Surgeon General Defendants also put additional pressure on social-media companies to comply with the requests to suppress free speech. The RFI sought information from private social-media companies to provide information about the spread of misinformation. The RFI stated that the office of the Surgeon General was expanding attempts to control the spread of misinformation on social-media platforms. The RFI also sought information about social-media censorship policies, how they were enforced, and information about disfavored speakers.

Taking all of this evidence together, this Court finds the Surgeon General Defendants likely engaged in both coercion and significant encouragement to such an extent that the decisions of private social-media companies should be deemed that of the Surgeon General Defendants. The Surgeon General Defendants did much more than engage in Government speech: they kept pressure on social-media companies with pre-rollout meetings, follow-up meetings, and RFI. Thus, Plaintiffs are likely to succeed on the merits of their First Amendment claim against these Defendants.

(3) CDC Defendants

Plaintiffs allege that the CDC Defendants have engaged in a censorship campaign, together with the White House and other federal agencies, to have free speech suppressed on social-media platforms. Plaintiffs allege that working closely with the Census Bureau, the CDC flagged supposed “misinformation” for censorship on the platforms. Plaintiffs further allege that by using the acronym “BOLO,” the CDC Defendants told social-media platforms what health claims should be censored as misinformation.

In opposition, Defendants assert that the CDC’s mission is to protect the public’s health. Although the CDC Defendants admit to meeting with and sending emails to social-media companies, the CDC Defendants argue they were responding to requests by the companies for science-based public health information, proactively alerting the social-media companies about disinformation, or advising the companies where to find accurate information. The Census Bureau argues the Interagency Agreement, entered into with the CDC in regard to COVID-19 misinformation, has expired, and that it is no longer participating with the CDC on COVID-19 misinformation issues. The CDC Defendants further deny that they directed any social-media companies to remove posts or to change their policies.

Like the White House Defendants and Surgeon General Defendants, the Plaintiffs are likely to succeed on the merits of Plaintiffs’ First Amendment free speech claim against the CDC Defendants. The CDC Defendants through emails, meetings, and other communications, seemingly exercised pressure and gave significant encouragement such that the decisions of the social-media platforms to suppress information should be deemed to be the decisions of the Government. The CDC Defendants coordinated meetings with social-media companies, provided examples of alleged disinformation to be suppressed, questioned the social-media companies about

how it was censoring misinformation, required reports from social-media companies about disinformation, told the social-media companies whether content was true or false, provided BOLO information, and used a Partner Support Portal to report disinformation. Much like the other Defendants, described above, the CDC Defendants became “partners” with social-media platforms, flagging and reporting statements on social media Defendants deemed false. Although the CDC Defendants did not exercise coercion to the same extent as the White House and Surgeon General Defendants, their actions still likely resulted in “significant encouragement” by the government to suppress free speech about COVID-19 vaccines and other related issues.

Various social-media platforms changed their content-moderation policies to require suppression of content that was deemed false by CDC and led to vaccine hesitancy. The CDC became the “determiner of truth” for social-media platforms, deciding whether COVID-19 statements made on social media were true or false. And the CDC was aware it had become the “determiner of truth” for social-media platforms. If the CDC said a statement on social media was false, it was suppressed, in spite of alternative views. By telling social-media companies that posted content was false, the CDC Defendants knew the social-media company was going to suppress the posted content. The CDC Defendants thus likely “significantly encouraged” social-media companies to suppress free speech.

Based on the foregoing examples of significant encouragement and coercion by the CDC Defendants, the Court finds that Plaintiffs are likely to succeed on the merits of their First Amendment claim against the CDC Defendants.

(4) NIAID Defendants

Plaintiffs allege that NIAID Defendants engaged in a series of campaigns to discredit and procure the censorship of disfavored viewpoints on social media. Plaintiffs allege that Dr. Fauci

engaged in a series of campaigns to suppress speech regarding the Lab-Leak theory of COVID-19's origin, treatment using hydroxychloroquine, the GBD, the treatment of COVID-19 with Ivermectin, the effectiveness of mask mandates, and the speech of Alex Berenson.

In opposition, Defendants assert that the NIAID Defendants simply supports research to better understand, treat, and prevent infectious, immunologic, and allergic diseases and is responsible for responding to emergency public health threats. The NIAID Defendants argue that they had limited involvement with social-media platforms and did not meet with or contact the platforms to change their content or policies. The NIAID Defendants further argue that the videos, press conferences, and public statements by Dr. Fauci and other employees of NIAID was government speech.

This Court agrees that much of what the NIAID Defendants did was government speech. However, various emails show Plaintiffs are likely to succeed on the merits through evidence that the motivation of the NIAID Defendants was a “take down” of protected free speech. Dr. Francis Collins, in an email to Dr. Fauci⁶²⁵ told Fauci there needed to be a “quick and devastating take down” of the GBD—the result was exactly that. Other email discussions show the motivations of the NIAID were to have social-media companies suppress these alternative medical theories. Taken together, the evidence shows that Plaintiffs are likely to succeed on the merits against the NIAID Defendants as well.

(5) FBI Defendants

Plaintiffs allege that the FBI Defendants also suppressed free speech on social-media platforms, with the FBI and FBI's FITF playing a key role in these censorship efforts.

⁶²⁵ [Doc. No. 207-6]

In opposition, Defendants assert that the FBI Defendants' specific job duties relate to foreign influence operations, including attempts by foreign governments to influence U.S. elections. Based on the alleged foreign interference in the 2016 U.S. Presidential election, the FBI Defendants argue that, through their meetings and emails with social-media companies, they were attempting to prevent foreign influence in the 2020 Presidential election. The FBI Defendants deny any attempt to suppress and/or change the social-media companies' policies with regard to domestic speech. They further deny that they mentioned Hunter Biden or a "hack and leak" foreign operation involving Hunter Biden.

According to the Plaintiffs' allegations detailed above, the FBI had a 50% success rate regarding social media's suppression of alleged misinformation, and it did no investigation to determine whether the alleged disinformation was foreign or by U.S. citizens. The FBI's failure to alert social-media companies that the Hunter Biden laptop story was real, and not mere Russian disinformation, is particularly troubling. The FBI had the laptop in their possession since December 2019 and had warned social-media companies to look out for a "hack and dump" operation by the Russians prior to the 2020 election. Even after Facebook specifically asked whether the Hunter Biden laptop story was Russian disinformation, Dehmlow of the FBI refused to comment, resulting in the social-media companies' suppression of the story. As a result, millions of U.S. citizens did not hear the story prior to the November 3, 2020 election. Additionally, the FBI was included in Industry meetings and bilateral meetings, received and forwarded alleged misinformation to social-media companies, and actually mislead social-media companies in regard to the Hunter Biden laptop story. The Court finds this evidence demonstrative of significant encouragement by the FBI Defendants.

Defendants also argue that Plaintiffs are attempting to create a “deception” theory of government involvement with regards to the FBI Defendants. Plaintiffs allege the FBI told the social-media companies to watch out for Russian disinformation prior to the 2020 Presidential election and then failed to tell the companies that the Hunter Biden laptop was not Russian disinformation. The Plaintiffs further allege Dr. Fauci colluded with others to cover up the Government’s involvement in “gain of function” research at the Wuhan lab in China, which may have resulted in the creation of the COVID-19 pandemic.

Although this Court agrees there is no specified “deception” test for government action, a state may not induce private persons to accomplish what it is constitutionally forbidden to accomplish. *Norwood*, 413 U.S. at 455. It follows, then, that the government may not deceive a private party either—it is just another form of coercion. The Court has evaluated Defendants’ conduct under the “coercion” and/or “significant encouragement” theories of government action, and finds that the FBI Defendants likely exercised “significant encouragement” over social-media companies.

Through meetings, emails, and in-person contacts, the FBI intrinsically involved itself in requesting social-media companies to take action regarding content the FBI considered to be misinformation. The FBI additionally likely misled social-media companies into believing the Hunter Biden laptop story was Russian disinformation, which resulted in suppression of the story a few weeks prior to the 2020 Presidential election. Thus, Plaintiffs are likely to succeed in their claims that the FBI exercised “significant encouragement” over social-media platforms such that the choices of the companies must be deemed to be that of the Government.

(5) CISA Defendants

Plaintiffs allege the CISA Defendants served as a “nerve center” for federal censorship efforts by meeting routinely with social-media platforms to increase censorship of speech disfavored by federal officials, and by acting as a “switchboard” to route disinformation concerns to social-media platforms.

In response, the CISA Defendants maintain that CISA has a mandate to coordinate with federal and non-federal entities to carry out cybersecurity and critical infrastructure activities. CISA previously designated election infrastructure as a critical infrastructure subsector. CISA also collaborates with state and local election officials; as part of its duties, CISA coordinates with the EIS-GCC, which is comprised of state, local, and federal governmental departments and agencies. The EI-SSC is comprised of owners or operators with significant business or operations in U.S. election infrastructure systems or services. After the 2020 election, the EI-SCC and EIS-GCC launched a Joint Managing Mis/Disinformation Group to coordinate election infrastructure security efforts. The CISA Defendants argue CISA supports the Joint Managing Mis-Disinformation Group but does not coordinate with the EIP or the CIS. Despite DHS providing financial assistance to the CIS through a series of cooperative agreement awards managed by CISA, the CISA Defendants assert that the work scope funded by DHS has not involved the CIS performing disinformation-related tasks.

Although the CISA Defendants admit to being involved in “switchboarding” work during the 2020 election cycle, CISA maintains it simply referred the alleged disinformation to the social-media companies, who made their own decisions to suppress content. CISA maintains it included a notice with each referral to the companies, which stated that CISA was not demanding censorship. CISA further maintains it discontinued its switchboarding work after the 2020 election

cycle and has no intention to engage in switchboarding for the next election.⁶²⁶ CISA further argues that even though it was involved with USG-Industry meetings with other federal agencies and social-media companies, they did not attempt to “push” social-media companies to suppress content or to change policies.

The Court finds that Plaintiffs are likely to succeed on the merits of their First Amendment claim against the CISA Defendants. The CISA Defendants have likely exercised “significant encouragement” with social-media platforms such that the choices of the social-media companies must be deemed to be that of the government. Like many of the other Defendants, the evidence shows that the CISA Defendants met with social-media companies to both inform and pressure them to censor content protected by the First Amendment. They also apparently encouraged and pressured social-media companies to change their content-moderation policies and flag disfavored content.

But the CISA Defendants went even further. CISA expanded the word “infrastructure” in its terminology to include “cognitive” infrastructure, so as to create authority to monitor and suppress protected free speech posted on social media. The word “cognitive” is an adjective that means “relating to cognition.” “Cognition” means the mental action or process of acquiring knowledge and understanding through thought, experiences, and the senses.⁶²⁷ The Plaintiffs are likely to succeed on the merits on its claim that the CISA Defendants believe they had a mandate to control the process of acquiring knowledge. The CISA Defendants engaged with Stanford University and the University of Washington to form the EIP, whose purpose was to allow state and local officials to report alleged election misinformation so it could be forwarded to the social-

⁶²⁶ However, at oral argument, CISA attorneys were unable to verify whether or not CISA would be involved in switchboarding during the 2024 election. [Doc. No. 288 at 122]

⁶²⁷ Google English Dictionary

media platforms to review. CISA used a CISA-funded non-profit organization, the CIS, to perform the same actions. CISA used interns who worked for the Stanford Internal Observatory, which is part of the EIP, to address alleged election disinformation. All of these worked together to forward alleged election misinformation to social-media companies to view for censorship. They also worked together to ensure the social-media platforms reported back to them on what actions the platforms had taken. And in this process, no investigation was made to determine whether the censored information was foreign or produced by U.S. citizens.

According to DiResta, head of EIP, the EIP was designed “to get around unclear legal authorities, including very real First Amendment questions that would arise if CISA or the other government agencies were to monitor and flag information for censorship on social media.”⁶²⁸ Therefore, the CISA Defendants aligned themselves with and partnered with an organization that was designed to avoid Government involvement with free speech in monitoring and flagging content for censorship on social-media platforms.

At oral arguments on May 26, 2023, Defendants argued that the EIP operated independently of any government agency. The evidence shows otherwise: the EIP was started when CISA interns came up with the idea; CISA connected the EIP with the CIS, which is a CISA-funded non-profit that channeled reports of misinformation from state and local government officials to social-media companies; CISA had meetings with Stanford Internet Observatory officials (a part of the EIP), and both agreed to “work together”; the EIP gave briefings to CISA; and the CIS (which CISA funds) oversaw the Multi-State Information Sharing and Analysis Center (“MS-ISAC”) and the Election Infrastructure Information Sharing and Analysis Center

⁶²⁸ [Doc. No. 209-5 at 4]

(“EI-ISAC”), both of which are organizations of state and local governments that report alleged election misinformation.

CISA directs state and local officials to CIS and connected the CIS with the EIP because they were working on the same mission and wanted to be sure they were all connected. CISA served as a mediating role between CIS and EIP to coordinate their efforts in reporting misinformation to social-media platforms, and there were direct email communications about reporting misinformation between EIP and CISA. Stamos and DiResta of the EIP also have roles in CISA on CISA advisory committees. EIP identifies CISA as a “partner in government.” The CIS coordinated with EIP regarding online misinformation. The EIP publication, “The Long Fuse,”⁶²⁹ states the EIP has a focus on election misinformation originating from “domestic” sources across the United States.⁶³⁰ EIP further stated that the primary repeat spreaders of false and misleading narratives were “verified blue-checked accounts belonging to partisan media outlets, social-media influencers, and political figures, including President Trump and his family.”⁶³¹ The EIP further disclosed it held its first meeting with CISA to present the EIP concept on July 9, 2020, and EIP was officially formed on July 26, 2020, “in consultation with CISA.”⁶³² The Government was listed as one of EIP’s Four Major Stakeholder Groups, which included CISA, the GEC, and ISAC.⁶³³

As explained, the CISA Defendants set up a “switchboarding” operation, primarily consisting of college students, to allow immediate reporting to social-media platforms of alleged election disinformation. The “partners” were so successful with suppressing election

⁶²⁹ [Doc. No. 209-2]

⁶³⁰ [Id. at 9]

⁶³¹ [Id. at 12]

⁶³² [Id. at 20–21]

⁶³³ [Id. at 30]

disinformation, they later formed the Virality Project, to do the same thing with COVID-19 misinformation that the EIP was doing for election disinformation. CISA and the EIP were completely intertwined. Several emails from the switchboarding operation sent by intern Pierce Lowary shows Lowary directly flagging posted content and sending it to social-media companies. Lowary identified himself as “working for CISA” on the emails.⁶³⁴

On November 21, 2021, CISA Director Easterly stated: “We live in a world where people talk about alternative facts, post-truth, which I think is really, really dangerous if people get to pick their own facts.” The Free Speech Clause was enacted to prohibit just what Director Easterly is wanting to do: allow the government to pick what is true and what is false. The Plaintiffs are likely to succeed on the merits of their First Amendment claim against the CISA Defendants for “significantly encouraging” social-media companies to suppress protected free speech.

(5) State Department Defendants

Plaintiffs allege the State Department Defendants, through the State Department’s GEC, were also involved in suppressing protected speech on social-media platforms.

In response, the State Department Defendants argue that they, along with the GEC, play a critical role in coordinating the U.S. government efforts to respond to foreign influence. The State Department Defendants argue that they did not flag specific content for social-media companies and did not give the company any directives. The State Department Defendants also argue that they do not coordinate with or work with the EIP or the CIS.

The Court finds that Plaintiffs are also likely to succeed on the merits regarding their First Amendment Free Speech Clause against the State Department Defendants. For many of the same reasons the Court reached its conclusion as to the CISA Defendants, the State Department

⁶³⁴ [Doc. No. 227-2 at 15, 23, 42, 65 & 78]

Defendants have exercised “significant encouragement” with social-media platforms, such that the choices of the social-media companies should be deemed to be that of the government. As discussed previously, both CISA and the GEC were intertwined with the VP, EIP, and Stanford Internet Observatory.

The VP, EIP, and Stanford Internet Observatory are not defendants in this proceeding. However, their actions are relevant because government agencies have chosen to associate, collaborate, and partner with these organizations, whose goals are to suppress protected free speech of American citizens. The State Department Defendants and CISA Defendants both partnered with organizations whose goals were to “get around” First Amendment issues.⁶³⁵ In partnership with these non-governmental organizations, the State Department Defendants flagged and reported postings of protected free speech to the social-media companies for suppression. The flagged content was almost entirely from political figures, political organizations, alleged partisan media outlets, and social-media all-stars associated with right-wing or conservative political views, demonstrating likely “viewpoint discrimination.” Since only conservative viewpoints were allegedly suppressed, this leads naturally to the conclusion that Defendants intended to suppress only political views they did not believe in. Based on this evidentiary showing, Plaintiffs are likely to succeed on the merits of their First Amendment claims against the State Department Defendants.

(6) Other Defendants

Other Defendants in this proceeding are the U.S. Food and Drug Administration, U. S. Department of Treasury, U.S. Election Assistance Commission, U. S. Department of Commerce, and employees Erica Jefferson, Michael Murray, Wally Adeyemo, Steven Frid, Brad Kimberly, and Kristen Muthig. Plaintiffs confirmed at oral argument that they are not seeking a preliminary

⁶³⁵ [Doc. No. 209-5 at 4]

injunction against these Defendants. Additionally, Plaintiffs assert claims against the Disinformation Governance Board (“DGB”) and its Director Nina Jankowicz. Defendants have provided evidence that the DGB has been disbanded, so any claims against these Defendants are moot. Thus, this Court will not address the issuance of an injunction against any of these Defendants.

ii. Joint Participation

The Plaintiffs contend that the Defendants are not only accountable for private conduct that they coerced or significantly encouraged, but also for private conduct in which they actively participated as “joint participants.” *Burton v. Wilmington Parking Authority*, 365 U.S. 715, 725 (1961). Although most often “joint participation” occurs through a conspiracy or collusive behavior, *Hobbs v. Hawkins*, 968 F.2d 471, 480 (5th Cir. 1992), even without a conspiracy, when a plaintiff establishes the government is responsible for private action arising out of “pervasive entwinement of public institutions and public officials in the private entity’s composition and workings.” *Brentwood Academy. v. Tennessee Secondary Sch. Athletic Ass’n.*, 531 U. S. 288, 298 (2001).

Under the “joint action” test, the Government must have played an indispensable role in the mechanism leading to the disputed action. *Frazier v. Bd. Of Trs. Of N.W. Miss. Reg. ’l Med. Ctr.*, 765 F.2d 1278, 1287-88 (5th Cir.), *amended*, 777 F.2d 329 (5th Cir. 1985). When a plaintiff establishes “the existence of a conspiracy involving state action,” the government becomes responsible for all constitutional violations committed in furtherance of the conspiracy by a party to the conspiracy. *Armstrong v. Ashley*, 60 F.4th 262, (5th Cir. 2023). Conspiracy can be charged as the legal mechanism through which to impose liability on each and all of the defendants without

regard to the person doing the particular act that deprives the plaintiff of federal rights. *Pfannstiel v. City of Marion*, 918 F.2d 1178, 1187 (5th Cir. 1990).

Much like conspiracy and collusion, joint activity occurs whenever the government has “so far insinuated itself” into private affairs as to blur the line between public and private action. *Jackson v. Metro. Edison Co.*, 419 U.S. 345, 357 (1974). To become “pervasively entwined” in a private entity’s workings, the government need only “significantly involve itself in the private entity’s actions and decision-making”; it is not necessary to establish that “state actors ... literally ‘override’ the private entity’s independent judgment.” *Rawson v. Recovery Innovations, Inc.*, 975 F.3d 742, 751, 753 (9th Cir. 2020). “Pervasive intertwinement” exists even if the private party is exercising independent judgment. *West v. Atkins*, 487 U.S. 42, 52, n.10 (1988); *Gallagher v. Neil Young Freedom Concert*, 49 F.3d 1442, 1454 (10th Cir. 1995) (holding that a “substantial degree of cooperative action” can constitute joint action).

For the same reasons as this Court has found Plaintiffs met their burden to show “significant encouragement” by the White House Defendants, the Surgeon General Defendants, the CDC Defendants, the FBI Defendants, the NIAID Defendants, the CISA Defendants, and the State Department Defendants, this Court finds the Plaintiffs are likely to succeed on the merits that these Defendants “jointly participated” in the actions of the private social-media companies as well, by insinuating themselves into the social-media companies’ private affairs and blurring the line between public and private action.⁶³⁶

However, this Court finds Plaintiffs are not likely to succeed on the merits that the “joint participation” occurred as a result of a conspiracy with the social-media companies. The evidence

⁶³⁶ It is not necessary to repeat the details discussed in the “significant encouragement” analysis in order to find Plaintiffs have met their initial burden.

thus far shows that the social-media companies cooperated due to coercion, not because of a conspiracy.

This Court finds the White House Defendants, the Surgeon General Defendants, the CDC Defendants, the NIAID Defendants, the FBI Defendants, the CISA Defendants, and the State Department Defendants likely “jointly participated” with the social-media companies to such an extent that said Defendants have become “pervasively entwined” in the private companies’ workings to such an extent as to blur the line between public and private action. Therefore, Plaintiffs are likely to succeed on the merits that the government Defendants are responsible for the private social-media companies’ decisions to censor protected content on social-media platforms.

iii. Other Arguments

While not admitting any fault in the suppression of free speech, Defendants blame the Russians, COVID-19, and capitalism for any suppression of free speech by social-media companies. Defendants argue the Russian social-media postings prior to the 2016 Presidential election caused social-media companies to change their rules with regard to alleged misinformation. The Defendants argue the Federal Government promoted necessary and responsible actions to protect public health, safety, and security when confronted by a deadly pandemic and hostile foreign assaults on critical election infrastructure. They further contend that the COVID-19 pandemic resulted in social-media companies changing their rules in order to fight related disinformation. Finally, Defendants argue the social-media companies’ desire to make money from advertisers resulted in change to their efforts to combat disinformation. In other words, Defendants maintain they had nothing to do with Plaintiffs’ censored speech and blamed any suppression of free speech on the Russians, COVID-19, and the companies’ desire to make

money. The social-media platforms and the Russians are of course not defendants in this proceeding, and neither are they bound by the First Amendment. The only focus here is on the actions of the Defendants themselves.

Although the COVID-19 pandemic was a terrible tragedy, Plaintiffs assert that it is still not a reason to lessen civil liberties guaranteed by our Constitution. “If human nature and history teaches anything, it is that civil liberties face grave risks when governments proclaim indefinite states of emergency.” *Does 1-3 v. Mills*, 142 S. Ct. 17, 20–21 (2021) (Gorsuch, J., dissenting). The “grave risk” here is arguably the most massive attack against free speech in United States history.

Another argument of Defendants is that the previous Administration took the same actions as Defendants. Although the “switchboarding” by CISA started in 2018, there is no indication or evidence yet produced in this litigation that the Trump Administration had anything to do with it. Additionally, whether the previous Administration suppressed free speech on social media is not an issue before this Court and would not be a defense to Defendants even if it were true.

Defendants also argue that a preliminary injunction would restrict the Defendants’ right to government speech and would transform government speech into government action whenever the Government comments on public policy matters. The Court finds, however, that a preliminary injunction here would not prohibit government speech. The traditional test used to differentiate government speech from private speech discusses three relevant factors: (1) whether the medium at issue has historically been used to communicate messages from the government; (2) whether the public reasonably interprets the government to be the speaker; and (3) whether the government maintains editorial control over the speech. *Pleasant Grove City, Utah v. Summum*, 555 U.S. 460, 465–80 (2009). A government entity has the right to speak for itself and is entitled to say what it wishes and express the views it wishes to express. The Free Speech Clause restricts government

regulation of private speech; it does not regulate government speech. *Pleasant Grove City, Utah*, 555 U.S. at 468.

The Defendants argue that by making public statements, this is nothing but government speech. However, it was not the public statements that were the problem. It was the alleged use of government agencies and employees to coerce and/or significantly encourage social-media platforms to suppress free speech on those platforms. Plaintiffs point specifically to the various meetings, emails, follow-up contacts, and the threat of amending Section 230 of the Communication Decency Act. Plaintiffs have produced evidence that Defendants did not just use public statements to coerce and/or encourage social-media platforms to suppress free speech, but rather used meetings, emails, phone calls, follow-up meetings, and the power of the government to pressure social-media platforms to change their policies and to suppress free speech. Content was seemingly suppressed even if it did not violate social-media policies. It is the alleged coercion and/or significant encouragement that likely violates the Free Speech Clause, not government speech, and thus, the Court is not persuaded by Defendants' arguments here.

b. Standing

The United States Constitution, via Article III, limits federal courts' jurisdiction to "cases" and "controversies." *Sample v. Morrison*, 406 F.3d 310, 312 (5th Cir. 2005) (citing U.S. Const. art. III, § 2). The "law of Article III standing, which is built on separation-of-powers principles, serves to prevent the judicial process from being used to usurp the powers of the political branches." *Town of Chester, N.Y. v. Laroe Ests., Inc.*, 581 U.S. 433, 435 (2017) (citation omitted). Thus, "the standing question is whether the plaintiff has alleged such a personal stake in the outcome of the controversy as to warrant [its] invocation of federal-court jurisdiction and to justify exercise of the court's remedial powers on his behalf." *Warth v. Seldin*, 422 U.S. 490, 498-99

(1975) (citation and internal quotation marks omitted). The Article III standing requirements apply to claims for injunctive and declaratory relief. *See Seals v. McBee*, 898 F.3d 587, 591 (5th Cir. 2018), *as revised* (Aug. 9, 2018); *Lawson v. Callahan*, 111 F.3d 403, 405 (5th Cir. 1997).

Article III standing is comprised of three essential elements. *Spokeo, Inc. v. Robins*, 578 U.S. 330, 338 (2016), *as revised* (May 24, 2016) (citation omitted). “The plaintiff must have (1) suffered an injury-in-fact, (2) that is fairly traceable to the challenged conduct of the defendant, and (3) that is likely to be redressed by a favorable judicial decision. The plaintiff, as the party invoking federal jurisdiction, bears the burden of establishing these elements.” *Id.* (internal citations omitted). Furthermore, “[a] plaintiff must demonstrate standing for each claim he seeks to press and for each form of relief that is sought.” *Town of Chester, N.Y.*, 581 U.S. at 439 (citations omitted). However, the presence of one party with standing “is sufficient to satisfy Article III’s case-or-controversy requirement.” *Texas*, 809 F.3d 134 (citing *Rumsfeld v. F. for Acad. & Institutional Rts., Inc.*, 547 U.S. 47, 52 n.2 (2006)).

In the context of a preliminary injunction, it has been established that “the ‘merits’ required for the plaintiff to demonstrate a likelihood of success include not only substantive theories but also the establishment of jurisdiction.” *Food & Water Watch, Inc. v. Vilsack*, 808 F.3d 905, 913 (D.C. Cir. 2015). In order to establish standing, the plaintiff must demonstrate that they have encountered or suffered an injury attributable to the defendant’s challenged conduct and that such injury is likely to be resolved through a favorable decision. *Lujan v. Def. of Wildlife*, 504 U.S. 555, 560–61 (1992). Further, during the preliminary injunction stage, the movant is only required to demonstrate a likelihood of proving standing. *Speech First, Inc. v. Fenves*, 979 F.3d 319, 330 (5th Cir. 2020). Defendants raise challenges to each essential element of standing for both the Private Plaintiffs and the States. Each argument will be addressed in turn below. For the reasons stated

herein, the Court finds that the Plaintiffs have demonstrated a likelihood of satisfying Article III's standing requirements.

i. Injury-in-fact

Plaintiffs seeking to establish injury-in-fact must show that they suffered “an invasion of a legally protected interest” that is “concrete and particularized” and “actual or imminent, not conjectural or hypothetical.” *Spokeo*, 578 U.S. at 339 (citations and internal quotation marks omitted). For an injury to be “particularized,” it must “affect the plaintiff in a personal and individual way.” *Id.* (citations and internal quotation marks omitted).

Plaintiffs argue that that they have asserted violations of their First Amendment right to speak and listen freely without government interference.⁶³⁷ In response, Defendants contend that Plaintiffs' allegations rest on dated declarations that focus on long-past conduct, making Plaintiffs' fears of imminent injury entirely speculative.⁶³⁸ The Court will first address whether the Plaintiff States are likely to prove an injury-in-fact. Then the court will examine whether the Individual Plaintiffs are likely to prove an injury-in-fact. For the reasons explained below, both the Plaintiff States and Individual Plaintiffs are likely to prove an injury-in-fact.

(1) Plaintiff States

In denying Defendants' Motion to Dismiss,⁶³⁹ this Court previously found that the Plaintiff States had sufficiently alleged injury-in-fact to satisfy Article III standing under either a direct injury or *parens patriae* theory of standing and that the States were entitled to special solicitude in the standing analysis.⁶⁴⁰ At the preliminary injunction stage, the issue becomes whether the Plaintiffs are likely to prove standing. *See Speech First, Inc.*, 979 F.3d, at 330. The evidence

⁶³⁷ See [Doc. No. 214, at 66]

⁶³⁸ See [Doc. No. 266, at 151]

⁶³⁹ [Doc. No. 128]

⁶⁴⁰ [Doc. No. 224, at 20–33]

produced thus far through discovery shows that the Plaintiff States are likely to establish an injury-in-fact through either a *parens patriae* or direct injury theory of standing.

Parens patriae, which translates to “parent of the country,” traditionally refers to the state’s role as a sovereign and guardian for individuals with legal disabilities. *Alfred L. Snapp & Son, Inc. v. Puerto Rico, ex rel., Barez*, 458 U.S. 592, 600 n.8 (1982) (quoting Black’s Law Dictionary 1003 (5th ed. 1979)). The term “*parens patriae* lawsuit” has two meanings: it can denote a lawsuit brought by the state on behalf of individuals unable to represent themselves, or a lawsuit initiated by the state to protect its “quasi-sovereign” interests. *Id.* at 600; see also *Kentucky v. Biden*, 23 F.4th 585, 596–98 (6th Cir. 2022); *Chapman v. Tristar Prod., Inc.*, 940 F.3d 299, 305 (6th Cir. 2019). A lawsuit based on the former meaning is known as a “third-party” *parens patriae* lawsuit, and it is clearly established law that states cannot bring such lawsuits against the federal government. *Kentucky*, 23 F.4th at 596. Thus, to have *parens patriae* standing, the Plaintiff States must show a likelihood of establishing an injury to one or more of their quasi-sovereign interests.

In *Snapp*, the United States Supreme Court determined that Puerto Rico had *parens patriae* standing to sue the federal government to safeguard its quasi-sovereign interests. *Snapp*, 458 U.S. at 608. The Court identified two types of injuries to a state’s quasi-sovereign interests: one is an injury to a significant portion of the state’s population, and the other is the exclusion of the state and its residents from benefiting from participation in the federal system. *Id.* at 607–608. The Court did not establish definitive limits on the proportion of the population that must be affected but suggested that an indication could be whether the injury is something the state would address through its sovereign lawmaking powers. *Id.* at 607. Based on the injuries alleged by Puerto Rico, the Court found that the state had sufficiently demonstrated harm to its quasi-sovereign interests and had *parens patriae* standing to sue the federal government. *Id.* at 609–10.

In *Massachusetts v. E.P.A.*, 549 U.S. 497 (2007), the United States Supreme Court further clarified the distinction between third-party and quasi-sovereign *parens patriae* lawsuits. There, the Court concluded that Massachusetts had standing to sue the EPA to protect its quasi-sovereign interests. The Court emphasized the distinction between allowing a state to protect its citizens from federal statutes (which is prohibited) and permitting a state to assert its rights under federal law (which it has standing to do). *Massachusetts*, 549 U.S. at 520 n.17. Because Massachusetts sought to assert its rights under a federal statute rather than challenge its application to its citizens, the Court determined that the state had *parens patriae* standing to sue the EPA.

Here, the Plaintiff States alleged and have provided ample evidence to support injury to two quasi-sovereign interests: the interest in safeguarding the free-speech rights of a significant portion of their respective populations and the interest in ensuring that they receive the benefits from participating in the federal system. Defendants argue that this theory of injury is too attenuated and that Plaintiffs are unlikely to prove any direct harm to the States' sovereign or quasi-sovereign interests, but the Court does not find this argument persuasive.

Plaintiffs have put forth ample evidence regarding extensive federal censorship that restricts the free flow of information on social-media platforms used by millions of Missourians and Louisianians, and very substantial segments of the populations of Missouri, Louisiana, and every other State.⁶⁴¹ The Complaint provides detailed accounts of how this alleged censorship harms “enormous segments of [the States’] populations.” Additionally, the fact that such extensive examples of suppression have been uncovered through limited discovery suggests that the

⁶⁴¹ See *supra*, pp. 8–94 (detailing the extent and magnitude of Defendants’ pressure and coercion tactics with social-media companies); See also [Doc. No. 214-1, at ¶¶ 1348 (noting that Berenson had nationwide audiences and over 200,000 followers when he was de-platformed on Twitter), 1387 (noting that the Gateway Pundit had more than 1.3 million followers across its social-media accounts before it was suspended), 1397–1409 (noting that Hines has approximately 13,000 followers each on her Health Freedom Louisiana and Reopen Louisiana Facebook pages, approximately 2,000 followers on two other Health Freedom Group Louisiana pages, and that the former Facebook pages have faced increasing censorship penalties and that the latter pages were de-platformed completely), etc.]

ensorship explained above could merely be a representative sample of more extensive suppressions inflicted by Defendants on countless similarly situated speakers and audiences, including audiences in Missouri and Louisiana. The examples of censorship produced thus far cut against Defendants' characterization of Plaintiffs' fear of imminent future harm as "entirely speculative" and their description of the Plaintiff States' injuries as "overly broad and generalized grievance[s]."⁶⁴² The Plaintiffs have outlined a federal regime of mass censorship, presented specific examples of how such censorship has harmed the States' quasi-sovereign interests in protecting their residents' freedom of expression, and demonstrated numerous injuries to significant segments of the Plaintiff States' populations.

Moreover, the materials produced thus far suggest that the Plaintiff States, along with a substantial segment of their populations, are likely to show that they are being excluded from the benefits intended to arise from participation in the federal system. The U.S. Constitution, like the Missouri and Louisiana Constitutions, guarantees the right of freedom of expression, encompassing both the right to speak and the right to listen. U.S. Const. amend. I; *Virginia State Bd. of Pharmacy v. Virginia Citizens Consumer Council, Inc.*, 425 U.S. 748, 756–57 (1976). The United States Supreme Court has acknowledged the freedom of expression as one of the most significant benefits conferred by the federal Constitution. *W. Virginia State Bd. of Educ. v. Barnette*, 319 U.S. 624, 642 (1943) ("If there is any fixed star in our constitutional constellation, it is that no official, high or petty, can prescribe what shall be orthodox in politics, nationalism, religion, or other matters of opinion."). Plaintiffs have demonstrated that they are likely to prove that federal agencies, actors, and officials in their official capacity are excluding the Plaintiff States

⁶⁴² [Doc. No. 266, at 151]

and their residents from this crucial benefit that is meant to flow from participation in the federal system. *See Snapp*, 458 U.S. at 608.

Accordingly, the Court finds that the States have alleged injuries under a *parens patriae* theory of standing because they are likely to prove injuries to the States' quasi-sovereign interests in protecting the constitutionally bestowed rights of their citizens.

Further, Plaintiffs have demonstrated direct censorship injuries that satisfy the requirements of Article III as injuries in fact.⁶⁴³ Specifically, the Plaintiffs contend that Louisiana's Department of Justice, which encompasses the office of its Attorney General, faced direct censorship on YouTube for sharing video footage wherein Louisianans criticized mask mandates and COVID-19 lockdown measures on August 18, 2021, immediately following the federal Defendants' strong advocacy for COVID-related "misinformation" censorship.⁶⁴⁴ Moreover, a Louisiana state legislator experienced censorship on Facebook when he posted content addressing the vaccination of children against COVID-19.⁶⁴⁵ Similarly, during public meetings concerning proposed county-wide mask mandates held by St. Louis County, a political subdivision of Missouri, certain citizens openly expressed their opposition to mask mandates. However, YouTube censored the entire videos of four public meetings, removing the content because some citizens expressed the view that masks are ineffective.⁶⁴⁶ Therefore, this Court finds that the Plaintiff States have also demonstrated a likelihood of establishing an injury-in-fact under a theory of direct injury sufficient to satisfy Article III.

⁶⁴³ [Doc. No. 214-1, at ¶¶1428–1430]

⁶⁴⁴ [Id. at ¶1428]

⁶⁴⁵ [Id. at ¶1429]

⁶⁴⁶ [Id. at ¶ 1430]

Accordingly, for the reasons stated above and explained in this Court’s ruling on the Motion to Dismiss,⁶⁴⁷ the Plaintiff States are likely to succeed on establishing an injury-in-fact under Article III.

(2) Individual Plaintiffs

In *Susan B. Anthony List v. Driehaus*, 573 U.S. 149, 158 (2014) (“*SBA List*”), the Supreme Court held that an allegation of future injury may satisfy the Article III injury-in-fact requirement if there is a “substantial risk” of harm occurring. (quoting *Clapper v. Amnesty Int’l USA*, 568 U.S. 398, 408 (2013)). In *SBA List*, the petitioner challenged a statute that prohibited making false statements during political campaigns. *Id.* at 151–52. The Court considered the justiciability of the pre-enforcement challenge and whether it alleged a sufficiently imminent injury under Article III. It noted that pre-enforcement review is warranted when the threatened enforcement is “sufficiently imminent.” *Id.* at 159. The Court further emphasized that past enforcement is indicative that the threat of enforcement is not “chimerical.” *Id.* at 164 (quoting *Steffel v. Thompson*, 415 U.S. 452, 459 (1974)).

Likewise, in *Babbitt v. United Farm Workers Nat. Union*, 442 U.S. 289, 302 (1979), the Supreme Court found that the plaintiffs satisfied Article III’s injury-in-fact requirement because the fear of future injury was not “imaginary or wholly speculative.” There, the Court considered a pre-enforcement challenge to a statute that deemed it an unfair labor practice to encourage consumer boycotts through deceptive publicity. *Id.* at 301. Because the plaintiffs had engaged in past consumer publicity campaigns and intended to continue those campaigns in the future, the Court found their challenge to the consumer publicity provision satisfied Article III. *Id.* at 302. Similar pre-enforcement review was recognized in *Virginia v. Am. Booksellers Ass’n, Inc.*, 484

⁶⁴⁷ [Doc. No. 214, at 20–33]

U.S. 383, 386 (1988), where the Supreme Court held that booksellers could seek review of a law criminalizing the knowing display of “harmful to juveniles” material for commercial purposes, as defined by the statute. *Virginia*, 484 U.S. at 386 (*certified question answered sub nom. Commonwealth v. Am. Booksellers Ass'n, Inc.*, 236 Va. 168 (1988)).

Here, each of the Individual Plaintiffs are likely to demonstrate an injury-in-fact through a combination of past and ongoing censorship. Bhattacharya, for instance, is the apparent victim of an ongoing “campaign” of social-media censorship, which indicates that he is likely to experience future acts of censorship.⁶⁴⁸ Similarly, Kulldorff attests to a coordinated federal censorship campaign against the Great Barrington Declaration, which implies future censorship.⁶⁴⁹ Kulldorff’s ongoing censorship experiences on his personal social-media accounts provide evidence of ongoing harm and support the expectation of imminent future harm.⁶⁵⁰ Kheriaty also affirms ongoing and anticipated future injuries, noting that the issue of “shadow banning” his social-media posts has intensified since 2022.⁶⁵¹

Hoft and Hines present similar accounts of past, ongoing, and anticipated future censorship injuries. Defendants even appear to be currently involved in an ongoing project that encourages and engages in censorship activities specifically targeting Hoft’s website.⁶⁵² Hines, too, recounts past and ongoing censorship injuries, stating that her personal Facebook page, as well as the pages

⁶⁴⁸ See [Doc. No. 214-1, ¶787 (an email from Dr. Francis Collins to Dr. Fauci and Cliff Lane which read: “Hi [Dr. Fauci] and Cliff, See <https://gbdeclaration.org>. This proposal from the three fringe epidemiologists who met with the Secretary seems to be getting a lot of attention – and even a co-signature from Nobel Prize winner Mike Leavitt at Stanford. There needs to be a quick and devastating published take down of its premises. I don’t see anything like that online yet – is it underway?”), ¶¶1368–1372 (describing the covert and ongoing censorship campaign against him)]

⁶⁴⁹ See [Id. at ¶¶1373–1380 (where Kulldorff explains an ongoing campaign of censorship against his personal social-media accounts, including censored tweets, censored posts criticizing mask mandates, removal of LinkedIn posts, and the ongoing permanent suspension of his LinkedIn account)]

⁶⁵⁰ [Id.]

⁶⁵¹ [Id. at ¶¶1383–1386]

⁶⁵² See [Id. at ¶¶1387–1396 (describing the past and ongoing campaign against his website, the Gateway Pundit, which resulted in censorship on Facebook, Twitter, Instagram, and YouTube)]

of Health Freedom Louisiana and Reopen Louisiana, are constantly at risk of being completely deplatformed.⁶⁵³ At the time of her declaration, Hines' personal Facebook account was under an ongoing ninety-day restriction. She further asserts, and the evidence supplied in support of the preliminary injunction strongly implies, that these restrictions can be directly traced back to federal officials.

Each of the Private Plaintiffs alleges a combination of past, ongoing, and anticipated future censorship injuries. Their allegations go beyond mere complaints about past grievances. Moreover, they easily satisfy the substantial risk standard. The threat of future censorship is significant, and the history of past censorship provides strong evidence that the threat of further censorship is not illusory or speculative. Plaintiffs' request for an injunction is not solely aimed at addressing the initial imposition of the censorship penalties but rather at preventing any continued maintenance and enforcement of such penalties. Therefore, the Court concludes that the Private Plaintiffs have fulfilled the injury-in-fact requirement of Article III.

Based on the reasons outlined above, the Court determines that both the States and Private Plaintiffs have satisfied the injury-in-fact requirement of Article III.

ii. Traceability

To establish traceability, or "causation" in this context, a plaintiff must demonstrate a "direct relation between the injury asserted and the injurious conduct alleged." *Holmes v. Sec. Inv. Prot. Corp.*, 503 U.S. 258, 268 (1992). Therefore, courts examining this element of standing must assess the remoteness, if any, between the plaintiff's injury and the defendant's actions. As explained in *Ass'n of Am. Physicians & Surgeons v. Schiff*, the plaintiff must establish that it is "substantially probable that the challenged acts of the defendant, not of some absent third party"

⁶⁵³ See [Id. at ¶¶1397–1411]

caused or will cause the injury alleged.” 518 F. Supp. 3d 505, 513 (D.D.C. 2021), *aff’d sub nom. Ass’n of Am. Physicians & Surgeons, Inc. v. Schiff*, 23 F.4th 1028 (D.C. Cir. 2022) (“AAPS II”) (quoting *Fla. Audubon Soc. v. Bentsen*, 94 F.3d 658, 663 (D.C. Cir. 1996)).

Plaintiffs argue that they are likely to prove that their injuries are fairly traceable to Defendants’ actions of inducing and jointly participating in the social-media companies’ viewpoint-based censorship under a theory of “but-for” causation, conspiracy, or aiding and abetting.⁶⁵⁴ In support, they cite the above-mentioned examples of switchboarding and other pressure tactics employed by Defendants.⁶⁵⁵ In response, Defendants assert that there is no basis upon which this Court can conclude that the social-media platforms made the disputed content-moderation decisions because of government pressure.⁶⁵⁶ For the reasons explained below, the Court finds that Plaintiffs are likely to prove that their injuries are fairly traceable to the conduct of the Defendants.

In *Duke Power Co. v. Carolina Env’t. Study Grp.*, the United States Supreme Court found that a plaintiff’s injury was fairly traceable to a statute under a theory of “but-for” causation. 438 U.S. 59 (1978). The plaintiffs, who were comprised in part of individuals living near the proposed sites for nuclear plants, challenged a statute that limited the aggregate liability for a single nuclear accident under the theory that, but for the passing of the statute, the nuclear plants would not have been constructed. *Id.* at 64–65. The Supreme Court agreed with the district court’s finding that

⁶⁵⁴ [Doc. No. 204, at 67–68]

⁶⁵⁵ [Id. at 69–71 (*citing* Doc. No. 214-1, ¶¶57, 64 “(promising the White House that Facebook would censor “often-true” but “sensationalized” content”); ¶ 73 “(imposing forward limits on non-violative speech on WhatsApp”); ¶¶ 89-92 “(assuring the White House that Facebook will use a “spectrum of levers” to censor content that “do[es] not violate our Misinformation and Harm policy, including “true but shocking claims or personal anecdotes, or discussing the choice to vaccinate in terms of personal and civil liberties”); ¶¶ 93-100 “(agreeing to censor Tucker Carlson’s content at the White House’s behest, even though it did not violate platform policies”); ¶¶ 103-104 “(Twitter deplatforming Alex Berenson at White House pressure”); ¶ 171 “(Facebook deplatformed the Disinformation Dozen immediately after these comments). Facebook officials scrambled to get back into the White House’s good graces. *Id.* ¶¶ 172, 224 (pleading for “de-escalation” and “working together”).”]

⁶⁵⁶ [Doc. No. 266, at 131–136]

there was a “substantial likelihood” that the nuclear plants would have been neither completed nor operated absent the passage of the nuclear-friendly statute. *Id.* at 75.

In *Duke Power Co.*, the defendants essentially argued that the statute was not the “but-for” cause of the injuries claimed by the plaintiffs because if Congress had not passed the statute, the Government would have developed nuclear power independently, and the plaintiffs would have likely suffered the same injuries from government-operated plants as they would have from privately operated ones. *Id.* In rejecting that argument, the Supreme Court stated:

Whatever the ultimate accuracy of this speculation, it is not responsive to the simple proposition that private power companies now do in fact operate the nuclear-powered generating plants injuring [the plaintiffs], and that their participation would not have occurred but for the enactment and implementation of the Price-Anderson Act. Nothing in our prior cases requires a party seeking to invoke federal jurisdiction to negate the kind of speculative and hypothetical possibilities suggested in order to demonstrate the likely effectiveness of judicial relief.

Id. at 77–78. The Supreme Court’s reluctance to follow the defendants down a rabbit-hole of speculation and “what-ifs” is highly instructive.

Here, Defendants heavily rely upon the premise that social-media companies would have censored Plaintiffs and/or modified their content moderation policies even without any alleged encouragement and coercion from Defendants or other Government officials. This argument is wholly unpersuasive. Unlike previous cases that left ample room to question whether public officials’ calls for censorship were fairly traceable to the Government; the instant case paints a full picture.⁶⁵⁷ A drastic increase in censorship, deboosting, shadow-banning, and account suspensions directly coincided with Defendants’ public calls for censorship and private demands for

⁶⁵⁷ See [Doc. No. 204, at 41-44 (where this Court distinguished this case from cases that “left gaps” in the pleadings)]

ensorship.⁶⁵⁸ Specific instances of censorship substantially likely to be the direct result of Government involvement are too numerous to fully detail, but a birds-eye view shows a clear connection between Defendants’ actions and Plaintiffs injuries.

The Plaintiffs’ theory of but-for causation is easy to follow and demonstrates a high likelihood of success as to establishing Article III traceability. Government officials began publicly threatening social-media companies with adverse legislation as early as 2018.⁶⁵⁹ In the wake of COVID-19 and the 2020 election, the threats intensified and became more direct.⁶⁶⁰ Around this same time, Defendants began having extensive contact with social-media companies via emails, phone calls, and in-person meetings.⁶⁶¹ This contact, paired with the public threats and tense relations between the Biden administration and social-media companies, seemingly resulted in an efficient report-and-censor relationship between Defendants and social-media companies.⁶⁶² Against this backdrop, it is insincere to describe the likelihood of proving a causal connection between Defendants’ actions and Plaintiffs’ injuries as too attenuated or purely hypothetical.

The evidence presented thus goes far beyond mere generalizations or conjecture: Plaintiffs have demonstrated that they are likely to prevail and establish a causal and temporal link between

⁶⁵⁸ *See, e.g.*, [Doc. No. 241-1, ¶¶1, 7, 17, 164 (examples of Government officials threatening adverse legislation against social-media companies if they do not increase censorship efforts); ¶¶ 51, 119, 133, 366, 424, 519 (examples of social-media companies, typically following up after an in-person meeting or phone call, ensuring Defendants that they would increase censorship efforts)]

⁶⁶¹ *See, e.g.*, [Doc. No. 174-1, at 3 (Twitter employees setting up a more streamlined process for censorship requests because the company had been “recently bombarded” with censorship requests from the White House)]

⁶⁶² *See, e.g.*, [Doc. Nos. 174-1, at 3 (Twitter employees setting up a more streamlined process for censorship requests because the company had been “recently bombarded” with censorship requests from the White House); at 4 (Twitter suspending a Jill Biden parody account within 45 minutes of a White House official requesting twitter to “remove this account immediately”); 214-1, at ¶799 (Drs. Bhattacharya and Kuldorff began experienced extensive censorship on social media shortly after Dr. Collins emailed Dr. Fauci seeking a “quick and devastating take down” of the GBD.); ¶1081 (Twitter removing tweets within two minutes of Scully reporting them for censorship.); ¶¶1266-1365 (Explaining how the Virality Project targeted Hines and health-freedom groups.); 214-9, at 2-3 (Twitter ensuring the White House that it would increase censorship of “misleading information” following a meeting between White House officials and Twitter employees.); etc.]

Defendants' actions and the social-media companies' censorship decisions. Accordingly, this Court finds that there is a substantial likelihood that Plaintiffs would not have been the victims of viewpoint discrimination but for the coercion and significant encouragement of Defendants towards social-media companies to increase their online censorship efforts.⁶⁶³

For the reasons stated above, as well as those set forth in this Court's previous ruling on the Motion to Dismiss,⁶⁶⁴ the Court finds that Plaintiffs are likely to succeed in establishing the traceability element of Article III standing.

iii. Redressability

The redressability element of the standing analysis requires that the alleged injury is "likely to be redressed by a favorable decision." *Lujan*, 504 U.S. at 560–61. "To determine whether an injury is redressable, a court will consider the relationship between 'the judicial relief requested' and the 'injury' suffered." *California v. Texas*, 141 S. Ct. 2104, 2115, 210 L. Ed. 2d 230 (2021) (quoting *Allen v. Wright*, 468 U.S. 737, 753 n.19 (1984), abrogated by *Lexmark Int'l, Inc. v. Static Control Components, Inc.*, 572 U.S. 118 (2014)). Additionally, courts typically find that where an injury is traceable to a defendant's conduct, it is usually redressable as well. See, e.g., *Scenic Am., Inc. v. United States Dep't of Transportation*, 836 F.3d 42, 54 (D.C. Cir. 2016) ("[C]ausation and redressability are closely related, and can be viewed as two facets of a single requirement."); *Toll Bros. v. Twp. of Readington*, 555 F.3d 131, 142 (3d Cir. 2009) ("Redressability . . . is closely related to traceability, and the two prongs often overlap."); *El Paso Cnty. v. Trump*, 408 F. Supp. 3d 840, 852 (W.D. Tex. 2019).

⁶⁶³ Because this Court finds that Plaintiffs have successfully shown a likelihood of success under a "but for" theory of causation, it will not address Plaintiffs arguments as to other theories of causation. However, the Court does note that caselaw from outside of the Fifth Circuit supports a more lenient theory of causation for purposes of establishing traceability. See, e.g., *Tweed-New Haven Airport Auth. v. Tong*, 930 F.3d 65, 71 (2d Cir. 2019); *Parsons v. U.S. Dep't of Justice*, 801 F.3d 701, 714 (6th Cir. 2015).

⁶⁶⁴ [Doc. No. 204, at 67–71]

Plaintiffs argue that they are likely to prove that a favorable decision would redress their injuries because they have provided ample evidence that their injuries are imminent and ongoing.⁶⁶⁵ In response, Defendants contend that any threat of future injury is merely speculative because Plaintiffs rely on dated declarations and focus on long-past conduct of Defendants and social-media companies.⁶⁶⁶ For the reasons explained below, the Court finds that Plaintiffs are likely to prove that their injuries would be redressed by a favorable decision.

As this Court previously noted,⁶⁶⁷ a plaintiff's standing is evaluated at the time of filing of the initial complaint in which they joined. *Lynch v. Leis*, 382 F.3d 642, 647 (6th Cir. 2004); *Davis v. F.E.C.*, 554 F.3d 724, 734 (2008); *S. Utah Wilderness All. v. Palma*, 707 F.3d 1143, 1153 (10th Cir. 2013). The State Plaintiffs filed suit on May 5, 2022,⁶⁶⁸ and the individual Plaintiffs joined on August 2, 2022.⁶⁶⁹ Both groups are likely to prove that threat of future injury is more than merely speculative.

Plaintiff States have produced sufficient evidence to demonstrate a likelihood of proving ongoing injuries as of the time the Complaint was filed. For instance, on June 13, 2023, Flaherty still wanted to “get a sense of what [Facebook was] planning” and denied the company’s request for permission to stop submitting its biweekly “Covid Insights Report” to the White House.⁶⁷⁰ Specifically, Flaherty wanted to monitor Facebook’s suppression of COVID-19 misinformation “as we start to ramp up [vaccines for children under the age of five].”⁶⁷¹ The CDC also remained in collaboration with Facebook in June of 2022 and even delayed implementing policy changes

⁶⁶⁵ [Doc. No. 214, at 71–74]

⁶⁶⁶ [Doc. No. 266, at 152–157]

⁶⁶⁷ [Doc. No. 204, at 62–65]

⁶⁶⁸ [Doc. No. 1]

⁶⁶⁹ [Doc. No. 45]

⁶⁷⁰ [Doc. No. 214-1, at ¶425]

⁶⁷¹ [Id.]

“until [it got] the final word from [the CDC].”⁶⁷² After coordinating with the CDC and White House, Facebook informed the White House of its new and government-approved policy, stating: “As of today, [June 22, 2022], all COVID-19 vaccine related misinformation and harm policies on Facebook and Instagram apply to people 6 months or older.”⁶⁷³

Likewise, the individual Plaintiffs are likely to demonstrate that their injuries were imminent and ongoing as of August 2, 2022. Evidence obtained thus far indicates that Defendants have plans to continue the alleged censorship activities. For example, preliminary discovery revealed CISA’s expanding efforts in combating misinformation, with a focus on the 2022 elections.⁶⁷⁴ As of August 12, 2022, Easterly was directing the “mission of Rumor Control” for the 2022 midterm elections,⁶⁷⁵ and CISA candidly reported to be “bee[ing] up [its] efforts to fight falsehoods[.]” in preparation for the 2024 election cycle.⁶⁷⁶ Chan of the FBI also testified at his deposition that online disinformation continues to be discussed between the federal agencies and social-media companies at the USG Industry meetings, and Chan assumes that this will continue through the 2024 election cycle.⁶⁷⁷ All of this suggests that Plaintiffs are likely to prove that risk of future censorship injuries is more than merely speculative. Additionally, past decisions to suppress speech result in ongoing injury as long as the speech remains suppressed, and the past censorship experienced by individual Plaintiffs continues to inhibit their speech in the present. These injuries are also affecting the rights of the Plaintiffs’ audience members, including those in Plaintiff States, who have the First Amendment right to receive information free from Government interference.

⁶⁷² [Doc. Nos. 71-7, at 6; 214-1, ¶424]

⁶⁷³ [Doc. Nos. 71-7, at 6; 71-3, at 5; 214-1, ¶¶424–425]

⁶⁷⁴ [Doc. No. 71-8, at 2; Doc. 86-7, at 14]

⁶⁷⁵ [Doc. No. 86-7, at 14]

⁶⁷⁶ [Doc. No. 214-1, at ¶1106 (*see also* [Doc. No. 71-8, at 2 (CISA “wants to ensure that it is set up to extract lessons learned from 2022 and apply them to the agency’s work in 2024.”)]

⁶⁷⁷ [Id. at ¶ 866]

Accordingly, and for the reasons stated above, the Court finds that Plaintiffs are likely to prove that a favorable decision would redress their injuries because those injuries are ongoing and substantially likely to reoccur.

iv. Recent United States Supreme Court cases of *Texas* and *Haaland*

Defendants cite to two recent cases from the Supreme Court of the United States which they claim undermine this Court's previous ruling about the Plaintiff States' likelihood of proving Article III standing.

First, Defendants argue that *United States v. Texas*, No. 22-58, 2023 WL 4139000 (U.S. June 23, 2023), undermines the States' Article III standing. In *Texas*, Texas and Louisiana sued the Department of Homeland Security (the "Department"), as well as other federal agencies, claiming that the recently promulgated "Guidelines for the Enforcement of Civil Immigration Law" contravened two federal statutes. *Id.* at *2. The Supreme Court held that the states lacked Article III standing because "a citizen lacks standing to contest the policies of the prosecuting authority when he himself is neither prosecuted nor threatened with prosecution." The Court further noted that the case was "categorically different" from other standing decisions "because it implicates only one discrete aspect of the executive power—namely, the Executive Branch's traditional discretion over whether to take enforcement actions against violators of federal law." *Id.* at *2, *8 (citations omitted).

Here, the Plaintiff States are not asserting a theory that the Defendants *failed* to act in conformity with the Constitution. To the contrary, the Plaintiff States assert that Defendants have affirmatively violated their First Amendment right to free speech. The Plaintiff States allege and (as extensively detailed above) are likely to prove that the Defendants caused direct injury to the Plaintiff States by significantly encouraging and/or coercing social-media companies to censor

posts made on social-media. Further, as noted in this Court’s previous ruling, the Plaintiff States are likely to have Article III standing because a significant portion of the Plaintiff States’ population has been prevented from engaging with the posts censored by the Defendants. The Supreme Court noted that “when the Executive Branch elects not to arrest or prosecute, it does not exercise coercive power over an individual’s liberty or property, and thus does not infringe upon interests that courts are often called upon to protect.” *Id.* at *5. Here, federal officials allegedly did exercise coercive power, and the Plaintiffs are likely to prevail on their claim that the Defendants violated the First Amendment rights of the Plaintiff States, their citizens, and the Individual Plaintiffs.

Defendants contend that the Supreme Court in *Texas* narrowed the application of special solicitude afforded to states because the Supreme Court noted that the standing analysis in *Massachusetts* “d[id] not control” because “[t]he issue there involved a challenge to the denial of a statutorily authorized petition for rulemaking,” rather than the exercise of enforcement discretion. *Id.* at *8 n.6. This Court disagrees with Defendants on that point. As noted by Plaintiffs, the majority opinion in *Texas* does not mention special solicitude. Further, this Court noted in its previous analysis of standing that the Plaintiff States could satisfy Article III’s standing requirements without special solicitude. Therefore, even to the extent this Court “leaves that idea on the shelf,” as suggested in Justice Gorsuch’s concurrence, the Court nonetheless finds that the Plaintiff States are likely to prove Article III standing.

Defendants also argue that the Supreme Court’s recent ruling in *Haaland v. Brackeen*, No. 21-376, 2023 WL 4002951 (U.S. June 15, 2023), undermines the Plaintiff States’ Article III standing. In *Haaland*, the Supreme Court ruled that Texas did not possess standing to challenge the placement provisions of the Indian Child Welfare Act, which prioritizes Indian families in

custody disputes involving Indian children. *Id.* at *19. The Supreme Court reasoned that the states in *Texas* could not “assert equal protection claims on behalf of its citizens because ‘[a] State does not have standing as *parens patriae* to bring an action against the Federal Government.’” *Id.* (quoting *Snapp*, 458 U.S. at 610 n.16)). The Defendants argue that this statement precludes *parens patriae* standing in the present case.⁶⁷⁸ However, in its brief discussion regarding *parens patriae* standing, the *Haaland* Court quoted footnote 16 from *Snapp*, which, in turn, reiterated the “Mellon bar.” *Haaland*, 2023 WL 4002951, at *19; *Snapp*, 458 U.S. at 610 n.16 (quoting *Massachusetts v. 262 U.S.* at 485–86).

Plaintiffs correctly note that, although both cases employ broad language, neither *Haaland* nor *Snapp* elaborate on the extent of the “Mellon bar.” Moreover, the Supreme Court has clarified in other instances that *parens patriae* suits are permitted against the federal government outside the scope of the Mellon bar. *See Massachusetts v. EPA*, 549 U.S. at 520 n.17, (explaining the “critical difference” between barred *parens patriae* suits by Mellon and allowed *parens patriae* suits against the federal government).

Consistent with *Massachusetts v. EPA*, this Court has previously determined that the Mellon bar applies to “third-party *parens patriae* suits,” but not to “quasi-sovereign-interest suits.”⁶⁷⁹ In *Haaland*, Texas presented a “third-party *parens patriae* suit,” as opposed to a “quasi-sovereign-interest suit,” as it asserted the equal protection rights of only a small minority of its population (i.e., non-Indian foster or adoptive parents seeking to foster or adopt Indian children against the objections of relevant Indian tribes), which clearly did not qualify as a quasi-sovereign interest. *See Haaland*, 2023 WL 4002951, at *19 & n.11). Here, however, Louisiana and Missouri advocate for the rights of a significant portion of their populations, specifically the hundreds of

⁶⁷⁸ [Doc. 289, at 2].

⁶⁷⁹ [Doc. 224, at 215–26], quoting *Kentucky v. Biden*, 23 F.4th 585, 598 (6th Cir. 2022).

thousands or millions of citizens who are potential audience members affected by federal social-media speech suppression.

Furthermore, when the *Haaland* Court determined that Texas lacked third-party standing, it stressed that Texas did not have either a “‘concrete injury’ to the State” or any hindrance to the third party’s ability to protect its own interests. *Id.* at *19 n.11 (quoting *Georgia v. McCollum*, 505 U.S. 42, 55–56 (1992)). Here, by contrast, the Plaintiff States have demonstrated a likelihood of succeeding on their claims that they have suffered, and likely will continue to suffer, numerous concrete injuries resulting from federal social-media censorship.⁶⁸⁰ Additionally, the ability of the third parties in this case to protect their own interests is hindered because the diffuse First Amendment injury experienced by each individual audience member in Louisiana and Missouri lacks sufficient economic impact to encourage litigation through numerous individual lawsuits. *See Bantam Books, Inc. v. Sullivan*, 372 U.S. 58, 64 n.6 (1963).

Defendants further contend that *Haaland* rejected Texas’s argument regarding the ICWA’s placement provisions requiring Texas to compromise its commitment to being impartial in child-custody proceedings.⁶⁸¹ However, the Supreme Court rejected this argument for a specific reason: “Were it otherwise, a State would always have standing to bring constitutional challenges when it is complicit in enforcing federal law.” *Haaland*, 2023 WL 4002951, at *19. By contrast, Missouri and Louisiana do not assert that the federal government mandates their complicity in enforcing federal social-media-censorship regimes. The Plaintiff States instead assert that they, along with a substantial portion of their populations, have been injured by Defendants’ actions.

Neither *Texas* nor *Haaland* undermine this Court’s previous ruling that the Plaintiff States have Article III standing to sue Defendants in the instant case. Further, the evidence produced thus

⁶⁸⁰ *See, e.g.*, [Doc. 214-1, ¶¶ 1427–1442]

⁶⁸¹ [Doc. 289, at 3] quoting *Haaland*, 2023 WL 4002951, at *19.

far through limited discovery demonstrates that Plaintiffs are likely to succeed on their First Amendment claims. Accordingly, the Court finds that Plaintiffs are likely to prove all elements of Article III standing, and therefore, are likely to establish that this Court has jurisdiction.

2. Irreparable Harm

The second requirement for a Preliminary Injunction is a showing of irreparable injury: plaintiffs must demonstrate “a substantial threat of irreparable injury” if the injunction is not issued. *Texas*, 809 F.3d at 150. For injury to be “irreparable,” plaintiffs need only show it cannot be undone through monetary remedies. *Burgess v. Fed. Deposit Inc., Corp.*, 871 F.3d 297, 304 (5th Cir.2017). Deprivation of a procedural right to protect a party’s concrete interests is irreparable injury. *Texas*, 933 F.3d at 447. Additionally, violation of a First Amendment constitutional right, even for a short period of time, is always irreparable injury. *Elrod*, 427 U.S. at 373.

Plaintiffs argue in their memorandum that the First Amendment violations are continuing and/or that there is a substantial risk that future harm is likely to occur. In contrast, Defendants argue that Plaintiffs are unable to show imminent irreparable harm because the alleged conduct occurred in the past, is not presently occurring, and is unlikely to occur in the future. Defendants argue Plaintiffs rely upon actions that occurred approximately one year ago and that it cannot be remedied by any prospective injunctive relief. Further, Defendants argue that there is no “imminent harm” because the COVID-19 pandemic is over and because the elections where the alleged conduct occurred are also over.

The Court finds that Plaintiffs have demonstrated a “significant threat of injury from the impending action, that the injury is imminent, and that money damages would not fully repair the harm.” *Humana, Inc., v. Jackson*, 804 F.2d 1390, 1394 (5th Cir. 1986). To demonstrate irreparable

harm at the preliminary injunction stage, Plaintiffs must adduce evidence showing that the irreparable injury is likely to occur during the pendency of the litigation. *Justin Indus. Inc., v. Choctaw Secs., L.P.*, 920 F.2d 262, 268 n. 7 (5th Cir. 1990). This Plaintiffs have done.

Defendants argue that the alleged suppression of social-media content occurred in response to the COVID-19 pandemic and attacks on election infrastructure, and therefore, the alleged conduct is no longer occurring. Defendants point out that the alleged conduct occurred between one to three years ago. However, the information submitted by Plaintiffs was at least partially based on preliminary injunction-related discovery⁶⁸² and third-party subpoena requests that were submitted to five social-media platforms on or about July 19, 2022.⁶⁸³ The original Complaint⁶⁸⁴ was filed on May 5, 2022, and most of the responses to preliminary injunction-related discovery provided answers to discovery requests that occurred before the Complaint was filed. Since completion of preliminary-injunction related discovery took over six months, most, if not all, of the information obtained would be at least one year old.

Further, the Defendants' decision to stop some of the alleged conduct does not make it any less relevant. A defendant claiming that its voluntary compliance moots a case bears the formidable burden of showing that it is absolutely clear the alleged wrongful behavior could not reasonably be expected to recur. *Already, LLC v. Nike*, 568 U.S. 85, 91 (2013). Defendants have not yet met this burden here.

Defendants also argue that, due to the delay in the Plaintiffs seeking relief,⁶⁸⁵ the Plaintiffs have not shown "due diligence" in seeking relief. However, this Court finds that Plaintiffs have exercised due diligence. This is a complicated case that required a great deal of discovery in order

⁶⁸² [Doc. No. 34]

⁶⁸³ [Doc. No. 37]

⁶⁸⁴ [Doc. No. 1]

⁶⁸⁵ Plaintiffs allege actions occurring as far back as 2020.

to obtain the necessary evidence to pursue this case. Although it has taken several months to obtain this evidence, it certainly was not the fault of the Plaintiffs. Most of the information Plaintiffs needed was unobtainable except through discovery.

Defendants further argue the risk that Plaintiffs will sustain injuries in the future is speculative and depends upon the action of the social-media platforms. Defendants allege the Plaintiffs have therefore not shown imminent harm by any of the Defendants.

In *Susan B. Anthony List v. Driehaus*, 573 U.S. 149, 158 (2014) (“*SBA List*”), the Supreme Court held that, for purposes of an Article III injury-in-fact, an allegation of future injury may suffice if there is “a ‘substantial risk’ that the harm will occur.” (quoting *Clapper v. Amnesty Int'l USA*, 568 U.S. 398, 408, (2013)). In *SBA List*, a petitioner challenged a statute that prohibited making certain false statements during the course of a political campaign. *Id.* at 151–52. In deciding whether the pre-enforcement challenge was justiciable—and in particular, whether it alleged a sufficiently imminent injury for purposes of Article III—the Court noted that pre-enforcement review is warranted under circumstances that render the threatened enforcement “sufficiently imminent.” *Id.* at 159. Specifically, the Court noted that past enforcement is “good evidence that the threat of enforcement is not ‘chimerical.’” *Id.* at 164 (quoting *Steffel v. Thompson*, 415 U.S. 452, 459 (1974)).

Similarly, in *Babbitt v. United Farm Workers Nat. Union*, 442 U.S. 289, 302 (1979), the Supreme Court held that a complaint alleges an Article III injury-in-fact where fear of future injury is not “imaginary or wholly speculative.” In *Babbitt*, the Supreme Court considered a pre-enforcement challenge to a statute that made it an unfair labor practice to encourage consumers to boycott using “dishonest, untruthful, and deceptive publicity.” *Id.* at 301. Because the plaintiffs had engaged in consumer publicity campaigns in the past and alleged an intention to continue those

campaigns in the future, the Court held that their challenge to the consumer publicity provision presented an Article III case or controversy. *Id.* at 302; *see also Virginia v. Am. Booksellers Ass'n, Inc.*, 484 U.S. 383, 386 (1988) (where the Supreme Court held that booksellers could seek pre-enforcement review of a law making it a crime to “knowingly display for commercial purpose” material that is “harmful to juveniles,” as defined by the statute).

Therefore, the question is whether Plaintiffs have alleged a “substantial risk” that harm may occur, which is not “imaginary or wholly speculative.” This Court finds that the alleged past actions of Defendants show a substantial risk of harm that is not imaginary or speculative. *SBA List*, 573 U. S. at 164. Defendants apparently continue to have meetings with social-media companies and other contacts.⁶⁸⁶

Although the COVID-19 pandemic is no longer an emergency, it is not imaginary or speculative to believe that in the event of any other real or perceived emergency event, the Defendants would once again use their power over social-media companies to suppress alternative views. And it is certainly not imaginary or speculative to predict that Defendants could use their power over millions of people to suppress alternative views or moderate content they do not agree with in the upcoming 2024 national election. At oral arguments Defendants were not able to state that the “switchboarding” and other election activities of the CISA Defendants and the State Department Defendants would not resume prior to the upcoming 2024 election,⁶⁸⁷ in fact, Chan testified post 2020, “we’ve never stopped.”⁶⁸⁸ Notably, a draft copy of the DHS’s “Quadrennial Homeland Security Review,” which outlines the department’s strategy and priorities in upcoming years, states that the department plans to target “inaccurate information” on a wide range of topics,

⁶⁸⁶ [Doc. No. 204-1 at 40]

⁶⁸⁷ [Doc. No. 208 at 122]

⁶⁸⁸ [Chan depo. at 8–9]

including the origins of the COVID-19 pandemic, the efficacy of COVID-19 vaccines, racial justice, the U.S. withdrawal from Afghanistan, and the return of U.S. Support of Ukraine.⁶⁸⁹

The Plaintiffs are likely to succeed on the merits in their claims that there is a substantial risk that harm will occur, that is not imaginary or speculative. Plaintiffs have shown that not only have the Defendants shown willingness to coerce and/or to give significant encouragement to social-media platforms to suppress free speech with regard to the COVID-19 pandemic and national elections, they have also shown a willingness to do it with regard to other issues, such as gas prices,⁶⁹⁰ parody speech,⁶⁹¹ calling the President a liar,⁶⁹² climate change,⁶⁹³ gender,⁶⁹⁴ and abortion.⁶⁹⁵ On June 14, 2022, White House National Climate Advisor Gina McCarthy, at an Axios event entitled, “A Conversation on Battling Disinformation,” was quoted as saying, “We have to get together; we have to get better at communicating, and frankly, the tech companies have to stop allowing specific individuals over and over to spread disinformation.”⁶⁹⁶

The Complaint (and its amendments) shows numerous allegations of apparent future harm. Plaintiff Bhattacharya alleges ongoing social-media censorship.⁶⁹⁷ Plaintiff Kulldorff alleges an ongoing campaign of censorship against the GBD and his personal social-media accounts.⁶⁹⁸ Plaintiff Kheriaty also alleges ongoing and expected future censorship,⁶⁹⁹ noting “shadow-banning” his social-media account is increasing and has intensified since 2022.⁷⁰⁰ Plaintiffs Hoft

⁶⁸⁹ [Doc. No. 209-23 at 4]

⁶⁹⁰ [Doc. No. 212-3 at 65–66, ¶ 211]

⁶⁹¹ [Id. at 58–60, ¶¶ 180–188]

⁶⁹⁹ [Doc. No. 45-7, ¶¶ 12–18]

⁷⁰⁰ [Id. at ¶¶ 15]

and Hines also allege ongoing and expected future censorship injuries.⁷⁰¹ It is not imaginary or speculative that the Defendants will continue to use this power. It is likely.

The Court finds that Plaintiffs are likely to succeed on their claim that they have shown irreparable injury sufficient to satisfy the standard for the issuance of a preliminary injunction.

3. Equitable Factors and Public Interest

Thus far, Plaintiffs have satisfied the first two elements to obtain a preliminary injunction. The final two elements they must satisfy are that the threatened harm outweighs any harm that may result to the Federal Defendants and that the injunction will not undermine the public interest. *Valley v. Rapides Par. Sch. Bd.*, 118 F.3d 1047, 1051 (5th Cir. 1997). These two factors overlap considerably. *Texas*, 809 F.3d at 187. In weighing equities, a court must balance the competing claims of injury and must consider the effect on each party of the granting or withholding of the requested relief. *Winter v. Nat. Res. Def. Council, Inc.*, 555 U.S. 7, 24 (2008). The public interest factor requires the court to consider what public interests may be served by granting or denying a preliminary injunction. *Sierra Club v. U.S. Army Corps of Engineers*, 645 F.3d 978, 997–98 (8th Cir. 2011).

Defendants maintain their interest in being able to report misinformation and warn social-media companies of foreign actors' misinformation campaigns outweighs the Plaintiffs' interest in the right of free speech. This Court disagrees and finds the balance of equities and the public interest strongly favors the issuance of a preliminary injunction. The public interest is served by maintaining the constitutional structure and the First Amendment free speech rights of the Plaintiffs. The right of free speech is a fundamental constitutional right that is vital to the freedom of our nation, and Plaintiffs have produced evidence of a massive effort by Defendants, from the

⁷⁰¹ [Doc. No. 45-7 at ¶¶ 12–18]; [Doc. No. 84 at ¶¶ 401–420]; [Doc. No. 45-12 at ¶ 4, 12]

White House to federal agencies, to suppress speech based on its content. Defendants' alleged suppression has potentially resulted in millions of free speech violations. Plaintiffs' free speech rights thus far outweighs the rights of Defendants, and thus, Plaintiffs satisfy the final elements needed to show entitlement to a preliminary injunction.

4. Injunction Specificity

Lastly, Defendants argue that Plaintiff's proposed preliminary injunction lacks the specificity required by Federal Rule of Civil Procedure 65 and is impermissibly overbroad. Rule 65(d)(1) requires an injunction to "state its terms specifically" and to "describe in reasonable detail the acts or acts restrained or required." The specificity provisions of Rule 65(d) are designed to prevent uncertainty and confusion on the part of those faced with injunction orders and to avoid possible contempt based upon a decree too vague to be understood. *Atiyeh v. Capps*, 449 U.S. 1312, 1316–17 (1981). An injunction must be narrowly tailored to remedy the specific action that gives rise to the injunction. *Scott v. Schedler*, 826 F.3d 207, 211 (5th Cir. 2016).

This Court believes that an injunction can be narrowly tailored to only affect prohibited activities, while not prohibiting government speech or agency functions. Just because the injunction may be difficult to tailor is not an excuse to allow potential First Amendment violations to continue. Thus, the Court is not persuaded by Defendants arguments here.

Because Plaintiffs have met all the elements necessary to show entitlement to a preliminary injunction, this Court shall issue such injunction against the Defendants described above.

IV. CLASS CERTIFICATION

In their Third Amended Complaint, the Individual Plaintiffs purport to bring a class action "on behalf of themselves and two classes of other persons similarly situated to them."⁷⁰² Plaintiffs

⁷⁰² [Doc. No. 268 at ¶489].

go on to describe the two proposed classes, as well as state generally that each requirement for class certification is met.⁷⁰³ Defendants opposed Plaintiffs' request for class certification in their Response to Plaintiffs' Motion for Class Certification and for Leave to File Third Amended Complaint.⁷⁰⁴

The Court is obligated to analyze whether this litigation should proceed as a class action. *See Castano v. Am. Tobacco Co.*, 84 F.3d 734, 740 (5th Cir. 1996) (“A district court must conduct a rigorous analysis of the rule 23 prerequisites before certifying a class.”). Pursuant to this obligation, the Court questioned counsel at the hearing on the preliminary injunction as to the basis for class certification. As explained in further detail below, the Court finds that Plaintiffs failed to meet their burden of proof, and class certification is improper here.

A. Class Certification Standard under FRCP 23

“The decision to certify is within the broad discretion of the court, but that discretion must be exercised within the framework of rule 23.” *Id.* at 740. “The party seeking certification bears the burden of proof.” *Id.*

Federal Rule of Civil Procedure 23(a) lays out the four key prerequisites for a class action.

It states:

One or more members of a class may sue or be sued as representative parties on behalf of all members only if:

- (1) the class is so numerous that joinder of all members is impracticable;
- (2) there are questions of law or fact common to the class;
- (3) the claims or defenses of the representative parties are typical of the claims or defenses of the class; and
- (4) the representative parties will fairly and adequately protect the interests of the class.

Fed. R. Civ. P. 23(a).

⁷⁰³ [Id. at ¶¶490–501].

⁷⁰⁴ [Doc. No. 244].

In addition to the enumerated requirements above, Plaintiffs must propose a class that has an objective and precise definition. “The existence of an ascertainable class of persons to be represented by the proposed class representative is an implied prerequisite of Federal Rule of Civil Procedure 23.” *John v. Nat’l Sec. Fire & Cas. Co.*, 501 F.3d 443, 445 (5th Cir. 2007).

“In addition to satisfying Rule 23(a)’s prerequisites, parties seeking class certification must show that the action is maintainable under Rule 23(b)(1), (2), or (3).” *Amchem Prod., Inc. v. Windsor*, 521 U.S. 591, 614 (1997). Here, Plaintiffs specifically bring this class action under Rule 23(b)(2), which allows for maintenance of a class action where “the party opposing the class has acted or refused to act on grounds that apply generally to the class, so that final injunctive relief or corresponding declaratory relief is appropriate respecting the class as a whole.” Fed. R. Civ. P. 23(b)(2). “Civil rights cases against parties charged with unlawful, class-based discrimination are prime examples” of Rule 23(b)(2) class actions. *Amchem Prod., Inc.*, 521 U.S. at 614.

Notably, the Fifth Circuit recently held that a standing analysis is necessary before engaging in the class certification analysis. *Angell v. GEICO Advantage Ins. Co.*, 67 F.4th 727, 733 (5th Cir. 2023). However, because this Court has already completed multiple standing analyses in this matter, and because the Court ultimately finds that the class should not be certified, the Court will not address which standing test should be applied to this specific issue.

B. Analysis

In order to certify this matter as a class action, the Court must find that Plaintiffs have established each element of Rule 23(a). *See In re Monumental Life Ins. Co.*, 365 F.3d 408, 414–15 (5th Cir. 2004) (“All classes must satisfy the four baseline requirements of rule 23(a):

numerosity, commonality, typicality, and adequacy of representation.”). The Court finds that Plaintiffs failed to meet their burden, and therefore, the Court will not certify the class action.

1. Class Definition

Plaintiffs propose two classes to proceed with their litigation as a class action. First, Plaintiffs define Class 1 as follows:

The class of social-media users who have engaged or will engage in, or who follow, subscribe to, are friends with, or are otherwise connected to the accounts of users who have engaged or will engage in, speech on any social-media company’s platform(s) that has been or will be removed; labelled; used as a basis for suspending, deplatforming, issuing strike(s) against, demonetizing, or taking other adverse action against the speaker; downranked; deboosted; concealed; or otherwise suppressed by the platform after Defendants and/or those acting in concert with them flag or flagged the speech to the platform(s) for suppression.⁷⁰⁵

Next, Plaintiffs define Class 2 as follows:

The class of social-media users who have engaged in or will engage in, or who follow, subscribe to, are friends with, or are otherwise connected to the accounts of users who have engaged in or will engage in, speech on any social-media company’s platform(s) that has been or will be removed; labelled; used as a basis for suspending, deplatforming, issuing strike(s) against, demonetizing, or taking other adverse action against the speaker; downranked; deboosted; concealed; or otherwise suppressed by the company pursuant to any change to the company’s policies or enforcement practices that Defendants and/or those acting in concert with them have induced or will induce the company to make.⁷⁰⁶

“It is elementary that in order to maintain a class action, the class sought to be represented must be adequately defined and clearly ascertainable.” *DeBremaecker v. Short*, 433 F.2d 733, 734 (5th Cir. 1970). The Court finds that the class definitions provided by Plaintiffs are neither “adequately defined” nor “clearly ascertainable.” Simply put, there is no way to tell just how many

⁷⁰⁵ [Doc. No. 268 at ¶490]

⁷⁰⁶ [Id. at ¶491]

people or what type of person would fit into these proposed classes. The proposed class definitions are so broad that almost every person in America, and perhaps in many other countries as well, could fit into the classes. The Court agrees with Defendants that the language used is simply too vague to maintain a class action using these definitions.⁷⁰⁷ Where a class definition is, as here, “too broad and ill-defined” to be practicable, the class should not be certified. *See Braidwood Mgmt., Inc. v. Equal Emp. Opportunity Comm’n*, No. 22-10145, 2023 WL 4073826, at *14 (5th Cir. June 20, 2023).

Further, no evidence was produced at the hearing on the motion for preliminary injunction that “would have assisted the district court in more accurately delineating membership in a workable class.” *DeBremaecker*, 433 F.2d at 734. The Court questioned Plaintiffs’ counsel about the issues with the proposed class definitions, but counsel was unable to provide a solution that would make class certification feasible here. Counsel for Plaintiffs stated that “the class definition is sufficiently precise,” but the Court fails to see how that is so, and counsel did not explain any further.⁷⁰⁸ Counsel for Plaintiffs focused on the fact that the proposed class action falls under Rule 23(b)(2), providing for broad injunctive relief, and therefore, counsel argued that the Court would not need to “figure out every human being in the United States of American [sic] who was actually adversely affected.”⁷⁰⁹ Even if the Court does not need to identify every potential class member individually, the Court still needs to be able to state the practical bounds of the class definition—something it cannot do with the loose wording given by Plaintiffs.

⁷⁰⁷ [Doc. No. 244 at 7]

⁷⁰⁸ Hearing Transcript at 181, line 15.

⁷⁰⁹ [Id. at lines 16–18]

Without a feasible class definition, the Court cannot certify Plaintiffs' proposed class action. Out of an abundance of caution, however, the Court will address the other enumerated prerequisites of Rule 23(a) below.

2. Numerosity

The numerosity requirement mandates that a class be “so large that joinder of all members is impracticable.” Fed. R. Civ. P. 23(a)(1). “Although the number of members in a proposed class is not determinative of whether joinder is impracticable,” classes with a significantly high number of potential members easily satisfy this requirement. *Mullen v. Treasure Chest Casino, LLC*, 186 F.3d 620, 624 (5th Cir. 1999) (finding class of 100 to 150 members satisfied the numerosity requirement). Other factors, such as “the geographical dispersion of the class” and “the nature of the action,” may also support a finding that the numerosity element has been met. *Id.* at 624–25.

Here, Plaintiffs state that both Class 1 and Class 2 are “sufficiently numerous that joinder of all members is impracticable.”⁷¹⁰ Plaintiffs reference the “content of hundreds of users with, collectively, hundreds of thousands or millions of followers” who were affected by Defendants' alleged censorship.⁷¹¹ Thus, based on a surface-level look at potential class members, it appears that the numerosity requirement would be satisfied because the class members' numbers reach at least into the thousands, if not the millions.

However, the numerosity requirement merely serves to highlight the same issue described above: the potential class is simply too broad to even begin to fathom who would fit into the class. Joinder of all the potential class members is more than impractical—it is impossible. Thus, while the sheer number of potential class members may tend towards class certification, the Court is only

⁷¹⁰ [Doc. No. 268 at ¶¶492–93]

⁷¹¹ [Id. at ¶¶492]

further convinced by Plaintiffs' inability to estimate the vast number of class members that certification is improper here.

3. Commonality

The commonality requirement ensures that there are "questions of law or fact common to the class." Fed. R. Civ. P. 23(a)(2). "The test for commonality is not demanding and is met 'where there is at least one issue, the resolution of which will affect all or a significant number of the putative class members.'" *Mullen*, 186 F.3d at 625 (quoting *Lightbourn v. County of El Paso*, 118 F.3d 421, 426 (5th Cir. 1997)).

Here, Plaintiffs state that both classes share common questions of law or fact, including "the question whether the government is responsible for a social-media company's suppression of content that the government flags to the company for suppression" for Class 1 and "the question whether the government is responsible for a social-media company's suppression of content pursuant to a policy or enforcement practice that the government induced the company to adopt or enforce" for Class 2.⁷¹² These questions of law are broadly worded and may not properly characterize the specific issues being argued in this case.

At the hearing for the preliminary injunction, Plaintiffs' counsel clarified that the alleged campaign of censorship "involve[es] a whole host of common questions whose resolution are going to determine whether or not there's a First Amendment violation."⁷¹³ The Court agrees that there is certainly a common question of First Amendment law that impacts each member of the proposed classes, but notes Defendants' well-reasoned argument that Plaintiffs may be attempting to aggregate too many questions into one class action.⁷¹⁴ The difficulty of providing "a single,

⁷¹² [Id. at ¶¶494–95]

⁷¹³ Hearing Transcript, at 183, lines 19–21.

⁷¹⁴ [Doc. No. 244 at 10]

class-wide answer,” as highlighted by Defendants, further proves to this Court that class certification is likely not the best way to proceed with this litigation.⁷¹⁵ Although commonality is a fairly low bar, the Court is not convinced Plaintiffs have met their burden on this element of Rule 23(a).

4. Typicality

The typicality requirement mandates that named parties’ claims or defenses “are typical...of the class.” Fed. R. Civ. P. 23(a)(3). “Like commonality, the test for typicality is not demanding.” *Mullen*, 186 F.3d at 625. It “focuses on the similarity between the named plaintiffs’ legal and remedial theories and the theories of those whom they purport to represent.” *Lightbourn*, 118 F.3d at 426.

Here, Plaintiffs assert that the Individual Plaintiffs’ claims are typical of both Class 1 and Class 2 members’ claims because they “all arise from the same course of conduct by Defendants...namely, the theory that such conduct violates the First Amendment.”⁷¹⁶ Further, Plaintiffs state that the Individual Plaintiffs “are not subject to any affirmative defenses that are inapplicable to the rest of the class and likely to become a major focus of the case.”⁷¹⁷

While the general claims of each potential class member would arise from the Defendants’ alleged First Amendment violations, the Individual Plaintiffs have not explained how their claims are typical of each proposed class specifically. For example, Class 2 includes those social-media users who “follow, subscribe to, are friends with, or are otherwise connected to the accounts of users” subject to censorship.⁷¹⁸ While the Individual Plaintiffs detail at length their own censorship, they do not clarify how they have been harmed by the censorship of other users. Again,

⁷¹⁵ [Id. at 13]

⁷¹⁶ [Doc. No. 268 at ¶496–97]

⁷¹⁷ [Id.]

⁷¹⁸ [Id. at ¶491]

this confusion highlights the myriad issues with this proposed class action as a result of the ill-defined and over-broad class definitions. The Court cannot make a finding that the Individual Plaintiffs' claims are typical of all class members' claims, simply because the Court cannot identify who would fit in the proposed class. Merely stating that the Rule 23(a) requirements have been met is not enough to persuade this Court that the class should be certified as stated.

5. Adequate Representation

The final element of a class certification analysis requires that the class representatives "fairly and adequately protect the interests of the class." Fed. R. Civ. P. 23(a)(4). "Differences between named plaintiffs and class members render the named plaintiffs' inadequate representatives only if those differences create conflicts between the named plaintiffs' interests and the class members' interests." *Mullen*, 186 F.3d at 626.

On this element, Plaintiffs state that they "are willing and able to take an active role in the case, control the course of litigation, and protect the interest of absentees in both classes."⁷¹⁹ Plaintiff also state that "[n]o conflicts of interest currently exist or are likely to develop" between themselves and the absentees.⁷²⁰ This element is likely met, without evidence to the contrary.

However, without a working class definition, and with the issues concerning the other Rule 23(a) elements discussed above, the Court finds class certification inappropriate here, regardless of the adequacy of the Individual Plaintiffs' representation. Thus, for the foregoing reasons, the Court declines to certify this matter as a class action.

V. CONCLUSION

Once a government is committed to the principle of silencing the voice of opposition, it has only one place to go, and that is down the path of increasingly repressive measures, until it becomes a source

⁷¹⁹ [Id. at ¶498]

⁷²⁰ [Id.]

of terror to all its citizens and creates a country where everyone lives in fear.

Harry S. Truman

The Plaintiffs are likely to succeed on the merits in establishing that the Government has used its power to silence the opposition. Opposition to COVID-19 vaccines; opposition to COVID-19 masking and lockdowns; opposition to the lab-leak theory of COVID-19; opposition to the validity of the 2020 election; opposition to President Biden's policies; statements that the Hunter Biden laptop story was true; and opposition to policies of the government officials in power. All were suppressed. It is quite telling that each example or category of suppressed speech was conservative in nature. This targeted suppression of conservative ideas is a perfect example of viewpoint discrimination of political speech. American citizens have the right to engage in free debate about the significant issues affecting the country.

Although this case is still relatively young, and at this stage the Court is only examining it in terms of Plaintiffs' likelihood of success on the merits, the evidence produced thus far depicts an almost dystopian scenario. During the COVID-19 pandemic, a period perhaps best characterized by widespread doubt and uncertainty, the United States Government seems to have assumed a role similar to an Orwellian "Ministry of Truth."⁷²¹

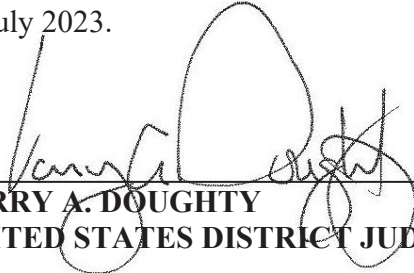

The Plaintiffs have presented substantial evidence in support of their claims that they were the victims of a far-reaching and widespread censorship campaign. This court finds that they are likely to succeed on the merits of their First Amendment free speech claim against the Defendants. Therefore, a preliminary injunction should issue immediately against the Defendants as set out

⁷²¹ An "Orwellian 'Ministry of Truth'" refers to the concept presented in George Orwell's dystopian novel, '1984.' In the novel, the Ministry of Truth is a governmental institution responsible for altering historical records and disseminating propaganda to manipulate and control public perception.

herein. The Plaintiffs Motion for Preliminary Injunction [Doc. No. 10] is **GRANTED IN PART and DENIED IN PART.**

The Plaintiffs' request to certify this matter as a class action pursuant to Fed. R. Civ. P. Article 23(b)(2) is **DENIED.**

MAG. JUDGE KAYLA D. MCCLUSKY

JUDGMENT

For the reasons set forth in the Memorandum Ruling on the Request for Preliminary Injunction,

IT IS ORDERED, ADJUDGED, AND DECREED that Plaintiffs' Motion for Preliminary Injunction [Doc. No. 10] is **GRANTED in part and DENIED in part**.

IT IS FURTHER ORDERED that: the **DEPARTMENT OF HEALTH AND HUMAN SERVICES** ("HHS") and **THE NATIONAL INSTITUTE OF ALLERGY AND INFECTIOUS DISEASES** ("NIAID"), and specifically the following employees of the HHS and NIAID: **XAVIER BECERRA**,¹ Secretary of HHS; **DR. HUGH AUCHINCLOSS**, Director of NIAID; **YOLANDA BYRD**, HHS Digital Engagement Team; **CHRISTY CHOI**, HHS Office of Communications; **ASHLEY MORSE**, HHS Director of Digital Engagement; **JOSHUA PECK**, HHS Deputy Assistant Secretary, Deputy Digital Director of HHS successor (formerly **JANELL MUHAMMED**); along with their secretaries, directors, administrators and employees; **SURGEON GENERAL VIVEK H. MURTHY**, **KATHARINE DEALY**, Chief Engagement Officer for the Surgeon General, along with her secretaries, directors, administrators, and employees; the **CENTERS FOR DISEASE CONTROL AND PREVENTION** ("CDC"), and specifically the following employees: **CAROL Y. CRAWFORD**, Chief of the Digital Media

¹ All individuals named in this Judgment are being sued in their official capacities.

Branch of the CDC Division of Public Affairs; **JAY DEMPSEY**, Social-media Team Leader, Digital Media Branch, CDC Division of Public Affairs; **KATE GALATAS**, CDC Deputy Communications Director; **UNITED STATES CENSUS BUREAU** (“Census Bureau”), and specifically the following employees: **JENNIFER SHOPKORN**, Census Bureau Senior Advisor for Communications, Division Chief for the Communications Directorate, and Deputy Director of the Census Bureau Office of Faith Based and Neighborhood Partnerships, along with their secretaries, directors, administrators and employees; the **FEDERAL BUREAU OF INVESTIGATION** (“FBI”), and specifically the following employees: **LAURA DEHMLow**, Section Chief, FBI Foreign Influence Task Force; **ELVIS M. CHAN**, Supervisory Special Agent of Squad CY-1 in the FBI San Francisco Division; **THE UNITED STATES DEPARTMENT OF JUSTICE**, along with their secretary, director, administrators, and employees; the following members of the Executive Office of the President of the United States: White House Press Secretary **KARINE JEAN-PIERRE**, Counsel to the President; **STUART F. DELERY**, White House Partnerships Manager; **AISHA SHAH**, Special Assistant to the President; **SARAH BERAN**, **MINA HSIANG**, Administrator of the United States Digital Service within the Office of Management and Budget; **ALI ZAIDI**, White House National Climate Advisor; White House Senior COVID-19 Advisor successor (formerly **ANDREW SLAVITT**); Deputy Assistant to the President and Director of Digital Strategy successor (formerly **ROB FLAHERTY**); **DORI SALCIDO**, White House COVID-19 Director of Strategic Communications and Engagement; White House Digital Director for the COVID-19 Response Team successor (formerly **CLARKE HUMPHREY**); Deputy Director of Strategic Communications and Engagement of the White House COVID-19 Response Team successor (formerly **BENJAMIN WAKANA**); Deputy Director for Strategic Communications and External Engagement for the White House COVID-

19 Response Team successor (formerly **SUBHAN CHEEMA**); White House COVID-19 Supply Coordinator successor (formerly **TIMOTHY W. MANNING**); Chief Medical Advisor to the President, **DR. HUGH AUCHINCLOSS**, along with their directors, administrators and employees; the **CYBERSECURITY AND INFRASTRUCTURE SECURITY AGENCY** (“**CISA**”), and specifically the following employees: **JEN EASTERLY**, Director of CISA; **KIM WYMAN**, Senior Cybersecurity Advisor and Senior Election Security Leader; **LAUREN PROTENTIS**; **GEOFFREY HALE**; **ALLISON SNELL**; **BRIAN SCULLY**, Officials of CISA; the **UNITED STATES DEPARTMENT OF HOMELAND SECURITY** (“**DHS**”), and specifically the following employees: **ALEJANDRO MAYORKAS**, Secretary of DHS; **ROBERT SILVERS**, Under-Secretary of the Office of Strategy, Policy and Plans; **SAMANTHA VINOGRAD**, Senior Counselor for National Security in the Office of the Secretary for DHS, along with their secretary, directors, administrators, and employees; the **UNITED STATES DEPARTMENT OF STATE** (“**State Department**”), and specifically the following employees: **LEAH BRAY**, Acting Coordinator of the State Department’s Global Engagement Center (“**GEC**”); **ALEX FRISBIE**, State Department Senior Technical Advisor and member of the Technology Engagement Team at the GEC; **DANIEL KIMMAGE**, Acting Coordinator of the GEC, along with their secretary, directors, administrators, and employees **ARE HEREBY ENJOINED AND RESTRAINED** from taking the following actions as to social-media companies:²

² “Social-media companies” include Facebook/Meta, Twitter, YouTube/Google, WhatsApp, Instagram, WeChat, TikTok, Sina Weibo, QQ, Telegram, Snapchat, Kuaishou, Qzone, Pinterest, Reddit, LinkedIn, Quora, Discord, Twitch, Tumblr, Mastodon, and like companies.

(1) meeting with social-media companies for the purpose of urging, encouraging, pressuring, or inducing in any manner the removal, deletion, suppression, or reduction of content containing protected free speech posted on social-media platforms;³

(2) specifically flagging content or posts on social-media platforms and/or forwarding such to social-media companies urging, encouraging, pressuring, or inducing in any manner for removal, deletion, suppression, or reduction of content containing protected free speech;

(3) urging, encouraging, pressuring, or inducing in any manner social-media companies to change their guidelines for removing, deleting, suppressing, or reducing content containing protected free speech;

(4) emailing, calling, sending letters, texting, or engaging in any communication of any kind with social-media companies urging, encouraging, pressuring, or inducing in any manner for removal, deletion, suppression, or reduction of content containing protected free speech;

(5) collaborating, coordinating, partnering, switchboarding, and/or jointly working with the Election Integrity Partnership, the Virality Project, the Stanford Internet Observatory, or any like project or group for the purpose of urging, encouraging, pressuring, or inducing in any manner removal, deletion, suppression, or reduction of content posted with social-media companies containing protected free speech;

(6) threatening, pressuring, or coercing social-media companies in any manner to remove, delete, suppress, or reduce posted content of postings containing protected free speech;

³ “Protected free speech” means speech that is protected by the Free Speech Clause of the First Amendment to the United States Constitution in accordance with jurisprudence of the United States Supreme Court, Courts of Appeal and District Courts.

(7) taking any action such as urging, encouraging, pressuring, or inducing in any manner social-media companies to remove, delete, suppress, or reduce posted content protected by the Free Speech Clause of the First Amendment to the United States Constitution;

(8) following up with social-media companies to determine whether the social-media companies removed, deleted, suppressed, or reduced previous social-media postings containing protected free speech;

(9) requesting content reports from social-media companies detailing actions taken to remove, delete, suppress, or reduce content containing protected free speech; and

(10) notifying social-media companies to Be on The Lookout (“BOLO”) for postings containing protected free speech.

This Preliminary Injunction precludes said named Defendants, their agents, officers, employees, contractors, and all acting in concert with them from the aforementioned conduct. This Preliminary Injunction also precludes said named Defendants, their agents, officers, employees, and contractors from acting in concert with others who are engaged in said conduct.

IT IS FURTHER ORDERED that the following actions are **NOT** prohibited by this Preliminary Injunction:

(1) informing social-media companies of postings involving criminal activity or criminal conspiracies;

(2) contacting and/or notifying social-media companies of national security threats, extortion, or other threats posted on its platform;

(3) contacting and/or notifying social-media companies about criminal efforts to suppress voting, to provide illegal campaign contributions, of cyber-attacks against election infrastructure, or foreign attempts to influence elections;

(4) informing social-media companies of threats that threaten the public safety or security of the United States;

(5) exercising permissible public government speech promoting government policies or views on matters of public concern;

(6) informing social-media companies of postings intending to mislead voters about voting requirements and procedures;

(7) informing or communicating with social-media companies in an effort to detect, prevent, or mitigate malicious cyber activity;

(8) communicating with social-media companies about deleting, removing, suppressing, or reducing posts on social-media platforms that are not protected free speech by the Free Speech Clause in the First Amendment to the United States Constitution.

IT IS FURTHER ORDERED that no security is required to be posted by Plaintiffs under Federal Rule of Civil Procedure 65.

IT IS FURTHER ORDERED that this Preliminary Injunction Order shall remain in effect pending the final resolution of this case or until further orders issue from this Court, the United States Court of Appeals for the Fifth Circuit, or the Supreme Court of the United States.

IT IS FURTHER ORDERED that the Motion for Preliminary Injunction [Doc. No. 10] is **DENIED** as to the following Defendants: U.S. Food and Drug Administration; U. S. Department of Treasury; U.S. Election Assistance Commission; U. S. Department of Commerce and employees Erica Jefferson, Michael Murray, Wally Adeyemo, Steven Frid, Brad Kimberly, and Kristen Muthig; and Disinformation Governance Board (“DGB”) and its Director Nina Jankowicz.

IT IS FURTHER ORDERED that no evidentiary hearing is required at this time.

IT IS FURTHER ORDERED that Plaintiffs' request for certification of this proceeding as a class action pursuant to Fed. R. Civ. P. Article 23 (b)(2) is **DENIED**.

THUS, DONE AND SIGNED IN MONROE, LOUISIANA, this 4th day of July 2023.

TERRY A. DOUGHTY
UNITED STATES DISTRICT JUDGE

**IN THE UNITED STATES DISTRICT COURT
FOR THE WESTERN DISTRICT OF LOUISIANA
MONROE DIVISION**

STATE OF MISSOURI *ex rel.* ERIC S.
SCHMITT, Attorney General, and

STATE OF LOUISIANA *ex rel.* JEFFREY
M. LANDRY, Attorney General,

Plaintiffs,

v.

JOSEPH R. BIDEN, JR., in his official
capacity as President of the United States, *et*

Defendants.

Case No. 3:22-cv-01213

PLAINTIFFS' MOTION FOR PRELIMINARY INJUNCTION

Plaintiffs, the States of Missouri and Louisiana, by and through their Attorneys General, Eric S. Schmitt and Jeffrey M. Landry (collectively, “Plaintiffs” or “the States”), respectfully move this Court to grant a preliminary injunction against Defendants, prohibiting them from demanding, pressuring, urging, encouraging, or otherwise inducing social-media platforms to censor or suppress in any manner the speech of speakers, content, and viewpoint that Defendants disfavor. For the reasons stated in the States’ Memorandum in Support of Motion for Preliminary Injunction, which is filed separately and incorporated by reference herein, the Court should enter a preliminary injunction to address the grave irreparable harms and to vindicate the public interest in freedom of speech for Missouri, Louisiana, and their citizens.

For the reasons stated in the States’ Memorandum, Plaintiffs respectfully request that this Court enter a preliminary injunction in three phases:

(1) Immediately enter a preliminary injunction preventing Defendants, and their agents, officers, employees, contractors and all those acting in concert with them, from taking any steps to demand, urge, encourage, pressure, or otherwise induce any social-media company or platform for online speech, or any employee, officer, or agent of any such company or platform, to censor, suppress, remove, de-platform, suspend, shadow-ban, de-boost, restrict access to content, or take any other adverse action against any speaker, content, or viewpoint expressed on social media;

(2) Grant the States' separately filed Motion for Preliminary-Injunction-Related Discovery, and authorize the States to take discovery from Defendants and third parties to identify the details and scope of Defendants' social-media censorship activities, discussed herein; and

(3) After the conclusion of such preliminary-injunction-related discovery, enter more specific preliminary injunctive relief to provide fully effective relief to address the details and scope of the conduct challenged herein.

INTRODUCTION

This case involves some of the most egregious First Amendment violations in American history. Federal officials from the White House and multiple agencies use pressure, threats, coercion, cajoling, collusion, demands, and trickery and deceit to induce social-media platforms to censor speakers and viewpoints on social media that the federal officials disfavor. The proof of this sprawling federal “Censorship Enterprise” is voluminous and overwhelming. Plaintiffs summarize key points of the evidence in 1,442 numbered paragraphs with specific citations of the record for each point. *See* Plaintiffs’ Proposed Findings of Fact, attached as Exhibit 1. This evidence establishes beyond dispute the following unconscionable federal censorship activities.

White House officials like Rob Flaherty, Andrew Slavitt, and Jennifer Psaki have engaged in a relentless pressure campaign, both in public and in private, to coerce platforms into censoring disfavored viewpoints on social media. *See infra*, at 8-10; Ex. 1, ¶¶ 31-211. Surgeon General Vivek Murthy and his staff coordinate closely with the White House in this pressure campaign, causing social-media platforms to scramble and assure federal officials that “we hear your call to do more” to censor disfavored viewpoints. *See infra*, at 8-13; Ex. 1, ¶¶ 212-425. The CDC flags specific social-media posts for censorship, organizes “BOLO” (“Be On the Lookout”) meetings to tell platforms what should be censored, and serves as the ultimate fact-checker with final authority to dictate what speech will be removed from social media. *See infra*, at 31-34; Ex. 1, ¶¶ 426-595.

Dr. Fauci orchestrated an elaborate campaign of trickery and deception to induce social-media platforms to censor the lab-leak theory and other viewpoints he disfavors. *See infra*, at 19-27; Ex. 1, ¶¶ 598-852. The FBI, likewise, deliberately planted false information about “hack-and-leak” operations to deceive social-media platforms into censoring the Hunter Biden laptop story. *See infra*, at 27-29; Ex. 1, ¶¶ 880-904. The FBI, CISA, and the GEC collude with social-media

platforms in hundreds of meetings about misinformation, and those agencies repeatedly flag huge quantities of First Amendment-protected speech to platforms for censorship. *See infra*, at 34-40; Ex. 1, ¶¶ 853-1134. CISA “switchboards” reports of so-called “misinformation” from state and local governments to platforms for censorship. *See infra*, at 37-39; Ex. 1, ¶¶ 972-977.

CISA and the GEC are pervasively intertwined with massive public-private censorship enterprises like the Election Integrity Partnership, a collaboration among government, social-media platforms, and activist nonprofits to monitor, track, and censor enormous volumes of Americans’ speech on social media. *See infra*, at 42-48; Ex. 1, ¶¶ 991-1075, 1135-1235. Federal health officials in the Surgeon General’s Office, the CDC, and HHS collaborate in a similar censorship enterprise called the Virality Project, which procures the censorship of enormous quantities of First Amendment-protected speech. *See infra*, at 48-51; Ex. ¶¶ 1236-1365. These are just examples of the violations herein.

Altogether, these censorship activities by federal officials and agencies constitute a gargantuan federal “Censorship Enterprise.” This enterprise is highly effective—it has stifled debate and criticism of government policy on social media about some of the most pressing issues of our time. And its activities are flagrantly unconstitutional. The Court should enter a preliminary injunction putting a stop to these egregious violations of the First Amendment.

Plaintiffs incorporate by reference their previously filed briefing addressing these issues, including their prior Memorandum in Support of Preliminary Injunction, Doc. 15, and their Response to Defendants’ Motion to Dismiss, Doc. 161-1. Plaintiffs also incorporate by reference the documentary discovery, evidence, and deposition transcripts and exhibits filed in the case, including Docs. 10-1 to 10-15, Docs. 71-1 to 71-13, Docs. 86-2 to 86-10, and Docs. 204-210.

FACTUAL BACKGROUND

Plaintiffs incorporate by reference the facts set forth in their Proposed Findings of Fact, attached as Exhibit 1 hereto. Plaintiffs also incorporate by reference the facts set forth in the Factual Background section of their prior brief in support of preliminary injunction, Doc. 15, at 8-41. Key facts relevant to each legal standard are also set forth in the Argument section below.

ARGUMENT

“To be entitled to a preliminary injunction, a movant must establish (1) a likelihood of success on the merits; (2) a substantial threat of irreparable injury; (3) that the threatened injury if the injunction is denied outweighs any harm that will result if the injunction is granted; and (4) that the grant of an injunction will not disserve the public interest.” *Ladd v. Livingston*, 777 F.3d 286, 288 (5th Cir. 2015). All four of these factors favor an injunction here.

I. Plaintiffs Are Likely to Succeed on the Merits.

First, Plaintiffs are likely to succeed on the merits of their First Amendment claim (Count One) and their APA and *ultra vires* claims (Counts Two to Seven). *See* Doc. 84, at 145-161.

A. Plaintiffs Are Likely to Succeed on their First Amendment Claim.

“[T]here is no single test to identify state actions and state actors,” and the Supreme Court’s “cases have identified a host of facts that can bear on the fairness of such an attribution” of state action. *Brentwood Acad. v. Tennessee Secondary Sch. Athletic Ass’n*, 531 U.S. 288, 294, 296 (2001). The question of state action is a “necessarily fact-bound inquiry,” and “the criteria lack rigid simplicity.” *Id.* at 295, 298. When the government induces or jointly participates in conduct that the Constitution prohibits the government from performing, the government is liable as if it had performed the conduct itself. Courts have articulated multiple, overlapping tests for when the government induces or jointly participates in private conduct. Under these tests, Defendants are

liable for viewpoint-based censorship by social-media companies for at least five independent reasons: Defendants are *inducing* the censorship by means of (1) significant encouragement, (2) coercion, and/or (3) deception; and Defendants are *jointly participating* in the censorship through (4) conspiracy or collusion, and/or (5) pervasive entwinement in the censorship process. The evidence in this case satisfies all five of these standards.

1. Inducement – Significant Encouragement, Coercion, and Deception.

As to inducement, it is “axiomatic that a state may not induce, encourage or promote private persons to accomplish what it is constitutionally forbidden to accomplish.” *Norwood v. Harrison*, 413 U.S. 455, 465 (1973); *see also Biden v. Knight First Amendment Inst. at Columbia Univ.*, 141 S. Ct. 1220, 1226 (2021) (Thomas, J. concurring) (“The government cannot accomplish through threats of adverse government action what the Constitution prohibits it from doing directly.”). As relevant here, such inducement can take the form of coercion (both implied and express), *Blum v. Yaretsky*, 457 U.S. 991, 1004 (1982); “significant encouragement,” *id.*; or deception, *George v. Edholm*, 752 F.3d 1206, 1215 (9th Cir. 2014). A government official who induces private conduct by any of these means is liable as if he had performed the conduct himself. *See Blum*, 457 U.S. at 1004; *George*, 752 F.3d at 1215.

Moreover, under this standard, it is not required for the government’s unlawful conduct to be the but-for cause of the censorship. The Constitution forbids governmental coercion, significant encouragement, and deception—even when the private parties do not resist. *Reitman v. Mulkey*, 387 U.S. 369, 380–81 (1967); *Peterson v. City of Greenville*, 373 U.S. 244, 248 (1963); *Mathis v. Pac. Gas & Elec. Co.*, 891 F.2d 1429, 1434 (9th Cir. 1989); *Carlin Commc’ns, Inc. v. Mountain States Tel. & Tel. Co.*, 827 F.2d 1291, 1295 (9th Cir. 1987).

a. Significant Encouragement.

The Constitution prohibits the government from “significant[ly] encourag[ing]” private conduct that the government itself could not constitutionally undertake. *Blum*, 457 U.S. at 1004. Although outright commands are the most obvious form of government inducement, the government acts unconstitutionally even when it “can be charged with only encouraging, rather than commanding” improper conduct. *Reitman*, 387 U.S. at 375 (quotation marks omitted); *accord Frazier v. Bd. of Trs. of Nw. Miss. Reg’l Med. Ctr.*, 765 F.2d 1278, 1286 (5th Cir.) (government is responsible for private conduct that it “had some affirmative role, albeit one of encouragement short of compulsion,” in promoting), *amended on other grounds*, 777 F.2d 329 (5th Cir. 1985) (Mem.).

Significant encouragement takes many forms. Explicit requests are most obvious. *E.g.*, *Hatteras v. Sw. Bell Tel. Co.*, 774 F.2d 1341, 1343 n.4 (5th Cir. 1985) (telephone disconnection at government’s request); *Warner v. Grand Cnty.*, 57 F.3d 962, 964 (10th Cir. 1995) (search at government’s request); *Fries v. Barnes*, 618 F.2d 988, 990–91 (2d Cir. 1980) (seizure of property at government’s request). But subtler, more “covert” forms of encouragement also are significant when designed to induce specific action. *See Skinner v. Ry. Lab. Execs. Ass’n*, 489 U.S. 602, 615 (1989) (“[A] private party should be deemed an agent or instrument of the Government” whenever “the Government did more than adopt a passive position toward the underlying private conduct.”).

For example, in *Adickes v. S.H. Kress & Co.*, a restaurant refused to serve a plaintiff “because she was a white person in the company of Negroes.” 398 U.S. 144, 152 (1970). The Supreme Court held that the denial of service was government action if a police officer in the restaurant “communicated his disapproval to a [restaurant] employee, thereby influencing the decision not to serve [the plaintiff].” *Id.* at 158. Similarly, in *Dossett v. First State Bank*, public-

school officials contacted the plaintiff's employer, a private bank where the school had an account, to report their displeasure at the plaintiff's remarks during a recent school-board meeting. 399 F.3d 940, 944 (8th Cir. 2005). The bank's president fired the plaintiff, citing the plaintiff's "negative [comments] about our local school board and superintendent." *Id.* at 944-45. Although the president "denied that any of the school board members or the superintendent threatened to remove funds from the Bank or demanded that [the plaintiff] be fired," the court held that the termination constituted government action if the bank and school officials nonetheless "reach[ed] a mutual understanding" that the plaintiff's speech deserved retaliation. *Id.* at 944, 949-50.

The Fifth Circuit has held that even the silent presence of government officials sometimes can transform otherwise private conduct into government action. *See United States v. Mekjian*, 505 F.2d 1320, 1327 (5th Cir. 1975) (stating that a search performed by private parties is attributable to the government if federal officials are "stand[ing] by watching with approval as the search continues"). To be sure, presence alone, without other factors, "is not sufficient." *Blum*, 457 U.S. at 1004-05. But if the facts show that the officials' approving presence "induce[s], encourage[s] or promote[s]" the private parties to act, *Norwood*, 413 U.S. at 465, then that presence amounts to unconstitutional "significant encouragement," *Blum*, 457 U.S. at 1004; *cf. Rivera v. Rhode Island*, 402 F.3d 27, 34 (1st Cir. 2005) (recognizing that a government official's assurance that he will not intervene can make the official responsible for private acts of violence).

Attributing responsibility to the government for "significantly encouraging" private acts makes sense because a party who has lent any "assistance rendered by words, acts, encouragement, support, or presence" is legally an accomplice. *Rosemond v. United States*, 572 U.S. 65, 73 (2014). Although that term applies most often in the criminal context, courts routinely find that the government is an accomplice to private civil misconduct when the government significantly

encourages that conduct. *E.g.*, *George*, 752 F.3d at 1215 (“Police officers may be liable for a private party’s search when the police ordered or were complicit in the search.”); *Hemphill v. Schott*, 141 F.3d 412, 419 (2d Cir. 1998) (identifying a “Fourteenth Amendment right not to be subjected to the excessive force of a third party who is aided and abetted by a state actor”); *Dwares v. City of New York*, 985 F.2d 94, 98 (2d Cir. 1993) (“[A] state actor may be subject to liability for an action physically undertaken by private actors in violation of the plaintiff’s liberty or property rights if the state actor directed or aided and abetted the violation.”).

Moreover, Defendants cannot evade responsibility for their actions by appealing to the government-speech doctrine. That doctrine permits the government to express its own opinion without violating the First Amendment. *Pleasant Grove City v. Summum*, 555 U.S. 460, 467–68 (2009). But Defendants are not merely opining in the abstract about disputed policy questions. Instead, they are contacting social-media companies through backchannels and demanding that those companies make specific changes to their content-moderation policies and take concrete censorship action on particular items of speech.

Courts regularly apply the same distinction to private speech. The First Amendment protects advocating criminal conduct in the abstract, *Brandenburg v. Ohio*, 395 U.S. 444, 448–49 (1969), but not “encourag[ing]” a particular person to take a specific criminal action, *e.g.*, *United States v. Rahman*, 189 F.3d 88, 115 (2d Cir. 1999); *Rice v. Paladin Enters., Inc.*, 128 F.3d 233, 243–47 (4th Cir. 1997); *United States v. Buttorff*, 572 F.2d 619, 623–24 (8th Cir. 1978). Thus, the First Amendment protects “abstract advocacy” like “‘I believe that child pornography should be legal’ or even ‘I encourage you to obtain child pornography,’” but it does not protect “the recommendation of a particular piece of purported child pornography.” *United States v. Williams*, 553 U.S. 285, 299–300 (2008). So too, even assuming the First Amendment permits the

government to advocate in the abstract for actions that the Constitution bars the government itself from taking, it does not permit the government to engage in specific, significant encouragement of such actions.

Here, there is overwhelming evidence the Defendants significantly encourage social-media censorship, especially the White House and Surgeon General's Office, and others as well.

The White House, Rob Flaherty, and Jennifer Psaki. Beginning in early 2021, and continuing through the present, White House officials such as Rob Flaherty, Andy Slavitt, and Jennifer Psaki, working with others such as Clarke Humphrey, Courtney Rowe, Christian Tom, and Benjamin Wakana, have conducted and continue to conduct an intense pressure campaign against social-media platforms in public and in private to demand greater censorship. Plaintiffs' Proposed Findings of Fact, Ex. 1, ¶¶ 31-211.

Rob Flaherty spearheads this campaign with a relentless chain of emails, meetings, and communications pressuring the platforms to engage in greater censorship of COVID-related speech. *Id.* Flaherty continuously badgers platforms for more detailed information about their censorship practices. *See, e.g., id.* ¶¶ 43-45, 50, 54, 66-68, 74, 84-85, 112-113, 175. White House officials ask platforms for reports on specific censorship issues. *See, e.g., id.* ¶¶ 85-86 (asking for and receiving "a 24 hour report-back" on misinformation about the Johnson & Johnson vaccine); 87, 107 (Flaherty to YouTube, "We'll look out for the top trends that you've seen in terms of misinformation around the vaccine."). White House officials make very specific demands about how to increase censorship of disfavored speech. *Id.* ¶¶ 118-121 (demanding that Facebook monitor private events and deplatform the "Disinformation Dozen").

The White House pressures the platforms with accusations and belligerent language. *See id.* ¶ 55 ("You are hiding the ball."); ¶ 58 ("This would all be a lot easier if you would just be

straight with us.”); ¶¶ 69-70, 77 (“Really couldn't care less about ... the product safari”); ¶ 99 (snapping, after not receiving a response on the censorship of Tucker Carlson quickly enough for his liking, “[t]hese questions weren't rhetorical.”); 126 (“Not to sound like a broken record....”); ¶ 130 (“Hard to take any of this seriously....”); ¶¶ 134-136 (“I don't know why you guys can't figure this out”); ¶ 173 (Flaherty accusing YouTube of providing misleading information); ¶ 178 (“not even sure what to say at this point”); ¶ 186 (“Total Calvinball.”). This includes one particularly profane attack by Rob Flaherty against Facebook: “Are you guys f**king serious? I want an answer on what happened here and I want it today.” *Id.* ¶ 139. Indeed, Flaherty accuses Facebook of fomenting the January 6, 2021 riot by not censoring enough speech. *Id.* ¶ 78 (“an insurrection which was plotted, in large part, on your platform.... I want some assurances, based in data, that you are not doing the same thing again here.”); ¶ 97 (“Not for nothing but last time we did this dance, it ended in an insurrection.”).

The encouragement takes other forms as well. White House officials praise the platforms for censoring content that does not violate their policies. *Id.* ¶ 112 (Flaherty praising YouTube for censoring non-violative content: “I believe you said you reduced watch time by 70% on ‘borderline’ content, which is impressive.”); ¶ 174 (YouTube assuring Flaherty that it censors non-violative content). And White House officials demand the removal of *specific* posts and accounts of disfavored speakers, and social-media platforms routinely comply. *Id.* ¶¶ 34-36 (Robert F. Kennedy Jr.); ¶¶ 81-82, 93-94 (Tucker Carlson and Tomi Lahren of Fox News); ¶ 103-104 (demanding and receiving the deplatforming of Alex Berenson); ¶¶ 121, 128 (the “Disinformation Dozen”); ¶ 149 (Psaki calling for the deplatforming of the “Disinformation Dozen”); ¶ 125 (trending posts on Facebook); ¶ 168 (parody or fake account of Dr. Fauci); ¶¶ 80-187 (a comedic video of Jill Biden).

When aggressive demands do not get quick enough results, the White House resorts to overt and implied threats. *See, e.g., id.* ¶ 61 (“Internally we have been considering our options on what to do about it.”); ¶ 108 (Flaherty telling YouTube, “This is a concern that is shared at the highest (and I mean highest) levels of the WH”); ¶¶ 114-115 (referring to a list of policy recommendations and stating, “spirit of transparency – this is circulating around the building and informing thinking.”).

In addition to private demands, public pressure is a key part of this campaign. The White House makes detailed public demands for greater censorship, including at the White House press conferences on May 5, 2021 and July 15, 2021. *Id.* ¶¶ 123-124 (Jennifer Psaki demanding greater censorship and calling for “a robust anti-trust program”); ¶¶ 146-152 (Jennifer Psaki at the July 15, 2021 press conference making four public demands on platforms, including data-sharing, creating “a robust enforcement strategy,” to “take faster action against harmful posts,” and adjusting their algorithms); ¶¶ 164-165 (White House communications director threatening repeal of Section 230 if platforms do not censor more speech). President Biden accuses the platforms of “killing people” by not censoring enough misinformation. *Id.* ¶ 153.

Social-media platforms promptly respond to this pressure campaign by repeatedly reporting to the White House that they will stiffen their policies and/or take enforcement actions against disfavored speech. *Id.* ¶¶ 41-42, 45, 64, 75, 131, 177, 187. And platforms dutifully report to the White House in detail about their censorship practices. *Id.* ¶¶ 86-87, 132-133, 174.

The Surgeon General and His Office. Throughout 2021 and 2022, Surgeon General Vivek Murthy and his Office have and are engaged in a pressure campaign in parallel with, and often overlapping with, the White House’s pressure campaign on social-media platforms. Surgeon General Murthy and his staff are often included in the same meetings and communications with

White House officials and social-media platforms, and join White House officials pressuring them to increase censorship in public and in private. *See id.* ¶¶ 212-425.

The Surgeon General uses his “bully pulpit” to pressure social-media platforms to censor disfavored viewpoints. *Id.* ¶¶ 218-222. This pressure occurs in public and in private, *id.* ¶¶ 222, 225, 269, including in “closed-door meetings” with platforms, *id.* ¶ 394. The Surgeon General pressures platforms to share data about misinformation and censorship on their platforms to allow the government to monitor disfavored viewpoints on their platforms. *Id.* ¶¶ 236-240, 353. After intense pressure, Facebook ultimately agreed to additional data-sharing demanded by the Surgeon General. *Id.* ¶¶ 359, 363. In private meetings, Dr. Murthy demands that the platforms perform “defensive work” to remove misinformation. *Id.* ¶ 283. In early 2021, Dr. Murthy had a series of “angry” and “tense” meetings with platforms to demand that they remove misinformation. *Id.* ¶¶ 341-344.

Dr. Murthy places great public pressure on the platforms to censor. At his July 15, 2021 press conference with Jennifer Psaki, Dr. Murthy announced a Health Advisory that explicitly demands greater censorship from social-media platforms. *Id.* ¶¶ 293-309. He demanded that platforms do “much, much more” to “address misinformation.” *Id.* ¶ 307. His Health Advisory demands that platforms take specific steps to censor disfavored viewpoints on health and share data with government and its partners so they can monitor the spread of disfavored speech on their platforms. *Id.* ¶¶ 324-329. He explicitly calls for prior restraints, *e.g.*, “prioritize the early detection of misinformation ‘super-spreaders’ and repeat offenders. Impose clear consequences for accounts that repeatedly violate platform policies.” *Id.* ¶ 326-329.

This White House-Surgeon General pressure campaign gets results. After the public pressure of July 15 and 16, Facebook provided “a catalog of ... both removal of misinformation

and other steps to tamp down mis- and disinformation.” *Id.* ¶ 262. In fact, the Surgeon General’s Office asked all platforms to report back on what additional censorship they were imposing as a result of the Surgeon General’s Health Advisory. *Id.* ¶¶ 270, 309, 364, 368. Platforms reported back with new steps taken to increase censorship of disfavored viewpoints. *Id.* ¶¶ 370-377, 395. In response to the Advisory, Facebook reported a series of more aggressive steps against misinformation, including deplatforming the Disinformation Dozen and adopting more restrictive policies. *Id.* ¶ 348, 354-358. Facebook told the White House and Surgeon General, “we hear your call to do more.” *Id.* ¶ 358. Facebook sought to understand “what the White House expects of us on misinformation going forward.” *Id.* ¶ 349. It asked to “find a way to deescalate and work together collaboratively” on censoring misinformation. *Id.* ¶ 351. Facebook assured the White House and Surgeon General that it would censor disfavored speech about vaccines for children ages 5-11. *Id.* ¶ 395. The Surgeon General’s pressure campaign places both economic and public pressure on platforms. *Id.* ¶¶ 272-273.

Facebook provides biweekly reports on misinformation on its platforms to the Surgeon General and the White House. *Id.* ¶¶ 279, 284-286, 291. Platforms provide detailed reports on their censorship activities to the Surgeon General and his staff, especially announcing increased censorship policies and enforcement. *See, e.g., id.* ¶¶ 281, 395-398.

In October 2021, the Surgeon General publicly hammered Facebook after a Washington Post report about disinformation on its platforms, pressuring all platforms to increase censorship. *Id.* ¶¶ 386-387. He stated: “We must demand Facebook and the rest of the social media ecosystem take responsibility for stopping health misinformation on their platforms. The time for excuses and half measures is long past. We need transparency and accountability now.” *Id.* ¶ 387. The Surgeon General’s Office agrees that the Surgeon General was “hitting up Facebook” on the spread

of misinformation on its platforms. *Id.* ¶ 392. Dr. Murthy followed up with a series of public statements demanding that the platforms increase censorship of disfavored viewpoints, including “aggressive action” against “superspreaders” and disfavored speakers. *Id.* ¶¶ 400-409.

The Surgeon General threatens regulation of platforms if they do not increase censorship. The Surgeon General’s Health Advisory impliedly threatens regulation by calling for “appropriate legal and regulatory measures that address health misinformation.” *Id.* ¶ 325. Dr. Murthy himself, and the Surgeon General’s documents, threaten adverse consequences on the platforms by threatening to hold them “accountable.” *See, e.g.*, ¶¶ 301-303, 329, 387, 403. Shortly before issuing a formal Request for Information (RFI) in the Federal Register, Dr. Murthy called for the government to set “safety standards” for misinformation on platforms. *Id.* ¶ 410. Then, on March 3, 2022, the Surgeon General issued the formal RFI to demand information from platforms about the spread of, and how to track, misinformation on their platforms. *Id.* ¶ 411-416. The RFI requests information about specific disfavored speakers and viewpoints on social media. *Id.* ¶ 416. The RFI carries an implied threat of regulation against social-media platforms if they do not stop the spread of misinformation. *Id.* ¶¶ 410-416. Shortly after the RFI, Dr. Murthy called for the equivalent of “speed limits”—*i.e.*, government-imposed safety standards—for misinformation on platforms. *Id.* ¶ 423.

These pressure campaigns amount to not only unlawful significant encouragement, but also coercion and conspiracy/collusion, as discussed further below. Moreover, the activities of other agencies such as CISA, the FBI, the CDC, the GEC, and NIAID, discussed in other subsections below, also constitute significant encouragement.

b. Coercion.

Defendants' conduct also constitutes outright coercion. Coercion includes "actual or threatened imposition of government power or sanction," "even if it turns out to be empty." *Backpage.com, LLC v. Dart*, 807 F.3d 229, 230–31 (7th Cir. 2015); *see also Biden v. Knight First Amendment Inst. at Columbia Univ.*, 141 S. Ct. 1220, 1226 (2021) (Mem.) (Thomas, J. concurring) ("The government cannot accomplish through threats of adverse government action what the Constitution prohibits it from doing directly."). Threats include any "intimati[on]," however "veiled" or "implicit," "that some form of punishment or adverse regulatory action" may follow unless the private actor complies with the government's demands. *Rattner v. Netburn*, 930 F.2d 204, 209–10 (2d Cir. 1991).

Rattner is instructive. There, a local chamber of commerce published speech that criticized the local government. *Id.* at 205. A local official wrote to the chamber purportedly on behalf of himself "and [his] neighbors to express [their] concern" that the article was "misleading." *Id.* at 205–06. The official said that the article "raise[d] significant questions and concerns about the objectivity and trust which we are looking for from our business friends" and asked which of the Chamber's members supported the article's publication. *Id.* at 206. The Second Circuit concluded that the letter "may reasonably be viewed as an implicit threat." *Id.* at 210. Further, no amount of verbal disclaimer can eliminate an actual on-the-ground threat. *Bantam Books, Inc. v. Sullivan*, 372 U.S. 58, 68 (1963). "It would be naive to credit the [government's] assertion that [its demands for stricter censorship] are in the nature of mere . . . advice." *Bantam Books*, 372 U.S. at 68.

Defendants' conduct described herein constitutes coercion. This is true of the White House's and Surgeon General's pressure campaigns—interspersed with veiled threats—discussed above. It is also true of the demands of the other agencies discussed herein, such as CISA, the

FBI, the CDC, NIAID, and the GEC, because of the background threats from senior federal officials, including both Defendants and their political allies.

As noted, Defendants' conduct occurs against the backdrop of a steady and ongoing drumbeat of public threats from senior federal officials who demand greater censorship from social-media platforms and threaten adverse legal consequences—such as repeal or reform of Section 230's liability shield, and antitrust enforcement—against the platforms if they do not increase censorship of disfavored viewpoints. Plaintiffs' Proposed Findings of Fact, Ex. 1, ¶¶ 1-30. The threat of Section 230 repeal or reform is a “fearsome cudgel” to platforms because the liability shield is “a hidden subsidy worth billions of dollars,” *id.* ¶ 2; and antitrust enforcement is “an existential threat” to the companies, *id.* ¶ 3. These threats include public statements and congressional hearings where social-media CEOs such as Mark Zuckerberg of Facebook, Jack Dorsey of Twitter, and Sundar Pichai of Google are repeatedly raked over the coals, compared to a “slavetocracy,” accused of running “hotbeds of misinformation and disinformation,” hounded to take “aggressive action ... to eliminate misinformation and disinformation,” and told that “aggressive and targeted reform” of Section 230 is coming, among others. *Id.* ¶¶ 4-18.

President Biden and his aides lead this charge, making the most vociferous and aggressive threats against platforms to demand greater censorship of disfavored viewpoints. *Id.* ¶¶ 19-30. Among other things, Biden has called for Mark Zuckerberg to face civil liability and even criminal prosecution for not censoring enough speech he disfavors, *id.* ¶¶ 20-21, and publicly stated that social-media platforms are “killing people” by not censoring enough misinformation, *id.* ¶ 27. Likewise, White House Press Secretary Jennifer Psaki and White House Communications Director Kate Bedingfield, among others, have repeatedly threatened Section 230 repeal and antitrust scrutiny against the platforms while demanding more censorship. *Id.* ¶¶ 123-124, 146-152, 156-

162, 164-165, 192-197. And once President Biden was elected with both Houses of Congress under control of his political allies, these threats became all the more menacing.

The Government's own witnesses attest to the coercive power of such pressure from Congress, which was exerted in private meetings as well. FBI agent Elvis Chan observes the platforms became far more aggressive in removing misinformation during the 2020 election cycle than in previous election cycles, and they have remained so. *Id.* ¶ 945. Based on direct observation and experience, Chan attributes this increase in censorship to pressure from Congress. *Id.* ¶¶ 946-961. He observes that “pressure from Congress, specifically HPSCI and SSCI”—the House Permanent Select Committee on Intelligence, and the Senate Select Committee on Intelligence—pushed the platforms to adopt more aggressive censorship policies and enforcement. *Id.* ¶ 946.

This pressure takes two forms. First, Congressional committees force the CEOs of social-media platforms to appear and testify, including “Mark Zuckerberg and Jack Dorsey and Sundar Pichai.” *Id.* ¶ 947. Based on discussions with platform employees, Chan concludes that “that kind of scrutiny and public pressure from Congress ... motivated them to be more aggressive in the account takedowns.” *Id.* ¶ 947. Chan identifies specific hearings that placed public pressure on the platforms and pushed them to increase censorship. *Id.* ¶¶ 948-949.

Second, those Congressional committees sent high-level staffers to Silicon Valley to meet directly with senior officials from the platforms, including Facebook, Google, and Twitter, in non-public meetings. *Id.* ¶¶ 950, 956-957. In these private meetings, employees of the platforms experience the visits from Congressional staffers as exercising a lot of pressure on them. *Id.* ¶ 951. The staffers have presented potential legislation to the platforms in these meetings, effectively threatening them with adverse legal consequences if they did not increase censorship. *Id.* ¶ 952. This pressure from Congress made the platforms more cooperative with the FBI when it seeks

account “takedowns.” *Id.* ¶ 953. Chan discussed these meetings both with the staffers and the platform employees who attend them. *Id.* ¶¶ 955-956.

As Chan attests, these tactics place “intense pressure from U.S. lawmakers” on the platforms and cause them to change their policies to be more restrictive, and to adopt more aggressive enforcement of their policies. *Id.* ¶¶ 958-959. This Congressional pressure on platforms is ongoing, as Chan acknowledges there were multiple such hearings during the 2022 election cycle to pressure the platforms to increase censorship. *Id.* ¶ 960. Chan attributes the dramatic increases in censorship on social-media platforms in recent years to such Congressional pressure. *Id.* ¶¶ 961.

Likewise, Alex Stamos of the Election Integrity Partnership agrees with Elvis Chan that “pushing the platforms to do stuff” is easier when they face “huge potential regulatory impact,” as in the United States. *Id.* ¶ 1234. And the Virality Project report agrees that government pressure pushes social-media platforms to adopt more aggressive censorship policies, and that “government inquiries” resulted in more restrictive vaccine-related policies. *Id.* ¶ 1270, *see also id.* ¶ 1349.

Especially against the backdrop of these public and private threats of adverse legal consequences – closely linked to demands for greater censorship – the Defendants’ conduct rises to the level of coercion, as well as significant encouragement. For example, the White House’s pressure campaign detailed above, combined with these threats, is extremely coercive. Indeed, White House officials have resorted to public and private threats to increase the pressure of their “encouragement.” So, too, is the Surgeon General’s pressure campaign, conducted in close coordination with the White House. Among other things, the Surgeon General has impliedly threatened adverse regulation through his Health Advisory and RFI, along with his public statements. The CDC’s close collaboration with the social-media platforms on health-

misinformation censorship, likewise, is enabled by the coercive pressure campaign from the White House and allied federal officials. The same conclusion applies to the censorship activities of the FBI, CISA, NIAID, and the GEC, all discussed further below.

c. Deception.

Government is also responsible for private conduct that it induces by deception. For example, when government officials “gave false information about [a suspect’s] medical condition” to a doctor “with the intent of inducing [the doctor] to perform” a search, the court held the government officials responsible for that search. *George*, 752 F.3d at 1215. So also, when government officials give false information to social-media platforms with the intent of inducing them to censor disfavored viewpoints, the government officials are responsible for that censorship. *See id.*; *see also Jones v. City of Chicago*, 856 F.2d 985, 994 (7th Cir. 1988) (“[Government officials] cannot hide behind [those] whom they have defrauded.”).

As above, holding government officials responsible for private action that they induce by deception is consistent with other areas of law, including federal complicity law. A defendant who uses deception to induce an innocent person into committing “an act . . . which if directly performed by [the defendant] would be an offense” is liable as if he had committed the act himself. 18 U.S.C. § 2(b); *see, e.g., United States v. Curran*, 20 F.3d 560, 567 (3d Cir. 1994). Thus, a defendant “cannot insulate himself from punishment by manipulating innocent third parties to perform acts on his behalf that would be illegal if he performed them himself.” *United States v. Rashwan*, 328 F.3d 160, 165 (4th Cir. 2003). So too, government officials cannot “avoid responsibility for an unconstitutional [act] by using deception to induce a private party to perform” the act on their behalf. *George*, 752 F.3d at 1220; *cf. Robinson v. Maruffi*, 895 F.2d 649, 656 (10th Cir. 1990) (“[A] police officer who deliberately supplied misleading information that influenced

the decision [to prosecute] . . . cannot escape liability” for malicious prosecution even though it was the prosecutor, not the officer, who filed charges.). “[I]t is axiomatic that a state may not induce . . . private persons to accomplish what it is constitutionally forbidden to accomplish,” Norwood, 413 U.S. at 465—including by tricking or deceiving them into doing it.

Here, the evidence shows Defendants Dr. Fauci, NIAID, NIH, and the FBI engaging in egregious campaigns of deception “with the intent of inducing” platforms to censor speech. *George*, 752 F.3d at 1215. These actions violate the First Amendment.

Dr. Fauci, Dr. Collins, NIAID, and NIH. Dr. Fauci, collaborating frequently with NIH Director Dr. Francis Collins, orchestrated a series of campaigns of deceit to procure the censorship of viewpoints he disfavored on social media, beginning at latest in early 2020. Once he became Chief Medical Advisor in the Biden Administration in early 2021, his censorship efforts coordinated with and reinforced those of federal officials in the White House, the Office of the Surgeon General, and the CDC.

Lab-Leak Theory. In early months of 2020, Dr. Fauci worked closely with Dr. Collins and Jeremy Farrar of the Wellcome Trust, a predominant British science-funding organization, to orchestrate a deceptive campaign to discredit and suppress the opinion that SARS-CoV-2, the virus that causes COVID-19, leaked from a laboratory at the Wuhan Institute of Virology—an opinion that has recently been confirmed as likely true. See Michael R. Gordon, et al., *Lab Leak Most Likely Origin of Covid-19 Pandemic, Energy Department Now Says*, WALL STREET JOURNAL (Feb. 26, 2023), at <https://www.wsj.com/articles/covid-origin-china-lab-leak-807b7b0a>.

Dr. Fauci had powerful motives to suppress the lab-leak theory: he is a longstanding public advocate for gain-of-function research, which makes viruses more virulent and transmissible; and his agency, NIAID, funded dangerous gain-of-function experiments on bat coronaviruses at the

Wuhan Institute of Virology, the prime suspect for a lab leak. Plaintiffs' Proposed Findings of Fact, Ex. 1, ¶¶ 598-630. If the lab-leak theory were established or widely believed, Dr. Fauci and his agency could face responsibility for the deaths of millions in a global pandemic, and a crisis of confidence in the public science-funding enterprise they run. *Id.*; *see also id.* ¶ 652.

In a call in the evening of Friday, January 31, 2020, Dr. Fauci became aware from Jeremy Farrar that Dr. Kristian Andersen of Scripps and other virologists had grave concerns that SARS-CoV-2, the virus that causes COVID-19, "look(s) ... engineered." *Id.* ¶¶ 637, 639. Shortly before this call, Dr. Fauci had received a briefing from his staff about NIAID's funding of research on bat coronaviruses in Wuhan. *Id.* ¶ 635.

After midnight after the call with Farrar and Andersen, Dr. Fauci sent an urgent, cryptic email to his confidential deputy, Dr. Hugh Auchincloss, attaching a paper about the "SARS Gain of Function" research that NIAID had funded in Wuhan, and telling him to "[k]eep your cell phone on ... you will have tasks today that must be done." *Id.* ¶¶ 640; *see also id.* ¶ 640-647, 653-656. Dr. Fauci later testified eighteen times that he could not remember anything about this urgent, cryptic email exchange with his principal deputy. *Id.* ¶ 642.

In fact, Dr. Fauci's testimony on this email and other points is not credible, and it contradicts the documentary evidence, including his own contemporaneous emails, on approximately 37 points. *Id.* ¶¶ 609, 612, 620, 628, 629, 630, 642, 647, 651, 662, 664, 666, 667, 668, 670, 685, 686, 690, 702, 703, 708, 710, 722, 730, 733, 737, 746, 753, 772, 789, 798, 805, 807, 808, 809, 825, 849. Further, Dr. Fauci testified that "I do not recall" or similar 174 times in his deposition, and counting variations on "I don't remember," at least 212 times. *Id.* ¶ 620. This contrasts with his public claims, on some of the very same events that he was asked to testify, that "I remember it very well." *Id.* It also contrasts with his clear, specific recollection of

contemporaneous events that are not directly related to the case. *Id.* ¶¶ 620, 852. Plaintiffs are filing with the Court a video compilation of Dr. Fauci’s response stating “I do not recall” so that the Court may assess his credibility by viewing his demeanor. *See* Jones Decl., Ex. 2, ¶ 35.

On February 1, 2020, Dr. Fauci participated in a clandestine conference call with a group of science funders and influential science-funding authorities to discuss the lab-leak possibility. *Id.* ¶¶ 648, 657-666. Farrar insisted that the call was to be “in total confidence.” *Id.* ¶ 657. Influential figures with a strong vested interest in avoiding a major scandal about science-funding practices were heavily represented on the call. *Id.* ¶ 659. As science-funding authorities, they also had powerful influence over the scientists on the call. *Id.* Dr. Fauci testified sixteen times that he could not remember details about the call, *id.* ¶ 661, though to the national media, he has proclaimed of the very same call, “I remember it very well,” *id.* ¶ 662.

Contemporaneous emails show that the participants on the call—including Dr. Fauci, Dr. Collins, and Farrar himself—were keenly aware that there were powerful arguments in favor of the lab-leak theory of COVID’s origins. *Id.* ¶ 680 (“hard time explaining that as an event outside the lab”); *id.* (“70:30 or 60:40” in favor of laboratory origins); *id.* ¶ 681 (“I really can’t think of a plausible natural scenario ... I just can’t figure out how this gets accomplished in nature.... it’s stunning.”); *id.* ¶ 682 (Farrar: “On a spectrum if 0 is nature and 100 is release – I am honestly at 50!”); *id.* ¶ 694 (“Eddie [Holmes] would be 60:40 lab side. I remain 50:50”); *id.* ¶ 709 (“we have a nightmare of circumstantial evidence to assess”).

Immediately after the call, the participants launched a deceitful effort to manufacture the appearance of scientific consensus against the lab-leak theory. Two scientists on the call, Eddie Holmes and Kristian Andersen, began drafting a scientific paper for publication to decisively

refute the lab-leak theory, even though their contemporaneous emails indicated that they were both inclined to believe the lab-leak theory. *Id.* ¶¶ 691-692.

Following the call, Dr. Fauci, Farrar, and Dr. Collins communicated extensively about the plan to discredit the theory. Among other things, they plotted to prod the WHO to establish a panel on the lab-leak theory that they would stack with a “core group” of their own contacts, then “frame the work of the group” and put “pressure on this group from our and your teams” to push it to their preferred result—discrediting the lab-leak theory. *Id.* ¶¶ 701-702.

There is no doubt about the purpose of this conspiracy. Dr. Fauci’s, Farrar’s, and Dr. Collins’s communications at the time repeatedly express concern about preventing the spread of the lab-leak theory on social media. *Id.* ¶¶ 671, 673, 675, 676, 677, 678, 683. Dr. Fauci, in particular, expressed concerns about “the threat of further distortions on social media.” *Id.* ¶ 683.

By February 4, 2020—three days after the clandestine conference call—Eddie Holmes sent a draft scientific paper attacking the lab-leak theory to Farrar, who forwarded it to Dr. Fauci. *Id.* ¶ 691. Though the draft purported to refute the lab-leak theory, Holmes noted that he did not “mention” the virus’s “other anomalies” that make it look bioengineered “as this will make us look like loons.” *Id.* ¶ 691. Dr. Fauci’s and Dr. Collins’s own emails make clear that they were keenly aware that the virus may have been created through serial passage through tissue of humanized mice in the Wuhan laboratory whose work NIAID was funding. *Id.* ¶ 695.

Farrar sent Dr. Fauci four drafts of the scientific paper to review in the week following the conference call. *Id.* ¶¶ 696-699. These drafts claimed that science “clearly demonstrates” a natural origin for SARS-CoV-2. *Id.* ¶ 698. By February 17, 2020, the scientific paper discrediting the lab-leak theory was accepted in a prestigious journal and was in preprint form, which was forwarded to Dr. Fauci for review (the fifth such draft he received). *Id.* ¶ 711, 716. The papers’

five listed authors were participants in the clandestine February 1, 2020 conference call, and they all privately acknowledged the plausibility of the lab-leak theory in emails that were shared with Dr. Fauci. *Id.* ¶¶ 711-715. Yet the paper claimed that “SARS-CoV-2 is not a laboratory construct nor a purposefully manipulated virus.” *Id.* ¶ 715. Dr. Andersen, the lead author, thanked Dr. Fauci for his “advice and leadership” in preparing the paper, and sent him a sixth draft to review, seeking further input from Dr. Fauci. *Id.* ¶ 718. The paper was then published in Nature Medicine on March 17, 2020, as “The Proximal Origin of SARS-CoV-2.” *Id.* ¶ 723. The final version attacked the lab-leak theory in unequivocal terms. *Id.* ¶ 724 (“clearly show ... irrefutably show ... clearly shows ... we do not believe that any type of laboratory-based scenario is plausible”).

Dr. Fauci and Dr. Collins then collaborated on a deceitful campaign to push the article into prominence, treating it as a scientific consensus created through independent scientific inquiry, rather than the product of a secret cabal of science-funders bent on suppressing the lab-leak theory to protect their own reputations. *Id.* ¶¶ 726-741. Dr. Collins featured it on NIH’s official blog, citing “The Proximal Origin of SARS-CoV-2” to describe the lab-leak theory as “outrageous” and “debunk[ed],” leading national media to proclaim, “Sorry, Conspiracy Theorists.” *Id.* ¶¶ 727-729. When Fox News host Bret Baier still discussed the lab-leak theory, Dr. Collins emailed Dr. Fauci, noting that he had hoped that “the Nature Medicine article” had “settled” “this very destructive conspiracy,” and asking if there was “[a]nything more we can do?” to discredit the theory. *Id.* ¶ 731. Dr. Fauci described the lab-leak theory as a “shiny object that will go away in times,” and the same day, during a White House Coronavirus Task Force briefing, deceptively cited this paper to proclaim an independent scientific consensus against the lab-leak theory. *Id.* ¶¶ 732-739. In doing so, he pretended to be unfamiliar with the paper’s authors, when in fact they had sent him seven drafts to review and thanked him for his “advice and leadership” in preparing the paper. *Id.*

Dr. Fauci, Dr. Collins, and Jeremy Farrar, and those acting in concert with them, thus engaged in a deliberately deceptive conspiracy to manufacture the appearance of a scientific consensus refuting the lab-leak theory when none existed, and when the very scientists involved were actively doubting the virus's natural origins. *Id.* ¶¶ 598-740. The stated purpose of this conspiracy was to suppress the lab-leak theory in both “main stream and social media,” *id.* ¶¶ 671, 673, 675, 676, 677, 678, 683—or, as Dr. Fauci himself put it at the time, to suppress “the threat of further distortions on social media.” *Id.* ¶ 683.

The conspiracy succeeded in its object. “The Proximal Origins of SARS-CoV-2” became “one of the best-read papers in the history of science.” *Id.* ¶ 741. It was trumpeted in national media as refuting the lab-leak theory as a racist “conspiracy theory.” Social-media platforms followed Dr. Fauci’s lead in lockstep and aggressively censored the lab-leak theory well into 2021, and the censorship cabal effectively deflected responsibility for the SARS-CoV-2 for years to come. *Id.* ¶¶ 743-756.

Having succeeded so dramatically in suppressing the lab-leak theory through deception, Dr. Fauci—cooperating often with Dr. Collins, and later with Biden White House officials—continued to the same tactic of deceptively creating a false appearance of scientific consensus to procure the censorship of disfavored viewpoints on social media.

Hydroxychloroquine. Soon thereafter, Dr. Fauci engaged in a well-known public campaign against the drug hydroxychloroquine as an effective early treatment for coronavirus. *Id.* ¶¶ 757-776. He publicly declared that the drug was plainly ineffective based on an observational study in *The Lancet*, which was swiftly retracted for glaring errors. *Id.* ¶¶ 757-76. He proclaimed, based on that flawed observational study, that the evidence was “unequivocal,” “that the data are clear right now,” and that “[t]he scientific data is really quite evident now about the lack of efficacy.”

Id. ¶¶ 758, 760. Then, as observational data *supporting* the drug’s usage emerged, he dismissed such data because it was not from *randomized* studies (the “gold standard” for scientific evidence)—even though his own proclamation against the drug had itself been based on a (flawed and later retracted) *observational* study. *Id.* ¶¶ 761-766, 770. When dissenting doctors advocated for the drug’s usage, he attacked them on national media as “a bunch of people spouting something that isn’t true.” *Id.* ¶ 769; *see also id.* ¶¶ 768-770.

Social-media platforms, predictably, followed Dr. Fauci’s lead and aggressively censored social-media speech advocating for the use of hydroxychloroquine, acting in lockstep with Dr. Fauci and accepting his proclamation of a clear scientific consensus against the drug’s usage. *Id.* ¶¶ 771-775. In fact, Dr. Fauci’s deceptively manufactured scientific consensus did not exist and never existed – hundreds of studies suggest that the drug is effective for early treatment of COVID-19, and the drug is approved for usage to treat COVID-19 in 41 countries. *Id.* ¶ 776.

Mask Efficacy. The same deceptiveness and double standard afflicted Dr. Fauci’s positions on mask mandates, which also resulted in widespread social-media censorship. *Id.* ¶¶ 828-839. In private communications in February 2020, Dr. Fauci stated that masks are generally ineffective to prevent the spread of coronavirus: “The typical mask you buy in the drugstore is not really effective in keeping out virus, which is small enough to pass through material. ... I do not recommend that you wear a mask...” *Id.* ¶ 829. By early April 2020, however, Dr. Fauci unequivocally endorsed universal masking, launching nationwide mask mandates that would last for years. *Id.* ¶ 833. Dr. Fauci’s dizzying change in position could not be justified by “randomized” studies that he insisted were necessary to justify using hydroxychloroquine. *Id.* ¶¶ 836-837.

The Great Barrington Declaration. Dr. Fauci and Dr. Collins collaborated to inflict a deceptive “quick and devastating ... take down” of the Great Barrington Declaration, co-authored

by Plaintiffs Dr. Bhattacharya and Dr. Kulldorff. *Id.* ¶¶ 777-808. Consistent with principles of pandemic response that were nearly universally accepted before the COVID-19 pandemic, the Great Barrington Declaration called for focused protection of high-risk individuals while reopening society for others, and it was sharply critical of prevailing government policies favoring lockdowns, school shutdowns, and similar restrictions. *Id.* ¶¶ 783-786. Among other things, it described “keeping students out of school” as “a grave injustice.” *Id.* ¶ 784.

Since Dr. Cliff Lane’s trip to China at Dr. Fauci’s direction in February 2020, Dr. Fauci and the government establishment favored the Chinese government’s novel tactic of aggressive lockdowns to control the virus’s spread, so the Great Barrington Declaration was a grave threat to the credibility of lockdown policies. *Id.* ¶¶ 777-782.

Dr. Fauci and Dr. Collins responded swiftly to the Great Barrington Declaration, following the same tactic of manufacturing the appearance of a false scientific consensus against it to procure its suppression on social media. *Id.* ¶¶ 787-808. Four days after it was published, Dr. Collins emailed Dr. Fauci, asking if a “swift and devastating published take down” of the Declaration was “underway.” *Id.* ¶ 787. The two then collaborated in a public campaign to attack the Declaration and proclaim it to be “appall[ing],” “nonsense,” “very dangerous,” “letting infections rip,” “fringe,” and “not mainstream science.” *Id.* ¶¶ 789-798. The claim that it was “fringe” and “not mainstream science” was deceptive, as focused protection had been scientific orthodoxy for pandemic responses prior to the COVID-19 pandemic. *Id.* ¶ 806. The campaign succeeded once again, as social-media platforms promptly and aggressively censored the Great Barrington Declaration and its authors, acting in lockstep with Dr. Fauci’s proclamations. *Id.* ¶¶ 799-805.

Alex Berenson. Dr. Fauci also collaborated with the White House to procure the censorship of vaccine critic Alex Berenson. *Id.* ¶¶ 840-851. As part of the White House’s ongoing pressure

campaign against Twitter to deplatform Berenson, *see supra*, Dr. Fauci publicly attacked Berenson's positions as "horrifying," "frightening," and not "want[ing] to do something to save your life." *Id.* ¶ 843. These comments were timed just a few days before the White House's public pressure campaign on July 15 and 16, 2021, which led to Berenson's immediate suspension and later permanent deplatforming. *See supra*.

The FBI and the Hunter Biden Laptop Story. Similar to Dr. Fauci's campaign of deception to suppress the lab-leak theory, the FBI engaged in a campaign of deception to induce social-media platforms to censor the Hunter Biden laptop story that the New York Post broke on October 14, 2020. Even though the FBI was in possession of Hunter Biden's laptop and knew it was not hacked, the FBI—anticipating the news story—told platforms to expect a hack-and-leak operation possibly involving Hunter Biden, and the FBI pushed the platforms to adopt policies censoring "hacked materials." This deception induced the platforms to censor the story.

In 2020, in its routine bilateral meetings with seven major social-media platforms, the FBI repeatedly raised the concern that a "hack-and-dump" or "hack-and-leak" operation might be forthcoming shortly before the 2020 general election. Plaintiffs' Proposed Findings of Fact, Ex. 1, ¶¶ 868, 883. Both the FBI and CISA repeatedly raised the concern about such "hack-and-dump" operations during the mass "USG-Industry" meetings during 2020 as well. *Id.* ¶¶ 881-882. In addition to the FBI's Elvis Chan and Laura Dehmlow, senior CISA officials Matt Masterson and Brian Scully repeatedly raised the warning about "hack-and-dump" operations during the 2020 USG-Industry meetings. *Id.* ¶¶ 894.

In fact, the FBI had no investigative basis to believe that any hack-and-leak or hack-and-dump operation was underway. *Id.* ¶ 893. Chan admits that "we did not see any similar competing intrusions to what had happened in 2016. [F]rom our standpoint we had not seen anything. ...

[W]e were not aware of any hack-and-leak operations that were forthcoming or impending,” *id.*—yet the FBI repeatedly hammered home the warning about an impending hack-and-leak operation.

Responding to these repeated concerns raised by the FBI and CISA, social-media platforms updated their content-moderation policies in 2020 to provide that they would remove hacked materials from their platforms. *Id.* ¶ 884. The FBI encouraged these changes by repeatedly warning about the expectation of hack-and-leak operations and inquiring of the platforms whether they would censor hacked materials. *Id.* ¶¶ 885-888. Multiple FBI officials raised this same inquiry to the platforms in this time frame. *Id.* ¶ 889.

A formal declaration by Twitter’s then-Head of Site Integrity, Yoel Roth—executed in December 2020, close in time to the relevant events—recounts that the FBI and other federal officials repeatedly warned platforms that they “expected” hack-and-leak operations during the 2020 election cycle. *Id.* ¶ 895. Roth also learned in these meetings with federal officials that “there were rumors that a hack-and-leak operation would involve Hunter Biden.” *Id.*

Corroborating Roth’s account, Mark Zuckerberg testified before Congress in October 2020 that the FBI had warned platforms to be on “high alert and sensitivity” for a hack-and-dump operation shortly before the 2020 election. *Id.* ¶ 902. Likewise, Brian Scully of CISA does not dispute that FBI and CISA raised the concern about hack-and-leak operations to platforms in the USG-Industry meetings during 2020, and he does not dispute Yoel Roth’s account of the communications about hack-and-leak operations in his December 2020 declaration. *Id.* ¶¶ 1088-1089. CISA’s emails with platforms reflect that the 2020 meetings included discussions of such topics as “preparing for so-called ‘hack and leak’ operations” and “Deep Dive Topic ... Hack/Leak and USG Attribution Speed/Process.” *Id.* ¶¶ 1090-1091. Like Chan, Scully was not aware of any pending investigations of hack and leak operations at the time. *Id.* ¶ 1092.

After the Hunter Biden laptop story broke on October 14, 2020, platforms privately asked the FBI to confirm whether the story was credible so they could decide whether it should be censored, but the FBI refused to confirm it. *Id.* ¶ 903. Accordingly, based on the FBI’s deceitful information, platforms were left with the clear impression that the Hunter Biden laptop materials were, in fact, hacked materials. After the Hunter Biden story broke, it was widely censored on social media—Twitter even suspended the New York Post’s Twitter account for two weeks—pursuant to the very “hacked materials” policies that the FBI had induced platforms to adopt in the preceding months of 2020. *Id.* ¶ 904.

2. Joint Participation – Collusion and Pervasive Entwinement.

Government is responsible not only for private conduct it induces by significant encouragement, deception, or threats but also for private conduct in which it acts as a “joint participant.” *Burton v. Wilmington Parking Auth’y*, 365 U.S. 715, 725 (1961). Most often, this occurs through a conspiracy or collusive behavior. *E.g.*, *Dennis v. Sparks*, 449 U.S. 24, 28–29 (1980); *Hobbs v. Hawkins*, 968 F.2d 471, 480 (5th Cir. 1992). But even without a conspiracy, government is responsible for private action arising out of “pervasive entwinement of public institutions and public officials in [the private entity’s] composition and workings.” *Brentwood Acad.*, 531 U.S. at 298.

a. Conspiracy and Collusion.

Government is liable when it “reache[s] an understanding” with private parties to violate a victim’s rights. *Dykes v. Hosemann*, 743 F.2d 1488, 1498 (11th Cir. 1984). As the Fifth Circuit has held, this requirement usually is “met by circumstantial evidence” because “conspirators rarely formulate their plans in ways susceptible of proof by direct evidence.” *Crowe v. Lucas*, 595 F.2d

985, 993 (5th Cir. 1979).¹ Plaintiffs need not prove, however, that Defendants “reached an understanding” to censor each particular item of speech—only that Defendants reached an understanding with social media companies to censor in general. When a plaintiff establishes “the existence of a conspiracy involving state action,” the government becomes responsible for *all* constitutional violations committed “in furtherance of the conspiracy by a party to the conspiracy.” *Armstrong v. Ashley*, --- F.4th ---, 2023 WL 2005263, at *12 (5th Cir. 2023). That is because conspiracy can “be charged as the legal mechanism through which to impose liability on each and all of the Defendants *without regard* to the person doing the particular act” that deprives the plaintiff of federal rights. *Pfannstiel v. City of Marion*, 918 F.2d 1178, 1187 (5th Cir. 1990) (emphasis added) (cited in *Armstrong*, 2023 WL 2005263, at *12).

Likewise, courts hold government responsible for the acts of coconspirators in civil law because the same attribution of responsibility occurs in criminal law. Liability under § 1983 is based on “more or less traditional principles of agency, partnership, joint venture, and the like.” *Nesmith v. Alford*, 318 F.2d 110, 126 (5th Cir. 1963). And under the traditional principles of partnership in criminal law, “conspirators are criminally liable for substantive crimes committed by other conspirators in furtherance of the conspiracy.” *United States v. Baker*, 923 F.3d 390, 406 (5th Cir. 2019) (citing *Pinkerton v. United States*, 328 U.S. 640 (1946)).

Here, there is overwhelming evidence of collusion and conspiracy between Defendants and social-media platforms to censor speech—including the CDC, the FBI, CISA, and the GEC. This

¹ In *Crowe*, the plaintiff sued state officials under 42 U.S.C. § 1983, alleging that they had arranged for his arrest in furtherance of a conspiracy to deprive him of “his rights to freedom of speech and assembly” after he questioned the integrity of an election. *Id.* at 988–92. Although there was no direct evidence of an agreement among the defendants, “[t]he evidence showed that the defendants had participated in private meetings at which Crowe was discussed.” *Id.* at 993. “From this evidence and the testimony regarding the defendants’ course of conduct toward Crowe,” the Fifth Circuit concluded, “the jury could reasonably have inferred that a conspiracy existed.” *Id.*

evidence also amounts to joint participation and coercion, as discussed above, and pervasive entwinement, discussed below.

The CDC and Census Bureau. In addition to the public and private pressure campaigns from the White House and the Surgeon General’s Office, the CDC and the Census Bureau are engaged in a long censorship campaign together, enabled by the White House’s pressure on platforms to cooperate with the federal government. Working closely with Census, the CDC flags supposed “misinformation” for censorship on platforms (sometimes using the acronym “BOLO,” *i.e.*, “Be On the Lookout”), and exercises full authority to dictate what health claims will be censored on social media platforms. As discussed herein, the CDC’s and Census Bureau’s actions constitute significant encouragement, coercion, and conspiracy or collusion.

The CDC has regular meetings with social-media platforms about misinformation, including often weekly meetings. Plaintiffs’ Proposed Findings of Fact, Ex. 1, ¶¶ 431, 434, 438-439, 453-454, 461, 473, 475, 531, 539-540, 544-545, 563. These meetings routinely include the platforms’ content-moderation officers. *Id.* ¶¶ 453, 459, 463, 487, 531.

The CDC asks platforms to provide reports about censorship on their platforms. *Id.* ¶¶ 455-457, 463, 472. These requests include inquiries about whether specific content flagged by the CDC and the Census Bureau has been removed. *Id.* ¶¶ 470, 475. The Census Bureau follows up to monitor whether platforms are removing the content that the CDC and Census flag. *Id.* ¶ 495.

Facebook provides the CDC with regular biweekly “CrowdTangle” reports about misinformation on its platforms. *Id.* ¶¶ 440-442, 450. The CDC uses CrowdTangle and other “social media listening tools” to monitor disfavored speech on platforms. *Id.* ¶ 442-447. These “listening tools” allow the CDC to “flag” misinformation for censorship. *Id.* ¶ 485. Facebook also

gives the CDC privileged access to use CrowdTangle to monitor speech on Facebook’s platforms, including in private speech like personal group posts. *Id.* ¶¶ 443, 451, 471.

The CDC works closely with the Census Bureau on censorship on social media pursuant to an Interagency Agreement (IAA), because the Census Bureau engaged in an earlier social-media censorship campaign with platforms during the 2020 census. *Id.* ¶¶ 449, 466-467, 532-533. Census and the CDC, working together, present social-media platforms with series of tables and decks that warn about misinformation themes and provide lists and screenshots of specific posts that they believe should be censored. *Id.* ¶ 460, 481. These include slide decks, *id.* ¶¶ 460, 536-538; tables of dozens of posts, *id.* ¶¶ 481, 567; spreadsheets of “example areas,” *id.* ¶ 565; and “BOLO” slides, *id.* ¶¶ 554-556. They also include “BOLO” flags for supposed “misinformation” about the CDC’s own content. *Id.* ¶¶ 515, 586-589. The CDC admits that it flags posts for censorship on the platforms, knowing that the platforms may take action to censor those posts and intending that the censorship occur—censorship is the desired result of the flagging. *Id.* ¶¶ 483-484, 521-523, 575-576. Platforms also offer the CDC privileged channels for federal officials to report misinformation on their platforms. *Id.* ¶¶ 476-479 (Facebook’s “misinfo reporting channel”); *id.* ¶¶ 577-584 (Twitter’s “Partner Support Portal”).

The CDC hosted a series of “BOLO” meetings to flag disfavored speech and viewpoints for censorship, where “BOLO” stands for “Be On the Lookout.” *Id.* ¶¶ 486, 549. At the BOLO meetings, the CDC and Census presented the platforms with slide decks identifying specific claims they wished to have censored, along with screenshots of specific posts as examples of the types of content to censor, and the CDC’s justification for censoring that content. *Id.* ¶¶ 550-558.

Social-media platforms routinely treat the CDC as a privileged fact-checker with authority to dictate what may and may not be posted on their platforms. Facebook does so continuously.

Id. ¶¶ 488-499 (asking the CDC to “debunk” specific claims); *id.* ¶¶ 500-506 (asking the CDC to debunk additional specific claims); *id.* ¶¶ 511-514 (asking the CDC for guidance on how to censor speech about VAERS); *id.* ¶¶ 518-519 (content on vaccine refusals and childhood vaccines); *id.* ¶¶ 520-525 (asking for the CDC’s position on ten specific claims); *id.* ¶¶ 527-530 (asking the CDC to refute and confirm harmfulness of a long series of medical claims, including relating to vaccines for children under age 5). The CDC regularly provides its definitive determination on such issues. *See id.* The CDC admits that it “know[s] that they’re using our scientific information to determine their policy.” *Id.* ¶ 529. YouTube also seeks the CDC’s determinative guidance on how to enforce its policies, including on health issues other than COVID-19. *Id.* ¶ 541 (requesting input on a “list of common vaccine misinformation claims”); *id.* ¶¶ 547-548 (it “wasn’t uncommon” for Google/YouTube to seek input on specific claims); *id.* ¶¶ 559-560 (YouTube seeking the CDC’s guidance on claims about childhood vaccines); *id.* ¶¶ 561-562 (“The YouTube Policy team is requesting evidence-based input on the claims below. In the past, the CDC has reviewed COVID information claims and commented TRUE or FALSE + add any additional context needed.”). Twitter, too, treats the CDC as an authoritative fact-checker. *Id.* ¶ 563.

Facebook confirms that it updated its censorship policies to address claims on childhood vaccines as a direct result of the CDC’s input. *Id.* ¶ 518. It also updated its policies on other topics to render them more restrictive, based on the CDC’s input. *Id.* ¶ 526. Facebook routinely asks the CDC to confirm whether particular claims “are false and can lead to harm”; if the CDC so confirms, Facebook censors those claims. *Id.* ¶¶ 501-502, 520-521.

When it comes to misinformation, the CDC’s “focus is not solely on COVID. We’re focusing on other topics,” and communicating with platforms about them, as well. *Id.* ¶ 562.

The FBI’s Collusion. FBI agent Elvis Chan and many other FBI agents, especially from the FBI’s Foreign Influence Task Force (“FITF”), routinely meet with social media platforms about disinformation, misinformation, and censorship. Plaintiffs’ Proposed Findings of Fact, Ex. 1 ¶¶ 855, 860. These include regular, CISA-organized mass meetings of federal national-security and law-enforcement agencies (CISA, other DHS components, the FBI, the ODNI, and DOJ’s national security division) with at least eight major social-media platforms (“USG-Industry meetings”), at which misinformation is extensively discussed. *Id.* ¶¶ 861-866.

The FBI also has regular bilateral meetings with at least seven social-media platforms, plus Apple, to discuss disinformation concerns, and these bilateral meetings also continue through the present day. *Id.* ¶¶ 867-877. In these meetings, the FBI meets with the platforms’ content-moderation officers in particular. *Id.* ¶¶ 871, 877, 962. Three to ten agents from FBI’s FITF task force participate in these bilateral meetings along with Elvis Chan. *Id.* ¶ 939.

The FBI also communicates with platforms—including flagging content, accounts, and URLs for censorship—through alternative channels, including the self-deleting app Signal and the encrypted Teleporter service. *Id.* ¶¶ 878.

Elvis Chan confirms that the FBI cooperates with social-media platforms through “information sharing and *account takedowns*.” Plaintiffs’ Proposed Findings of Fact, Ex. 1 ¶ 905 (emphasis added). In addition to sharing “strategic information” about themes and tactics of putative disinformation, the FBI routinely flags specific content, posts, accounts, and URLs to the platforms for censorship—*i.e.*, “IP addresses, email accounts, social media accounts, ... website domain names, and ... file hash values.” *Id.* ¶ 906.

The intended purpose and predictable effect in flagging specific speakers, content, and accounts to platforms is to induce the platforms to censor those speakers, content, and accounts.

Id. ¶¶ 908-911. The purpose of the FBI’s “information sharing” with platforms is to “shut down ... accounts.” *Id.* ¶ 911. And it succeeds on a grand scale.

The FBI also flags specific content, speakers, and accounts to state and local government officials to encourage them to report them to social-media platforms (or to report them to the FBI and CISA, who then flag them to platforms). *Id.* ¶ 912.

Chan estimates that the FBI sends lists of accounts, content, websites, and URLs to social-media platforms for censorship about “one to five times per month.” *Id.* ¶ 931. Each time, the FBI sends the platforms an encrypted Teleporter message with a list of “indicators,” *i.e.*, specific social-media accounts, web sites, URLs, email accounts, etc., that the FBI wants the platforms to evaluate under their content-moderation policies. *Id.* ¶ 932. The size of each list ranges from a single account to “a whole spreadsheet full of them,” sometimes including “hundreds” of specific accounts, websites, URLs, etc. *Id.* ¶ 934. In one occasion in 2020, the FBI sent “a spreadsheet with hundreds of accounts” via Teleporter to the platforms. *Id.* ¶ 941. Such mass-flagging messages were sent during the 2020 and 2022 election cycles with similar frequency. *Id.* ¶¶ 934-935. In general, these mass-flagging messages go to all seven major social-media platforms, but sometimes there are platform-specific mass-flagging messages. *Id.* ¶ 936. At least eight FBI agents in the San Francisco field office participate in flagging content for censorship to the social-media platforms. *Id.* ¶ 938.

The FBI’s social-media flagging of supposed “foreign influence” accounts sweeps in massive amounts of domestic, First Amendment-protected speech by ordinary Americans. *Id.* ¶¶ 913-924. For example, the FBI flags supposedly foreign posts (including core political speech) that hundreds of thousands of American have engaged by liking, commenting on, and reposting—

all First Amendment-protected activities.² *Id.* ¶¶ 916-919. The FBI thus obliterates massive amounts of American speech when it induces platforms to censor such supposedly “foreign” speech. The FBI also flags for censorship foreign-hosted websites on which American journalists and American speakers post content. *Id.* ¶¶ 922-923.

In addition, the FBI runs “command centers” around every election that, among other things, flag reported “misinformation” for censorship to social-media platforms. *Id.* ¶ 879, 925-927. In doing such flagging, the FBI does not attempt to distinguish whether the speaker is American or foreign; it flags the disfavored content to the platforms for censorship regardless of whether it is foreign or domestic. *Id.* ¶ 926.

The FBI also probes platforms for details about how they detect supposedly “inauthentic content” and how they enforce their censorship policies. ¶¶ 929-930. And the FBI also asks the platforms to report back to it on whether it censors the content it flags. *Id.* ¶ 937.

The FBI boasts a “50 percent success rate” in getting platforms to censor content that it flags as misinformation. *Id.* ¶ 928. Given the sheer volume of the FBI’s reports, this comprises the censorship of massive amounts of disfavored speakers and viewpoints.

CISA Collusion. CISA, likewise, engages in extensive collusion with platforms on censorship.

² See, e.g., *Robinson v. Hunt County*, 921 F.3d 440, 447 (5th Cir. 2019) (commenting on a Facebook page is First Amendment-protected activity); *Bland v. Roberts*, 730 F.3d 368, 386 (4th Cir. 2013) (“liking” a web page is First Amendment-protected speech); see also *Knight First Amend. Inst. at Columbia Univ. v. Trump*, 928 F.3d 226, 237 (2d Cir. 2019), cert. granted, judgment vacated as moot sub nom. *Biden v. Knight First Amend. Inst. at Columbia Univ.*, 141 S. Ct. 1220 (2021) (Mem.) (“Replying, retweeting, and liking are all expressive conduct that blocking inhibits. Replying and retweeting are messages that a user broadcasts, and, as such, undeniably are speech.”).

Continuous meetings and coordination. CISA communicates regularly with social-media platforms about misinformation through multiple series of standing meetings. Plaintiffs' Proposed Findings of Fact, Ex. 1, ¶¶ 978-990, 1083-1087. CISA has at least five sets of recurring meetings with social-media platforms about misinformation and disinformation. *Id.* ¶ 1078. CISA also has many bilateral meetings with individual platforms. *Id.* ¶ 1084.

CISA hosts the "USG-Industry" meetings attended by the FBI, CISA, ODNI, DOJ, DHS's I&A, and at least seven or eight major social-media platforms. *Id.* ¶¶ 978, 981, 986, 1086. These "USG-Industry" meetings increase in frequency as each election nears, becoming monthly and then weekly shortly before an election. *Id.* ¶¶ 980, 1087. These meetings have been ongoing for years and are continuing. *Id.* ¶¶ 983, 985. "Concerns about misinformation and disinformation on social media platforms" are discussed at the USG-Industry meetings. *Id.* ¶ 987. Federal officials and platforms report to each other on the trends and topics of misinformation that they perceive on social media. *Id.* ¶¶ 987-988. CISA also has bilateral planning meetings with Facebook before every USG-Industry meeting. *Id.* ¶ 984.

In addition, CISA receives regular reports from social-media platforms about any changes to their content-moderation policies. *Id.* ¶ 979. Platforms report to CISA when they make their policies more restrictive. *Id.* ¶ 1103. CISA also asks platforms to report back on how they acted on reports of misinformation received from CISA, and whether they censored the flagged content. *Id.* ¶ 1061. In the USG-Industry meetings, the platforms report on changes to their content-moderation policies to the federal officials. *Id.* ¶ 1024.

Flagging content for censorship. CISA's website proclaims that it "serves as a switchboard for routing disinformation concerns to appropriate social media platforms," and that it has "expanded the breadth of reporting" under this program. *Id.* ¶ 976. CISA "switchboards" reports

of misinformation to social-media platforms for censorship by receiving the reports from state and local government officials and others, and forwarding them to platforms such as Facebook, Twitter, and YouTube to be evaluated for censorship under their content-moderation policies. *Id.* ¶¶ 972, 977. The “idea” of such “switchboarding” is to get the platforms to apply their content-moderation policies to the disfavored content, *i.e.*, to censor them. *Id.* ¶ 973.

CISA receives reports of misinformation both from the nonprofit organization Center for Internet Security (CIS) and directly from state and local government officials. *Id.* ¶ 1030. CISA also directs election officials to the Center for Internet Security, whose EI-ISAC program CISA funds, as an alternative route for reporting misinformation to platforms. *Id.* ¶ 1002. The CISA-funded EI-ISAC, operated by CIS, is a clearinghouse for state and local government officials to report misinformation for censorship. CISA coordinates with the CIS on reporting misinformation to the platforms. *Id.* ¶ 1031. The Center for Internet Security works closely with CISA in reporting misinformation to social-media platforms, and CISA serves as a pass-through for reports from CIS to the platforms. *Id.* ¶ 1005. CISA reports misinformation to the platforms without making any assessment of whether it involves foreign or domestic speakers. *Id.* ¶ 1033.

During the 2020 election cycle, CISA maintained a “tracking spreadsheet” with 146 entries of its “switchboarding” activities. *Id.* ¶ 1062. At least six members of CISA “took shifts” in “switchboarding” misinformation reports to platforms during 2020 election cycle. *Id.* ¶ 1063. Two of these CISA staffers were interns simultaneously working for Stanford Internet Observatory and flagging misinformation to platforms on behalf of the Election Integrity Partnership (discussed below). *Id.* ¶ 1064. These shifts would last until late in the evening as election day approached. *Id.* ¶ 1067. State officials sometimes flagged misinformation for censorship because CISA and the FBI had warned them to be on the lookout for such content. *Id.* ¶ 1072. CIS and EIP also

flagged social-media content to local election officials and invited them to review and report it as misinformation. *Id.* ¶ 1082.

In addition to flagging misinformation to platforms, CISA frequently fact-checks such reports for the platforms. *Id.* ¶¶ 1076-1080. CISA also publishes debunks of social-media narratives, knowing that the platforms will use this information to censor those narratives. *Id.* ¶ 1105. CISA pushed especially hard for the censorship of content that CISA's Director disfavored, including the "Hammer and Scorecard" narrative in 2020. *Id.* ¶ 1105. CISA flags even obvious parody and joke accounts to the platforms for censorship, such as account handles saying "Smoke weed erry day" and "hoes be mad, but this is a parody account." *Id.* ¶ 1102.

Platforms treat CISA as a privileged reporter of misinformation, often responding with great alacrity to reports, even late in the evening, and reporting back when speech reported by CISA has been censored. *Id.* ¶ 1081.

Early in the 2022 election cycle, Lauren Protentis of CISA repeatedly urged the platforms to prepare "one pagers" for state and local government officials that would explain to them how to report misinformation directly to the platforms. *Id.* ¶¶ 1094-1096. The Center for Internet Security, whose EI-ISAC is funded by CISA, continued to flag misinformation to the platforms during the 2022 election cycle. *Id.* ¶ 1098. Like the FBI, CISA runs an "operation center" on election day that engages in reporting misinformation to social-media platforms. *Id.* ¶ 1097.

Global Engagement Center Collusion. Likewise, the State Department's Global Engagement Center (GEC) colludes with social-media platforms on censorship. GEC conducts numerous meetings with social-media platforms about disinformation. *Id.* ¶ 1123. These include quarterly meetings involving the GEC's senior leadership and more frequent meetings involving its Technology Engagement Team. *Id.* ¶ 1124-1125. As with the other agencies, the GEC meets

with the platforms' content-moderation officials, *i.e.*, those charged with enforcing censorship policies. *Id.* ¶ 1126-1127. The GEC also maintains at times a permanent liaison in Silicon Valley to connect with social-media platforms, who also meets with the platforms' content-moderation teams. *Id.* ¶ 1130.

Other Agencies' Collusion. This collusion extends to other agencies as well. In particular, platforms routinely treat certain federal agencies as privileged fact-checkers with authority to dictate what will and will not be removed. Plaintiffs' Proposed Findings of Fact, Ex. 1 ¶ 46, ¶ 396 (Facebook to White House: "There are several claims we will be able to remove as soon as the CDC debunks them."); *id.* ¶ 397 (asking the Surgeon General to provide a health expert to dictate what claims about child vaccines would be censored on Facebook). As discussed above, platforms treat the CDC, in particular, as a final censorship authority with ultimate authority to dictate what health-related claims will be censored on their platforms.

Other agencies share this privileged-fact-checker role. Under Dr. Fauci's leadership, NIAID staff, working with HHS, NIH, and White House officials, repeatedly flagged posts, content, and accounts for censorship to social-media platforms, including impersonation and/or parody accounts (and even fan pages) of Dr. Fauci himself. *Id.* ¶¶ 809-825. These flaggings include requests such as "PLEASE REMOVE!!!" and "Is there anything else that you can also do to block other variations ... so we don't have this happen again?" *Id.* ¶ 810. Dr. Fauci approves of the removal of these accounts from social media because he thinks they are "a bad thing," even though they may include parody accounts. *Id.* ¶¶ 818-820.

NIH, likewise, serves as an authority dictating what speech will be censored on social media. *Id.* ¶¶ 826-827. NIH provided the authority, for example, for the CDC to rate claims about

the efficacy of Ivermectin to treat COVID-19 as “*NOT ACCURATE*” to platforms to procure their censorship on social media. *Id.*

Platforms also coordinate closely with federal officials in controlling messaging on their platforms, including amplifying and subsidizing the government’s message to the exclusion of private speakers. *Id.* ¶¶ 83-84 (Facebook collaborating with the White House to amplify government messaging); *id.* ¶ 129 (Facebook noting that it has “provided more than \$30 million in ad credits to help governments ... reach people”); *id.* ¶ 379 (White House telling Facebook it would “appreciate a push” to promote the FDA approval of the Pfizer vaccine).

b. Pervasive Entwinement.

In addition to conspiracy and collusion, joint activity occurs whenever the government has “so far insinuated itself” into private affairs as to blur the line between public and private action. *Jackson v. Metro. Edison Co.*, 419 U.S. 345, 357 (1974). This manifests itself in “pervasive entwinement of public institutions and public officials in [the private entity’s] composition and workings.” *Brentwood Acad.*, 531 U.S. at 298; *see also Wittner v. Banner Health*, 720 F.3d 770, 777–78 (10th Cir. 2013). To become pervasively entwined in a private entity’s workings, government need only “significantly involve[] itself in the private [entity’s] actions and decisionmaking”; it is not necessary to establish that “state actors ... literally ‘override’ [the private entity’s] independent judgment.” *Rawson v. Recovery Innovations, Inc.*, 975 F.3d 742, 751, 753 (9th Cir. 2020).

Pervasive entwinement exists even if the private party is exercising independent judgment. The Supreme Court has explicitly rejected “the proposition that no person acts under color of state law where he is exercising independent professional judgment.” *West v. Atkins*, 487 U.S. 42, 52 n.10 (1988). “A finding that individual state actors ... literally ‘override’ a nominally private

[actor's] independent judgment might very well provide relevant information. But it is a mistake to focus too narrowly on this question.” *Rawson*, 975 F.3d at 751; *accord West*, 487 U.S. at 52 n.10 (“The exercise of independent professional judgment is not . . . the primary test.” (cleaned up)). “[S]ustained and routine cooperation between” government officials and private actors can constitute joint participation even if the private actors exercise independent judgment, especially if the purpose of the cooperation is “to further [the government’s] interest.” *Rawson*, 975 F.3d at 750, 754; *see also Roberson v. Dakota Boys & Girls Ranch*, 42 F.4th 924, 935 (8th Cir. 2022) (“In *West*, the doctor’s use of professional . . . judgment did not preclude him from being a state actor. Rather, the salient fact was that his relationship with [government officials] was *cooperative*.” (internal citation and quotation marks omitted)); *Gallagher v. Neil Young Freedom Concert*, 49 F.3d 1442, 1454 (10th Cir. 1995) (indicating that a “substantial degree of cooperative action” can constitute “joint action”).

Here, social-media companies work hand-in-glove with Defendants and their partners in state and local government, the Election Integrity Partnership, and the Virality Project to censor speech expressing viewpoints that Defendants disfavor. This conduct constitutes significant encouragement, coercion, and conspiracy and collusion as well.

The Election Integrity Partnership. The Election Integrity Partnership is a collaboration among four anti-disinformation nonprofits—Stanford Internet Observatory, the University of Washington’s Center for an Informed Public, Graphika, and the Atlantic Council’s Digital Forensic Lab—with government and social-media platforms. *Id.* ¶ 1144.

The EIP lists three government agencies—CISA, the CISA-funded EI-ISAC, and the GEC—as “major stakeholders.” *Id.* ¶ 1153, 1180. The EIP lists them as providing information into the EIP’s “Intake Queue,” *i.e.*, reporting misinformation for censorship. *Id.* ¶ 1151. These

government agencies, as “trusted external stakeholders,” submit “tickets” to the EIP to flag content and themes on social media for censorship. *Id.* ¶¶ 1152, 1153, 1175.

The EIP was created “in consultation with” CISA. ¶ *Id.* 1138. CISA interns originated the idea of the EIP, *id.* ¶ 1139, and then CISA officials helped create it. The EIP’s “Operational Timeline” includes a July 9, 2020, “Meeting with CISA to present EIP concept.” *Id.* ¶ 1169.

The EIP successfully lobbied social-media platforms to adopt more restrictive policies about election-related speech during the late summer and early fall of 2020. *Id.* ¶¶ 1148-1150, 1149, 1217-1220. The EIP then aggressively reported misinformation to the platforms to be censored under those new policies that it pushed them to adopt. *Id.* ¶¶ 1148-1150.

Through its “ticketing” system, the EIP flagged, not just posts, but entire themes and narratives on social media to platforms for censorship, encompassing potentially millions of posts in 2020 alone. *Id.* ¶¶ 1157, 1174-1176. The EIP used teams of researchers working long days to monitor Americans’ speech on social-media platforms and report disfavored speech to platforms for censorship. *Id.* ¶ 1178. The EIP created “established relationships with social media platforms to facilitate flagging of incidents for evaluation” under their content-moderation policies. *Id.* ¶ 1182. The EIP coordinated closely with virtually all major platforms, as well as government agencies, in reporting misinformation. *Id.* ¶ 1183-1185.

The EIP boasts that its flagging for censorship had a high success rate: “35% of the URLs we shared with Facebook, Instagram, Twitter, TikTok, and YouTube were either labeled, removed, or soft blocked. ... the four major platforms we worked with all had high response rates to our tickets.” *Id.* ¶ 1187.

The CISA-funded Center for Internet Security was a major source for EIP tickets. *Id.* ¶ 1188. The GEC also reported misinformation to the EIP. *Id.* ¶ 1197 (“Groups that reported tickets include the State Department’s Global Engagement Center...”).

The EIP admits that the speech it targets for censorship is not foreign but domestic, grassroots speech by American citizens. *Id.* ¶¶ 1158, 1195, 1199. This includes the speech of highly visible figures with hundreds of thousands or millions of social-media followers, such as Plaintiff Jim Hoft, President Trump, Fox News host Sean Hannity, and Breitbart News. *Id.* ¶ 1159, 1208.

The EIP is partly funded by the federal government, both through a grant from the U.S. National Science Foundation and from federal funding for the Atlantic Council. *Id.* ¶¶ 1164-1165.

Numerous current and former CISA personnel also have or had roles in the EIP. *Id.* ¶ 1163. Likewise, key EIP personnel such as Alex Stamos, Renee DiResta, and Kate Starbird also have formal roles in CISA. *See id.* ¶¶ 1179-1171.

The EIP “flag[s] policy violations for platforms.” *Id.* ¶ 1172; *see also id.* ¶ 1177. The reach of the EIP’s monitoring and reporting is enormous; its “tickets” encompassed almost 22 million posts on Twitter alone. *Id.* ¶ 1202; *see also id.* ¶ 1201. These disfavored tweets were identified by monitoring 859 million tweets over three months. *Id.* ¶ 1203.

The EIP was given privileged access to the internal data of some platforms to monitor Americans’ social-media speech, *id.* ¶ 1203, but it expressed frustration about not having access to better internal data from Facebook, *id.* ¶ 1204.

The EIP targets truthful speech and core political speech that expresses viewpoints disfavored by the government and the EIP. *Id.* ¶ 1205-1206. The EIP’s public report indicates that it flagged Plaintiff Jim Hoft’s content for censorship repeatedly; the report mentions Hoft’s

website 47 times, identifies him as the #2 “superspreader” of election-related misinformation on Twitter, and devotes an entire subsection of the report to his website and social-media accounts. *Id.* ¶¶ 1156, 1192-1194, 1207-1216. The EIP indicates that it monitored and targeted Hoft’s content in 29,207 original tweets and over 840,000 retweets. *Id.* ¶ 1210.

The EIP indicates that it plans to remain active in the future. *Id.* ¶ 1222-1224. In fact, the EIP reformed itself as the “Virality Project” during 2021. *Id.* ¶ 1223.

The EIP’s Pervasive Entwinement with CISA and the GEC. CISA has established relationships with researchers at the Stanford Internet Observatory, the University of Washington, and Graphika—three of the four entities comprising the “Election Integrity Partnership” (“EIP”). *Id.* ¶ 991-992. Brian Scully admits that CISA has an “established relationship” with the EIP and the Stanford Internet Observatory personnel involved. *Id.* ¶ 1000. He also admits that CISA collaborated with the EIP. *Id.* ¶ 1028.

As noted, CISA interns originated the idea of the EIP. *Id.* ¶ 993. The EIP is designed to address a CISA-perceived problem of a “gap” that Brian Scully communicated to the CISA interns. *Id.* ¶¶ 995-996. The “gap” is the lack of resources that prevents state and local officials from identifying and flagging social-media misinformation that affects their jurisdictions. *Id.* ¶ 995. The EIP is designed to fill that “gap,” *i.e.*, to do the work of monitoring and censoring speech that government lacks the resources to do effectively.

CISA received briefings from the EIP on its work. *Id.* ¶ 993. These “conversations” happened “throughout” the EIP’s work during the 2020 election cycle. *Id.* ¶ 997. CISA also reviewed and relied on the EIP’s public reports on social-media misinformation. *Id.* ¶ 999.

CISA had communications with the EIP’s founders, including Alex Stamos and Renee DiResta of the Stanford Internet Observatory, as the EIP was starting up and they were “trying to

figure out what the gap was.” *Id.* ¶ 993. CISA briefed the EIP’s founders on what the “gap” is that needed to be filled. *Id.* ¶ 997. CISA “had conversations with Stanford about the gap” as the EIP was being launched. *Id.* ¶¶ 1013, 1019. The EIP’s leaders, Alex Stamos and Renee DiResta, also briefed CISA on the EIP in spring or summer 2021. *Id.* ¶ 1010.

CISA connected the EIP to the Center for Internet Security (CIS), a nonprofit that runs the CISA-funded “EI-ISAC,” a clearinghouse through which state and local government officials report misinformation to CIS and CISA to be flagged to the platforms. *Id.* ¶¶ 993, 997, 1001-1002, 1027. CISA connected the EIP to the CIS so that they could coordinate directly on flagging misinformation. *Id.* ¶ 1024. As a result of CISA’s connection, the CIS and the EIP had a relationship and shared information. *Id.* ¶ 1032. CISA also connected the EIP to organizations of state and local officials who report misinformation, including the National Association of Secretaries of State (NASS) and the National Association of State Election Directors (NASED). *Id.* ¶¶ 993, 1024-1025.

CISA connected the Center for Internet Security with the EIP because “the EIP was working on the same mission,” so “we wanted to make sure that they were all connected.” *Id.* ¶ 1004. Thus, CISA originated and set up the collaborations between local government officials and the CIS, and between the EIP and the CIS. *Id.*

Two of the interns who originated the idea of the EIP worked simultaneously for CISA and for Stanford Internet Observatory during the 2020 election cycle, and they flagged misinformation to the platforms on behalf of both CISA and the EIP during the same time. *Id.* ¶¶ 994, 1064-1066.

CISA served a mediating role between the CIS, the EIP, and the platforms, to coordinate their efforts in reporting misinformation to the platforms. *Id.* ¶ 1007, 1073. CISA also had direct email communications with the EIP about misinformation reporting. *Id.* ¶ 1008.

As noted above, CISA coordinated closely with the Center for Internet Security on misinformation reports, and CIS coordinated closely with the EIP, creating a triangle of collaboration. *Id.* ¶ 1006, 1009.

There is substantial overlap of personnel between CISA and the EIP. As noted above, two interns worked simultaneously for CISA and EIP in flagging misinformation to platforms on behalf of both entities. *Id.* ¶¶ 994, 1064-1066. Alex Stamos, Renee DiResta, and Kate Starbird of the University of Washington—all key players in the EIP—also have formal roles in CISA. *Id.* ¶¶ 1011-1012. CISA Director Krebs went into business with Alex Stamos after he left government, and Matt Masterson became a fellow at the Stanford Internet Observatory when he left; both participated in meetings with the EIP while they were at CISA. *Id.* ¶¶ 1014-1016, 1018, 1021. Masterson spoke to Stanford about “clarifying the gap” when they were originating the EIP. *Id.* ¶ 1018. Masterson was at the meeting with Alex Stamos where the idea of the EIP was first discussed. *Id.* ¶ 1020.

The EIP was formulated as a means to accomplish what the government is forbidden to do under the First Amendment. Alex Stamos has publicly stated that the EIP was formed in part because of the government “lacked ... legal authorizations” to engage in the EIP’s work. *Id.* ¶ 1048. The EIP tries to “to fill the gap of the things that the government cannot do themselves.” *Id.* ¶¶ 1049, 1054. Renee DiResta also admits that the EIP was designed to get around the problem of “very real First Amendment questions” that would arise if federal officials did the EIP’s monitoring and censorship work directly. *Id.* ¶ 1055.

The EIP and CIS coordinated directly on specific misinformation reports to platforms, including instances where CIS reported misinformation under EIP tracking numbers. *Id.* ¶ 1058. CISA then forwarded EIP-ticketed reports received from CIS to the platforms. *Id.* ¶ 1060.

Forwarding misinformation reports received from the EIP to platforms was CISA's "standard practice." *Id.* ¶ 1069. CISA's "tracking spreadsheet" of "switchboarding" communications contains at least 13 entries that originated from the EIP, including one flagging Plaintiff Jim Hoft's content. *Id.* ¶¶ 1069, 1075. CIS simultaneously forwarded reports of misinformation to both CISA and the EIP. *Id.* ¶ 1070. State and local officials simultaneously forwarded reports of misinformation to CIS, CISA, and the EIP. *Id.* ¶ 1071.

The GEC, likewise, coordinated directly with the EIP by "engaging with the [Election Integrity] partnership." *Id.* ¶ 1132. As noted above, the GEC reported misinformation to the EIP.

The Virality Project. After the 2020 election cycle, the EIP continued and expanded the same work under the moniker "Virality Project" (VP), continuing to collaborate closely with federal officials and turning its attention to so-called "misinformation" about COVID-19 vaccines. *Id.* ¶¶ 1236, 1257, 1260. The same four entities were involved in the Virality Project, including Stanford Internet Observatory and many former CISA officials; new nonprofits were added as well. *Id.* ¶¶ 1237-1238.

Like the EIP, the VP targets First Amendment-protected domestic speech by American citizens. *Id.* ¶¶ 1241, 1256. Like the EIP, the VP seeks the censorship of speech that is truthful but does not support the government's preferred narratives on COVID vaccines, including religious claims and core political speech like "*Liberty*: ... no government or employer should be able to tell people what to put in their bodies." *Id.* ¶¶ 1264-1265, 1268, 1269.

The VP specifically targets speech by "health freedom" groups, such as Plaintiff Jill Hines' group "Health Freedom Louisiana." *Id.* ¶¶ 1266-1268, 1316-1323, 1331. The VP devotes an entire section of its report to such groups, noting that it targets their speech nationwide. *Id.* ¶ 1317. It discusses such groups almost 100 times. *Id.* ¶ 1331. In targeting such groups, the VP focuses

not only on misinformation about vaccines, but political speech and political organizing against vaccine passports and vaccine mandates—areas where Hines experienced particularly invidious censorship. *Id.* ¶ 1321. The VP targets such groups “across all 50 states” including “at a messaging and *organizing* level.” *Id.* ¶¶ 1343-1345 (emphasis added). Like the EIP, the VP also specifically flags Plaintiff Jim Hoft’s content as misinformation. *Id.* ¶ 1324.

Like the EIP, the VP pushes platforms to adopt more restrictive content-moderation policies and to engage in more aggressive enforcement of such policies. *Id.* ¶¶ 1242, 1248, 1270. Like the EIP, the VP allows “government partners” to share “tips,” *i.e.*, to flag so-called “misinformation” for censorship. *Id.* ¶¶ 1244, 1276. The VP’s “stakeholders provided tips ... and requests to assess specific incidents and narratives.” *Id.* ¶ 1276. These “stakeholders” include “federal health agencies” and “state and local public health officials.” *Id.* ¶ 1277.

Six major social-media platforms (Facebook/Instagram, Twitter, Google/YouTube, TikTok, Medium, and Pinterest) cooperated in the VP, “acknowledging content flagged for review and acting on it in accordance with their policies” and providing feedback on “the reach of narratives previously flagged by VP.” *Id.* ¶ 1280.

Like the EIP, the VP targets speech by influential speakers with large audiences, affecting audiences of millions of people. *Id.* ¶¶ 1255 (video censored after “tens of millions of views”); *id.* ¶ 1297 (targeting “recurring actors” that create “viral” incidents); *id.* ¶¶ 1313-1314, 1344-1348 (Alex Berenson and Tucker Carlson); *id.* ¶ 1325 (Breitbart News and One America News Network); *id.* ¶¶ 1334-1341 (Fox News, The Daily Wire, Candace Owens, Robert F. Kennedy Jr. (considered “especially pernicious” because of his large audience), America’s Frontline Doctors, Simone Gold, Dr. Joseph Mercola, and others).

Like the EIP, the VP engages in monitoring of Americans' speech on social media on a massive scale. *Id.* ¶¶ 1272-1276. The VP “systematically monitored activity across social media platforms” for seven months. *Id.* ¶ 1288. The VP monitored about 6.7 million social-media “engagements” per week, over 200 million over seven months. *Id.* ¶ 1294. The VP reported 174 “tickets” tracking vaccine-related narratives and themes to platforms for censorship. *Id.* ¶ 1291. The vast majority of speech flagged and tracked by the VP was not false or incorrect speech. *Id.* ¶¶ 1295, 1303-1313.

Federal officials are pervasively entwined with the Virality Project. The Surgeon General pushes platforms to share information with the Virality Project. *Id.* ¶¶ 226-227. His Office coordinated with the Virality Project on the Surgeon General's Health Advisory and “brainstorm[ed]” with the Virality Project. *Id.* ¶ 228, 231. The Surgeon General repeatedly echoes the key messaging of the Virality Project. *Id.* ¶ 319. The Surgeon General launched his Health Advisory on Misinformation in an event hosted by Stanford Internet Observatory, which leads the Virality Project. *Id.* ¶¶ 330-337. Dr. Murthy admitted that his Office had been “partnered with” SIO for “many months.” *Id.* ¶ 337.

The VP notes its coordination with “federal government agencies,” touting its “strong ties with several federal government agencies, most notably the Office of the Surgeon General (OSG) and the CDC,” which involved flagging vaccine-related content on social media (“situational awareness around emerging narratives”). *Id.* ¶ 1279. The VP and the Surgeon General's office collaborated closely, as the VP boasts that “the Office of the Surgeon General incorporated VP's research and perspectives into its own vaccine misinformation strategy,” including its Health Advisory on Misinformation. *Id.* ¶ 1249. The VP repeatedly cites the work of Surgeon General Murthy. *Id.* ¶ 1359.

The VP “directly informed counter-messaging efforts by ... public health officials,” and “provided strategic insights to government entities such as the OSG, CDC, and the Department of Health and Human Services.” *Id.* ¶ 1284. As noted, the VP even hosted Surgeon General Murthy for an event announcing his Health Advisory. *Id.* ¶ 1285.

The VP matches the Surgeon General’s messaging on social-media misinformation verbatim, calling for “transparency,” “accountability” and a “whole-of-society” effort to address misinformation. *Id.* ¶¶ 1247, 1251, 1353-1355. This includes demanding data-sharing from the platforms, a key demand of the White House and Surgeon General directly echoed by the VP. *Id.* ¶ 1293. It also includes the “recommendations” for platforms to increase censorship in the VP’s report and the Surgeon General’s Health Advisory, including demands for data-sharing. *Id.* ¶¶ 1363-1364.

For all these reasons, Plaintiffs are likely to establish that Defendants’ conduct involves government action—it involves significant encouragement, coercion, deception, conspiracy/collusion, and pervasive entwinement. Most of the conduct of the federal agencies and officials discussed herein, moreover, falls into multiple such categories.

3. Defendants’ Censorship Activities Violate the First Amendment.

Given a finding of government action for all these activities, Defendants’ social-media censorship activities violate the First Amendment. In fact, the censorship here is particularly egregious because it unites three forms of government action considered most offensive to the First Amendment: viewpoint discrimination, targeting core political speech, and prior restraints.

First, the Court has held that First Amendment protection is “at its zenith” when the government attempts to restrict “core political speech.” *Buckley v. Am. Const. Law Found., Inc.*, 525 U.S. 182, 186–87 (1999); *see also Citizens United v. F.E.C.*, 558 U.S. 310, 485 (2010)

(Thomas, J., concurring in part and dissenting in part) (describing “core political speech” as the “primary object of First Amendment protection”). Although it includes speech about elections, “core political speech need not center on a candidate for office” but encompasses any “advocacy of a politically controversial viewpoint.” *McIntyre v. Ohio Elec. Comm’n*, 514 U.S. 334, 347 (1995). “No form of speech is entitled to greater constitutional protection than” core political speech. *Id.* Here, virtually all the election-related speech targeted by CISA, the GEC, the FBI, and the Election Integrity Partnership is core political speech. So too is the great majority of the health-related speech, as it focuses on politically sensitive topics like the safety and efficacy of COVID vaccines, mask mandates, and similar topics. Each of these topics is highly “politically controversial.” *Id.*

Second, “viewpoint-based” regulation is especially “obnoxious” to the First Amendment. *Hill v. Colorado*, 530 U.S. 703, 723 (2000). Indeed, the “rationale of the general prohibition” against *content*-based regulation “is that content discrimination raises the specter that the Government may effectively drive certain ideas or *viewpoints* from the marketplace.” *R.A.V. v. City of St. Paul*, 505 U.S. 377, 387 (1992) (emphasis added and quotation marks omitted). Accordingly, courts are even more skeptical of viewpoint-based restrictions on speech than they are of content-based restrictions. *See, e.g., Int’l Women’s Day March Planning Comm. v. City of San Antonio*, 619 F.3d 346, 359 (5th Cir. 2010) (“[C]ontent-based burdens on speech in a public forum are subject to strict scrutiny, while viewpoint-based burdens are [absolutely] unconstitutional.”). As the Supreme Court famously wrote in *West Virginia State Board of Education v. Barnette*, “If there is any fixed star in our constitutional constellation, it is that no official, high or petty, can prescribe what shall be orthodox in politics, nationalism, religion, or other matters of opinion or force citizens to confess by word or act their faith therein.” 319 U.S.

624, 642 (1943). Here, virtually all of Defendants' requests for censorship is viewpoint-based. Defendants have not procured the censorship of *all* speech about elections and COVID-19 vaccines; they have only sought to censor the *views* about such topics that contradict the government's preferred narratives. This is quintessential viewpoint discrimination.

Third, prior restraints are "the most serious and least tolerable infringement on First Amendment rights." *Neb. Press Ass'n v. Stuart*, 427 U.S. 539, 559 (1976). Although the quintessential prior restraint is a law requiring government approval prior to publication, *see* 4 WILLIAM BLACKSTONE, COMMENTARIES *152, the Supreme Court treats as a *de facto* prior restraint any government restriction on speech whose "object . . . is not punishment but suppression." *Near v. Minnesota ex rel. Olson*, 283 U.S. 697, 703, 711–12 (1931) (treating a statute as an unconstitutional prior restraint even though it was enforced against the defendants only after they had circulated the offending publication); *see also Bantam Books*, 372 U.S. at 60–70 (treating agency pressure to stop the circulation of "books which have for sometime been widely distributed" as a *de facto* regime of prior restraint). Here, Defendants' censorship seeks not to impose consequences on disfavored viewpoints, but to silence disfavored viewpoints on social media. This is a massive system of *de facto* prior restraints.

Because Defendants' conduct violates three of the most fundamental precepts of the First Amendment, it is egregiously unconstitutional. Plaintiffs are likely to succeed on their First Amendment claim.

B. Plaintiffs Are Likely to Succeed on their APA and *Ultra Vires* Claims.

Plaintiffs are also likely to succeed on the merits of their claims under the Administrative Procedure Act (APA), 5 U.S.C. § 500 et seq, as well as their statutory *ultra vires* claim. Plaintiffs explained in their Response to Defendants' Motion to Dismiss why 5 U.S.C. §§ 702 and 704

provide a cause of action and a waiver of sovereign immunity for their APA claims. Doc. 161-1, at 51–56. Plaintiffs also explained why they do not need a waiver of sovereign immunity for their *ultra vires* claim and why, even if they did, 5 U.S.C. § 702 provides one. *Id.* at 50–51. Plaintiffs incorporate by reference those explanations here.

The APA directs a reviewing court to “hold unlawful and set aside agency action” that the court concludes is “(A) arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law; (B) contrary to constitutional right, power, privilege, or immunity; (C) in excess of statutory jurisdiction, authority, or limitations, or short of statutory right; (D) without observance of procedure required by law.” 5 U.S.C. § 706(2). Agency Defendants’ censorship program meets each of these conditions.

To decide whether agency action was “arbitrary, capricious, [or] an abuse of discretion,” § 706(2)(A), “the court the court must consider whether the decision was based on a consideration of the relevant factors and whether there has been a clear error of judgment,” *Citizens to Preserve Overton Park, Inc. v. Volpe*, 401 U.S. 402, 416 (1971). If the agency “relied on factors which Congress has not intended it to consider” or “entirely failed to consider an important aspect of the problem,” then its action was arbitrary and capricious. *Motor Vehicle Mfrs. Ass’n of U.S., Inc. v. State Farm Mut. Auto Ins.*, 463 U.S. 29, 43 (1983). Here, Agency Defendants entirely failed to consider many important facts about their censorship program, including (1) that it targets core political speech for suppression, (2) that it is viewpoint discriminatory, and (3) that it subjects speech to *de facto* prior restraint. And Defendants’ decision to proceed with the program despite its manifest unconstitutionality was “a clear error of judgment.” *Overton Park*, 401 U.S. at 416.

Plaintiffs have already explained why Agency Defendants’ censorship program is “contrary to constitutional right” and “in excess of statutory . . . authority.” § 706(2)(B)–(C).

Finally, Agency Defendants launched their censorship program “without observance of procedure required by law,” § 706(2)(D), because they failed to provide the public with notice and an opportunity to comment. The APA exempts “interpretative rules,” “general statements of policy,” and “rules of agency organization, procedure, or practice” from notice and comment. § 553(b)(A). But these exceptions “must be narrowly construed,” *Texas v. United States*, 40 F.4th 205, 228 (5th Cir. 2022). And even broadly construed, they would not encompass Defendants’ censorship program. Because the program does more than “clarify or explain existing law or regulations,” it is no mere “interpretative rule[.]” *Alcarez v. Block*, 746 F.3d 593, 613 (9th Cir. 1984). Because the program does not “advise the public prospectively of the manner in which the agency proposes to exercise a discretionary power,” it is no mere “general statement of policy.” *Texas*, 40 F.4th at 228 (alteration omitted). And because the program “encodes . . . substantive value judgment[s]” and “trenches on substantial private rights or interests,” it is no mere “rule[] of agency organization, procedure, or practice.” *Am. Fed. of Lab. & Cong. of Indus. Orgs. v. N.L.R.B.*, 57 F.4th 1023, 1034–35 (D.C. Cir. 2023) (cleaned up) (limiting this exception to “internal house-keeping measures”).

In addition, Plaintiffs are likely to prevail on the merits of their *ultra vires* claim because no statute provides “any colorable basis” on which Defendants could claim the authority to implement their censorship program. *Danos v. Jones*, 652 F.3d 577, 583 (2011) (quotation mark omitted). Defendants have failed to identify a single statute that they are prepared to argue gives them the authority for their mass-censorship program. Nor could they: the censorship program is “plainly invalid,” *Fla. Dep’t of State v. Treasure Salvors, Inc.*, 458 U.S. 670, 716 (1982) (White, J., concurring in the judgment in part and dissenting in part).

C. Plaintiffs Are Likely to Establish Standing.

In the context of a preliminary injunction, “the ‘merits’ on which plaintiff must show a likelihood of success encompass not only substantive theories but also establishment of jurisdiction.” *Food & Water Watch, Inc. v. Vilsack*, 808 F.3d 905, 913 (D.C. Cir. 2015). To have standing, a plaintiff must face or have suffered an injury traceable to the challenged conduct of the defendant and likely to be redressed by a favorable decision. *Lujan v. Def. of Wildlife*, 504 U.S. 555, 560–61 (1992). At the preliminary-injunction stage, a movant need only show that he likely to prove that he has standing. *Speech First, Inc. v. Fenves*, 979 F.3d 319, 330 (5th Cir. 2020). Because Plaintiff States and the individual Plaintiffs seek the same relief, Plaintiffs need only show that they are likely to prove that at least one Plaintiff has standing. *See Rumsfeld v. Forum for Acad. & Inst’l Rights, Inc.*, 547 U.S. 47, 52 n.2 (2006). In fact, all Plaintiffs have standing. Plaintiffs incorporate by reference their prior briefing on standing in response to Defendants’ motion to dismiss. Doc. 161-1, at 5-49.

1. Plaintiffs Are Likely to Prove Injury.

Plaintiffs’ Proposed Findings of Fact set forth the facts underlying the imminent, ongoing injuries to both the individual Plaintiffs, Ex. 1, ¶¶ 1367-1411, and to the State Plaintiffs, *id.* ¶¶ 1427-1442. They also describe the injuries to other, similarly situated speakers and listeners of social-media speech. *Id.* ¶¶ 1412-1426.

The individual Plaintiffs assert violations of their First Amendment right to speak and listen freely without government interference. *See Va. State Bd. of Pharm. v. Va. Citizens Consumer Council, Inc.*, 425 U.S. 748, 757 (1976) (holding that government “censorship equally infringe[s]” the speaker’s rights and “the rights of [the audience] to whom the [speech] was addressed”). A personal loss of First Amendment rights is “unquestionably” an injury that supports standing.

Croft v. Governor of Tex., 562 F.3d 735, 745 (5th Cir. 2009); *see also McNamara v. Moody*, 606 F.2d 621 (5th Cir. 1979) (affirming a nominal-damages award under 42 U.S.C. § 1983 for a First Amendment free-speech violation absent any other injury).

The State Plaintiffs, moreover, assert seven specific imminent, ongoing injuries. *See* Doc. 161-1, at 14-29. Among other things, Defendants' own witness, Carol Crawford of the CDC, attests to the significance of the States' injury to their interest in being able to read and follow the uncensored speech and opinions of their constituents on social media. Plaintiffs' Proposed Findings of Fact, Ex. 1, ¶¶ 1435-1437. The CDC agrees with the States that government agencies have a strong interest in reading and following the *uncensored* speech and opinions of their constituents. *Id.* ¶¶ 590-595. The CDC admits that "it does help ... for communicators to know what conversations occurs on social media because it helps us identify gaps in knowledge, or confusion, or things that we're not communicating effectively that we need to adjust." *Id.* ¶ 591. Having a "full picture" of what people are saying on social media allows the government agency to "adjust communication materials" to address their actual thoughts and concerns. *Id.* ¶ 594.

The evidence also demonstrates the imminent and ongoing nature of Plaintiffs' injuries. Plaintiffs both experience ongoing injury from censorship and face the imminent prospect of further censorship in the future, as all Defendants are continuing and expanding their censorship efforts. For example, the White House continues its censorship campaign throughout 2022 without relenting. *Id.* ¶¶ 188-199. The White House also continues to expand the topics of its social-media censorship campaign, to include new topics such as "climate disinformation," abortion-related speech, "gendered disinformation," and economic policy. *Id.* ¶¶ 200-211. Likewise, when it comes to misinformation, the CDC's "focus is not solely on COVID. We're focusing on other topics" as well, and the CDC colludes with social-media platforms about emerging topics like

medication abortion. *Id.* ¶ 562. CISA and its Director Jen Easterly have made a series of public statement indicating that they intend to expand their anti-disinformation efforts in the future. *Id.* ¶¶ 1106, 1112-1114, 1118. Recent DHS document indicate that DHS intends to target misinformation on new topics like “the origins of the COVID-19 pandemic,” “the U.S. withdrawal from Afghanistan,” “racial justice,” and “the nature of U.S. support for Ukraine.” *Id.* ¶ 1110. CISA has already been involved in an initiative against so-called misinformation about the U.S.’s involvement in Ukraine. *Id.* ¶ 1111. CISA is also working with Treasury on an initiative to address “misinformation” about the financial-services industry. *Id.* ¶¶ 1115-1116. The EIP continues to operate through the 2022 election cycle. *Id.* ¶ 998. At every turn, Defendants’ censorship enterprise is expanding its efforts to dictate and control what Americans may say on social media, the “modern public square.” *Packingham v. North Carolina*, 137 S. Ct. 1730 (2017).

2. Plaintiffs Are Likely to Prove Traceability.

Plaintiffs are likely to prove that their injuries are fairly traceable to Defendants’ actions of inducing and jointly participating in social-media companies’ viewpoint-based censorship. But-for causation is sufficient for traceability. *Duke Power Co. v. Carolina Envt. Study Grp.*, 438 U.S. 59, 74–75 (1978). But it is not necessary. *Tweed-New Haven Airport Auth. v. Tong*, 930 F.3d 65, 71 (2d Cir. 2019); *Parsons v. U.S. Dep’t of Justice*, 801 F.3d 701, 714 (6th Cir. 2015). On the contrary, “the fairly-traceable inquiry is much more forgiving than the . . . tort-causation inquiry,” *Webb ex rel. K.S. v. Smith*, 936 F.3d 808, 814 (8th Cir. 2019), and even the tort-causation inquiry does not require but-for causation, RESTATEMENT (THIRD) OF TORTS: LIABILITY FOR PHYSICAL AND EMOTIONAL HARM § 27 (Am. L. Inst. 2022). For example, a defendant who aided and abetted a tort is liable for it, RESTATEMENT (THIRD) OF TORTS: LIABILITY FOR ECONOMIC HARM § 28 (Am. L. Inst. 2022), even if his act of aiding and abetting was not a but-for cause of the tort, *id.* cmt. e.

Likewise, a party to a conspiracy is liable for torts committed in furtherance of the conspiracy by his coconspirators, *id.* § 27, even if his own conduct was not a but-for cause of the torts, *id.* rptr. note c. *A fortiori*, “injuries resulting from [a third party’s acts] are . . . ‘fairly traceable’ to” the defendant if the defendant “aided or abetted their commission,” *Mustafa v. Australian Wheat Bd. Ltd.*, No. 07 Civ. 7955(GEL), 2008 WL 4378443, at *2 (S.D.N.Y. Sep. 25, 2008), or the third party committed the acts in furtherance of a conspiracy to which the defendant was a party, *see In re Domestic Airline Travel Antitrust Litig.*, 221 F. Supp. 3d 46, 55 (D.D.C. 2016).

Under these principles, Plaintiffs are likely to prove that the injuries they assert are fairly traceable to the challenged actions of Defendants. Plaintiffs are likely to prove that Defendants’ acts of inducing and jointly participating in social-media companies’ viewpoint-based censorship are but-for causes of that censorship, including censorship that has affected the individual Plaintiffs and Plaintiff States’ citizens as speakers or audience members. Plaintiffs are also likely to prove that Defendants aided and abetted the censorship and that the social-media companies committed the censorship in furtherance of a conspiracy with Defendants to suppress speech. Each of these grounds—but-for causation, aiding and abetting, and conspiracy—is individually sufficient to establish that the injuries to Plaintiffs’ and Plaintiff States’ citizens’ ability to speak and listen are fairly traceable to the challenged actions of Defendants.

To be sure, “injury that results from the independent action of some third party not before the court” is not fairly traceable to the defendant. *Simon v. E. Ky. Welfare Rights Org.*, 426 U.S. 26, 41–42 (1976). But acts of a third party “are not ‘independent’ of steps taken to aid and abet those acts.” *Mustafa*, 2008 WL 4378443, at *2; *accord In re TelexFree Sec. Litig.*, --- F. Supp. 3d ---, 2022 WL 3915989, at *13 (D. Mass. Aug. 31, 2022). Nor are acts in furtherance of a conspiracy to which the defendant is a party. *See Domestic Airline Travel Antitrust Litig.*, 221 F.

Supp. 3d at 55, 57 (drawing a contrast between “independent decision[s]” and a coconspirator’s acts in furtherance of the conspiracy). Here, Defendants conduct falls into the latter categories.

Moreover, even assuming the connection between Defendants’ conduct and Plaintiffs’ other injuries were too attenuated to support standing (which it is not), the injuries to the individual Plaintiffs’ First Amendment rights and to Plaintiff States’ quasi-sovereign interests would still be fairly traceable to Defendants’ conduct. All Plaintiffs are suffering censorship, which is an injury no matter who is responsible for it. But for both the individual Plaintiffs and Plaintiff States’ citizens, censorship *at the hands of the government* is a distinct injury insofar as it is an invasion of their constitutional rights. *See Al-Amin v. Smith*, 511 F.3d 1317, 1333–35 (11th Cir. 2008) (holding that like being deprived of due process, being deprived of First Amendment rights is *per se* a cognizable injury, independently of “any actual injury” that it entails). Without Defendants’ involvement, social-media censorship by private companies would not violate constitutional rights. *See Manhattan Cmty. Access Corp. v. Halleck*, 139 S. Ct. 1921, 1930 (2019). Therefore, the violation of the individual Plaintiffs’ and Plaintiff States’ citizens’ constitutional rights is traceable to Defendants even assuming (contrary to fact) that the other injuries Plaintiffs assert are not. *See Duke Power*, 438 U.S. at 74-75 (recognizing that but-for causation is sufficient for traceability).

In any event, here, as discussed further above, there is overwhelming evidence that Defendants’ actions are the direct and but-for cause of the censorship that injures Plaintiffs. For example, White House officials repeatedly and successfully press for censorship of so-called “borderline” content that *does not violate platform policies*, and thus would not be censored but for federal pressure. *See, e.g.*, Plaintiffs’ Proposed Findings of Fact, Ex. 1, ¶¶ 57, 64 (promising the White House that Facebook would censor “often-true” but “sensationalized” content); ¶ 73

(imposing forward limits on non-violative speech on WhatsApp); ¶¶ 89-92 (assuring the White House that Facebook will use a “spectrum of levers” to censor content that “do[es] not violate our Misinformation and Harm policy, including “true but shocking claims or personal anecdotes, or discussing the choice to vaccinate in terms of personal and civil liberties”); ¶¶ 93-100 (agreeing to censor Tucker Carlson’s content at the White House’s behest, even though it did not violate platform policies), ¶¶ 103-104 (Twitter deplatforming Alex Berenson at White House pressure); ¶ 171 (Facebook deplatformed the Disinformation Dozen immediately after these comments). Facebook officials scrambled to get back into the White House’s good graces. *Id.* ¶¶ 172, 224 (pleading for “de-escalation” and “working together”).

The facts demonstrate a clear pattern of platforms responding to White House pressure by agreeing to greater and greater censorship, including of non-violative speech. This is strikingly clear in the platforms’ response to the one-two punch of Jennifer Psaki’s and Surgeon General Murthy’s public comments on July 15, 2021, followed by President Biden’s accusation that the platforms are “killing people” on July 16. *Id.* ¶¶ 141-162. Twitter suspended Alex Berenson within hours of the President’s statement, and later deplatformed him. *Id.* ¶ 163. Facebook took prompt action against the Disinformation Dozen. *Id.* ¶ 170. YouTube immediately assured the White House that it was aggressively censoring non-violative content. *Id.* ¶ 174.

As another example, virtually all the “flagging” activity—by the White House, the CDC, NIAID, CISA, the FBI, the GEC, the EIP, and the Virality Project—obviously results in censorship that the platforms would not impose *but for* Defendants’ actions. The whole point of “flagging” content for censorship is to *call the platforms’ attention to content that they have not censored*, in order to get them to censor it. The fact that content is flagged means that the platforms have not censored it, and federal officials think that they should. “Flagging” would make no sense if it were

not the but-for cause of censorship. The Government's witnesses effectively admit this. For example, Brian Scully acknowledges that CISA's "switchboarding" activity causes speech to be censored that otherwise would not have been censored, because Scully agrees that "if it hadn't been brought to their attention [by CISA's flagging] then they obviously wouldn't have moderated it." *Id.* ¶ 974.

In addition, the social-media censorship traceable to Defendants' conduct includes many specific examples of Defendants' inducing the censorship of Plaintiffs' social-media content in particular. Both CISA and the Election Integrity Project repeatedly flagged Plaintiff Jim Hoft's content for censorship, the latter on a massive scale. The Virality Project, working in collaboration with the Surgeon General's Office, particularly targeted "health freedom" groups like Plaintiff Jill Hines's "Health Freedom Louisiana." The Great Barrington Declaration was censored immediately after Dr. Fauci's campaign to suppress it. The YouTube video of Dr. Bhattacharya and Dr. Kulldorff's roundtable with Governor DeSantis was censored pursuant to a policy change that YouTube adopted at Dr. Fauci's instigation. And so forth. All Plaintiffs' censored content falls within the scope of Defendants' censorship campaign. Plaintiffs are likely to prove traceability.

3. Plaintiffs Are Likely to Prove Redressability.

Finally, Plaintiffs are likely to prove that a favorable decision would redress their injuries. Because past injury is not redressable by injunctive or declaratory relief, *Stringer v. Whitley*, 942 F.3d 715, 720 (5th Cir. 2019), Plaintiffs must prove that, at least as of when they filed suit, their injuries were ongoing, or new injuries were imminent, but would likely be stopped by injunctive or declaratory relief against Defendants, *see Davis v. F.E.C.*, 554 U.S. 724, 734 (2008) ("While

. . . the suit proceeds, the standing inquiry remains focused on whether the party invoking jurisdiction had the requisite stake in the outcome when the suit was filed.”).

A plaintiff’s standing is assessed as of the filing of the first complaint that the plaintiff joined. *Lynch v. Leis*, 382 F.3d 642, 647 (6th Cir. 2004); *see also Davis v. F.E.C.*, 554 F.3d 724, 734 (2008) (“While . . . the suit proceeds, the standing inquiry remains focused on whether the party invoking jurisdiction had the requisite stake in the outcome when the suit was filed.”); *S. Utah Wilderness All. v. Palma*, 707 F.3d 1143, 1153 (10th Cir. 2013) (“[S]tanding . . . is assessed at the time of the original complaint, even if the complaint is later amended.”). The State Plaintiffs filed suit on May 5, 2022, *see* Doc. 1, and the individual Plaintiffs joined on August 2, 2022, *see* Doc. 45.

The State Plaintiffs already have more than enough evidence to prove that their injuries were ongoing as of May 5, 2022. For example, preliminary discovery has revealed that Defendant CDC was working with Facebook in June 2022 to expand Facebook’s censorship policies to encompass skepticism about COVID-19 vaccines for children. On June 7, Facebook notified CDC officials that Facebook’s censorship policies for claims about childhood COVID-19 vaccines would wait for government approval. Doc. 71-7, at 6 (“We’ll hold on our policy changes until we get the final word from you.”). On June 22, the new and expanded policy that Facebook adopted under Defendants’ supervision took effect. Doc. 71-3, at 5 (“As of today[, June 22, 2022], all COVID-19 vaccine related misinformation and harm policies on Facebook and Instagram apply to people 6 months or older We expanded these policies in coordination with the CDC and ensured that we also included false claims that might be connected to children”). Defendant Robert Flaherty was involved in the effort too. *See id.* (email about the new policy addressed to “Rob and Team”). On June 13, Flaherty denied Facebook’s request for permission to stop

submitting its biweekly “Covid Insights Report” to the White House, because he wanted to monitor Facebook’s suppression of COVID-19 misinformation “as we start to ramp up under 5 vaccines.” Doc. 71-3, at 6. Facebook had previously informed Defendants Flaherty, Courtney Rowe, and Eric Waldo that it “expect[ed] the approval of COVID vaccines for kids ages 5-11 w[ould] be another significant peak in new misinformation claims.” Doc. 86-5, at 4. The rollout of vaccines for children under age five undoubtedly prompted another “peak” in content to be censored. *Id.*

Similarly, the individual Plaintiffs are likely to show that their injuries were both imminent and ongoing as of August 2, 2022. The documents Plaintiffs obtained indicate that Defendants are planning to continue their censorship activities into the future, well beyond August 2. For example, preliminary discovery revealed that Defendant CISA “has a burgeoning MDM [Mis-, Dis-, and Mal-Information] effort” that includes “directly engaging with social media companies to flag MDM,” with focus in calendar year 2022 on the midterm elections in November. Doc. 71-8, at 2. Spearheading this effort is an “MDM Subcommittee,” which was working under Defendant Jennifer Easterly’s direction to “continu[e]/refin[e] the mission of Rumor Control” for the 2022 midterm elections. Doc. 86-7, at 14. CISA “wants to insure that it is set up to extract lessons learned from 2022 and apply them to the agency’s work in 2024.” Doc. 71-8, at 2. Accordingly, the “MDM Subcommittee” is working under Easterly’s direction to perfect its “mission of Rumor Control” in time for the 2024 elections. Doc. 86-7, at 14. All of this indicates that Plaintiffs are likely to show that each Plaintiff has been affected by *new* incidents of censorship occurring at Defendants’ behest after that Plaintiff filed or joined this lawsuit. And *past* decisions to suppress speech expressed by or addressed to Plaintiffs or Plaintiff States’ citizens also impose ongoing injury on Plaintiffs insofar as the speech remains suppressed. Furthermore, the censorship that the individual Plaintiffs have experienced in the past continues to chill their speech in the present.

This chilling effect also violates the rights of the individual Plaintiffs' audience members, including many in Plaintiff States.

For similar reasons, Plaintiffs have standing to assert their procedural APA claim. *See Massachusetts v. E.P.A.*, 549 U.S. 497, 518 (2007) (“When a litigant is vested with a procedural right, that litigant has standing if there is some possibility that the requested relief will prompt the injury-causing party to reconsider the decision that allegedly harmed the litigant.”). Here, there is at least “some possibility” that calling the agencies’ attention to the grave constitutional problems with their censorship activities will prompt them to reconsider this censorship enterprise.

II. The Other Three Equitable Factors Strongly Favor a Preliminary Injunction.

In addition to showing a likelihood of success on the merits, Plaintiffs must show that “a substantial threat of irreparable injury” exists, “that the threatened injury if the injunction is denied outweighs any harm that will result if the injunction is granted,” and “that the grant of an injunction will not disserve the public interest.” *Ladd*, 777 F.3d at 288.

Where, as here, “a plaintiff has shown a likely violation of his or her First Amendment rights, the other requirements for obtaining a preliminary injunction are generally deemed to have been satisfied.” *Minn. Citizens Concerned for Life, Inc. v. Swanson*, 692 F.3d 864, 870 (8th Cir. 2012) (en banc). “The loss of First Amendment freedoms, for even minimal periods of time, unquestionably constitutes irreparable injury.” *Elrod v. Burns*, 427 U.S. 347, 373 (1976). Defendants have no cognizable interest in maintaining an unconstitutional program of *de facto* prior restraint, *see BST Holdings, L.L.C. v. Occupational Safety & Health Admin., U.S. Dep’t of Lab.*, 17 F.4th 604, 618 (5th Cir. 2021) (“Any interest [an agency] may claim in enforcing an unlawful (and likely unconstitutional) [regulation] is illegitimate.”); whereas Plaintiffs have an overriding interest in protecting the First Amendment freedoms of individual Plaintiffs, the

millions of similarly situated speakers and listeners, and the millions of citizens Plaintiff States represent as *parentes patriae*, see *Pittsburgh Press Co. v. Pittsburgh Comm'n on Hum. Rels.*, 413 U.S. 376, 381 (1973) (“[T]he freedoms of speech and of the press rank among our most cherished liberties.”). “Injunctions protecting First Amendment freedoms are always in the public interest.” *Texans for Free Enter. v. Tex. Ethics Comm’n*, 732 F.3d 535, 539 (5th Cir. 2013).

III. The Court Should Grant Classwide Injunctive Relief Under Rule 23(b)(2).

To make preliminary injunctive relief as fully effective as possible, the Court should grant classwide preliminary injunctive relief under Rule 23(b)(2). To that end, Plaintiffs will shortly file a motion for leave to amend the Complaint to include class allegations and a motion for certification of an injunctive class under Rule 23(b)(2) at the conclusion of expedited preliminary-injunction-related discovery. The Court should grant class certification and grant classwide preliminary injunctive relief. Rule 23(b)(2) was designed precisely for cases like this, where a plaintiff alleges large-scale civil-rights violations targeting entire classes of people. See, e.g., *DeHoyos v. Allstate Corp.*, 240 F.R.D. 269, 284 (W.D. Tex. 2007) (“Rule 23(b)(2) was promulgated essentially as a tool for facilitating civil rights class actions.” (cleaned up)). Because Defendants are acting “on grounds that apply generally to the class” by targeting everyone who expresses the views they disfavor, “injunctive relief or corresponding declaratory relief is appropriate respecting the class as a whole.” Fed. R. Civ. P. 23(b)(2).

Classwide injunctive relief is particularly appropriate here, because a classwide injunction is required to protect Plaintiff States’ quasi-sovereign interest in the ability of their citizens to engage in free exchange of ideas on social media. This is an interest that each Plaintiff “State has in the well-being of its populace” as a whole, not merely an interest in the well-being of handful of individual residents. *Alfred L. Snapp & Son v. Puerto Rico ex rel. Barez*, 458 U.S. 592, 602–

07 (1982). Each Plaintiff State has millions of citizens who use social media and have a right to hear and listen to other users, both inside and outside of Plaintiff States. Only an injunction that protects the entire forum of social media from Defendants' censorship is sufficient to redress the injuries to Plaintiff States' populace as a whole.

Furthermore, classwide injunctive relief is necessary to provide adequate redress for the injuries that the individual Plaintiffs and the Plaintiff States are suffering directly. One of the ways Defendants are injuring Plaintiff States directly is by compromising their "ability to follow, measure, and understand the nature and degree of" their citizens' views and concerns on matters of public importance. Doc. 10-6, ¶ 6; Doc. 10-13, ¶ 6. Classwide relief that protects the rights of social-media users as a whole is necessary to remediate this injury. Likewise, the individual Plaintiffs closely follow the accounts of other social-media users, many of whom are experiencing or are at risk of experiencing censorship by social-media companies with the encouragement or joint participation of Defendants. An injunction that protects only their rights as speakers, but not the rights of other speakers, would not remediate the injuries they experience daily as *audience* members participating in ongoing dialog on social media.

CONCLUSION

For the reasons stated, the Court should enter the preliminary injunction requested in Plaintiffs' Motion for Preliminary Injunction, Doc. 10, at 1, with the following modifications in light of the evidence. The Court should enter a preliminary injunction preventing Defendants, and their agents, officers, employees, contractors and all those acting in concert with them, from taking any steps to demand, urge, encourage, pressure, coerce, deceive, collude with, or otherwise induce any social-media company or platform for online speech, or any employee, officer, or agent of any such company or platform, to censor, suppress, remove, de-platform, suspend, shadow-ban, de-

boost, deamplify, issue strikes against, restrict access to, demonetize, or take any similar adverse action against any speaker, content, or viewpoint expressed on social media. The Court should also preliminarily enjoin Defendants from acting in concert with any others, including but not limited to persons and entities associated with the Center for Internet Security, the Election Integrity Partnership, and the Virality Project, to engage in the aforementioned conduct, and from acting in concert with any such others who are engaged in any of the aforementioned conduct.

The injunction should extend to the White House Defendants (White House Press Secretary, Rob Flaherty, Andrew Slavitt, Clarke Humphrey, Courtney Rowe, Benjamin Wakana, Gina McCarthy, and their official successors and those acting in concert with them); the Surgeon General Defendants (Dr. Vivek H. Murthy, HHS, Eric Waldo, and their official successors and those acting in concert with them); the CDC Defendants (Centers for Disease Control, HHS, Carol Crawford, Kate Galatas, Jay Dempsey, and their official successors and those acting in concert with them); the Census Defendants (U.S. Census Bureau, Jennifer Shopkorn, Zachary Henry Schwartz, and their official successors and those acting in concert with them); the NIAID Defendants (NIAID, HHS, Dr. Anthony Fauci, and his official successor and those acting in concert with them); the FBI Defendants (FBI, DOJ, Laura Dehmlow, Elvis Chan, and their official successors and those acting in concert with them); the CISA Defendants (Cybersecurity and Infrastructure Security Agency, DHS, Director Jen Easterly, Brian Scully, Matthew Masterson, Lauren Protentis, Geoffrey Hale, Allison Snell, Kim Wyman, and their official successors and those acting in concert with them); and the GEC Defendants (State Department, Leah Bray, Daniel Kimmage, Samaruddin K. Stewart, Alexis Frisbie, and their official successors and those acting in concert with them).

Defendants.

Case No. 3:22-cv-01213

**PLAINTIFFS' PROPOSED FINDINGS OF FACT IN SUPPORT
OF THEIR MOTION FOR PRELIMINARY INJUNCTION**

PLAINTIFFS' PROPOSED FINDINGS OF FACT

Plaintiffs respectfully submit the following Proposed Findings of Fact as Exhibit 1 to their supplemental brief in support of a preliminary injunction. Plaintiffs incorporate by reference the evidence, documents, and exhibits previously filed in this case; where cited herein, they are cited by docket number (e.g. “Doc. 174-1, at 31” is page 31 of ECF No. 174-1). The deposition transcripts and exhibits to depositions are filed separately; they are cited herein as “[Witness Last Name] Dep. Page:Line,” e.g., “Fauci Dep. 1:3-5” is lines 3-5 of page 1 of Dr. Fauci’s deposition, and “Scully Dep. 10:22-11:5” is page 10, line 22 through page 11, line 5 of Brian Scully’s deposition. Plaintiffs are also filing the video recordings of the depositions with the Court so that the Court may view the testimony of the Government’s witnesses and assess the witnesses’ credibility for itself. The Declaration of Jasimiel Jones, submitting supplemental exhibits in addition to the deposition and transcript and attached as Exhibit 2, is cited herein as “Jones Decl. Ex. __, at __” e.g., pages 1-3 of Exhibit A to the Jones Declaration is “Jones Decl. Ex. A, at 1-3.” Plaintiffs’ previously filed exhibits attached to the Declaration of Tammy Glenn, Doc. 10-1, are cited as “Glenn Decl. Ex. __, at __; Doc. 10-1, at __.” In addition, these Findings regularly refer to the company formerly known as Facebook, now known as Meta, which owns Facebook, Instagram, WhatsApp, and other platforms, as “Facebook,” consistent with common usage in documents.

I. The Campaign Of Public Threats Against Social-Media Platforms To Pressure Them To Censor More Speech on Social Media.

1. Federal officials, including Defendants, have made a long series of public statements since at least 2018 demanding that social-media platforms increase their censorship of speech and speakers disfavored by these officials, and threatening adverse consequences – such as repeal or

reform of Section 230 immunity under the Communications Decency Act, antitrust scrutiny or enforcement, increased regulation, and other measures – if the platforms do not increase censorship. The private communications between government officials and social-media platforms addressing disinformation, misinformation, and censorship set forth herein were made against the backdrop of these public threats.

2. The immunity provided by Section 230 of the Communications Decency Act is extremely valuable for social-media platforms, so threatening to amend or repeal that immunity is highly motivating to them. One commentator has aptly described Section 230 immunity as “a hidden subsidy worth billions of dollars,” stating: “Digital platforms enjoy a hidden subsidy worth billions of dollars by being exempted from any liability for most of the speech on their platforms (Section 230).” Glenn Decl. Ex. 11, Doc. 10-1 at 140. Another commentator has observed, “imperiling Section 230 is a fearsome cudgel against ever untouchable companies.” Glenn Decl. Ex. 13, Doc. 10-1 at 206.

3. The threat of antitrust scrutiny or enforcement is also a major motivator to social-media platforms. For example, Facebook CEO Mark Zuckerberg has stated that the threat of antitrust enforcement is “an ‘existential’ threat” to his platform. Glenn Decl. Ex. 12, Doc. 10-1 at 202.

A. Threats From Federal Elected Officials Pressuring Platforms to Censor Speech.

4. Then-Speaker of the House Nancy Pelosi stated on April 12, 2019: “I do think that for the privilege of 230, there has to be a bigger sense of responsibility on it. And it is not out of the question that that could be removed.” Glenn Decl. Ex. 13, Doc. 10-1, at 205 (“When asked about Section 230, Pelosi referred to the law as a ‘gift’ to tech companies that have leaned heavily on the law to grow their business.... ‘It is a gift to them and I don’t think that they are treating it with the respect that they should, and so I think that that could be a question mark and in jeopardy... I

do think that for the privilege of 230, there has to be a bigger sense of responsibility on it. And it is not out of the question that that could be removed.”).

5. Senator Richard Blumenthal stated on Nov. 17, 2020: “I have urged, in fact, a breakup of tech giants. Because they’ve misused their bigness and power. ... And indeed Section 230 reform, meaningful reform, including even possible repeal in large part because their immunity is way too broad and victims of their harms deserve a day in court.” Glenn Decl. Ex. 16, at 1; Doc. 10-1, at 225.

6. Senator Mazie Hirono tweeted on Feb. 5, 2021: “Sec 230 was supposed to incentivize internet platforms to police harmful content by users. Instead, the law acts as a shield allowing them to turn a blind eye. The SAFE TECH ACT brings 230 into the modern age and makes platforms accountable for the harm they cause.” Glenn Decl. Ex. 55, at 1; Doc. 10-1, at 723.

7. Defendants’ political allies have repeatedly used congressional hearings as forums to advance these threats of adverse legislation if social-media platforms do not increase censorship of speakers, speech, content, and viewpoints they disfavor. They have repeatedly used such hearings to berate social-media firm leaders, such as Mark Zuckerberg of Facebook, Jack Dorsey of Twitter, and Sundar Pichai of Google and YouTube, and to make threats of adverse legal consequences if censorship is not increased. Such hearings include, but are not limited to, an antitrust hearing before the House Judiciary Committee on July 29, 2020; a Senate Judiciary Committee hearing on November 17, 2020; and a House Energy and Commerce Hearing on March 25, 2021.

8. The March 25, 2021 Joint Hearing of the Communications and Technology Subcommittee with the Subcommittee on Consumer Protection and Commerce, the Joint Statement of Democratic Committee Chairs stated: “This hearing will continue the Committee’s work of holding online

platforms accountable for the growing rise of misinformation and disinformation. ... For far too long, big tech has failed to acknowledge the role they've played in fomenting and elevating blatantly false information to its online audiences. Industry self-regulation has failed. We must begin the work of changing incentives driving social media companies to allow and even promote misinformation and disinformation." Glenn Decl. Ex. 17, at 1-2; Doc. 10-1, at 228-29.

9. At the same hearing, entitled "Disinformation Nation: Social Media's Role in Promoting Extremism and Misinformation," Representative Schakowsky stated: "[S]elf-regulation has come to the end of its road.... [Congress] is preparing to move forward with regulation and legislation. The regulation we seek ... must hold platforms accountable when they are used to ... spread misinformation.... All three of the companies that are here today run platforms that are hotbeds of misinformation and disinformation." Jones Decl., Ex. A, at 1, 5. She also stated: "Self-regulation has not worked. They must be held accountable for allowing misinformation and disinformation to spread." *Id.* at 7.

10. At the same hearing, Representative Doyle stated: "despite repeated promises to tackle this crisis, Facebook, Google, and Twitter instead routinely make minor changes in response to the public relations crisis of the day. ... It is now painfully clear that neither the market nor public pressure will force these social media companies to take the aggressive action they need to take to eliminate disinformation and extremism from their platforms. And therefore, it is time for Congress and this committee to legislate and realign these companies' incentives. ... I question whether existing liability protections [*i.e.*, Section 230] should apply ... That is why you are here today, Mr. Zuckerberg, Mr. Pichai, and Mr. Dorsey.... Your business model itself has become the problem." *Id.* at 10-11.

11. At the same hearing, Representative Rush accused the platforms of allowing “[m]isinformation, outlandish conspiracy theories, and incendiary content” to spread, and stated to the three CEOs of Google, Facebook, and Twitter: “There is only one comparison that remotely approaches the avarice and moral discrepancy of your companies, and that is the slavetocracy burden of our Nation’s shameful and inhumane and most difficult dark days in the past.” *Id.* at 13. He also stated to Jack Dorsey, “I can’t wait until we come up with legislation that will deal with you and your cohorts in a very, very effective way.” *Id.* at 14.

12. At the same hearing, Representative Upton stated: “we are going to see some changes in Section 230.” *Id.* at 15.

13. At the same hearing, Representative Eshoo demanded of Jack Dorsey, “why haven’t you banned the 12 accounts that are spewing its deadly COVID misinformation?” *Id.* at 17.

14. At a hearing of the Antitrust subcommittee of the House Judiciary Committee on July 29, 2020, Representative Cicilline said to Mark Zuckerberg: “Mr. Zuckerberg. When a television station runs a false political advertisement, they’re held liable for that. Why should Facebook or any other platform be different? ... It’s hard to understand why Facebook shouldn’t be responsible for those business decisions. ... Facebook gets away with it because you’re the only game in town. There’s no competition forcing you to police your own platform. Allowing this misinformation to spread can lead to violence. And frankly, I believe it strikes at the very heart of American democracy. ... American democracy has always been at war against monopoly power. ... These companies, as exist today, have monopoly power. Some need to be broken up, all need to be properly regulated and held accountable. ... The names have changed, but the story is the same. Today, the men are named Zuckerberg, Pichai, Cook, and Bezos.” Jones Decl., Ex. B, at 9-11.

15. On November 17, 2020, at a hearing of the Senate Judiciary Committee, Senator Blumenthal stated: “Now, Mr. Zuckerberg and Mr. Dorsey, you have built terrifying tools of persuasion and manipulation with power far exceeding the robber barons of the last Gilded Age. You have profited hugely by ... promoting hate speech and voter suppression. ... The destructive incendiary misinformation is still a scourge on both your platforms and on others. ... [W]hat appears on your platform ... is voter suppression and incendiary malicious misinformation. ... [A] series of hearings on big tech is long overdue on antitrust issues ... and Section 230. I have urged, in fact, a breakup of the tech giants because they’ve misused their bigness and power. Breaking off, for example, WhatsApp and Instagram [both Meta platforms].... And indeed Section 230 reform, meaningful reform, including even possible repeal in large part because their immunity is way too broad.... [F]oreign disinformation campaigns intended to interfere in our democracy.... What we’ve seen here are fighting words and hate speech that certainly deserve no free expression protection. ... Change is going to come, no question. Change is on the way and I intend to bring aggressive and targeted reform to Section 230.” Jones Decl., Ex. C, at 2-3. Soon thereafter, he demanded that Mark Zuckerberg (who was testifying before the committee) “commit to ... robust content modification playbook in this coming election, including fact-checking, labelling, reducing the spread of misinformation” to “tak[e] action against dangerous disinformation” and “malign tactics.” *Id.* at 4; *see also, e.g., id.* at 9 (Senator Coons demanding that Jack Dorsey explain why “you don’t have a standalone climate change misinformation policy”)

16. On March 11, 2022, Representative Ro Khanna, the Chairman of the House Oversight and Reform Committee who is leading “an investigation of oil industry ‘misinformation’ and held two days of hearings on the oil industry, tweeted: “Facebook is preventing us from taking action on climate change by allowing climate misinformation to spread. Congress must step up and hold

them accountable.” Jones Decl., Ex. D. He also tweeted: “Misinformation being spread on social media is undermining our efforts to tackle climate change. As chair of the House Oversight Environment Subcommittee, I will be holding a hearing to hold social media companies accountable.” *Id.*

17. On April 20, 2022, twenty-two Democratic members of Congress sent a letter to Mark Zuckerberg of Facebook (n/k/a “Meta Platforms, Inc.”), demanding that Facebook increase censorship of “Spanish-language disinformation across its platforms” and threatening Congressional action if Facebook did not do so. The letter claimed that “disinformation” was a threat to democracy, and it made explicit threats of adverse legislative action if Facebook/Meta did not increase censorship: “The spread of these narratives demonstrate that Meta does not see the problem of Spanish-language disinformation in the United States as a critical priority for the health of our democracy. The lack of Meta’s action to swiftly address Spanish-language misinformation globally demonstrates the need for Congress to act to ensure Spanish-speaking communities have fair access to trustworthy information.” Glenn Decl. Ex. 18; Doc. 10-1, at 244-46.

18. Comments from two Members of the House of Representatives summarize this campaign of pressure and threats: “In April 2019, Louisiana Rep. Cedric Richmond warned Facebook and Google that they had ‘better’ restrict what he and his colleagues saw as harmful content or face regulation: ‘We’re going to make it swift, we’re going to make it strong, and we’re going to hold them very accountable.’ New York Rep. Jerrold Nadler added: ‘Let’s see what happens by just pressuring them.’” Glenn Decl. Ex. 14, at 2-3; Doc. 10-1, at 218-19.

B. Public Threats from President Biden and His Aides Pressuring Platforms to Censor.

19. Then-candidate and now-President Biden has led this charge. He has tripled down on these threats of adverse official action from his colleagues and allies in senior federal-government positions. His threats of adverse government action have been among the most vociferous, and among the most clearly linked to calls for more aggressive censorship of disfavored speakers and speech by social-media companies.

20. For example, on January 17, 2020, then-candidate Biden stated, in an interview with the New York Times editorial board, that Section 230 of the CDA should be “revoked” because social-media companies like Facebook did not do enough to censor supposedly false information in the form of political ads criticizing him *i.e.*, core political speech. He stated: “The idea that it’s a tech company is that Section 230 should be revoked, immediately should be revoked, number one. For Zuckerberg and other platforms.” He also stated, “And it should be revoked. It should be revoked because it is not merely an internet company. It is propagating falsehoods they know to be false.... There is no editorial impact at all on Facebook. None. None whatsoever. It’s irresponsible. It’s totally irresponsible.” Glenn Decl. Ex. 19, at 27; Doc. 10-1, at 275.

21. Candidate Biden also threatened that Facebook CEO Mark Zuckerberg should be subject to civil liability and even *criminal prosecution* for not censoring such core political speech: “He should be submitted to civil liability and his company to civil liability.... Whether he engaged in something and amounted to collusion that in fact caused harm that would in fact be equal to a criminal offense, that’s a different issue. That’s possible. That’s possible it could happen.” *Id.* In other words, Biden’s message—not long before he became President of the United States—was that if Facebook did not censor political ads against him, Zuckerberg should go to prison. These two threats echoed the same threats made by numerous political allies of the President since 2019, cited above.

22. During the presidential campaign, now-Vice President Harris made similar threats against social-media firms to pressure them to engage in more aggressive censorship of speakers, content, and viewpoints she disfavors. For example, in addition to the statements cited above, she stated in 2019: “We will hold social media platforms responsible for the hate infiltrating their platforms, because they have a responsibility to help fight against this threat to our democracy. And if you profit off of hate—if you act as a megaphone for misinformation or cyberwarfare, if you don’t police your platforms—we are going to hold you accountable as a community.” Glenn Decl. Ex. 20, at 1; Doc. 10-1, at 284.

23. In or around June 2020, the Biden campaign published an open letter and online petition (ironically, on Facebook) calling for Facebook to engage in more aggressive censorship of core political speech and viewpoints that then-Candidate Biden disfavored. The open letter complained that Facebook “continues to allow Donald Trump to say anything — and to pay to ensure that his wild claims reach millions of voters. Super PACs and other dark money groups are following his example. Trump and his allies have used Facebook to spread fear and misleading information about voting.... We call for Facebook to proactively stem the tide of false information by no longer amplifying untrustworthy content and promptly fact-checking election-related material that goes viral. We call for Facebook to stop allowing politicians to hide behind paid misinformation in the hope that the truth will catch up only after Election Day. There should be a two-week pre-election period during which **all** political advertisements must be fact-checked before they are permitted to run on Facebook. ... Anything less will render Facebook a tool of misinformation that corrodes our democracy.” Glenn Decl. Ex. 23, at 1; Doc. 10-1, at 299.

24. The online petition demanded that Facebook “[p]romote real news, not fake news,” “[q]uickly remove viral misinformation,” and “[e]nforce voter suppression rules against

everyone—even the President [Trump].” Glenn Decl. Ex. 24, at 2; Doc. 10-1, at 304. The petition complained that Facebook “continues to amplify misinformation and lets candidates pay to target and confuse voters with lies.” *Id.* at 304. It demanded that Facebook “promote authoritative and trustworthy sources of election information, rather than rants of bad actors and conspiracy theorists,” “promptly remove false, viral information,” and “prevent political candidates and PACs from using paid advertising to spread lies and misinformation – especially within two weeks of election day.” *Id.* at 305.

25. On September 28, 2020, the Biden-Harris campaign sent a letter to Facebook accusing it of propagating a “storm of disinformation” by failing to censor the Trump campaign’s political speech, including social-media political ads. Glenn Decl. Ex. 25, at 3; Doc. 10-1, at 312. The letter accused Facebook of allowing “hyper-partisan” and “fantastical” speech to reach millions of people, and it demanded “more aggressive” censorship of Trump. *Id.*

26. On December 2, 2020—during the presidential transition—Biden’s former chief of staff and top technical advisor, Bruce Reed, publicly stated that “it’s long past time to hold the social media companies accountable for what’s published on their platforms.” Glenn Decl. Ex. 26, at 1; Doc. 10-1, at 314-15. This comment specifically referred to the amendment or repeal of Section 230 of the Communications Decency Act. *See id.* He also wrote: “Washington would be better off throwing out Section 230 and starting over.” *Id.*

27. On July 16, 2021, President Biden stated that social-media companies are “killing people” by not censoring enough misinformation. Waldo Ex. 14, at 1.

28. On January 3, 2022, an audio clip of President Biden played on Alyssa Milano’s podcast stated: “The unvaccinated are responsible for their own choices, but those choices had been shulled [sic] by dangerous misinformation on cable TV and social media. You know, these companies ...

are making money by ped[dling] lies and allowing misinformation that can kill their own customers and their own supporters. It's wrong. It's immoral. I call on the purveyors of these lies and misinformation to stop it. Stop it now.” Waldo Ex. 39, at 5 (Audio Tr. 4).

29. In September of 2022, the White House convened the “United We Stand” summit at which the President put social media companies on notice that Section 230 protections were at risk. “Tech platforms currently have special legal protections under Section 230 of the Communications Decency Act that broadly shield them from liability. This immunity extends beyond what the First Amendment requires and what newspapers and other media receive. It also effectively permits hate-fueled content mobilizing users to violence to be amplified on large tech platforms. President Biden has long urged fundamental reforms to Section 230, and ...he reiterates his call for Congress to fundamentally reform Section 230.” Jones Decl., Ex. E, at 9.

30. President Biden also stated in the same document: “Americans deserve to know how the algorithms that drive large tech platforms may amplify divisions and contribute to hate-fueled violence, among other critical harms. Consistent with those same principles for accountability, President Biden supports *requiring* platform transparency sufficient to allow the public and researchers to understand how and why such decisions are made, their potential effects on users, and the very real dangers these decisions may pose.” *Id.* (emphasis added).

II. The White House’s Public and Private Pressure Campaign on Platforms.

31. Many White House officials are involved in communicating with social-media platforms about misinformation, disinformation, and censorship. In response to a third-party subpoena, Facebook/Meta identified at least the following White House officials as engaged in such communications: Special Assistant to the President Laura Rosenberger, White House Partnerships Manager Aisha Shah, White House Counsel Dana Remus, and White House officials

Andy Slavitt, Rob Flaherty, and Clarke Humphrey. Doc. 84, ¶ 379. Defendants' discovery reveals many others. *See infra*.

32. In response to a third-party subpoena, YouTube identified White House officials Benjamin Wakana and Rob Flaherty as engaged in such communications, and Defendants' discovery reveals others. Doc. 84, ¶ 380. Defendants' discovery reveals others. *See infra*.

33. In response to a third-party subpoena, Twitter has disclosed the following White House officials as engaged in such communications: Deputy Assistant to the President and Director of Digital Strategy Rob Flaherty, White House Senior Advisor Andrew Slavitt, NSC staffer Katy E. Colas, Deputy Assistant to the President Joshua Geltzer, White House Digital Director Clarke Humphrey, Deputy Director of the Office of Digital Strategy Tericka Lambert, Press Secretary for the First Lady Michael LaRosa, NSC Director of Counterterrorism John Picarelli, Chief of Staff for the Office of Digital Strategy Hoor Qureshi, Director of Strategic Communications and Engagement Courtney Rowe, White House Associate Counsel Michael Posada, Associate Director for Communications Marissa Sanchez-Velasco, Deputy Director of Digital Strategy Christian Tom, and Strategic Director of Digital Communications Benjamin Wakana. Jones Decl., Ex. F, at 1. Defendants' discovery has revealed others. *See infra*.

A. Pressure in Private from Rob Flaherty, Andy Slavitt, and White House Officials.

34. The Biden White House's demands for censorship began almost immediately upon taking office. On January 23, 2021, three days after Inauguration Day, at 1:04 a.m., Clarke Humphrey of the White House emailed Twitter, copying Rob Flaherty, with the subject line: "Flagging Hank Aaron misinfo." Doc. 174-1, at 1. The email stated: "Hey folks – Wanted to flag the below tweet and am wondering if we can get moving on the process for having it removed ASAP." *Id.* Humphrey then linked to a Tweet by anti-vaccine activist Robert F. Kennedy Jr., who

is also a principal target of the Virality Project and a member of the so-called “Disinformation Dozen.” *Id.* Humphrey added: “And then if we can keep an eye out for tweets that fall in this same ~genre that would be great.” *Id.*

35. “Flagging Hank Aaron misinfo” refers to the claim by anti-vaccine speakers that COVID-19 vaccines may have contributed to baseball legend Hank Aaron’s death. *See, e.g.*, <https://www.usatoday.com/story/news/factcheck/2021/01/26/fact-check-hank-aaron-death-unlikely-result-covid-19-vaccine/6699577002/>.

36. Twitter responded to Humphrey within 4 minutes, at 1:08 a.m. on January 23, 2021, stating: “Thanks. We recently escalated this.” Doc. 174-1, at 2.

37. The White House’s demands for censorship continued relentlessly, and their tone was arrogant, demanding, and peremptory. On Saturday night, February 6, 2021, at 9:45 p.m., Rob Flaherty emailed Twitter to demand the immediate removal of a parody or impostor account linked to Finnegan Biden, Hunter Biden’s adult daughter. Doc. 174-1, at 4. He stated: “Please remove this account immediately.” *Id.* He also stated: “I have tried using your form three times and it won’t work—it is also ridiculous that I need to upload my id to a form [to] prove that I am an authorized representative of Finnegan Biden.” *Id.*

38. Two minutes later, at 9:47 p.m., Twitter responded, “Thanks for sending this over. We’ll escalate for further review from here.” *Id.* Flaherty shot back, the same minute, “Cannot stress the degree to which this needs to be resolved immediately.” *Id.* Forty-five minutes later, at 10:32 p.m., Twitter responded, “Update for you – account is now suspended.” *Id.* at 3-4.

39. The next day, Sunday, Feb. 7, 2021, Twitter emailed Flaherty and described steps he could take to “streamline the process” for the White House’s demands for Twitter censorship. *Id.* at 3. Twitter offered to enroll White House officials in Twitter’s Partner Support Portal for

expedited review of flagging content for censorship, recommending that Flaherty “**Designate a list of authorized White House staff for Twitter's Partner Support Portal.**” *Id.* (bold in original). Twitter stated: “We sent over instructions about this on January 28th and also discussed this with Christian [Tom] during our call on February 4th. This is the same system we had in place for the previous two administrations for their support issues, *as well as the transition and campaign teams.* Once you assign and we enroll these authorized reporters, whenever they submit a ticket through the Help Center it will be prioritized automatically, without having to contact our team, and you won't need to add your personal information. To enroll your designated reporters to the Partner Support Portal, we simply need the list of @usernames (up to 10) that are registered with a White House email address.” *Id.* at 3 (italics added; underlines omitted).

40. Twitter noted that it had been recently bombarded with such requests for censorship from the White House: “we would prefer to have a streamlined process strictly with your team as the internal liaison. That is the most efficient and effective way to ensure we are prioritizing requests. In a given day last week for example, we had more than four different people within the White House reaching out for issues.” *Id.* at 3.

41. The next day, Monday, February 8, 2021, Facebook emailed Rob Flaherty, Courtney Rowe, and Clarke Humphrey of the White House to explain how it had recently expanded its COVID-19 censorship policies. Doc. 174-1, at 7-8. Facebook stated: “We wanted to make sure you saw our announcements today about running the largest worldwide campaign to promote authoritative COVID-19 vaccine information and expanding our efforts to remove false claims on Facebook and Instagram about COVID-19, COVID-19 vaccines and vaccines in general during the pandemic.” *Id.*

42. Under the heading “**Combating Vaccine Misinformation**,” Facebook provided a detailed list of expanded censorship policies: “We are expanding our efforts to remove false claims on Facebook and Instagram about COVID-19, COVID-19 vaccines and vaccines in general during the pandemic. Since December [*i.e.* during the Biden transition], we've removed false claims about COVID-19 vaccines that have been debunked by public health experts. ... [W]e are expanding the list of false claims we will remove to include additional debunked claims about the coronavirus and vaccines. ... Groups, Pages and accounts on Facebook and Instagram that repeatedly share these debunked claims may be removed altogether. We are also requiring some admins for groups with admins or members who have violated our COVID-19 policies to temporarily approve all posts within their group. On Instagram, in addition to surfacing authoritative results in Search, in the coming weeks we're making it harder to find accounts in search that discourage people from getting vaccinated....” *Id.* at 7-8 (bold in original).

43. This was not nearly enough for the White House. Within 19 minutes of receiving this email, Flaherty responded, pressing Facebook for more information about how strict the new policies are. *Id.* at 7. Quoting Facebook’s email in italics, he wrote: “This line, of course, stands out: *that repeatedly share these debunked claims may be removed altogether*. Can you share more about your framework here? May, of course, is very different than ‘will.’ Is there a strike policy, ala Youtube? Does the severity of the claims matter?” *Id.* at 7. He also asked for specific data on the application of the censorship policies: “And as far as your removal of claims, do you have data on the actual number of claims - related posts you've removed? Do you have a sense of how many are being flagged versus how many are being removed? Are there actions (downranking, etc) that sit before removal? How are you handling things that are dubious, but not provably false?” *Id.*

44. The next day, February 9, 2021, Flaherty followed up with Facebook with a demand for more information and an accusation (to be repeated) that Facebook’s failure to censor speech on its platforms causes “political violence”: “All, especially given the Journal’s reporting on your internal work on political violence spurred by Facebook groups, I am also curious about the new rules as part of the ‘overhaul.’ I am seeing that you will no longer promote civic and health related groups, but I am wondering if the reforms here extend further? Are there other growth vectors you are controlling for?” *Id.* at 6. Flaherty suggested an oral meeting to discuss: “Happy to put time on the calendar to discuss further.” *Id.*

45. Facebook responded on February 9, 2021, with a detailed answer to each of Flaherty’s questions about the enforcement of its new policies. *Id.* at 5-6. Facebook also noted that “We are happy to discuss these and additional questions as per your recent note.” *Id.* at 5. Among other things, Facebook reported that it would “suspend the entire Page, Group, or account” in case of repeat violations; that it “will begin enforcing this policy immediately,” *id.* at 5; that for vaccine-skeptical content that does not violate Facebook’s policies, Facebook will “reduce its distribution and add strong warning labels with more context, so fewer people see the post,” *id.* at 6; and that Facebook was working to censor content that does not violate its policies in other ways by “prevent[ing] posts discouraging vaccines from going viral on our platforms; address[ing] content that experts believe dissuades people from getting the vaccine, but does not violate our misinformation policies, through the use of information labels; and prevent[ing] recommendations for Groups, Pages, and Instagram accounts that repeatedly push content discouraging vaccines,” *id.* at 6.

46. Facebook advised Flaherty that it was relying on advice of “public health authorities” to determine its censorship policies: “In consultation with leading health

organizations, we continuously expand the list of false claims that we remove about COVID-19 and vaccines during the pandemic. We remove claims *public health authorities* tell us have been debunked or are unsupported by evidence.” *Id.* at 6 (emphasis added).

47. Facebook also promised Flaherty that it would aggressively enforce the new censorship policies: “We will begin enforcing this policy immediately, with a particular focus on Pages, Groups and accounts that violate these rules, and we’ll continue to expand our enforcement over the coming weeks.” *Id.* at 5.

48. Facebook then followed up to “see when you would like to have a meeting arranged to speak to our misinformation team reps about the latest updates. They also have a more detailed misinformation analysis prepared based on the discussions/questions from the previous meetings during the transition time period.” *Id.* at 5.

49. This email makes clear that Flaherty, as part of the Biden transition team, had already engaged in “previous meetings” and “discussions/questions” with Facebook about censorship of COVID-19 misinformation on its platforms during the Presidential transition period from November 2020 to January 2021. *Id.*

50. On February 24, 2021, Facebook emailed Rob Flaherty with the subject “Misinfo Themes,” stating: “Following up on your request for COVID-19 misinfo themes we are seeing. All the below claims violate our updated Covid and vaccine misinformation policies that we announced earlier this month, and we are removing these claims from our platforms,” and she identified “Vaccine Toxicity,” “False Claims About Side Effects of Vaccines,” “Comparing the Covid Vaccine to the Flu Vaccine,” and “Downplaying Severity of COVID-19.” Jones Decl. Ex. G, at 1-2. Flaherty responded by inquiring for details about Facebook’s actual enforcement practices and for a report on misinformation that was not censored: “Can you give us a sense of

volume on these, and some metrics around the scale of removal for each? Can you also give us a sense of misinformation that might be falling outside your removal policies? Goes without saying, just because it's on your list for removal hasn't historically meant that it was removed, so I want to get a sense of the state of play here!" *Id.* at 1. Facebook promised to discuss this at an upcoming oral meeting: "Hope to cover a lot of that on Monday ... Can definitely go into detail on content that doesn't violate like below but could contribute to vaccine hesitancy." *Id.*

51. On March 1, 2021, White House officials Rob Flaherty and Clarke Humphrey, along with Joshua Peck of HHS, participated in a meeting with Twitter about misinformation. Jones Decl., Ex. H, at 1. The same day, after the meeting, Twitter emailed these officials and assured the White House that it would increase censorship of "misleading information" on Twitter: "Thanks again for meeting with us today. As we discussed, we are building on our continued efforts to remove the most harmful COVID-19 misleading information from the service We have also introduced a strike system that determines when further enforcement is necessary. ... As we said, we are committed to working with stakeholders in the public, private and non-profit sectors to address the reliability of covid information online and look forward to continued dialogue about joint efforts." *Id.* at 1.

52. From at least May 28, 2021 to July 10, 2021, a senior Meta executive repeatedly copied Slavitt on his emails to Surgeon General Murthy in which he assured the Surgeon General and the White House that Meta was engaging in censorship of COVID-19 misinformation according to the White House's demands. Doc. 71-4. Among other things, the Meta executive insisted that "We've expanded penalties for individual Facebook accounts that share misinformation." *Id.* at 9.

53. On March 12, 2021, referring to previous oral communications with the White House and HHS, Facebook emailed Flaherty “[f]ollowing up on our commitment to share our survey data on vaccine uptake.” Doc. 174-1, at 9. Facebook provided the White House with a detailed report and summary on the topic, and noted that the information had evidently been requested by or on behalf of “White House / HHS” officials: “Hopefully, this format works for the various teams and audiences within the White House / HHS that may find this data valuable.” *Id.*

54. On March 15, 2021, at 3:20 a.m., Flaherty sent an email to Facebook acknowledging, “[g]ood insights here,” but then immediately pivoted to demand more and different data, linking a recent Washington Post article accusing Facebook of allowing the spread of information about vaccine hesitancy and QAnon, stating: “I’m more interested in the data that was outlined in the Washington Post (<https://www.washingtonpost.com/technology/2021/03/14/facebook-vaccine-hesistancy-qanon>) And what interventions you are testing/their effectiveness.” *Id.* at 9. This would become a standard tactic of the White House – linking to articles critical of Facebook in the press, and then demanding more information or actions based on those articles.

55. The day before, Sunday, March 14, 2021, at 11:13 p.m., Flaherty had emailed a link to the same article to Facebook (“<https://www.washingtonpost.com/technology/2021/03/14/facebook-vaccine-hesistancy-qanon>”), copying White House COVID-19 official Andrew Slavitt, with no more text in the email and the subject line: “You are hiding the ball.” *Id.* at 12.

56. The next morning, Facebook responded by stating, “there is a misunderstanding on what this story is covering with respect to research that’s happening – I will call to clear up. Certainly not hiding the ball.” *Id.* at 11-12.

57. Flaherty responded in accusatory fashion, referring to a series of at least three previous oral conversations in which the White House had demanded more information from Facebook about its censorship policies. *Id.* at 11. Flaherty made clear that the White House was seeking more aggressive action on “borderline” content—*i.e.*, content that *does not clearly violate Facebook’s own censorship policies* but the White House demands action against anyway. Flaherty wrote: “I don’t think this is a misunderstanding ... I’ve been asking you guys pretty directly, over a series of conversations, for a clear accounting of the biggest issues you are seeing on your platform when it comes to vaccine hesitancy, and the degree to which borderline content--as you define it-- is playing a role.” *Id.* at 11. Flaherty also referred to a series of meetings, including one-on-one meetings with Facebook (“1:1”): “I’ve also been asking for what actions you have been taking to mitigate it as part of your ‘lockdown’ - which in our first conversation, was said to be in response to concerns over borderline content, in our 1:1 convo you said was not out of any kind of concern over borderline content, and in our third conversation never even came up.” *Id.*

58. Flaherty followed with a series of accusations that Facebook was deceiving and prevaricating with the White House about its “borderline” (*i.e. not violative*) content: “You said you would commit to us that you’d level with us. I am seeing in the press that you have data on the impact of borderline content, and its overlap with various communities. I have asked for this point blank, and got, instead, an overview of how the algorithm works, with a pivot to a conversation about profile frames, and a 45-minute meeting that seemed to provide you with more insights than it provided us.” *Id.* He accused Facebook of being the “top driver[] of vaccine hesitancy,” demanded action against “borderline” content, and stated that the White House wanted to be directly involved in those efforts: “I am not trying to play ‘gotcha’ with you. We are gravely

concerned that your service is one of the top drivers of vaccine hesitancy- period. I will also be the first to acknowledge that borderline content offers no easy solutions. But we want to know that you're trying, we want to know how we can help, and we want to know that you're not playing a shell game with us when we ask you what is going on. This would all be a lot easier if you would just be straight with us.” *Id.*

59. Facebook responded on March 15, respectfully disputing the Washington Post’s reporting, but then saying to Flaherty: “We obviously have work to do to gain your trust. You mention that you are not trying to play ‘gotcha’ with us—I appreciate the approach you are taking to continued discussions. We are also working to get you useful information that's on the level. That's my job and I take it seriously--I'll continue to do it to the best of my ability, and I'll expect you to hold me accountable.” *Id.* at 10-11.

60. The same day, March 15, 2021, Andrew Slavitt (who was copied on these exchanges between Facebook and Flaherty) weighed in, once again accusing Facebook of dishonesty in a series of oral meetings: “It would [be] nice to establish trust. I do feel like relative to others, interactions with Facebook are not straightforward and the problems are worse – like you are trying to meet a minimum hurdle instead of trying to solve the problem and we have to ask you precise questions and even then we get highly scrubbed party line answers. We have urgency and don't sense it from you all. 100% of the questions I asked have never been answered and weeks have gone by.” *Id.* at 10.

61. Slavitt then made an ominous statement threatening unspecified Executive action against Facebook in retaliation for Facebook’s perceived lack of cooperation with the White House’s demands on censorship of “borderline” (*non-violative*) content: “*Internally we have been considering our options on what to do about it.*” *Id.* at 10 (emphasis added).

62. On March 16, 2021, Facebook responded to Slavitt, again disputing the Washington Post’s reporting and respectfully explaining its position, but also promising to share information about vaccine hesitancy in “real time”: “We are absolutely invested in getting you the specific information needed to successfully manage the vaccine roll out.” *Id.* Facebook promised to increase information-sharing and proposed a detailed oral meeting on the topic: “But I understand your point regarding how we communicate, and that we need to share information with you in a way that prioritizes what we are seeing in as close to real time as possible. I’d like to set up a conversation with our research leads to walk your team through ongoing research we are currently conducting and our approach; and then we can prioritize sharing results as quickly as possible.” *Id.* Facebook also offered to speak to Slavitt by phone at any time. *Id.*

63. On March 19, 2021, Facebook had an oral meeting with White House officials, including Flaherty and Slavitt. Doc. 174-1, at 15. On Sunday, Facebook sent a follow-up summary of the meeting to Andrew Slavitt (“Thanks for taking the time to connect on Friday”), which noted that the White House (1) demanded a “Consistent Product Team [Point of Contact]” at Facebook, (2) demanded “Sharing Additional Data” from Facebook, (3) had asked about “Levers for Tackling Vaccine Hesitancy Content,” and (4) asked about censorship policies for the Meta platform WhatsApp. *Id.*

64. In the follow-up email, Facebook noted that, in direct response to White House demands, it was censoring, removing, and reducing the spread of content that did not violate its policies: “You also asked us about our levers for reducing virality of vaccine hesitancy content. In addition to policies previously discussed, these include *the additional changes that were approved late last week* and that we’ll be implementing over the coming weeks. As you know, in addition to removing vaccine misinformation, we have been focused on reducing the virality of content

discouraging vaccines *that does not contain actionable misinformation*. This is *often-true content* ... but it can be framed as sensation, alarmist, or shocking. *We ll remove these Groups, Pages, and Accounts when they are disproportionately promoting this sensationalized content.*” *Id.* at 15 (emphases added).

65. Facebook also provided the White House with a detailed report on its censorship policies on WhatsApp: “WhatsApp's approach to misinformation focuses on limiting the virality of messages, preventing coordinated abuse, and empowering users to seek out reliable sources of information both in and out of the product. Our product includes features to limit the spread of viral content, such as forward limits and labels, privacy settings to help users decide who can add them to groups, and simple ways for users to block accounts and make reports to WhatsApp if they encounter problematic messages. Additional limitations we placed in April 2020 on forwarding of messages that have been forwarded many times reduced these kinds of messages by over 70%.” *Id.*

66. On March 22, 2021, Flaherty responded to Facebook, demanding much more detailed information and action about “sensationalized” content on its platforms. *Id.* at 14. Flaherty noted that White House officials were demanding a plan from Facebook to censor non-violative content, *i.e.*, “looking out for your game plan on tackling vaccine hesitancy spread on your platform.” *Id.*

67. In this email, Flaherty badgered Facebook with a series of detailed requests for information about this issue of censoring vaccine-skeptical content that does not violate Facebook’s content-moderation policies, such as truthful but “sensational” content: “Again, as I've said, what we are looking for is the universe and scale of the problem. You noted that there is a level below sensational stories that get down-ranked, which took the form of general skepticism.

... [T]he problem does not sit in ‘microchips’-land, and ... it seems plausible that the things that drive the most actual hesitancy sit in ‘sensational’ and ‘skeptical.’” *Id.* Flaherty demanded more information and greater censorship of such non-violative “sensational” and “skeptical” content: “If you're down ranking sensational stuff—great—but I want to know how effective you've seen that be from a market research perspective. And then, what interventions are being taken on ‘skepticism?’ ... [W]hat are you trying here, and again, how effective have you seen it be. And *critically*, what amount of content is falling into all of these buckets? Is there wider scale of skepticism than sensationalism? I assume given the Carnegie data and the studies I've seen in the press that you have this. ... As I've said: this is not to play gotcha. It is to get a sense of what you are doing to manage this.” *Id.* (italics in original).

68. Flaherty also badgered Facebook for more information on Meta’s censorship policies on the WhatsApp platform, pushing for greater censorship there: “On whatsapp, which I may seem like I'm playing gotcha, but I guess I'm confused about how you're measuring reduction of harm. If you can't see the message, I'm genuinely curious—how do you know what kinds of messages you've cut down on? Assuming you've got a good mousetrap here, that's the kind of info we're looking for above: what interventions you've taken, and what you've found to work and not work? And how effective are you seeing the good information on Whatapp be? Are you doing cross platform campaign work to try to reduce people's exposure on whatsapp?” *Id.* at 14.

69. Flaherty concluded with an accusation of past dishonesty against Facebook and proposed frequent oral meetings to address the White House’s issues: “You've given us a commitment to honest, transparent conversations about this. We're looking for that, and hoping we can be partners here, even if it hasn't worked so far. I know Andy [Slavitt] is willing to get on

the phone with [a Facebook official] a couple of times per week if its necessary to get all of this.”

Id.

70. Flaherty’s statement that the White House is “hoping we can be partners here, even if it hasn’t worked so far,” reinforced Slavitt’s previous implied threat that the White House would take some unspecified action against Facebook if it did not cooperate with the White House’s demands on censorship of vaccine-hesitant content, especially *non-violative* content, on Facebook’s platforms. *Id.*

71. Facebook then agreed with Flaherty and Slavitt to schedule a meeting that Wednesday at 4:00 pm to discuss these issues. *Id.* at 13.

72. On April 9, 2021, Facebook sent Flaherty an email to respond to a long series of detailed questions from Flaherty about how the Meta platform WhatsApp was censoring COVID-19 misinformation. Doc. 174-1, at 17-21. All Flaherty’s questions were designed to probe and pressure Facebook toward more aggressive censorship. *See id.* Facebook began by “noting some of the key differences between a private messaging app like WhatsApp, and social media like Facebook and Instagram. Approximately 90 percent of the messages sent on WhatsApp are one-to-one, and the majority of group chats include fewer than ten people. WhatsApp does not promote content, and users do not build audiences or discover new people as they would on social media.” *Id.* at 18. Flaherty responded to this: “Very aware. [Smiley face].” In other words, the White House was demanding information about speech on a *private* messaging app used for one-to-one private communication, and demanding greater censorship of speech on that app—and it was “very aware” that it was doing so. *Id.*

73. Facebook noted that “WhatsApp seeks to control the spread of misinformation and inform users through deliberate, content-agnostic product interventions -- things like labeling and

limiting message forwards.” *Id.* at 18. Facebook noted that the message-forwarding limits are “intended” to censor COVID misinformation, and that they actually reduced such speech by 70 percent, and Facebook admitted that these are “somewhat blunt tools” that prevent its users from sending many other forms of speech as well: “The forward limits ... are intended to reduce their spread. As mentioned in my earlier note, when WhatsApp rolled out the limitation for highly forwarded messages to one chat at a time in April 2020, this resulted in a 70% reduction of those messages globally. Of course, not all forwards are misinformation, so these are by nature somewhat blunt tools, but they are important ones -- and ones that many other messaging services don't provide.” *Id.*

74. After presenting Facebook with a series of questions (presented in bold and in red type in the email, *see id.* at 18-20), Flaherty summed up by demanding insight into Facebook’s internal information: “I guess I have the same question here as I do on Facebook on Instagram. Do you guys think you have this under control? You're obviously going to say yes to that, so I guess the real question is, as ever: how are you measuring success? Reduction in forwarding? Measured impact across Facebook properties?” *Id.* at 20.

75. Facebook responded by emphasizing that it was “reducing viral activity on our platform” through message-forward limits and other speech-blocking techniques as well: “On WhatsApp, reduction in forwards is just one of the signals that we use to measure how well we are doing in reducing viral activity on our platform. We also ban accounts that engage in mass marketing or scam behaviors - including those that seek to exploit COVID-19 misinformation. Our efforts in this space are more comprehensive than anything that our peers in private messaging or SMS do, and we are constantly innovating to stay ahead of future challenges.” *Id.* at 20.

76. Facebook also offered to meet with the White House “Monday or anytime next week” to discuss its censorship efforts, to which Flaherty responded, “Hoor should be trying to land a time.” *Id.* at 17.

77. Flaherty responded to Facebook’s long, detailed account of its censorship efforts on WhatsApp by expressing dissatisfaction with the response and demanding ever-more detailed information, stating that he “couldn’t care less” about Facebook’s “product safari”: “Will say I’m really mostly interested in what effects the interventions and products you’ve tested have had on increasing vaccine interest within hesitant communities, and which ones have shown promise. Really couldn’t care less about products unless they’re having measurable impact. And while the product safari has been interesting, at the end of the day, *I care mostly about what actions and changes you re making to ensure sure you re not making our country s vaccine hesitancy problem worse.* I definitely have what I believe to be a non-comprehensive list of products you’re building but I still don’t have a good, empirical answer on how effective you’ve been at reducing the spread of vaccine-skeptical content and misinformation to vaccine fence sitters in the now-folded ‘lockdown.’” *Id.* at 17 (emphasis added).

78. Flaherty then accused Facebook of being responsible for the riot at the Capitol on January 6, 2021, by not censoring enough speech online, and suggested that Facebook would be similarly responsible for COVID-related deaths if it did not engage in more online censorship here: “In the electoral context, you tested and deployed an algorithmic shift that promoted quality news and information about the election. This was reported in the New York Times and also readily apparent to anyone with cursory social listening tools. You only did this, however, after *an election that you helped increase skepticism in, and an insurrection which was plotted, in large part, on*

your platform. And then you turned it back off. I want some assurances, based in data, that you are not doing the same thing again here.” Id. (emphases added).

79. Facebook responded by promising ever-more-detailed information to the White House’s demands: “Understood. I thought we were doing a better job [of] responding to this – and we are working to get the data that will more clearly show the universe of the Covid content that’s highest in distribution with a clear picture of what percentage of that content is vax hesitancy content, and how we are addressing it. I know [a Facebook official] told Andy [Slavitt] that would take a bit of time to nail down and we are working on that universe of data. I will make sure we’re more clearly responding to your questions below.” *Id.* at 17.

80. The meeting that Facebook offered with the White House on Monday, April 12 or thereafter occurred on Wednesday, April 14, because Flaherty emailed Facebook that day stating: “Since we’ve been on the phone...” *Id.* at 22.

81. In this Wednesday, April 14, 2021 email, with the subject line “tucker,” Flaherty noted that the White House was tracking COVID-related content in real time, and he demanded the censorship of currently-trending posts of content from two prominent Fox News hosts, Tucker Carlson and Tomi Lahren: “Since we’ve been on the phone – the top post about vaccines today is tucker Carlson saying they don’t work. Yesterday was Tomi Lehren [*sic*] saying she won’t take one. This is exactly why I want to know what ‘Reduction’ actually looks like – if ‘reduction’ means ‘pumping our most vaccine hesitant audience with tucker Carlson saying it doesn’t work’ then ... I’m not sure it’s reduction!” *Id.* at 22. Facebook responded: “Thanks—I saw the same thing when we hung up. Running this down now.” *Id.* In a separate email chain to Flaherty and Courtney Rowe the same day, Facebook also assured the White House, “running down the question on Tucker and working on getting you report by end of week.” *Id.* at 23.

82. Tucker Carlson has 1.2 million followers on his personal Facebook account and 3.8 million followers on his show's account, Jones Decl., Ex. I, at 1-2, so censoring Carlson's content would affect the free-speech rights of millions of people in a single stroke.

83. In the meantime, Facebook was offering to cooperate closely with the White House to "amplify" its preferred messages. On April 13, 2021, Facebook emailed Andy Slavitt about the temporary halt of the Johnson & Johnson vaccine, stating: "Re the J+J [*i.e.*, Johnson & Johnson] news, we're keen to amplify any messaging you want us to project about what this means for people – it obviously has the risk of exacerbating vaccine hesitancy, so we're keen to get ahead of the knock-on effect. Don't hesitate to tell me – or via your teams – how we can help to provide clarity/reassurance via Facebook." Doc. 174-1, at 31-32. Facebook then forwarded the same offer to Courtney Rowe and Rob Flaherty of the White House digital communications team. *Id.* at 31.

84. Flaherty responded the same day, April 13, with a series of detailed requests about how Facebook could amplify the White House's preferred messages, including: "Some kind of thing that puts the news in context if folks have seen it (like your current 'COVID news' panel) that has 3-4 pieces of info (eg: Adverse events are very rare – 6 cases out of nearly 7 million, the FDA and CDC are reviewing so it health care providers know how to treat any of the rare events, this does not affect pfzier or moderna, which vaccinate via a different mechanism)"; "CDC is working through an FAQ that we'd love to have amplified in whatever way possible – maybe through the COVID info panel"; and "[a] commitment from you guys to make sure that a favorable review reaches as many people as the pause, either through hard product interventions or algorithmic amplification." *Id.* at 30-31. Flaherty also block-quoted a White-House-approved message on the vaccine pause for Facebook to amplify. *Id.* at 31.

85. Flaherty then concluded by demanding that Facebook monitor any “misinformation” relating to the Johnson & Johnson vaccine pause, and asking Facebook to provide a detailed report to the White House within 24 hours of how it was doing so: “More broadly: we share [Facebook’s] concern about knock-on effects and are curious to get a read from your CMU data about what you’re seeing and with whom. *Moreover, I want to make sure you have eyes on what might be spinning off the back end of this that the news about J&J doesn’t spin off misinformation. Would be great to get a hour report-back on what behavior you’re seeing.*” *Id.* at 31 (emphasis added).

86. The same day, April 13, 2021, Facebook responded with a detailed report on misinformation on its platforms about this issue. Doc. 174-1, at 24-30. Facebook noted that there was an oral meeting about misinformation with the White House scheduled the next day: “I’m looking forward to the meeting tomorrow [*i.e.*, Wednesday, April 14] and hoping we can spend some time responding to Rob’s feedback from last week as well as further discussing the J&J news and how we can hopefully partner together.” *Id.* at 24.

87. Facebook also noted that it had recently had a telephone call with Courtney Rowe about how it was censoring misinformation, and had agreed to provide a detailed report on its relevant censorship enforcement policies: “Courtney – as we discussed, we also wanted to send over some examples of content we see on our platform that we remove (misinformation & harm) as well as content we take other actions on, but do not remove (vaccine hesitancy). I have included some examples at the bottom of this email and happy to setup time to talk through this more with you as well, if helpful.” *Id.* at 24. Facebook then provided a six-page report on censorship with explanations and screen shots of sample posts of content that it censors and does not censor. *Id.* at 24-30.

88. First, Facebook responded to Flaherty’s request for government-message-amplification by agreeing to cooperate with the White House on those demands. *Id.* at 24. Regarding Flaherty’s demand that Facebook monitor and report on “misinformation” related to the Johnson & Johnson vaccine pause, Facebook agreed to both monitor and report to the White House: “We will look to get you insights as soon as we have them. We are going to be watching to see how this plays out over the next couple of days. [A Facebook official] is joining [the call] tomorrow and plans to share a couple things we are seeing emerge from the CMU survey and what we are going to be watching over the next few days. Also, we are proactively monitoring and seeing what themes emerge from content on-platform and happy to share out when we have stuff collected.” *Id.* at 24-25.

89. Facebook then provided a detailed report to Courtney Rowe’s request for specific examples of posts that are censored on its platforms. First, as to “VACCINE HESITANCY” content, Facebook explained that this content does not violate Facebook’s content-moderation policies, but Facebook assured the White House that Facebook still censors such non-violative content by suppressing it in news feeds and algorithms. *Id.* at 25. Facebook admitted that such content is often “true” and sometimes involves core political speech or advocacy (*e.g.*, “discussing choice to vaccinate in terms of personal and civil liberties”): “The following examples of content are those that *do not violate our Misinformation and Harm policy*, but may contribute to vaccine hesitancy or present a barrier to vaccination. This includes, for example, content that contains sensational or alarmist vaccine misrepresentation, disparaging others based on the choice to or to not vaccinate, *true but shocking claims or personal anecdotes*, or *discussing the choice to vaccinate in terms of personal and civil liberties* or concerns related to mistrust in institutions or individuals.” *Id.* at 25 (emphases added).

90. Facebook assured the White House that it censors such true, political, non-violative content through “a spectrum of levers” that includes concealing the content from other users, deboosting the content, and preventing sharing through “friction”: “We utilize a spectrum of levers for this kind of content.... Actions may include reducing the posts’ distribution, not suggesting the posts to users, limiting their discoverability in Search, and applying Inform Labels and/or reshare friction to the posts.” *Id.* Facebook then provided the White House with a series of sample posts, all of which content originated from Children’s Health Defense, the anti-vaccine organization headed by Robert F. Kennedy Jr. (who would soon be identified as one of the so-called “Disinformation Dozen”). *Id.* at 25-27.

91. Next, under the heading “Examples of Content Removed for Violating our Misinformation & Harm Policy,” Facebook provided the White House with “examples of posts we have removed for violation of our Misinformation & Harm Policy.” *Id.* at 27. Facebook then provided a list of screen shots of posts it had removed from the platform entirely, again all of which originated from Children’s Health Defense, Robert F. Kennedy Jr.’s group. *Id.* at 28-30.

92. As noted below, Facebook’s explanation that it was removing violative posts by Children’s Health Defense and censoring even its posts that did not violate Facebook’s policies turned out to be not nearly enough to satisfy the White House.

93. Separately from Flaherty’s demands about Tucker Carlson, on April 14, 2021, Andy Slavitt also emailed a high-level Facebook executive—Facebook’s President of Global Affairs, former Deputy Prime Minister of the United Kingdom Nick Clegg—with a sarcastic message expressing the White House’s displeasure both with Facebook’s failure to censor Tucker Carlson and with Facebook’s perceived failure to allow the White House to micromanage its censorship policies: “Number one of Facebook. Sigh. Big reveal call with FB and WH today. No

progress since we spoke. Sigh.” Doc. 174-1, at 35. Clegg promptly responded to Slavitt with an apology and promise to immediately address the censorship of Tucker Carlson: “OK – sorry to hear about call today, will dig in now.” *Id.* The subject line of Slavitt’s email, reproduced in the “Re:” line of later messages, was “Tucker Carlson anti-vax message.” *Id.* at 34.

94. Late evening of the same day, April 14, 2021, at 10:51 p.m., Nick Clegg provided Slavitt with a detailed report about the Tucker Carlson post, explaining that Tucker Carlson’s content did not violate Facebook policies (due to the federal government’s own information about its accuracy) but assuring the White House that Facebook would censor it anyway. *Id.* at 34. Clegg denied that Carlson’s content was the top post on Facebook, but then stated, “Regardless of popularity, the Tucker Carlson video does not qualify for removal under our policies. Following the government’s decision yesterday, we are allowing claims that the Johnson and Johnson vaccine causes blood clots.... That said, the video is being labeled with a pointer to authoritative COVID information, it’s not being recommended to people, and it is being demoted.” *Id.* at 34.

95. Clegg also stated that Facebook was “v[ery] keen” to provide a more detailed report on its censorship practices in response to White House demands: “I’m v keen that we follow up as we’d agreed, and I can assure you the teams here are on it.” *Id.*

96. Brian Rice of Facebook then forwarded the same report on the Tucker Carlson post to Rob Flaherty. *Id.* (“Making sure you receive--”).

97. Less than twenty minutes later, at 11:29 p.m. on April 14, 2021, Flaherty responded to Rice with a sarcastic response badgering Facebook for a more detailed explanation of why it had not removed Tucker Carlson’s content outright, demanding greater censorship, and accusing Facebook of causing an “insurrection” by not censoring enough speech on its platforms: “I guess this is a good example of your rules in practice then – and a chance to dive in on questions as

they're applied. How was this [*i.e.* Tucker Carlson' post] not violative? The second half of the segment is raising conspiracy theories about the government hiding that all vaccines aren't effective. It's not about just J&J. What exactly is the rule for removal vs demoting? Moreover: you say reduced and demoted. What does that mean? There's 40,000 shares on the video. Who is seeing it now? How many? How effective is that? And we've gone a million rounds on this in other contexts so pardon what may seem like *deja vu* – but on what basis is ‘visit the covid-19 information center for vaccine resources’ the best thing to tag to a video that says the vaccine doesn't work?” Doc. 174-1, at 33. Flaherty concluded ominously by reiterating his accusation that Facebook had caused the January 6 riot by not censoring enough speech on its platforms: “Not for nothing but last time we did this dance, it ended in an insurrection.” *Id.* at 34.

98. Six minutes later, at 11:35 p.m. on April 14, Flaherty followed up with another email accusing Facebook of providing incorrect information through CrowdTangle and demanding an explanation: “And sorry – if this was not one of the most popular posts about the vaccine on Facebook today, then what good is crowdangle? [A Facebook official] said that Tomis [*i.e.*, Tomi Lahren's] video was the most popular yesterday based on your data, which reflected what CT [*i.e.*, CrowdTangle] was showing. Tuckers video was top on CT today. What is different about this video, then?” *Id.* at 33.

99. On Friday, April 16, Flaherty then sent an email expressing his displeasure with the timing of Facebook's response and demanding immediate answers, snapping at Rice: “These questions weren't rhetorical.” *Id.* at 33. Facebook apologized and promised an immediate response: “Hey Rob – understood and sorry for the delay. The team has been heads-down since our conversation to produce the report we discussed on Wednesday afternoon. We are aiming to

get you something tonight ahead of the weekend.” *Id.* Facebook then proposed another oral meeting: “schedule a call to discuss. Would that work?” *Id.*

100. On Tuesday, April 21, 2021, Facebook sent an additional response to the same email chain, indicating that there had been a phone call with Flaherty (“thanks for catching up earlier”) and providing another, more detailed report on its censorship of Tucker Carlson in response to each of Flaherty’s queries question-by-question. *Id.* at 36. Facebook again reported that Tucker Carlson’s content had not violated its policies, stating that “we reviewed this content in detail and it does not violate those policies,” but reported that Facebook had been censoring it anyway and would continue to censor it even though no fact-check had reported it false: “The video received 50% demotion for seven days while in the queue to be fact checked, and *will continue to be demoted even though it was not ultimately fact checked.*” *Id.* (emphasis added). These circumstances raise a compelling inference that Facebook continued to demote Tucker Carlson’ content, in violation of its own policies and practices, due to the White House’s pressure.

101. In the same time frame, the White House was exerting similar pressure on other major social-media platforms. It had meetings with YouTube and Twitter about misinformation on April 21, 2021 as well.

102. On April 21, Rob Flaherty, Andy Slavitt, and Kelsey Fitzpatrick of the White House, along with an official at HHS, participated in a meeting with several Twitter officials. Doc. 71-7, at 86. The meeting’s subject was “Twitter Vaccine Misinfo Briefing.” *Id.* The meeting invite noted: “White House Staff will be briefed by Twitter on vaccine misinfo. Twitter to cover trends seen generally around vaccine misinformation, *the tangible effects seen from recent policy changes*, what interventions are currently being implemented *in addition to previous policy*

changes, and ways the White House (and our COVID experts) can *partner* in product work.” *Id.* (emphases added).

103. The next day, April 22, Twitter employees noted in internal communications that the White House officials, during this meeting, had posed “one really tough question about why Alex Berenson hasn’t been kicked off the platform.” Jones Decl., Ex. J, at 2-3. The Twitter employee noted that the White House’s questions were “pointed” and “mercifully we had answers.” *Id.* Another internal Twitter communication noted that the White House “really wanted to know about Alex Berenson. Andy Slavitt suggested they had seen data viz that had showed he was the epicenter of disinfo that radiated outwards to the persuadable public.” *Id.*

104. Later, on July 16, 2021, Twitter suspended Alex Berenson for the first time. *Id.* On August 28, 2021, Twitter permanently deplatformed Berenson. *Id.*

105. On April 21, 2021, Flaherty, Andy Slavitt, Kelsey Fitzpatrick of the White House, and Jessica Scruggs of HHS had a similar meeting with YouTube, to which at least six YouTube officials were invited. Jones Decl., Ex. K, at 1. The calendar invite stated that the purpose of the meeting was: “White House staff to get briefed by YouTube on general trends seen around vaccine misinformation. As well as, the empirical effects of YouTube’s efforts to combat misinfo, what interventions YouTube is currently trying, and ways the White House (and or COVID experts) can partner in product work.” *Id.*

106. Just after midnight on April 22, 2021, Rob Flaherty emailed a list of Google officials about YouTube, copying Andy Slavitt, Clarke Humphrey, and Kelsey Fitzpatrick of the White House. Doc. 174-1, at 39. He began by referring to the oral meeting with Google/YouTube officials on April 21: “Thanks again for the conversation today.” *Id.* Flaherty also referred to an earlier, “first conversation,” indicating that there had been multiple meetings with YouTube. *Id.*

107. Flaherty then noted that the White House had asked YouTube (like Facebook) to monitor and report on the speech on its platforms, stating that the White House expected a report from them: “We’ll look out for the top trends that you’ve seen in terms of misinformation around the vaccine.” *Id.*

108. Flaherty then provided a “recap” of their oral conversation, stating that concern about misinformation on YouTube was “shared at the highest (and I mean highest) levels of the [White House]”: “To recap: ... we remain concerned that Youtube is ‘funneling’ people into hesitance and intensifying people’s hesitancy.... we want to be sure that you have a handle on vaccine hesitancy generally and are working toward making the problem better. *This is a concern that is shared at the highest and I mean highest levels of the WH*, so we’d like to continue a good-faith dialogue about what is going on under the hood here. I’m the on the hook for reporting out.” *Id.* (emphasis added).

109. Citing an article “highlighting the Youtube misinformation that is spreading through the Vietnamese community,” Flaherty stated: “Clearly, more work to be done here. Would love to get some insights from you on how you are tackling this problem across all languages.” *Id.*

110. Flaherty then stated, “A couple of other things it would be good to have from you all,” and provided a five-bullet list of detailed demands for YouTube’s internal data about the spread of misinformation on its platform, including: “the top trends that you’re seeing in terms of misinformation/hesitance inducing content,” and “[a] deeper dive on reduction and its effectiveness,” among others. *Id.*

111. Flaherty indicated that the White House was coordinating with the Stanford Internet Observatory, which was then operating the Virality Project, discussed in detail below, noting in

the first bullet point: “Stanford has mentioned that it's recently Vaccine Passports and J&J pause-related stuff, but I'm not sure if that reflects what you' re seeing.” *Id.* This reference raises the inference that the White House’s “COVID experts” (“our COVID experts”) mentioned in the calendar invite for the meeting, Jones Decl., Ex. K, at 1, are, in fact, “Stanford” personnel associated with the Virality Project, and that the White House was working with “Stanford” to “partner with” platforms “on product work.”

112. As with Facebook, many of Flaherty’s demands related to so-called “borderline” content, *i.e.*, often-truthful content that does not violate platform policies but that the White House disfavors. *See* Doc. 174-1, at 39. Among other things, he praised YouTube for reducing distribution of such content: “I believe you said you reduced watch time by 70% on ‘borderline’ content, which is impressive.” *Id.* But then, again, he followed up with a long series of demands for more information: “How does that track with vaccine-related content specifically...? What has the comparative reduction in watch time on ‘borderline’ vaccine topics been after your interventions? And what has the increase in watch time been on authoritative information?... Related to the second bullet: to what extent have your ranking interventions been effective there? And, perhaps more critically, to what degree is content from people who have been given a ‘strike’ still being recommended and shown in prominent search positions? ... [H]ow did you arrive on info-panels as the best intervention? And to what extent are people clicking through after exposure to vaccine-hesitant content? ... What are the general vectors by which people see the ‘borderline’ content – or really just vaccine-skeptical content? Is it largely through recommendations? Search?” *Id.* Notably, Flaherty’s “most critical[.]” question implied that YouTube should be censoring more content from disfavored *speakers*, *i.e.*, those who have been given a “strike” for previous anti-vaccine content. *Id.*

113. Flaherty emphasized that the White House wanted to make sure YouTube’s “work extends to the broader problem” of people viewing vaccine-hesitant content. *Id.* at 39-40. And he proposed regular meetings to push YouTube to disclose its “internal data” to the White House: “We’ve worked with a number of platform partners to track down similar information based on internal data, including partners of similar scale. I am feeling a bit like I don’t have a full sense of the picture here. We speak with other platforms on a semi-regular basis. We’d love to get in this habit with you. Perhaps bi-weekly? Looking forward to more conversation.” *Id.* at 40.

114. On April 23, 2021, Flaherty sent Facebook an email that included a document entitled “Facebook COVID-19 Vaccine Misinformation Brief” prepared by an unidentified third party. Jones Decl., Ex. L, at 1. The “Brief” had two major headings with several bullet points under each: “Facebook plays a major role in the spread of COVID vaccine misinformation,” and “Facebook’s policy and enforcement gaps enable misinformation’s spread.” *Id.* The “Brief” recommended much more aggressive censorship of Facebook’s platforms, calling for “progressively severe penalties ... and comprehensive enforcement for pages, accounts, and groups that repeatedly post COVID vaccine misinformation,” and stating that “[b]ans for COVID-19 misinformation should be cross-platform and enforced at the entity-level, not the account level.” *Id.* It called for Facebook to stop distributing even non-violative anti-vaccine content “in News Feed or in group recommendations” to “significantly reduce the reach of low-quality domains,” and it stated that “[v]accine misinformation monitoring and enforcement must adjust as disinformers evade enforcement...” *Id.* at 1-2. And it called for specific censorship of disfavored speakers: “Warning screens before linking to domains known to promote vaccine misinformation would dissuade users from following links to of-platform misinformation and hurt the vaccine-misinformation business model Facebook enables.” *Id.* at 2.

115. Reproducing this pro-censorship “Brief” in the text of his email to Facebook, Flaherty wrote: “Here’s the crux of their recs. Don’t read this as White House endorsement of these suggestions (or, also, as the upper bound of what our thoughts may be). But – spirit of transparency – this is circulating around the building and informing thinking.” *Id.* at 1.

116. On May 1, 2021, Nick Clegg of Facebook sent an email to Andy Slavitt indicating that the White House had recently met with Facebook to “share research work” and make more demands, stating: “Thanks to your team for sharing the research work with us...” *Id.* at 41. At the beginning of the email, Clegg apologized to the White House for not catching and censoring three pieces of vaccine content that went viral, even though the content did not violate Facebook’s policies, and promising to censor such non-violative content more aggressively in the future: “I wanted to send you a quick note on the three pieces of vaccine content that were seen by a high number of people before we demoted them. Although they don’t violate our community standards, we should have demoted them before they went viral and this has exposed gaps in our operational and technical process.” *Id.* at 42.

117. Clegg then promised to be more vigilant and censor such non-violative content to prevent it from going viral in the future, and offered to report back to the White House in detail about its efforts to do so: “The teams have spent the last 24 hrs analysing these gaps and are making a number of changes starting next week, including setting up more dedicated monitoring for Covid vaccine content on the cusp of going viral, applying stronger demotions to a broader set of content, and setting up daily review and analysis so that we have a better real-time view of what is being seen by lots of people. I will be checking on this closely to make sure that these additional steps show results - the stronger demotions in particular should deliver real impact. Please let me know if you’d like to discuss any of this in more detail.” *Id.*

118. Clegg then listed in bold the demands that the White House had made in its recent meeting, with a detailed response to each. *Id.* at 42. First, the White House had demanded that Facebook address “**Non-English mis/disinformation circulating without moderation,**” and Facebook promised to take steps to do so. *Id.* (bold in original).

119. Second, the White House had commanded Facebook: “**Do not distribute or amplify vaccine hesitancy, and Facebook should end group recommendations for groups with a history of COVID-19 or vaccine misinformation.**” *Id.* (bold in original). Facebook assured the White House that it was taking strong steps to censor such content, and promised to increase its efforts to do so in the future: “Much of the research you shared called on us to ensure that our systems don't amplify vaccine hesitancy content and this is top of mind for us. In addition to the changes I mentioned above, we have already removed all health groups from our recommendation feature on Facebook, and on Instagram we filter vaccine-related accounts from our ‘accounts you may follow feature’. We also remove accounts that may discourage vaccination from search features. We currently enforce on hash tags we know are shared to promote vaccine hesitancy content and are working to improve our automated systems here.” *Id.*

120. Third, the White House had demanded that Facebook “**Monitor[] events that host anti-vaccine and COVID disinformation.**” *Id.* (bold in original). Facebook promised to monitor social-media “events” on its platforms more closely and take more aggressive action to censor them: “we are working to improve automatic detection for events hosting anti-vaccine and COVID content. Our viral monitoring efforts will also help us detect events that are gaining views on Facebook, and we do remove events coordinating in-person gatherings that involve or encourage people who have COVID-19 to join.” *Id.*

121. Fourth, the White House had demanded censorship of the so-called “Disinformation Dozen” in the private meeting with Facebook, raising the concern that “**12 accounts are responsible for 73% of vaccine misinformation.**” *Id.* (bold in original). Facebook responded that it was scrutinizing those speakers and censoring them whenever it could, but that most if their content did not violate Facebook’s policies: “we continue to review accounts associated with the 12 individuals identified in the CCDH ‘Disinformation Dozen’ report, but many of those either do not violate our policies or have ceased posting violating content. Our ‘Dedicated Vaccine Discouraging Entity’ policy is designed to remove groups and pages that are dedicated to sharing vaccine discouraging content and we continue to review and enforce on these where we become aware of them.” *Id.*

122. Clegg then noted that he realized the White House would not be satisfied with these answers and was demanding greater censorship: “I realise that our position on this continues to be a particular concern for you.” *Id.* Clegg then suggested that too much censorship might be counterproductive and might drive vaccine hesitancy: “Among experts we have consulted, there is a general sense that deleting more expressions of vaccine hesitancy might be more counterproductive to the goal of vaccine uptake because it could prevent hesitant people from talking through their concerns and potentially reinforce the notion that there's a cover-up.” *Id.* Brian Rice also forwarded Nick Clegg’s email to Rob Flaherty. *Id.* at 41.

B. Public Pressure and Threats From Press Secretary Jennifer Psaki.

123. The White House was evidently quite unhappy with this response and the results of its pressure campaign behind closed doors. A few days later, the White House took its pressure campaign public. On May 5, 2021, Jen Psaki publicly reminded Facebook and the other platforms of the threat of legal consequences hanging over its head if it did not censor misinformation more

aggressively. At the May 5, 2021 White House Press Briefing, Jen Psaki stated about social-media censorship: “The President’s view is that the major platforms have a responsibility related to the health and safety of all Americans to stop amplifying untrustworthy content, disinformation, and misinformation, especially related to COVID-19, vaccinations, and elections. And we’ve seen that over the past several months, broadly speaking.” Glenn Decl. Ex. 29, at 15, Doc. 10-1, at 353.

124. Psaki also stated that President Biden “also supports better privacy protections and a robust anti-trust program. So his view is that there’s more that needs to be done to ensure that this type of misinformation; disinformation; damaging, sometimes life-threatening information is not going out to the American public.” *Id.* She thus linked the threat of a “robust anti-trust program” to the White House’s demand that “more ... needs to be done” by “the major platforms” to prevent “misinformation” and “disinformation” from “going out to the American public,” *i.e.*, its demand for censorship. *Id.*

125. The next day, May 6, 2021, Flaherty privately responded to Facebook’s most recent email, badgering Facebook again for more explanations about why it was not censoring more aggressively. Regarding Nick Clegg’s apology for not catching and censoring three viral posts earlier, Flaherty linked to one and noted: “For one, it's still up and seems to have gotten pretty far. And it's got 365k shares with four comments. We've talked about this in a different context, but how does something like that happen? The top post, the one from the Wisconsin news station, has 2.1 million comments.” Doc. 174-1, at 41.

126. Flaherty also demanded more information about Facebook’s efforts to demote “borderline” content: “Won't come as a shock to you that we're particularly interested in your demotion efforts, which I don't think we have a good handle on (and, based on the below, it doesn't

seem like you do either). Not to sound like a broken record, but how much content is being demoted, and how effective are you at mitigating reach, and how quickly?” *Id.*

127. Flaherty then criticized Facebook’s censorship efforts for vaccine-related posts in Facebook groups related to other topics: “Also, health groups: sure. But it seems more likely that anti-vax stuff is moving in groups that are not about health but are ... mom centric, or other spaces. Strikes me as the issue here is less from single-use anti-vaccine accounts and more about people who ... do other things and are also vaccine hesitant.” *Id.* (ellipses in original).

128. Flaherty tied this criticism to his criticism of Facebook’s failure to censor the “Disinformation Dozen”: “Seems like your ‘dedicated vaccine hesitancy’ policy isn’t stopping the disinfo dozen - they’re being deemed as not dedicated – so it feels like that problem likely carries over to groups.” *Id.*

129. On May 10, 2021, Facebook sent an email to Rob Flaherty and Courtney Rowe of the White House digital team, touting its efforts to promote vaccination on its platforms. Doc. 174-1, at 46. Among other things, Facebook reported that “Since January, we’ve provided more than \$30 million in ad credits to help governments, NGOs and other organizations reach people with COVID-19 vaccine information and other important messages.” *Id.*

130. The next day, May 11, 2021, Flaherty responded with a one-line, snarky email stating: “Hard to take any of this seriously when you’re actively promoting anti-vaccine pages in search.” *Id.* He included a link to a news report about this topic on Twitter. *Id.*

131. The next day, May 12, 2021, Facebook responded, assuring Flaherty that it had censored the accounts mentioned in the news reports: “Thanks Rob - both of the accounts featured in the tweet have been removed from Instagram entirely.... We’re looking into what happened.” *Id.* at 45.

132. Facebook then assured Flaherty it was working on processes to suppress disfavored speech from search results on its platforms and remove anti-vaccine accounts: “We are continuing to develop technology to improve the quality of search results at scale across Instagram - this is a continual process built on new technology to address adversarial accounts.... We also remove accounts that may discourage vaccination from search by developing and using this new technology to find accounts on Instagram that discourage vaccines, and remove these accounts from search altogether. We've also removed accounts that primarily discourage vaccination from appearing where we recommend new accounts to follow, such as accounts you may like, and suggested accounts.” *Id.*

133. Facebook acknowledged that its censorship efforts were not enough and promised the White House they would increase them: “We clearly still have work to do to [sic], but wanted to ensure you were aware of the authoritative resources we're pointing people to first as we continue investing in removing accounts from search that may discourage vaccination.” *Id.*

134. The same day, May 12, 2021, Flaherty responded sarcastically, indicating that promoting pro-vaccine speech was not enough for the White House, which demanded the removal or deboosting of anti-vaccine speech: “Sure. They're first connected to authoritative information, but then you, as of last night, were presenting an anti-vaccine account with less than 1000 followers alongside, at level, with those pinned accounts!” *Id.* at 45.

135. Flaherty then accused Facebook of not doing enough to censor anti-vaccine content in search results and dissembling to deceive the White House: “[R]emoving bad information from search’ is one of the easy, low-bar things you guys do to make people like me think you're taking action. If you're not getting *that* right, it raises even more questions about the higher bar stuff.” *Id.* at 45. Flaherty continued, accusing Facebook of dishonesty: “You say in your note that you

remove accounts that discourage vaccination from appearing in recommendations (even though you're using 'primarily' to give yourself wiggle room). You also said you don't promote those accounts in search. Not sure what else there is to say." *Id.*

136. Flaherty then compared Facebook unfavorably to other platforms to pressure them to suppress anti-vaccine content in search results: "Youtube, for their warts, has done pretty well at promoting authoritative info in search results while keeping the bad stuff off of those surfaces. Pinterest doesn't even show you any results other than official information when you search for 'vaccines.' I don't know why you guys can't figure this out." *Id.*

137. On May 28, 2021, a senior executive of Meta sent an email to Slavitt and Murthy reporting that Facebook had expanded its censorship policies, evidently to satisfy federal officials' demands made at a recent oral meeting. The email stated that a "key point" was that "We're expanding penalties for individual Facebook accounts that share misinformation." Doc. 71-4, at 9.

C. Flaherty's Profane Attack: "Are You Guys Fking Serious?"**

138. At some time prior to July 15, 2021, the White House's Facebook account experienced an issue that slowed its growth in followers. Doc. 174-1, at 56. On July 15, 2021, Facebook emailed a White House staffer and reported that "the technical issues that had been affecting follower growth on @potus have been resolved.... you should start to see your numbers trend back upwards.... Thanks for your patience as we investigated this." *Id.* The White House staffer asked Facebook, "Could you tell me more about the technical issues affecting audience growth?" *Id.* at 55. Facebook responded, "from what we understand it was an internal technical issue that we can't get into, but it's now resolved and should not happen again." *Id.* The White House staffer then simply added Rob Flaherty to the email chain without further comment. *Id.*

139. The same minute he was added to the email chain, 3:29 p.m. on July 15, 2021, Flaherty exploded at Facebook: “Are you guys fucking serious? I want an answer on what happened here and I want it today.” *Id.* at 55.

140. Facebook immediately raced to placate Flaherty, assuring him that the problem was from a “bug in our recommendation surface” that had been resolved two months earlier. *Id.* at 55. Facebook followed up with a longer explanation stating that the President’s account had been affected because Facebook “take[s] aggressive steps to reduce the spread of vaccine hesitancy and vaccine misinformation on our platforms and we deploy technology to do so. As part of our efforts on Instagram, we have measures to help ensure we don’t recommend people follow accounts that promote vaccine hesitancy at scale. For two weeks in April (April 14-28) this measure was impacted by over-enforcement on a signal we used” *Id.* at 54. In other words, the White House’s Instagram account had been inadvertently swept into the net of censorship that it had insisted that Facebook impose on private speakers’ accounts. Evidently the White House is not amused when its own accounts are subject to the same treatment that it demands the platforms impose on thousands of ordinary Americans whose viewpoint the White House disfavors.

D. President Biden on Social-Media Platforms: “They’re Killing People.”

141. That same day, July 15, 2021, the White House held a joint press conference with Jen Psaki and Surgeon General Murthy. Dr. Murthy participated in the White House press conference with White House Press Secretary Jennifer Psaki to announce the Surgeon General’s Health Advisory on Misinformation. Waldo Ex. 10. Psaki announced of Dr. Murthy that “[t]oday, he published an advisory on health misinformation as an urgent public health crisis.” *Id.* at 1.

142. Among other things, Dr. Murthy stated that “Modern technology companies have enabled misinformation to poison our information environment with little accountability to their users.” *Id.* at 2.

143. Dr. Murthy announced: “we expect more from our technology companies. We’re asking them to operate with greater transparency and accountability. We’re asking them to monitor misinformation more closely. We’re asking them to consistently take action against misinformation super-spreaders on their platforms.” *Id.* at 3.

144. At the July 15 press conference, Dr. Murthy also demanded that the platforms do “much, much more” and “take aggressive action” against misinformation. Waldo Ex. 10, at 5.

145. Dr. Murthy also stated that platforms “have to do more to reduce the misinformation that’s out there” *Id.* at 6.

146. At the same press conference on July 15, 2021, Jennifer Psaki stated: “we are in regular touch with these social media platforms, and those engagements typically happen through members of our senior staff, but also members of our COVID-19 team.” Waldo Ex. 10, at 10.

147. Psaki stated: “We’ve increased disinformation research and tracking within the Surgeon General’s office. We’re flagging problematic posts for Facebook that spread disinformation.” *Id.* at 10.

148. Regarding the Administration’s “asks” to social-media platforms, Psaki stated: “There are also proposed changes that we have made to social media platforms, including Facebook, and those specifically are four key steps: One, that they measure and publicly share the impact of misinformation on their platform. Facebook should provide, publicly and transparently, data on the reach of COVID-19 — COVID vaccine misinformation. Not just engagement, but the reach of the misinformation and the audience that it’s reaching.” *Id.* at 11.

149. Psaki also stated: “Second, that we have recommended — proposed that they create a robust enforcement strategy that bridges their properties and provides transparency about the rules. So, about — I think this was a question asked before — there’s about 12 people who are producing 65 percent of anti-vaccine misinformation on social media platforms. All of them remain active on Facebook, despite some even being banned on other platforms, including Facebook — ones that Facebook owns.” Waldo Ex. 10, at 11.

150. Psaki stated: “Third, it’s important to take faster action against harmful posts. As you all know, information travels quite quickly on social media platforms; sometimes it’s not accurate. And Facebook needs to move more quickly to remove harmful, violative posts — posts that will be within their policies for removal often remain up for days. That’s too long. The information spreads too quickly.” *Id.* at 11.

151. And Psaki stated, publicly criticizing Facebook: “Finally, we have proposed they promote quality information sources in their feed algorithm. Facebook has repeatedly shown that they have the levers to promote quality information. We’ve seen them effectively do this in their algorithm over low-quality information and they’ve chosen not to use it in this case. And that’s certainly an area that would have an impact.” Waldo Ex. 10, at 11.

152. Psaki concluded: “So, these are certainly the proposals. We engage with them regularly and they certainly understand what our asks are.” *Id.* at 11.

153. The next day, July 16, 2021, President Biden stated of Facebook and other platforms that “they’re killing people” by failing to censor enough misinformation: “Mr. Biden was asked what his message was to social media platforms when it came to Covid-19 disinformation. ‘They’re killing people,’ he said. ‘Look, the only pandemic we have is among the

unvaccinated, and that — and they’re killing people.” Glenn Decl. Ex. 33, at 1; Doc. 10-1, at 436.

154. President Biden’s statement came after “weeks” of pressuring Facebook to give federal officials access to Facebook’s internal data: “White House officials ... singled out social media companies for allowing false information to proliferate. That came after weeks of failed attempts to get Facebook to turn over information detailing what mechanisms were in place to combat misinformation about the vaccine, according to a person familiar with the matter.” *Id.*

155. Surgeon General Murthy had been directly involved in those meetings with Facebook, including “tense” meetings and a meeting where he “angrily” demanded that Facebook do more to censor misinformation. *Id.* at 437.

156. When the President stated, “They’re killing people,” Psaki reinforced the same message: “‘Our point is that there is information that is leading to people not taking the vaccine, and people are dying as a result,’ Jen Psaki, the White House press secretary, said before Mr. Biden made his comments. ‘And we have responsibility as a public health matter to raise that issue.’” *Id.* at 436.

157. That same day, July 16, 2021, at a White House press conference, Psaki stated that “we’re in regular touch with social media platforms ... about areas where we have concern. ... [W]e are ... regularly making sure social media platforms are aware of the latest narratives dangerous to public health that we and many other Americans seeing — are seeing across all of social and traditional media. And we work to engage with them to better understand the enforcement of social media platform policies.” Glenn Decl. Ex. 34, at 6; Doc. 10-1, at 444.

158. Psaki then described a “false narrative that remains active ... flowing on the internet quite a bit, in other places as well,” and stated, “we want to know that the social media

platforms are taking steps to address it. That is inaccurate, false information... And that is an example of the kind of information that we are flagging or raising.” Glenn Decl. Ex. 34, at 7; Doc. 10-1, at 445.

159. Psaki also demanded additional “steps” “for Facebook or other platforms,” including “to measure and publicly share the impact of misinformation on their platform and the audience it’s reaching, also with the public.” *Id.*

160. She called on the platforms “to create robust enforcement strategies that bridge their properties and provide transparency about rules.” *Id.* She stated that platforms should coordinate on censoring disfavored speakers: “You shouldn’t be banned from one platform and not others if you — for providing misinformation out there.” *Id.*

161. Psaki also stated that the platforms should be “[t]aking faster action against harmful posts. As you all know, information travels quite quickly. If it’s up there for days and days and days when people see it, you know, there’s — it’s hard to put that back in a box.” Glenn Decl. Ex. 34, at 8; Doc. 10-1, at 446.

162. Psaki was asked whether the censorship Facebook was already doing, which included “remov[ing] 18 million pieces of COVID misinformation” and “connect[ing] more than 2 billion people to reliable information,” was “sufficient,” and she responded, “Clearly not, because we’re talking about additional steps that should be taken.” *Id.*

163. “[A] few hours after Biden’s comment” that social-media platforms are “killing people” by not censoring misinformation, “Twitter suspended [Alex Berenson’s] account for the first time.” Jones Decl., Ex. J, at 3. Later, on August 28, 2021, Twitter permanently deplatformed Berenson. *Id.*

164. Four days later, July 20, 2021, the White House explicitly threatened to amend or repeal the liability protections of § 230 of the Communications Decency Act if social-media companies did not increase censorship of disfavored speakers and viewpoints. Glenn Decl. Ex. 35; Doc. 10-1, at 474-75 - *They Should Be Held Accountable' White House Reviews Platforms' Misinformation Liability*, USA TODAY (July 20, 2021), at <https://www.usatoday.com/story/news/politics/2021/07/20/white-house-reviews-section-230-protections-covid-misinformation/8024210002/>. The White House communications director, Kate Bedingfield, announced that “[t]he White House is assessing whether social media platforms are legally liable for misinformation spread on their platforms.” *Id.* “We’re reviewing that, and certainly, they should be held accountable,” she said. *Id.*

165. The White House communications director “specified the White House is examining how misinformation fits into the liability protections granted by Section 230 of the Communications Decency Act, which shields online platforms from being responsible for what is posted by third parties on their sites.” *Id.*

166. Media reported that, in connection with this threat, “Relations are tense between the Biden administration and social media platforms, specifically Facebook, over the spread of misinformation online.” *Id.*; *see also, e.g.*, Glenn Decl. Ex. 36; Doc. 10-1, at 477-81: *White House says social media networks should be held accountable for spreading misinformation*, CNBC.com (July 20, 2021), at <https://www.cnbc.com/2021/07/20/white-house-social-networks-should-be-held-accountable-for-spreading-misinfo.html>.

167. When “asked ... whether these companies should be held liable for publishing false information that causes people harm, Kate Bedingfield said the administration is reviewing policies. That could include amending the Communications Decency Act, or Section 230 of the

act. ‘We’re reviewing that and certainly they should be held accountable,’ Bedingfield said. ‘And I think you heard the president speak very aggressively about this. He understands that this is an important piece of the ecosystem.’” *Id.* at 478.

168. The same day, Tuesday, July 20, 2021, Clarke Humphrey of the White House communications office emailed Facebook asking for the removal of an Instagram account associated with Dr. Fauci, saying it “is not actually one of ours.” Fauci Ex. 57, at 1-2. Facebook responded one minute later, stating, “Yep, on it!” Fauci Ex. 57, at 1. The next day, Facebook responded again, stating, “This account has been removed. Thank you for flagging!” *Id.*

E. The Social-Media Platforms Are Cowed into Collusion on Censorship.

169. The threats and public pressure on July 15 and 16—including the President’s comment, “they’re killing people”—got immediate results, as Facebook scrambled to assuage the White House’s wrath and accede to all its censorship demands.

170. After this series of public statements, responding to “White House pressure,” Facebook censored the accounts of the 12 specific disfavored speakers whom Psaki accused of spreading health misinformation. Glenn Decl. Ex. 37; Doc. 10-1, at 483-85: *Facebook takes action against disinformation dozen’ after White House pressure*, CNN.com (Aug. 18, 2021), at <https://www.cnn.com/2021/08/18/tech/facebook-disinformation-dozen/index.html>. Psaki had “hammered the platform in July for allowing the people identified in the report to remain on its platform.” *Id.* at 483. After they were singled out for censorship by the White House, Facebook “removed over three dozen Pages, groups and Facebook or Instagram accounts linked to these 12 people, including at least one linked to each of the 12 people, for violating our policies.” *Id.*

171. Other platforms responded to the pressure as well, as Twitter suspended Alex Berenson within a few hours of President Biden’s July 16 comments and deplatformed him Berenson on August 28, 2021. Jones Decl., Ex. J, at 3.

172. On July 17, 2021, another Facebook official sent an email to Anita B. Dunn, the political strategist and Senior Advisor to the President in the White House, begging for assistance in getting back into the White House’s good graces. Doc. 174-1, at 49. The Facebook official, who evidently had a prior relationship with Dunn, wrote: “Would love to connect with you on the President's comments on Covid misinfo and our work there. Really could use your advice and counsel on how we get back to a good place here. ... As I hope you know, we've been doing a significant amount of work to ... fight the misinfo ... Obviously, yesterday things were pretty heated, and I'd love to find a way to get back to pushing together on this - we are 100% on the same team here in fighting this and I could really use your advice.” *Id.* Dunn looped in Rob Flaherty to schedule a call. *Id.* at 48. Facebook then wrote: “Thanks Anita, and thanks Rob. I appreciate the willingness to discuss. We'd love to find a way to get things back to a productive conversation.” *Id.* Facebook also noted, with a similarly conciliatory tone: “We had a conversation with the Surgeon General's office yesterday to discuss the advisory in more detail and hope to continue to work to address concerns.” *Id.*

173. The next Monday, July 19, 2021, YouTube emailed Flaherty to announce “a few new ways in which we are making it easier for people to find authoritative information on health topics on YouTube.” *Id.* at 51-2. On July 20, 2021, Flaherty responded, linking to a Tweet of “borderline” content and stating, “I'm curious: Saw this tweet. [Linking the Tweet]. I think we had a pretty extensive back and forth about the degree to which you all are recommending anti-

vaccination content. You were pretty emphatic that you are not. This seems to indicate that you are. What is going on here?” *Id.* at 51.

174. YouTube responded by assuring Flaherty that it “reduce[s]” the recommendation of anti-vaccine speech even when it does not violate YouTube’s policies: “it is important to keep in mind that borderline content accounts for a fraction of 1% of what is watched on YouTube in the United States. We use machine learning to reduce the recommendations of this type of content, including potentially harmful misinformation. In January 2019, we announced changes to our recommendations systems to limit the spread of this type of content which resulted in a 70% drop in watchtime on non-subscribed recommended content in the U.S. and our goal is to have views of nonsubscribed, recommended borderline content below 0.5%.” *Id.* at 51.

175. This was not enough for Flaherty, who demanded more information: “I see that’s your goal - what is the actual number right now?” *Id.* at 50. YouTube responded that it would check for more information, and stated: “Per our COVID-19 medical misinformation policy, we will remove any content that contradicts local health authorities’ or the World Health Organization’s (WHO) medical information about COVID-19. To date, approximately 89% of videos removed for violations of this policy were removed with 100 views or less. With regards to the specific videos you referenced, the content was not in violation of our community guidelines.” *Id.* at 50.

176. Flaherty responded, expressing surprise that YouTube was not censoring the disfavored content: “So this actually gets at a good question - the content [that the Tweet] points out isn’t defined as ‘borderline’ and therefore isn’t subject to recommendation limitations?” *Id.*

177. YouTube, like Facebook before it, assured Flaherty that it would “limit the visibility” and “reduce the spread” such content, even though it does not violate YouTube’s

policies: “the content was not in violation of our policies and therefore not subject to removal. But for all content on YouTube, we apply our 4R framework we have previously described to raise authoritative voices while reducing visibility on borderline content. External evaluators use these guidelines which are then used to inform our machine learning systems that limits the spread of borderline content.” *Id.* at 50.

178. On October 28, 2021, the same day as a Washington Post article about Facebook employee Frances Haugen’s allegations about misinformation on Facebook, Rob Flaherty emailed Brian Rice of Facebook a hyperlink to the article. The only text in the email was the subject line, which stated: “not even sure what to say at this point.” Waldo Ex. 35, at 1-2; *see also infra*.

179. On November 4, 2021, Meta reported to Rowe, Flaherty, and other White House officials that “we updated our misinformation policies for COVID-19 vaccines to make clear that they apply to claims about children....” Doc. 71-3, at 15.

180. On November 30, 2021, Christian Tom of the White House emailed Twitter stating, “Would you mind looking at this video and helping us with next steps to put a label or remove it?” Doc. 174-1, at 65. He included a link to a Tweet of an unflattering, comedic video of First Lady Jill Biden reading to children, which had been clearly edited to make it sound as if she was profanely heckled while reading to them. *Id.* The subject line of the message was “Doctored video on Twitter of the First Lady.” *Id.* Twitter responded within six minutes: “Happy to escalate with the team for further review from here.” *Id.*

181. That evening, Twitter emailed back, stating, “Update for you - The team was able to create this event page for more context and details.” *Id.* at 64. The “event page” explained the context of the parody video but did not censor it; it alerted users that the video had been edited for “comedic” effect. *See A video of first lady Jill Biden reading to children was manipulated to*

include profanity, according to fact-checkers, TWITTER (Nov. 30, 2021), <https://twitter.com/i/events/1465769009073123330>.

182. Christian Tom promptly emailed back, asking that Twitter actually censor the comedic video, not just provide an event page explaining that it was comedic: “Will you apply the ‘Manipulated Media’ disclaimer to the video asset itself?” Doc. 174-1, at 64.

183. The next morning, December 1, 2021, Tom emailed Twitter again, arguing that Twitter should apply a label to the video under its content-moderation policies: “Just wanted to follow-up here. It looks like from the rubric that this fits the first two criteria, which means it is ‘likely’ to be labeled:” and linking Twitter’s “manipulated media” policy. *Id.* at 63-4.

184. Twitter wrote back the same morning, explaining that the comic, parody video of Jill Biden was not subject to labeling under its policy because it was not likely to cause harm, but noting again that Twitter had created a special page to explain that the video was edited: “After escalating this to our team, the Tweet and video referenced will not be labeled under our synthetic and manipulated media policy. Although it has been significantly altered, the team has not found it to cause harm or impact public safety. The team was able to create this Twitter Moment (here) and event page for more context and details.” *Id.* at 63.

185. The same day, Christian Tom emailed back, disputing Twitter’s interpretation of its own content-moderation policy and looping in Michael DeRosa, the First Lady’s press secretary. *Id.* Michael DeRosa then emailed as well, disputing and demanding information about Twitter’s application of its own policy. *Id.* at 62. Tom and DeRosa continued to press Twitter for further explanation and action on December 9, 13, and 17. *Id.* at 60-61. Twitter provided another, more detailed explanation of its decision on December 17. *Id.* at 59-60. Tom emailed back the

same day, again disputing Twitter's application of its own policy and pressing Twitter again on the issue. *Id.* at 58-59. He added Rob Flaherty to the email chain for the first time. *Id.* at 58.

186. Nine minutes later, on December 17, 2021, Flaherty wrote to Twitter, angrily accusing Twitter of dishonestly misapplying its own policies: "New to the thread here, but this all reads to me like you all are bending over backwards to say that this isn't causing confusion on public issues. If the AP deems it confusing enough to write a fact check, and you deem it confusing enough to create an event for it, how on earth is it not confusing enough for it to at least have a label? Total Calvinball." *Id.* at 58. ("Calvinball" refers to a game in the cartoon "Calvin and Hobbes" where the participants make up the rules of the game as they go along.)

187. A senior-level Twitter executive then emailed Flaherty proposing to resolve the matter by phone. *Id.* After that phone conversation, it appears that the Tweet that prompted the exchange is no longer available. *See id.* at 65 (linking to https://twitter.com/ArtValley818_/status/1465442266810486787?s=20, which is no longer available).

F. White House Pressure and Collusion Continue Throughout 2022.

188. During January 2022, Facebook reported to Rowe, Manning, Flaherty, and Slavitt that it has "labeled and demoted" "vaccine humor posts whose content could discourage vaccination." It also reported to the White House that it "labeled and demoted" posts "suggesting natural immunity to COVID-19 infection is superior to immunity by the COVID-19 vaccine." Doc. 71-3, at 10-11.

189. Twitter emailed back within an hour and offered to discuss, to which Flaherty responded: "Happy to talk through it but if your product is appending misinformation to our tweets that seems like a pretty fundamental issue." *Id.*

190. Separately, Jesse Lee of the White House emailed Twitter in response to the same report, accusing Twitter of “calling the President a liar” and offering to talk by phone to resolve the complaint: “this note is factually inaccurate. This is a very technical question but you don't have it right, and you are in effect calling the President a liar when his tweet is actually accurate. I'm happy to discuss this with whoever is the right person,” and providing his cell phone number. *Id.* at 69. Twitter then reached out by phone to resolve it. *Id.*

191. On September 18, 2021, regarding a story in the Wall Street Journal about COVID-19 “misinformation” circulating on Facebook, Flaherty demanded that Meta provide an explanation “as we have long asked for, [of] how big the problem is, what solutions you’re implementing, and how effective they’ve been.” Doc. 71-3, at 24.

192. On February 1, 2022, Psaki was asked at a White House press conference whether the Administration was satisfied with Spotify’s decision to affix advisory warnings to Joe Rogan’s immensely popular podcast, which featured speakers that contradicted the Administration’s messaging about COVID-19 and vaccines, or whether the government “think[s] that companies like Spotify should go further than just, you know, putting a label on” disfavored viewpoints and speakers. Psaki responded by demanding that Spotify and other platforms “do[] more” to block disfavored speech: “[O]ur hope is that all major tech platforms ... be vigilant to ensure the American people have access to accurate information on something as significant as COVID-19.... So, this disclaimer – it’s a positive step. But we want every platform to continue *doing more* to call out ... mis- and disinformation while also uplifting accurate information.” Glenn Decl. Ex. 38, at 15-16; Doc. 10-1, at 501-2 (emphasis added). She stated that Spotify’s advisory warnings are “a good step, it’s a positive step, but *there’s more that can be done.*” *Id.* at 502 (emphasis added).

193. On April 25, 2022, Psaki was asked at a White House press briefing to respond to the news that Elon Musk would acquire Twitter, and asked “does the White House have any concern that this new agreement might have President Trump back on the platform?” Glenn Decl. Ex. 40; Doc. 10-1, at 528.

194. Psaki responded by reiterating the threats of adverse legal consequences to Twitter and other social media platforms, specifically referencing antitrust enforcement and Section 230 repeal: “No matter who owns or runs Twitter, the President has long been concerned about the power of large social media platforms ... [and] has long argued that tech platforms must be held accountable for the harms they cause. He has been a strong supporter of fundamental reforms to achieve that goal, including reforms to Section 230, enacting antitrust reforms, requiring more transparency, and more. And he’s encouraged that there’s bipartisan interest in Congress.” *Id.* at 528-29.

195. At the same press briefing, Psaki was asked: “Are you concerned about the kind of purveyors of election misinformation, disinformation, health falsehoods, sort of, having more of an opportunity to speak there on Twitter?” She responded by specifically linking the legal threats to the social-media platforms’ failure to more aggressively censor free speech: “I would say our concerns are not new. We’ve long talked about and the President has long talked about his concerns about the power of social media platforms, including Twitter and others, to spread misinformation, disinformation; the need for these platforms to be held accountable.” *Id.* at 534.

196. Psaki was then asked a question that noted that “the Surgeon General has said that misinformation about COVID amounts to a public health crisis,” and then queried, “would the White House be interested in working with Twitter like it has in the past to continue to combat this

kind of misinformation? Or are we in a different part of the pandemic where that kind of partnership is no longer necessary?” *Id.* at 549.

197. Psaki responded by reaffirming that senior officials within the White House and/or the Administration are continuing to coordinate directly with social-media platforms to censor disfavored speakers and content on social media, and directly linking these efforts to the repeated threat of adverse legal action: “we engage regularly with all social media platforms about steps that can be taken that has continued, and I’m sure it will continue. But there are also reforms that we think Congress could take and we would support taking, including reforming Section 230, enacting antitrust reforms, requiring more transparency. And the President is encouraged by the bipartisan support for — or engagement in those efforts.” *Id.*

198. On June 13, 2022, Flaherty demanded that Meta continue to produce periodic “COVID-19 insights reports” to track so-called “misinformation” regarding COVID-19 on Meta’s social-media platforms, expressing the specific concern that COVID vaccines for children under 5 would soon be authorized. Doc. 71-3, at 6.

199. Meta got the message. It agreed to continue sending its censorship-tracking reports, and on June 22, 2022, Meta assured Flaherty that it was expanding its censorship of COVID-19 “misinformation” to ensure that speech critical or skeptical of COVID-19 vaccines for children under 5 years old—a highly controversial topic—would be censored. Doc. 71-3, at 5.

G. Pressure to Expand the Topics of Social-Media Censorship.

200. Since this lawsuit was filed, Defendants have expanded their social-media censorship activities and pressured social-media platforms for censorship in new areas of online discourse, including areas such as climate change, gender, abortion, and economic policy.

201. For example, on June 14, 2022, White House National Climate Advisor Gina McCarthy spoke at an Axios event titled “A conversation on battling misinformation.” Jones Decl. Ex. M, at 1.

202. During the event, “McCarthy skewered Big Tech companies for ‘allowing’ disinformation and cheered Congress for ‘taking action’ to enact more censorship last Thursday.” *Id.* at 2. “Axios political reporter Alexi McCammond asked McCarthy how so-called ‘rampant mis-and-disinformation around climate change online and in other platforms’ has ‘made your job harder?’” *Id.* “McCarthy responded by slamming social media companies: ‘We have to get tighter, we have to get better at communicating, and frankly, *the tech companies have to stop allowing specific individuals over and over again to spread disinformation.*’” *Id.* (emphasis added). “She suggested further that ‘we have to be smarter than that and *we need the tech companies to really jump in.*’” *Id.* at 3 (emphasis added). “McCammond responded by asking: ‘Isn’t misinformation and disinfo around climate a threat to public health itself?’ McCarthy asserted that it ‘absolutely’ is: ‘Oh, absolutely.’” *Id.*

203. Like Psaki and others, McCarthy explicitly tied these demands for censorship of climate-change-related speech to threats of adverse legislation: “McCarthy also praised Congress directly for pushing social media companies to censor Americans: ‘We do see Congress taking action on these issues, we do see them trying to tackle the misinformation that’s out there, trying to hold companies accountable.’” *Id.* at 4.

204. On June 16, 2022, the White House announced a new task force to address, among other things, “gendered disinformation” and “disinformation campaigns targeting women and LGBTQI+ individuals who are public and political figures, government and civic leaders, activists, and journalists.” Jones Decl., Ex. N, at 1.

205. The June 16 Memorandum decries “online harassment and abuse”—vague terms that, on information and belief, are deliberately adopted to sweep in constitutionally protected speech. *Id.* In particular, the Memorandum defines “online harassment and abuse” to include “gendered disinformation,” a deliberately broad and open-ended term. *Id.* § 1. The Memorandum announces plans to target such “gendered disinformation” directed at public officials and public figures, including “women and LGBTQI+ political leaders, public figures, activists, and journalists.” *Id.* The Memorandum creates a Task Force co-chaired by the Assistant to the President for National Security Affairs, which includes the Secretary of Defense, the Attorney General, and the Secretary of Homeland Security, among others. *Id.*

206. The Task Force is charged with “developing programs and policies to address ... *disinformation campaigns* targeting women and LGBTQI+ individuals who are public and political figures, government and civic leaders, activists, and journalists in the United States and globally.” *Id.* § 4(a)(iv) (emphasis added). The Memorandum calls for the Task Force to consult and coordinate with “technology experts” and “industry stakeholders,” *i.e.*, social-media firms, to achieve “the objectives of this memorandum,” *id.* § 4(b). Those “objectives,” of course, include suppressing so-called “disinformation campaigns” against “public and political figures.” *Id.* § 4(a)(iv).

207. The Memorandum again threatens social-media platforms with adverse legal consequences if they do not censor aggressively enough to suit federal officials: “the Task Force shall ... submit periodic recommendations to the President on *policies, regulatory actions, and legislation on technology sector accountability* to address systemic harms to people affected by online harassment and abuse.” *Id.* § 5(c) (emphasis added).

208. Relatedly, on May 27, 2022, HHS Assistant Secretary Rachel Levine demanded that social-media platforms censor “misinformation” about “gender-affirming care.” Jones Decl., Ex. O, at 1. In a public address to health officials, Levine “spoke about the need for government to ‘address health information directly’ and specified that includes encouraging Big Tech to combat health misinformation ‘beyond COVID-19.’” *Id.* Levine stated: “So I’d like to just talk briefly about another area of substantial misinformation that is directly impacting health equity in our nation, and that is the health equity of sexual and gender minorities. There is substantial misinformation about gender-affirming care for transgender and gender diverse individuals... The positive value of gender-affirming care for youth and adults is not in scientific or medical dispute ... And we need to use our clinicians’ voice to collectively advocate for our tech companies to create a healthier, cleaner information environment.” *Id.* at 1-2.

209. On July 8, 2022, the President signed an Executive Order on protecting access to abortion. Jones Decl., Ex. P, at 1.

210. Section 4(b)(iv) of the order states: “The Secretary of Health and Human Services shall, in consultation with the Attorney General and the Chair of the FTC, consider options to address deceptive or fraudulent practices related to reproductive healthcare services, including online, and to protect access to accurate information.” *Id.* This is a plain reference to the online advertising practices of pro-life pregnancy resources centers, which the President’s political allies were then attacking. Jones Decl., Ex. Q, at 1-2.

211. On August 11, 2022, Flaherty emailed Twitter to dispute a note added by Twitter to one of President Biden’s tweets. Doc. 174-1, at 68. The subject line of Flaherty’s email was a link to a Tweet criticizing Twitter’s note: “Joe Weisenthal on Twitter: ‘Wow, this note that twitter added to Biden's tweet is pure gibberish. Imagine adding this, and thinking this is helpful to the

public's understanding in any way.” *Id.* Linking to a tweet about gas prices, Flaherty wrote: “Happy to connect you with some economists who can explain the basics to you guys.” *Id.* Flaherty copied Jesse Lee, Senior Advisor to the National Economic Council at the White House, on the email. *Id.*

III. The Pressure Campaign from Surgeon General Murthy and His Office.

212. Throughout 2021 and 2022, Surgeon General Vivek Murthy and his Office engaged in a pressure campaign in parallel with, and often overlapping with, the White House’s pressure campaign on social-media platforms. Surgeon General Murthy and his staff were often included in the same meetings and communications with White House officials and social-media platforms, and joined White House officials pressuring them to increase censorship in public and in private.

A. The Surgeon General: Using the “Bully Pulpit” to Pressure Platforms.

213. Eric Waldo is the Senior Advisor to the Surgeon General of the United States, Vivek Murthy, and was formerly a Chief Engagement Officer in the Office of the Surgeon General (“OSG”). Waldo Dep. 11:15-12:2.

214. As “the engagement team leader” for OSG, Waldo was “the one in charge of maintaining the contacts and the relationships with representatives of social media platforms.” *Id.* at 51:11-17.

215. Dr. Murthy was directly involved in editing and approving the final work product of the Surgeon General’s Office, including the Surgeon General’s July 15, 2021 health advisory on misinformation and the Surgeon General’s March 3, 2022 RFI to social-media platforms. *Id.* at 14:20-22, 15:16-19, 16:9-10, 17:1-6, 187:24-188:3.

216. Calling for an “all-of-society approach” to misinformation was a pervasive theme of the Surgeon General’s communications, including the health advisory and the RFI. *Id.* at 19:25,

26:8, 88:9, 89:13, 101:2, 117:13, 122:15, 211:22, 246:25, 251:9, 332:22. This theme echoes the repeated call for an “all-of-society approach” in the Virality Project’s public report. *See infra*.

217. Before the Surgeon General’s health advisory on misinformation was published on July 15, 2021, OSG and Waldo “did pre-rollout calls with Twitter, Facebook, [and] Google/YouTube.” *Id.* at 20:7-11.

218. The Surgeon General uses his “bully pulpit” to call for censorship of health misinformation: “Dr. Murthy continued from a communications perspective to talk about health misinformation using his bully pulpit.” *Id.* at 25:23-25.

219. Waldo admits that the Surgeon General is directly advocating to social-media platforms to take stronger actions against health “misinformation”: “[T]he Surgeon General has the ability ... to talk to the relevant stakeholders and say we want you to be aware of this issue and that we think you have a role to play to improve the health outcomes, yes.” *Id.* 28:10-14. As part of this role, the Surgeon General “call[s] out social media platforms in the [health] advisory.” *Id.* at 28:18-19.

220. The Surgeon General’s “bully pulpit,” Waldo agrees, involves putting public pressure on social-media platforms: “I think the bully pulpit ... is really the fact that he commands attention, including being able to ... speak with the press, speak with the public, and ... we think of the Surgeon General as the nation’s doctor.” *Id.* at 29:9-15.

221. A goal of the Surgeon General’s use of the “bully pulpit” includes to “reduce the dissemination of health misinformation.” *Id.* at 30:5-10. This includes making “recommendations of specific steps the social media platforms are ... called out to take to reduce the spread of misinformation on the platforms.” *Id.* at 31:3-8.

222. OSG reinforces its public “message of calling out the social media platforms to take steps to reduce the spread of misinformation on their platforms” through private communications with platforms: “[W]hat we're saying publicly, we're also ... said that privately to them as well.” *Id.* at 32:5-8, 12-14. This includes during “rollout calls.” *Id.* at 32:19-20.

B. Surgeon General Works in Tandem with the White House and Virality Project.

223. On the day of the health misinformation advisory rollout, July 15, 2021, “Press Secretary ... Jen Psaki had already made remarks specifically about Facebook, and then,” the next day, “President Biden made his remarks that social media and Facebook were killing people.” *Id.* at 33:19-25. “Facebook ... was upset about how the rollout had gone.” *Id.* at 33:6-8. Waldo’s initial rollout call with Facebook, as a result, was affected by the Administration’s public attacks on Facebook: “I wouldn't call it the most productive call.” *Id.* at 34:4-6.

224. After this public pressure, Facebook’s senior executive, Nick Clegg, reached out to request “deescalat[ion]” and “work[ing] together” as a direct result of that public pressure on Facebook: “Then later, with our call, we had a call with Nick Clegg from Facebook, and at his request, and ... his intentions were to sort of I think deescalate and just find ways that we could work together, given how Facebook ... was treated in that rollout day.” *Id.* at 34:7-13.

225. In the call with Nick Clegg, Surgeon General Murthy reiterated his demand for Facebook to do more to censor “misinformation” on its platforms: “[O]n the call with Nick Clegg, the Surgeon General did ... reiterate the idea that, you know, as we described in the advisory, that we think there's more ... that Facebook and other social media companies can do, and ... we reiterated that.” *Id.* at 35:7-12.

226. Murthy also asked Clegg and Facebook specific questions about requiring Facebook to share data with outside researchers about the scope and reach of misinformation on

its platforms, again echoing the key recommendation of the Virality Project: “[T]he most specific questions were about understanding the data around the spread of misinformation and how we were measuring that, and ... how we could have external researchers validate the spread of misinformation and -- and helping us as a field understand the depth of the problem.” *Id.* at 35:20-36:2.

227. One such “external researcher” that OSG had in mind was “Renee DiResta, from the Stanford Internet Observatory,” a leading organization of the Virality Project, which hosted a “rollout event” for the advisory featuring Dr. Murthy on the day the advisory was announced. *Id.* at 36:19-23.

228. Waldo admits that there was “coordination” between OSG and Renee DiResta of the Virality Project on the launch of the Surgeon General’s health advisory: “I know there was coordination with [DiResta] with respect to the launch ... there was a panel, a public sort of virtual town hall that we hosted -- with the Sanford [sic] Internet Observatory that Dr. Murthy spoke at, and that was part of the launch day. So certainly there would have been coordination ... with her.” *Id.* at 38:1-7.

229. Kyla Fullenwider is the OSG’s key “subject matter expert” who “worked on the advisory” and had significant substantive input on both the Surgeon General’s July 15, 2021 health advisory on misinformation, and the Surgeon General’s March 3, 2022 RFI to social-media platforms on the spread of misinformation. *Id.* at 39:1-4, 59:16-23. Kyla Fullenwider is not a direct employee of the OSG, but works for a non-profit contractor named “US Digital Response,” Waldo Dep. 85:13-15.

230. Kyla Fullenwider “did a follow-up call with Renee DiResta” about the health advisory. *Id.* at 38:25-39:4.

231. After the launch of the health advisory, Waldo and Fullenwider “did a call” with Renee DiResta “that was more of a brainstorm around ... public-facing events that we could do to talk about this issue” of stopping health misinformation. *Id.* at 40:13-17.

232. Fullenwider and DiResta “most likely” discussed misinformation in these calls. *Id.* at 41:4-6.

233. Waldo and OSG also received a briefing from the Center for Countering Digital Hate about the so-called “Disinformation Dozen.” *Id.* at 43:1-48:1. CCDH gave “a presentation about the Disinformation Dozen and sort of how they were measuring ... that those were the folks primarily responsible for a lot of misinformation online.” *Id.* at 47:2-5.

234. Rafael Campos of OSG “helped create the event with ... the Stanford Internet Observatory for the launch,” and likely had communications with Stanford and Professor DiResta in the lead-up to the event. *Id.* at 48:12-14, 49:1-2.

235. The OSG anticipated that the social-media platforms would feel pressured by the advisory: “we didn’t think they would be happy about this -- you know, the content of the advisory.” *Id.* at 54:24-55:1.

236. Waldo is aware of “at least one call ... that the Surgeon General [Murthy] had with Facebook during the transition,” i.e., between President Biden’s election and his assuming office. *Id.* at 55:8-10. The call involved a “Facebook individual”: “Dr. Murthy had mentioned that he had been on a call with that person [from Facebook] during the transition.” *Id.* at 79:11-18, 56:5-6. Waldo identified the individual as “a data person from the Facebook team.” *Id.* at 56:10. The purpose of that call was “again, about that issue of trying to understand the reach of the mis- and disinformation and understanding ... how far it was spreading.” *Id.* at 56:15-19.

237. “Data about misinformation” was “a topic of conversation” in that call, and the participants discussed “Facebook” being “un[]clear” or “unable to present ... the depth or reach of the misinformation, that they didn’t have that data.” *Id.* at 80:1-15.

238. DJ Patil may have participated in that transitional call. Patil was the “chief data scientist in the Obama administration, and he was a special government employee at the White House for part of the first year” of the Biden Administration. *Id.* at 81:6-13. Patil was also “on the call with Dr. Murthy and [Waldo] and Nick Clegg ... in his capacity as a White House official.” *Id.* at 81:24-82:3.

239. Waldo “connected [Patil] to another research data person ... a Facebook data person.” *Id.* at 82:13-16.

240. The purpose of this follow-up was to demand more information from Facebook about monitoring the spread of misinformation on its platforms: “[T]he problem was we were still in this piece of not understanding the reach and depth ... of the misinformation ... on Facebook. And ... this person was going to try to explain to [Patil] the data challenges in doing so.” *Id.* at 83:4-9.

241. Kyla Fullenwider is the “main” or key staffer for the OSG on misinformation and disinformation. *Id.* at 58:21-24. Ann Kim is listed on the OSG’s org chart, Waldo Ex. 2, as the person who “[d]irects mis- and dis-information engagement,” Waldo Ex. 2, but that is solely “because Kyla Fullenwider reported up to Ann Kim. And since Kyla, I think, was our main subject matter expert or continued to do work on mis- and disinformation, maybe that was why that was put under Anne's list of duties.” Waldo Dep. 58:20-24. Fullenwider, therefore, is the OSG’s “main subject matter expert” on “mis- and disinformation,” who “directs mis- and dis-information engagement” for the OSG. *Id.* at 58:13-59:7.

242. Fullenwider works for the nonprofit U.S. Digital Response, and is not directly employed by the OSG, though she was acting in an official capacity on behalf of OSG. Waldo Ex. 3, at 32; Waldo Dep. 85:10-86:8.

243. U.S. Digital Response is not a government agency but a non-profit organization: “U.S. Digital Response (USDR) is a nonprofit, nonpartisan organization that helps governments, nonprofits, and public entities respond quickly to critical public needs.” *About U.S. Digital Response*, U.S. Digital Response (last visited Feb. 17, 2023), <https://www.usdigitalresponse.org/about>.

244. Ann Kim has no direct involvement in mis- and disinformation. Waldo Dep. 58:25-59:3. But Kyla Fullenwider “was definitely working on mis- and disinformation.” *Id.* at 59:6-7. Fullenwider “was working with Daniel [Tartakovsky] on the design of ... the advisory. And then ... Kyla was continuing to help us think about were there additional ways we might engage.” *Id.* at 59:12-15. Further, “Kyla ... was the principal designer of options around follow-up with respect to data.” *Id.* at 59:16-18. And when “the Surgeon General's office put out an RFI around misinformation data” on March 3, 2022, “Kyla worked on that.” *Id.* at 59:18-22. Kyla “was the subject matter expert who was chiefly creating options for the Surgeon General ... to consider how we would continue to ... talk about mis- and disinformation with respect to data.” *Id.* at 60:6-10.

245. Kyla Fullenwider also participated in the “rollout calls” to the social-media platforms announcing the Surgeon General’s health advisory on misinformation. *Id.* at 62:24-63:4.

246. Waldo was also “on some e-mails and at least one call with Rob Flaherty” when he “would communicate with Facebook.” *Id.* at 64:9-11. This included a call with Rob Flaherty and

the OSG: “[B]efore our call with Nick Clegg, ... I had a call with Rob.” *Id.* at 65:1-2. By then, Flaherty had been “separately communicating with Facebook,” and he was “giving us a heads-up on his experiences ... in communicating with ... Facebook.” *Id.* at 65:4-9.

247. In August 2021, Waldo joined a call with Rob Flaherty and Brian Rice of Facebook, who was in charge of Facebook’s relationship with federal officials. *Id.* at 66:10-14, 124:24-125:2.

248. In that August 2021 call, “Brian Rice from Facebook had requested a call to give us an update on some sort of internal action they were doing. ... Facebook had either found something or removed something and was letting us know about it.” *Id.* at 66:16-23.

249. Andy Slavitt of the White House also communicated with Nick Clegg. *Id.* at 67:14-21. When Andy Slavitt left the White House, he offered Surgeon General Murthy as a direct contact for Nick Clegg. *Id.* at 68:4-7.

250. In addition, “Dr. Murthy has certainly had conversations with Dr. Fauci.” *Id.* at 69:21-22. Waldo claims that he does not know the nature of those conversations. *Id.* at 69:23-25. “Dr. Murthy would have directly communicated with Dr. Fauci, to my knowledge.” *Id.* at 70:13-15.

251. Waldo is “certain that Dr. Murthy has connected” with Dr. Francis Collins. *Id.* at 71:2-9.

252. Waldo was involved in collecting information to respond to Plaintiffs’ interrogatories on behalf of OSG. *Id.* at 73:19-74:11.

C. The Surgeon General Pressures Social-Media Platforms in Private.

253. The first meeting with social-media platforms relating to misinformation that OSG identified in response to interrogatories was a brief introductory call with Nick Clegg on May 25, 2021: “On May 25, 2021, from 4:30 to 5:00 pm ET, Dr. Vivek Murthy from OSG and Andy Slavitt

from the White House met remotely with Nick Clegg from Facebook. The purpose of the call was to introduce Dr. Murthy to Mr. Clegg.” Waldo Ex. 3, at 32; *see also* Waldo Dep. 78:24-79:10. The next meeting disclosed was the first “rollout call” relating to the advisory on July 12, 2021. Waldo Ex. 3, at 32. As noted below, this interrogatory response failed to disclose several previous meetings between Dr. Murthy and Facebook.

254. OSG had pre-rollout calls with Twitter and YouTube on July 12 and July 14, 2021, and a rollout call with Facebook the day after the rollout on July 16, 2021. *Id.* at 32; Waldo Dep. 85:10-90:5.

255. Kyla Fullenwider handled the substantive communications with the social-media platforms in the rollout calls; Waldo’s role was to “connect them to our subject matter expert.” Waldo Dep. 86:24-25.

256. The July 16 call with Facebook was “the same day” that President Biden stated of Facebook that “They’re killing people” by not censoring enough misinformation. *Id.* at 90:24, 93:3-5.

257. At that July 16 call, Kyla Fullenwider “was able, at a high level, to walk over the ... recommendations section for ... technology companies,” which demand greater censorship of misinformation. *Id.* at 91:14-16.

258. The Facebook call “was definitely a slightly awkward call” because “President Biden made his comment about social media companies and Facebook killing people ... right before, or even potentially during the call,” and Waldo observed that “the Facebook team looked a little sad.” *Id.* at 92:24-93:6.

259. On July 23, 2021, Waldo, Dr. Murthy, and DJ Patil of the White House had a call with Nick Clegg and Brian Rice of Facebook. Waldo Ex. 3, at 32-33. Nick Clegg requested the

meeting “to deescalate” and “reset the tone” because the “Facebook team were feeling ... that they had been uniquely called out.” Waldo Dep. 95:4-13.

260. After the meeting, Nick Clegg “did share definitely over e-mail more information about what they were doing to reduce mis- and disinformation, COVID mis- and disinformation on the platform.” *Id.* at 96:13-17.

261. There was also “a follow-up e-mail sometime the next couple of weeks where ... Nick or Brian shared ... here's additional work we're doing, here's how we're responding to the advisory.” *Id.* at 97:7-11.

262. This follow-up email provided “a catalog of ... both removal of misinformation and other steps to tamp down mis- and disinformation.” *Id.* at 97:16-22.

263. Waldo believes that these were “new steps that they had taken in the week or so since ... they felt uniquely called out on July 15th and 16th.” *Id.* at 97:23-98:3. The email was in response to a request from OSG “asking for, can you let us know, like, what you're doing in addition” to combat misinformation, “and so this was responding to that.” *Id.* at 98:5-7.

264. On the July 23 call with Facebook, “Dr. Murthy raised the issue of wanting to have a better understanding of the reach of the mis- and disinformation on ... the social media platform.” *Id.* at 98:19-22.

265. Waldo likens the problem of mis- and disinformation on social media to “eating, like, a piece of uranium,” and compares misinformation to “cancer.” *Id.* at 99:1-101:8.

266. The OSG’s health advisory advances the view that the spread of misinformation is “very harmful.” *Id.* at 101:24-102:7.

267. Waldo agrees that the health advisory “provides specific examples to technology companies what they could do more of to reduce the spread of health mis- and disinformation.” *Id.* at 104:16-18.

268. Waldo uses the word “poison” to describe health misinformation, as did Dr. Murthy in announcing the Health Advisory. *Id.* at 105:4; Waldo Ex. 10, at 2.

269. In the July 23, 2021 call with Nick Clegg, Dr. Murthy “didn’t retreat ... from the message of the advisory, which explicitly calls for social media platforms to do more to control the reach of misinformation on their platforms,” and “continued ... to discuss that message.” Waldo Dep. 107:21-108:5.

270. In addition, in that call, the OSG asked Facebook to report back on “what they were doing in response to the advisory, if they were taking any actions.” *Id.* at 109:2-4.

271. In addition, Patil was “also asking the data impact questions.” *Id.* at 109:24.

272. OSG perceived that OSG’s and the White House’s public statements criticizing Facebook put economic pressure on Facebook, and that Facebook was engaging with Dr. Murthy to “keep Dr. Murthy from saying ... any other things that might be viewed as bad for their business.” *Id.* at 113:13-15.

273. Waldo agrees that the events of July 15 and July 16 put unique pressure on Facebook: “when you add the press conference remarks plus President Biden’s remarks, it made it seem as though ... there was more attention on Facebook.” *Id.* at 116:2-5.

274. The OSG’s “subject matter experts” – Kyla Fullenwider, Daniel Tartakovsky, and DJ Patil of the White House – believed that misinformation “was a problem across multiple platforms.” *Id.* at 116:15-16.

275. On July 30, 2022, Waldo had a meeting with Google and YouTube representatives, in which the representatives reported to OSG on what actions they were taking that were consistent with or in response to the health advisory: “The topics discussed included YouTube/Google following up on the announcement of the OSG Advisory to share more of the work it was doing around health mis- and disinformation.” Waldo Ex. 3, at 33.

276. When the OSG’s health advisory issued, Twitter’s policy handle publicly endorsed the OSG’s call for greater censorship of health misinformation: “[T]he Twitter policy handle ... either retweeted or quote tweeted and said something like, we agree. ... [W]e do need an all-society approach, and here's what we're doing.” Waldo Dep. 122:11-16.

277. On August 10, 2021, Waldo and Rob Flaherty had a call with Facebook in which Facebook reported back to federal officials on its actions to remove misinformation, including the details of “an operation [Facebook] uncovered that is related to vaccine misinformation.” Waldo Ex. 3, at 33 (alteration in original). According to Waldo, “Brian Rice had requested a call with me and Rob [Flaherty] and, during the call, flagged that Facebook ... had done some sort of internal operation where ... they discovered some misinformation pieces happening and had taken some corrective action.” Waldo Dep. 124:13-21.

278. Brian Rice was Facebook’s “main ... staff level liaison” with the federal officials. *Id.* at 125:2-3.

279. Facebook emailed Waldo and Flaherty “a COVID report list that had ... some sort of report from Facebook on a biweekly basis.” *Id.* at 126:11-16.

280. On September 14, 2021, Waldo had another meeting with Google/YouTube representatives, “to discuss a new policy we [YouTube] are working on as well as provide an update on our overall efforts to combat harmful COVID-19 misinformation on the platform.”

Waldo Ex. 3, at 33. This was the “second update by [Google/YouTube] to [OSG] following the health advisory of stuff they're doing to combat harmful COVID-19 misinformation through YouTube.” Waldo Dep. 129:7-12.

281. On May 28, 2021, a few days after meeting with Andy Slavitt and Dr. Murthy for the first time (and almost two months before OSG issued the Health Advisory and had the related meetings with Waldo and others), Nick Clegg emailed Dr. Murthy and stated that, “[a]s promised,” he was sending a report of misinformation on Facebook. Waldo Ex. 4, at 1. Clegg also “highlighted a few policy updates we announced yesterday regarding repeat misinformation,” including “expand[ing] penalties for individual Facebook accounts that share misinformation,” “add[ing] more context about pages that repeatedly share false claims,” and “redesign[ing] notifications when they share content that a fact-checker later rates.” *Id.*

282. These “policy updates” about increasing censorship were announced on May 27, 2021, two days after Nick Clegg’s meeting with Dr. Murthy and Andy Slavitt on May 25, 2021. Waldo Dep. 138:2-7.

283. Clegg plainly indicated that there had been prior conversations in which Slavitt and Dr. Murthy had demanded “defensive work” to remove misinformation: “We’re . . . committed to addressing the defensive work around misinformation that you’ve called on us to address.” Waldo Ex. 4, at 2. These prior conversations were not disclosed in OSG’s responses to interrogatories, which noted the first meeting with Dr. Murthy was a mere introductory meeting with Clegg on May 25, 2021. Waldo Ex. 3, at 32.

284. On June 14, 2021, Nick Clegg emailed Dr. Murthy another (“the latest”) “Facebook bi-weekly covid content report,” which he indicated was “as promised/discussed,” and offered

“[a]s always” to “jump on a call at any point ... to delve into any further details as needed.” Waldo Ex. 5, at 1.

285. The “Facebook bi-weekly covid content report,” *id.*, contained a report of “the most engaged posts ... with respect to both accurate and inaccurate information.” Waldo Dep. 140:8-10. Rob Flaherty of the White House also received these reports. *Id.* at 140:21-24.

286. Waldo admits that Facebook sending these biweekly reports to Dr. Murthy and Flaherty “had preexisted” and “predates the meeting” on May 25, 2021 – further indicating that OSG failed to disclose key meetings between Dr. Murthy and social media platforms in its interrogatory responses. *Id.* at 142:10-11.

287. On July 6, 2021, Waldo emailed contacts at Twitter to set up the “rollout call” before the health advisory and stated: “As you know, one of the issues Dr. Murthy has been thinking about is how to help stop the spread of health misinformation as we continue to tackle COVID19 and beyond. I know you and your teams are working hard and thinking deeply about this issue. We’d love to chat over zoom to connect and discuss what’s on the horizon for our teams.” Waldo Ex. 6, at 2; Waldo Dep. 145:15-146:22.

288. On July 6, 2021, Waldo sent an identical email to Facebook. Waldo Ex. 7, at 3-4. The purpose of these emails was to set up calls to announce the Surgeon General’s forthcoming health advisory on misinformation. Waldo Dep. 149:11-16. Because of scheduling conflicts, the “rollout call” with Facebook was not scheduled until July 16, the day after the advisory was announced and the same day President Biden stated of Facebook that “they’re killing people.” *Id.* at 149:11-17.

289. On July 6, 2021, Waldo also sent an email to YouTube with a similar statement to set up a rollout call with YouTube. Waldo Ex. 8, at 3. Waldo's emails make clear that OSG's message and purpose was to "stop the spread of misinformation" on social-media platforms. *Id.*

290. In these calls, "we had Kyla [Fullenwider] on the call and giving them a high-level update that we're going to have this advisory come out and that we want them to take a look at it." Waldo Dep. 153:23-154:1.

291. On July 10, 2021, Nick Clegg emailed Dr. Murthy, attaching another bi-weekly Covid content report, and stated, "I understand ... that my team is meeting with yours next week to delve deeper into our [C]ovid misinformation efforts." Waldo Ex. 9, at 1. Waldo understands that this refers to the July 16 rollout meeting. Waldo Dep. 155:12-18.

292. In the July 16, 2021 meeting with Facebook, Kyla Fullenwider went over the advisory, and then "asked additional questions ... related to Facebook's efforts to combat health misinformation," including "some questions about, again, the research side.... [S]ome questions came up about CrowdTangle, if I recall correctly which was a ... data port for ... some ways to understand the Facebook, again, impact and research of the misinformation." *Id.* at 157:21-159:9.

D. The Surgeon General's Public Pressure Campaign.

293. On July 15, 2021, Dr. Murthy participated in a White House press conference with White House Press Secretary Jennifer Psaki to announce the Surgeon General's Health Advisory on Misinformation. Waldo Ex. 10. Psaki announced of Dr. Murthy that "[t]oday, he published an advisory on health misinformation as an urgent public health crisis." *Id.* at 1.

294. At the press conference, Dr. Murthy described misinformation as "one of the biggest obstacles that's preventing us from ending this pandemic," and stated: "Today, I issued a Surgeon General's Advisory on the dangers of health misinformation. Surgeon General

Advisories are reserved for urgent public health threats.... [T]oday we live in a world where misinformation poses an imminent and insidious threat to our nation’s health.” *Id.* at 2. He stated that “misinformation takes away our freedom to make informed decisions about our health and the health of our loved ones.” *Id.* at 2.

295. Dr. Murthy’s definition of “misinformation” incorporates the notion that the definition changes over time: “Health misinformation is false, inaccurate, or misleading information about health, according to the best evidence at the time.” *Id.* at 2. Waldo agrees that this definition “contemplate[s] that what constitutes misinformation might change over time,” and that “something that we now think is misinformation may later turn out to be accurate information ... [a]nd vice versa.” Waldo Dep. 164:17-165:7.

296. Dr. Murthy stated that those who question mask mandates and decline vaccination are following misinformation: “During the COVID 19 pandemic, health misinformation has led people to resist wearing masks in high-risk settings. It’s led them to turn down proven treatments and to choose not to get vaccinated. This has led to avoidable illnesses and death. Simply put, health [mis]information has cost us lives.” Waldo Ex. 10, at 2.

297. Dr. Murthy placed specific blame on social-media platforms for the spread of misinformation: “Now, health misinformation didn’t start with COVID-19. What’s different now, though, is the speed and scale at which health misinformation is spreading. Modern technology companies have enabled misinformation to poison our information environment with little accountability to their users. They’ve allowed people who intentionally spread misinformation — what we call ‘disinformation’ — to have extraordinary reach.” *Id.* at 2. Dr. Murthy described social-media companies as enabling the spread of “poison” in our “information environment.” *Id.*

298. He blamed the platforms' algorithms and features for the spread as well: "They've designed product features, such as 'Like' buttons, that reward us for sharing emotionally charged content, not accurate content. And their algorithms tend to give us more of what we click on, pulling us deeper and deeper into a well of misinformation." *Id.*

299. Echoing the language of the Virality Project, Dr. Murthy stated, "we need an all-of-society approach to fight misinformation." *Id.* at 2.

300. Dr. Murthy announced: "we're saying we expect more from our technology companies. We're asking them to operate with greater transparency and accountability. We're asking them to monitor misinformation more closely. We're asking them to consistently take action against misinformation super-spreaders on their platforms." *Id.* at 3. Both the call for "transparency and accountability" and the request for increased monitoring and greater censorship of "super-spreaders" mirror the Virality Project report. *See infra.*

301. Both Dr. Murthy's public statements and his health advisory repeatedly use the word "accountable" and "accountability" to refer to the social-media platforms—again, echoing the Virality Project report. *See id.* at 2, 3, 5; Waldo Ex. 11, at 14, 16.

302. Waldo agrees that the word "accountable" carries with it the threat of consequences; he concedes that "accountability includes accepting the consequences for when you do something wrong ... or inappropriate." Waldo Dep. 171:4-8. Thus, the OSG's repeated reference to holding social-media platforms "accountable" entails an implied threat of adverse consequences if the platforms do not censor more health misinformation. *See id.*

303. The Surgeon General's use of the word "accountable" also echoes the repeated use of the word "accountable" by elected federal officials, including President Biden and his political allies, to threaten adverse legal consequences against social-media platforms if they do not increase

ensorship of disfavored speakers, speech, and viewpoints. *See, e.g.*, Jones Decl., Ex. R (quoting White House Communications Director Kate Bedingfield: “We’re reviewing [amending Section 230 of the Communications Decency Act], and certainly [the social media companies] should be held accountable. I think you’ve heard the president speak very aggressively about this.”).

304. Waldo agrees that Murthy’s comments entail that “there’s an obligation ... or certainly an imperative to do more. So ... not only stop but reduce or take some sort of mitigating efforts so that the misinformation and disinformation is not leading to poor health results for people.” Waldo Dep. 172:21-173:1.

305. Dr. Murthy’s call for greater “transparency” is a call for platforms to engage in the kind of data-sharing that Dr. Murthy, Rob Flaherty, DJ Patil, and Kyla Fullenwider, among others, demanded in private meetings with Facebook. *Id.* at 174:15-23. Again, this echoes the key recommendation of the Virality Project.

306. Waldo agrees that Dr. Murthy’s call for greater “accountability” includes a demand to “take more proactive steps to stop the spread of misinformation.” *Id.* at 176:1-4.

307. Dr. Murthy also demanded that the platforms do “much, much more” and “take aggressive action” against misinformation: “We know that the dramatic increase in the speed — speed and scale of spreading misinformation has, in part, been enabled by these platforms. So that’s why in this advisory today, we are asking them to step up. We know they have taken some steps to address misinformation, but much, much more has to be done. And we can’t wait longer for them to take aggressive action because it’s costing people their lives.” Waldo Ex. 10, at 5.

308. Dr. Murthy also stated that platforms “have to do more to reduce the misinformation that’s out there so that the true voices of experts can shine through.” *Id.* at 6.

309. After the advisory, OSG asked Facebook, Google/YouTube, and Twitter “as a follow-up what actions they might have taken in response to the advisory.” Waldo Dep. 181:15-21.

310. At the same press conference on July 15, 2021, Jennifer Psaki stated: “we are in regular touch with these social media platforms, and those engagements typically happen through members of our senior staff, but also members of our COVID-19 team.” Waldo Ex. 10, at 10.

311. Psaki stated: “We’ve increased disinformation research and tracking within the Surgeon General’s office. We’re flagging problematic posts for Facebook that spread disinformation.” *Id.*

312. “Regarding the Administration’s “asks” to social-media platforms, Psaki stated: “There are also proposed changes that we have made to social media platforms, including Facebook, and those specifically are four key steps: One, that they measure and publicly share the impact of misinformation on their platform. Facebook should provide, publicly and transparently, data on the reach of COVID-19 — COVID vaccine misinformation. Not just engagement, but the reach of the misinformation and the audience that it’s reaching.” *Id.* at 11. Again, this echoes the key recommendation of the Virality Project report. It also echoes Dr. Murthy’s call for “transparency” and the repeated private demands that Facebook give external researchers like Renee DiResta of the Virality Project access to its internal data. Waldo Dep. 191:17-21.

313. Psaki also stated: “Second, that we have recommended — proposed that they create a robust enforcement strategy that bridges their properties and provides transparency about the rules. So, about — I think this was a question asked before — there’s about 12 people who are producing 65 percent of anti-vaccine misinformation on social media platforms All of them remain

active on Facebook, despite some even being banned on other platforms, including Facebook — ones that Facebook owns.” Waldo Ex. 10, at 11.

314. Psaki stated: “Third, it’s important to take faster action against harmful posts. As you all know, information travels quite quickly on social media platforms; sometimes it’s not accurate. And Facebook needs to move more quickly to remove harmful, violative posts — posts that will be within their policies for removal often remain up for days. That’s too long. The information spreads too quickly.” *Id.*

315. Waldo agrees that the Surgeon General’s advisory calls for platforms to “move faster” and take “more aggressive” action against supposed misinformation. Waldo Dep. 194:20-21.

316. And Psaki stated, publicly criticizing Facebook: “Finally, we have proposed they promote quality information sources in their feed algorithm. Facebook has repeatedly shown that they have the levers to promote quality information. We’ve seen them effectively do this in their algorithm over low-quality information and they’ve chosen not to use it in this case. And that’s certainly an area that would have an impact.” Waldo Ex. 10, at 11.

317. Psaki concluded: “So, these are certainly the proposals. We engage with them regularly and they certainly understand what our asks are.” *Id.*

318. On the same day, July 15, 2021, Surgeon General Murthy issued his advisory, “Confronting Health Misinformation: The U.S. Surgeon General’s Advisory on Building a Healthy Information Environment.” Waldo Ex. 11, at 1 (the “Health Advisory”); Waldo Dep. 196:21-197:1.

319. The Health Advisory describes censorship of health misinformation as a “moral and civic imperative”: “Health misinformation is a serious threat to public health. ... Limiting the

spread of health misinformation is a moral and civic imperative that will require a whole-of-society effort.” Waldo Ex. 11, at 2. The “whole-of-society effort” echoes the language of the Virality Project.

320. The Health Advisory states: “Misinformation has caused confusion and led people to decline COVID-19 vaccines, reject public health measures such as masking and physical distancing, and use unproven treatments.” *Id.* at 4.

321. The Health Advisory specifically blames social-media platforms for the spread of misinformation: “In recent years, the rapidly changing information environment has made it easier for misinformation to spread at unprecedented speed and scale, especially on social media and online retail sites, as well as via search engines.” *Id.* at 5. According to the Advisory, “misinformation is often framed in a sensational and emotional manner that can connect viscerally, distort memory, align with cognitive biases, and heighten psychological responses such as anxiety. People can feel a sense of urgency to react to and share emotionally charged misinformation with others, enabling it to spread quickly and go ‘viral.’” *Id.*

322. In addition, the Advisory blames “product features” of platforms: “[P]roduct features built into technology platforms have contributed to the spread of misinformation. For example, social media platforms incentivize people to share content to get likes, comments, and other positive signals of engagement. These features help connect and inform people but reward engagement rather than accuracy, allowing emotionally charged misinformation to spread more easily than emotionally neutral content.” *Id.*

323. The Advisory also faults platforms’ “algorithms”: “algorithms that determine what users see online often prioritize content based on its popularity or similarity to previously seen

content. As a result, a user exposed to misinformation once could see more and more of it over time, further reinforcing one's misunderstanding." *Id.*

324. The Health Advisory specifically called for platforms to enact "policy changes" to reduce the spread of misinformation: "**Implement product design and policy changes on technology platforms** to slow the spread of misinformation." *Id.* at 7 (bold in original).

325. The Health Advisory also explicitly threatened future "legal and regulatory measures" to combat misinformation: "**Convene federal, state, local, territorial, tribal, private, nonprofit, and research partners** to explore the impact of health misinformation, identify best practices to prevent and address it, issue recommendations, and find common ground on difficult questions, including *appropriate legal and regulatory measures that address health misinformation ...*" *Id.* at 7 (bold in original, italics added).

326. Under the heading "What Technology Platforms Can Do," the Health Advisory called for platforms to take a series of steps to increase and enable greater social-media censorship of "misinformation," including the following: "[M]ake meaningful long-term investments to address misinformation, including product changes. Redesign recommendation algorithms to avoid amplifying misinformation, build in "frictions" ... to reduce the sharing of misinformation, and make it easier for users to report misinformation. Give researchers access to useful data to properly analyze the spread and impact of misinformation. Strengthen the monitoring of misinformation. ... [A]ddress misinformation in live streams, which are more difficult to moderate due to their temporary nature and use of audio and video. Prioritize early detection of misinformation 'super-spreaders' and repeat offenders. Impose clear consequences for accounts that repeatedly violate platform policies. Evaluate the effectiveness of internal policies and practices in addressing misinformation and be transparent with findings. Publish standardized

measures of how often users are exposed to misinformation and through what channels, what kinds of misinformation are most prevalent, and what share of misinformation is addressed in a timely manner. Communicate why certain content is flagged, removed, downranked, or left alone.” *Id.* at 12.

327. Waldo agrees that the Advisory calls for platforms to provide “a method for users to flag problematic posts so that they could be reviewed for content modulation, policy violations.” Waldo Dep. 200:25-201:5.

328. Waldo agrees that “clear consequences” for repeat violators include “things like issuing strikes against them, suspensions ... and sometimes permanent deplatforming.” *Id.* at 205:6-13.

329. In its conclusion, the Health Advisory states: “We need institutions to recognize that this issue is their moral and civic responsibility, too, and that they are accountable.” Waldo Ex. 11, at 16. Waldo agrees that the word “accountable” is repeated in the Surgeon General’s remarks and the Advisory itself. Waldo Dep. 206:3-11.

F. The Surgeon General’s Collaboration with the Virality Project.

330. Also on January 15, 2021, Surgeon General Murthy participated in a separate launch event hosted by Stanford Internet Observatory, which was then operating the Virality Project. Waldo Ex. 12, at 1; Waldo Dep. 206:12-207:9.

331. In his public comments with Stanford Internet Observatory, Dr. Murthy stated: “We’re asking technology companies to operate with greater transparency and accountability so that misinformation doesn’t continue to poison our sharing platforms, and we know the government can play an important role, too.” Waldo Ex. 12, at 8 (Audio Tr. 6). This reiterates the key words “poison” and “accountability.”

332. Waldo describes government's "important role" as including "bringing stakeholders ... together with urgency around a common vision for a healthy information environment ... the government can help bring together stakeholders ... what I would call the convening power of a bully pulpit." Waldo Dep. 209:15-22. This would include bringing social-media platforms around to the government's "common vision" for censorship. *Id.* at 209:24-210:8.

333. Dr. Murthy was asked, "do you believe a rapid response initiative like the Virality Project could be implemented at the federal level to combat health misinformation on a national scale from the top down?" and he answered that "having a federal organized effort to combat misinformation" is "a really, really interesting idea." Waldo Ex. 12, at 10 (Audio Tr. 8).

334. Dr. Murthy stated: "[T]echnology companies have a really important role. They must step up and play to slow the spread of misinformation on their sites wh[ether] that's by either sharing data with people and researchers about what interventions they're making and the impact that's having or whether it's by changing their algorithms and making other alterations to their platform to identify misinformation early and slow its spread and avoid sending more information of misinformation to people who are consuming it." *Id.* at 11 (Audio Tr. 9).

335. Waldo agrees that "the purpose of the data sharing is so that outside people come in and ... assess how well they're doing with their own internal policies to combat the spread of misinformation." Waldo Dep. 211:6-11.

336. Dr. Murthy expressly stated that he had been coordinating with Renee DiResta and the Virality Project and planned to continue to do so: "Well, thank you, Renee, for those kind words. ... I do want to say thank you to you personally because you have been a leader in this effort long before many people recognize[d] what was happening with COVID misinformation. You were there looking at the data, looking at the numbers, speaking out, raising the flags, saying

there's something here we've got to address and do so urgently. I have personally learned a lot from your work and from our conversations together, and so I just want to say thank you to you for everything you've done for being such a great partner for moderating our event today, and just for being a partner in the future, because I know we have lots and lots more that we've got to do together.” Waldo Ex. 12, at 12 (Audio Tr. 10).

337. Dr. Murthy also stated that his team had been “partnered with” the Stanford Internet Observatory over “many months”: “myself, my team, we're committed to working with you, Renee, with others ... who we've been ... partnered with over the last many months....” *Id.* at 13 (Audio Tr. 11).

G. The Surgeon General’s “Angry” and “Tense” Meetings With Platforms.

338. On July 16, 2021, the New York Times reported that President Biden publicly stated about Facebook, “They’re killing people” by allowing misinformation to spread on its platforms. Waldo Ex. 14, at 1.

339. The article reported that “this week, White House officials went further and singled out social media companies for allowing false information to proliferate. That came after weeks of failed attempts to get Facebook to turn over information detailing what mechanisms were in place to combat misinformation about the vaccine, according to a person familiar with the matter.” *Id.*

340. The same article reported that Jennifer Psaki stated, “We raised for them in our direct channels, of which every administration has always had with every social media platform, that we’re seeing this trend.” *Id.* at 2.

341. The article reported that there had been a series of “talks” between Surgeon General Murthy and Facebook “since January” of 2021—none of which were disclosed in OSG’s

interrogatory responses: “Since January, senior White House officials, including the surgeon general, Dr. Vivek Murthy, have been in talks with the social media company to stop the spread of false stories about vaccination side effects and other harms.” *Id.* at 2. In these “talks,” federal officials demanded Facebook’s internal data on misinformation on its platforms: “Despite repeated requests by the White House, Facebook has not shared even basic data on how much vaccine misinformation exists and if the company’s efforts to stop its spread are working, according to the person familiar with the talks.” *Id.* at 2.

342. “When administration officials presented data from CrowdTangle, a content tracking tool owned by Facebook, that showed vaccine misinformation was soaring, company officials dismissed its accuracy.” *Id.* at 2.

343. In one meeting, Dr. Murthy “angrily” demanded that Facebook censor misinformation instead of just promoting reliable information: “In another meeting with Dr. Murthy, ... Dr. Murthy angrily said that while the company [Facebook] promoted its efforts to encourage vaccination, it did not do enough to defend against bad information.” *Id.* at 2.

344. In another “tense” meeting in “late spring,” Dr. Murthy repeated similar demands: “In one tense meeting in the late spring, according to the person familiar with the matter, a Facebook official responded defensively, ‘How do you know if your efforts are working?’” *Id.* at 2.

345. Waldo agrees that this news report “does not accurately describe ... that introductory call between Nick Clegg, Andy Slavitt, and Dr. Murthy on May 25th of 2021,” which is the only meeting involving Dr. Murthy disclosed in OSG’s interrogatory responses. Waldo Dep. 219:17-21; 222:14-23. In those responses, OSG did not disclose Dr. Murthy’s “tense” and “angry” meetings with Facebook during the spring of 2021.

H. The Surgeon General Leverages Public Pressure to Increase Censorship.

346. On July 21, 2021, five days after the July 16 meeting where “the Facebook folks ... had sad faces,” *id.* at 226:15-16, Facebook emailed Waldo and Kyla Fullenwider, stating: “We wanted to follow up with you on a few questions you asked in the meeting focused on CrowdTangle, data on the online interventions, and Facebook's borderline content policies,” Waldo Ex. 16, at 1. This referred to the July 16 meeting with Waldo and Fullenwider. Waldo Dep. 227:3-8.

347. In the email, Facebook reported back to OSG on “interventions that the team mentioned, some of which specifically create frictions in how people consume information.” Waldo Ex. 16, at 1. These include limiting forwarded WhatsApp messages, placing “warning labels on fact checked content,” and creating “friction when someone goes to share these posts on Facebook.” *Id.*

348. Facebook also reported to OSG a series of censorship policies and actions, including the following: “We remove COVID-19 content that contributes to the risk of imminent physical harms, including numerous false claims about the COVID-19 vaccine. We permanently ban pages, groups, and accounts that repeatedly break our rules on COVID-19 misinformation. We also reduce the reach of posts, pages, groups, and accounts that share other false claims that do not violate our policies but may present misleading or sensationalized information about COVID-19 and vaccines.” *Id.* at 1. Evidently, OSG’s inquiry at the July 16 meeting about “borderline content” related to the censorship of such content. *See id.* Waldo agrees that Fullenwider asked Facebook to report back about censorship at the July 16 meeting: “The response indicates that it's about COVID policies including removal, banning and reducing the reach.” Waldo Dep. 232:9-11, 233:12-234:1.

349. On July 16, 2021, Nick Clegg emailed Dr. Murthy and stated, “Dear Vivek, Reaching out after what has transpired over the past few days following the publication of the misinformation advisory and culminating today in the President's remarks about us.” Waldo Ex. 17, at 1-2. He then stated, “I know our teams met today to better understand the scope of *what the White House expects of us on misinformation* going forward.” *Id.* at 2 (emphasis added). Facebook understood the purpose of the meetings was to understand the White House’s expectations on misinformation. *See id.*

350. Clegg indicated that there had been a history of prior discussions with Dr. Murthy and the White House in which federal officials demanded greater censorship—both more stringent policies and greater enforcement—which were not disclosed in OSG’s interrogatory responses: “Certainly we understand (and have understood for some time) that there is disagreement on some of the policies governing our approach and how they are being enforced.” *Id.* at 2. Clegg asked for a meeting with Dr. Murthy, who did not immediately respond. *Id.* at 1-2.

351. On July 18, 2021, having received no response to his email requesting a meeting, Clegg texted Dr. Murthy stating, “I imagine you and your team are feeling a little aggrieved – as is the FB team, it’s not great to be accused of killing people – but as I said by email I’m keen to find a way to deescalate and work together collaboratively. I am available to meet/speak whenever suits.” Waldo Ex. 18, at 1.

352. On July 19, Dr. Murthy responded by email and agreed to a meeting, which was scheduled for July 23, 2021. Waldo Ex. 17, at 1; Waldo Dep. 241:1-14.

353. At the July 23, 2021 meeting, “Dr. Murthy asked Mr. Clegg about ... the research questions about understanding the reach of the data in terms the impact of the ... health

misinformation. And ... DJ [Patil] had some questions about also on the data side and Nick [Clegg] offered to connect DJ with a data person from Facebook.” Waldo Dep. 242:8-16.

354. Later on June 23, 2021, after the meeting between Dr. Murthy and Nick Clegg, Clegg sent a follow-up email to Dr. Murthy stating: “Dear Vivek, if I may, thanks again for taking the time to meet earlier today..... I wanted to make sure you saw the steps we took just this past week to adjust policies on what we are removing with respect to misinformation as well as steps taken to further address the ‘disinfo dozen’....” Waldo Ex. 19, at 1.

355. Clegg’s reference to “just this past week” refers to the one-week period between this July 23 email and rollout of the Advisory on July 15 and the President’s comment “They’re killing people” on July 16. *Id.*; Waldo Dep. 244:14-19.

356. It is evident that Dr. Murthy and federal officials pressured Facebook for specific censorship actions in the July 23 meeting, because the same day as the meeting, Clegg reported back to them a series of new censorship actions and policies. First, Clegg reported enforcement actions against the “Disinfo Dozen” whom Jennifer Psaki had publicly demanded censorship: “We removed 17 additional Pages, Groups, and Instagram accounts tied to the disinfo dozen (so a total of 39 Profiles, Pages, Groups, and IG accounts deleted thus far, resulting in every member of the disinfo dozen having had at least one such entity removed).” Waldo Ex. 19, at 1. Clegg reported that Facebook was secretly censoring accounts associated with the Disinfo Dozen even if they had not violated Facebook’s policies: “We are also continuing to make 4 other Pages and Profiles, which have not yet met their removal thresholds, more difficult to find on our platform.” *Id.*

357. Clegg also reported that Facebook had amended its censorship policies to make them more restrictive: “We also expanded the group of false claims that we remove, to keep up with recent trends of misinformation that we are seeing.” *Id.*

358. Clegg also committed to “do more” to censor misinformation in response to federal officials’ demands: “We hear your call for us to do more and, as I said on the call, we’re committed to working toward our shared goal of helping America get on top of this pandemic.” *Id.* Dr. Murthy, evidently, demanded that Facebook “do more” against misinformation on its platforms in the July 23 phone call. *See id.*

359. Clegg further agreed to accede to federal officials’ demands that Facebook make its internal data on misinformation available to federal officials and researchers like Renee DiResta of the Virality Project: “We will reach out directly to DJ to schedule a deeper dive on how to best measure Covid related content and how to proceed with respect to the question around data.” *Id.* at 1-2.

360. Clegg also pledged to report back to Dr. Murthy repeatedly so that federal officials could monitor Facebook’s “progress” on censoring misinformation: “We’d also like to begin a regular cadence of meetings with your team so that we can continue to update you on our progress. You have identified 4 specific recommendations for improvement and we want to make sure to keep you informed of our work on each.” *Id.* at 2. Clegg also promised to continue sending federal officials regular updated reports on the spread of misinformation on Facebook’s platforms. *Id.*

361. Clegg concluded by promising that Facebook would “strive” to meet federal officials’ expectations on censorship: “we will strive to do all we can to meet our shared goals.” *Id.*; *see also* Waldo Dep. 245:6-247:4.

362. Waldo agrees that Clegg’s statement “We hear your call for us to do more” in the July 23 email is an accurate understanding of the Surgeon General’s message from the July 15 press conference, the Health Advisory, and the July 15 rollout at Stanford Internet Observatory: “Yes. I think, as we've established, the advisory and ... the remarks, and the event with the Stanford

Internet Observatory, Dr. Murthy is calling on ... social media companies to do more to address the problem of health mis- and disinformation.” Waldo Dep. 251:6-12.

363. After the July 23 email, Waldo connected Brian Rice of Facebook with DJ Patil to discuss data-sharing to monitor social-media misinformation between Facebook and federal officials. *Id.* at 252:9-19.

364. Additionally, on the July 23 call with Nick Clegg, the OSG specifically asked Facebook to report back on any additional steps they were taking in response to the Health Advisory to increase censorship of misinformation on their platforms. Waldo Ex. 21, at 1. On August 6, 2021, Waldo emailed Brian Rice and Nick Clegg of Facebook and stated, “I know on the call with Dr. Murthy he’d mentioned seeing if you were able to send an update of any new/additional steps you are taking with respect to health misinformation in light of the advisory.” *Id.* Waldo noted that “we are asking all platforms for this type of update.” *Id.* Waldo asked for a report from Facebook within two weeks: “Would you be able to send something over within two weeks?” *Id.*

365. In the same email, Waldo connected Facebook with DJ Patil of the White House “on next steps for connecting on data.” *Id.*

366. Facebook responded that it was planning “additional steps” to increase censorship of misinformation, and promised to report back to the Surgeon General in 2 weeks: “Our teams have been working on additional steps—we will have something back to you within two weeks outlining our approach.” *Id.* Facebook also followed up with Patil to schedule the meeting about using Facebook’s internal data to monitor speech on its platforms. *Id.*

367. Waldo admits that, during the July 23 call, “we asked for an update,” and that it was probably Dr. Murthy who asked for it. Waldo Dep. 256:20-23.

368. Waldo does not dispute that he asked “all platforms” to provide a similar “update” on new or additional steps to censor misinformation in light of the Advisory, and that “all platforms” means “Facebook, Twitter, Instagram, and YouTube, and Google.” *Id.* at 257:10-258:9.

369. On July 19, 2021, a few days after the President’s “They’re killing people” comments, Rob Flaherty of the White House emailed Dr. Murthy to put him in touch with an operative for the Democratic National Committee who works on misinformation and disinformation issues. Waldo Ex. 22, at 3. Flaherty wrote: “Vivek – wanted to link you with Jiore Craig, who’s been a critical leader of the DNC’s misinfo work for a long time, but also has been helping us think through mis/dis on the COVID side. I thought it would be great for you both to connect as OSG charts out next steps.” *Id.* Eric Waldo followed up to schedule a Zoom meeting on July 22 between Ms. Craig of the DNC and key members of the OSG’s staff. *Id.* at 1.

370. On August 18, 2021, Facebook again reported back to OSG about additional censorship actions against misinformation “superspreaders.” Waldo Ex. 24, at 1. Facebook stated, “Eric and DJ – flagging this post for you and for Surgeon General Murthy. This details how we are approaching content from the disinfo dozen.” *Id.* Facebook sent the same update to Rob Flaherty of the White House on the same day. *Id.* at 2.

371. The post was entitled, “How We’re Taking Action Against Vaccine Misinformation Superspreaders.” *Id.* at 1. The post detailed a long list of censorship actions taken against the “Disinfo Dozen,” including removing over three dozen pages, groups and accounts linked with them; imposing additional penalties on another two dozen pages, groups, and accounts linked with them; applying penalties to some of their website domains so that third parties posting their content will be deamplified; and removing the remaining violating content. *Id.* at 1.

372. As Waldo acknowledges, this was the “second report that Facebook has sent [OSG] after that July 23rd meeting where they're reporting back about actions taken against the Disinfo Dozen.” Waldo Dep. 268:12-16.

373. On August 20, 2021—two weeks after the August 6 email in which Waldo had requested a report within two weeks on Facebook’s new or additional steps to remove misinformation in light of the Health Advisory—Nick Clegg sent a long, detailed email to Dr. Murthy, Waldo, and DJ Patil, detailing Facebook’s additional censorship actions taken as a result of the Advisory. Waldo Ex. 25, at 1-3.

374. In the August 20 email, Clegg noted that Dr. Murthy had “asked for an update on existing and new steps that Facebook is taking.” *Id.* at 1. Clegg noted that Facebook was taking new steps in response to the pressure from the White House and Surgeon General since July 15 and 16: “In this update, we describe ... further policy work to enable stronger action against persistent distributors of vaccine misinformation.” *Id.*

375. In a lengthy section headed “Limiting Potentially Harmful Misinformation,” Clegg provided five bullet points and four sub-bullet points detailing expanded efforts of censorship by Facebook taken in response to the Advisory. *Id.* at 2. These included, among others, “expanding our COVID policies to further reduce the spread of potentially harmful content”; “increasing the strength of our demotions for COVID and vaccine-related content that third-party fact-checkers rate as ‘Partly False’ or ‘Missing Context’”; “making it easier to have Pages/Groups/Accounts demoted for sharing COVID and vaccine-related misinformation”; and “strengthening our existing demotion penalties for websites that are repeatedly fact-checked for COVID or vaccine misinformation content shared on our platform.” *Id.* at 2. Clegg also included a report of additional actions taken against the Disinfo Dozen. *Id.* Clegg also reported that Facebook

“continue[s] to experiment with signals that we can use ... to demote content that we predict will contain low quality information.” *Id.*

376. In another long section entitled “Increasing Transparency,” Clegg detailed a list of actions taken by Facebook to share data about the reach of misinformation on its platforms, per federal demands. *Id.* at 2-3; *see also* Waldo Dep. 269:20-277:8 (reviewing the content of the August 20 email in detail).

377. Waldo agrees that this email is “a report back to [OSG’s] request for report in two weeks related to actions they took in respect to the advisory.” Waldo Dep. 270:19-23.

378. Waldo responded to Clegg by stating that “we look forward to continuing to move forward together with urgency and solutions during these extraordinary times.” Waldo Ex. 25, at 1. The phrase “urgency and solutions” was intended to push Facebook to increase its anti-misinformation efforts: “I was hoping that Facebook would continue to move. Urgency means, you know, that they would take this seriously, and solutions means that they would also come with real solutions to the problems and not just pretend to solve problems.” Waldo Dep. 277:23-278:3.

379. Three days later, on August 23, 2021, Rob Flaherty of the White House emailed Facebook, asking for a report on how they intended “to promote” the FDA’s approval of the Pfizer vaccine and noting that the White House “[would] appreciate a push” of the vaccine information using specific “suggested language from [the White House].” Waldo Ex. 27, at 2. Facebook responded the same day with an additional report on new steps to remove vaccine misinformation: “We’re ... updating our misinformation policies to remove the specific claims that ‘there are no FDA-approved vaccines’ and ‘the Pfizer vaccine is not FDA-approved.’ We’ll also continue to look for claims that are no longer accurate given the approval today.” *Id.* at 1. Facebook forwarded

this report on increasing censorship to Waldo at OSG as well. *Id.*; *see also* Waldo Dep. 280:1-281:24.

380. On September 18, 2021, Facebook sent Eric Waldo and Rob Flaherty another bi-weekly report, and also noted that “I’m sure you also saw yesterday’s story in the WSJ about the spread of COVID-19 misinformation in comments on Facebook,” which Facebook disagreed with and offered to discuss. Waldo Ex. 30, at 1. Flaherty responded, “Happy to talk about it, Brian. Would be interested to see, as we have long asked for, how big the problem is, what solutions you’re implementing, and how effective they’ve been.” *Id.* Facebook promised, “we will circle back over the next few days to brief.” *Id.*

381. On September 29, 2021, Google emailed Eric Waldo to “share an update we recently made to YouTube’s policies pertaining to vaccine-related misinformation.” Google reported: “We just announced that we will be introducing a new policy that prohibits content that includes harmful misinformation about the safety, efficacy, or ingredients for currently administered vaccines...” Waldo Ex. 31, at 1.

382. On October 19, 2021, Rob Flaherty emailed Facebook, copying several White House officials and Eric Waldo, and asked Facebook to “connect on what the admin’s plans are for the 5-11 vaccine rollout.” Waldo Ex. 32, at 1. The “5-11 vaccine rollout” refers to the approval of vaccines for children ages 5 to 11 years old. Waldo Dep. 298:20-23.

383. Flaherty requested that Facebook report on its censorship plans for claims on social media about the authorization of vaccines for children ages 5 to 11: “We’d like to talk about what we’re seeing as the biggest headwinds we’re going to face, and discuss what you all are planning as we move into this next phase. We remain concerned about mis- and disinformation on feed and

groups, and the wide reach of hesitancy-inducing content across your platform.” Waldo Ex. 32, at 1.

384. Facebook responded, agreeing to the meeting: “we’d welcome the opportunity. Adding Felicia on our end to help coordinate.” Waldo Ex. 32, at 1.

385. Waldo states that he does not recall whether this meeting occurred or if he participated, but he agrees that the meeting probably occurred: “Probably. If they added schedulers, usually those meetings happen.” Waldo Dep. 300:14-23.

I. The Surgeon General and White House Hammer Facebook.

386. On October 28, 2021, the Washington Post ran a story based on information from Frances Haugen reporting that “Facebook researchers had deep knowledge of how coronavirus and vaccine misinformation moved through the company’s apps, according to documents disclosed by Facebook whistleblower Frances Haugen.” Waldo Ex. 33, at 1.

387. In response to the article, on October 29, Surgeon General Murthy issued a series of Tweets from his official Twitter account demanding that Facebook increase censorship and give outside researchers access to its data. Waldo Ex. 33, at 1. In the Tweet thread, Dr. Murthy stated: “I was deeply disappointed to read this story. Health misinformation has harmed people’s health and cost lives. In the Surgeon General’s Advisory on Health Misinformation, I stated clearly that tech platforms have a responsibility to improve our health information ecosystem. What continues to be lacking from Facebook and other tech companies is transparency and accountability. Only the companies understand the full extent of misinformation’s spread and impact – yet they have not yet shared this data with independent researchers and the public. Without this critical data, it is much harder to design the right interventions or hold the platforms accountable. ... We must demand Facebook and the rest of the social media ecosystem take responsibility for stopping health

misinformation on their platforms. The time for excuses and half measures is long past. We need transparency and accountability now. The health of our country is at stake.” *Id.* Dr. Murthy repeated the mantras “transparency” and “accountability,” threatening that the federal government would “hold the platforms accountable” for misinformation. *Id.*

388. This Tweet thread reflects Dr. Murthy’s own words, as he “made the final and substantial edits” to the Tweets. Waldo Dep. 303:25-304:17.

389. Waldo agrees that the Twitter thread demands “transparency and accountability around health misinformation, especially vis-à-vis the social media organizations,” and “demands that Facebook and the other platforms do more” to “stop[] health misinformation.” *Id.* at 305:6-22. “Lots of work went into” crafting that message, according to Waldo. *Id.* at 306:7-8.

390. On October 28, 2021, the same day as the Washington Post article, Rob Flaherty emailed Brian Rice of Facebook a hyperlink to the article. The only text in the email was the subject line, which stated: “not even sure what to say at this point.” Waldo Ex. 35, at 1-2.

391. Facebook responded to Flaherty by stating, “nothing in the story is inconsistent with what we briefed on,” and providing its account of the facts underlying the story. *Id.* at 1. Facebook then forwarded this response to Waldo and the OSG, noting that “I saw the Surgeon General’s reaction on Twitter,” and asking for “a longer conversation next week” about the issue. *Id.*

392. Waldo describes both the Surgeon General’s public Tweet threat, and Rob Flaherty’s private email to Facebook, as different ways of “hitting up Facebook” about the Frances Haugen article: “this was one of the most popular articles in all of news that week, so I’m not surprised that people who care a lot about this issue were certainly hitting up Facebook about it.” Waldo Dep. 307:13-22.

393. On October 28, 2021, Nick Clegg also emailed Dr. Murthy and asked for a meeting to discuss the “intense debate that’s been prompted by the documents disclosed by a former employee.” Waldo Ex. 36, at 2. Waldo responded on behalf of the OSG, stating that “we have seen the recent public reports around Facebook and misinformation. We are certainly concerned about what we are seeing, given our emphasis on health misinformation in our advisory and the ongoing conversations our teams have been having. As has been the case, you’ll continue to see us raising the issue of health misinformation in public and in private as a critical public health issue.” *Id.* at 1.

394. Regarding his reference to “in private,” Waldo admits that this refers to “closed-door meetings” with platforms like Facebook: “in the government, you’re not always just doing a panel that’s open press, you’re meeting with stakeholders ... in closed-door meetings....” Waldo Dep. 312:13-16. The Surgeon General’s Office was continuously pushing for action against health misinformation “in public and private” meetings with stakeholders: “talking about health mis- and disinformation was in our talking points of when we talked to stakeholders in public and private.” *Id.* at 313:8-11.

395. The next day, October 29, 2021, Facebook sent a long email to Rob Flaherty, Eric Waldo, and several other White House officials referring back to an October 25 meeting about vaccines for children ages 5-11. Waldo Ex. 37, at 3-4; Waldo Dep. 315:8-316:15. The email reported to the White House and OSG a “detailed description of [Facebook’s] plans” for the approval of vaccines for children. *Id.* at 4. The plans included immediately updating policies to censor claims relating to vaccination of children: “As discussed, soon as the EUA is issued, we will also be able to apply claims from our current misinfo policies for COVID-19 vaccines to include claims about child vaccinations.” *Id.*

396. Facebook also noted that it was relying directly on the CDC to decide what to censor: “We were able to make this change based on the conversation we had last week with the CDC.... There are several claims we will be able to remove as soon as the CDC debunks them.” *Id.*

397. Facebook then asked federal officials to provide a federal health authority to dictate what content would be censored on Facebook’s platforms: “We expect the approval of COVID vaccines for kids aged 5-11 will be another significant peak of new misinformation claims. Our policy allows us to take action against this content once those claims have been debunked and confirmed harmful by a public health authority. We’re committing to addressing these quickly; to do so effectively, we will need a channel to a health expert with whom we can discuss these claims in real time. Is this something we could partner on, and if so, would your team be able to connect us with a point person?” *Id.*

398. On November 4, 2021, Facebook followed up again to OSG and the White House with additional reports of censoring misinformation: “Last Friday, we updated our misinformation policies for COVID-19 vaccines to make clear they apply to claim about children,” identifying a list of specific claims. *Id.* at 1.

399. Facebook made clear that the CDC was serving as the “health expert” who was dictating what could be said on Facebook’s platforms “in real time”: “We’re grateful to our partners at the CDC for helping get these debunked in advance of the announcement, and we look forward to staying connected on emerging COVID misinformation trends.” *Id.* at 1, 3.

J. The Surgeon General Threatens Regulation to Increase Censorship.

400. On December 21, 2021, Dr. Murthy gave a podcast on the Omicron variant in which he again publicly threatened to hold the social-media platforms “accountable” for not censoring

misinformation: “number one, we have to track down where this misinformation is coming from and understand how to hold platforms accountable, new technology platforms that are driving so much of the misinformation spread.... [B]y allowing this misinformation to proliferate on their sites, they're subjecting people in the United States and around the world to extraordinary harm, and they're doing so with little accountability at this moment and really with very little transparency. That can't be allowed to continue because it's putting everyone's health at risk.” Waldo Ex. 38, at 4 (Audio Tr. 7).

401. Dr. Murthy demanded “aggressive action” from the platforms to censor speech: “I do think that part of what they have to do, the platforms is take aggressive action against people who are intentionally spreading misinformation.” *Id.*

402. Waldo agrees that this message is “consistent with his previous statements as well as the content within the advisory itself.” Waldo Dep. 321:22-24.

403. As Waldo concedes, Dr. Murthy’s threat to hold platforms “accountable” and his demand for “aggressive action” to censor misinformation “is consistent with the messaging we’ve reviewed all day today of the advisory, the rollout, the public statements” by OSG. *Id.* at 322:22-24.

404. On January 3, 2022, Dr. Murthy participated in Alyssa Milano’s podcast. Waldo Ex. 39, at 1. In the podcast, Dr. Murthy stated that the “sophistication with which this misinformation is spreading is truly unprecedented, and a lot of has been enabled by technology platforms in the social media which enable the spread, and ... the platforms need to do a lot more is step up, to be accountable for making their spaces safer.” *Id.* at 3 (Audio Tr. 2). He also stated, “finally, I just want to come back to the technology companies for a moment here, because unless those platforms step up and make their spaces safer and reduce the amount of misinformation on

their site, it's going to be pretty tough to get a full handle on this spread of misinformation.” *Id.* at 5 (Audio Tr. 4).

405. Immediately after these comments, the podcast broadcast public comments by President Biden, stating: “Joe Biden: The unvaccinated are responsible for their own choices, but those choices had been shulled [*sic*] by dangerous misinformation on cable TV and social media. You know, these companies ... are making money by ped[dling] lies and allowing misinformation that can kill their own customers and their own supporters. It's wrong. It's immoral. I call on the purveyors of these lies and misinformation to stop it. Stop it now.” *Id.*

406. Waldo agrees that this podcast is “aligned with ... the advisory and the other public statements we’ve seen so far.” Waldo Dep. 327:8-10.

407. Dr. Murthy also called for the platforms to “go after people who are superspreaders of misinformation on these sites,” which Waldo agrees is “entirely consistent ... with the messages that Dr. Murthy was sharing about health mis- and disinformation.” *Id.* at 329:23-330:18.

408. On February 14, 2021, Dr. Murthy participated in a panel discussion hosted by the Rockefeller Foundation. Waldo Ex. 41. Dr. Murthy stated, “what feels different in this moment compared to ten years ago or [twenty] years ago is this speed, scale, and sophistication with which this misinformation is spreading and much of it has been enabled, in fact, by technology platforms, and we talk to people about where they're encountering misinformation. It's off and on social media channels and other tech platforms. ... We need certainly technology companies to step up and do more, to help reduce this spread of misinformation, and to be transparent with the public about how much misinformation is being transacted on their sites and whether their methods of addressing it are working or not. We do not have enough transparency on that front and that is hindering us in our response of misinformation.” *Id.* a 6-7 (Audio Tr. 9-10).

409. Waldo agrees that this is “a consistent message with what we've seen in previous public statements, interviews, as well as the advisory itself.” Waldo Dep. 331:23-25.

410. In the same panel, Dr. Murthy stated that there is a role for government to set “safety standards” when it comes to misinformation, which directly suggests government regulation and foreshadowed the OSG’s forthcoming Request for Information (RFI): “And, of course, there's a role for government here as well to set safety standards, to push for transparency and accountability, particularly from platforms.” Waldo Ex. 41, at 8 (Audio Tr. 11). Dr. Murthy then immediately foreshadowed the OSG’s forthcoming Request for Information (RFI) as a step toward government “setting safety standards”: “There are steps we are working now that we will be -- you know, have more to say about it in the ... coming weeks and months ahead, to try to, in fact, gather even more information about the impact of health misinformation on health professionals of the public and also in the role that technology companies may be playing on that on that front.” *Id.* Less than a month later, the OSG issued a formal RFI for information about misinformation on social media platforms.

411. On March 3, 2021, the OSG issued a formal RFI in the Federal Register, seeking information from social-media platforms and others about the spread of misinformation on social media. Waldo Ex. 42 (87 Fed. Reg. 12712). The RFI is entitled, “Impact of Health Misinformation in the Digital Information Environment in the United States Throughout the COVID–19 Pandemic Request for Information (RFI).” *Id.* at 1.

412. “Kyla [Fullenwider] was the primary driver on the RFI from a content expert perspective.” Waldo Dep. 338:22-23. Though she was employed at U.S. Digital Response, “she was doing work on behalf of the Surgeon General.” *Id.* at 340:8-9. Kyla Fullenwider is also

responsible for receiving and reviewing the responses to the RFI. *Id.* at 362:6-10. “Kyla was the subject matter expert who was guiding this RFI process.” *Id.* at 362:15-17.

413. The RFI defines “technology platforms” very broadly, indicating that the Surgeon General is expanding its attempts to control the spread of so-called “misinformation”: “Technology platforms include the following: General search engines, content sharing platforms, social media platforms, e-commerce platforms, crowd sourced platforms, and instant messaging systems.” Waldo Ex. 42, at 2; *see also* Waldo Dep. 341:14-342:7.

414. Under the heading “Information About Technology Platforms,” the RFI seeks a long series of detailed information about misinformation on such platforms, including “Information about how widespread COVID–19 misinformation is on individual technology platforms,” Waldo Ex. 42, at 2; “any aggregate data and analysis on the prevalence of COVID–19 misinformation on individual platforms including exactly how many users saw or may have been exposed to instances of COVID–19 misinformation,” *id.* at 2-3; and “[a]ny aggregate data and analysis on how many users were exposed, were potentially exposed, or otherwise engaged with COVID–19 misinformation,” *id.* at 3.

415. The RFI also seeks detailed information about censorship policies and how they are enforced: “Information about COVID–19 misinformation policies on individual technology platforms,” and “[a]ny aggregate data and analysis of technology platform COVID–19 misinformation policies including implementation of those policies and evaluations of their effectiveness.” *Id.* at 3.

416. The RFI also seeks detailed information about disfavored *speakers* on social-media platforms, requesting “[i]nformation about sources of COVID–19 misinformation,” including “[i]nformation about the major sources of COVID–19 misinformation associated with exposure.”

Id. at 3. The RFI makes clear that “source” refers to *speakers* on platforms: “By source we mean both specific, public actors that are providing misinformation, as well as components of specific platforms that are driving exposure to information.” *Id.* at 3.

417. Especially in light of Dr. Murthy’s prior public statements about the government “setting safety standards” for misinformation, Waldo Ex. 41, at 8 (Audio Tr. 11), the RFI carries a clear implied threat of future regulation against the social-media and other technology platforms.

418. Contemporaneous media coverage portrayed the RFI as a “demand” for information from platforms. *See, e.g.*, Waldo Ex. 44, at 1 (Brad Dress, *Surgeon General Demands Data on COVID-19 Misinformation from Major Tech Firms*, The Hill (Mar. 3, 2022, 11:24 am)).

419. Max Lesko, the Surgeon General’s Chief of Staff, also sent the RFI to several major tech platforms with a formal letter requesting that they respond. Waldo Dep. 348:20-22. He sent nearly identical letters to Facebook, Google, LinkedIn, Twitter, YouTube, and Microsoft. Waldo Exs. 46, 47, 48, 49, 50, 51. Each letter was directed to the CEO of the platform over General Murthy’s signature. *Id.*

420. Each letter stated, “The proliferation of health misinformation during the pandemic has been both extensive and dangerous. . . . It is clear that we must do everything we can to address this threat.” *Id.* Each letter referred to the July 15, 2021 Health Advisory, noting that “a large proportion of health misinformation is spread through technology platforms,” and “my Advisory includes a call for technology companies to join this broader effort to create a safer, healthier information environment.” *Id.* Each letter advised the social-media platforms of the RFI, and formally “request[ed] that your company contribute to the RFI.... Specifically, I am requesting responses from companies about the extent and spread of COVID-19 misinformation on their

technology platforms, policies to address COVID-19 misinformation and their effectiveness, [and] sources of COVID-19 misinformation....” *Id.*

421. On May 3, 2022, Facebook notified the White House and OSG that it had “filed a response to the Surgeon General’s rfi on Covid misinformation and would be happy to discuss at the appropriate time.” Waldo Ex. 54, at 2. To date, the OSG has never made this or any other the responses to its RFI public.

422. Shortly after the RFI was issued, on March 11, 2022, GQ magazine published an interview with Dr. Murthy. Waldo Ex. 52. In this interview, Dr. Murthy stated, “we all have a responsibility to do everything we can to reduce the spread of misinformation... Whether you have one million followers on social media, or you’ve got 10 followers, we all have platforms and people in our lives who trust us.” *Id.* at 6. He called on platforms like Spotify (which was then being criticized for hosting Joe Rogan’s podcast) to censor health misinformation: “If you’re running a platform, whether it’s a Spotify or another social media platform, you’ve got to think about, how do I create a healthy information environment here? How do I create rules and a culture that promotes accurate information?” *Id.* He emphasized that “a platform has the ability, the opportunity, and the responsibility to create rules and a culture that supports the dissemination of accurate information and that reduces the spread of misinformation.” *Id.* at 7.

423. Echoing his prior comments about “setting safety standards” by government, Dr. Murthy compared censorship “rules” for misinformation to speed limits: “We have speed limits on the road because we know that sometimes if you drive too fast, that can have an impact on somebody else’s health and wellbeing. If we’re going to live together in a society, we’ve got to take steps and observe certain rules to help protect other people. That’s true here as well. Platforms

have an opportunity to help shape that environment in their own way. We all do. That’s our responsibility at a time like this.” *Id.*

K. The White House and Surgeon General Continue Oversight of Censorship.

424. On June 22, 2022, Facebook again emailed Waldo, Rob Flaherty, and other White House officials with an update on Facebook’s increased censorship. Waldo Ex. 53, at 1. In the email, Facebook stated that it “[w]anted to ensure that you were aware of our policy updates following the early childhood vaccine approvals. As of today, all COVID-19 vaccine related misinformation and harm policies on Facebook and Instagram apply to people 6 months or older....” *Id.* Facebook indicated that it had again relied on the CDC to dictate what claims people can post on Facebook: “We expanded these policies in coordination with the CDC and ensured that we also included false claims that might be connected to children....” *Id.*

425. Throughout this period, at the federal officials’ request, Facebook continued to send bi-weekly “Covid Insights Reports” reporting on COVID-19 related misinformation on its platforms to the White House and OSG. *See, e.g.*, Waldo Ex. 54, at 2-4. In the spring of 2022, Facebook repeatedly asked the federal officials if it could discontinue or reduce the frequency of these reports, which it had been sending for over a year. *Id.* at 2. Finally, on June 13, 2022, Facebook notified the White House and OSG that “we will plan to discontinue these unless we hear from you that this information continues to be valuable.” *Id.* at 1. Rob Flaherty responded the same day, requesting that Facebook continue to send the reports and further asking Facebook to report on how it would handle misinformation for early-childhood (under age 5) vaccines: “It would be helpful to continue to get these as we start to ramp up under 5 vaccines. Obviously, that has a potential to be just as charged. Would love to get a sense of what you all are planning here.”

Id. Facebook continued to send the reports as requested, including two reports on July 17, 2022, and promised to continue sending them. *Id.*

IV. The CDC and the Census Bureau: BOLO and Authoritative Fact-Checking.

426. In addition to the public and private pressure campaigns from the White House and the Surgeon General’s Office, the CDC and the Census Bureau have engaged in a long censorship campaign together, enabled by the White House’s pressure on platforms to cooperate with the federal government. Working closely with Census, the CDC flags supposed “misinformation” for censorship on platforms (sometimes using the acronym “BOLO,” “Be On the Lookout”), and exercises full authority to dictate what health claims will be censored on social media platforms.

A. The CDC’s Regular Communication with Social Media Platforms.

427. Carol Crawford is the division director for the division of Digital Media within the CDC Office of the Associate Director for Communication. Crawford Depo. 11:7-9.

428. According to Crawford, her “division provides leadership for CDC's web presence. We provide leadership for CDC's social media presence.” *Id.* 11:14-16. Crawford is “the director of that work. I determine strategy, objectives, oversee work.” *Id.* 11:21-22.

429. Before April 2022, Crawford was “the branch chief of the Digital Media Branch within the Division of Public Affairs, and most of the roles that our division currently performs, web and social media, were in that branch.” *Id.* 15:3-6.

430. Crawford is “the main person that was the CDC point of contact to talk to Facebook, Twitter and the platforms since our job was to lead digital media.” *Id.* 249:1-4.

431. Crawford has regular contact with social-media platforms, especially about COVID-19 issues: “We started regular contact with the [platforms] at the beginning of the COVID

outbreak to exchange information about COVID, and most of the contact since then has been around COVID or other high-priority things, but mostly COVID.” *Id.* 16:13-17.

432. Crawford had only “very occasional” contacts with the platforms before COVID-19, *id.* 17:8-9; but then she and the CDC “started talking to some of them in February and March of 2020,” at the beginning of the pandemic. *Id.* 18:5-6.

433. At this time, CDC leaders were asking Crawford’s group if they were in contact with the platforms: “there were a lot of people asking staff, or other staff, are we -- were we in contact with the groups, and do we have any arrangements.” *Id.* 18:19-23.

434. Crawford communicated with platforms by email, phone, and in meetings and calls. *Id.* 20:1-19. She “had points of contact at several of them, and we would have meetings when we needed to talk. So we arranged calls.” *Id.* 20:17-19.

B. CDC’s and Census’s Pressure and Collusion With Facebook/Meta.

435. On February 6, 2020, Facebook emailed State Department officials, noting that “Facebook has taken proactive as well as reactive steps to control information and misinformation related to Corona virus which includes ... removal of misinformation.” Crawford Ex. 2, at 4. The email was forwarded to Crawford, who reforwarded to her contacts at Facebook. *Id.* at 3. Facebook proposed to Crawford that “Facebook team would create a Coronavirus Page serving up content that exists on other organizations’ FB pages including the CDC,” and would direct users to “curated content from trusted sources.” *Id.* at 3.

436. On February 7, 2020, Crawford agreed to the proposals, and she also proposed that “There could be times we might want to address widespread myths like mask use or new issues.” *Id.* at 2. She discussed with Facebook the same day. *Id.* at 1.

437. On March 3, 2020, Facebook emailed Crawford and noted that Facebook intended to “support governments ... with their response efforts on COVID-19,” including the “goal” to “remove misinformation.” Crawford Ex. 3, at 1.

438. Crawford “talked pretty regularly” with Facebook “around this time,” *i.e.*, March 2020. 37:7-9.

439. Crawford recalls having discussions of misinformation with Facebook “in the fall of 2020.” Crawford Dep. 38:7-8. These included discussions of how to combat “growing” misinformation about COVID-19: “I can recall us generally saying things to the effect of ... misinformation is really growing, or ... what do you think we could be doing to address it? That kind of conversation.” *Id.* 38:11-15.

440. On January 25, 2021, Facebook emailed Crawford the first of an ongoing, biweekly series of CrowdTangle reports, which report on “top engaged COVID and vaccine-related content overall across Pages and Groups.” Crawford Ex. 6, at 2. The email emphasized in bold the anti-vaccine content listed in the report, including “Reports of healthcare workers refusing the vaccine,” “Posts about alleged vaccine-related deaths,” and “News and reports of severe vaccine side effects.” *Id.* Facebook indicated that it was sending this report in response to a prior conversation with Crawford in which such data was requested: “I am following up on our conversation several weeks ago about providing more detailed reporting from our CrowdTangle team.” *Id.*

441. Crawford responded that the report “looks wonderful and much appreciated.” *Id.* at 1. She said that she “will be extending our distribution list” for the report. *Id.* at 1. She also noted, “One group we’ll be adding” to the distribution list for the CrowdTangle reports “is the Census group who hopefully will soon start their project with us.” *Id.* And she stated, “the wide group of those looking at misinfo will want this.” *Id.*

442. CrowdTangle is “a social media listening tool for Meta properties ... [l]ike Instagram and Facebook.” Crawford Dep. 50:3-6. “[S]ocial media listening reports show themes ... of discussion on social media channels.” *Id.* 52:10-12. The CrowdTangle report is “a search of content on social media, and a summary of the higher volume conversations.” *Id.* 53:8-10. It is “a report of the most talked about topics on social media during this time period.” *Id.* 54:13-15.

443. The CrowdTangle reports that Facebook regularly emailed to CDC were only one of two forms of access to CrowdTangle. Since “March or April 2020,” Facebook had also allowed CDC to “directly log into CrowdTangle and run our own reports or searches.” *Id.* 77:9-13.

444. According to Crawford, the CrowdTangle reports “would help us understand what was being discussed on social media about COVID, which helps us look for gaps in information, confusion about facts, things that we might need to adjust our communication materials for.” *Id.* 57:24-58:3.

445. Crawford confirms that the CDC had privileged access to CrowdTangle from early 2020, and government officials used the non-public “social media listening tool” to monitor and track private speech about COVID-19 on social media: “we had access to go in directly to CrowdTangle and run in reports ... from early 2020. ... And I mentioned that our research team ... searched in it and looked in it to create their reports, and I believe other teams did too.” *Id.* 147:12-18.

446. The CDC also used other “social media and listening tools” to monitor Americans’ speech on social media: “we did searches in CrowdTangle, the same way we do searches in other social media and listening tools that we have to create, to understand what's being discussed in the environment, to update our communication material.” *Id.* 148:11-15.

447. The CDC's "listening tools" included "Meltwater reports," where "Meltwater is sort of like CrowdTangle but for all the platforms." *Id.* 154:13-16. But CrowdTangle is superior to Meltwater for monitoring Facebook and Instagram because it provides privileged access to some online speech: "CrowdTangle can see more on the Meta properties. So it's nicer if you're just looking at Meta properties. Meltwater gives you social media at large." *Id.* 154:24-155:2.

448. Related to the bolded categories of supposed misinformation in Facebook's CrowdTangle report, Crawford claims that she does not have specific recollection about the issues, but she admits that "I do recall generally discussing misinformation with Facebook around this time." *Id.* 58:11-13.

449. Crawford added Census Bureau officials to the distribution list for the CrowdTangle reports because "[t]hey were going to start working with the CDC regarding misinformation." *Id.* 58:19-20; *see also id.* 61:11-12 ("At some point I recall adding Census to the distr[ibution]").

450. From then on, Facebook regularly sent Crawford biweekly "CrowdTangle content insights report[s]." Crawford Ex. 7, at 1-4. With each report, Facebook would highlight in bold the high-engagement misinformation-related issues for the CDC from the two-week period. *Id.* In each email, Facebook would introduce these misinformation-related posts by noting something like, "However, posts falling into the following themes also garnered high engagement." *Id.*

451. The CrowdTangle reports survey content that is not publicly available, such as "personal Group posts." *Id.* at 2.

452. Crawford is "sure that general discussions" with Facebook addressed "that there was a lot of information on vaccines, which is one of the bolded words [in the CrowdTangle Reports], for example. I am sure that did occur." Crawford Dep. 64:19-22.

453. On January 27, 2021, Facebook sent Crawford a recurring invite to a “Facebook weekly sync with CDC (CDC to invite other agencies as needed).” Crawford Ex. 36, at 1. A large number of Facebook and CDC officials were included on the invite, including Liz Lagone, Facebook’s content-moderation officer who communicated with the CDC. *See Id.* The agenda for the recurring meeting included “Misinfo collab status.” *Id.* It also included “CDC needs/questions.” *Id.*

454. Crawford confirms that CDC frequently had weekly meetings with Facebook: “There were definitely times that we were talking weekly.” Crawford Dep. 226:20-21; *see also*, *e.g.*, Crawford Ex. 39, at 1 (recurring calendar invite for a meeting with the same agenda and participants on May 6, 2021).

455. On March 10, 2021, Crawford sent Facebook an email seeking information about “Themes that have been removed for misinfo.” Crawford Ex. 44, at 3. She stated, “We mentioned this on the call last week and you said you’d be sending something as other had asked – is that available yet by chance?” *Id.* She clarified: “You mentioned that WH and HHS had asked so you’d get it to us,” and responded “Yes” to Facebook’s question, “Are you looking for types of COVID-19 misinfo we remove?” *Id.*

456. Facebook noted, that “[w]e are setting up a meeting with WH/HHS to discuss more likely later this week or early next. Perhaps a CDC rep could participate....” Crawford Ex. 44, at 2. Crawford noted, “They want to see what you guys proactively have removed that might not be in those [CrowdTangle] reports.... My guess is a short meeting with Lis Wilhelm[’s] vaccine confidence team is what is needed if FB is willing to do it.” Crawford Ex. 44, at 2.

457. In this exchange, CDC was “wondering if [Facebook] had info on the types of posts that were removed and the themes because they were worried that we could only see the live posts

and so we wouldn't know if there was also confusion about other areas that had been removed.” Crawford Dep. 258:6-11. CDC had “asked on the meeting if they had this data, like, because we wanted it. And I think she said, Oh, we did something like this for the White House or HHS.” *Id.* 260:6-9.

458. From this, Crawford understood that HHS and the White House were having similar meetings with Facebook: “I do think that they did have meetings with the agencies.” *Id.* 261:10-11.

459. On March 25, 2021, Crawford and other CDC officials met with Facebook. Ex. S, at 1. The day before the meeting, March 24, 2021, Facebook emailed Crawford and noted, “[a]s we discussed last week, we will present on COVID-19 misinformation on this session/meeting and have some of our team that is focused on that workstream provide a briefing on the current policies and approach as well as the current trends we are identifying.” *Id.* at 2. The official also noted that Facebook would have a “Misinformation Manager” and Liz Lagone, a content-moderation official for Facebook who “will be leading from our side on misinformation briefing for your team. They all work on our COVID-19 policies.” *Id.* at 1. Crawford responded, attaching a Powerpoint slide deck and stating, “This is a deck Census would like to discuss and we’d also like to fit in a discussion of topic types removed from Facebook.” *Id.* She also noted that two Census Bureau officials (Zack Schwartz and Jennifer Shopkorn) and two Census Bureau contractors (Sam Huxley and Christopher Lewitzke) would attend the meeting. *Id.*

460. The “deck Census would like to discuss” was attached to the email, *id.* at 3-16, and it contained an overview of “Misinformation Topics” including “concerns about infertility, misinformation about side effects, and claims about vaccines leading to deaths.” *Id.* at 4. “These topics were selected due to high volume, continued public discussion, and high-profile coverage,”

according to the slide deck. *Id.* For each topic, the deck included sample slides and a statement from the CDC debunking the supposedly erroneous claim. *Id.* at 6-14. The slides were clearly designed to convince Facebook that such content should be censored. For example, with respect to claims of infertility, the deck provided screen shots of six specific posts on Facebook and Instagram, summarized similar claims, and stated: “According to CDC there is no evidence that fertility problems are a side effect of any vaccine, including COVID-19 vaccines.” *Id.* at 6-8. It also noted that “Several of Facebook’s fact check partners have covered this claim.” *Id.* at 6. The deck provided a similar debunking treatment for claims about other side effects from COVID vaccines, *id.* at 9-11, and claims about vaccines leading to deaths, *id.* at 12-14—in each case, providing six sample posts from real Facebook users as examples of the type of claim, and providing information designed to ensure that the claim would be censored. *Id.*

461. On March 30, 2021, Facebook sent Crawford an email with the subject line, “This week’s meeting.” Crawford Ex. 8, at 3. Crawford confirms that she was engaging in weekly meetings with Facebook during this time period, as well as other time periods during the COVID-19 pandemic: “we were meeting weekly during parts, so I imagine we were.” Crawford Dep. 68:9-10.

462. The email indicates that CDC and Facebook were repeatedly discussing misinformation during these weekly meetings, as Facebook stated to Crawford: “I wanted to surface any misinfo questions your team may have for the team that I had briefing last time. They are available to attend again, but also want to make sure we are answering any of your team’s questions.” Crawford Ex. 8, at 3.

463. Crawford admits that these weekly meetings involved CDC meeting with Facebook’s *content-moderation* teams: “I do recall [Facebook] bringing in people from their Trust

and Safety or Misinformation teams ... to talk to us about misinformation at some weekly meetings.” Crawford Dep. 68:24-69:3.

464. Crawford admits that, in these meetings with Facebook content-moderation team, CDC inquired about how Facebook was censoring COVID-19 misinformation: “we had asked questions about what they were seeing in terms of misinformation and inquired about any activities they were undertaking. And I believe this was an offer to sort of get back to us on any of those questions.” *Id.* 69:9-13.

465. In response, Crawford noted that she was also communicating with Facebook through an alternative channel. Crawford Ex. 8, at 2 (“I added this part in yellow to our chain on turn.io”). She asked Facebook if they “have thoughts on how we can meet regularly with Census? ... am I correct that your team is going to consider how you might want to engage with the CDC/Census team routinely and get back to us?” *Id.* at 2-3. She noted to Facebook: “I know you all have experience with Census already.” *Id.* at 3.

466. At this time, CDC had recently executed an Interagency Agreement with the Census Bureau to assist the CDC in addressing misinformation: “We had entered an IAA with Census to help advise on misinformation.” Crawford Dep. 71:3-4. Pursuant to this agreement, the Census Bureau provided reports to the CDC on misinformation that the Census Bureau tracked on social media: “they provided reports on misinformation that they were seeing to us.” *Id.* 71:15-17. “Census did provide [CDC] with the key themes they were seeing around misinformation during the times that they were looking at it.” *Id.* 72:16-19.

467. An IAA is “an agreement between two agencies to conduct some kind of work between them.” *Id.* 109:23-24. Under this IAA, CDC was “only engaging” with Census “on COVID misinformation.” *Id.* 110:12-13. CDC was “learning about how [Census] operated a

general misinformation team.” *Id.* 110:13-14. The IAA “let [CDC] partner with Census to learn how they handled misinformation and help us with the COVID misinformation. ... They seemed to have more knowledge than we did.” *Id.* 111:3-6.

468. Facebook replied that “it would be great to have questions that may not have been answered from your team on misinfo. That team is very busy so it’s a good opportunity to di[g] deeper on that topic and especially if there are areas that are still unclear or the teams have concerns about.” Crawford Ex. 8, at 2.

469. Crawford responded that CDC “would like to have more info ... about what is being done on the amplification-side,” and that CDC “is still interested in more info on how you analyze the data on removals, etc.” *Id.* at 2. She also noted that Census Bureau was “hoping to go over the deck they had and discuss how to engage on a more regular basis.” *Id.*

470. Following up, Crawford noted that Census would like to discuss the following topics: “It looks like the posts from last week’s deck about infertility and side effects have all been removed. Were those re-evaluated by the moderation team or taken down for another reason?” *Id.* at 1. This remark plainly indicates that, in the last week of March 2021, the Census Bureau was sharing “decks” of posts about COVID-19 misinformation with Facebook, which Facebook then “removed,” and CDC was following up to inquire whether the censorship occurred because those posts were “re-evaluated by [Facebook’s] moderation team” because of Census’s flagging, or for another reason. Crawford testified that she “cut and pasted” the Census Bureau’s inquiries on these points. Crawford Dep. 76:10.

471. Crawford also asked Facebook to give the Census Bureau direct access to log in to Facebook’s CrowdTangle tool: “Can we add the Census Team to CrowdTangle?” Crawford Ex. 8, at 1. As Crawford noted, Facebook had “allowed [CDC] to directly log into CrowdTangle and

run our own reports or searches,” and she was asking Facebook to let Census “log in to CrowdTangle” as well. Crawford Dep. 77:4-14.

472. In the same email, Crawford inquired of Facebook, “One of the main themes we’re seeing and from the CrowdTangle report is local news coverage of deaths after receiving the vaccine. What’s the approach for adding labels to those stories?” Crawford Ex. 8, at 1. Thus, the CDC inquired of Facebook what its “approach” was to censoring local news stories about vaccine-related deaths. *Id.*

473. Crawford asked Facebook “[h]ow should we best engage regularly going forward on the Census/CDC reports.” Crawford Ex. 8, at 1. Crawford notes that Census had already been working with Facebook to address census-related misinformation: “we generally discussed, you know, how we should talk about misinformation because they had already been working with Census, on their own Census misinformation, and I wanted to know what was best for them for engaging on any topics that we might want to discuss.” Crawford Dep. 77:19-24.

474. Facebook answered that “[w]e are working on a proposal of how to set up a sharing partnership on the misinform[ation] items.” Crawford Ex. 8, at 1.

475. Crawford also had three-way meetings with Facebook, CDC, and Census about misinformation: “there were meetings where Census, myself and Facebook were on calls,” in which they “had general conversations about what were opportunities to address misinformation.” Crawford Dep. 83:6-12. In those conversations, specific topics like the removal of specific posts discussed in Exhibit 8 “were probably discussed,” but Crawford claims she does not “have specific memory of it.” *Id.* 83:12-14.

476. On April 13, 2021, Facebook followed up by emailing Crawford and proposing to enroll CDC and Census Bureau officials in a special misinformation reporting channel to

Facebook. Crawford Ex. 10, at 2. With a subject line “CV19 misinfo reporting channel,” Facebook wrote, “We’re working to get our COVID-19 misinfo channel up for CDC and Census colleagues,” and asked Crawford to confirm “if the below emails are correct for onboarding to the reporting channel and if there are others you’d like to include.” *Id.* Facebook provided nine emails, including five CDC officials and four Census officials or contractors, to “onboard” into the COVID-19 “misinfo reporting channel.” *Id.*

477. The officials who work for Reingold, including Christopher Lewitzke, “were contractors working with Census.” Crawford Dep. 101:10.

478. Crawford states that this email refers to the fact that Facebook “has a portal or reporting channel where you can report misinformation or threats or things from a specific log-in that I believe they only provide to ... federal agencies.” *Id.* 91:23-92:2. The portal allows federal officials to “log onto Facebook as an administrator, and it's something that they make available to you as a federal agency.” *Id.* 95:17-19. Crawford understands that this “wasn’t something that was generally available” to the public but was only provided to federal officials. *Id.* 96:15-16.

479. Crawford recalls that a CDC official logged into this portal and used it to report “two or three posts.” *Id.* 92:17.

480. On April 23, 2021, Crawford emailed Facebook and stated that the Wyoming Department of Health had “mentioned ... that the algorithms that Facebook and other social media networks are apparently using to screen out postings by sources of vaccine misinformation are also apparently screening out valid public health messaging, including WY Health communications.” Crawford Ex. 38, at 2. When she did not hear back, on April 28, she emailed Facebook again, “Anything you all can do to help on this?” *Id.* Facebook then responded and addressed the

problem. *Id.* at 1-2. The government is not amused when government-induced censorship sweeps in the government's own speech.

481. On May 6, 2021, Crawford emailed Facebook a table containing a list of 16 specific postings on Facebook and Instagram, with a link and the text of each post. Crawford Ex. 9, at 1-3. Crawford wrote, "As mentioned, here are two issues that we are seeing a great deal of misinfo on that we wanted to flag for you all ... These are just some example posts. ... Our census team is copied here, has much more info on it if needed." Crawford Ex. 9, at 1. Crawford copied Jennifer Shopkorn of the Census Bureau and Christopher Lewitzke, a Census Bureau contractor, on the email. *Id.*

482. Crawford "flag[ged]" these posts for Facebook "[b]ecause we had had conversations with Facebook about ways that we could address misinformation, and ... one suggestion ... that came up in that conversation was to let them know if we were seeing major themes that CDC had scientific information on, or had web content that would address." Crawford Dep. 87:15-21.

483. When Crawford would "flag" such content for Facebook and other platforms, she knew that they would evaluate and possibly censor the content under the content-moderation policies: "I do know that the platforms have a variety of ways to address misinformation. They might tag it as something that people should look more into. I think ... that they have the ability to control how often some of these things show up in peoples' feeds. And I do know that removing them is an option that they could consider." *Id.* 88:7-14.

484. CDC's "goal" in flagging misinformation for possible removal from Facebook "is to be sure that people have credible health information so that they can make the correct health decisions.... There were a lot of things circulating that were not accurate information about

COVID. And so we were trying to point out and make the credible information more available to users.” *Id.* 88:25-89:6.

485. CDC and Census used “the social [media] listening tools,” such as CrowdTangle, to identify misinformation that was “flagged” to Facebook for possible censorship. *Id.* 90:18-23. Regarding the table of 16 posts she “flagged” in her May 6, 2021 email, she stated, “these probably came from the social listening tools ... that can consolidate examples. And we provided some examples of what we meant.” *Id.* 90:18-23.

486. On May 10, 2021, Crawford emailed Facebook with the subject line, “COVID BOLO Misinformation meetings.” Crawford Ex. 40, at 3. She wrote: “We would like to establish COVID BOLO meetings on misinformation and invite all platforms to join the meetings. We are aiming for our first one on Friday at noon. ... Are there direct POCs on your end I should include on the invite? Happy to chat if better. THANKS!” *Id.*

487. On May 18, 2021, Facebook emailed Crawford noting that a Facebook official “has an agenda item” for the “CDC call this week.” Crawford Ex. 11, at 2. This official, according to Crawford, is a member of Facebook’s “Trust and Safety team, or the Misinformation team.” Crawford Dep. 103:9.

488. The Facebook official noted that Facebook’s “Content Policies ... determine what we may remove or reduce and inform.” Crawford Ex. 11, at 2. She noted that “we currently remove false claims about face masks,” and wanted to discuss “whether there is still a high risk of harm from mask misinformation,” as well as “false claims about the efficacy of social distancing or the existence of COVID-19.” *Id.*

489. Crawford admits that the CDC provided “scientific information” that Facebook would use to decide whether to “remove” or “reduce and inform,” *id.*, content under its policies:

“What we did provide was scientific information that I did assume that they might use to do those things,” *i.e.*, “remove or reduce and inform.” Crawford Dep. 105:17-19.

490. The next day, May 19, 2021, Facebook emailed Crawford and noted that, for the weekly call that week, “here are some of the COVID content items that [Facebook’s content-moderation official] will be flagging for you/CDC team.” Crawford Ex. 11, at 1. She then provided a list of twelve specific claims, including such claims as “COVID-19 has a 99.96% survival rate,” “COVID-19 vaccines cause bell’s palsy,” and “[p]eople who are receiving COVID-19 vaccines are subject to medical experiments.” Crawford Ex. 11, at 1-2.

491. Facebook raised these twelve claims to get CDC’s guidance on whether they violated Facebook’s policies: “They were wanting our feedback on whether these things were true or false statements that they were seeing. Did the CDC have science around this, did we have content on our website.” Crawford Dep. 106:10-13. CDC would respond to debunk such claims if it had information: “[I]f we knew, if we had something or we had science on these items, we would point to it or provide them an answer.” *Id.* 106:19-21.

492. In response, Crawford indicated that “Census team members” would join the call, and that she might not be able to address or debunk all 12 claims on the call, because “[t]here may be some facts we have to get back to the group on after the meeting.” Crawford Ex. 11, at 1.

493. On the call referred to in the email, CDC discussed with Facebook these twelve claims and who at CDC might be able to address their veracity. Crawford Dep. 106:23-107-3.

494. According to Crawford, “Sometimes in these meetings they would ask do we know if this is true or false, which is what they were doing [in Exhibit 11]. And then if we knew, the communicators knew the answer, we would provide it. If not, I would say, we would say, I’ll have to get back to you later, we’ll talk to our SMEs,” *i.e.* subject-matter experts. *Id.* 116:7-12.

495. Census Bureau officials would follow up to monitor whether Facebook was actually removing the content that federal officials had flagged as misinformation: “Census was at least periodically checking on things that they had flagged, or they had seen come up.” *Id.* 117:19-21.

496. After the meeting, on May 24, Facebook’s content-moderation official emailed Crawford, stating, “Thanks so much again for you and team’s help in debunking a few COVID-19 and vaccine misinformation claims for us.” Crawford Ex. 15, at 2. She then provided a list of the twelve claims with CDC’s input on each, noting “Debunked” for each claim that the CDC had debunked in the meeting. *Id.* at 2-3. Among other things, she noted that CDC “[d]ebunked” claims like “Face masks contain ... harmful particles,” and even plainly evaluative statements like “People who are receiving COVID-19 vaccines are subject to medical experiments.” *Id.* at 2-3.

497. On June 2, 2021, Crawford emailed the Facebook content-moderation official back with further input on the claims from CDC’s subject-matter experts. Crawford Ex. 16, at 2. She noted several times that CDC’s “web content to debunk is in clearance,” meaning that CDC was preparing web content that would debunk those claims. *Id.*

498. The next day, on June 3, 2021, the Facebook content-moderation official emailed Crawford to clarify that “web content to debunk is in clearance” means that “we should consider these debunked by the CDC now,” and Crawford answered that “Yes they are debunked and we will also have content on it soon.” Crawford Ex. 16, at 1. As Crawford stated, “We reported to Facebook that they were debunked at this time.” Crawford Dep. 135:2-3.

499. Crawford knew that Facebook would apply its content-moderation policies to claims that the CDC debunked: “I knew that they had options ... which is to inform people, to maybe reduce it in the algorithm, or to remove it.... [T]hey probably had other options, but I knew of at least those.” *Id.* 138:18-22.

500. On July 26, 2021, the same Facebook content-moderation official emailed Crawford, asking for CDC to debunk three more COVID-related claims. The subject line of the email was, “FB Misinformation Claims Help Debuning.” Crawford Ex. 17, at 1. Crawford understood that “Debuning” was “Debunking” misspelled. Crawford Dep. 139:1-2.

501. In this email, Facebook’s content moderator wrote to Crawford: “Our Misinformation Policy Team has identified some claims that we were hoping your team could **help us understand if they are false and can lead to harm?**” Crawford Ex. 17, at 1 (bold in original).

502. Facebook’s content-moderation policy called for it to remove claims that are false and can lead to harm. *See, e.g.*, Crawford Ex. 26, at 4 (Facebook’s content-moderation official, Liz Lagone, noting that “We remove ... posts on the grounds that the claim is false and that it is harmful,” where “harmful” includes cases where “if people believed it, it might make them less likely to get vaccinated.”). So it was clear that Facebook’s “Misinformation Policy Team” was asking CDC to advise whether these claims should be removed under Facebook’s content-moderation policy. Crawford admits that she understood that CDC’s guidance would “benefit” Facebook’s expansion and application of its censorship “policy” to these claims, acknowledging that Facebook was asking her about these claims “[b]ecause CDC would have credible health information about the claims or scientific information that would benefit their policy making.” Crawford Dep. 140:1-3.

503. The three claims included: “Spike protein in COVID-19 vaccines is dangerous/cytotoxic,” “Guillain-Barre Syndrome (GBS) is a possible side effect of the COVID vaccine,” and “Heart inflammation is a possible side effect of all COVID-19 vaccines.” Crawford Ex. 17, at 1.

504. Facebook also asked Crawford if “your team was aware of any global source of truth/database for vaccine adverse effects including possibly vaccine-related deaths.” Crawford Ex. 17, at 1.

505. Crawford responded, “Got it, let me get back to you shortly and thank you much for asking!” Crawford Ex. 17, at 1.

506. Crawford does not recall her specific response to this inquiry, but she admits that “generally” she referred them to the CDC’s subject-matter experts and responded to Facebook with the CDC’s view on the scientific questions, as she did with similar requests. Crawford Dep. 140:16-141:4.

507. On July 20, 2021, Facebook emailed Crawford another biweekly “CrowdTangle content insights report” on COVID-19. Crawford Ex. 18, at 1. One of the misinformation-trending topics that Facebook flagged in bold in the email was “**Door-to-Door Vaccines**,” which stated that “The highest interaction Page posts for this topic convey concern from political opponents about the Biden Administration’s strategy to ramp up vaccination efforts in communities with low vaccination rates by going ‘door-to-door’ to educate and encourage more Americans to get vaccinated.” *Id.* The same topic, in the same time frame, was emphasized in the Virality Project report as a prime example of viral vaccine-related “misinformation,” when in fact it involved only expressions of political opinion. Scully Ex. 2, at 39, 54-55.

508. The same email also noted posts “expressing skepticism about vaccinating children.” Crawford Ex. 18, at 1. Earlier CrowdTangle reports in the same email chain had flagged for the CDC highly engaged content about “**Vaccine Side Effects** ... especially for children and pregnant women,” “**Vaccine Refusal**,” and “**Vaccination Lawsuits** ... lawsuits over compulsory vaccination related to employment.” *Id.* at 2-3 (bold in original).

509. Facebook noted that the CrowdTangle reports were confidential and not to be disclosed further: “As always, please do not share.” *Id.* at 1.

510. Facebook continued to send biweekly CrowdTangle reports, which flagged in bold high-engagement topics such as “**Proof of Vaccination Requirement**,” “**COVID-19 and Unvaccinated Individuals**” (addressing “concerns that the recent uptick in hospitalizations and deaths is being driven up by unvaccinated individuals”), and “**COVID-19 Mandates**,” as well as “allowing people to return to ... religious services.” Crawford Ex. 19, at 1-3 (bolds in original).

511. On August 19, 2021, Facebook asked Crawford for a “VAERS Policy Consultation” meeting for the CDC to give Facebook guidance on how to address VAERS-related misinformation: “Our Health Policy folks would like to meet with your VAERS experts for a consultation meeting regarding VAERS and misinformation.” Crawford Ex. 20, at 1. Crawford responded, “I’m sure we can do this, and I’m glad you’re asking.” Crawford Ex. 20, at 1.

512. “VAERS” is the HHS’s Vaccine Adverse Event Reporting System, *see* <https://vaers.hhs.gov/>. At that time, the CDC was greatly concerned about VAERS-related “misinformation” on social-media, because users cited and discussed VAERS data and reports to raise concerns about the safety of vaccines in ways that the CDC thought misleading, as Crawford recounted: “the topic of VAERS was an area that was widely discussed on social media, and there was a lot of areas of confusion about what VAERS data was. There was myths about VAERS data, and there was misinformation about VAERS data. So it was always one of the things that rose to the top in terms of volume of discussion of people were very confused about VAERS.” Crawford Dep. 150:21-151:3. So it is not surprising that Crawford was “glad” Facebook was “asking” for a meeting in which the CDC would give Facebook guidance on how to censor “misinformation” about VAERS. Crawford Ex. 20, at 1.

513. Crawford also followed up with Facebook by providing written CDC-provided materials for Facebook to use in addressing VAERS-related “misinformation” on its platforms: “If of use, we just published a new video and I’ve attached some recent talking points that may also inform your efforts.” Crawford Ex. 20, at 1. Plainly, the “efforts” Crawford wished to “inform” were Facebook’s efforts to remove VAERS-related “misinformation” from its platforms.

514. The CDC also had a meeting with Facebook about VAERS-related misinformation: “We did have a session with the VAERS experts with Facebook.” Crawford Dep. 151:8-9. In the meeting, the CDC had “two experts for VAERS and a couple of their communication experts on the line with Facebook’s team,” which consisted of “their misinformation and policy type team” that the content-moderation official “was part of.” *Id.* 151:20-24. In the meeting, the CDC “offered the [subject-matter expert] just to answer their questions about what VAERS was and what it wasn’t. And my recollection is [Facebook] asked a lot of questions like ... who can report something on VAERS and things like that during the session.” *Id.* 152:1-6.

515. On September 1, 2021, Crawford emailed Facebook and stated: “BOLO for a small but growing area of misinfo. One of our lab alerts ... was misinterpreted and was shared via social media.” Crawford Ex. 21, at 1. (“BOLO” stands for “Be on the lookout.” Crawford Dep. 153:21.). She explained what the CDC viewed was misinformation, and then stated, “I’ve attached some example Facebook posts and another document with the facts around the issue.” Crawford Ex. 21, at 1.

516. Plainly, Crawford was flagging these posts and related posts for possible censorship under Facebook’s content-moderation policy. She admits that the CDC’s “BOLO” alerts were provided to “assist” the platforms with their enforcement decisions under their policies: “Similar to all the other BOLOs, we still thought it was good to point out if we had facts around something

that was widely circulating as a cause of misinformation to the platforms to assist them in whatever they were going to do with their policy or not do.” Crawford Dep. 153:23-154:3.

517. When asked what she “expected [Facebook] to do once they were on the lookout” for the supposed misinformation that the CDC had flagged, Crawford responded: “I knew that they had various options. They could have just used it to inform people. They could have considered it in their algorithm, I believe. I did understand that potentially removing posts was something that they might do.” Crawford Dep. 155:15-20. So she provided the information knowing it would happen and wanting it to happen.

518. On November 2, 2021, Facebook’s content-moderation official sent Crawford and other CDC officials an email stating, “thanks so much for confirming the ability for the claims in question last week having the risk of causing vaccine refusals.” Crawford Ex. 22, at 1. Again, that is one of the criteria Facebook used to justify removal of content from its platforms. Crawford Ex. 26, at 4 (“We remove ... posts on the grounds that the claim is false and that it is harmful because if people believed it, it might make them less likely to get vaccinated.”). The content-moderation official also stated, “thank you all so much for your input over the last week on our many questions about vaccine misinformation relative to the EUA.” Crawford Ex. 22, at 1. (“EUA” refers to the FDA’s “emergency use authorization to the Pfizer vaccine for children.” *Id.*)

519. The content-moderation official also stated: “I wanted to share that as a result of our work together, when the FDA gave emergency use authorization to the Pfizer vaccine for children last week, we immediately updated our policies globally to remove additional false claims about the COVID-19 vaccine for children (e.g. ‘the COVID vaccine is not safe for kids’).” Crawford Ex. 22, at 1. She also noted, “We also launched a new feature on Instagram, where accounts that repeatedly post content that violates our policies on COVID-19 or vaccine

misinformation may now lose the ability to be tagged or mentioned or may see pop-ups asking if they'd like to delete certain posts that may violate our policies." Crawford Ex. 22, at 1. Thus, Facebook noted that, "as a result of our work together" with the CDC, Facebook had updated its content-moderation policies to increase censorship of vaccine-related claims in significant ways. *Id.*

520. The content-moderation official went on to ask the CDC to debunk additional claims: "**we have identified a number of additional claims we would like to get your team's assessment on ... Would it at all be possible to get input by Monday, November 8th?**" Crawford Ex. 22, at 1 (bold and underline in original). She requested, "For each of the following new claims, which we've recently identified on the platform, **can you please tell us if: 1. The claim is false; and 2. If believed, could this contribute to vaccine refusals?**" *Id.* (bold in original). Again, these are the two precise criteria that Facebook relied on to remove content from its platforms. Crawford Ex. 26, at 4 ("We remove ... posts on the grounds that the claim is false and that it is harmful because if people believed it, it might make them less likely to get vaccinated."). She then included a new list of ten specific claims about the COVID-19 vaccines for the CDC to debunk. Crawford Ex. 22, at 1-2.

521. Crawford understood, again, that this request was made to "inform their policies," *i.e.*, inform Facebook's application of its content-moderation policies to these claims: "It was still my interpretation that she was asking to inform their policies." Crawford Dep. 159:7-8.

522. Crawford also admits that she was "happy" when the CDC's information to Facebook caused "less spread of misinformation" on Facebook and other platforms, *i.e.*, that she desired that outcome: "I'm happy that providing the scientific information led to less spread of misinformation." *Id.* 161:23-25.

523. Crawford also understood that Facebook was, in fact, removing content from its platforms based on the CDC's information: "I understand that she's removing claims ... that are not scientifically accurate." *Id.* 162:21-22.

524. Crawford responded to Facebook, "Thank you so much for the feedback on what you've been able to do. This is very good to know." Crawford Ex. 22, at 1. She also stated, regarding Facebook's request that the CDC debunk the ten new claims, that "I'm going to work on this one I hope we can do it by Monday, I will keep you posted." *Id.*

525. The following Monday, November 8, 2021, Crawford followed up with a response from the CDC addressing seven of the ten claims Facebook had asked CDC to evaluate. Crawford Ex. 23, at 1-2. The CDC rated six of the seven claims "**False.**" *Id.* (bold in original). Crawford also noted in the response email, without citing any support, that "It appears that any of these could potentially cause vaccine refusal." Crawford Ex. 23, at 1. Under Facebook's policies, a claim that is both false and could contribute to vaccine refusal was subject to removal. Crawford Ex. 26, at 4 ("We remove ... posts on the grounds that the claim is false and that it is harmful because if people believed it, it might make them less likely to get vaccinated.").

526. On February 3, 2022, Facebook's content-moderation official sent Crawford another email, stating that she "wanted to **share updates we made as a result of our work together**" and "**ask for your assessment on a few things.**" Crawford Ex. 26, at 1 (bold in original). She described the "updates" as follows: "On February 2nd, we launched several updates to our COVID-19 Misinformation and Harm Policy based on your [*i.e.* CDC's] inputs." *Id.* These "updates" included "[r]emoving claims that COVID-19 vaccines cause heart attacks," and "[t]aking steps to reduce the distribution of content that our systems predict likely violates our COVID-19 and vaccine misinformation policies, but has not yet been reviewed by a human; if at

any point this content is confirmed to violate the policy then it will be removed from the platform.” Crawford Ex. 26, at 1. Crawford responded, “the update is very helpful, thank you for including that!” *Id.*

527. Facebook’s content-moderation official also included, under the heading “**NEW: For CDC Input**,” another request that “For each of the following new claims, **can you please tell us if: 1. The claim is false; and 2. If believed, could this claim contribute to vaccine refusals?**” Crawford Ex. 26, at 1 (bold and underline in original). She then provided a long, detailed list of claims and sub-claims about COVID-19 for CDC’s input. *Id.* at 2-4.

528. Among other things, Facebook asked the CDC to pre-refute claims based on events that had not occurred yet. Facebook asked Crawford to address “How FDA EUA authorization for children under 5 might impact our policies.” Crawford Ex. 26, at 1. Facebook noted, “We understand that the FDA is considering giving emergency use authorization for the COVID-19 vaccine for children under five in the coming weeks. We are considering how our existing policies on COVID-19 vaccines ... should apply to claims about children 6 months to 4 years once the vaccine is approved for use. Can you please assess for each claim whether it is false for children in this age range and if believed, likely to contribute to vaccine hesitancy or refusals? *Please let us know if it is easiest to set up a time to meet and discuss each one.*” Crawford Ex. 26, at 2 (italics in original). There followed a long, detailed list of claims about the vaccines, for which Facebook sought CDC’s input on their falsity as to children under 5. *Id.* at 2-3.

529. For this long list of claims, Crawford understood that Facebook would use the CDC’s input to “determine” Facebook’s censorship policy for such claims: “I know that they're using our scientific information to determine their policy.” Crawford Dep. 170:19-20.

530. Regarding Facebook's request for CDC's input on these many new claims, Crawford responded, "I will talk to the Vaccine program and see what we can do." Crawford Ex. 27, at 1. The next day, February 4, 2022, she followed up, stating, "I'm heading out today but do you have a minute to discuss this by chance? Call anytime," and provided her phone number. Crawford Ex. 27, at 1. Crawford also changed the subject line of the email to state, "Have 5 minutes to chat? [re]: Vaccine Misinformation Questions for CDC." *Id.*

C. CDC's and Census's Pressure and Collusion with Google/YouTube.

531. On March 18, 2021, Crawford emailed contacts at Google, stating: "As I believe we discussed previously, CDC is now working with Census to leverage some of their infrastructure to help identify and address COVID vaccine mis-info." Crawford Ex. 28, at 1. She went on, "As I understand it from the Census team ... when they were doing this for the Census project last year, they meet regularly with a Google/YouTube Trust team." *Id.* A "Trust team" is a content-moderation team. Crawford then asked, "Is it possible for us to start up regular meetings on this topic or maybe use our existing meeting time." *Id.* The subject line of this email was "COVID Misinfo Project." *Id.* Google and Crawford then set up a time to talk and discuss the project. *Id.*

532. Crawford states that this email refers to "the work of the IAA with Census to help consult and work with us on the COVID misinformation..." Crawford Dep. 175:6-8. Her reference to Census's infrastructure referred to "the fact that Christopher [Lewitzke, the Census contractor] ran those reports and looked for misinformation on those areas for us." *Id.* 175:11-13.

533. Crawford's reference to Census's previous project referred to their work on combating misinformation about the 2020 Census. *Id.* 175:18-19.

534. Crawford does not remember the specific call referenced in this email, but she admits that, “This was in 2021. So we had been meeting pretty regularly with Google by this time.” *Id.* 179:5-6.

535. On March 23, 2021, Crawford sent a calendar invite for a meeting on March 24 that included herself and five other CDC employees, four Census Bureau employees and contractors (including Zachary Schwartz, Christopher Lewitzke, and Jennifer Shopkorn), and six Google/YouTube officials. Jones Decl., Ex. T, at 1-2. The subject of the meeting was “COVID Misinformation: CDC/Census/Google.” *Id.* at 1. The invite stated: “CDC/Census to meet with Google regarding our misinformation efforts.” *Id.*

536. At the meeting, CDC and Census presented a slide deck similar to the one that Census prepared for the meeting with Facebook on March 25, 2021, discussed above. *See id.* 3-16. The slide deck was entitled, “COVID Vaccine Misinformation: Issue Overview.” *Id.* at 3. As with the Facebook slide decks, this one stated of “Misinformation Topics” that “[t]hese topics were selected due to high volume, continued public discussion, and high-profile coverage.” *Id.* at 4. It noted that these topics included “infertility, misinformation about side effects, and claims of vaccines leading to deaths.” *Id.*

537. For each topic, the slide deck included a description of a common claim, specific examples of videos on YouTube and social-media postings making the disfavored claim, and a putative refutation by the CDC. *Id.* at 6-14. For infertility, the slide deck stated that “[c]ommon claims about the COVID vaccine’s side effects include that it causes infertility in women and men, miscarriages, and stillbirth,” and it provide screen shots of specific videos on YouTube and social-media posts making this claim. *Id.* at 6-8. The deck asserted that “[a]ccording to CDC there is no evidence that fertility problems are a side effect of any vaccine, including COVID-19 vaccines.”

Id. at 6. Regarding supposed misinformation about side effects, the deck stated, “speculation and misinformation about side effects after taking the COVID vaccine have been prevalent on social media since the first vaccines were approved,” and it provided screen shots of an example video on YouTube and social-media posts making such claims, along with a putative refutation by the CDC. *Id.* at 9-11. Regarding the topic “Death from Vaccines,” the slide deck stated that “[v]accine-hesitant groups spreading misinformation and conspiracy theories about alleged vaccine-related deaths erode trust in the COVID-19 vaccine and the public health system,” and it provided a sample video on YouTube and social-media posts linking the vaccines to deaths, along with a putative refutation by the CDC: “According to CDC, VAERS has not detected patterns in cause of death that would indicate a safety problem with COVID-19 vaccines.” *Id.* at 12-14. As with the similar Facebook slide deck, the evident purpose of this presentation was to induce YouTube to censor these claims on its platform.

538. On March 25, 2021, Kate Galatas of the CDC emailed the group attending the meeting and stated: “Many thanks, again, for the time yesterday. This is such important shared work we are doing in the mis/dis information space, and we deeply appreciate your contributions. Please find attached the slide deck referenced during the meeting, and we ask that you treat it close hold and not for further distribution. We are looking forward to our future collaboration efforts!” *Id.* at 1.

539. On March 29, 2021, Crawford followed up with Google, inquiring “Are you all open to using our regular 4pm meetings to go over things with Census or what is preferred?” Crawford Ex. 29, at 2. Google responded: “We would like to follow up on our discussion with your colleague, Cynthia, on vaccine information a few months ago. Specifically, we plan to share a new list of common vaccine misinformation claims and would love it if Cynthia or other vaccine

experts could join.” *Id.* He also stated that “we can save a few minutes ... to discuss potential next steps regarding the Census...” *Id.* The subject line of this email was “Follow up on mis-info conversation.” *Id.*

540. Crawford recalls that Census was asking for regular meetings with platforms specifically focused on misinformation: the statement “is in reference to discussing how to engage on an ongoing basis about misinformation and the Census suggestion that we have regular meetings with them just on that topic.” Crawford Dep. 184:14-18. The exchange was “about how to engage more regularly about misinformation, or ... whatever Census had done with Google and YouTube, should we have a similar structure with CDC.” *Id.* 185:11-14.

541. Regarding the request for input on the “new list of common vaccine misinformation claims,” Crawford responded, “I’ve arranged for a few SMEs [subject-matter experts] to join the call, including Cynthia.” Crawford Ex. 29, at 2.

542. A few days later, on April 2, 2021, Google emailed Crawford stating, “Thanks again for your time this week. Attached are some of the claims we discussed for your reference.” Crawford Ex. 29, at 1.

543. Crawford’s reference to the “4pm meeting” refers to a regular biweekly meeting with Google, which still continues to the present day: “I still have a 4:00 p.m. meeting every other Monday with Google.” Crawford Dep. 180:6-7.

544. Crawford also has “similar regular meetings with ... Meta and Twitter.” *Id.* 180:11-16. She admits that she has ongoing meetings with Google and Facebook/Meta that continue to the present: “we had regular meetings with Google, and we had regular meetings with Meta.... you know, the frequency changed.... I mean, Google we meet every other week. Right now with Meta it's more ad hoc.” *Id.* 180:16-21.

545. Crawford also “had a regular meeting with Pinterest for a short period of time, and we had ... just more ad hoc meetings on occasion with Twitter.” *Id.* 180:23-181:1.

546. Crawford states that these meetings “were mostly about things other than misinformation; though misinformation was discussed in the meetings.” *Id.* 181:22-24.

547. On April 12, 2021, Google/YouTube followed up with an email to Crawford, stating, “For tomorrow’s call, would it be possible to include Cynthia or other COVID-19 treatment SMEs [subject-matter experts] to follow up on some additional questions?” Crawford Ex. 30, at 1. Crawford responded, “Can you give me an idea of what topics we’ll be covering? But yes, I’ll ask them to attend.” *Id.*

548. Crawford notes that it “wasn’t uncommon” for Google/YouTube to ask her to bring subject-matter experts to meetings to go over such topics. Crawford Dep. 188:19-22.

549. On May 10, 2021, Crawford emailed her Google contacts and invited them to attend in the BOLO meetings: “We would like to establish COVID BOLO meetings on misinformation and invite all platforms to join the meetings. We are aiming for our first one on Friday at noon. We have heard through the grapevine that [an official] at YouTube would want to join. Are there other POCs on your end I should include on the invite?” Crawford Ex. 40, at 1. The subject of the email was “COVID BOLO meetings on misinformation.” *Id.*

D. CDC’s and Census’s “BOLO Meetings.”

550. On May 11, 2021, Crawford followed up with an email stating, “We would like to invite digital platforms to attend a short ‘Be On The Lookout’ meeting on COVID. Please let us know if you have questions and feel free to forward this message to anyone in your organization that should attend.” Crawford Ex. 40, at 2. Google responded by asking that Crawford include

the YouTube official in the meeting, and Crawford noted that she “was going to ask about” him at the 4:00pm recurring meeting. *Id.*

551. Crawford testified that she wanted to include YouTube on the BOLO meetings because they hosted the most content: “people from YouTube would occasionally be on our regular meetings, depending on what we talked about. And because YouTube has the most content, like, hosting, ... they were a part of the BOLO meetings...” Crawford Dep. 244:21-245:1.

552. The Census officials “were arranging” the BOLO meetings, and “they drafted the slides” for the meetings. *Id.* 246:12-20.

553. Crawford ran the BOLO meetings. *Id.* 265:13. She “opened up the meeting, introduced myself, gave context for why we were doing the BOLO meeting in brief. And then I believe that Christopher [Lewitzke] went through the slide decks, and I occasionally piped in on them.” *Id.* 265:15-19.

554. The “slide decks” shown at the meetings were “similar to the table” of 16 Facebook posts that Crawford previously emailed to Facebook, but “they were more like this is a theme, and then there'd be maybe a little info about what the theme was and then maybe a couple of example posts. And then there would be a slide maybe with CDC links or information related to that theme.” *Id.* 266:1-6.

555. The first BOLO meeting was held on May 14, 2021. Jones Decl., Ex. U, at 1. The slide deck for that meeting was entitled “COVID Vaccine Misinformation: Hot Topics.” *Id.* at 2-10. It contained a list of five “Hot Topics” with an “ADVISORY” in red noting that platforms should “**Be On the Lookout**” for “**Potential Misinformation**” on each topic, and provided specific examples of social-media posts for each topic, “Associated Link(s) and Hashtag(s)” for each topic, and the CDC’s position on each topic (listed as “**The Facts**”). *Id.* at 4-8.

556. Crawford also emailed similar slide decks for BOLO meetings scheduled for May 28 and June 18, 2021, though the latter was canceled due to the new Juneteenth holiday. Jones Decl., Exs. V and W. In the cover email to the May 28 slides, Crawford requested secrecy: “Please do not share outside your trust and safety teams.” Jones Decl., Ex. V, at 1. Just like the May 14 BOLO slides, these slides contained lists of “Hot Topics” with an “ADVISORY” in red noting that platforms should “**Be On the Lookout**” for “**Potential Misinformation**” on each topic, and provided specific examples of social-media posts for each topic, “Associated Link(s) and Hashtag(s)” for each topic, and the CDC’s position on each topic (listed as “**The Facts**”). Jones Decl., Ex. V, at 4-6; *id.* Ex. W, at 4-6.

557. In conducting the BOLO meetings, Crawford described CDC’s goal as follows: “our goal is to be sure that credible information about COVID was out there. A lot of people seek information on platforms. We thought that by giving the platform scientific information it might help in our goals to being sure that credible information could be found.” Crawford Dep. 266:16-21. Of course, the BOLO meetings did not address identifying and promoting “credible information,” but flagging information that the CDC thinks is *not* credible for potential removal. Crawford effectively admits this; when asked if CDC’s goal includes that “incredible information would not be found,” she agreed that “I did want the credible information to be found in advance of the uncredible information.” *Id.* 266:22-267:4.

558. Crawford believes that the third BOLO meeting was cancelled because Juneteenth was declared a new federal holiday, and “that is why we didn’t end up having it and we sent the materials out via email.” *Id.* 248:17-22.

559. On October 28, 2021, Google emailed Crawford stating, “do you have time to connect early next week on anticipated guidance on vaccines for [children ages] 5-11? It would

be great to connect as the CDC plans communications on authoritative information for pediatric vaccines.” Crawford Ex. 42, at 2.

560. Crawford responded: “Yes, we can discuss pediatric vaccines early next week but let me give you some general info: ACIP is likely to vote on this on Nov 2. CDC is likely to start posting final information on Nov 3 (possibly late Nov 2), if that helps to know. There will be many updates so the changes might span over a few days. We are also looking ahead and misinformation and hope to have a BOLO type meeting later that week with platforms that are interested.” Crawford Ex. 42, at 1. (“ACIP” is the “Advisory Council for Immunization Practices.” 253:21-22.)

561. On June 29, 2022, Google/YouTube emailed Crawford and her deputy, stating: “The YouTube Policy team is requesting evidence-based input on the claims below. In the past, the CDC has reviewed COVID information claims and commented TRUE or FALSE + add any additional context needed.” Crawford Ex. 43, at 1. YouTube then presented two claims, relating to the safety and effectiveness of administering progesterone to reverse chemical abortion. *Id.* (“**CLAIM:** High doses of progesterone is a **safe** method of reversing chemical abortion ... **CLAIM:** High doses of progesterone is an **effective** method of reversing chemical abortion....”) (bold in original). Crawford responded, “I’ll check on this but I think I’ll probably end up needing to refer you to another agency. I’ll get back to you.” *Id.*

562. Regarding this exchange, Crawford notes that the CDC’s “focus is not solely on COVID. We’re focusing on other topics. I think [YouTube] thought that we might be able to help with this topic as well.” Crawford Dep. 256:5-8. Thus, Crawford admits that the CDC is continuing to engage with social-media platforms to provide information that will lead to the

ensorship of health-related claims on social media, and that it is willing to expand its focus to other health topics beyond COVID-19.

E. CDC’s and Census’s Pressure and Collusion with Twitter.

563. On April 8, 2021, Twitter emailed Crawford stating, “I’m looking forward to setting up regular chats; my team has asked for examples of problematic content so we can examine trends. All examples of misinformation are helpful....” Crawford Ex. 32, at 1. The subject line of this email was “Request for problem accounts.” *Id.* Crawford responded, “Yes, we’ll get that to you early next week.” *Id.*

564. Crawford believes that Twitter sent this email in response to her inquiry, “Is there a good way that we should start engaging on misinformation?” 197:19-20.

565. Crawford responded on April 14, 2021, “The Census team put this spreadsheet together with four example areas,” which included the topics, “Vaccines aren’t FDA approved,” “Fraudulent cures,” “VAERS data taken out of context,” and “Infertility.” Crawford Ex. 33, at 1. The attachment was called, “Twitter CDC Examples 4-13-21.xlsx.” *Id.* The spreadsheet contained a “list [of] things that [Census] saw that were being stated as misinformation.” Crawford Dep. 203:24-204:1. “Infertility” referred to “people claiming that getting the vaccines led to infertility.” *Id.* 204:17-18.

566. Crawford believes that Twitter “was asking for these examples in this email because he was wondering ... what would come up in BOLO meetings, or what we would be discussing.” *Id.* 204:22-24.

567. On May 10, 2021, Crawford emailed Twitter, stating “We wanted to point out two issues we are seeing a great deal of misinfo about....” Crawford Ex. 34, at 4. She then provided

a list of “sample posts” that included 12 Tweets reproduced verbatim. She stated, “Our census team is copied here, has much more info on it if needed.” *Id.*

568. In the same email on May 10, 2021, Crawford wrote, “Also, we are standing up a BOLO COVID misinformation meeting and inviting all tech platforms. We are shooting for 12pm EST on Friday for our first meeting. I’ll include you on the invite....” Crawford Ex. 34, at 4.

569. Crawford agrees that she was “sending this to [Twitter] so that he would be on the lookout for those things appearing on Twitter.” Crawford Dep. 208:25-209:3.

570. Crawford notes that “the BOLO format ... was used previously,” *id.* 209:12-13, because Census had done “BOLO meetings ... for their own work,” *id.* 209:23-24. The platforms had done BOLO meetings for Census “in relation to the 2020 census.” *Id.* 210:5-9.

571. Regarding the BOLO meetings, Census officials “explained” to Crawford “how they did it.” *Id.* 210: 16. “In fact, they drafted the slide deck” for the CDC BOLO meetings with social-media platforms. *Id.* 210:16-17. Census “drafted it and showed me how they thought that we should do it, and that ... we would give examples, we would give the science, and then ... people could follow up separately.” *Id.* 210:18-22.

572. Crawford believes that regular meetings with Twitter were not set up, but that “I know they participated in the BOLO meetings.” *Id.* 198:15-16.

573. Regarding the BOLO meetings, Crawford remembers that two occurred and a third one was scheduled but cancelled due to a holiday, and “in lieu of a meeting” she sent “a Powerpoint.” *Id.* 198:24-199:1.

574. Twitter responded to Crawford’s May 10, 2021 email flagging 12 specific Twitter posts as examples of trending misinformation, stating: “Thanks for sharing this – agree these are important trends to note; a quick scan shows that at least some of these have been previously

reviewed and actioned.” Crawford Ex. 34, at 3. He then stated: “I will now ask the team to review the others.” *Id.*

575. Crawford understood that “asking the team to review the others” meant referring Crawford’s flagged posts and issues to Twitter’s content-moderation team for possible censorship: “I interpreted it as Twitter made decisions about the areas of misinformation based on whatever policy they had.” Crawford Dep. 211:17-19.

576. As with Facebook, Crawford understood that her flagging of posts would result in Twitter censoring at least some of these materials in different ways, including removing posts: “similar to Meta that they probably had multiple options. I am sure some were removed. I am sure some ... were flagged. I see flags all the time on the Twitter posts. I am sure some were just maybe ... maybe they weren't distributed as much on peoples' feeds.” *Id.* 212:10-16.

577. In the same email, Twitter offered to enroll CDC officials in its “Partner Support Portal” to provide expedited review of content flagged for censorship: “Carol, remind me: did you have a chance to enroll in our Partner Support Portal? In the future, that’s the best way to get a spreadsheet like this reviewed.” Crawford Ex. 34, at 3.

578. Crawford understood that Twitter’s Partner Support Portal was “similar to what I described for Meta. It's an offering where you log in and you can report misinformation or threats or problematic posted content in this portal, and it puts it in a system for review.” Crawford Dep. 212:3-7.

579. On May 10, 2021, Twitter noted to Crawford, “I’d be glad to enroll you in our Partner Support Portal, which allows you a special, expedited reporting flow in the Twitter Help Center. It worked very well with Census colleagues last year.” Crawford Ex. 34, at 3.

580. Crawford responded by asking for instructions on how to enroll in the Partner Support Portal, and Twitter offered to enroll any Twitter accounts she identified. Crawford Ex. 34, at 3. Crawford provided her personal Twitter account to enroll. *Id.*

581. Then, on May 24, Census Bureau contractor Christopher Lewitzke followed on the same email chain with Twitter, asking about “the partner support portal enrollment for CDC.” Crawford Ex. 34, at 2. Lewitzke indicated that they planned to report COVID misinformation to Twitter using existing Census accounts already enrolled in the portal, not CDC accounts, stating: “would there be any issues or complications stemming from flagging COVID misinformation on the portal using the existing census.gov accounts that have access? We’ll want to have at least some CDC accounts whitelisted, but that backup may be helpful short-term.” *Id.* He then stated: “Let us know any next steps we can take to make sure CDC is all set with the portal.” *Id.*

582. Crawford confirms that Census had used similar portals to report misinformation to platforms in the past: “I did know from discussions with them that one technique I think that they used was using portals ... for their work to report [mis]information.” Crawford Dep. 213:16-19.

583. Twitter emailed Crawford on May 27, 2021, noting that she should be fully enrolled. Crawford Ex. 34, at 1. A screen shot of the portal proclaims, in very large, bolded type, “**Report any issue to get priority service.**” *Id.* (bold in original, font greatly reduced).

584. Crawford believes that she attempted to use Twitter’s Partner Support Portal “every now and then,” but that she never solved technical issues that prevented her from reporting anything. Crawford Dep. 215:9-22.

585. Christopher Lewitzke is “a Census contractor.” *Id.* 217:5-6.

586. On September 2, 2021, Crawford emailed Twitter, stating, “A quick BOLO for a small but growing area of misinfo.” Crawford Ex. 35, at 1. To Twitter, she claimed that “one of our Lab alerts ... was misinterpreted and was shared via social media.” Crawford Ex. 35, at 1. She stated, “I’ve attached some example Twitter posts and another document with the facts around the issue.” *Id.* The subject line of the email was “BOLO: CDC lab alert & misinformation.” *Id.*

587. This report was very similar to the report Crawford provided Facebook the day before, September 1, 2021. Crawford Ex. 21, at 1. “The only difference is this email is going to Twitter.” Crawford Dep. 220:7-8.

588. By sending these emails to Facebook and Twitter flagging what the CDC believed was a misinterpretation of a CDC lab alert on social media, CDC intended to prevent the disfavored message from spreading on social media: “We saw this confusion about this alert brewing and more posts were going up with confusion, and we thought it would be a good idea to provide the platforms with the facts *before it became something bigger.*” *Id.* 220:13-17 (emphasis added). In other words, CDC wished to cause the disfavored viewpoint to be censored before it could be viewed or repeated by others—a quintessential prior restraint.

589. CDC specifically flagged this information to the platforms, knowing that they would evaluate it for potential censorship under their content-moderation policies: Crawford “knew their policy teams or their trust teams or misinfo teams ... would evaluate it.” *Id.* 220:21-23. And Crawford “knew that removal was one of the options that they had, yes.” *Id.* 220:25-221:1.

F. CDC Endorses the States’ Theory of Standing.

590. Crawford admits that government communicators have a strong interest in tracking what their constituents are saying on social media: “It’s helpful for communicators to know what is being discussed because it helps improve our communication materials.” *Id.* 53:10-12.

591. Crawford emphasized this point multiple times: “as I mentioned before, it does help ... for communicators to know what conversations occurs on social media because it helps us identify gaps in knowledge, or confusion, or things that we’re not communicating effectively that we need to adjust.” *Id.* 54:15-20.

592. CrowdTangle reports “would help us understand what was being discussed on social media about COVID, which helps us look for gaps in information, confusion about facts, things that we might need to adjust our communication materials for.” *Id.* 57:24-58:3.

593. Crawford specifically expressed the concern that, if content was censored or removed from social-media platforms, government communicators would not know what the citizens’ true concerns were: She “was wondering if they delete the info will we know those myths or information so we could update communication activity. So if they were deleting content would we know what the themes were.” *Id.* 75:14-18. Thus, Crawford was concerned that, if the platforms “were deleting content,” she might not know “what the themes were” of “myths or [mis]information,” which would prevent her from “updat[ing the CDC’s] communication activity” to address those myths and misinformation. *Id.* Accordingly, Crawford wanted to know, “would [CDC] be able to see in CrowdTangle or other reports ... what kind of themes were removed so we would still have the full picture of areas of confusion.” *Id.* 75:21-76:1.

594. Crawford inquired of Facebook “about the data that we could get so we had a full picture on confusion so that we could adjust communication materials, or ways that we were communicating” about COVID-19. *Id.* 81:10-13. In other words, Crawford wanted to know about

speech that was censored, as well as speech that was left up, on social-media platforms so CDC could get “a full picture” and “adjust communication materials” to address people’s actual concerns. *Id.*

595. The CDC “did searches in CrowdTangle, the same way we do searches in other social media and listening tools that we have to create, to understand what's being discussed in the environment, to update our communication material.” *Id.* 148:11-15.

V. Dr. Fauci’s Campaigns to Censor Disfavored Viewpoints on Social Media.

596. Dr. Fauci, cooperating frequently with NIH Director Dr. Francis Collins, engaged in a series of campaigns to discredit and procure the censorship of viewpoints he disfavored on social media, beginning at least in early 2020. Once he became Chief Medical Advisor in the Biden Administration in early 2021, his censorship efforts coordinated with and reinforced those of federal officials in the White House, the Office of the Surgeon General, the CDC, and elsewhere.

597. Until his recent retirement, Dr. Anthony S. Fauci was the director of the National Institute for Allergy and Infectious Diseases at the National Institutes of Health and the Chief Medical Advisor to President Biden. Fauci Dep. 10:8-16. At the time of his deposition, Dr. Fauci had been the director of NIAID for over 38 years. *Id.* at 10:25-11:1.

A. Dr. Fauci’s Conspiracy and Campaign to Suppress the Lab-Leak Theory.

598. First, in early months of 2020, Dr. Fauci worked closely with Dr. Francis Collins and Jeremy Farrar to orchestrate a campaign to discredit and suppress the opinion that SARS-CoV-2, the virus that causes COVID-19, leaked from a laboratory at the Wuhan Institute of Virology—an opinion that has recently been confirmed as likely true. Early in the pandemic, Dr. Fauci was aware that NIAID, under his direction, had funded dangerous gain-of-function research on coronaviruses at that laboratory, and he sought to discredit and suppress the lab-leak theory to

deflect the scandal and blame associated with potential responsibility for the deaths of millions in the ensuing pandemic. He engaged in a campaign of deception to discredit the theory, and as a result of his efforts, the lab-leak theory was heavily censored on social media.

599. On December 30, 2011, Dr. Fauci co-authored an op-ed with Dr. Francis S. Collins in the Washington Post entitled *A Flu Virus Risk Worth Taking*. Fauci Ex. 1, Fauci Dep. 13:13-20.

600. In this op-ed, Dr. Fauci and Dr. Collins advocated for creating potentially dangerous viruses in laboratories, writing that “important information and insights can come from generating a potentially dangerous virus in a laboratory.” Fauci Ex. 1, at 1. According to Fauci and Collins, “[u]nderstanding the biology of ... virus transmission has implications for outbreak prediction, prevention and treatment,” and “[i]dentifying threatening viruses can also facilitate the early stages of manufacturing vaccines that protect against such a virus in advance of an outbreak.” *Id.* at 2. They further argued that “identifying the molecular Achilles heel of these viruses can allow scientists to identify novel antiviral drug targets that could be used to prevent infection ... or better treat those who become infected.” *Id.*

601. Dr. Fauci and Dr. Collins acknowledged the significant risks associated with such research, writing that “[s]afeguarding against the potential accidental release or deliberate misuse of laboratory pathogens is imperative.” *Id.* But they believed that those risks were contained, writing that “engineered viruses ... are maintained in high-security laboratories.” They further state that “scientists, journal editors, and funding agencies involved are working together to ensure that access to specific information that could be used to create dangerous pathogens is limited to those with an established and legitimate need to know.” *Id.*

602. Thus, long before the COVID-19 pandemic, Dr. Fauci and Dr. Collins were highly visible, public advocates for laboratory experiments that involve “generating a potentially dangerous virus in a laboratory.” *Id.* at 1.

603. Such research of “generating a potentially dangerous virus in a laboratory” is commonly called “gain-of-function” research. Dr. Fauci testified that “[g]ain of function is a very potentially misleading terminology, and that was one of the reasons why several years ago outside groups, not the NIH ... did away with the terminology ‘gain of function’ because it can often be very confusing and misleading.” Fauci Dep. 16:3-10. But Dr. Fauci confirms that “the NIH” did not “d[o] away” with that terminology, *id.*, and Dr. Fauci’s own internal email uses the phrase “SARS Gain of Function” to describe the research on bat coronaviruses that was conducted by Dr. Shi Zhengli and others at the Wuhan Institute of Virology, partly funded by Dr. Fauci’s NIAID through the subgrants from the EcoHealth Alliance, discussed below, *see* Fauci Ex. 6, at 8.

604. On June 1, 2014, Dr. Fauci’s NIAID funded a grant to the EcoHealth Alliance for the five-year period June 1, 2014, to May 31, 2019. Fauci Ex. 2, at 2. The title of the project was “Understanding the Risk of Bat Coronavirus Emergence.” *Id.* at 1. The project’s Abstract stated, “This project will examine the risk of future coronavirus (CoV) emergence from wildlife using in-depth field investigations across the human-wildlife interface in China, molecular characterization of novel CoVs and host receptor binding domain genes, mathematical models of transmission and evolution, and in vitro and in vivo laboratory studies of host range.” *Id.*

605. The Abstract noted that one of the project’s “three specific aims” would be to “[t]est predictions of CoV inter-species transmission” by engaging in two forms of research to enhance the bat coronaviruses’ transmissibility to humans: “reverse genetics,” *i.e.*, genetic manipulation of the viruses to render them more transmissible; and “virus infection experiments”

using “humanized mice,” *i.e.*, repeatedly infecting humanized mice with bat coronaviruses to provoke mutations that render them more infectious to human cells (a process known as “serial passage,” *see* https://en.wikipedia.org/wiki/Serial_passage). *Id.* at 1. Specifically, the Abstract stated: “Predictive models of host range (i.e., emergence potential) will be tested experimentally using *reverse genetics*, pseudovirus and receptor binding assays, and *virus infection experiments across a range of cell cultures* from different species and humanized mice.” *Id.* (emphases added).

606. Dr. Fauci attempted to argue that “reverse genetics” is so vague that it might not refer to gain-of-function research. *See* Fauci Dep. 23:18-20 (“I’m not really quite sure what they’re referring to. Reverse genetics can mean many things.”). But Dr. Fauci admits that “reverse genetics” means “[m]anipulation of a virus, recombination, things like that.” *Id.* at 23:19-21. In 2015, in an article reporting on research performed pursuant to this grant, Dr. Ralph Baric and Dr. Shi Zhengli wrote that they used “reverse genetics” to “generate[] and characterize[] a chimeric virus” that was more infectious and more virulent in humans. Fauci Ex. 4, at 1. Dr. Fauci’s own internal email describes that article as addressing “SARS Gain of Function.” Fauci Ex. 6, at 8.

607. Dr. Fauci admits that “EcoHealth has a subaward from their original grant that goes to Shi Zhengli at the Wuhan Institute of Virology.” Fauci Dep. 36:4-6. He agrees that EcoHealth and Shi Zhengli of the Wuhan Institute of Virology “work together on research that’s directly funded by NIAID.” Fauci Dep. 36:7-13.

608. Dr. Fauci also attests that Dr. Peter Daszak likely has access to the genetic sequences of chimeric viruses that Shi Zhengli created during her research funded by EcoHealth using NIAID funds: “I don’t know absolutely for sure, but I would imagine that if Peter Daszak is collaborating scientifically with Shi Zhengli, that it is likely, given the norms of scientific

collaboration, that he would have access to data,” and “they are collaborators, since he has a subaward to the Wuhan Institute that I believe goes to Dr. Shi.” Fauci Dep. 37:1-13. Daszak, therefore, is likely in possession of genetic evidence demonstrating whether SARS-CoV-2 originated from NIAID-funded research at the Wuhan Institute of Virology.

609. Dr. Fauci claimed that he had never seen this grant award before his deposition, and that he was only “vaguely” aware of NIAID’s funding of EcoHealth Alliance. *Id.* at 18:10-12 (“I’m vaguely familiar with the fact that EcoHealth Alliance has been doing research on trying to understand the bat coronavirus emergence.”); *id.* at 19:7-8 (“I have no recollection of the initiation of this grant.”). Dr. Fauci admits that “NIAID has funded EcoHealth Alliance,” 20:5-6, but he contends that he is completely unfamiliar with this project. *Id.* at 20:8-9 (“[T]his is the first time that I have seen this piece of paper.”). But this very grant project was flagged for Dr. Fauci in an email from his subordinate on January 27, 2020, at the beginning of the pandemic. Fauci Ex. 5. Given the public and Congressional scrutiny of this particular project and its relation to the origins of the COVID-19 pandemic, Dr. Fauci’s testimony on these points is not credible.

610. Peter Daszak is listed as the “Contact PI/Project Leader” for the grant award “Understanding the Risk of Bat Coronavirus Emergence.” Fauci Ex. 2, at 1. The “Awardee Organization” is the EcoHealth Alliance. *Id.*

611. Dr. Fauci claims that he is not acquainted with Peter Daszak and does not know how to pronounce Daszak’s name, Fauci Dep. 20:13 (“I’m not sure”), and that he “do[es]n’t even remember meeting him,” *id.* at 21:1-2, but that he has seen a photo of himself with Daszak at a public event as the only evidence that they have met. *Id.* at 21:2-8.

612. In fact, Dr. Fauci has exchanged cordial emails with Daszak on a first-name basis, and he participated in a podcast with him on February 9, 2020, in which they both sought to

discredit the lab-leak theory of COVID's origins. Fauci Ex. 15, 16, 30. Dr. Fauci's attempt to deny or downplay his acquaintance and familiarity with Daszak is not credible.

613. On October 17, 2014, the U.S. Government entered a "research funding pause" on gain-of-function research on coronaviruses, in a document entitled "U.S. Government Gain-of-Function Deliberative Process and Research Funding Pause on Selected Gain-of-Function Research Involving Influenza, MERS, and SARS Viruses." Fauci Ex. 3, at 1 (the "GoF Pause" or "Pause").

614. Contrary to Dr. Fauci's testimony that the "pause" was an occasion to jettison the term "gain-of-function," the Pause provided a simple and clear definition of "gain of function" research, defining "Gain-of-function studies" as "research that improves the ability of a pathogen to cause disease." Fauci Ex. 3, at 2. The research on bat coronaviruses described in Fauci Ex. 2 meets this simple definition.

615. The Pause applied to funding for all "research such as this until a new U.S. Government research policy could be adopted." Fauci Dep. 27:17-19; Fauci Ex. 3, at 2-3.

616. The Pause provided an exception in Footnote 1, which stated: "An exception from the research pause may be obtained if the head of the USG funding agency determines that the research is urgently necessary to protect the public health or national security." Fauci Ex. 3, at 2 n.1.

617. Dr. Fauci testified that he does not recall whether NIAID ever invoked that exception during the years that the Pause was in place (2014-2017). Fauci Dep. 28:22-29:3. He testified that authorization for funding under the exception would "not usually rise up to the office of the director, but is handled at the level of staff and deputy." *Id.* at 29:1-2. He testified that such approval for projects "urgently necessary to protect the public health or national security" could

have come from “any of a number of people. It could have been people at the program level. It could have been my deputy. It could have been program managers and division directors.” *Id.* at 30:16-19.

618. This testimony contradicts the plain language of the exception, which states that “*the head of the USG funding agency*” must “determine[] that the research is urgently necessary to protect the public health and national security” to allow continued funding for gain-of-function research on coronaviruses. Fauci Ex. 3, at 2 n.1. At all relevant times, Dr. Fauci was the “head of the USG funding agency,” *i.e.*, the Director of NIAID, and he was responsible for authorizing funding for gain-of-function research on the ground that it was “urgently necessary to protect the public health or national security.”

619. Dr. Fauci states that he does not recall whether NIAID ever authorized continued funding for Peter Daszak or EcoHealth Alliance pursuant to the exception to the Pause in footnote 1. Fauci Dep. 30:3-12.

620. In fact, Dr. Fauci testified that “I don’t recall” or “I do not recall” 174 times in his deposition, and testified that he could not recall or remember using variations on that phrase 212 times. *See* Fauci Dep. 22:21-352:17-18. This contrasts sharply with his public statements about the very same issues that, during his deposition, he professed near-complete loss of memory. *See, e.g.*, Jones Decl., Ex. X, at 1 (“I remember it very well”). It also contrasts sharply with his clear, specific recollection of unrelated events from the same time frame. *See, e.g.*, Fauci Dep. 353:20-354:16. Dr. Fauci’s repeated claims to not remember or not recall key events and people are not credible.

621. Dr. Fauci’s chief deputy is Dr. Hugh Auchincloss, who is the Principal Deputy Director of NIAID. *Id.* at 30:20-25.

622. In December 2015, during the research “Pause” on gain-of-function funding, Nature Medicine published an article entitled, “A SARS-like cluster of circulating bat coronaviruses shows potential for human emergence.” Fauci Ex. 4, at 1. Dr. Ralph Baric of the University of North Carolina was listed as the corresponding author, and Dr. Shi Zhengli of the Wuhan Institute of Virology was listed as a co-author. *Id.* at 1 & n.8.

623. The 2015 Nature Medicine article clearly described gain-of-function research on bat coronaviruses. The Abstract states: “Here we examine the disease potential of a SARS-like virus, SHC014-CoV, which is currently circulating in Chinese horseshoe bat populations. Using the SARS-CoV reverse genetics system, we generated and characterized a chimeric virus expressing the spike of bat coronavirus SHC014 in a mouse-adapted SARS-CoV backbone.” Fauci Ex. 4, at 1. Notably, the article uses the same phrase as the EcoHealth grant, “reverse genetics,” to describe creating “a chimeric virus.” *Id.*

624. The article reports that the “chimeric virus” created from a “SARS-like” bat coronavirus had become highly transmissible in human tissue: it could “replicate efficiently in primary human airway cells and achieve *in vitro* titers equivalent to epidemic strains of SARS-CoV.” *Id.* It had also become more virulent: “Additionally, *in vivo* experiments demonstrate replication of the chimeric virus in mouse lung with notable pathogenesis.” *Id.* There were no available treatments for this lab-created “chimeric” virus: “Evaluation of available SARS-based immune-therapeutic and prophylactic modalities revealed poor efficacy; both monoclonal antibody and vaccine approaches failed to neutralize and protect from infection with CoVs using the novel spike protein.” *Id.*

625. The article noted that the authors had then “synthetically re-derived an infectious full-length SHC014 recombinant virus and demonstrate robust viral replication both *in vitro* and

in vivo.” *Id.* The article concluded that “[o]ur work suggests a potential risk of SARS-CoV re-emergence from viruses currently circulating in bat populations” – and this conclusion was based on creating a more transmissible (to humans) and more virulent (to humans) SARS-like coronavirus in a lab. *Id.*

626. The article acknowledged that NIAID was the principal funder of this research, and that it had received funding from the EcoHealth Alliance, Daszak’s group: “Research in this manuscript was supported by grants from the National Institute of Allergy & Infectious Disease and the National Institute of Aging of the US National Institutes of Health (NIH) ... and by USAID-EPT-PREDICT funding from EcoHealth Alliance.” *Id.* at 5.

627. The article also noted that the NIH had reviewed and approved the research under the GoF Pause: “Experiments with the full-length and chimeric SHC014 recombinant viruses were initiated and performed before the GOF research funding pause and have since been reviewed and approved for continued study by the NIH.” *Id.* “GOF” is short for “gain-of-function.”

628. Dr. Fauci testified that he first became aware of this Nature Medicine article “likely ... several months” after the outbreak of the COVID-19 pandemic, and that “it was brought to my attention in the context of questions that were raised by members of Congress about experiments that were funded by the NIAID.” Fauci Dep. 31:17-20, 32:7-9. In fact, Dr. Fauci attached this article to a confidential midnight email to his principal deputy, Hugh Auchincloss, on January 31, 2020, and directed Auchincloss to read it immediately and take unspecified actions on it on a Saturday morning. Fauci Ex. 6, at 8. Dr. Fauci’s testimony on this point is not credible.

629. Dr. Fauci testified that he does not believe he has ever met Dr. Ralph Baric, the corresponding author of the 2015 Nature Medicine article. Fauci Dep. 32:16-19 (“I know who he is, I doubt I’ve ever met him. I may have met him at one of the meetings where there are thousands

of scientists saying hi to each other...”); *see also id.* at 33:25-34:1. In fact, Dr. Fauci’s official calendar shows a one-on-one meeting with Dr. Ralph Baric on February 11, 2020, during the events described herein. Fauci Ex. 17, at 1. A contemporaneous Slack message on February 18, 2020 reports that Dr. Baric “sat in Fauci’s office talking about the outbreak and chimeras,” *i.e.*, lab-created chimeric viruses. Jones Decl., Ex. Y, at 1. And Dr. Fauci testified that Dr. Baric may be the source of the phrase “SARS Gain of Function” in the attachment to his midnight email to Hugh Auchincloss. Fauci Dep. 57:11-12. Dr. Fauci’s testimony on this point is not credible.

630. Dr. Fauci professed to be ignorant of the identity of Dr. Shi Zhengli, the notorious “Bat Woman” of the Wuhan Institute of Virology. When asked if he knows who she is, he stated, “I’m not a hundred percent certain. I get sometimes confused with Asian names.” *Id.* at 33:9-10, 18-19. Yet Dr. Shi Zhengli, the so-called “bat woman,” is world-renowned as the researcher who may have caused the COVID-19 pandemic, and has been so since the beginning of the pandemic, *see, e.g.*, Jones Decl., Ex. Z, at 1, and the name “Shi” is included in the title of the article that Dr. Fauci forwarded to Dr. Hugh Auchincloss after midnight on February 1, 2020. Fauci Ex. 6, at 8. Dr. Fauci’s testimony is not credible on this point.

631. Dr. Fauci testified that he first became aware of the outbreak of COVID-19 either December 31, 2019 or “the first couple days of 2022.” Fauci Dep. 34:8-11.

632. Dr. Fauci recounts that he first became aware of concerns that the SARS-CoV-2 virus that causes COVID-19 “might have been genetically engineered or originated in a laboratory” when “[t]here was a phone call in late January of 2020, I believe, from Jeremy Farrar. There was one other person on the phone. I believe it was [K]ristian [Andersen], who piped me in on a three-way call, saying that they looked at the virus and there was some concern about the

molecular configuration or makeup of the virus that made them think there was a possibility that there could have been a manipulation of the virus.” *Id.* at 34:12-35:1.

633. Dr. Fauci states that he does not believe that anyone ever raised the concern to him before that late January call, and he specifically attests that he does not recall Dr. Robert Redfield, then-Director of the CDC, raising the concern to him in mid-January 2020. *Id.* at 35:2-15. Dr. Fauci’s recollection conflicts with that of Dr. Redfield, who specifically recalls raising this issue to Dr. Fauci earlier in January 2020, and having his concerns fall on deaf ears: “Dr. Robert Redfield, a virologist and the director of the Centers for Disease Control and Prevention (CDC), had urged Fauci privately to vigorously investigate both the lab and natural hypotheses. He was then excluded from the ensuing discussions—learning only later that they’d even occurred. ‘Their goal was to have a single narrative,’ Redfield [said].” Jones Decl., Ex. AA, at 7.

634. “In mid-January of 2020, ... Redfield expressed his concerns in separate phone conversations with three scientific leaders: Fauci; Jeremy Farrar, the director of the U.K.’s Wellcome Trust; and Tedros Adhanom Ghebreyesus, director general of the World Health Organization (WHO). Redfield’s message, he says, was simple: ‘We had to take the lab-leak hypothesis with extreme seriousness.’” *Id.* at 23. Dr. Fauci disputes this account and states that this conversation did not happen: “To my recollection, no.” Fauci Dep. 35:9-12.

635. On January 27, 2020, Dr. Fauci and several other senior NIAID officials received an email from Greg Folkers, who is his “immediate chief of staff in my office group,” *id.* at 38:2-4; the email provided “Talking Points for NIAID Director Dr. Fauci.” Fauci Ex. 5. The email stated that “when talking about CoV ... we have on our team (Vincent and folks we fund, Peter Daszak, Ralph Baric, Ian Lipkin, etc.) probably the world’s experts on non-human coronaviruses. ... EcoHealth group (Peter Daszak et al) has for years been among the biggest players in

coronavirus work, also in collaboration Ralph Baric, Ian Lipkin, and others.” *Id.* at 1. It also flagged the ongoing NIAID grant to Daszak and its work with Wuhan Institute of Virology: “NIAID has funded Peter’s group for coronavirus work in China for the past five years through R01 1R01AI110964: ‘Understanding the Risk of Bat Coronavirus Emergence.’ That’s now been renewed.” *Id.* It noted that “[t]he results of the work to date include ... Found SARS-related CoVs that can bind to human cells (published in *Nature*) and that cause SARS-like disease in humanized mouse models”—a clear reference to the 2015 *Nature Medicine* article. *Id.* Three days later, Dr. Fauci would attach that *Nature Medicine* article to a midnight email to Hugh Auchincloss. Fauci Ex. 6, at 8.

636. Like so many other things, Dr. Fauci testifies that he does not recall receiving this email. Fauci Dep. 40:5-6.

637. Dr. Fauci states that he first became aware of the concern that the virus might be bioengineered and lab-created in a call with Dr. Kristian Andersen of Scripps and Jeremy Farrar of the Wellcome Trust on January 31, 2020. Fauci Dep. 43:17-25. In that call, according to Dr. Fauci, “Jeremy and [K]ristian said they had looked at -- or at least [K]ristian did, possibly Jeremy -- and maybe one other scientist -- and said that it is possible that there may have been a manipulation because it was an unusual virus.” Fauci Dep. 44:3-9. A phone call was arranged for the next day, Saturday, February 1, 2020, to discuss the possibility. *Id.* at 44:15-17.

638. According to contemporaneous emails, Eddie Holmes and Bob Garry were involved in this call with Dr. Fauci and Kristian Andersen as well. Fauci Ex. 7, at 2. Eddie Holmes, who was then raising serious concerns that the virus had leaked from a lab, would go on to be the lead drafter of a key article discrediting the lab-leak theory.

639. After the January 31 call with Farrar and Andersen, in the evening of the same day, Dr. Fauci forwarded them an article that was skeptical of the lab-leak theory, stating that “it is of interest to the current discussion.” Ex. 6, at 1. Andersen responded, stating that he was not convinced by the article because “one has to look really closely at all the sequences to see that some of the features look (potentially) engineered,” and that “after discussion earlier today, Eddie [Holmes], Bob [Garry], Mike [Larabee], and myself *all find the genome inconsistent with expectations from evolutionary theory.*” *Id.* (emphasis added); *see also* Fauci Dep. 51:3-8.

640. A few hours later, shortly after midnight, at 12:29 a.m. on February 1, 2020, Dr. Fauci sent an email to his principal deputy, Hugh Auchincloss. Fauci Ex. 6, at 8. The subject line of the email said “IMPORTANT.” *Id.* The email stated: “Hugh: It is essential that we speak this AM. Keep your cell phone on. ... Read this paper as well as the e-mail that I will forward to you now. You will have tasks today that must be done. Thanks, Tony.” *Id.*

641. The “this paper” that was attached to the email was the 2015 *Nature Medicine* article entitled “A SARS-like cluster of circulating bat coronaviruses shows potential for human emergence,” Fauci Ex. 4, co-authored by Dr. Ralph Baric and Dr. Shi Zhengli and funded by NIAID and the EcoHealth Alliance. Fauci Ex. 6, at 8; Fauci Dep. 55:23-56:25. As an attachment to Dr. Fauci’s email, this article was called “Baric, Shi et al – Nature Medicine – SARS Gain of Function.pdf.” Fauci Ex. 6, at 8.

642. Dr. Fauci claims that he can recall virtually nothing about sending this urgent, confidential email to his principal deputy in the middle of the night of the day when he found out that highly qualified researchers were concerned that SARS-CoV-2 might have leaked from a laboratory. *See* Fauci Dep. 55:15-63:21 (“I don’t recall ... I don’t know for sure ... I can’t say that I recall that in particular ... I don’t recall. I’m not sure exactly why those words got in there

... I don't recall ... I don't recall ... I don't precisely recall ... I don't recall if I did ... I might have, but I don't recall. ... I don't recall. ... I don't recall ... I don't recall. ... I don't recall ... I really don't recall ... I actually don't recall why I forwarded it to him ... I don't recall why I did that ... I don't remember ... I don't recall speaking to him.”). This contrasts starkly with Dr. Fauci's public claim to “remember ... very well” key events of the same day. Jones Decl., Ex. X, at 1. Dr. Fauci's claim to an amazing loss of memory about this urgent clandestine email to his confidential deputy is not credible.

643. Dr. Fauci admits, however, that he wanted Auchincloss to find out what coronavirus research NIAID was funding in China before his call later that afternoon with scientists about the lab-leak concerns raised by Andersen and Farrar: “And at my recollection, I brought to Hugh's attention, saying, ‘We have to speak in the morning, because I want to find out what the scope of what it is that we are funding so I'll know what we're talking about.’” Fauci Dep. 58:1-5. In particular, Dr. Fauci wanted to find out what EcoHealth Alliance was doing: “this was the first that I had heard about specifics of what EcoHealth and what other people were doing, and I wanted my staff to say get me up to date. So that's what I meant by you have work to do.” *Id.* at 58:6-12.

644. Regarding the “tasks that must be done,” Dr. Fauci admits that “I wanted to be briefed on the scope of what our collaborations were and the kind of work that we were funding in China. I wanted to know what the nature of that work was.” *Id.* at 59:12-15.

645. The tone of the email and Dr. Fauci's own testimony strongly support the inference that Dr. Fauci sent the email to Auchincloss because he was concerned that NIAID, under his leadership, was funding research in China that might have led to the creation and leak of SARS-CoV-2, and he wanted to know the full extent of NIAID's exposure before his call later that day with scientists and funding authorities. *See also* Fauci Dep. 58:18-25. If it became public that

NIAID had funded the creation of SARS-CoV-2, Dr. Fauci and his agency potentially faced an enormous crisis of public credibility and accountability.

646. Immediately after sending Auchincloss the 2015 *Nature Medicine* article, Dr. Fauci also forwarded Auchincloss another article about the possibility that SARS-CoV-2 had leaked from a lab—the Jon Cohen article that he had sent to Kristian Andersen and Jeremy Farrar earlier that evening. Fauci Ex. 6, at 9. This email confirms that Dr. Fauci was deeply concerned about the prospect that NIAID, under his watch, might have funded the creation of the virus causing the global pandemic.

647. Dr. Fauci denies that, when he sent this email to Auchincloss, he was then concerned that NIAID might have funded the creation of the virus that caused the COVID-19 pandemic. When asked, “Were you concerned at that time that the work that you had funded in China might have led to the creation of the coronavirus?” Dr. Fauci responded: “I wasn’t concerned that it might have.” Fauci Dep. 59:16-19. In light of the tone and content of his emails at the time, and Dr. Fauci’s other testimony, this statement is plainly not credible.

648. According to Dr. Fauci, when he participated in the secret call with the scientists and funding authorities later that afternoon on Saturday, Feb. 1, 2020, he did not share with them that NIAID had been funding “SARS Gain of Function” research in China leading to the outbreak of COVID-19. Fauci Dep. 63:22 (“I don’t believe I did.”).

649. In fact, once again, Dr. Fauci claims that he does not recall what he said on the clandestine February 1, 2020 phone call. *Id.* at 64:17 (“I don’t recall”).

650. At 1:19 p.m. on Saturday, Feb. 1 – about forty minutes before the secret conference call to discuss the lab-leak concern – Dr. Fauci also forwarded the “Baric, Shi et al – Nature Medicine – SARS Gain of Function” article to Lawrence Tabak of the NIH, saying only “Here it

is.” Fauci Ex. 6, at 15. Lawrence Tabak was then “the deputy director of the National Institutes of Health,” the principal deputy to then-NIH Director Dr. Francis Collins. Fauci Dep. 65:8-11.

651. Dr. Fauci testified that “I don’t recall why” he sent the 2015 *Nature Medicine* article to Lawrence Tabak, but he admits that it was likely to get it into the hands of Dr. Francis Collins, who was about to participate in the 2:00 p.m. secret conference call with Dr. Fauci and the other scientists. *Id.* at 66:15-17. Dr. Fauci claims that this was “to make sure *everyone* was aware of what the discussions were,” *id.* at 66:13-15, but that is not credible in light of his testimony that he did not alert any of the *other* scientists on the call to the concern that NIAID was funding “SARS Gain of Function” research in China. *Id.* at 63:22.

652. The more compelling inference is that Dr. Fauci wanted Dr. Collins to know that NIAID and NIH faced enormous exposure if the lab-leak theory turned out to be true or publicly accepted. Dr. Collins, along with Dr. Fauci, had publicly championed gain-of-function research since at least 2011, and NIH had jointly funded Dr. Shi Zhengli’s work at the Wuhan Institute of Virology through NIAID and the National Institute of Aging. Fauci Ex. 4, at 5 (referring to “grants from the National Institute of Allergy & Infectious Disease and the National Institute of Aging of the US National Institutes of Health (NIH)”).

653. On Saturday, Feb. 1, 2020, at 11:47 a.m., Hugh Auchincloss emailed Dr. Fauci in response to his 12:29 a.m. email. The subject line stated only “Continued.” Auchincloss stated: “The paper you sent me [*i.e.*, the 2015 *Nature Medicine* article on ‘SARS Gain of Function’] says the experiments were performed before the gain of function pause but have since been reviewed and approved by NIH. Not sure what this means since Emily is sure that no Coronavirus work has gone through the P3 framework. She will try to determine if we have any distant ties to this work abroad.” Fauci Ex. 6, at 16. At 5:51 p.m., Dr. Fauci responded: “OK. Stay tuned.” *Id.*

654. “Emily” in Auchincloss’s email “is Emily Erbelding, the Director of the Division of Microbiology and Infectious Diseases at NIAID,” who “would have been the one who was closest to the ground in understanding what we were doing in funding China.” Fauci Dep. 70:14-18. The “P3 framework” refers to the special approval process required for funding of gain-of-function research on coronaviruses that may cause pandemics, as “P3” stands for “potential pandemic pathogens.” See National Institutes of Health, Office of Science Policy, *Gain of Function Research*, at <https://osp.od.nih.gov/policies/national-science-advisory-board-for-biosecurity-nsabb/gain-of-function-research/> (“Certain gain-of-function studies with the potential to enhance the pathogenicity or transmissibility of potential pandemic pathogens (PPPs) have raised biosafety and biosecurity concerns...”). Thus, Auchincloss and Dr. Fauci had evidently discussed the concern that NIAID had funded the creation of “potential pandemic pathogens” at the Wuhan Institute of Virology, and Dr. Fauci was concerned about NIAID’s “ties to this work abroad.” Fauci Ex. 6, at 16.

655. Dr. Fauci admits that this email confirms that he “wanted to be briefed as to the extent of our involvement with funding in China,” Fauci Dep. 71:2-4—in particular, NIAID’s funding of the Wuhan Institute of Virology, as a global SARS-like pandemic emerged from Wuhan.

656. Dr. Fauci also admits that he may have raised the concern with Auchincloss that Dr. Baric’s and Dr. Shi Zhengli’s research reflected in the 2015 *Nature Medicine* article may have been illegally funded in violation of the GoF Pause in effect from 2014 to 2017. Fauci Dep. 71:14-20 (“Q: Did you raise a specific concern with Hugh that the research reflected in the Baric, Shi Nature Medicine paper may have been inconsistent with the pause on -- gain-of-function funding research? A. That is possible.”).

657. On Saturday, Feb. 1, 2020, Jeremy Farrar sent an email organizing a secret conference call at 2:00 pm EST to a group of scientists and science-funding authorities. Fauci Ex. 6, at 17-18. The first thing that Farrar noted in the email, in bold, was “**Information and discussion is shared in total confidence and not to be shared until agreement on next steps.**” *Id.* at 17 (bold in original).

658. Separately, Farrar sent just Dr. Fauci an email on the morning of Feb. 1 to ensure that he could join the call, stating “Could you join?” Fauci Ex. 7, at 12. In that email, Farrar listed the participants and stated, “My preference is to keep this a really tight group. ... Obviously ask everyone to treat in total confidence.” *Id.* He also stated that the purpose of the call was “To listen to the work of Eddie, Bob and Kristian have done. Question it. And think through next steps.” *Id.*

659. Dr. Fauci described the call as an open debate about the lab-leak theory among “a larger group of evolutionary virologists,” Fauci Dep. 58:19-20, but in fact the call included a heavy representation of international government and science-funding authorities—including Dr. Fauci, Director of NIAID; Dr. Francis Collins, Director of NIH; Jeremy Farrar, head of the Wellcome Trust, the United Kingdom’s “predominant” science-funding authority; Paul Schreier, the Chief Operating Officer of the Wellcome Trust who is responsible for “research funding” there; and Sir Patrick Vallance, the chief medical advisor to the U.K. government. Fauci Ex. 6, at 18; *see also* Fauci Dep. 75:11-76:15. All these people had a strong vested interest in avoiding a major scandal about international science-funding practices—such as the concern that Western governments may have funded the creation of a deadly virus that escaped from a lab and infected millions of people. As funding authorities who control the distribution of massive amounts of research funding, they also had powerful influence over the research scientists on the call.

660. Dr. Fauci took steps to ensure that Dr. Francis Collins would be included on the call “since he’s the director of NIH.” Fauci Dep. 75:4-6. Dr. Fauci evidently spoke with Dr. Collins before the call, as he emailed Farrar before the call stating, “Jeremy: Francis will be on the call. He is trying to phone you.” Fauci Ex. 7, at 17. Farrar then emailed Dr. Collins stating, “Francis Call me on [redacted].” Fauci Ex. 7, at 19.

661. Like the 12:29 a.m. email to Auchincloss, Dr. Fauci repeatedly claimed that he could not recall virtually any details about the 2:00 p.m. secret conference call with scientists and funding authorities about the lab-leak theory. Fauci Dep. 63:19-67:11 (“I don’t recall bringing this up ... I don’t recall ... I don’t recall ... I don’t recall when it was ... I don’t recall ... I don’t believe that Larry was, but he could have been ... I don’t recall”); Fauci Dep. 73:20-74:14 (“I don’t recall a discussion about confidentiality or not ... I may have. I don’t recall.”); Fauci Dep. 77:13-15 (“Do you remember anything that anybody said on the call? A: No.”); Fauci Dep. 78:10-83:10 (“I don’t recall whether that was discussed ... I don’t recall anything from that phone call that said that ... I’m not sure if I discussed it ... I have a vague recollection that there was a concern ... It is certainly possible, but I don’t specifically remember ... I don’t specifically recall.”).

662. This testimony to near-complete lack of memory about the call stands in stark contrast to Dr. Fauci’s public statements a year and a half after the call occurred, when FOIA releases of Dr. Fauci’s emails finally revealed to the public that this secret call had occurred. Then, Dr. Fauci stated, “I remember it very well.” Jones Decl., Ex. X, at 1. Dr. Fauci’s testimony about lack of recall is not credible.

663. Notwithstanding his repeated testimony that he cannot recall specifically what was said on the call, Dr. Fauci provided a self-justifying and innocent account of the call, describing it as a good-faith discussion among scientists trying to get to the truth without any preconceived

biases. *See, e.g.*, Fauci Dep. 77:16-18 (“[T]here was what appeared to me to be good faith discussion back and forth between people who knew each other”); Fauci Dep. 79:23-80:1 (“I think the general feeling among the participants on the call is that they wanted to get down to the truth and not wild speculation about things.”); Fauci Dep. 80:9-10 (“I don't think there was any other concern than sticking with the truth and sticking with data”).

664. Dr. Fauci thus seeks to have his cake and eat it too—he claims both to remember little or nothing of what was said on the call, and to clearly remember that the entire discussion was done in good faith and without any bias. In any event, subsequent communications and events make clear that Dr. Fauci’s testimony on this point is not credible, as discussed in detail below, as an aggressive plot to discredit the lab-leak theory commenced immediately after the call.

665. Almost an hour into the 2:00 pm call, at 2:56 p.m., Jeremy Farrar sent a cryptic email to Fauci, Collins, Vallance (all science funders) and Mike Ferguson, stating, “Can I suggest we shut down the call and then redial in? Just for 5-10 mins?” Dr. Fauci responded, “Yes.” Fauci Ex. 7, at 26. Dr. Fauci claims he cannot recall whether this occurred. Fauci Dep. 92:1-93:6.

666. Dr. Fauci testified that the call participants concluded that they needed more time to take a much closer look at the biology of the virus and genetic sequences before coming to a conclusion about the virus’s origins, and they planned to take more time to continue their inquiry afterward. *See* Fauci Dep. 78:3-9 (“The ten[or] of it ended that we need more time ... they said we need some time to more carefully look at this to see if we can come to a sound conclusion based on further examination of the sequences.”); Fauci Dep. 80:24-25 (“The plan was to go and spend more time carefully looking at it.”). In fact, Eddie Holmes and Kristian Andersen began drafting an article concluding that the lab-leak hypothesis was baseless and rooted in animus

immediately after the call ended, and Dr. Fauci received an initial draft of this article by the next Tuesday morning. *See infra*. Dr. Fauci's testimony on this point is not credible.

667. Dr. Fauci testified that his next interaction with the call's participants was when Kristian Andersen sent him a preprint of that article attacking the lab-leak theory. Fauci Dep. 82:19-83:1. In fact, before the preprint, Holmes and Farrar had sent Dr. Fauci at least *four* drafts of the article to review. *See infra*. Dr. Fauci's testimony is not credible on this point.

668. Dr. Fauci states that he cannot remember if he had further discussions with Jeremy Farrar, Francis Collins, and Patrick Vallance surrounding this call on Feb. 1, 2020. Fauci Dep. 83:2-10; 85:8-23, 90:25-91:15, 92:1-21. In fact, Dr. Fauci sent Jeremy Farrar a lengthy email that is entirely redacted at 12:38 a.m. on Saturday, Feb. 1, 2020, Fauci Ex. 7, at 1; Farrar emailed Fauci on Jan. 30 stating "Tony Perfect timing – thank you. Great to catch up," and provided Sir Patrick Vallance's phone number, Fauci Ex. 7, at 4; Fauci emailed Farrar and Vallance on Jan. 30, stating "Thanks, Jeremy. Great chatting with you and Patrick. Will stay in close touch," Fauci Ex. 7, at 4; Jeremy Farrar sent Dr. Fauci an email on Friday, Jan. 31, stating "Tony Really would like to speak with you this evening It is 10pm now UK Can you phone me on [redacted]," Fauci Ex. 7, at 3; Farrar and Sir Patrick Vallance had a three-way call with Dr. Fauci on Jan. 30, 2020, Fauci Ex. 7, at 4; Farrar emailed Fauci and Collins after the call referring to "Conversations with you and Tony, and Patrick and others," Fauci Ex. 7, at 34; among others. Dr. Fauci had extensive discussions with Jeremy Farrar, Francis Collins, and Patrick Vallance surrounding the 2:00 p.m. February 1, 2020 secret conference call, and his testimony to the contrary is not credible.

669. After the call, Francis Collins emailed Farrar and stated, "Hi Jeremy, I can make myself available at any time 24/7 for the call with Tedros. Just let me know. Thanks for your leadership on this critical and sensitive issue." Fauci Ex. 7, at 34. Farrar responded, "We are

altogether as you know!” Fauci then chimed it: “Thanks, Jeremy. We really appreciate what you are doing here.” Fauci Ex. 7, at 34. “Tedros” refers to the director of the World Health Organization. Fauci Dep. 95:6-7.

670. After the call, Dr. Fauci described the scientists as engaging in a careful investigation of the virus: “[K]ristian and a few of the others carefully got together and looked at it and examined the pros and the cons and the ups and downs, and came to the conclusion that their initial concern about the molecular basis of the concern was unwarranted and that what they saw was quite compatible and, in fact, suggestive of a natural evolution.” Fauci Dep. 81:8-15. In fact, Eddie Holmes and Kristian Andersen immediately began drafting an article attacking the lab-leak theory with no further investigation, which was sent to Dr. Fauci in less than three days. *See infra*. Dr. Fauci’s testimony on this point is not credible.

671. Farrar emailed Dr. Tedros of the World Health Organization and two senior WHO officials, along with Dr. Fauci and Dr. Collins, indicating that he had just spoken to the senior WHO officials and “[f]ully agree with your summary.” Fauci Ex. 8, at 1. Farrar emphasized the “urgency and importance” of the lab-leak question because of the “[g]athering interest evident in the scientific literature and in mainstream and social media to the question of the origin of this virus,” and thus it was “[c]ritical” to “get ahead of the science and the narrative of this” instead of “reacting to reports which could be very damaging.” Fauci Ex. 8, at 1. He also wrote, “I am sure I speak for Francis [Collins] and Tony [Fauci] when I say we are here and ready to play any constructive role in this,” as they “[d]o think this is an urgent matter to address.” *Id.*

672. Thus, Farrar, joined by Fauci and Collins, sent a message to the WHO that they wanted to “get ahead” of potentially damaging “narrative[s]” that might emerge “in mainstream and social media” about the origins of the virus. *Id.*

673. Later that day, on Feb. 2, Farrar separately emailed Fauci and Collins, stating “Tedros and Bernhard have apparently gone into conclave...they need to decide today in my view. If they do prevaricate, I would appreciate a call with you later tonight or tomorrow to think how we might take forward.” Fauci. Ex. 8, at 2. He also stated, “Meanwhile....” and linked to an online article speculating about the lab-leak origins of the virus—again indicating that Fauci, Farrar, and Collins were concerned about controlling online discourse about the lab-leak theory. *Id.*

674. The day after the conference all, Sunday, Feb. 2, Dr. Fauci, Jeremy Farrar, and Dr. Collins shared a series of emails (1) acknowledging that there were very serious arguments in favor of the lab-leak theory, and (2) repeatedly expressing concern about the lab-leak theory’s involvement on “social media.” The group, including Dr. Fauci, repeatedly expressed concern about postings about the lab-leak theory on social media. *See* Fauci Ex. 8.

675. First, after the Feb. 1 call, still on Feb. 1, Farrar sent an email to the group expressing concern that “[t]here will be media interest and there is already chat on Twitter/WeChat” about the lab-leak theory, and stating: “In order to stay ahead of the conspiracy theories and social media I do think there is an urgency for a body to convene” to address the lab-leak question. Fauci Ex. 8, at 9.

676. The next day, Feb. 2, Farrar then expressed concern that “these questions are being asked by politicians, starting in the scientific literature, [and] certainly on social and main stream media. If, and I stress if, this does spread further, pressure and tensions will rise. [I] fear these questions will get louder and more polarised and people will start to look to who to blame. ... I am concerned if this is not done quite quickly it will be reacting to what may be lurid claims.” Fauci Ex. 8, at 7.

677. Another call participant then agreed that “this needs to be discussed urgently,” in part “because of the lurid claims on Twitter.” Fauci Ex. 8, at 6. He also noted that “if the evolutionary origins of the epidemic were to be discussed, I think the only people with sufficient information or access to samples to address it would be the teams working in Wuhan.” *Id.*

678. The same day, Farrar acknowledged “this is a very complex issue,” and again expressed concern about “social and main stream media”: “As discussed on the phone this discussion is not limited to those on this email, it is happening wider in the scientific, social and main stream media.” Fauci Ex. 8, at 5.

679. Dr. Collins then responded to Farrar and Dr. Fauci only, stating that “a confidence-inspiring framework ... is needed, or the voices of conspiracy will quickly dominate, doing great potential harm to science and international harmony.” Fauci Ex. 8, at 5.

680. Farrar then shared notes with Fauci, Collins and Tabak (Collins’ deputy) from “Mike Farzan (discoverer of SARS receptor),” which stated that Farzan “is bothered by the furin cleavage site [a virus feature that looks bioengineered] and has a hard time explaining that as an event outside the lab,” and that “acquisition of the furin site would be highly compatible with the idea of continued passage of virus in tissue culture,” *i.e.*, serial passage. Fauci Ex. 8, at 4. Farzan suggested that “a likely explanation” of the virus was serial passage of SARS-like coronaviruses in human cell lines, and he stated that “I am 70:30 or 60:40” in favor of laboratory origins. Fauci Ex. 8, at 3-4.

681. Farrar also shared notes from “Bob” [Garry] that he had “aligned” the new virus “with the 96% bat CoV sequenced at WIV [Wuhan Institute of Virology],” and viewed the lab-origin theory as highly likely: “I really can’t think of a plausible natural scenario ... I just can’t

figure out how this gets accomplished in nature. Do the alignment of the spikes at the amino acid level – it’s stunning.” Fauci Ex. 8, at 4.

682. Having shared these notes, Farrar noted, “On a spectrum if 0 is nature and 100 is release – I am honestly at 50! My guess is that this will remain grey, unless there is access to the Wuhan lab – and I suspect that is unlikely!” Fauci Ex. 8, at 3. Both Farrar and Collins expressed concerns that the WHO might move too slowly for their liking. *Id.*

683. Then, still on February 2, 2020, Dr. Fauci wrote to Farrar, Collins, and Lawrence Tabak (Dr. Collins’ principal deputy), stating: “Like all of us, I do not know how this evolved, but given the concerns of so many people and *the threat of further distortions on social media*, it is essential that we move quickly. Hopefully, we can get the WHO to convene.” Fauci Ex. 8, at 2 (emphasis added).

684. Dr. Fauci claimed that he is completely dissociated from social media, stating: “I don’t do social media so I’m not familiar with them,” Fauci Dep. 98:15-16; and “You know, I’m so dissociated from social media. I don’t have a Twitter account. I don’t do Facebook. I don’t do any of that, so I’m not familiar with that,” Fauci Dep. 99:5-8; *see also, e.g.*, Fauci Dep. 103:12-14; 210:3-8; 213:10-16; 241:6-9; 241:21-242:1; 301:10-11 (“I don’t pay attention to things related to social media accounts.”); *id.* at 312:7-9 (“I can repeat it for the hundredth time, I really don’t get involved in social media issues.”); *id.* at 356:15-16 (“I’m not a social media person.”).

685. In fact, Dr. Fauci’s daughter was then a software engineer at Twitter, Fauci Dep. 99:23-100:15; Dr. Fauci has done numerous podcasts and interviews on social media, including with Mark Zuckerberg, Fauci Dep. 99:16-19, 101:1-6; Dr. Fauci had specifically expressed concern about “the threat of further distortions on social media” about the lab-leak theory in his contemporaneous email, Fauci Ex. 8, at 2; and Dr. Fauci’s communications staff had repeatedly

emailed Twitter to try to remove postings critical of Dr. Fauci, *see infra*. Dr. Fauci's professed ignorance of social media is not credible. His communications and conduct make clear that he is keenly aware and deeply concerned about what he believes are "distortions on social media." Fauci Ex. 8, at 2.

686. Dr. Fauci also testified that "I don't recall anything about social media" in his discussions with Farrar about the origins of the virus. Fauci Dep. 102:17-18. In light of the contemporaneous emails repeatedly raising concerns about discussions of the lab-leak theory on social media, this claim is not credible.

687. Dr. Fauci admits that he was "concerned about ... there being misinformation or disinformation that would interfere with our trying to save the lives of people throughout the world, which happens when people spread false claims." Fauci Dep. 103:18-22. He states that "misinformation and/or disinformation can lead to loss of life ... and that troubles me." Fauci Dep. 104:15-17. This includes the spread of misinformation and disinformation on social media, because "that's part of the way information is disseminated." Fauci Dep. 104:22-23.

688. After Dr. Fauci's email about "the threat of further distortions on social media," Farrar emailed back indicating that the WHO might not move quickly to address the lab-leak theory, and stating to Fauci and Collins: "they need to decide today in my view. If they do prevaricate, I would appreciate a call with you later tonight or tomorrow to think how we might take forward." Fauci Ex. 8, at 2. He also stated: "Meanwhile...." and linked to an online posting expressing concerns about the lab-leak theory – indicating his dominant concern about online speech discussing the lab-leak theory. *Id.*

689. Soon thereafter, Farrar emailed Dr. Tedros of the WHO and two senior WHO officials, copying Fauci and Collins. Fauci Ex. 8, at 1. Farrar urged the WHO to quickly establish

a working group to address the lab-leak theory, and reiterated that they should “[a]ppreciate the urgency and importance of this issue,” given the “[g]athering interest evident in the science literature and in mainstream and social media to the question of the origin of this virus,” and pressing them to “get ahead of ... the narrative of this and not reacting to reports which could be very damaging.” Fauci Ex. 8, at 1.

690. Fauci claims that he does not believe there was any further communication between him and Farrar about this issue, despite Farrar’s urgent request for a follow-up call if the WHO did not act immediately. Fauci Ex. 8, at 2; Fauci Dep. 109:22-110:7. In light of their subsequent communications, this testimony is not credible.

691. By the early morning of February 4, 2020, Eddie Holmes had already sent a draft research paper attacking the lab-leak theory to Jeremy Farrar. Fauci Ex. 9, at 1. Holmes noted to Farrar that, in the draft, he “[d]id not mention [the virus’s] other anomalies as this will make us look like loons.” Fauci Ex. 9, at 1. To complete the draft between the afternoon of Saturday, Feb. 1, and the early morning of Tuesday, Feb. 4, Holmes must have started working on it almost immediately after the Feb. 1 conference call.

692. Farrar forwarded this draft to Fauci and Collins at 2:01 a.m. on Tuesday morning, February 4, 2020, in an attachment called “Summary.” Fauci Ex. 10, at 3. He noted, “Please treat in confidence – a very rough first draft from Eddie and team – they will send on the edited, cleaner version later.” *Id.*; *see also* Fauci Ex. 12, at 1.

693. Dr. Collins responded: “I note that Eddie is now arguing against the idea that this is the product of intentional human engineering,” Fauci Ex. 10, at 3, a dramatic reversal of Holmes’s position a few days earlier that Holmes and Andersen “find the genome inconsistent with expectations from evolutionary theory.” Fauci Ex. 6, at 1. The paper’s conclusion was also

profoundly at odds with Holmes's statement, in the email sending the draft paper itself, that they would "look like loons" if the paper discussed the virus's other "anomalies" that strongly suggested a lab origin. Fauci Ex. 9, at 1.

694. Collins also noted that Holmes had not ruled out the possibility of a lab-created virus through serial passage. Fauci Ex. 10, at 3. Farrar responded, stating "Eddie would be 60:40 lab side. I remain 50:50." *Id.* Eddie, however, had already drafted a paper that *refuted* the lab-leak theory, even though he evidently still believed was the better explanation. *See id.*

695. Regarding the possibility of serial passage, Dr. Fauci noted that "Serial passage in ACE2-transgenic mice" was a possibility for the virus's origin, Fauci Ex. 10, at 2— notably, serial passage in humanized mice as was used in the 2015 *Nature Medicine* study. (Like so many other things, Dr. Fauci claims he does not recall this statement that he wrote. Fauci Dep. 115:22-116:12.) Collins responded, "Surely that wouldn't be done in a BSL-2 lab?" and Farrar answered, "Wild West...." Fauci Ex. 10, at 2. This exchange indicates that that Fauci, Farrar, and Collins were concerned that the coronavirus had been created in Wuhan by serial passage through humanized mice in a low-security [BSL-2] lab and then escaped from that low-security lab—*i.e.*, the precise concerns surrounding the NIAID-funded research at WIV. *Id.*; *see also, e.g.*, Jones Decl., Ex. BB< at 14 ("In the above exchange, the health officials [Fauci, Farrar, and Collins] seem to be contemplating the possibility that the repeated passage of a coronavirus through genetically modified mice in an insufficiently secure lab could have resulted in the accidental emergence and release of SARS-CoV-2.")).

696. Later in the evening of the same day, Tuesday, Feb. 4, Farrar sent Fauci and Collins a second version of draft, entitled "Summary," with the note "Tidied up." Fauci Ex. 12, at 7. Dr. Fauci claims he does not remember receiving these drafts. Fauci Dep. 127:4-10.

697. The next day, February 5, 2020, Farrar sent Fauci and Collins a third version of the draft, still entitled “Summary,” with a note: “Tony and Francis The revised draft from Eddie, copied here.” Fauci Ex. 12, at 8.

698. Two days later, on February 7, 2020, Farrar sent Fauci and Collins a fourth version of the same draft, entitled “Summary.Feb7.pdf,” with the note in the subject line, “Revised draft.” Fauci Ex. 11, at 2. This draft made clear that Holmes and his co-authors planned to aggressively discredit the lab-leak theory. It stated in bold in the beginning “Overview” section: “**Analysis of the virus genome sequences clearly demonstrates that the virus is not a laboratory construct or experimentally manipulated virus.**” Fauci Ex. 11, at 3 (bold in original).

699. This was the *fourth* updated draft that Farrar sent to Fauci and Collins of the paper discrediting the lab-leak theory in the first week since the Feb. 1 secret conference call. The draft advocated that genetic evidence “clearly demonstrates” that the lab-leak theory is false. *Id.*

700. Dr. Fauci claims that he did not have any involvement in Farrar’s efforts to push the WHO to assemble a working group to address the lab-leak theory. Fauci Dep. 110:4-7 (“So I really would doubt that there was any further communication between me and the WHO about this. This was fundamentally Jeremy’s lane, if you want to call it that.”); *id.* at 125:17-19 (“I didn’t have any direct involvement with the WHO, not to my recollection.”); *id.* at 131:14-15 (“This was mostly a Jeremy-led thing”). But in fact, Dr. Fauci sent multiple emails to Farrar urging for the inclusion of a long list of specific scientists in the WHO’s working group. Fauci Ex. 13, at 1-2, 6.

701. On Feb. 5, 2020, Farrar emailed Fauci and Collins, stating that he believed that the WHO would assemble a working group to address the lab-leak theory, and urging Fauci and Collins to provide names of scientists to participate in the group. Fauci Ex. 13, at 7. Farrar stated that the WHO “have asked for names to sit on that Group – please do send any names.” *Id.* He

then stated, “We can have a call this week with a core group of that *to frame the work of the Group* including – if you could join?” *Id.* (emphasis added). And then he stated, “With names to be put forward into the Group from us and *pressure on this group from your and our teams* next week.” *Id.* (emphasis added). Plainly, Farrar intended, with Fauci and Collins’ assistance, to stack the WHO’s group with their hand-picked scientists, have an advance call “to frame the work of the Group,” and to put “pressure on this group from [Fauci’s and Collins’] and our teams next week,” *id.*—to influence and control the outcome of the WHO Group’s deliberations.

702. Fauci and Collins did not dispute this plan. On the contrary, Fauci responded by providing Farrar with a detailed list of eight scientists to include in the WHO’s group “in addition to the individuals who were on the call with us last Saturday.” Fauci Ex. 13, at 2, 6. Fauci then followed up to his own email with an additional scientist, stating she is “an important name for the coronavirus evolution working group. Please include her.” *Id.* at 1. Fauci’s attempts to downplay his involvement with the plan to create and control a WHO working group on COVID-19’s origins to discredit the lab-leak theory, therefore, are not credible.

703. Dr. Fauci testified that he, Farrar, and Collins “wanted to get them [the WHO] involved because we wanted to make sure that this was an open and transparent discussion,” Fauci Dep. 126:9-12, is not credible in light of the contemporaneous email from Farrar to Fauci and Collins plotting to “frame the work of the Group” and put “pressure on this group from your and our teams next week.” Fauci Ex. 13, at 3.

704. Dr. Fauci claims he does not recall any discussions about framing the work of the Group, or putting pressure on the Group. Fauci Dep. 137:1-21.

705. On February 9, 2020, Dr. Fauci participated in a joint podcast with Dr. Peter Daszak of the EcoHealth Alliance to discuss the outbreak of COVID-19. Fauci Ex. 15, at 1.

706. Peter Daszak was then involved in organizing a statement for the Lancet seeking to discredit the lab-leak theory, similar to the article then being drafted by Eddie Holmes, of which Dr. Fauci had received four drafts the previous week. *See* Jones Decl., Ex. CC, at 1. Just a few days later, The Lancet would publish a statement of scientists organized and co-signed by Daszak and Jeremy Farrar, which stated: “We stand together to strongly condemn conspiracy theories suggesting that COVID-19 does not have a natural origin.” *Id.* Thus, at that time, Daszak was working in parallel with Dr. Fauci, and together with Jeremy Farrar, to produce a published article discrediting the lab-leak theory. *Id.*

707. During the podcast, both Dr. Fauci and Daszak made comments seeking to discredit the lab-leak theory. Fauci Ex. 16, at 1. Fauci, when asked “Do you have any sense of where [the virus] probably came from?” answered, “Well I think ultimately we know that these things come from an animal reservoir. I heard these conspiracy theories and like all conspiracy theories ... they [are] just conspiracy theories.... I think the things you are hearing are still in the realm of conspiracy theories without any scientific basis for it.” *Id.* Daszak was asked, “Is it your sense that it’s almost certain it came from an animal-to-human transmission?” and he responded: “All the evidence says that is what happened. ... It looks to me and to most scientists like it’s a bat virus that got into people either in the market or in rural China and just unfortunately has the capacity to spread.” *Id.*

708. On February 11, 2020, Dr. Fauci had a meeting at NIAID with Dr. Ralph Baric, the corresponding author of the 2015 *Nature Medicine* article about NIAID-funded gain-of-function research in Wuhan that Dr. Fauci sent to Hugh Auchincloss after midnight on Feb. 1. Fauci Ex. 17, at 1 (Dr. Fauci’s official calendar, Feb. 11, 2020, at 2:30 p.m. – “Meeting with Dr. Ralph Baric”). Dr. Fauci does not dispute that he met with Dr. Ralph Baric that day, but (like so many

other things) he claims that he does not recall the meeting or what they discussed. Fauci Dep. 149:9-10, 149:21-23. As noted above, given that Dr. Fauci was deeply concerned about Baric's research at the time, Dr. Fauci's testimony on this point is not credible.

709. On Feb. 11, 2020, Ian Lipkin wrote an email referring to the draft paper about the origins of COVID-19 stating that, while the paper was "well-reasoned and provides a plausible argument against genetic engineering," it "does not eliminate the possibility of an inadvertent release following adaptation through selection in culture at the institute in Wuhan. Given the scale of the bat CoV research pursued there and the site emergence of the first human cases we have a nightmare of circumstantial evidence to assess." Fauci Ex. 18, at 1. Dr. Fauci states that he does not recall this email but that "it's entirely possible that Ian wrote this to me," because "Ian communicates with me." Fauci Dep. 153:15-17.

710. Dr. Fauci testified that it is "molecularly" impossible that SARS-CoV-2 originated from NIAID-funded research: "molecularly, that could not have happened." *Id.* at 157:21-22. But separately, he repeatedly testified that molecular virology is not his field, so his certainty on this one key point is not credible. *Id.* at 64:8-9 ("that's not my field, evolutionary virology"); *id.* at 117:19-20 ("I'm hesitant to go there because that's not my area of expertise"); *id.* at 127:12-13 ("it was an area that was not my area of expertise"); *id.* at 160:7-9 ("Did I fully understand the molecular virology of it? Unlikely, because I'm not an evolutionary virologist.").

711. On February 17, 2020, the preprint version of the paper drafted by Eddie Holmes attacking the lab-leak theory was released. Fauci Ex. 19. The paper was entitled, "The Proximal Origins of SARS-CoV-2." *Id.* at 12. Its listed authors were Kristian Andersen, Andrew Rambaut, Ian Lipkin, Edward Holmes, and Robert Garry. *Id.* All these authors, except possibly Ian Lipkin,

had been participants in the secret phone conference at 2:00 p.m. on Saturday, Feb. 1, 2020. Fauci Dep. 161:7-10.

712. These authors had a financial interest in supporting NIH's preferred narrative. "Garry and Andersen have both been recipients of large grants from NIH in recent years, as has another 'Proximal Origin' author, W. Ian Lipkin of Columbia University." Jones Decl., Ex. BB.

713. These authors were stunningly recent converts to the theory of natural origin. On February 11, Ian Lipkin had sent an email about the same paper stating that "we have a nightmare of circumstantial evidence to assess." Fauci Ex. 18, at 1. On February 4, Holmes had written to Farrar that he avoided discussing the virus's "other anomalies as this will make us look like loons." Fauci Ex. 9, at 1.

714. On February 2, Bob Garry had written to Farrar, "I really can't think of a plausible natural scenario ... I just can't figure out how this gets accomplished in nature. Do the alignment of the spikes at the amino acid level – it's stunning." Fauci Ex. 8, at 4. On January 31, Andersen had written to Dr. Fauci that the virus's "features (potentially) look engineered," and that "after discussion earlier today, Eddie [Holmes], Bob [Garry], ... and myself all find the genome inconsistent with expectations from evolutionary theory." Fauci Ex. 6, at 1.

715. The preprint version of "The Proximal Origin of SARS-CoV-2" asserted a very different conclusion. It stated that "this analysis provides evidence that SARS-CoV-2 is not a laboratory construct nor a purposefully manipulated virus." Fauci Ex. 19, at 2. It stated that "genomic evidence does not support the idea that SARS-CoV-2 is a laboratory construct." *Id.* at 6.

716. Dr. Fauci does not dispute that this preprint was sent to him. Fauci Dep. 160:3-4 ("It is likely that this was sent to me"). Dr. Fauci admits that he reviewed the preprint when it was

sent to him. *Id.* at 160:7 (“Did I look through it? Yes.”). And Dr. Fauci admits that he was aware of what their conclusion was about the lab-leak theory. *Id.* at 162:13-15 (“I am certain that having looked at it, I was aware of what their conclusion was.”).

717. This was the *fifth* version of the paper that was sent to Dr. Fauci to review, after four drafts sent to him on Feb. 4, 5, and 7. *Id.* at 160:13-16.

718. On March 6, 2020, Kristian Andersen emailed Dr. Fauci, Dr. Collins, and Jeremy Farrar, stating, “Dear Jeremy, Tony, and Francis, Thanks again for your advice and leadership as we have been working through the SARS-CoV-2 ‘origins’ paper. We are happy to say that the paper was just accepted by Nature Medicine and should be published shortly To keep you in the loop, I just wanted to share the accepted version with you, as well as a draft press release. We’re still waiting for proofs, so please let me know if you have any comments, suggestions, or questions about the paper or the press release.” Fauci Ex. 22, at 1. He also wrote: “Tony, thank you for your straight talk on CNN last night – it’s being noticed.” *Id.*

719. Thus, Andersen thanked Dr. Fauci, Collins, and Farrar for their “advice and leadership” about the paper, sent them the final draft, and asked for their input both on the draft and on their public messaging about the draft. *Id.*

720. This was the *sixth* version of the paper that was forwarded to Dr. Fauci for review and input. *Id.*

721. Dr. Fauci responded: “Kristian: Thanks for your note. Nice job on the paper. Tony.” *Id.*

722. Dr. Fauci denies that he provided “advice and leadership” in the preparation of the paper. Fauci Dep. 171:11-13. In light of the extensive meetings and correspondence detailed above, that testimony is not credible.

723. On March 17, 2020, *Nature Medicine* published the online version of *The Proximal Origin of COVID-19*. Fauci Ex. 24, at 3. The print version appeared in the April 2020 volume of the journal. *Id.*

724. The final, published version of the article makes even stronger claims attacking the lab-leak theory than the preprint version. In its opening, the article states: “Our analyses *clearly show* that SARS-CoV-2 is not a laboratory construct or a purposefully manipulated virus.” Fauci Ex 24, at 1 (emphasis added). Similarly strong language, leaving no room for doubt, occurs throughout the article: “the genetic data *irrefutably show* that SARS-CoV-2 is not derived from any previously used viral backbone,” *id.* at 1 (emphasis added). “This *clearly shows* that the SARS-CoV-2 spike protein optimized for binding to human-like ACE2 is the result of natural selection,” *id.* at 2 (emphasis added). “[T]he evidence shows that SARS-CoV-2 is not a purposefully manipulated virus,” *id.* at 3. “[W]e do not believe that any type of laboratory-based scenario is plausible.” *Id.* at 3. “SARS-CoV-2 originated via natural selection.” *Id.* at 3.

725. Thus, between the preprint version and final version of the article, the article substantially beefed up its conclusion that the lab-leak theory is implausible and should be discredited. Dr. Fauci claims he does not “recall specific conversations” about that conclusion with the authors, but he admits that he is “sure” that he discussed that conclusion with them: “we read the preprint and, therefore, we knew what the conclusion was, and I’m sure that that conclusion was discussed. So I would not be surprised at all following the initial preprint that I discussed the conclusion of these authors that this is not a laboratory construct or a purposely manipulated virus.” Fauci Dep. 181:3-10; *see also id.* at 181:18-22. Based on all these circumstances, it is likely that Dr. Fauci encouraged the authors to express a stronger and more unequivocal conclusion against the lab-leak theory than reflected in the preprint.

726. Once the article “The Proximal Origin of SARS-CoV-2” was released, both Dr. Fauci and Dr. Collins took steps to push it into prominence. First, on March 26, 2020, Dr. Collins published a blog post on the article on the “NIH Director’s Blog” entitled “Genomic Study Points to Natural Origin of COVID-19.” Fauci Ex. 25, at 1.

727. Dr. Collins used strong language relying on the study to attack and discredit the lab-leak theory as “outrageous” and “debunk[ed]”: “Some folks are even making outrageous claims that the new coronavirus causing the pandemic was engineered in a lab and deliberately released to make people sick. A new study debunks such claims by providing scientific evidence that this novel coronavirus arose naturally.” Fauci Ex. 25, at 2. Dr. Collins stated that the study shows that “the coronavirus that causes COVID-19 almost certainly originated in nature,” and that “this study leaves little room to refute a natural origin for COVID-19.” Fauci Ex. 25, at 3.

728. In his blog post, Dr. Collins did not disclose that he and Dr. Fauci had been part of the group that organized the study, nor that he and Dr. Fauci had reviewed six versions of the study before it was published. Fauci Ex. 25.

729. As was evidently intended, Dr. Collins’s blog post immediately fueled media coverage attacking the lab-leak theory as a “conspiracy theory.” For example, the next day, March 27, 2020, ABC News ran a story entitled, “Sorry, conspiracy theorists. Study concludes COVID-19 ‘is not a laboratory construct.’” Fauci Ex. 26. The article quoted Bob Garry—who on January 31 had found “the genome inconsistent with the expectations of evolutionary theory,” Fauci Ex. 6, at 1, and on February 1 had told Farrar that “I just can’t figure out how this gets accomplished in nature ... it’s stunning,” Fauci Ex. 8, at 4—as stating that “[t]his study leaves little room to refute a natural origin for COVID-19.” Fauci Ex. 26, at 3-4.

730. Dr. Fauci testified that he could not remember any contact from Dr. Collins about “The Proximal Origin of SARS-CoV-2” after Dr. Collins’ blog post on March 26, 2020. Fauci Dep. 186:19-187:6. In light of their subsequent communications and Dr. Fauci’s actions, this testimony is not credible.

731. In fact, Dr. Collins emailed Dr. Fauci about the article on Thursday, April 16, 2020. Fauci Ex. 27. The email linked to a Fox News piece by Bret Baier alleging that sources were “increasingly confident” that SARS-CoV-2 originated in a lab, and it stated: “Wondering if there is something NIH can do to help put down this very destructive conspiracy, with what seems to be growing momentum.” Fauci Ex. 27, at 1. Dr. Collins stated, “I hoped the Nature Medicine article on the genomic sequence of SARS-CoV-2 [*i.e.*, “The Proximal Origin of COVID-19] would settle this. ... Anything more we can do?” Fauci Ex. 27, at 1.

732. Dr. Fauci responded to Dr. Collins at 2:45 a.m. the next day, Friday, April 17, stating only: “Francis: I would not do anything about this right now. It is a shiny object that will go away in times. Best, Tony.” Fauci Ex. 27, at 2.

733. Dr. Fauci testified that he did not take “any steps to increase the visibility of the article after this” email exchange with Dr. Collins. 191:21-22; *see also* 195:10-17. That testimony is incorrect and not credible.

734. In fact, that same day, Dr. Fauci took matters into his own hands to make the lab-leak theory “go away.” At the joint press conference on April 17, 2020, with President Trump, Vice President Pence, and Dr. Fauci, a reporter asked, “Mr. President, I wanted to ask Dr. Fauci: Could you address the suggestions or concerns that this virus was somehow manmade, possibly came out of a laboratory in China?” Fauci Ex. 28, at 2. Dr. Fauci responded: “There was a study recently that we can make available to you, where a group of highly qualified evolutionary

virologists looked at the sequences there and the sequences in bats as they evolve. And the mutations that it took to get to the point where it is now is [pause for emphasis] *totally consistent* with a jump of a species from an animal to a human.” *Id.*; *see also id.* 199:18-25 (Dr. Fauci conceding that, “when you said that sentence about totally consistent, you pause and use that phrase, ‘totally consistent’ with emphasis” – “Right.”); *see also* Video of April 17, 2020 White House Coronavirus Task Force Briefing, at <https://www.youtube.com/watch?v=brbArpX8t6I> (exchange starting at 1:38:32 of video).

735. Dr. Fauci then feigned ignorance and unfamiliarity with the authors of the study: “the paper will be available – I don’t have the authors right now, but we can make that available to you.” Fauci Ex. 28, at 2. Presenting himself as unconnected with the paper, Dr. Fauci did not reveal (1) that he was part of a group that had launched the paper in a clandestine phone call on Saturday, Feb. 1; (2) that he had extensively corresponded with Jeremy Farrar about the paper and its conclusions; (3) that the authors of the paper had sent six versions to him, Jeremy Farrar, and Dr. Collins to review; (4) that he had likely urged the authors to beef up their conclusion attacking the lab-leak theory between the preprint and published versions of the paper; (5) that the authors had personally thanked him for his “advice and leadership” in drafting the paper; or (6) that Dr. Collins had emailed him the day before to ask him to push the paper publicly or take other steps to discredit the lab-leak theory.

736. Dr. Fauci does not dispute that he was referring to “The Proximal Origin of SARS-CoV-2” in his public remarks at the April 17, 2020, White House press briefing. Fauci Dep. 201:2-6 (“I assume it was the Nature Medicine paper.... I think it was.”).

737. Dr. Fauci testified that he did not make that paper available to any reporters after the press conference. *Id.* at 201:7-9 (“Not to my knowledge.”). That testimony is not credible.

738. In fact, over the weekend following the press conference, Dr. Fauci personally responded to an inquiry from a reporter specifically asking for the study he had referred to at the April 17, 2020 press conference, and provided a link to “The Proximal Origin of SARS-CoV-2.” Fauci Ex. 29, at 1. On Sunday, April 19, a reporter emailed the White House press office asking, “Dr. Fauci said on Friday he would share a scientific paper with the press on the origin of the coronavirus. Can you please help me get a copy of that paper?” *Id.*

739. Dr. Fauci personally responded to this reporter, stating, “Bill: Here are the links to the scientific papers and a commentary about the scientific basis of the origins of SARS-CoV-2.” Fauci Ex. 29, at 1. He then provided three links. The first was a link to the online version of “The Proximal Origin of SARS-CoV-2.” The second and third were links to a paper and an online statement by Eddie Holmes, whom Dr. Fauci knew had begun secretly drafting the paper that became “The Proximal Origin of SARS-CoV-2” immediately after the clandestine Feb. 1 conference call with Dr. Fauci, Jeremy Farrar, and others. Fauci Ex. 29, at 1. The second link to a paper authored by Holmes was “a commentary on [The Proximal Origin of SARS-CoV-2] in the journal *Cell*.” Fauci Dep. 202:25-203:1; *see also id.* at 203:2-16.

740. On April 18 and 19, 2020, Dr. Fauci exchange cordial emails with Peter Daszak of the EcoHealth Alliance, who steers NIAID funds to finance bat coronavirus research with Dr. Shi Zhengli at the Wuhan Institute of Virology. On Saturday, April 18, Daszak emailed Dr. Fauci, calling him “Tony,” and stating: “As the PI of the R01 grant publicly targeted by Fox News reporters at the Presidential press briefing last night, I just wanted to say a personal thank you ... for standing up and stating that the scientific evidence supports a natural origin for COVID-19 ... not a lab release from the Wuhan Institute of Virology.” Fauci Ex. 30, at 1. Daszak also wrote: “Once this pandemic’s over I look forward to thanking you in person and let you know how

important your comments are to us all.” *Id.* Dr. Fauci responded on April 19: “Peter: Many thanks for your kind note.” *Id.*

741. Dr. Fauci’s and Dr. Collins’s efforts to orchestrate and publicize “The Proximal Origin of SARS-CoV-2” as a method of discrediting the lab-leak theory were highly effective. “The Proximal Origin of SARS-CoV-2” became one of the most widely read and most publicized scientific papers in history, with pervasive media coverage using it to discredit the lab-leak theory. “The paper has been accessed online more than 5.7 million times and has been cited by more than 2,000 media outlets. ... It became one of the best-read papers in the history of science.” Jones Decl., Ex. BB, at 3.

742. As a direct result of these efforts, speech and speakers advocating for the lab-leak theory of COVID-19’s origins were extensively censored on social media platforms.

743. Twitter took aggressive censorship action against such speech and speakers. For example, on September 16, 2020, Twitter suspended the account of a Chinese virologist who claimed coronavirus was made in a lab. Fauci Ex. 31, at 1. “Twitter has suspended the account of a Chinese scientist who suggested that the novel coronavirus was created in a lab ... despite inconclusive evidence.” Fauci Ex. 31 at 2.

744. Facebook, likewise, took aggressive steps to censor the lab-leak theory on social media, even going so far as to formalize this policy as part of its official content-moderation policy. Fauci Ex. 32, at 3 (Facebook announcing that “we are expanding the list of false claims we will remove to include additional debunked claims about the coronavirus and vaccines,” including “COVID-19 is man-made or manufactured”). Facebook noted that “we already prohibit these claims in ads,” and promised “to take aggressive action against misinformation about COVID-19 and vaccines.” *Id.* Facebook promised to “begin enforcing this policy immediately, with a

particular focus on Pages, groups or accounts that violate these rules Groups, Pages, and accounts on Facebook that repeatedly share these debunked claims may be removed altogether.”

Id.

745. Like Twitter, Facebook censored even high-profile speakers who raised questions about the origins of COVID-19 or advanced the lab-leak hypothesis. For example, Facebook censored an article by award-winning British journalist Ian Birrell who raised “the question of the origins of the Covid-19 virus within Wuhan” and criticized the natural-origin theory of the virus. Fauci Ex. 33, at 1.

746. Dr. Fauci claims that he is not aware of any suppression of speech about the lab-leak theory on social media: “I’m not aware of suppression of speech on social media to my knowledge.... I don’t recall being aware of suppression of anything.” Fauci Dep. 208:10-14. He claims that this ignorance is because he does not pay any attention to anything said on social media: “This is not something that would be catching my attention because, you know, the social media and Twitter, I told you, I don’t have a Twitter account. I don’t tweet. I don’t do Facebook. I don’t do anything. So social media stuff, I don’t really pay that much attention to.” *Id.* at 210:3-8. As noted above, Dr. Fauci’s emails and actions reflect extensive concern about what is said on social media, and his attempt to cast himself as someone with no knowledge of social media is not credible.

747. Further, Dr. Fauci’s emails and interrogatory responses show a close relationship with the CEO and founder of Meta (Facebook/Instagram), Mark Zuckerberg.

748. On February 27, 2020, Mark Zuckerberg emailed Dr. Fauci directly to inquire about the development of the COVID-19 vaccine and offer the assistance of the Chan-Zuckerberg foundation. Fauci Ex. 23, 1. Zuckerberg already had Dr. Fauci’s email, called Dr. Fauci by his

first name “Tony,” and wrote as if he had a preexisting acquaintance with Dr. Fauci. *Id.* Dr. Fauci, likewise, responded to Zuckerberg on a first-name basis and with the familiar tone of an acquaintance. Fauci Ex. 23, at 2.

749. Dr. Fauci claims that he does not recall whether he had already met Mark Zuckerberg. Fauci Dep. 173:17-174:5 (“I meet thousands of people. I’m not sure I ever met him in person.”). But in fact, Dr. Fauci still refers to Mark Zuckerberg by his first name. *Id.* at 289:9-16.

750. On March 15, 2020, Mark Zuckerberg sent Dr. Fauci a lengthy email to offer close coordination between Dr. Fauci and Facebook on COVID-19 messaging. In the email, Zuckerberg thanked Dr. Fauci for his leadership, and “share[d] a few ideas of ways to help you get your message out.” Fauci Ex. 23, at 3. Zuckerberg made three proposals: (1) Facebook was about to launch a “Coronavirus Information Hub” visible at the top of the page to all Facebook users to “get authoritative information from reliable sources,” and Zuckerberg offered to include “a video from you” as a “central part of the hub,” *id.*; (2) Zuckerberg was “doing a series of livestreamed Q&As from health experts” for his 100 million followers and wanted Dr. Fauci to do one of these videos, *id.*; and (3) Zuckerberg advised Dr. Fauci that Facebook had “allocated technical resources and millions of dollars of ad credits for the US government to use for PSAs to get its message out over the platform,” and he wanted Dr. Fauci to recommend “a point person for the government response,” *id.*

751. Dr. Fauci responded the next day, telling “Mark” that “[y]our idea and proposal sound terrific,” that he “would be happy to do a video for your hub,” and that “your idea about PSAs is very exciting.” Fauci Ex. 23, at 4. He copied his Special Assistant to put Zuckerberg in

touch with the right point person for the government to arrange specially subsidized government messaging about COVID-19 on Facebook. *Id.*

752. Zuckerberg replied the same day, stating “[w]e’d love to move quickly to help the effort and support getting these messages out.” Fauci Ex. 23, at 6.

753. Dr. Fauci claims that the U.S. Government did not accept Facebook’s offer of free ad credits to support the Government’s COVID-19 messaging. Fauci Dep. 177:22-178:4 (“I don’t believe that there was any money that was given from the Zuckerberg to the United States government to do PSAs. It’s possible, but it certainly didn’t happen to my knowledge. I don’t recall money being given for PSAs.”). But at the time, Dr. Fauci described the proposal as “very exciting” and immediately followed up on Zuckerberg’s offer. Fauci Ex. 23, at 4. Separate emails from Facebook to the White House corroborate these ad credits. *See, e.g.*, Doc. 174-1, at 46. Dr. Fauci’s testimony on this point is not credible.

754. Dr. Fauci and Zuckerberg have “interacted on Facebook Zoom-type podcasts.” Fauci Dep. 175:17-18. Dr. Fauci did “[t]hree live stream Facebook-type Q and As” about COVID-19 with Zuckerberg. Fauci Dep. 177:2-4.

755. Dr. Fauci’s interrogatory responses reveal extensive direct communications between Dr. Fauci and Zuckerberg. *See* Scully Ex. 12, at 33, 53-54 (identifying 13 communications between Dr. Fauci and Zuckerberg, including emails, phone calls, virtual meetings, and live broadcasts, over a nine-month period in 2020).

756. Reviewing the foregoing facts about Dr. Fauci’s communications with Farrar, Eddie Holmes, and others, former Director of the CDC Robert Redfield “had a dawning realization. He concluded there’d been a concerted effort not just to suppress the lab-leak theory but to manufacture the appearance of a scientific consensus in favor of a natural origin. ‘They

made a decision, almost a P.R. decision, that they were going to push one point of view only' and suppress rigorous debate, said Redfield. 'They argued they did it in defense of science, but it was antithetical to science.'" Jones Decl., Ex. AA.

B. Dr. Fauci's Efforts to Suppress Speech on Hydroxychloroquine.

757. On May 22, 2020, The Lancet published an online article entitled "Hydroxychloroquine or chloroquine with or without a macrolide for treatment of COVID-19: a multinational registry analysis." Fauci Ex. 35, at 1. The article purported to analyze 96,032 patients to compare cohorts who did and did not receive hydroxychloroquine or chloroquine to treat COVID-19. *Id.* The study concluded that hydroxychloroquine and chloroquine were "associated with decreased in-hospital survival and an increased frequency of ventricular arrhythmias when used for COVID-19." *Id.*

758. On May 27, 2020, Dr. Fauci publicly cited this study to claim that hydroxychloroquine is "not effective against coronavirus." Fauci Ex. 34, at 1. Dr. Fauci "became the first Trump administration official to say definitively that hydroxychloroquine is not an effective treatment for the coronavirus." *Id.* at 2. "'The scientific data is really quite evident now about the lack of efficacy,' Fauci ... said on CNN." *Id.*

759. Dr. Fauci's comments were based on the May 22 Lancet study. *Id.* at 3 ("Fauci's comments come days after the Lancet published a 96,000-patient observational study that concluded that hydroxychloroquine had no effect on Covid-19 and may even have caused some harm.").

760. The Lancet article was an observational study, not a randomized trial. At the time, "[t]here [wa]s no data yet from randomized, controlled clinical trials of hydroxychloroquine – the

gold standard for evaluating potential treatments.” Fauci Ex. 34, at 4. “But Fauci was unequivocal on [May 27, 2022], saying that ‘the data are clear right now.’” *Id.*

761. Just a few days later, The Lancet retracted the May 22, 2022 study. Fauci Ex. 35, at 1. An article reporting on the retraction noted that the study’s authors “were unable to confirm that the data set was accurate,” that “several concerns were raised with respect to the veracity of the data,” the study may have “include[ed] more cases than possible,” and that “[a] first-year statistics major could tell you about major flaws in the design of the analysis.” Jones Decl., Ex. DD, at 2-3.

762. Thus, Dr. Fauci’s initial dismissal of hydroxychloroquine was based on a purely *observational* study – not a randomized, controlled trial – and one that was retracted for glaring errors just days later.

763. Dr. Fauci testified that he did not recall that The Lancet study he cited to discredit the efficacy of hydroxychloroquine had been retracted. Fauci Dep. 223:7 (“I don’t recall it being retracted.”).

764. Dr. Fauci stepped up his public campaign to discredit hydroxychloroquine by insisting that its effectiveness could only be judged by undergoing rigorous, randomized, double-blind, placebo-based studies, notwithstanding his previous reliance on the less-than-rigorous observational study in The Lancet that was subsequently retracted. On July 31, 2020, Dr. Fauci testified before the House Select Subcommittee on Coronavirus Crisis, during which he stated: “The point that I think is important, because we all want to keep an open mind, any and all of the randomized placebo-controlled trials, which is the gold standard of determining if something is effective, none of them had shown any efficacy by hydroxychloroquine. Having said that, I will state, when I do see a randomized placebo-controlled trial that looks at any aspect of

hydroxychloroquine, either early study, middle study, or late, if that randomized placebo-controlled trial shows efficacy, I would be the first one to admit it and to promote it. But I have not seen yet a randomized placebo-controlled trial that's done that. And in fact, every randomized placebo-controlled trial that has looked at it, has shown no efficacy. So, I just have to go with the data. I don't have any horse in the game one way or the other, I just look at the data." See <https://www.youtube.com/watch?v=RkNC5OQD2UE>.

765. Despite his insistence before a congressional committee that randomized, placebo-controlled trials were the determining factor for his opinion regarding the effectiveness of hydroxychloroquine in the treatment of COVID-19, Dr. Fauci quietly admitted that such rigorous studies are not actually required to determine the efficacy of a therapeutic drug. Dr. Fauci was asked, "Do you recall saying in connection with the discussion of hydroxychloroquine that a randomized double blind placebo based study is the gold standard?" Fauci Dep. 244:8-11. He replied, "That is the gold standard for everything. *It isn't always needed*, but for the most part, it's the gold standard." *Id.* at 244:12-14 (emphasis added).

766. Dr. Fauci's sudden reversal concerning the critical standards for scientific studies to determine the effectiveness of hydroxychloroquine demonstrated a lack of candor to the House Select Subcommittee on Coronavirus Crisis. Indeed, Dr. Fauci misled the Committee when he failed to disclose that randomized, double-blind, placebo-based studies are not always needed and that he previously relied on the *observational*, i.e., non-randomized, non-double-blind, non-placebo-based study in *The Lancet* to form an opinion about that drug's efficacy in the first place. Dr. Fauci lacks credibility on this point.

767. Despite mounting evidence against his position, Dr. Fauci testified that his opinion against hydroxychloroquine was based on other studies as well as the retracted article in *The*

Lancet, but he could not identify any of those studies. Fauci Dep. 223:12-18 (“I don’t recall specifically what those studies are now.”).

768. Dr. Fauci did not retreat from his hard public stance against hydroxychloroquine. On July 26, 2020, a group called “America’s Frontline Doctors” held a press conference at the U.S. Capitol criticizing the government’s response to the COVID-19 pandemic and touting the benefits of hydroxychloroquine in treating the coronavirus. Fauci Ex. 38, at 5.

769. Dr. Fauci responded to this event with highly visible public statements condemning the use of hydroxychloroquine. For example, he stated on “Good Morning America,” that “[t]he overwhelming prevailing clinical trials that have looked at the efficacy of hydroxychloroquine have indicated that it is not effective in coronavirus disease.” Fauci Ex. 36, at 5. Dr. Fauci made these comments in direct response to the public claims of America’s Frontline Doctors. Fauci Dep. 227:7-228:13. He also stated on MSNBC’s “Andrea Mitchell Reports” that the video of the press conference by America’s Frontline Doctors constituted “a video out there from a bunch of people spouting something that isn’t true.” Fauci Ex. 37, at 3.

770. Dr. Fauci also stated that “the cumulative data on trials, clinical trials that were valid, namely clinical trials that were randomized and controlled in a proper way, ... showed consistently that Hydroxychloroquine is not effective in the treatment of coronavirus disease or COVID-19.” Fauci Ex. 37, at 3. But two months earlier, he had said “the data are clear right now” when no such studies existed. Fauci Ex. 34, at 4.

771. Social-media platforms reacted by aggressively censoring the video of America’s Frontline Doctors. Facebook removed the video when it was “the top-performing Facebook post in the world,” and “had accumulated over 17 million views by the time of its censorship by Facebook.” Fauci Ex. 38, at 3, 4. Further, “Facebook’s decision to censor the livestream was

quickly followed by YouTube, the Google-owned video-sharing platform.” *Id.* at 6. “The video had 80,000 views on YouTube prior to its removal.” *Id.* “Following Facebook and YouTube’s removal of the video, Twitter followed suit...” *Id.*; *see also* Fauci Ex. 36, at 3 (noting that “Twitter ... removed the video, saying it was ‘in violation of our COVID-19 misinformation policy’”).

772. Dr. Fauci professed to be unaware of whether 17 million views of a video on Facebook are a large number of views: “I don't know what 17 million views means. What's the denominator? Is 17 million a large amount? Is it a small amount? I don't go on social media, so I don't know what 17 million views means.” Fauci Dep. 236:7-11. It is common sense that 17 million views are a large number of views. Dr. Fauci’s testimony on this point is not credible.

773. Dr. Fauci does not deny that he or his staff at NIAID may have communicated with Facebook regarding the censorship of the America’s Frontline Doctors video. Instead, he claims that he does not recall whether they communicated with Facebook about it, and that it is possible that they did so. Fauci Dep. 238:2-5 (“I don't recall anybody communicating with them about that. Could have been, but I don't recall anybody -- I don't recall anybody communicating with the social media people.”); *see also id.* at 238:6-10. He also does not deny that other federal officials may do so, but he claims that “I don’t recall any of that” and “it just doesn’t ring a bell to me right now.” *Id.* at 238:21-239:7. He claims he doesn’t “pay attention” to whether his staff or other federal officials communicate with social-media platforms about censorship because “I have a really important day job that I work at.” *Id.* at 238:19-20.

774. Nevertheless, regarding the decision by YouTube and Twitter to follow Facebook in censoring the video, Dr. Fauci admits that “Yes, I knew of that.” *Id.* at 239:8-13.

775. A few days later, on August 1, 2020, the web host provider for America’s Frontline Doctors shut down their website. *Id.* at 242:14-243:8; Fauci Ex. 39. Dr. Fauci testifies that he does not recall this occurrence. Fauci Dep. 243:13-18.

776. On November 18, 2022, a meta-analysis of 449 studies on the efficacy of hydroxychloroquine considered “449 HCQ COVID-19 studies, 351 peer reviewed, 371 comparing treatment and control groups.” Fauci Ex. 40, at 1. The meta-analysis concluded that “[I]ate treatment and high dosages may be harmful, while early treatment consistently shows positive results.” *Id.* It also noted that “[n]egative evaluations” of hydroxychloroquine “typically ignore treatment delay.” *Id.* And it noted that “HCQ/CQ was adopted for early treatment in all or part of 41 countries.” *Id.*

C. Dr. Fauci’s “Devastating Takedown” of the Great Barrington Declaration.

777. Dr. Fauci recommended Dr. Clifford Lane of NIAID to participate in a WHO mission to China in February 2020. Fauci Dep. 139:15.

778. On April 3, 2020, the NIH Record wrote a report on Lane’s trip entitled “NIAID’s Lane Discusses WHO COVID-19 Mission to China. Fauci Ex. 20, at 1. Lane praised China’s response to the pandemic, especially their reliance on lockdowns and “extreme ... social distancing”: “The Chinese were managing this in a very structured, organized way,” he explained. “When we got there, the outbreak was already coming under control in China. The measures they put in place appeared to be working.... It demonstrated their successful response.... From what I saw in China, we may have to go to as extreme a degree of social distancing to help bring our outbreak under control.” *Id.* at 5-6.

779. Dr. Fauci discussed this conclusion with Lane when he returned from China: “Dr. Lane was very impressed about how from a clinical public health standpoint, the Chinese were

handling the isolation, the contact tracing, the building of facilities to take care of people, and that's what I believed he meant when he said were managing this in a very structured, organized way.” Fauci Dep. 165:4-11.

780. Dr. Fauci admits that Lane “did discuss with me that the Chinese had a very organized way of trying to contain the spread in Wuhan and elsewhere. ... he mentioned that they had a very organized, well-regimented way of handling the outbreak.” *Id.* at 166:1-7.

781. Dr. Fauci came to agree with Dr. Lane’s rosy assessment of China’s draconian response to the outbreak: “Dr. Lane is a very astute clinician, and I have every reason to believe that his evaluation of the situation was accurate and correct.” *Id.* at 166:24-167:1.

782. On Feb. 22, 2020, Dr. Lane sent an email stating, “China has demonstrated that this infection can be controlled, albeit at great cost.” Fauci Ex. 21, at 1.

783. On October 4, 2020, Plaintiffs Dr. Jay Bhattacharya of Stanford and Dr. Martin Kulldorff of Harvard, along with Dr. Sunetra Gupta of Oxford, published online the “Great Barrington Declaration,” which was one-page treatise opposing reliance on lockdowns and advocating for an approach to COVID-19 called “focused protection.” Fauci Ex. 41.

784. The Great Barrington Declaration criticized the social-distancing and lockdown approaches to the pandemic endorsed by government experts such as Dr. Fauci and Cliff Lane: “As infectious disease epidemiologists and public health scientists we have grave concerns about the damaging physical and mental health impacts of the prevailing COVID-19 policies, and recommend an approach we call Focused Protection.” *Id.* It was very critical of such government policies: “Current lockdown policies are producing devastating effects on short and long-term public health. The results (to name a few) include lower childhood vaccination rates, worsening cardiovascular disease outcomes, fewer cancer screenings and deteriorating mental health –

leading to greater excess mortality in years to come, with the working class and younger members of society carrying the heaviest burden. Keeping students out of school is a grave injustice. Keeping these measures in place until a vaccine is available will cause irreparable damage, with the underprivileged disproportionately harmed.” *Id.* It called for an end to lockdowns: “The most compassionate approach that balances the risks and benefits of reaching herd immunity, is to allow those who are at minimal risk of death to live their lives normally to build up immunity to the virus through natural infection, while better protecting those who are at highest risk. We call this Focused Protection.” *Id.*

785. The Declaration called for an end of government-imposed lockdowns and an immediate return to normal life for those who are low-risk: “Those who are not vulnerable should immediately be allowed to resume life as normal. Simple hygiene measures, such as hand washing and staying home when sick should be practiced by everyone to reduce the herd immunity threshold. Schools and universities should be open for in-person teaching. Extracurricular activities, such as sports, should be resumed. Young low-risk adults should work normally, rather than from home. Restaurants and other businesses should open. Arts, music, sport and other cultural activities should resume. People who are more at risk may participate if they wish, while society as a whole enjoys the protection conferred upon the vulnerable by those who have built up herd immunity.” *Id.*

786. The Declaration was thus highly critical of the lockdown policies defended by Dr. Fauci and Dr. Cliff Lane of NIAID since Dr. Lane’s trip to China at the beginning of the pandemic. The Declaration was “going against the global political consensus, which holds that lockdowns are key to minimising mortality to Covid-19.” Fauci Ex. 48, at 3. After it was posted online, it rapidly gathered signatures from doctors and scientists, as well as members of the public.

787. Four days later, on October 4, 2020, Dr. Francis Collins emailed Dr. Fauci and Cliff Lane, citing the Great Barrington Declaration. Fauci Ex. 42, at 1. Dr. Collins stated: “Hi Tony and Cliff, See <https://gbdeclaration.org>. This proposal from the three fringe epidemiologists who met with the Secretary seems to be getting a lot of attention – and even a co-signature from Nobel Prize winner Mike Leavitt at Stanford. There needs to be a quick and devastating published take down of its premises. I don’t see anything like that on line yet – is it underway? Francis.” *Id.*

788. This email seeking Dr. Fauci’s assistance in a “quick and devastating ... take down” of the Great Barrington Declaration” is strikingly similar to Dr. Collins’ email to Dr. Fauci on April 16, 2020, asking Dr. Fauci’s “help [to] put down this very destructive conspiracy,” *i.e.*, the lab-leak hypothesis. Fauci Ex. 27, at 1. In both cases, Dr. Collins sought Dr. Fauci’s aid in discrediting and silencing an online narrative that federal officials disfavored, and in both cases, Dr. Fauci promptly and effectively complied.

789. Dr. Collins’ question to Dr. Fauci in the email, “Is it underway?” implies that Dr. Collins expected Dr. Fauci to be already working on a “quick and devastating ... take down” of the Declaration, or to be aware of others working on one. Fauci Ex. 42, at 1. Dr. Fauci denies that Dr. Collins had any reason to think that Dr. Fauci might be working on a refutation of the Great Barrington Declaration, because “[t]his is not something I would be involved in,” because “I have a very important day job that is running a \$6.4 billion institute.” Fauci Dep. 260:11-20. Given Dr. Fauci’s immediately subsequent attempts to refute and discredit the Great Barrington Declaration, this testimony is not credible.

790. The same day as Dr. Collins’ email, October 8, 2020, Dr. Fauci wrote back to Dr. Collins, stating “Francis: I am pasting in below a piece from *Wired* that debunks this theory. Best, Tony.” Fauci Ex. 43, at 1. Dr. Fauci followed up the same day with an email to Dr. Collins linking

to an article by Gregg Gonsalves which Dr. Fauci called “[a]nother refutation of the herd immunity approach.” Fauci Ex. 44, at 1.

791. Dr. Fauci has known Gregg Gonsalves for decades, since the 1980s. Fauci Dep. 265:16-19. Dr. Fauci does not deny that he may have contacted Gregg Gonsalves before Gonsalves wrote this piece attacking the Great Barrington Declaration, but claims he does not recall. *Id.* at 268:8-19 (“I don’t recall. I might have.”).

792. Dr. Fauci and Dr. Collins followed up with a series of public media statements attacking the Great Barrington Declaration. On October 14, 2020, the Washington Post ran a story entitled, “Proposal to hasten herd immunity to the coronavirus grabs White House attention but appalls top scientists.” Fauci Ex. 45, at 1. In the article, Dr. Collins described the Great Barrington Declaration and its authors as “fringe” and “dangerous”: “This is a fringe component of epidemiology. This is not mainstream science. It’s dangerous.” *Id.* at 3.

793. Dr. Fauci consulted with Dr. Collins before he told the Washington Post that the Great Barrington Declaration represented a “fringe” and “dangerous” idea. Fauci Dep. 272:4-7.

794. Dr. Fauci endorsed these comments in an email to Dr. Collins on October 13, 2020, stating, “[w]hat you said was entirely correct.” Fauci Ex. 46, at 1.

795. Dr. Fauci admits that Dr. Collins could have been concerned about the spread of the ideas in the Declaration on social media when he called it “fringe” and “dangerous.” Fauci Dep. 274:19-20.

796. The next day, October 15, 2020, Dr. Fauci echoed Dr. Collins’ comments, calling the Declaration “nonsense” and “dangerous.” Fauci Ex. 47, at 1. Describing the proposal as “letting infections rip as it were,” Dr. Fauci stated: “Quite frankly that is nonsense, and anybody

who knows anything about epidemiology will tell that that is nonsense and very dangerous.” *Id.* at 3.

797. Dr. Fauci testified that “it’s possible that” he coordinated with Dr. Collins on their public statements attacking the Great Barrington Declaration. Fauci Dep. 279:23-24.

798. Dr. Fauci also testified of himself and Dr. Collins that “that’s not our style to be coordinating things.” *Id.* at 279:22-23. In light of the extensive coordination with Dr. Collins about the lab-leak theory, and the coordination about the Great Barrington Declaration, that testimony is not credible.

799. Shortly after Dr. Collins’ email to Dr. Fauci seeking a “quick and devastating ... take down” of the Great Barrington Declaration, the Declaration and its authors, Drs. Bhattacharya and Kulldorff, experienced extensive censorship on social media. *See infra.* In October 2020, Google deboosted the search results for the Declaration, so that “most users in English-speaking countries, when they google ‘Great Barrington Declaration,’ will not be directed to the declaration itself but to articles that are critical of the declaration.” Fauci Ex. 48, at 4.

800. In the same time, “[c]ensorship of the declaration ... also spread to Reddit. The two most popular subreddits for discussion of the coronavirus – r/COVID-19 and r/coronavirus – have both removed links to the Great Barrington Declaration. The moderators of r/coronavirus, a forum with 2.3million members, have declared it to be ‘spam’.” Fauci Ex. 48, at 4-5.

801. In October 2020, YouTube updated its terms of service regarding medical “misinformation,” reporting “COVID-19 medical misinformation policy updated to prohibit content about vaccines contradicting consensus from health authorities.” Fauci Ex. 49, at 3. “Health authorities” include federal officials like Dr. Fauci and Dr. Collins. *See id.* This October 2020 update specifically stated that claims which are “not allowed on YouTube” include “[c]laims

that achieving herd immunity through natural infection is safer than vaccinating the population,” which is listed on the same footing as “[c]laims that COVID-19 vaccines contain a microchip or tracking device.” Fauci Ex. 50, at 3-4.

802. Pursuant to this censorship policy of YouTube, the authors of the Great Barrington Declaration had content removed from YouTube, including a video of a roundtable discussion with Governor Ron DeSantis of Florida. *See infra*.

803. Facebook, likewise, adopted censorship policies against the Great Barrington Declaration. Meta’s policy on “Misinformation about vaccines” states that: “We remove misinformation primarily about vaccines when *public health authorities* conclude that the information is false and likely to directly contribute to imminent vaccine refusals.” Fauci Ex. 51, at 4 (emphasis added).

804. Facebook/Meta views Dr. Fauci as a “public health authority” who may dictate what people may post about COVID-19 on its platforms (Facebook and Instagram, among others), because Mark Zuckerberg and Dr. Fauci were collaborating on multiple public appearances and videos for Facebook. *See supra*; Scully Ex. 12, at 33, 53-54 (identifying 13 communications between Dr. Fauci and Zuckerberg, including emails, phone calls, virtual meetings, and live broadcasts, over a nine-month period in 2020). Indeed, in his March 15, 2020 email to Dr. Fauci, Mark Zuckerberg described Dr. Fauci as an “expert[],” a “health expert[.]” and “reliable source[.]” for “authoritative information” about fighting COVID-19. Fauci Ex. 23, at 3.

805. Dr. Fauci claims that he would not have paid any attention to the Great Barrington Declaration because he is too busy and important to pay attention to such matters: “this is not something that I would have been paying a lot of attention to. I was knee deep in trying to do things like develop a vaccine that wound up saving the lives of millions of people. That's what I

was doing at the time.” Fauci Dep. 256:13-17. Given Dr. Fauci’s direct involvement in publicly attacking the Great Barrington Declaration and collecting sources for Dr. Collins to “take [it] down,” this statement is not credible. In fact, on November 1, 2020, Greg Folkers, Dr. Fauci’s staffer at NIAID, sent Dr. Fauci a list of articles attacking the Great Barrington Declaration—including one co-authored by Gregg Gonsalves—with the statement “As discussed. I have highlighted the three I found the most useful.” Fauci Ex. 52, at 1. The list of articles were all harshly critical of the Declaration—using phrases like “dangerous,” “false promise,” “ethical nightmare,” and “could kill millions.” *Id.* Thus, four weeks after the Declaration was published, Dr. Fauci and his staffers were still “discuss[ing]” and looking up articles on ways to attack it. *Id.*

806. Dr. Kulldorff points out that, regardless of disagreements over the policy, describing the Declaration as “fringe” and “nonsense” is fundamentally dishonest, as the Declaration reflects principles of pandemic preparedness that were widely accepted before COVID-19: “the Great Barrington Declaration is merely a restatement of the principles of public health. Lockdown ... is a ‘terrible experiment’ that throws those principles ‘out of the window’ by focusing solely on one disease at the expense of all other health problems. ‘Most countries in Europe had a pandemic-preparedness plan that did not recommend lockdowns, but instead proposed a risk-based strategy to protect those at high risk, which is actually the same as the focused protection we put forward in the Great Barrington Declaration. What we are proposing is, therefore, nothing revolutionary’, [Kulldorff] said.” Fauci Ex. 48, at 6.

807. Regarding the censorship of the Great Barrington Declaration on social media, Dr. Fauci repeatedly testified that he was oblivious to it: “I don’t pay much attention to what goes on in social media ... it is highly unlikely that ... I paid any attention to this thing of Google censoring the Great Barrington Declaration ... I would not have paid much attention to it.” Fauci Dep.

281:15-282:2, 283:7-10. In light of his contemporaneous statements and emails, this statement is not credible.

808. Like so many other topics, Dr. Fauci repeatedly testified that he could not recall virtually anything about his involvement in seeking to squelch the Great Barrington Declaration. He testified at least 33 times that he could not recall his involvement in this matter. *See* Fauci Dep. 251:11, 252:20, 255:6, 255:9, 256:3, 257:5, 258:12, 263:1, 263:15, 263:21, 264:17, 264:20, 264:22, 265:2, 265:6, 268:10, 268:18, 270:24, 282:19-20, 284:22-23, 290:13, 290:21, 291:13, 291:16, 292:15, 292:24, 293:15, 293:24, 295:9, 295:25, 296:21, 297:2-3, 297:14. For the reasons discussed above, these claims to almost total loss of memory are not credible.

D. NIAID Flags Social-Media Accounts for Censorship Under Dr. Fauci.

809. As noted above, Dr. Fauci testified that he is not aware of any NIAID or NIH staff contacting social media platforms to ask them to remove content. In fact, NIAID and NIH staff—including staffers in Dr. Fauci’s senior circle—sent several messages to social-media platforms asking them to remove content lampooning or criticizing Dr. Fauci. Dr. Fauci’s testimony to the contrary is not credible.

810. On March 14, 2020, a Twitter employee reached out to CDC officials, including Carol Crawford, and asked if a particular account associated with Dr. Fauci is “real or not.” Fauci Ex. 53, at 2. Scott Prince of NIH responded, “Fake/Impostor handle. PLEASE REMOVE!!!” *Id.* Twitter responded that it would take action promptly and “circle back ASAP.” *Id.* An HHS official then asked if Twitter could pre-block similar parody accounts: “Is there anything else that you can also do to block other variations of [Dr. Fauci’s] name from impersonation so we don’t have this happen again?” *Id.* at 1. Twitter replied: “We’ll freeze this @handle and some other variations so no one can hop on them.” *Id.*

811. Likewise, on April 21, 2020, Judith Lavelle of NIAID emailed Facebook, copying Scott Prince of NIH and Jennifer Routh of Dr. Fauci's communications team, and stated: "We wanted to flag a few more fake Dr. Fauci accounts on FB and IG for you. I have also reported them from @niaid and my personal FB account." Fauci Ex. 55, at 3. She listed eight accounts that she considered fake. One of these was called "Dr.FauciTheHero," and she stated, "I think this one may be fine as a fan page but could use a reminder to be a bit more clear," *id.* at 4—thus noting that she was seeking the censorship only of speech about Dr. Fauci that the government disfavors, while "a fan page" was fine.

812. Both Jennifer Routh and Judith Lavelle are members of Dr. Fauci's communications staff. Fauci Dep. 308:14-21.

813. The fact that Lavelle stated they were flagging "a few *more*" accounts indicates that NIAID's flagging social-media accounts for censorship was not an isolated incident but an ongoing practice. Fauci Ex. 55, at 3.

814. Lavell then followed up flagging yet another account, saying "Apologies one more," and adding Greg Folkers of Dr. Fauci's personal staff to the email chain reporting these accounts to Facebook for censorship. Fauci Ex. 55, at 3.

815. The same day, Facebook responded, "Flagged this for the fake accounts team and they have confirmed that all but two accounts were removed for impersonation of Dr. Fauci. I guess two of the accounts are fan accounts." Fauci Ex. 55, at 3.

816. The Facebook employee then added, "Also want to intro you all to [two more Facebook employees] who have been working hard to manage any fake accounts for NIH across the board. She can work with you directly if anything like this comes up." Fauci Ex. 55, at 2. Lavelle responded that "our team will be sure to reach out if we identify any more impersonations,"

id., and Facebook answered that Lavelle of NIAID should “feel [free] to flag to us the various imposter accounts,” Fauci Ex. 55, at 1. Again, this response indicates an ongoing and widespread practice of NIH reporting supposedly “fake” accounts for censorship. *Id.*

817. Dr. Fauci testifies that he does not remember for certain, but he “likely” asked his communications staff to do something about these impersonation or parody accounts. Fauci Dep. 302:6-10 (“I vaguely remember somebody mentioning something about an imposter account. ... And I likely would have said, ‘Well, how can they do that?’”). He also agrees that his communications staff would do so on their own. *Id.* at 301:1-4 (“I have a communication staff that I’m sure, if they found out it was a false and misleading account, that they would want it to be removed.”); *see also id.* at 301:23-25; 304:19-21.

818. Dr. Fauci believes it is “totally appropriate” for his communications staff to contact social-media platforms and seek the removal of such accounts. *Id.* at 312:19-21; *see also id.* at 310:14-16.

819. He thinks so because “impersonating me is a bad thing.” *Id.* at 303:20; *see also id.* at 304:11-13; 309:23-310:1 (“fake accounts are bad things, I believe”); 311:20-21. Dr. Fauci specifically believes that removing accounts associated with him is “a good thing” because “those accounts are bad.” *Id.* at 329:12-16.

820. Dr. Fauci does not know whether some of the so-called “fake accounts,” which he calls “bad things,” that his staff flagged for censorship may actually be parody accounts. *Id.* at 311:7-9.

821. Moreover, it was not just NIAID staff, but also White House staff, who flagged content about Dr. Fauci for removal from social-media platforms. As noted above on Tuesday, July 20, 2021, Clarke Humphrey of the White House communications office emailed Facebook

asking for the removal of an Instagram account associated with Dr. Fauci, saying it “is not actually one of ours.” Fauci Ex. 57, at 1-2. Facebook responded one minute later, stating, “Yep, on it!” Fauci Ex. 57, at 1. Courtney Billet, Dr. Fauci’s communications director at NIAID, then weighed in, asking Facebook to disclose whether “there’s a federal email address attached to whomever set this account up,” so that she could ascertain whether the account was set up by “some federal employee outside our official comms offices.” Fauci Ex. 57, at 1. The next day, Facebook responded, stating, “This account has been removed. Thank you for flagging!” Fauci Ex. 57, at 1.

822. NIAID’s communications with social-media platforms were not limited to flagging impostor or parody accounts. On October 30, 2020, for example, a NIAID staffer wrote an email connecting Google/YouTube with Jennifer Routh of NIAID’s “Office of Communications and Government Relations,” so that NIAID and the “Google team” could “connect on vaccine communications – specifically misinformation....” Fauci Ex. 56, at 2. Routh then added Courtney Billet (“director of the Office of Communications and Government Relations at NIAID”) and two other senior NIAID officials to the communications chain with YouTube. Fauci Ex. 56, at 1.

823. Likewise, in response to a third-party subpoena, Twitter has disclosed that Dina Perry, a Public Affairs Specialist for NIAID, communicates or has communicated with Twitter about misinformation and censorship. Jones Decl., Ex. F, at 1.

824. NIAID did not disclose Dina Perry in response to interrogatories seeking the identities of NIAID officials who communicate with social-media platforms about misinformation, disinformation, and censorship. Scully Ex. 12, at 17-18.

825. Dr. Fauci testified that he has never “contacted a social media company and asked them to remove misinformation from one of their platforms.” Fauci Dep. 151:21-24 (“No, I have

not.”). He also testified that no one on his staff at NIAID has “ever reached out to a social media platform to ask them to take content down or to block content in any way. *Id.* at 152:7-15 (“To my knowledge, no.”). In light of the repeated attempts of Dr. Fauci’s staff to have content related to Dr. Fauci removed from social media, Dr. Fauci’s testimony on this point is not credible.

E. CDC and NIH Procure the Censorship of Speech on Ivermectin.

826. On September 13, 2021, Facebook emailed Carol Crawford of the CDC to ask the CDC to identify whether the claim that “Ivermectin is effective in treating COVID” is “false, and if believed, could contribute to people refusing the vaccine or self-medicating,” which were the qualifications for censoring that claim on Facebook’s platforms. Fauci Ex. 58, at 2. Facebook noted that it was currently rating this claim as “*not false*,” *i.e.*, Facebook was *not* censoring the claim that Ivermectin is effective in treating COVID-19, because there was “no consensus” of its efficacy for treatment. *Id.* at 3.

827. The next day, the CDC responded, advising Facebook that the claim that “Ivermectin is effective in treating COVID” is “***NOT ACCURATE***” (bold and italics in original) and thus should be censored on Facebook’s platforms. Fauci Ex. 58, at 1. To support this claim, the CDC cited NIH’s “Ivermectin | COVID-19 Treatment Guidelines.” *Id.* Thus, the CDC cited the NIH’s treatment guidelines for Ivermectin as authority to urge Facebook to censor claims about using Ivermectin to treat COVID-19. *Id.* CDC also cited NIH to call for the censorship of two related claims about Ivermectin, and noted that “[t]hese responses are based on the independent advice of ... NIH,” which had “opined that there are not data that indicate ivermectin is effective in the ways described above.” *Id.*

F. Dr. Fauci’s Double Standard on Acceptable Speech: Mask Mandates.

828. “Sylvia Burwell is the former Secretary of the Department of Health and Human Services [under President Obama] and the current president of American University.” Fauci Dep. 313:9-11. “Sylvia has, over the past couple of years, asked [Dr. Fauci] advice about personal safety during the COVID-19 pandemic.” *Id.* at 313:17-19.

829. On February 4, 2020, Sylvia Burwell wrote Dr. Fauci an email stating that she was traveling and wondering if she should wear a mask in the airport. Fauci Dep. 313:21-314:5; *see also* Jones Decl., Ex. EE, at 1. Dr. Fauci responded, stating: “Masks are really for infected people to prevent them from spreading infection to people who are not infected, rather than protecting uninfected people from acquiring infection. The typical mask you buy in the drugstore is not really effective in keeping out virus, which is small enough to pass through material. ... I do not recommend that you wear a mask....” Fauci Dep. 314:9-19; *see also* Jones Decl., Ex. EE, at 1.

830. Dr. Fauci agrees that he “made several statements that are similar to that at that time frame.” Fauci Dep. 315:12-14.

831. He states that, at that time, there were “no studies” on the efficacy of masking to stop the spread of COVID-19. *Id.* at 316:8-13.

832. In fact, on March 31, 2020, Dr. Fauci forwarded studies showing that masking is ineffective. Fauci Dep. 318:24-319:7.

833. Dr. Fauci’s position on masking dramatically changed by April 3, 2020, when he became an advocate for universal mask mandates. *Id.* at 317:14-20.

834. Dr. Fauci states that his position on masking changed in part because “[e]vidence began accumulating that masks actually work in preventing acquisition and transmission.” Fauci Dep. 317:5-6.

835. Dr. Fauci was asked to identify any studies that were done between February 2020 and April 3, 2020, that supported his change of position on the efficacy of masking, and he could not identify any. *Id.* at 318:8-10.

836. Dr. Fauci was asked if there were any “placebo-based, double-blind, randomized studies of the efficacy of masking that were done between February and April 2020,” and he could not identify any. *Id.* at 322:1-5. In fact, it is obvious that there were none.

837. Dr. Fauci’s position on masking, therefore, directly contradicts his insistence on randomized, double-blind, placebo-based clinical trials for alternative COVID-19 treatments like hydroxychloroquine and ivermectin. At best, Dr. Fauci’s dramatic change in position on masking was based on observational studies—the same kind of studies that he dismissed, in the very same time frame, as inadequate to support the use of hydroxychloroquine to treat COVID-19. At worst, it was based on no evidence at all—and Dr. Fauci identified none.

838. Dr. Fauci believes it can be dangerous to give ordinary people access to scientific information: “If information is clearly inadequate and statistically not sound, there can be a danger in people who don't have the ability or the experience of being able to understand that it's a flawed study.” *Id.* at 323:5-9.

839. Dr. Fauci believes that it is “disturbing” when “unwitting” people believe what he thinks is misinformation: “I think honest debate is important, but when it goes beyond debate and leads people who are unwitting about these things to do things that are clearly detrimental to their life and their safety, I find that disturbing.” *Id.* at 358:13-17.

G. Dr. Fauci and the White House Cause the Censorship of Alex Berenson.

840. Alex Berenson is a former New York Times science reporter and prominent critic of government messaging about COVID-19 vaccines who was deplatformed from Twitter on

August 28, 2021, after months of pressure from White House and federal officials. Fauci Ex. 59, at 4.

841. As Berenson notes: “On July 16, 2021, President Biden complained publicly that social media companies were ‘killing people’ by encouraging vaccine hesitancy. A few hours after Biden’s comment, Twitter suspended by account for the first time.” Fauci Ex. 59, at 4.

842. Dr. Fauci, who was then Chief Medical Advisor to President Biden, played a key role in procuring the censorship of Alex Berenson. Shortly before President Biden’s comments, Dr. Fauci engaged in public attacks on Alex Berenson in attempt to discredit him and silence his government-skeptical opinions.

843. On July 11, 2021, appearing on CNN’s “State of the Union,” Dr. Fauci described Alex Berenson’s comments on vaccine skepticism as “horrifying.” Fauci Ex. 60, at 1. Responding to applause for a speech given by Berenson at a conference, Dr. Fauci stated: “It’s horrifying. I mean, they are cheering about someone saying that it’s a good thing for people not to try and save their lives.” *Id.* In response to Berenson’s views, Dr. Fauci stated, “it’s almost frightening to say, ... we don’t want you to do something to save your life.” *Id.* Dr. Fauci also stated, “I don’t think that anybody who is thinking clearly can get that.” *Id.*

844. Dr. Fauci’s public comments as the President’s Chief Medical Advisor specifically criticizing Alex Berenson were made at a time when other White House officials like Andrew Slavitt were *privately* pressuring Twitter to deplatform Berenson since April 21, 2020. *See, e.g.,* Fauci Ex, 58, at 7 (internal Twitter communications on April 22, 2020, indicating that White House officials “had one really tough question about why Alex Berenson hasn’t been kicked off from the platform,” and “yes, they really wanted to know about Alex Berenson. Andy Slavitt suggested

they had seen data vis that had showed he was the epicenter of disinfo that radiated outwards to the persuadable public.”).

845. Dr. Fauci does not deny that he may have discussed Alex Berenson with other White House or federal officials, but claims he does not recall whether he did so. Fauci Dep. 343:16-23.

846. Dr. Fauci believes that misinformation and disinformation “contribute to the deaths” of people: “misinformation and disinformation, particularly that encourages people to avoid lifesaving interventions, can certainly result in the unnecessary death of people whose lives would have been saved. So when misinformation and disinformation leads people to avoid a lifesaving intervention, that is equivalent to contributing to the death of that person.” *Id.* at 345:8-15. “I do feel strongly that misinformation and disinformation, when it leads to people avoiding lifesaving interventions, can be deadly. *Id.* at 346:1-3.

847. Dr. Fauci also believes that misinformation and disinformation on social media are “contrary to public health” and “the enemy of public health”: “If social media is propagating disinformation that leads to the death of people by encouraging them to avoid lifesaving interventions, I believe that's contrary to public health.” *Id.* at 346:5-7, 346:10-13.

848. Dr. Fauci admits that it is “certainly possible” that he discussed the view that “disinformation or misinformation on social media platforms are killing people” with others in the federal government, but claims he cannot remember whether he did so. *Id.* at 345:3-25.

849. Dr. Fauci testified that the first time he heard of Alex Berenson was when Berenson publicly claimed that the White House demanded that Twitter deplatform him in 2022: “it's the person who says that the White House demanded Twitter ban me months before the company did so. I had never heard of who Alex Berenson was before this ... I don't even know who he is.” *Id.*

at 335:1-7. In light of Dr. Fauci's public attacks on Alex Berenson in 2021, this testimony is not credible.

850. Former FDA Commissioner Scott Gottlieb also emailed Twitter to pressure them to remove Alex Berenson's content, invoking Dr. Fauci in his email. Sending Twitter a link to a post by Berenson entitled "The Arrogance of Dr. Fauci," Gottlieb wrote: "This is why Tony needs a security detail," Fauci Ex. 62, at 1—thus implying that Berenson's criticism of Dr. Fauci was endangering Dr. Fauci's life.

851. Dr. Fauci does not deny that he may have discussed this issue with Gottlieb before Gottlieb sent this email to Twitter, but he claims he does not recall whether he did so. Fauci Dep. 349:7-19, 352:12-18.

852. After testifying over 200 times during his deposition that he could not remember or could not recall events related to the case, Dr. Fauci was shown an email chain between him and Dr. Ezekial Emanuel from May 2, 2020 that had no direct connection to issues in the case. Fauci Ex 63. Unlike his convenient lack of memory as to case-related communications, Dr. Fauci was immediately able to provide a detailed, specific account of the context and communications with Dr. Emanuel relating to that email chain. Fauci Dep. 353:20-354:16.

VI. The FBI's Censorship Campaign of Pressure and Deception.

853. In parallel with the censorship of health "misinformation" and related issues achieved by the White House, the CDC, Surgeon General Murthy, Dr. Fauci, and others, *see supra* Parts I-V, federal national-security and law-enforcement agencies flex their considerable muscle to pressure and induce social-media platforms to censor disfavored speech and viewpoints about elections and other topics. The FBI's Foreign Influence Task Force (FITF) and the Cybersecurity and Infrastructure Security Agency's (CISA) "Mis, Dis, and Malinformation Team" play key roles

in this efforts – in cooperation with non-profit agencies working in close collaboration with the government, such as the CISA-funded “Center for Internet Security” and the formidable censorship cartel calling itself the “Election Integrity Partnership” and the “Virality Project.”

854. Elvis Chan is the Assistant Special Agent in Charge of the Cyber Branch for the San Francisco Division of the Federal Bureau of Investigation. Chan Dep. 8:11-13.

855. In this role, Chan is “one of the primary people” who communicates with social-media platforms about disinformation on behalf of the FBI. *Id.* 105:3-4 (“I would say I’m one of the primary people with pass-through information” for platforms). There are many other points of contact between the FBI and social-media platforms, however. *Id.* 105:3-7 (“[W]e have agents on the different cyber squads and our private sector engagement squad who also relay information to the companies.”).

856. Chan graduated from the Naval Postgraduate School in 2021 with an M.A. in Homeland Security Studies. *Id.* 10:16-17. In connection with his master’s degree, Chan authored a publicly available thesis entitled, “Fighting Bears and Trolls: An Analysis of Social Media Companies and U.S. Government Efforts to Combat Russian Influence Campaigns During the 2020 U.S. Elections.” *Id.* 11:3-16; Chan Ex. 1, at 1. This thesis overtly relied only on publicly available documents, but it also reflected Chan’s personal knowledge and experience of working with social-media platforms during the 2020 elections. *See id.*

857. Chan’s thesis discussed “hack-and-dump activity,” also known as “hack-and-leak” operations, as well as “Russian malign influence ... on the social media platforms and on fake news websites that the Russians have created.” Chan Dep. 13:7-21.

858. Chan’s thesis relied on research performed by persons and entities comprising the Election Integrity Partnership, including Graphika, *id.* 145:1-6; and Renee DiResta of the Stanford

Internet Observatory, *id.* 51:20-52:7, 85:4-12. Chan communicated directly with DiResta “about Russian disinformation,” and had “[a] lot of conversations about Russian disinformation” with DiResta. *Id.* 52:5-7, 52:24-25.

859. Chan also knows Alex Stamos, the head of the Stanford Internet Observatory, from the time when Stamos participated on behalf of Facebook in the USG-Industry meetings. *Id.* 54:2-19. Chan and Stamos were involved in meetings about “malign-foreign-influence activities” on Facebook while Stamos was the chief security officer for Facebook. *Id.* Chan has also discussed “protecting platforms from hacking” with Stamos. *Id.* 55:12-13. And Chan’s “colleagues at FBI headquarters regularly meet with researchers much more frequently than I do.” *Id.* 57:15-18.

860. According to Chan, the FBI engages in “information sharing” with social-media platforms about content posted on their platforms, which includes both “strategic-level information” and “tactical information.” *Id.* 16:16-19.

A. FBI’s and CISA’s Regular “USG-Industry” Disinformation Meetings

861. The FBI participates in a CISA-organized “industry working group” with Facebook, Twitter, and Google/YouTube, as well other social-media platforms. *Id.* 18:21-24. The social-media platforms that participate are Facebook, Microsoft, Google, Twitter, Yahoo! (a.k.a. Verizon Media), Wikimedia Foundation, and Reddit. *Id.* 23:24-24:3. On the U.S. Government side, the meetings are attended by representatives of CISA, the Department of Homeland Security’s Intelligence & Analysis division (“I&A”), the Office of the Director of National Intelligence (ODNI), the FBI’s Foreign Influence Task Force (FITF), and Elvis Chan on behalf of FBI-San Francisco when he is available. *Id.* 24:9-19; *see also* Chan Ex. 6, at 37. Chan later confirmed that “DOJ National Security Division” attends these “USG-Industry” meetings as well. Chan Dep. 171:6-8.

862. Chan participates in the meetings because most social-media platforms are headquartered in San Francisco, and “FBI field offices are responsible for maintaining day-to-day relationships with the companies that are headquartered in their area of responsibility.” *Id.* 24:21-25:4. As a result, Chan serves as a frequent conduit for communication between federal officials, especially FBI officials but also others, and social-media platforms. *See id.*

863. Matt Masterson attended, and Brian Scully attends, the USG-Industry meetings on behalf of CISA. They are “regular attendees” and “one of them is usually emceeding the meeting.” *Id.* 25:15-18. “For the 2020 election cycle, Mr. Masterson was ... primarily the facilitator. Ahead of the 2022 midterm elections, Mr. Scully has been the primary facilitator.” *Id.* 26:19-22.

864. Chan also “participate[s] in the preparation meetings” for the USG-Industry meetings. *Id.* 27:24-25.

865. At these CISA-led “USG-Industry” meetings, “the disinformation content was shared by the social media companies. They would provide a strategic overview of the type of disinformation they were seeing on their respective platforms,” and the FBI “provided strategic unclassified overviews of the activities that we saw [Russian actors] doing.” *Id.* 156:9-157:1.

866. The “USG-Industry” meetings “are continuing” at the time of Chan’s deposition on November 23, 2022, and Chan assumes that they will continue through the 2024 election cycle. Chan Dep. 284:23-285:6. Online “disinformation” continues to be discussed between the federal agencies and the social-media platforms at these meetings. Chan Dep. 285:7-286:16.

B. The FBI’s Regular Bilateral Meetings with Social-Media Platforms.

867. The USG-Industry group meetings are not the only censorship-related meetings between the FBI and social-media platforms. Chan also “hosted ... bilateral meetings between each of the companies I mentioned”—*i.e.*, Meta/Facebook, Twitter, Google/YouTube,

Yahoo!/Verizon Media, Microsoft/LinkedIn, Wikimedia Foundation, and Reddit, *see id.* 23:24-24:3—“and the Foreign Influence Task Force.” *Id.* 39:4-8.

868. During these bilateral meetings, the FBI’s FITF would also “bring in field offices that had cyber investigations” of “state-sponsored actors that the FBI was investigating that we believe were capable of hack-and-dump campaigns” during the 2020 election cycle. *Id.* 39:10-16. In other words, in the bilateral meetings, the FBI repeatedly raised the concern about the possibility of “hack and dump” operations during the 2020 election cycle during FITF’s bilateral meetings with each of at least seven major social-media platforms. *Id.*

869. These bilateral meetings between FBI and social-media platforms are continuing—they occurred during the 2020 election cycle, and they continued during the 2022 election cycle. *Id.* 39:18-40:1. “They occur at roughly a quarterly cadence,” but “the cadence increase[s] as elections get close,” so that the meetings “become monthly as the election nears and then weekly very close to the elections.” *Id.* 40:2-20. These meetings will continue quarterly, monthly, and then weekly leading up to the 2024 election as well. *Id.* 41:5-15. The meetings also occurred “[o]n a quarterly cadence” during the 2018 election cycle. *Id.* 42:18-24.

870. The companies with which FITF conducts these regular bilateral meetings include “Facebook, Google, Twitter, Yahoo!, Reddit, and LinkedIn,” as well as “Apple and Wikimedia Foundation.” *Id.* 41:24-42:7. Apple was “added because they are a cloud infrastructure company; and we believe that tactical information, specifically indicates that we shared with them related to foreign-state-sponsored actors, might pop up on ... any screening they do on iCloud.” *Id.* 42:12-17.

871. In these meetings, FBI officials meet with senior social-media platform officials in the “trust and safety or site integrity” role, *i.e.*, those in charge of enforcing terms of service and

content-moderation policies for the platforms. *Id.* 43:5-44:1. In other words, the FBI meets with the officials responsible for censoring speakers and content on the platforms—those “directly involved in the enforcement of terms of service for these various platforms,” which “includes ... content modulation of content on the platforms.” *Id.* 49:19-50:2.

872. The FBI’s “quarterly meetings” with social media platforms to “probe” questions about censorship of disinformation began as early as “in the 2017 time frame.” *Id.* 87:24-88:14, 89:19-20.

873. A large number of FBI officials attend each regular bilateral meeting about disinformation with each of those seven social-media platforms. In addition to Chan and Laura Dehmlow, who is the head of FBI’s Foreign Influence Task Force (FITF), “between three to ten” FITF officials attend each meeting, as well as “one field office comprised of two representatives” from each of “one to three field offices.” *Id.* 109:21-22, 110:7-14. Frequently the number of FBI agents attending each meeting “could be as high as a dozen.” *Id.* 110:17-18.

874. Likewise, large numbers of officials from the social-media platforms attend these regular bilateral meetings with the FBI about disinformation. “[A] similar amount” of people attend each meeting from the platforms, and “for the three larger companies – specifically Google/YouTube, Facebook, and Twitter – it would be equal numbers or higher numbers than the FBI.” *Id.* 110:21-25.

875. In addition to all these meetings, on February 4, 2019, there was a meeting between Facebook, Google, Microsoft, and Twitter and the FBI’s FITF, ODNI, and CISA to discuss election issues. Elvis Chan attended, as did Director Krebs, Matt Masterson, and possibly Brian Scully of CISA. Representatives of the social-media companies at the meeting included those

from the “trust and safety” or content-modulation teams, and “the social media companies were focused on discussing disinformation.” *Id.* 151:9-154:6.

876. Discovery obtained from LinkedIn contains 121 pages of emails between Elvis Chan and other FBI officials and LinkedIn officials setting up numerous meetings to discuss disinformation issues during the 2020 and 2022 election cycles. Chan Ex. 2. Chan confirms that he has a similar set of communications setting up a similar series of meetings with each of “six or seven other social-media platforms as well”—he has “similar types of correspondence” with the others, including Facebook, Twitter, Google/YouTube, etc. Chan. Dep. 288:4-17.

877. These emails confirm that Chan and the other FBI officials regularly met with senior officials at social-media platforms with responsibility for *content moderation*. See Chan Ex. 2, at 3; Chan Dep. 292:7-293:8. The FBI meets with “director level and ... their direct reports” from the “trust and safety and site integrity” teams. Chan Dep. 293:4-8.

878. The FBI communicates with social-media platforms using two alternative, encrypted channels—the self-deleting messaging app Signal, and the encrypted messaging service Teleporter. Chan Dep. 295:7-296:9.

879. For each election cycle, during the days immediately preceding and through election day, the FBI maintains a command center around the clock to receive and forward reports of “disinformation” and “misinformation,” and the FBI requests that the platforms have people available to receive and process those reports at all times: “FBI headquarters, they just ran 24 hours a day for their command post, I believe from Friday to Tuesday. FBI San Francisco ran from, I believe, 8:00 o'clock in the morning to perhaps 10:00 o'clock at night every day except the election, when we ran until midnight.” Chan Dep. 301:14-20. In advance of the elections, the FBI “ask[ed]

the companies when they intended to have personnel on what days monitoring their platform for any threats that they saw.” Chan Dep. 301:21-24.

C. The FBI’s Deceptive Information Censors the Hunter Biden Laptop Story.

880. Elvis Chan, other FBI officials, and other federal officials repeatedly warned industry participants to be alert for “hack and dump” or “hack and leak” operations prior to the 2020 election, even though they had no investigative basis to issue such warnings. These warnings provided the justification for the platforms to censor the Hunter Biden laptop story that the New York Post broke on October 14, 2020. *See id.* at 232:1-234:3. These “hack and leak” or “hack and dump” warnings were issued many times, both in the “USG-Industry” meetings and in the FBI’s bilateral meetings with social-media platforms.

881. Hack and leak operations were discussed at the USG-Industry meetings. *Id.* 172:3-5. At the USG-Industry meetings, Elvis Chan and other FBI officials “warned the social media companies about the potential for a 2016-style DNC hack-and-dump operation.” *Id.* 172:23-173:1.

882. During these meetings, Chan “warned the companies about a potential for hack-and-dump operations from the Russians and the Iranians on more than one occasion.” *Id.* 175:10-13. Laura Dehmlow, the head of FITF, also “mentioned the possibility of hack-and-dump operations.” *Id.* 175:17-20.

883. The prospect of hack-and-leak operations was also repeatedly raised “[a]t the FBI-led meetings with FITF and the social-media companies.” *Id.* 177:24-25. It was also raised at the “CISA-hosted USG-industry” meetings. *Id.* 178:1-6, 180:24-25. “[T]he risk of hack-and-leak operations were raised at both sets of meetings, both at CISA-organized USG-industry meetings and the FITF-organized direct meetings between the FBI and social media platforms.” *Id.* 181:6-11. Chan himself raised the warnings “regularly” at the bilateral FITF-platform meetings. *Id.*

185:16-18. Laura Dehmlow raised the warning at the USG-Industry meetings “that the FBI is concerned about the potential for hack-and-leak or hack-and-dump operations from foreign state-sponsored actors.” *Id.* 187:1-4. And Chan himself “recollect[s] mentioning the potential for hack-and-dump operations during the CISA-hosted USG-industry meetings.” *Id.* 189:4-7. Chan confirms that he raised these concerns “to the social media platforms on multiple occasions in two sets of meetings in 2020,” including “the USG-industry meetings organized by CISA” and “the FITF organized meetings with the individual social media platforms.” *Id.* 204:2-12.

884. In the same time frame in 2020, as federal officials were repeatedly raising these concerns about hack-and-leak operations, some social media platforms updated their policies to provide that posting hacked materials would violate their policies and could result in censorship: “some social media companies adjusted or updated their terms of service or their community standards to say that they would not post any hacked materials.” *Id.* 205:6-9. According to Chan, the “impetus” for these more restrictive censorship policies was the repeated concern raised by Chan, the FBI, and federal national-security officials about the risk of “a 2016-style hack-and-leak operation: “the impetus was in case there was a 2016-style hack-and-leak operation.” *Id.* 205:14-21. The FBI’s repeated warnings, therefore, induced social-media platforms to adopt more restrictive censorship policies on hacked materials, *see id.*, which would then be used to censor the Hunter Biden laptop story.

885. Chan denies that the FBI urged the platforms to change their terms of service to address hacked materials, but he admits that the FBI repeatedly inquired of the social-media platforms *whether* their policies would allow for or require the censorship of hacked materials. The FBI “wanted to know if they had changed their terms of service or modified it, and we wanted to know what they had changed,” and thus the platforms “advise[d]” the FBI that “they had

changed” their policies “to reflect the ability to pull down content that results from hack operations.” *Id.* 206:5-13.

886. Again, Chan testified that, in meeting with platforms like Facebook, the FBI “asked, ‘If you receive a whole -- if you see a trove of potentially hacked materials, what are you going to do about it?’ Which would be our way of asking them how their terms of service would handle a situation like that.” Chan Dep. 247:25-248:4. The FBI “ask[ed] how they would handle it if potentially hacked materials appeared.” Chan Dep. 248:5-8. Chan believes they asked that question of Twitter, Facebook, and YouTube, and the social-media platforms responded, as he “remember[s] the social media companies having terms-of-service policies to handle this sort of situation.” Chan Dep. 248:14-16. Both Facebook and Twitter, for example, “said that they would remove hacked materials if they were able to validate that it was hacked.” Chan Dep. 252:24-253:4. These conversations happened “ahead of the 2020 elections.” Chan Dep. 253:6-7.

887. The FBI asked the platforms how their policies would handle a hack-and-leak operation at the same time as repeatedly warning them about such operations—thus effectively inducing them to adopt such policies. Chan Dep. 248:23-249:2.

888. The FBI inquired about the platforms’ hacked-materials policies because “internally we wanted to know what actions that we would need to take, whether we would need to take a legal remedy such as like a seizure warrant” to remove supposedly hacked materials. Chan Dep. 249:17-20.

889. Chan was not the only FBI official to ask the platforms about their censorship policies for hacked materials. Instead, this question was posed repeatedly by multiple FBI officials: “I would say we take turns asking. When I say ‘we,’ I mean either myself or the members of the Foreign Influence Task Force Wherever it seemed like an organic follow-up question,

we would ask ‘How would your terms of service apply to this situation or that situation?’” Chan Dep. 250:14-20.

890. When asked, “did anyone within the FBI discuss or suggest with you that you should raise the prospect of Russian hack-and-leak operations with social media platforms in 2020?” Chan repeatedly responded with a stock answer, “I do not recollect.” *Id.* 189:14-23; 189:8-191:21, 203:13-15 (“I cannot recollect.” ... “I do not recollect.” ... “I do not recollect.” ... “I don’t recollect.” ... “I don’t recollect.” ... “I do not recollect.”).

891. These responses are not credible because they are stock responses, and it is facially implausible that Chan does not recall whether other federal officials discussed warning platforms about “hack-and-leak” operations during 2020, especially after the fiasco of censorship of the Hunter Biden laptop story. These “I do not recollect” responses also contradict Chan’s testimony later in the deposition that he “regularly” communicated with FITF and FBI’s cyber division about the possibility of a hack-and-leak operation: “I believe that we internally discussed the potential for hack-and-leak operations, and so I regularly was in communication with the cyber division of the FBI as well as with the Foreign Influence Task Force to see if they had heard of anything that I had not heard of. So I would say that the people that I communicate with, everyone was vigilant, but no one -- I believe that in general people at the FBI were concerned about the potential for hack-and-leak operations, but that we had not seen any investigations that led in that direction or that would lead us in that direction.” *Id.* 206:23-207:10. He specifically admitted that he recalls discussing hack-and-leak operations with FITF officials “Ms. Dehmlow, Mr. Olson, Mr. Cone, and Mr. Giannini.” *Id.* 207:19-23. It is not credible that the *only* aspect of his internal discussions with the FBI about hack-and-leak operations that he does not recall is whether someone from the FBI suggested or directed him to raise the issue with social-media platforms.

892. Further, as revealed on the video of Chan’s deposition, his demeanor in answering questions on this point changes and becomes evasive. Chan’s demeanor when testifying on this point undermines his credibility.

893. The FBI and other federal officials had no specific investigative basis for these repeated warnings about possible “hack-and-dump” operations. As Chan admits, “[t]hrough our investigations, we did not see any similar competing intrusions to what had happened in 2016. So although from our standpoint we had not seen anything, we specifically, in an abundance of caution, warned the companies in case they saw something that we did not.” *Id.* 174:7-13. As Chan admits, “we were not aware of any hack-and-leak operations that were forthcoming or impending” when he and other federal officials warned about the “risk of hack-and-leak operations, especially before the general election.” *Id.* 192:19-24.

894. Matt Masterson and Brian Scully of CISA also raised the concern about the threat of hack-and-leak operations in the 2020 election cycle to the social-media platforms during the “USG-Industry” meetings that occurred quarterly, then monthly, then weekly leading up to the 2020 election. *Id.* 212:3-22.

895. Yoel Roth, then-Head of Site Integrity at Twitter, provided a formal declaration to the Federal Election Commission containing a contemporaneous account of the discussion of the threat of “hack-and-leak operations” at the meetings between the FBI, other federal law-enforcement and national-security agencies, and the social-media platforms. His declaration states: “Since 2018, I have had regular meetings with the Office of the Director of National Intelligence, the Department of Homeland Security, the FBI, and industry peers regarding election security. During these weekly meetings, the federal law enforcement agencies communicated that they expected ‘hack-and-leak operations’ by state actors [*i.e.*, Russians or other foreign

governments] might occur in the period shortly before the 2020 presidential election, likely in October. I was told in these meetings that the intelligence community expected that individuals associated with political campaigns would be subject to hacking attacks and that material obtained through those hacking attacks would likely be disseminated over social media platforms, including Twitter. These expectations of hack-and-leak operations were discussed throughout 2020. *I also learned in these meetings that there were rumors that a hack-and-leak operation would involve Hunter Biden.*” Chan. Ex. 8, ¶¶ 10-11, at 2-3 (emphasis added). Yoel Roth executed this declaration on December 17, 2020, shortly after the events described, and submitted it to the Federal Election Commission in a formal enforcement proceeding, so it has the force of a statement under oath. *Id.* at 4.

896. Chan’s account of these meetings largely matches Roth’s account, *see, e.g.*, Chan Dep. 218:5-220:15, but there are two key discrepancies between Roth’s and Chan’s accounts. First, Roth recounts that the FBI and national-security officials communicated to Twitter that they “*expected*” that there would be one or more hack-and-leak operations by Russia or other “state actors.” *Id.* at 2. Chan testified that he believed they used words like “concern” instead of “expected.” Chan. Dep. 220:20-24, 224:5-17, 226:5-12, 227:3-6. Second, Roth specifically recalls that federal officials told him that “there were rumors that a hack-and-leak operation would involve Hunter Biden.” Chan Ex. 8, ¶ 11, at 3. Chan testified that “in my recollection, Hunter Biden was not referred to in any of the CISA USG-Industry meetings.” Chan Dep. 213:8-10; *see also id.* 227:24-228:1, 228:21-23, 229:9-11 229:15-20.

897. On these points, Roth’s declaration is more credible than Chan’s testimony, for at least four reasons. First, Roth’s declaration was executed much closer in time to the events described—just two months later—while Chan’s testimony occurred over two years later. Indeed,

as noted above, Chan himself admitted that he “could not recollect” key details about the federal officials’ course of conduct in warning social-media platforms about a supposed “hack and dump” operation, so there is no reason to think that Chan’s recollection is more reliable on these similarly specific details.

898. Second, Roth had no incentive to color or shade his account of communications from federal officials when he submitted this Declaration to the FEC, while Chan has strong incentives to shade his testimony on these points to deemphasize the FBI’s involvement in censoring the Hunter Biden laptop story. Indeed, if the FBI and other federal officials warned social-media platforms about a hack-and-leak operation *involving Hunter Biden*—when the FBI had received Hunter Biden’s laptop from the Delaware repair-shop owner and thus *knew* that it was not hacked, *see* Doc. 106-3, at 5-11 —that raises a compelling inference that the FBI deliberately gave misleading information to social-media platforms to induce them to wrongfully censor the Hunter Biden laptop story.

899. Third, Chan’s testimony on a closely related point—whether Chan was instructed by an FBI official to warn social-media platforms about “hack and leak” operations—is not credible. Chan’s minor disagreements with Roth’s account are not credible for similar reasons. For example, Chan claims to have extremely specific recollection of the FBI’s word-choice in meetings that occurred over two years earlier—disputing that the FBI used the word “expected,” *id.* 220:20-24, 223:12-22, 224:5-17, 226:5-12, 227:3-6, and affirmatively asserting with confidence that “Hunter Biden” was never mentioned, *id.* 213:8-10, 227:24-228:1, 228:21-23, 229:9-11 229:15-20—while at the same time claiming that he could not recollect whether he discussed the same issues with the FBI internally *at all*, *Id.* 189:14-23; 189:8-191:21, 203:13-15.

900. Fourth, Chan’s demeanor while testifying by videotape on this point is evasive and undermines his credibility.

901. Two additional points support the credibility of Roth’s account over Chan’s. First, Brian Scully’s testimony, unlike Chan’s, did not dispute or quibble with any aspect of Roth’s near-contemporaneous account of these conversations—Scully merely contended that he could not remember. Scully Dep. 247:18-248:2.

902. Second, Roth’s account directly matches the less detailed but even more contemporaneous account provided by Mark Zuckerberg in his testimony before Congress on October 28, 2020. Zuckerberg’s testimony confirms that, as Yoel Roth recounted, the FBI conveyed a strong risk or expectation of a foreign hack-and-leak operation shortly before the 2020 election: “So you had both the public testimony from the FBI and in private meetings alerts that were given to at least our company ... that suggested that we be on *high alert and sensitivity* that if a trove of documents appeared that we should view that with suspicion, that it might be part of a foreign manipulation attempt.” Chan Ex. 9, at 56 (emphasis added). Indeed, Chan did not dispute Zuckerberg’s account: “I don’t remember the exact framing of our discussions with them [*i.e.*, Facebook].” Chan Dep. 247:14-15. And again, Chan did not dispute the fundamental details of Zuckerberg’s account; he admitted that he “hosted several private meetings with Facebook where the concern about a hack-and-leak operation was raised” in 2020. Chan Dep. 246:17-20. Though Chan did state that “I would not have framed it like Mr. Zuckerberg did,” Chan essentially concedes the accuracy of Zuckerberg’s account. Chan Dep. 255:14-15.

903. After the Hunter Biden story broke on October 14, 2020, Laura Dehmlow of the FBI refused to comment on the status of the Hunter Biden laptop in response to a direct inquiry

from Facebook, even though the FBI had the laptop in its possession since late 2019 and knew that its contents were not hacked. Chan Dep. 213:11-215:5.

904. When the Hunter Biden laptop story broke on October 14, 2020, it was widely censored on social media, including by Twitter and Facebook, pursuant to their hacked-materials policies. For example, Twitter’s Site Integrity Team “blocked Twitter users from sharing links over Twitter to the applicable New York Post articles and prevented users who had previously sent Tweets sharing those articles from sending new Tweets until they deleted the Tweets” sharing the Hunter Biden laptop story. Chan Ex. 8, at 3. “Facebook, according to its policy communications manager began ‘reducing its distribution on the platform,’ pending ... a third-party fact check. Twitter went beyond that, blocking all users, including the House Judiciary Committee, from sharing the article on feeds and through direct messages. Twitter even locked the New York Post account entirely, claiming the story included hacked materials and was potentially harmful.” Chan Ex. 9, at 2.

D. The FBI Routinely Flags Speakers and Content for Censorship.

905. According to Chan, during the 2020 election cycle, “the U.S. government and social media companies effectively impeded [foreign] influence campaigns primarily through information sharing and *account takedowns*, respectively.” Chan Ex. 1, at i (emphasis added).

906. According to Chan, the FBI’s “information sharing” includes both “strategic information,” which “discusses the tools, tactics or processes” used by foreign-influence campaigns, and “tactical information,” which means identifying specific “indicators or selectors,” which are both “a term of art” that refers to “IP addresses, email accounts, social media accounts, ... website domain names, and ... file hash values.” Chan Dep. 29:15-30:7.

907. In other words, according to Chan, the FBI “shares information” with social-media platforms that includes information about specific IP addresses, email accounts, social-media accounts, and website domain names that the FBI believes should be censored, and this sharing of information leads social-media platforms to engage in “account takedowns” based on the FBI’s information. *See id.* According to Chan, this combination of “information sharing” and “account takedowns” “effectively impeded [foreign] influence campaigns” during the 2020 election cycle. Chan Ex. 1, at i.

908. Chan testified that the FBI shares this information with social-media platforms so that they can “protect their platforms”—indeed, “protect their platforms” was a stock phrase in Chan’s testimony. Chan Dep. 32:19, 34:7-12, 35:8-10, 36:25, 87:22-23, 274:14. As Chan’s testimony makes clear, however, the phrase “protecting their platforms” is a euphemism for “censoring speech that federal officials disfavor.” For example, Chan admits that “protect their platforms” means “knocking down accounts or knocking down misinformation content.” Chan Dep. 273:12-17. Chan’s thesis and testimony make clear that the FBI’s purpose in “information sharing” with social-media platforms is to induce them to censor speech that the FBI dislikes and wants to see censored. For example, Chan testified that “my purpose is to share the information with them so they can protect their platforms as they deem appropriate,” but he immediately admitted that “one way to protect their platforms is to take down these accounts.” *Id.* 35:9-14. Thus, Chan admits that the FBI’s “purpose” in “information-sharing” includes “to take down these accounts” that the FBI believes are Russian-influenced. *Id.*

909. Chan admits that the purpose and predictable effect of “tactical” information-sharing—*i.e.*, the FBI flagging specific accounts, websites, URLs, IP addresses, web domain names, etc., to social-media platforms for censorship—is that the platforms will take action against

such specific content and accounts under their content-moderation policies: “from what I have observed and what they have told me when we have provided them with high confidence of Russian selectors, that they have been able to discover fake Russian accounts and take them down.” *Id.* 32:20-24.

910. According to Chan, the social-media platforms “take the information that we share, they validate it through their own means. And then if they determine that these are accounts being operated by Russian state-sponsored actors, then they have taken them down.” *Id.* 33: 12-17.

911. Chan admits that, during the 2020 election cycle, the U.S. Government engaged in “information sharing with the social media companies to expose Russia’s different operations and shut down its accounts.” Chan Ex. 1, at xvii. In other words, Chan admits that the purpose of federal officials’ “information sharing” was to “shut down ... accounts” on social media that the Government disfavored. *Id.*; *see also* Chan Dep. 37:17-38:2.

912. In addition to social-media platforms, Chan and the FBI also “share indicators” with state and local government election officials, such as “county registrars or county clerk’s offices”—who are also state actors subject to the First Amendment. Chan “would share indicators with them,” and “share the same type of information that I shared with social media companies,” including “IP addresses and domain names, so that they could see if they were popping up anywhere on their networks.” *Id.* 50:11-51:6. In other words, the FBI feeds information to state and local election officials so that they can make their own reports of supposed “misinformation” and “disinformation” to social-media platforms, creating a First Amendment feedback loop. The FBI seeds concerns with the state and local election officials, who then identify supposed “disinformation” and “misinformation” based on the FBI’s information, and then report it to the social-media platforms through CISA and the FBI.

913. Chan contends that Russian “state-sponsored actors ... have created fake social media accounts,” which “have either generated disinformation themselves or they have amplified existing content from current users of social media platforms.” *Id.* 60:1-7.

914. These supposedly Russian-controlled accounts “make their own content,” such as “mak[ing] their own Facebook postings,” and they “try to find what are the hot-button or current issues in the news ... and then they will try to either generate content themselves related to that or they will amplify existing content.” *Id.* 60:13-22. This is supposedly done with the goal to “sow discord in the American online environment.” *Id.* 61:12-13.

915. Chan agrees that “the goal there is ... they post messages that they anticipate will be divisive and try and get Americans to engage with them.” *Id.* 61:14-18.

916. As Chan agrees, “engagement” with a social-media posting includes viewing the content, liking or disliking it, reposting it, commenting on it, and/or reposting it with commentary. *Id.* 61:19-63:13. All of these are First Amendment-protected activities. In this way, according to Chan, “the Russians are trying to get people to engage on their divisive content.” *Id.* 63:19-64:1.

917. According to Chan, over 126 million Americans “engaged” with Russian-originated content on Facebook, and 1.4 million Americans engaged with such content on Twitter, during the 2016 election cycle. *Id.* 66:2-25. All of this was First Amendment-protected activity. Chan credits federal government efforts during the 2020 election cycle with preventing the vast majority of such “engagement” by American citizens with Russian-originate content on social media during the 2020 election cycle. Chan Ex. 1, at v (“This thesis finds that the Russians shifted their tactics from 2016 to 2020. Still, the U.S. government and social media companies effectively impeded their influence campaigns primarily through information sharing and account takedowns,

respectively.”). Thus, the federal officials’ “information sharing” activities prevented an enormous amount of First Amendment-protected activity from occurring.

918. Chan’s thesis and testimony provide clear examples of how supposedly Russian-originated “disinformation” on social media becomes intertwined with, and inseparable from, First Amendment-protected forms of expression by American citizens. Chan identifies a supposedly Russian-originated political ad on Facebook that features a picture of Hillary Clinton with a black X painted over her face, advertising an event called “Down with Hillary!” and stating, “Hillary Clinton is the co-author of Obama’s anti-police and anti-Constitutional propaganda.” Chan Ex. 1, at 29. None of this is “disinformation” in any meaningful sense—it is actually expression of political opinions. The posting notes that it received 763 reactions and 78 comments on Facebook, which Chan agrees are “engagements by users.” *See id.*; *see also* Chan Dep. 67:1-68:20. Chan contends that the underlying ad was “Russian-originated content masquerading as something posted by an American,” *id.* 67:6-10—*i.e.*, just the sort of content that the FBI would flag for censorship to social-media platforms through “tactical information-sharing.” But once the FBI induces Facebook to pull down the ad from the platform, the First Amendment-protected “engagements” by Americans—likes, dislikes, re-posts, comments, etc.—are all obliterated as well. This is the collateral damage to *Americans*’ freedom of speech in the FBI’s war on so-called Russian “disinformation.”

919. Chan’s thesis provides similar examples of supposedly Russian-originated content with heavy engagement by Americans. For example, it reproduces two supposedly Russian-originated political ads containing a secure-borders message (“Secured Borders: Every man should stand for our borders! Join!”) and a pro-Second Amendment message (“Defend the 2nd: The community of 2nd Amendment supporters, gun-lovers & patriots”). Chan Ex. 1, at 32. Again,

these are expressions of political opinion, not “disinformation” in any meaningful sense. The former posting garnered 134,943 “likes,” and the latter posting garnered 96,678 “likes”—each of which is a First Amendment-protected expression of support for the underlying, supposedly Russian-originated, political message. *See id.* Another similar ad, targeting black voters, simply stated “Black Matters: Join us because we care. Black matters!” and it drew 223,799 “likes” from ordinary users. *Id.* at 32; Chan Dep. 80:12-20. Chan admits that these are “high” levels of “engagement” from ordinary users. Chan Dep. 83:21.

920. Chan also reports that “IRA employees used social media bots, i.e., computer programs which control social media accounts, to amplify existing content.” Chan Ex. 1, at 30. To “amplify existing content” means to do “things like liking it or reposting it.” Chan Dep. 71:20-24.

921. Based on research, Chan estimates that “over 100,000 real people had their postings amplified by [Russian]-controlled social media bots.” *Id.* 87:2-6.

922. In addition, the “indicators” that the FBI targeted for censorship included supposedly Russian-aligned websites that hosted First Amendment-protected content posted by Americans. For example, Chan identified a supposedly Russia-generated website called “PeaceData,” which “hire[d] unwitting freelance journalists, including Americans, to write articles for the site.” *Id.* 141:24-142:3. “[A]t least 20 freelance journalists, which includes Americans, had been duped into writing articles for the site.” *Id.* 142:4-9. The FBI identified this site as Russia-generated to the social-media platforms, and as a result, the platforms “identified accounts that were foreign-associated ... that were directing users to those platforms” and “t[ook] actions against those accounts.” *Id.* 143:10-20. The speech of the American freelance journalists was thus suppressed due to FBI inducement.

923. Similarly, Chan identified a website called “NAEBC” as a Russia-generated website. According to Chan, the Russians “used various social media accounts to engage with real users and convince them to post on the NAEBC site, which met with some success.” *Id.* 144:13-145:2. Thus, “the NAEBC site also included content drafted and written by real users that had posted on that site.” *Id.* 145:3-6. “The FBI flagged the NAEBC site to social-media platforms as a ... Russian-originated source.” *Id.* 146:12-15. On that basis, “the companies were able to discover Russian-controlled accounts that were used to try to redirect users to those websites,” and the platforms “said they had taken down those accounts.” *Id.* 146:16-147:7. The FBI thus induced the platforms to censor the speech of “real users” on a supposedly fake Russian website.

924. Chan admits that “Russia’s influence operations” are deeply intertwined with First-Amendment-protected speech by ordinary social-media users, as he describes: “Many factors are at play when trying to measure the effects of Russia’s influence operations. First-order effects include real users interacting with inauthentic content, Russian-bot amplification of divisive organic content, and IRA-controlled accounts communicating directly with real users.” Chan Ex. 1, at 94.

925. During the days surrounding the 2020 election, the FBI’s command post also routed reports of domestic “disinformation” to social-media platforms for censorship to social-media. “During FBI San Francisco's 2020 election command post, which I believe was held from the Friday before the election through election night, that Tuesday at midnight, information would be provided by other field offices and FBI headquarters about disinformation These were passed to FBI San Francisco's command post, which I mentioned to you before I was the daytime shift commander, and we would relay this information to the social media platforms where these accounts were detected.” Chan Dep. 162:12-24.

926. The FBI made no attempt to distinguish whether these reports of “election disinformation” “whether they were American or foreign.” *Id.* 163:1-3. “[M]any field offices” of the FBI “relayed this information to us.” *Id.* 163:7-11.

927. “[T]hose reports would come to FBI San Francisco ... and then FBI San Francisco would relay them to the various social media platforms where the problematic posts had been made,” in order “to alert the social media companies to see if they violated their terms of service... which may include taking down accounts.” *Id.* 165:3-17.

928. The FBI has about a “50 percent success rate” in getting reported disinformation taken down or censored by the platforms, *i.e.*, “that some action had been taken because it was a terms-of-service violation.” *Id.* 167:7-14.

E. The FBI Demands Information on Censorship from the Platforms.

929. Regarding the algorithms that platforms use to detect inauthentic activity and to censor content, the FBI has “probed them to ask for details” about those algorithms, “so that we could make sure we were sharing the most effective and actionable type of information with them,” *id.* 88:5-7, 20-22—in other words, to maximize the chances that disfavored speech would be censored as a result of the FBI’s “information sharing.”

930. The FBI “would ... ask them what their terms of service or community standards were.” *Id.* 90:21-23. But Chan contends that “we never told the companies to modify their terms of service or community standards.” *Id.* 92:5-7.

F. The FBI Flags Accounts and URLs for Censorship on a Monthly Basis

931. The FBI gives “tactical information” to social-media platforms, where “tactical information includes identifying specific social media accounts and URLs” to be evaluated for censorship. *Id.* 96:24-97:2. Chan estimates that this occurs “one to five times per month.” *Id.*

97:17-18. This includes such “tactical” information-sharing at most quarterly meetings. *Id.* 98:18-19.

932. To flag such specific accounts, URLs, and content to the platforms, Chan “would typically ... send an email to the recipients at the companies” notifying them that he would be using “a secure file transfer application within the FBI that is called Teleporter,” and “the Teleporter email contains a link for them to securely download the files from the FBI.” *Id.* 98:20-11. The Teleporter files contain “different types of indicators,” *i.e.*, specific social-media accounts, web sites, URLs, email accounts, etc. that the FBI wants the platforms to evaluate under their content-moderation policies. *Id.* 99:15.

933. Each such communication may contain any number of such “indicators,” ranging “from one account or one selector to many, like a whole spreadsheet full of them.” *Id.* 100:16-17.

934. Chan “estimate[s] that during 2020 [he] shared information with the companies between one to five or one to six times per month.” *Id.* 100:21-24. Each such incident of information-sharing included flagging a number of specific “indicators” that ranged anywhere from one to “hundreds” of specific accounts, web sites, URLs, etc... *Id.* 101:4-7.

935. During the 2022 election cycle, Chan shared such information with the platforms “one to four times per month.” *Id.* 101:13-14. Each such incident involved flagging a number of specific “indicators” that ranged anywhere from one to “in the tens, in the dozens” of specific accounts, web sites, URLs, etc. *Id.* 101:17-19.

936. “[I]n general” these flagging communications would go to all seven social-media platforms identified above, but sometimes there would be “company-specific information” that would go to a particular company. *Id.* 102:3-9. “[M]ost of the time we would share with that list of [seven] companies.” *Id.* 102:14-15.

937. When it made such communications, the FBI would request that the platforms report back to the FBI their specific actions taken toward the accounts that the FBI specifically flagged for possible censorship. *Id.* 102:18-25. “[A]t every quarterly meeting we try to follow up to ask if information we shared has been relevant if we have not received a response yet.” *Id.* 103:5-9. Sometimes, but not always, the platforms report back to the FBI on what accounts they have removed based on the FBI’s information, in which case the FBI documents the report to “help[] us fine-tune the information we’re sharing.” *Id.* 103:14-22.

938. Including Chan, at least *eight* FBI agents in the San Francisco field office are involved in reporting disinformation to social-media platforms—Chan himself, two GS-14 supervisors who report to Chan, and roughly five FBI field agents in two different squads within the office. *Id.* 105:19-108:18. All these agents share both “strategic” and “tactical” information with social-media platforms about supposed malign-foreign-influence content on platforms, and they are “involved in following up to find out if their tactical information was acted on.” *Id.* 108:8-10.

939. In addition, a significant number of FBI officials from FBI’s Foreign Influence Task Force (FITF) also participate in regular meetings with social-media platforms about supposed disinformation. *Id.* 108:19-110:14. These include “three to ten” FITF officials at bilateral meetings with social-media platforms. *Id.* 110:7-8.

940. The FBI uses both its criminal-investigation authority and its national-security authority to gather information about supposed malign-foreign-influence activities and content on social-media platforms. This specifically includes using “the Foreign Intelligence Surveillance Act ... the PATRIOT Act, [and] Executive Order 12333 that allows us to gather national security intelligence” to investigate content on social media. *Id.* 111:13-112:8.

941. In one case in 2020, for example, a single “Teleporter message was sent” to platform(s) “with a spreadsheet with hundreds of accounts,” all of which the FBI was flagging for the platforms as supposed malign-foreign-influence accounts. *Id.* 112:9-14.

942. Chan expressed a high degree of confidence that the FBI’s identification of “tactical information” (*i.e.*, specific accounts, URLs, sites, etc.) to social-media platforms was always accurate, and that the FBI never misidentified accounts, content, web sites etc. as operated by malign foreign actors when in fact they were operated by American citizens. He testified that “we only share information that we have a high confidence that is attributed to a foreign-state actor,” and that “[i]n my experience, it has always been correct.” *Id.* 112:15-113:16.

943. But there are substantial reasons to think that Chan is wrong. For example, Chan reports that the FBI induced Twitter to remove accounts and Tweets related to the #ReleaseTheMemo hashtag in 2019, which supported Congressman Devin Nunes’ investigation regarding Russia collusion. *Id.* 149:13-21; Chan Ex. 1, at 71 (noting that 929,000 Tweets removed by Twitter as supposedly Russian disinformation included thousands of Tweets amplifying the #ReleaseTheMemo hashtag). In fact, recent reporting indicates that Twitter was aware that the accounts pushing #ReleaseTheMemo were *not* Russian-controlled inauthentic accounts, but core political speech by ordinary American citizens that the FBI conspired to suppress.

944. The FBI’s flagging accounts for censorship often leads to the censorship of additional accounts. According to Chan, the FBI “may share, for example, one account with them, but then they may find ten connected accounts and take all of them down.” *Id.* 113:23-114:1.

G. Pressure from Congress Induces Platforms to Increase Censorship.

945. According to Chan, the social-media platforms were far more aggressive in taking down disfavored accounts and content in the 2018 and 2020 election cycles than they were in the 2016 cycle. *Id.* 115:18-116:6.

946. Based on his personal observation, experience, and research, Chan concludes that “pressure from Congress, specifically HPSCI and SSCI,” induced the social-media platforms to adopt more aggressive censorship policies in 2018 and 2020. *Id.* 116:1-3. “HPSCI” stands for the House Permanent Select Committee on Intelligence, and “SSCI” stands for the Senate Select Committee on Intelligence. *Id.* 116:11-14.

947. This “pressure from Congress” took multiple forms. First, those Congressional committees called “the CEOs for the companies ... to testify in front of their committees,” including “Mark Zuckerberg and Jack Dorsey and Sundar Pichai.” *Id.* 116:20-117:2. These CEOs were called to testify about disinformation on their platforms “more than once.” *Id.* 117:5-6. Chan believes that “that kind of scrutiny and public pressure from Congress ... motivated them to be more aggressive in the account takedowns.” *Id.* 117:7-14. Chan believes this based on conversations with social-media platform employees. *Id.* 117:15-118:2.

948. Chan identifies specific congressional hearings that placed such pressure on social-media platforms to adopt more restrictive censorship policies: “On April 10–11, 2018, the Senate Commerce Committee and Senate Judiciary Committee held hearings on consecutive days with Mark Zuckerberg to discuss Russia’s influence campaigns on Facebook and its countermeasures to combat them.... The Senate committees also used this as an opportunity to hold Facebook accountable for its actions and *exert pressure for positive change.*” Chan Ex. 1, at 50 (emphasis added). “On July 17, 2018, the House Judiciary Committee held a hearing with senior executives from Facebook, Google, and Twitter so they could provide updates on their companies’ efforts for

content filtering to stop foreign influence campaigns on their platforms.” *Id.* On September 5, 2018, the Senate Intelligence Committee held a hearing with senior executives from Facebook and Twitter to discuss their companies’ efforts to stop foreign influence campaigns and illegal transactions on their platforms.” *Id.*

949. Chan links these Congressional hearings to “constructive change,” *i.e.*, more aggressive censorship policies by the platforms: “On October 31, 2017, the Senate Judiciary Committee held a hearing with senior executives from Facebook, Google, and Twitter to discuss the extent of the Russian disinformation campaigns on their respective platforms.” Chan Ex. 1, at 48. “This public hearing ... provided politicians with the occasion to exert pressure on the companies to make constructive changes to their platforms.” *Id.* at 48-49. According to Chan, this “constructive change” means the adoption of more restrictive censorship policies. Chan Dep. 133:9-23.

950. In addition, Congress put pressure on the platforms to adopt and enforce more aggressive censorship policies and practices by sending high-level congressional staff from HPSCI and SSCI to meet with the social-media platforms directly and threaten them with adverse legislation. According to Chan, “staffers from both of those committees have visited with ... those [social-media] companies,” and after these meetings with congressional staffers, employees of the social-media platforms “would indicate that they had to prepare very thoroughly for these types of meetings ... and they indicated that it felt like a lot of pressure.” *Id.* 117:19-119:2.

951. The Congressional staffers had such meetings with “Facebook, Google, and Twitter.” Employees from those three companies “experienced these visits from congressional staffers as exercising a lot of pressure on them.” *Id.* 118:12-16.

952. In those meetings, the Congressional staffers discussed potential legislation with the social-media platforms, and before or after they met with those three companies, the Congressional staffers “discussed with [Chan] ... legislation that they were thinking about doing.” *Id.* 118:17-120:3.

953. It is Chan’s opinion that the social-media platforms’ “changes in takedown policies” to make them more restrictive “resulted from that kind of pressure from Congress.” *Id.* 118:17-20.

954. Chan’s opinion is the result of discussing these meetings with participants on both sides—both the Congressional staffers and employees of Facebook, Twitter, and Google. Chan “and FBI San Francisco personnel would meet with the congressional staffers, typically before they met or after they met with the social media companies,” because “they wanted an FBI opinion about what they had heard from the social media companies.” *Id.* 119:23-120:3.

955. To the best of Chan’s recollection, these meetings between Congressional staffers and social-media platforms were an “annual occurrence” that began in 2017 and recurred annually after 2017. *Id.* 120:7-8. “The staffers had separate meetings with each of the companies.” *Id.* 121:4-5. “[A]fter those meetings, the staffers would come to [Chan] and ask [his] opinion of potential legislation.” *Id.* 121:6-9.

956. Chan also discussed these meetings with the social-media platform employees who participated, as he “talk[s] with the social media platform personnel regularly,” and he understood from them that “the congressional staffers put a lot of pressure on them” in the meetings. *Id.* 122:18-25. He spoke directly to the personnel who participated in the meetings. *Id.* 123:21-24. Senior officials from the social-media platforms, including Yoel Roth of Twitter, Steven Siegel of

Facebook, and Richard Salgado of Google, participated in the meetings with Congressional staffers. *Id.* 123:25-125:7.

957. The Congressional staffers involved in the meetings were “senior-level staffers,” including “a director-level” staffer, “the committee counsel or a senior counsel for the committee,” and “one or two other ... line-level staffers.” *Id.* 123:6-13.

958. According to Chan, “intense pressure from U.S. lawmakers and the media ... eventually force[d] the social media companies to examine what had taken place on their platforms [in 2016] and strive to ensure that it did not happen in the future.” *Id.* 127:3-23; Chan Ex. 1, at 42.

959. These steps included actions by the social-media platforms to take more aggressive enforcement against violations of their terms of service, but also policy changes to the terms of service themselves to make their policies more restrictive: “the policy changes specifically to their terms of service or community standards.” Chan Dep. 129:17-19. These involved “more robust or more aggressive content-modulation policies,” that “clarify that certain things actually violate their policies and can be taken down.” *Id.* 130:4-18.

960. Chan notes that “Facebook and Twitter faced more Congressional scrutiny ... as their senior executives testified before Congress on three separate occasions before the midterm elections,” Chan Ex. 1, at 46, and he concludes that “political pressure from Congress was a contributing factor” leading social-media platforms to adopt more restrictive content-moderation policies. Chan Dep. 132:7-9. Chan believes that these more restrictive censorship policies that include “account takedowns” are “constructive change,” *id.* 133:2-23.

961. These policy changes, induced by “political pressure from Congress,” resulted in a dramatic increase in censorship on social-media platforms, including for example that “zero [Twitter] accounts were taken down during the 2016 cycle but 3,613 Twitter accounts were taken

down during the 2018 cycle.” *Id.* 133:24-134:5. Likewise, 825 accounts were removed from Facebook and Instagram based on publicly available reports, but according to Chan, the actual number was much higher. *Id.* 147:8-148:18. In 2019, Twitter announced the takedown of “422 accounts which made 929,000 tweets.” *Id.* 149:9-12. “[S]ome subset of that amount was due to information [the FBI] provided.” *Id.* 150:12-14.

962. When meeting with social-media platforms, Chan “typically meet[s] with the trust and safety individuals and then their associated attorneys.” *Id.* 135:16-18.

963. Samaruddin K. Stewart (“Sam”) of the State Department’s Global Engagement Center “would meet with social media companies ... primarily with policy individuals.” *Id.* 135:2-15.

964. Sam Stewart would offer “different types of software made by vendors that they would pilot to see if they could detect malign foreign influence on social media platforms.” *Id.* 135:25-136:3. Chan believed that the Global Engagement Center’s products “might accidentally pick up U.S. people information.” *Id.* 138:10-12.

965. Elvis Chan knows and has worked with Peter Strzok and Lisa Page. *Id.* 234:19-240:5. He also knows and has worked with James Baker, the former general counsel of the FBI who went on to become deputy general counsel of Twitter and encouraged Twitter to keep censoring the Hunter Biden laptop story. *Id.* 239:13-16.

H. The FBI’s Censorship Activities Are Ongoing.

966. Chan urges the public to report supposed misinformation on social media directly to the platforms, or else report it to the FBI or DOJ so that they can report it to the platforms, and boasts that the platforms are “very aggressive” in taking down misinformation. As he stated in a public podcast just before the 2020 election: “If you're also seeing something related to the election

on your social media platform, all of them have portals where you can report that sort of information. They're being very aggressive in trying to take down any disinformation or misinformation, and then, lastly, if they see anything on election day or before election day, you can always report it to FBI.gov or justice.gov ... We take all of these very seriously.” Chan Ex. 13, at 3, 9:9-19. FBI San Francisco, when it receives such reports, “would then relay those to social media platforms,” so that “the social media platforms will assess those in connection with their terms of service.” Chan Dep. 267:13-23. Chan characterizes the platforms as “very aggressive” in taking down disinformation because they “[adjusted] their policies to be able to handle foreign-malign-influence operations.” *Id.* 270:23-25.

967. The FBI continues the same efforts in 2022 and later election cycles that it pursued in 2020. As Chan publicly stated, “post 2020, we've never stopped ... as soon as November 3rd happened in 2020, we just pretty much rolled into preparing for 2022.” Chan Ex. 15, at 2, 8:2-4. Chan stated: “[W]e are also really engaged with the technology companies that are out here ... We're also working with the social media companies to make sure that any foreign disinformation that's coming out ... if we can identify them, we can share that information with them so they can knock down accounts, knock down disinformation content,” and he noted that they are “having conversations with all of those organizations as they're building up to November of [2022].” Chan Ex. 15, at 2-3, 8:15-9:4.

VII. CISA's Censorship: Pressure, “Switchboarding,” and Working Through Nonprofits.

968. CISA, the Cybersecurity and Infrastructure Security Agency within the Department of Homeland Security, serves as a “nerve center” for federal censorship efforts. CISA meets routinely with social-media platforms about censorship in at least five different sets of standing meetings, CISA pressures platforms to increase censorship of speech that federal officials disfavor,

and CISA serves as a “switchboard” by “routing disinformation concerns to social-media platforms” for censorship. CISA also seeks to evade the First Amendment by outsourcing many of its censorship activities to nonprofit agencies that it collaborates closely with, including the CISA-funded Center for Internet Security and its “EI-ISAC” (“Election Infrastructure – Information Sharing & Analysis Center”) for state officials, and the massive censorship cartel calling itself the “Election Integrity Partnership.”

969. Brian Scully is the chief of the so-called “Mis, Dis, and Malinformation Team” or “MDM Team” within the Cybersecurity and Infrastructure Security Agency (CISA) in the Department of Homeland Security (DHS). Scully Depo. 15:14-20. Before the Biden Administration, the MDM Team was known as the “Countering Foreign Influence Task Force,” or CFITF.

970. Lauren Protentis is the “Engagements Lead” for the MDM Team, and she is in charge of “outreach and engagement to key stakeholders, interagency partners, [and] private sector partners,” including “social media platforms.” Scully Depo. 18:2-18. During relevant periods in both 2020 and 2022, however, Protentis was on maternity leave, and during those times, Scully performs her role as chief engagement officer for communicating with other federal agencies, private-sector entities, and social-media platforms about misinformation and disinformation. Scully Depo. 18:19-20:10.

971. Both Scully and Protentis have done or are doing extended details at the National Security Council where they work on misinformation and disinformation issues. Protentis began a one-year detail at the NSC in January 2023, as soon as she came back from maternity leave, and she will deal with mis- and disinformation issues for the NSC as part of her detail. Scully Depo. 19:15:20:5.

A. CISA “Switchboards” by Flagging Government-Reported “Misinformation.”

972. Scully admits that, during 2020, the MDM team “did some switchboard work on behalf of election officials.” Scully Depo. 16:23-25. “Switchboard work” or “switchboarding” is a disinformation-reporting system that CISA provides that allows state and local election officials (who are government officials subject to the First Amendment) “to identify something on social media they deemed to be disinformation aimed at their jurisdiction. They could forward that to CISA and CISA would share that with the appropriate social media companies.” Scully Depo. 17:3-8.

973. In reporting perceived misinformation to the platforms, CISA and the state and local officials have “an understanding that if the social media platforms were aware of disinformation that they might apply their content moderation policies to it,” and “the idea was that they would make decisions on the content that was forwarded to them based on their policies.” Scully Depo. 17:15-21.

974. CISA’s “switchboarding” activity causes social-media speech to be censored that otherwise would not have been censored: Scully agrees that “if it hadn't been brought to their attention then they obviously wouldn’t have moderated it.” Scully Depo. 17:22-18:1.

975. Scully contends that “we didn’t do switchboarding in 2022.” Scully Depo. 21:24-25. But he admits that this decision was made in late April or early May 2022. Scully Depo. 22:15-23. This lawsuit was filed, specifically challenging CISA’s “switchboarding” activity, on May 5, 2022. Doc. 1.

976. Throughout the 2022 election cycle and through the present date, CISA continues to publicly state on its website that the MDM Team “serves as a switchboard for routing disinformation concerns to appropriate social media platforms”: “The MDM team serves as a

switchboard for routing disinformation concerns to appropriate social media platforms and law enforcement. This activity began in 2018, supporting state and local election officials to mitigate disinformation about the time, place, and manner of voting. For the 2020 election, CISA expanded the breadth of reporting to include other state and local officials and more social media platforms.” Scully Ex. 24, at 3; *see also* Cybersecurity and Infrastructure Security Agency, “Mis, Dis, Malinformation,” <https://www.cisa.gov/mdm> (visited Feb. 4, 2023).

977. According to Scully, “switchboarding is CISA’s role in forwarding reporting received from election officials, state/local election officials, to social media platforms.” Scully Depo. 23:24-24:2.

B. CISA Organizes the “USG-Industry Meetings” on Misinformation.

978. The MDM Team continues to communicate regularly and extensively with social-media platforms about misinformation and disinformation, including during the 2022 election cycle. These communications include at least “two general types of communications, one, we did regular sync meetings between government and industry, so federal partners and different social media platforms.” Scully Depo. 21:2-6. This is “a coordinated meeting. Facebook was the industry lead, so [Scully] would have coordination calls with them prior to the meetings, just to set the agenda for meetings...” Scully Depo. 21:6-10. These meetings are described in CISA’s interrogatory responses as “USG-Industry” meetings. Scully Ex. 12, at 38-40.

979. In addition, the MDM Team received regular reports from social-media platforms about any changes to their censorship policies or their enforcement actions on censorship: “if a platform was putting out a ... public report on policies or activities” relating to disinformation and censorship,” CISA would “get a briefing on that or at least get an awareness that it was going out.” Scully Depo. 21:11-16.

980. The USG-Industry meetings increase in frequency as each election nears. In 2022, they were “monthly” as the election approached, and then in October, they became “biweekly,” so that there were two “biweekly meetings ... prior to the [2022] election.” Scully Depo. 24:16-21.

981. “DOJ, FBI, ODNI, and ... DHS” participate in these meetings on the federal government’s side. Scully Depo. 25:23. DHS’s participation includes at least two components: CISA, typically represented by Scully and Geoff Hale, Scully’s supervisor; and the Office of Intelligence and Analysis (“I&A”). Scully Depo. 25:11-26:13. Scully’s role is to “oversee” and “facilitate the meetings.” Scully Depo. 25:14-16. On behalf of CISA, Kim Wyman, Allison Snell, and Lauren Protentis also participate in the meetings. Scully Depo. 28:4-13.

982. On behalf of FBI, FITF Chief Laura Dehmlow and Elvis Chan participate in these “USG-Industry” meetings, and “periodically other people would be on from different parts of FBI,” while “Laura [Dehmlow] was usually who [CISA] coordinated through.” Scully Depo. 29:14-30:12.

983. These “USG-Industry” meetings have been occurring “for years,” and “the first meeting we had ... between federal and ... industry was in 2018.” Scully Depo. 31:10-16.

984. In addition, prior to each “USG-Industry” meeting, CISA hosts at least two planning meetings before the main meeting: a bilateral planning meeting between CISA and Facebook, and an interagency meeting with the federal agencies that participate. Scully Depo. 36:21-37:13.

985. Even though the 2022 meetings were still quite recent at the time of his deposition, Scully professed that “I don’t recall specifics, so I’ll just say that upfront” about the discussions at these meetings. Scully Depo. 37:19-20; *see also* Scully Depo. 39:23-25.

986. The social-media platforms attending these meetings include “Facebook, Twitter, Microsoft, Google, Reddit, ... [and] LinkedIn,” as well as “others.” Scully Depo. 38:15-20. For example, Wikimedia Foundation participated in “some.” Scully Depo. 39:2-6.

987. Scully agrees that “concerns about misinformation and disinformation on social media platforms [were] discussed in these meetings in the 2022 timeframe.” Scully Depo. 39:7-11. This includes federal officials reporting on disinformation concerns that they believe will affect speech on social media; for example, the “intelligence community” would report on “information operations”: “the intelligence community, if their reporting included foreign actors who were potentially going to use information operations, they might mention that in their briefings.” Scully Depo. 39:19-23.

988. The social-media platforms, likewise, would report back to federal officials about disinformation “trends” on their platforms, and provide additional information to the federal government not included in their public reports about such trends: “the platforms, they might share some high-level trend information from public reporting that they put out. So a lot of the platforms do their own regular reports on what they’re seeing on their platforms and ... what actions they’re taking. And so the platforms, themselves, would share that type of information.... they would share essentially what they were getting ready to make public or what they had already made public... and then potentially provide some additional context around that.” Scully Depo. 40:4-22. The government would ask for additional information about their observations of disinformation trends on social media, and the platforms would provide it: “they would share that, and if the government had questions or was looking for additional context they would often talk about that, they would generally talk about any new tactics that they were seeing.” Scully Depo. 41:1-5.

989. Scully admits that the discussion of foreign-originated misinformation is ultimately targeted at preventing domestic actors' from engaging in certain government-disfavored speech. He states that "my recollections for the time period we're talking about here, from September 2022 to the election in 2022, I recall most of it was foreign based. But ... often what you see overseas essentially makes its way to the United States." Scully Depo. 41:6-12.

990. At the various meetings, the platforms discuss misinformation and disinformation as "coordinated inauthentic behavior," which is subject to removal under their terms of service, but Scully admits that "coordinated inauthentic behavior" concerns CISA because it "could lead to mis and disinformation, for sure." Scully Depo. 42:12-14.

C. CISA Is Deeply Embedded in the Election Integrity Partnership.

991. Scully admits that CISA has established relationships with researchers at "Stanford" and the "University of Washington," as well as "Graphika." Scully Depo. 46:23, 48:1-4. CISA's coordination with these researchers has continued since before the 2020 election cycle. Scully Depo. 47:22-25. Detailed additional information about these entities and their collaboration with CISA in the "Election Integrity Partnership" (or "EIP") is provided below. *See infra*.

992. Stanford Internet Observatory, University of Washington, the Atlantic Council, and Graphika are all involved in the EIP. Scully Depo. 48:1-22.

993. When EIP was starting up, Scully admits that CISA's "involvement" with the EIP included at least the following collaborations: (1) "a couple of our [CISA] interns came up with the idea and ... [CISA] had some communications with" the EIP. Scully Depo. 49:8-10. (2) CISA "received some briefings on the work that they were doing." Scully Depo. 49:13-14. (3) CISA "had some communications early on in the process, when they were making decisions, when Stanford was trying to figure out what the gap was." Scully Depo. 49:18-21. (4) CISA "connected

them [EIP] with the Center For Internet Security,” which is a CISA-funded nonprofit that channels reports of disinformation from state and local government officials to social-media platforms. Scully Depo. 50:5-6. (5) CISA also “connected them [EIP] with some of the election official groups,” *i.e.*, “the National Association of Secretaries of State [NASS] and the National Association of State Election Directors [NASED],” both of which are groups of state and local government officials. Scully Depo. 50:6-10. (6) And CISA “facilitated some meetings between those three.” Scully Depo. 50:10-11.

994. The CISA interns who originated the idea of the EIP “worked for the Stanford Internet Observatory, as well ... which was part of the [Election Integrity] Partnership.” Scully Depo. 51:7-8, 22-24.

995. According to Scully, the “gap” that the EIP was designed to fill, was that state and local election officials lack the resources to monitor and report on disinformation that affects their jurisdictions: “One of the gaps that we identified from 2018 is, as you know, most election officials their offices are fairly low staff, low resourced, and so there was no – they didn't have capabilities to try to identify disinformation targeting their jurisdictions, and so was essentially the gap is that most election offices throughout the country just didn't have that capacity or capability to be monitoring so that they could identify anything that would be potentially target their jurisdictions, so that was the gap.” Scully Depo. 57:6-17.

996. Scully and other CISA officials identified the “gap” as a problem to CISA interns who were simultaneously working for the Stanford Internet Observatory: “So we had a conversation with the interns, and they were asking questions about kind of needs that the election officials have, generally. One of the gaps that we identified from 2018 is, as you know, most

election officials their offices are fairly low staff, low resourced, and so ... they didn't have the capabilities to try to identify disinformation targeting their jurisdictions." Scully Depo. 57:2-11.

997. Thus, Scully and other CISA officials were involved in originating and brainstorming about the creation of the EIP in the first place, as they "had some initial conversation with the interns" about this "gap," and then they also "had a conversation with the Stanford Internet Observatory folks about the gap." Scully Depo. 52:3-6. Then, CISA "received a briefing from them [EIP], or two, on kind of what they were putting together." Scully Depo. 52:7-9. Scully and other CISA officials then "facilitated some meetings between Stanford folks, the Center For Internet Security, and election officials, where they had discussions about how they would work together." Scully Depo. 52:10-13. And CISA's involvement did not end there, as Scully admits that "we had some conversations, kind of throughout, when they were -- particularly when they were putting out public reporting about what they were seeing." Scully Depo. 52:14-17. In addition, Scully "wouldn't be surprised if there were some other kind of brief conversations in there." Scully Depo. 52:18-20.

998. The EIP continued to operate during the 2022 election cycle. Scully Depo. 53:4-5. At the beginning of the 2022 election cycle, the EIP "gave us [CISA] a briefing, early on, about what they were thinking about," which occurred in "May/June of 2022." Scully Depo. 53:14-19. Scully and Geoff Hale of CISA received the briefing from Renee DiResta and another EIP official. Scully Depo. 53:22-54:7. In that briefing, the EIP officials "walked through what their plans were for 2022, [and] some of the lessons learned from 2020." Scully Depo. 54:11-13. Their plans for 2022 were that "they were going to do something similar to what they did in 2020 in terms of trying to support election officials." Scully Depo. 54:16-18. They planned to "work with state and local election officials." Scully Depo. 54:22-25.

999. CISA followed EIP's public reporting during the 2022 election cycle, and in particular, Scully relied on "at least one public report ... that I thought was pretty good," which was "about specific disinformation" and "was basically how to think about whether or not a narrative poses risks." Scully Depo. 56:12-17.

1000. Scully admits that CISA has "an established relationship" with the EIP and the Stanford Internet Observatory personnel who lead it. Scully Depo. 55:24-25.

1001. The Center for Internet Security is a "non-profit that oversees the multi-state ISAC and the election infrastructure subsector information sharing and analysis center, that's what ISAC stands for." Scully Depo. 59:13-16. In other words, CIS oversees the "Multi-State Information Sharing and Analysis Center," or "MS-ISAC," and the "Election Infrastructure Information Sharing and Analysis Center," or "EI-ISAC." Scully Depo. 60:9-20. Both of these are organizations of state and/or local government officials, organized for information sharing. Scully Depo. 60:3-11, 60:25-61:6.

1002. CISA funds the Center for Internet Security in its activity of overseeing the EI-ISAC, which is an organization for information-sharing among state and local government election officials. Scully Depo. 61:9-10, 62:1 ("CISA provides funding for the EI-ISAC").

1003. CISA directed election officials to the Center for Internet Security, which CISA funds, as an alternative route for reporting misinformation to social-media platforms, because CISA found the "switchboarding" role to be resource-intensive. Scully Depo. 62:16-24.

1004. CISA connected the Center for Internet Security with the EIP because "the EIP was working on the same mission," so "we wanted to make sure that they were all connected." Scully Depo. 62:24-63:1. Thus, CISA originated and set up the collaborations between local government officials and the CIS, and between the EIP and the CIS. *Id.*

1005. The Center for Internet Security worked closely with CISA in reporting misinformation to social-media platforms, as CISA served as a pass-through for reports from CIS to the platforms: CIS officials “were receiving reporting directly from election officials. In the early part of 2020, they would forward what they were receiving election officials to us at CISA, and then we would push that to the social media platform; as 2021 moved along, CIS more frequently provided that directly to the platforms, themselves. And so I would say early on in the process, the switchboarding generally came through CISA. Later on in the process, it was more of a mixed bag of how the switchboarding worked.” Scully Depo. 63:23-64:10.

1006. In addition to CIS and CISA, EIP also reported supposed misinformation to social-media platforms. Scully Depo. 64:13-14. CISA and CIS coordinated directly with each other on reporting misinformation. Scully Depo. 64:18-20.

1007. CISA served a mediating role between CIS and the EIP, and the platforms, to coordinate their efforts in reporting misinformation to the platforms: “There was a point where one of the platforms was concerned about too much kind of duplicate reporting coming in, and so we did have some conversations with EIP and CIS on how to kind of better manage that activity to make sure we weren't overwhelming the platforms.” Scully Depo. 64:21-65:1.

1008. There was also direct email communication between EIP and CISA about misinformation reporting. Scully Depo. 66:9-12.

1009. When CISA reported misinformation to platforms, CISA would “generally copy the Center for Internet Security,” which was coordinating with EIP. Scully Depo. 67:20-68:6.

1010. Alex Stamos and Renee DiResta of the Stanford Internet Observatory briefed Scully about the EIP’s report, “The Long Fuse,” in “late spring, early summer 2021.” Scully Depo. 70:1-10. Scully also reviewed portions of the report. *See id.*; Scully Ex. 1 (EIP Report).

1011. Dr. Kate Starbird of the University of Washington, who works with the EIP, is also on the MDM Subcommittee for CISA. Scully Depo. 72:19-73:4. Kate Starbird of the University of Washington serves on CISA’s CSAC MDM Subcommittee, as well as working with the EIP. Scully Ex. 59, at 1.

1012. Alex Stamos and Renee DiResta, who quarterback the EIP, also have roles in CISA. Renee DiResta of the Stanford Internet Observatory—a key player in the EIP—also serves as a “Subject Matter Expert (SME)” for the CISA’s Cybersecurity Advisory Committee’s MDM Subcommittee. *Id.*; Scully Depo. 361:19-362:6. Alex Stamos, the director of the Stanford Internet Observatory who launched the EIP, serves on the CISA Cybersecurity Advisory Committee, along with Kate Starbird. Jones Decl., Ex. FF, at 3, 12-13.

1013. CISA had extensive communications to coordinate with the EIP when it was starting up during the 2020 election cycle: “we had conversations with Stanford about the gap. They gave us some briefings on what they were doing, how they were doing it. Prior to the election, we had some conversations with them to facilitate and coordinate meetings, as I mentioned. And then when they put public reporting out, if we had questions about it, we would probably have conversations with them around that, as well.” Scully Depo. 74:17-75:1.

1014. In addition to Scully, Matt Masterson was involved in communicating with the EIP. Scully Depo. 75:6-11. In addition, Scully “wouldn’t be surprised” if Geoff Hale participated in some conversations with EIP. Scully Depo. 76:1-2.

1015. The then-Director of CISA, Director Krebs, “had a relationship with Alex Stamos,” the head of the Stanford Internet Observatory, while CISA was coordinating with the EIP, and Director Krebs “may have had conversations in that context” about the EIP. Scully Depo. 76:8-

10. In fact, when he left CISA in late 2020, Director Krebs “joined Alex Stamos,” and “they started a business together,” called the “Krebs/Stamos Group.” Scully Depo. 76:5-23.

1016. Scully believes that “Director Krebs may have participated in a couple of meetings that I’m aware of, that Stamos was also in.” Scully Depo. 77:20-22, 78:3-11.

1017. According to Scully, “generally speaking, the reporting that CISA received came through the Center for Internet Security.” Scully Depo. 79:19-21.

1018. Matt Masterson and Scully presented questions to the EIP about their “public reporting,” which consisted of “regular blog posts on what they were seeing” about supposed election-related misinformation. Scully Depo. 81:19-82:16. Masterson was also involved in at least one of the initial discussions with the Stanford Internet Observatory about starting up the EIP. Scully Depo. 81:24-82:4. Masterson spoke to Stanford about “clarifying the gap that election officials faced for the folks at the Stanford Internet Observatory early on in the process.” Scully Depo. 83:22-25.

1019. The idea of the “gap” came from Scully and CISA, which he “shared with the interns.” Scully Depo. 84:8-22.

1020. Matt Masterson “was in the meeting where we talked about the gap with [Alex] Stamos, in particular. And I believe Stamos mentioned that [*i.e.*, the collaboration that became the Election Integrity Partnership] as an option during that call.” Scully Depo. 85:21-24.

1021. Matt Masterson left CISA in January 2021. He started at Microsoft in early 2022. In the intervening year, immediately after leaving CISA, Masterson “was a fellow at the Stanford Internet Observatory.” Scully Depo. 88:21-89:8. Thus, both the CISA Director (Krebs) and the political appointee directly involved in the establishment of the EIP (Masterson) went to work with Alex Stamos of Stanford Internet Observatory immediately after the 2020 election cycle.

1022. Alex Stamos consulted with CISA in part because “he knew he would need us helping him connect with election officials.” Scully Depo. 100:17-18.

1023. Scully believes that there was at least “a fifth call” between CISA and Alex Stamos in 2020. Scully Depo. 101:4.

1024. Scully put Stamos in touch with NASED and NASS, and “facilitated some meetings between ... them [EIP] and election officials.” Scully Depo. 101:15-102:10. Scully “facilitated meetings ... some meetings between EIP and CIS” because “they didn't have relationship” and “didn't know each other. So [CISA] just facilitated getting them together to talk and figure out how they were going to work together.” Scully Depo. 102:14-20. The purpose of these meetings was “to set up a direct line of communication between CIS and EIP.” Scully Depo. 103:7-10.

1025. Scully also put EIP in contact and facilitated meetings between EIP (*i.e.*, folks at the Stanford Internet Observatory, which organized EIP) and representatives of NASED and NASS, the organizations of state and local election officials. Scully Depo. 103:11-104:19. These occurred in July or August 2020. Scully Depo. 104:24-25.

1026. Scully believes that the Center for Internet Security, which CISA funds, “forward[ed] messages that election officials sent them” reporting misinformation “to EIP.” Scully Depo. 106:10-16.

1027. Scully agrees that “EI-ISAC is a part of CIS and we do fund the EI-ISAC.” Scully Depo. 110:20-23.

1028. Scully agrees that CISA collaborated with the EIP. Scully Depo. 111:15-18.

1029. CISA probably had “between two and four” conversations with the EIP about its public reports on disinformation trends on social media. Scully Depo. 113:20-24. “[I]f we had a question about jurisdiction[s] being targeted or a new [disinformation] tactic or things like that,

we would just ask them ... questions about that sort of thing.” Scully Depo. 114:17-21. Scully “was following the public reports” from the EIP during 2020. Scully Depo. 115:16-17.

1030. CISA received misinformation reports principally from three sources: first, from the Center for Internet Security; and second, “sometimes election officials would send them in to CISA central, which is CISA's kind of ops center block room type setup. And then the third way was they would just send direct to a CISA employee, ... often Matt Masterson, who had relationships with many of the election officials.” Scully Depo 119:7-11, 119:22-120:5.

1031. CISA coordinated with the Center for Internet Security on reporting misinformation to platforms: “we would let them know when we reported something to a platform ... to avoid duplication,” and “most of the reporting that I recall in 2020 came through CIS. And so we just wanted to let them know that we were acting on what they sent us. For reporting that didn't come through CIS, we would often let them know after we had shared it with the platforms that we had shared something with the platforms for their arrangement.” Scully Depo. 120:23-121:9.

1032. CIS and EIP also “had a relationship. They shared information.” Scully Depo. 121:20-21.

1033. According to Scully, “CISA does not do attribution. We didn’t do analysis of what we received from election officials. So we would not know what percentage” of misinformation reports “were foreign derived.” Scully Depo. 122:25-123:3. CISA thus forwards reports of “misinformation” to social-media platforms “without assessing whether they were originated from foreign or domestic sources.” CISA would not “take steps to see whether this came from foreign or domestic sources,” but “would just pass it along to the social-media platforms.” Scully Depo. 123:4-18.

1034. Scully was aware that social-media platforms changed their content-moderation policies to be more restrictive of election-related “misinformation” during the 2020 election cycle, because the platforms reported on those changes to federal officials “in our regular sync meetings,” *i.e.*, the “USG-Industry” meetings. Scully Depo. 127:18-19. In those meetings, “that would be one of their briefing points, that they were making significant changes” to policies for censoring election-related speech. Scully Depo. 128:4-6.

1035. During 2020, Matt Masterson was “a senior election security person at CISA,” and he was a “political appointee.” Scully Depo. 129:23-130:4. Masterson was “familiar with the switchboarding work that we were doing.” Scully Depo. 131:8-10. And “when he would receive emails” reporting misinformation, “he forwarded them to us.” Scully Depo. 131:13-14.

1036. Scully understands that the Virality Project was “Stanford’s attempt to mimic the EIP for COVID.” Scully Depo. 134:10-11.

1037. The Virality Project “sent [Scully] some of their public reports.” Scully Depo. 134:13-14.

1038. Scully was aware that Alex Stamos and Renee DiResta of the Stanford Internet Observatory were involved in the Virality Project. Scully Depo. 134:21-22.

1039. Scully “did have some conversations where they were ... asking me ... for any connections I had with HHS or CDC.” Scully Depo. 135:10-12.

1040. In addition, Scully recalls “some informal ... conversations that I may have had with Alex, in particular, and maybe Renée, as well,” about the Virality Project. Scully Depo. 136:3-6.

1041. Alex Stamos gave Scully an “overview what they planned to do in the Virality Project” that “was similar to what they did ... with the EIP.” Scully Depo. 136:19-22.

1042. Scully also had conversations with Renee DiResta about commencing the Virality Project. Scully Depo. 139:5-14.

1043. With respect to the EIP, Alex Stamos and Renee DiResta “shared ... lessons learned,” and “what some of their big takeaways were” with Scully. Scully Depo. 141:6-8.

1044. CrowdTangle is a “Facebook-owned social media monitoring service.” Scully Depo. 144:23-24.

1045. According to the Virality Project report, “as voting-related mis- and disinformation arose in the 2020 presidential election, the Election Infrastructure Information Sharing and Analysis Center (EI-ISAC) served a critical role in sharing information with the Election Integrity Partnership and pushing its rapid response analysis back out to election stakeholders across all states.” Scully Ex. 2, at 150. Scully understands that this refers to the Center for Internet Security, which operates the EI-ISAC through CISA-provided funding, and that “it was Center for Internet Security” that engaged in direct communications with the EIP and played a critical role in sharing information with the EIP. Scully Depo. 147:17-25.

1046. During the summer of 2020, CISA was “piloting a capability that would allow us to monitor narratives online,” Scully Depo. 151:13-15—*i.e.*, the work that the EIP eventually did and does.

1047. In his public statements, Alex Stamos has identified the EIP’s “partners in government” as “most particularly those in CISA and DHS, but also in all of the local and state governments with whom we operated with.” Scully Ex. 6, at 4. Scully agrees that “CISA and DHS were partners of the EIP.” Scully Depo. 369:1-11.

1048. According to Stamos, “[t]he Election Integrity Partnership started with our team in Stanford sending a group of interns to go work with the cyber security and infrastructure security

agency at the DHS to work election security. And what these interns found is, there's a lot of opportunity for them to contribute to the technical components of election security. They also found that there was a lack of capability around election disinformation. This is not because CISA didn't care about disinformation, but at the time they lacked both kind of the funding and the legal authorizations to go do the kinds of work that would be necessary to truly understand how election disinformation was operated.” Scully Ex. 6, at 4.

1049. Stamos says that the EIP is “a project between four different institutions to try to fill the gap of the things that the government cannot do themselves.” Scully Ex. 6, at 4.

1050. Stamos states that CISA was one of “four major stakeholders” in the EIP: “There are kind of four major stakeholders that we operated with that we worked beside at EIP. Our partners in government, most particularly those in CISA and DHS, but also in all of the local and state governments with whom we operated with.” Scully Ex. 6, at 4.

1051. EIP had access to data for monitoring social-media speech that the federal government does not have: The EIP “also worked with the major platforms, Facebook, Twitter, YouTube, TikTok, Reddit, NextDoor and the like. ... [S]ome of those cases we had agreements for access of data. In other cases, we had to have individual analysts go work with them.” Scully Ex. 6, at 5.

1052. According to Stamos, there was very little foreign disinformation in 2020: “We find very little evidence that there's any foreign involvement at all. In fact, the vast majority of election disinformation in 2020 came from Americans who had verified accounts and very large follower accounts.” Scully Ex. 6, at 6.

1053. According to Stamos, its founder, the EIP targeted “large follower account political partisans who are spreading misinformation intentionally, doing so in a multi-media context. So

they're doing so online, on social media, but they're also doing so on cable news, doing so on the radio, through a variety of different outlets and are able to amplify their message and to motivate their followers to go try find evidence of the incorrect claims that they're making.” Scully Ex. 6, at 7.

1054. According to Renee DiResta, “in August 2020, students from the Stanford Internet Observatory were doing an internship with CISA and they identified a massive gap in the capability of federal, state, and local governments to become aware of, to analyze, and to rapidly respond to mis and disinformation, both foreign and domestic, targeting the 2020 election.” Scully Ex. 7, at 4. The EIP was designed to fill that “gap” in the governments’ capability to “rapidly respond to mis- and disinformation ... targeting the 2020 election.” *Id.*

1055. As DiResta notes, the EIP was designed to get around “unclear legal authorities, including very real First Amendment questions,” that would arise if CISA or other government agencies were to monitor and flag misinformation for censorship on social media. Scully Ex. 7, at 4. As she states, “that gap had several components. The federal government wasn't prepared to identify and analyze election mis- and disinfo. ... There were unclear legal authorities, including very real First Amendment questions.” *Id.*

1056. DiResta agrees that “the vast majority of voting related misinformation in the 2020 election was domestic.” Scully Ex. 7, at 6.

1057. The Virality Project was immediately established on the heels of the EIP: “Following the success of EIP and the certification of the 2020 election, SIO [Stanford Internet Observatory] ... almost immediately we recognized the need to ramp back up. This time to support government health officials' efforts to combat misinformation and targeting the COVID-19 vaccines. In February 2021, we formally established the Virality Project drawing on the same

partners from EIP and adding a few more, and much like EIP, it focused on realtime observation, analysis, and understanding of cross platform vaccine-related misinformation.” Scully Ex. 7, at 7.

1058. The CISA-funded Center for Internet Security coordinated with EIP regarding online misinformation and reported it to CISA. For example, on October 1, 2020, CIS emailed Scully about alleged misinformation, noting that “the impact seems to be escalating. Our hope is the platforms can do more to take down the misinformation. The EIP has been tracking this spread under ticket EIP-243 and has more examples.” Scully Ex. 9, at 1. Scully forwarded this report to social media platforms. *Id.*

1059. EIP had advised Scully that it was using a ticketing system to track misinformation narratives. Scully Depo. 159:1-5.

1060. Scully forwarded this report tracked under EIP-243 to Twitter, as well as Facebook and YouTube, because “people generate traffic ... by posting it across platforms,” and he “would sometimes share across other platforms that we thought there might be ... relevant content showing up on their platforms.” Scully Depo. 160:2-5; Scully Ex. 9, at 1, 7, 12.

1061. Scully asked social-media platforms to report back how they were handling reports of misinformation and disinformation received from CISA. *See* Scully Ex. 9, at 11 (asking Twitter “to see if there’s anything you can share about how you’re approaching” misinformation reported by CISA). According to Scully, “periodically ... we would ask if the decision was made and if we can share back.” Scully Depo. 164:15-17.

1062. CISA maintained a “tracking spreadsheet” of its misinformation reports to social-media platforms during the 2020 election cycle. Scully Depo. 165:14-166:13. After Scully’s deposition, CISA produced this “tracking spreadsheet” in response to Plaintiffs’ Motion to Compel. Jones Decl., Ex. GG.

1063. At least six members of the MDM team “took shifts” in reporting supposed misinformation to social-media platforms, including Scully, Chad Josiah, Rob Schaul, Alex Zaheer, John Stafford, and Pierce Lowary. Scully Depo. 166:9-168:11, 183:14-16.

1064. At the time, Pierce Lowary and Alex Zaheer were simultaneously serving as interns for CISA and working for the Stanford Internet Observatory, which was then operating the Election Integrity Partnership. Scully Depo. 168:22-171:16, 183:20-22. Thus, Zaheer and Lowary were simultaneously engaged in reporting misinformation to social-media platforms on behalf of CISA, and in reporting misinformation to social-media platforms on behalf of the EIP. *Id.*

1065. Zaheer and Lowary were also two of the four Stanford interns who originated the idea of the EIP. Scully Depo. 171:14-16, 184:22-24, 185:12-14.

1066. Zaheer “was one of the people that were working the ticketing system” for EIP. Scully Depo. 181:21-23. Likewise, Lowary “did both SIO and CISA push forwarding” at the same time during the fall of 2020. Scully Depo. 183:14-16.

1067. CISA’s misinformation reporting to platforms “ramped up as we got closer to the election.” Scully Depo. 174:1-2. On election night, they “were up until at least midnight,” and “if we received anything we would push it forward.” Scully Depo. 175:12-14. Close to the election, they would “monitor their phones” for disinformation reports even during “off hours.” Scully Depo. 175:16-17. “[T]he expectation [was] ... that they would be responsible for forwarding something” to the platforms. Scully Depo. 175:19-21.

1068. Alex Zaheer, when switchboarding for CISA, forwarded detailed a report of supposed “misinformation” from the Election Integrity Partnership (EIP) to CISA’s reporting system, which called for “swift removal of ... posts and continued monitoring of the user’s account” because that user had “claimed (1) that mail-in voting is insecure, [and] (2) conspiracy

theories about election fraud are hard to discount.” Scully Ex. 9, at 62. Scully forwarded this report to Twitter, which reported back that it had taken action pursuant to its civic integrity policy. *Id.* at 61; *see also* Scully Depo. 199:6-200:17.

1069. According to Scully, forwarding such reports of misinformation from the EIP to social-media platforms “was our standard practice.” Scully Depo. 200:25. In fact, CISA’s tracking spreadsheet contains at least eleven entries of “switchboarded” reports of misinformation that CISA received directly from “EIP” and forwarded to social-media platforms for review under their policies. Jones Decl., Ex. GG, at 4-5, Column C (“From”), Lines 86-96, 115, 123 (all listing “EIP”). CISA also used EIP tracking numbers for those reports. *See id.* Column D. One of these notes that content was reported to Twitter for censorship because “EIP ... saw article on The Gateway Pundit.” *Id.* at 4 (Column F, Line 94).

1070. CIS routinely reported misinformation by sending the notice simultaneously to both CISA and to the EIP, using the EIP’s misinformation-reporting email “tips@2020partnership.atlassian.net.” Scully Ex. 9, at 33, 52, 58; Scully Ex. 10, at 1. Scully Ex. 11, at 1-2 (indicating that “tips@2020partnership.atlassian.net” is the reporting email for the EIP); Scully Depo. 229:18-230:25 (Scully admitting that this email is the EIP reporting email).

1071. State officials, likewise, simultaneously reported supposed “misinformation” to CISA, CIS, and the EIP. *See, e.g.*, Scully Ex. 9, at 59 (Colorado state official reporting misinformation to “EI-ISAC, CISA and Stanford Partners”).

1072. State officials sometimes indicated that they were reporting misinformation to platforms for censorship precisely *because* federal officials at FBI and CISA had warned them about it. *See, e.g.*, Scully Ex. 9, at 59 (noting that Colorado was reporting two Twitter accounts, one with 14 followers and one with 2 followers, because “[t]hese are concerning to us here in

Colorado because of recent FBI/CISA warnings about impersonation accounts spreading false information about the election”).

1073. One platform complained to Scully that it was receiving duplicate reports of misinformation from the EIP and Center for Internet Security, and asked if CISA could be designated reporter for the group: “Hey Brian, can we talk about CIS Misinformation reporting duplicate reports to EIP? Possible to have just you escalate?” Scully Ex. 9, at 63. Scully coordinated with CIS and EIP to set forth a coordinated reporting process involving agreed roles for all three of them—CISA, CIS, and EIP. *Id.*; Scully Depo. 209:14-212:12. Scully admits that there was “an agreement for EIP and CIS and CISA to coordinate and let each other know what they were reporting to platforms like Twitter.” Scully Depo. 212:7-12.

1074. State and local officials reported misinformation to the FBI in parallel with their reports to CIS and CISA. *See, e.g.*, Scully Ex. 10, at 10. This is because CISA “tell[s] election officials to report what they saw to either DHS or the FBI, and it would end up where it needed to be.” Scully Depo. 215:8-14.

1075. The Center for Internet Security, likewise, sometimes used EIP ticket numbers on the misinformation reports it sent to CISA for forwarding to platforms. *See, e.g.*, Scully Ex. 10, at 27 (reporting supposed misinformation in Pennsylvania under ticket number “EIP-664”); Scully Depo. 217:16-218:19. As noted, CISA’s “tracking spreadsheet” used similar EIP ticket numbers at least 13 times for misinformation reports sent to platforms. Jones Decl., Ex. GG, at 4-5.

D. CISA Uses Switchboarding to Pressure Platforms to Censor Speech.

1076. CISA and Scully did not just forward misinformation reports to platforms; in addition, they also engaged in fact-checking for the platforms. For example, regarding a report about election security in Pennsylvania, Facebook asked Scully if he could please “confirm” two

factual aspects of the report, and Scully responded with an explanation of why the government believed that the report was misinformation violating Facebook's terms of service. Scully Depo. 218:22-219:24; Scully Ex. 10, at 25-27; Scully Depo. 222:20-224:20; Scully Ex. 10, at 35-37 (Scully engaging in his own research to debunk an election-integrity claim on Twitter and reporting to Twitter, which relied on his research to label the Tweet).

1077. Scully admits that CISA commonly engaged in such informal fact-checking for the platforms: "if social media platforms needed additional information from an election official we would try to support that. ... "[G]enerally speaking, we would do what we did here, which is if the -- if the jurisdiction made a public statement or if there was additional information the jurisdiction could provide, and the platforms asked for it, that we would try to facilitate getting the information they asked for." Scully Depo. 220:6-20. CISA would do its own research as well as relaying statements from public officials to help debunk postings for social-media platforms. Scully Depo. 221:1-4 ("If it was a public statement, I'm sure we pulled it ourselves. If there was not a public statement, I would imagine we would go back to the election official."); Scully Depo. 221:23-222:19.

1078. In presenting such "debunking" information to platforms to urge them to remove content, CISA always assumed—without any independent research—that the *government* official was a reliable source, and that the social-media user was unreliable, even for first-hand accounts: "if there was a public statement that was put out by the jurisdiction, we would ... defer to that." Scully Depo. 221:9-12. CISA would not "take any steps to find out" if the private citizen's account might actually be truthful, and CISA would not "do further research to figure out who was telling the truth," but would simply "relay ... the official statement from the jurisdiction" to the platforms for censorship. Scully Depo. 221:13-22.

1079. CISA’s fact-checking activity included both relaying “debunking” information from state and local officials—always assuming without question that the state and local officials were truthful, not the social-media speakers—and performing its own fact-checking when the claim related to federal activities. For example, “[t]here was also one time when I believe it was Facebook had a question about DHS immigration and customs enforcement having agents going places where we also provided a response back on a specific piece.” Scully Depo. 220:8-13.

1080. CIS and CISA’s “switchboarding” activities reached, not just public postings, but private postings on social-media platforms. *See, e.g.*, Scully Ex. 10, at 45-46 (reporting a “post on a private FB page,” *i.e.*, a “(private) Facebook post that Trump already won AZ”).

1081. Social-media platforms treated CISA as a privileged reporter of misinformation, frequently responding with great promptness to CISA’s reports of misinformation, immediately “escalating” the content for moderation, and reporting back the censorship action taken. For example, on November 10, 2020, at 7:23 pm, Scully reported offending Tweets, and Twitter responded within two minutes, “Thanks Brian. We will escalate.” Shortly after midnight the same night, at 12:11 a.m., Twitter followed up with a report on censoring the Tweets. Scully Ex. 10, at 59. On November 13, 2020, Scully reported an offending tweet at 11:20 pm, and Twitter responded at 11:21 pm, “Thanks Brian. We will escalate.” Scully Ex. 18, at 26; Scully Depo. 291:15-294:3.

1082. CISA’s censorship partners also originated their own reports for censorship. CIS and the EIP sometimes reached out to state and local officials to invite them to debunk and report speech that CIS and EIP had observed on social media. For example, on December 1, 2020, the Center for Internet Security emailed local government officials stating, “The EI-ISAC, and our partners at the Election Integrity Partnership (EIP), are tracking a social-media post that is gaining

traction very quickly.” Scully Ex. 11, at 4. The CIS asked the local officials to debunk the post so that “we can work with the social media platforms to have the posts removed as misinformation. Please let us know as soon as possible.” *Id.* The local officials responded with information disputing the posts, and CIS promptly forwarded the dispute to CISA and EIP: “Brian [Scully] and EIP, misinformation tweet ... a [local official] confirmed the misinformation.” *Id.* at 2. Scully then forwarded the report to Twitter, which responded within three hours, “We have labeled the tweet and are taking steps to limit trending on this.” *Id.* at 1; Scully Depo. 228:5-231:7.

E. CISA’s Many Misinformation Meetings with Platforms.

1083. In its interrogatory responses, CISA disclosed five sets of recurring meetings with social-media platforms that involve discussions of misinformation, disinformation, and/or censorship of speech on social media. Scully Ex. 12, at 38-40.

1084. Scully provided the information in the interrogatory responses regarding CISA’s meetings with social-media platforms regarding misinformation and censorship. Scully Depo. 232:24-233:3. In doing so, Scully failed to disclose a long series of *bilateral* meetings between CISA and social-media platforms. *See, e.g.*, Scully Depo. 238:11-13 (“we had some Twitter-only calls, as well, that [Yoel Roth] participated in”); Scully Depo. 238:21-22 (“we had some briefings from [Twitter] on some of their public reports” about misinformation); Scully Depo. 239:8-12 (agreeing that there were “briefings in those bilateral meetings with Twitter as relating to misinformation and disinformation on social media”); Scully Depo. 239:20-240:3 (admitting that CISA conducted “bilateral meetings with other social media platforms, like this, where misinformation was discussed”); Scully Depo. 241:4-22 (admitting to a series of bilateral meetings with social-media platforms beginning in 2018 and continuing through 2020); Scully Depo. 241:7-14 (testifying that “in 2018 ... in our initial stages of trying to build those relationships, we would

go meet with each platform one-on-one”); Scully Depo. 241:20-22 (admitting that, “prior to starting the switchboarding work, in 2020, we had conversations with each platform individually”).

1085. None of these many bilateral meetings with social-media platforms about misinformation was disclosed in CISA’s interrogatory responses. Scully Ex. 12, at 38-40; Scully Depo. 243:6-21.

1086. In its interrogatory responses, CISA describes the “USG-Industry” meetings as follows: “A recurring meeting usually entitled USG – Industry meeting, which has generally had a monthly cadence, and is between government agencies and private industry. Government participants have included CISA’s Election Security and Resilience subdivision, DHS’s Office of Intelligence and Analysis, the FBI’s foreign influence task force, the Justice Department’s national security division, and the Office of the Director of National Intelligence. Industry participants generally include Google, Facebook, Twitter, Reddit, [and] Microsoft but, have also included Verizon Media, Pinterest, LinkedIn, and the Wikimedia Foundation as well. The topics discussed include, but are not limited to: information sharing around elections risk, briefs from industry, threat updates, and highlights and upcoming watch outs.” Scully Ex. 12, at 38-39.

1087. In fact, the CISA’s description of the “USG-Industry” meeting as having “a monthly cadence” is misleading. The meetings became biweekly and weekly close to elections, when they were most needed: “from summer of 2018 ... to early 2020 they were quarterly. Sometime in 2020 they became monthly and then as we got closer to the election in 2020 they became weekly.” Scully Depo. 234:7-11.

F. CISA Worked with FBI to Suppress the Hunter Biden Laptop Story.

1088. Scully claims that he does not recall whether or not “hack and leak” or “hack and dump” operations were raised at the USG-Industry meetings, but he does not dispute that they may

have been raised: “I don't recall a specific incident of that [*i.e.*, discussions of “hack and dump” or “hack and leak” operations], but it's definitely possible. It's a tactic that had been used in the past.” Scully Depo. 236:6-12. Scully does not dispute that he may have raised it: “Me, personally, I don't recall myself raising that, but it's possible.” Scully Depo. 236:15-16. He does not dispute that Laura Dehmlow of FBI's FITF may have raised the concern: “Again, I don't know. It was a tactic that had been used globally, previously. So it wouldn't surprise me if there was some discussion of that somewhere in these meetings.” Scully Depo. 236:20-23. He does not dispute that Elvis Chan and/or Matt Masterson may have raised the concern. Scully Depo. 237:10-22.

1089. Scully also does not dispute Yoel Roth's account of the communications to social-media platforms from federal officials about hack-and-leak operations and the possibility of a hack-and-leak operation involving Hunter Biden in Paragraphs 10-11 of Yoel Roth's Declaration dated December 17, 2020. Scully Ex. 13, at 2-3; Scully Depo. 245:23-248:11. Scully does not dispute that federal officials repeatedly raised the concern that they “expected hack and leak operations by state actors” in the USG-Industry meetings, Scully Depo. 245:23-247:17 (“it's certainly possible, because it was a common tactic ... I would definitely not be surprised if these were included in the conversations”); and Scully does not dispute Roth's statement that Roth learned in these meetings that “there were rumors that a hack and leak operation would involve Hunter Biden,” Scully Depo. 247:18-248:7.

1090. Contemporaneous emails confirm that CISA officials were warning of “hack and leak” operations during the USG-Industry and other meetings with social-media platforms during 2020. For example, on September 16, 2020, Facebook employees emailed Scully and other CISA officials a draft of a joint industry statement, which stated: “For several years, tech companies have worked together with ... U.S. government agencies ... to counter election threats across our

platforms.... At today's meeting, we specifically discussed: ... (2) Ways to counter targeted attempts to undermine the election conversation before, during, and after the election. This includes *preparing for so-called 'hack and leak' operations* attempting to use platforms and traditional media for unauthorized information drops." Scully Ex. 16, at 1 (emphasis added). This email confirms that "preparing for so-called 'hack and leak' operations" was discussed at the USG-Industry meeting on Sept. 16, 2020, which included CISA, FBI's FITF, DOJ's National Security Division, ODNI, and Google, Microsoft, Facebook, Twitter, Reddit, Verizon Media, Pinterest, LinkedIn, and Wikimedia Foundation. Scully Ex. 16, at 1; *see also* Scully Depo. 253:14-255:13.

1091. Likewise, the agenda for the July 15, 2020 USG-Industry meeting included, as a "Deep Dive Topic," a 40-minute discussion of "Hack/Leak and USG Attribution Speed/Process." Scully Ex. 17, at 16. According to Scully, "attribution" in this context means identifying the hacker and leaker, and "USG" means "United States Government." Scully Depo. 274:4-275:10.

1092. Like Elvis Chan, Scully was not aware of any "pending investigations, at that time, into possible hack and leak operations." Scully Depo. 255:9-13.

1093. At the USG-Industry meeting, CISA asked platforms to report back on "Themes / narratives / approaches you anticipate for races you think will be targeted." Scully Ex. 15, at 1.

G. CISA's Ongoing and Expanding Censorship Efforts.

1094. In the spring and summer of 2022, Lauren Protentis requested the social-media platforms to prepare "one-pagers" for state and local election officials to address their content moderation rules. *See* Scully Ex. 17, at 1 (including "One-Pager Reminder" on the agenda for the April 2020 USG-Industry meeting); Scully Depo. 260:3-261:11 ("we had asked industry to provide a one-page summary of their content moderation rules that we could share with election officials").

1095. The purpose of these “one-pagers” was to provide a summary of the platforms’ content moderation rules to state and local government officials who would be reporting misinformation to the platforms. Scully Depo. 260:3-261:11.

1096. Lauren Protentis of CISA repeatedly lobbied the social-media platforms to include in their “one-pagers” for state and local officials a description of how to report perceived misinformation to the platform for censorship. *See, e.g.*, Scully Ex. 18, at 41 (Protentis requesting that Facebook update its one-pager to include its “steps for flagging or escalating MDM content” to “make this a comprehensive product on both the critical needs for officials—account security and MDM concerns”); *id.* at 44 (Protentis asking Microsoft to create a one-pager for election officials to “provide steps to ... report MDM”); *id.* at 45 (Protentis requesting that Twitter update its one-pager for government officials to include information about “how to report disinformation”). Scully agrees that Protentis was “trying to make sure that election officials have the information they need if they want to report” disinformation. Scully Depo. 300:23-25.

1097. CISA also set up an “operation center” on and around Election Day that engaged in “switchboarding” reports of election-day misinformation to platforms: “CISA regularly set up an operation center on election day, around the election. And the platforms and some of the other agencies do the same.” Scully Depo. 262:16-19. This “operation center” received “switchboard reporting” in 2018 and 2020. Scully Depo. 263:15-18. It was also communicating with platforms and other federal agencies, including “connectivity with FBI, DOJ, NEI, I&A.” Scully Depo. 264:18. When these reports came in, CISA would “perform the same misinformation routing function and pass that along to the platforms.” Scully Depo. 265:1-7.

1098. The CISA-funded Center for Internet Security continued to report misinformation and disinformation to platforms for censorship in 2022: “CIS was up and running [in 2022].”

Scully Depo. 266:2. Scully understands that “CIS continued to receive disinformation/misinformation reports from state and local election officials during the 2022 election cycle, and relay them directly to social media platforms.” Scully Depo. 266:5-13.

1099. Scully also believes that NASS and NASED routed disinformation concerns directly to social-media platforms in 2022. Scully Depo. 268:25-269:3.

1100. Scully agrees that foreign-originated social-media content typically becomes repeated from domestic sources: “We often see what happens overseas send up showing up domestically.” Scully Depo. 279:9-11.

1101. CISA has also teamed up directly with the State Department’s Global Engagement Center (GEC) to seek removal of social-media content; for example, on one occasion, the GEC enlisted CISA’s aid to seek the removal of “a YouTube channel run by Americans falsely claiming” that a certain State Department special envoy was “Patient Zero” for COVID-19. Scully Ex. 18, at 2. Scully forwarded the report to Facebook, which reported within minutes that it had “flagged for our internal teams.” Scully Ex. 18, at 1.

1102. CISA flagged obvious parody and joke accounts for censorship, including a Colorado parody account with 56 followers whose handle stated, “dm us your weed store location (hoes be mad, but this is a parody account),” and one with 27 followers whose handle stated, “Smoke weed erry day.” Scully Ex. 18, at 11-12. The government official who reported these stated that “these are concerning to us ... because of recent FBI/CISA warnings about impersonation accounts spreading false information about the election.” Scully Ex. 18, at 11. In other words, the government official sought to censor these accounts *before* they posted any election-related speech, because (according to “FBI/CISA”), they *might* engage in misleading

election-related speech. *See id.* Scully forwarded these reports to Twitter for censorship. Scully Ex. 18, at 10.

1103. Platforms report to CISA when they update their content-moderation policies to make them more restrictive. On September 10, 2020, for example, Twitter reported to Masterson and Scully that it was “updating our Civic Integrity Policy” to “label or remove false or misleading information intended to undermine public confidence in an election or other civic process.” Scully Ex. 18, at 9. This includes censorship of “Disputed claims that could undermine faith in the process itself, e.g. unverified information about election rigging, ballot tampering, vote tallying, or certification of election results.” Scully Ex. 18, at 9. The EIP had successfully lobbied platforms to adopt such changes ahead of the 2020 election. *See infra.*

1104. CISA pushed for the censorship of content that CISA’s Director particularly disfavored, including supposed disinformation about CISA itself, and about the so-called “Hammer and Scorecard” narrative that attributed election interference to federal intelligence agencies. For example, Scully requested censorship of a “disinfo report about CISA and Director Krebs.” Scully Ex. 18, at 19. And on November 10, 2022, Scully reported to platforms that “Director Krebs is particularly concerned about the hammer and scorecard narrative that is making the rounds,” and asked for information about their tracking and “amplification” of the narrative. Scully Ex. 18, at 22, 24. Twitter and Facebook promptly reported back on their efforts to censor the narrative. Scully Ex. 18, at 21 (Facebook reporting that “our teams are labelling and downranking the content as identified”); *id.* at 24 (Yoel Roth of Twitter explaining Twitter’s attempts to censor the narrative, and asking CISA “Let us know if there are especially high-profile examples of tweets sharing the conspiracy that *haven’t* been labeled” so Twitter can censor them). *See also* Scully Depo. 286:3-289:25.

1105. CISA also purposely debunks online narratives, knowing that the social-media platforms will use its debunks as censorship. For example, Yoel Roth emailed CISA about the Hammer and Scorecard narrative stating: “We’ve tracking the Hammer/Scorecard issue closely, particularly since Director Krebs’ tweet on the subject (which was pretty unambiguous as far as debunks go).” Scully Ex. 18, at 24. Scully admits that CISA was aware that “social-media platforms were following the rumor page posted by CISA and using that as a debunking method for content on their platforms.” Scully Depo. 290:13-17 (“We had a sense they were doing that, yeah.”).

1106. CISA publicly states that it is expanding its efforts to fight disinformation heading into the 2024 election cycle. Scully Ex. 27, at 1. On August 12, 2022, Director Easterly was reported to be “beef[ing] up [CISA’s] efforts to fight falsehoods,” and “has taken several specific steps to fight the problem.” *Id.*

1107. In January 2022, Director Easterly asked Facebook for a “briefing from us on 2022 election approach.” Scully Ex. 28, at 2. Easterly responded to an email by Facebook and directed her staff to set up the meeting. *Id.* Scully does not know what was discussed at the meeting. Scully Depo. 309:12-19.

1108. Director Easterly also exchanged text messages with Matt Masterson on February 26, 2022, when he was recently employed by Microsoft. Scully Ex. 29, at 2-3. In those texts, referring to a previous unidentified group call, Easterly told Masterson that she is “Just trying to get us in a place where Fed can work with platforms to better understand the mis/dis trends so relevant agencies can try to prebunk/debunk as useful.” Scully Ex. 29, at 2. She stated that CISA is “looking to play a coord role so not every D/A [*i.e.*, department and agency] is independently reaching out to platforms which could cause a lot of chaos.” Scully Ex. 29, at 2. Masterson

responded, agreeing with Easterly, and stating, “Platforms have got to get comfortable with gov’t. It’s really interesting how hesitant they remain.” Scully Ex. 29, at 3. (Scully notes that “D/A” is “one of our common abbreviations for department and agency.” Scully Depo. 316:23-24.)

1109. Scully agrees with Director Easterly that, when multiple federal agencies contact platforms independently, “it does create challenges and provides the platforms opportunities to play departments off each other.” Scully Depo. 317:6-9. For CISA to play a “coordinating” role among the agencies, therefore, allows federal officials to keep better influence and control over the platforms.

1110. According to a September 2022 leaked draft copy of DHS’s “Quadrennial Homeland Security Review, DHS’s capstone report outlining the department’s strategy and priorities in the coming years, the department plans to target ‘inaccurate information’ on a wide range of topics, including “the origins of the COVID-19 pandemic and the efficacy of COVID-19 vaccines, racial justice, U.S. withdrawal from Afghanistan, and the nature of U.S. support to Ukraine.” Scully Ex. 30, at 4.

1111. Scully agrees that DHS has discussions about targeting misinformation regarding the efficacy of COVID-19 vaccines, Scully Depo. 322:9-21 (“our building critical infrastructure help in public health is one of the sectors of critical infrastructure, so we engage with CDC and HHS to help them”); about the origins of the COVID-19 pandemic, Scully Depo. 323:16-17 (“We did some work on the ... bio-lab narratives”); and regarding Ukraine, Scully Depo. 324:5-10 (“We saw this with COVID. ... We saw this around Ukraine. And so, again, just helping people understand ... these disinformation narratives...”). In particular, CISA participated in a “Unified Coordination Group” regarding Russia’s invasion of Ukraine, which addressed misinformation: “there was a ... Unified Coordination Group, when Russia invaded Ukraine, to coordinate DHS

activities related to the crisis. As a part of that there was an MDM component, and a member of the MDM team was detailed to lead the MDM component of the Russian/Ukraine work.” Scully Depo. 325:5-12. Scully believes that this group communicated with social-media platforms as well (again, not disclosed in CISA’s interrogatory responses). Scully Depo. 327:1-18.

1112. As of August 12, 2022, DHS’s Office of Inspector General continued to call for a more aggressive, not less aggressive, approach to combating disinformation. Scully Ex. 31, at 1 (OIG calling for DHS to adopt a “Unified Strategy to Counter Disinformation Campaigns”).

1113. DHS’s OIG reports that CISA is expanding, not contracting, its efforts to fight disinformation. OIG reports that CISA’s “MDM team focuses on disinformation activities targeting elections and critical infrastructure. According to a CISA official, the MDM team counters all types of disinformation, to be responsive to current events.” Scully Ex. 31, at 9. “An official from the MDM team stated that, through this work, CISA is building national resilience to MDM, such as COVID-19 vaccine hesitancy and foreign influence activities.” *Id.* at 10. OIG further reports that, “[a]ccording to selected Intelligence Community officials, the Office of the Director of National Intelligence and the U.S. Department of Justice worked with CISA and I&A to counter disinformation related to the November 2020 elections. For example, according to an Office of the Director of National Intelligence official, prior to the November 2020 elections, CISA and I&A joined in weekly teleconferences to coordinate Intelligence Community activities to counter election-related disinformation. The Office of the Director of National Intelligence official stated the teleconferences continued to occur every 2 weeks after the 2020 elections and were still taking place as of the time of this audit.” *Id.* at 11. Further, OIG reports that “CISA and I&A also work with the U.S. Department of State’s (State Department) Global Engagement Center on countering disinformation.” *Id.* at 11.

1114. On November 21, 2021, Director Easterly reported that CISA is “beefing up its misinformation and disinformation team in the wake of a divisive presidential election that saw a proliferation of misleading information online.” Scully Ex. 23, at 1. “I am actually going to grow and strengthen my misinformation and disinformation team,” Easterly stated publicly. *Id.* She stated that she “had a meeting with ‘six of the nation’s experts’ in the misinformation and disinformation space.” *Id.* And she “stressed her concerns around this being a top threat for CISA ... to confront.” *Id.* “One could argue that we’re in the business of protecting critical infrastructure, and the most critical infrastructure is our cognitive infrastructure,” Easterly said. *Id.* “We now live in a world where people talk about alternative facts, post-truth, which I think is really, really dangerous if people get to pick their own facts,” Easterly said. *Id.* at 2. Evidently, Easterly thinks that *government officials* should help Americans “pick their own facts” for them. *Id.*

1115. According to Scully, CISA has an expansive mandate to address all kinds of misinformation that may affect “critical infrastructure” indirectly: “mis, mal-information threatens critical infrastructure in a number of ways, it could be operational impact, so in the case of the elections, disrupting election operations So a multitude of ways that disinformation could impact critical infrastructure, like I said ... there's financial, there's reputational, there's just a multitude of ways that this disinformation could affect critical infrastructure.” Scully Depo. 340:10-341:1. This could include, for example, “misinformation” that undermines confidence in any kind of national institution, including banks and financial services industry: “from mis, dis and mal-information, a reputational risk could come about if the integrity or the public confidence in a particular sector was critical to that sector's functioning. So I think the financial services would probably be a good example. So if there's a loss of confidence by the American public in

financial services, financial systems of the United States, that could create national security concerns.” Scully Depo. 341:17-342:2. This is a breathtakingly broad—even limitless—interpretation of CISA’s mandate to protect “critical infrastructure,” which would allow CISA to target virtually any kind of core political speech as “mis, dis and mal-information” that “create national security concerns” by undermining “public confidence in a particular sector.” *Id.*

1116. In fact, CISA is “working with Treasury to develop a product to help the financial services sector understand MDM risks to the sector.” Scully Depo. 355:22-24.

1117. Scully has publicly stated that CISA is “trying to reduce the amount that Americans engage with disinformation,” where “engaging with disinformation” means “amplifying it, re-tweeting it, resending it, things like that.” Scully Depo. 346:7-24; Scully Ex. 49.

1118. On June 22, 2022, CISA’s Cybersecurity Advisory Committee issued a “Draft Report to the Director” calling for an extremely broad view of CISA’s mandate. The report states that “[t]he spread of false and misleading information poses a significant risk to critical functions like elections, public health, financial services, and emergency response.” Scully Ex. 46, at 1. “Pervasive MDM diminishes trust in information, in government, and in democratic processes more generally.” *Id.* The report states that “CISA should consider MD across the information ecosystem,” including “social media platforms of all sizes, mainstream media, cable news, hyper partisan media, talk radio, and other online resources.” *Id.* at 2. Scully agrees with this report that CISA is trying to make its “resilience activity ... as broad as possible so it’s applicable anywhere that someone may come across MDM.” Scully Depo. 358:7-11.

1119. In September 2022, the Center for Internet Security is still working on a “portal” for government officials to report election-related misinformation to social-media platforms. Scully Ex. 19, 21. “[W]ork on the online ‘portal’ for election officials to flag misinformation to

social-media platforms ... continues today.” Scully Ex. 21, at 4. Scully states that “my understanding is that [CIS] did do something along those lines, I just don’t know the extent of it.” Scully Depo. 365: 3-6.

1120. As of January 2023 and today, CISA’s website continues to proclaim, “[t]he MDM team serves as a switchboard for routing disinformation concerns to appropriate social media platforms and law enforcement. This activity began in 2018, supporting state and local election officials to mitigate disinformation about the time, place, and manner of voting. For the 2020 election, CISA expanded the breadth of reporting to include other state and local officials and more social media platforms. This activity leverages the rapport the MDM team has with the social media platforms to enable shared situational awareness.” Scully Ex. 24, at 3; *see also* www.cisa.gov/mdm (visited Feb. 10, 2023). CISA thus proclaims that it is “expand[ing] the breadth of reporting,” not retreating from it. *Id.*

1121. Regarding misinformation reports, CISA “would generally share whatever we received from the election officials with the FBI, in case there was an ongoing investigation related to whatever it was that we forwarded to them.” Scully Depo. 366:17-20.

1122. CISA engaged in switchboarding and colluding with social-media platforms to promote censorship in other ways as well.

VIII. The State Department’s Global Engagement Center’s Censorship Efforts.

1123. The State Department’s Global Engagement Center (“GEC”) also conducts numerous meetings with social-media platforms about disinformation.

1124. The GEC’s “front office and senior leadership engage with social media companies.” Kimmage Dep. 29:12-13. These senior leadership meet with social-media platforms “[e]very few months, can be quarterly, but sometimes less than quarterly.” *Id.* at 32:9-10.

According to Daniel Kimmage, Principal Deputy Coordinator of the GEC, these meetings focus on the “tools and techniques” of spreading disinformation on social media, and it “would be rare” for them to discuss specific “content that’s posted on social media that might be of concern to the GEC.” *Id.* at 30:9-31:3.

1125. In addition, the GEC’s “Technology Engagement Team does engage with social media companies” as well. *Id.* at 29:11-12. The Technology Engagement Team meets with social media companies “[m]ore frequently” than the senior leadership, which meets with them “every few months.” *Id.* at 37:9-15.

1126. Kimmage recalls at least two meetings with Twitter. *Id.* at 129:22-25. At such meetings, the GEC would bring “between five and ten” people, including “the acting coordinator, me, in that capacity, then one or more of the deputy coordinators, team chiefs from the Global Engagement Center, and working-level staff with relevant subject matter expertise.” *Id.* 130:24-131:13. These GEC staff meet with the platforms’ content-moderation teams, *i.e.*, the people responsible for censorship on the platforms. *Id.* at 133:1-20, 135:1-11.

1127. In such a meeting, “the GEC would provide an overview of what it was seeing in terms of foreign propaganda and disinformation. And Twitter would, to the extent that they felt comfortable sharing information, would discuss similar topics.” 136:8-13.

1128. In addition to meeting with Twitter, the GEC’s senior leadership had similar meetings with Facebook and Google as well during the same time frames. *Id.* at 139:22-140:6. These meetings were also with Facebook and Google’s content-moderation or trust and safety teams, *i.e.*, the people responsible for censoring content on their platforms. *Id.* at 141:17-143:3.

1129. The GEC brought similar numbers of people to the meetings with Facebook and Google. *Id.* at 143:16-17 (“I believe the lineup would have been similar.”).

1130. In addition to the senior-leadership and TET meetings, the GEC also maintained a Senior Advisor as a permanent liaison in Silicon Valley, Samaruddin K. Stewart, for the purpose of meeting with social-media platforms about disinformation. *Id.* at 159:24-160:13; Kimmage Ex. 9, at 2. Stewart set up a series of meetings with LinkedIn to discuss “countering disinformation” and to “explore shared interests and alignment of mutual goals regarding the challenge.” Kimmage Ex. 9, at 2. Like the senior-leadership meetings, Stewart scheduled these meetings with the head of the trust and safety team, *i.e.*, the person responsible for censorship on the platform. *See id.* at 7 (meeting with the “Head of Threat Prevention, Trust & Safety” at LinkedIn). Kimmage confirms that Stewart set up similar meetings with other social-media platforms. Kimmage Dep. 160:12-13.

1131. On March 25, 2021, the GEC set an email to Rob Schaul of CISA flagging “a disinfo campaign on YouTube targeting a [diplomatic security] officer” on a “Youtube channel run by Americans.” Kimmage Ex. 11, at 2. Brian Scully of CISA forwarded the disinformation report to Twitter, Facebook, and YouTube. *Id.* at 1, 3, 7. Facebook responded, “Thank you so much for this! Have flagged for our internal teams.” *Id.* at 1.

1132. The GEC also coordinated with the Election Integrity Partnership. George Beebe of the GEC was in contact with the EIP. Kimmage Dep. 202:10-24. Kimmage admits that the GEC had “a general engagement with the EIP. ... the GEC was engaging with the partnership.” *Id.* at 214:11-19. In addition to Mr. Beebe, Adele Ruppe, who “liaised on election-related issues,” may have engaged with the EIP. *Id.* 214:23-215:5.

1133. Kimmage states that the GEC’s work against disinformation “equips ... technology companies to better understand” disinformation “so that they can take whatever actions they would take to stop the spread.” *Id.* 280:24-281:3.

1134. On October 17, 2022, at an event at Stanford University, Secretary of State Blinken was asked, “Stanford is one of the leading institutions to combat misinformation research and pointing out propaganda narratives and how they spread. How do you envision the cooperation between the State Department and institutions like Stanford in combatting the spread of propaganda?” Kimmage Ex. 16, at 5. Secretary Blinken responded, mentioning the GEC and noting that State is engaging in “collaborations” and “build[ing] out ... partnerships” with Stanford: “Stanford is doing remarkable work on that, and it's one of the things that we want to make sure that we're benefitting from, because this is a day-in, day-out battle for us, combating misinformation and disinformation around the world. We have at the State Department itself a big focus on this. We have something called the Global Engagement Center that's working on this every single day. But that work is both inspired by work that's being done in academia, including here at Stanford, as well as where appropriate collaborations. ...So we're trying to build out these kinds of partnerships to make sure that we're looking at every place that is actually developing answers, including Stanford, and then integrating that into what we do.” *Id.*

IX. The Election Integrity Partnership and Virality Project – Federal Collaborators.

1135. Federal officials also work through nonprofit organizations to achieve their censorship goals. Most notably, federal officials at CISA and the GEC, and state officials through the CISA-funded EI-ISAC, work in close collaboration with the Stanford Internet Observatory and other nonprofit organizations to achieve censorship and attempt to evade the First Amendment. Moreover, the Surgeon General’s Office and other federal officials collaborate closely with the Stanford Internet Observatory and the same entities under the aegis of the “Virality Project.”

A. The Election Integrity Project Is a Formidable Censorship Cartel.

1136. According to its website, “[t]he Election Integrity Partnership (EIP) was formed in July 2020 as a coalition of research entities focused on supporting real-time information exchange between the research community, election officials, *government agencies*, civil society organizations, and *social media platforms*.” *The Election Integrity Partnership*, Election Integrity Partnership (last visited Feb. 22, 2023) (emphasis added), <https://www.eipartnership.net/2020>. The EIP’s “objective was to detect and *mitigate the impact* of attempts to prevent or deter people from voting or to delegitimize election results.” *Id.* (emphasis added). As discussed further herein, “mitigate[ing] the impact” means pushing social-media platforms to censor supposed “misinformation.”

1137. “In March 2021 [the EIP] published [its] final report. This page displays an archive of the work carried out by the EIP and its partners during the 2020 U.S. election.” *Id.* The EIP report is publicly available, it provides a detailed account of the EIP’s activities in the 2020 election, and it is Exhibit 1 to the deposition of Brian Scully. Scully Ex. 1 (containing Stanford Internet Observatory et al., Election Integrity P’Ship, *The Long Fuse Misinformation and the Election* (v1.3.0 2021), <https://www.eipartnership.net/report> [<https://purl.stanford.edu/tr171zs0069>]).

1138. The EIP was created “in consultation with CISA [the Cybersecurity and Infrastructure Security Agency at the Department of Homeland Security] and other stakeholders.” *Id.* at 20 (2).¹ After “consultation with CISA,” the EIP “assembled” a “coalition ... with like-minded partner institutions.” *Id.*

1139. CISA interns originated the EIP: “The initial idea for the Partnership came from four students that the Stanford Internet Observatory (SIO) funded to complete volunteer

¹ Citations of this exhibit are formatted “Scully Ex. 1, at [page of exhibit] ([page of report]).”

internships at the Cybersecurity and Infrastructure Security Agency (CISA) at the Department of Homeland Security.” *Id.*

1140. The EIP agrees with Scully that the EIP was formed to fill in a perceived “gap” in the ability of the government to “monitor and correct” misinformation: “Responsibility for election information security is divided across government offices: CISA has authority to coordinate on cybersecurity issues related to the election, the FBI to investigate cyber incidents and enforce election laws, and intelligence agencies to monitor for foreign interference. Yet, no government agency in the United States has the explicit mandate to monitor and correct election mis- and disinformation.” *Id.*

1141. The EIP acknowledges that the federal government directly targeting misinformation posted Americans would “likely” violate the First Amendment and exceed agencies’ lawful authority: “This is especially true for election disinformation that originates from within the United States, which would likely be excluded from law enforcement action under the First Amendment and not appropriate for study by intelligence agencies restricted from operating inside the United States.” *Id.* As noted below, the EIP’s founders publicly admit that virtually all the misinformation targeted by the EIP was domestic in origin, not foreign, and thus subject to the First Amendment.

1142. The EIP specifically notes CISA and the FBI in discussing the need to fill this “gap” in their ability to police “election misinformation originating from domestic sources”: “none of these federal agencies has a focus on, or authority regarding, election misinformation originating from domestic sources within the United States. This limited federal role reveals a critical gap for non-governmental entities to fill. Increasingly pervasive mis- and disinformation, both foreign and

domestic, creates an urgent need for collaboration across government, civil society, media, and social media platforms.” *Id.* at 9 (v).

1143. “As a result” of the First Amendment and lack of legal authority, according to the EIP, “during the 2020 election, local and state election officials, who had a strong partner on election-system and overall cybersecurity efforts in CISA, were without a clearinghouse for assessing mis- and disinformation targeting their voting operations.” *Id.* at 20 (2). The EIP was deliberately formed to fill this “gap.”

1144. The EIP “was formed between four of the nation’s leading institutions focused on understanding misinformation and disinformation in the social media landscape: the Stanford Internet Observatory, the University of Washington’s Center for an Informed Public, Graphika, and the Atlantic Council’s Digital Forensic Research Lab.” *Id.*

1145. The EIP makes clear that its “aim” was not just to observe but to “defend[]” the public from misinformation: “With the narrow aim of defending the 2020 election against voting-related mis- and disinformation, it bridged the gap between government and civil society, helped to strengthen platform standards for combating election-related misinformation, and shared its findings with its stakeholders, media, and the American public.” *Id.* at 9 (v).

1146. The EIP’s statement that it “helped to strengthen platform standards for combating election-related misinformation” refers to the fact that the EIP successfully pushed virtually all major social-media platforms to adopt or increase censorship policies targeted at election-related “misinformation” during the 2020 election cycle. *See id.*

1147. The EIP notes that its efforts to push social-media platforms to adopt more restrictive censorship policies were highly effective, both in procuring changes in policies and censoring speech: “Many platforms expanded their election-related policies during the 2020

election cycle. ... Platforms took action against policy violations by suspending users or removing content, downranking or preventing content sharing, and applying informational labels.” *Id.* at 12 (viii).

1148. Alex Stamos, the director of the Stanford Internet Observatory who founded the EIP, has publicly stated that the EIP successfully pushed social-media platforms to adopt more restrictive policies about election-related speech in 2020: “My suggestion, if people want to get the platforms to do stuff is, first, you've got to push for written policies that are specific and that give you predictability; right? And so this is something we started in the summer, in August, is as Kate [Starbird] talked about Carly Miller led a team from all four institutions to look at the detailed policies of the big platforms and to measure them against situations that we expected to happen. Now we're not going to take credit for all of the changes they made, but there -- we had to update this thing, like, eight or nine times; right? And so like putting these people in a grid to say, you're not handling this, you're not handling this, you're not handling this, creates a lot of pressure inside of the companies and forces them to kind of grapple with these issues, because you want specific policies that you can hold them accountable for.” Scully Ex. 4, at 7 (Audio Tr. 4).

1149. Alex Stamos notes that the EIP then pressured the platforms to aggressively enforce the new policies that the EIP had pushed them to adopt: “The second is, when you report stuff to them, report how it's violating those written policies; right? So there's two steps here. Get good policies, and then say, this is how it's violated it.” *Id.*

1150. Other EIP participants have also publicly stated that the EIP induced social-media platforms to adopt much more aggressive censorship policies on election-related speech. On March 3, 2021, at an EIP-hosted conference on the release of the EIP report, Emerson Brooking of the Atlantic Council’s DRFLab, an EIP participant, stated: “I think the EIP really helped push

the envelope with things like just the notion that ... this delegitimization of electoral processes that we were seeing in the summer and early fall that this should be against content moderation policies on these platforms, and begin to take proactive steps there....” Scully Ex. 5, at 6 (Audio Tr. 2). He also stated, “after November 3rd, we saw that market shift where content moderation actions that ... we could hardly contemplate a few weeks before began to be taken. There was a much stronger emphasis on cracking down on the sort of content we've been tracking from the beginning.” *Id.*

1151. The EIP treats “Government” and Social-Media “Platforms” as two of its “Four Major Stakeholders,” providing input to the EIP and receiving feedback from the EIP. Scully Ex. 1, at 26 (8) & fig.1.2 (graphic showing “Government” as the EIP’s first “Major Stakeholder,” submitting information to EIP’s “Intake Queue” and receiving feedback on the EIP’s “Mitigation”—*i.e.*, censorship—efforts).

1152. The EIP organizes its misinformation reports under groups called “tickets,” and it notes that “[t]ickets were submitted by ... trusted external stakeholders...” *Id.* at 26 (8). “Trusted external stakeholders” include “government”: “External stakeholders included government, civil society, social media companies, and news media entities.” *Id.* at 30 (12). Thus, it is clear that “government” submitted “tickets,” *i.e.*, reports of misinformation to be processed for censorship on social media, to the EIP. *See id.* at 26, 30 (8, 12).

1153. And it is clear that the “government” partners who submit tips to the EIP are CISA, the State Department’s Global Engagement Center (GEC), and the Elections Infrastructure Information Sharing & Analysis Center (EI-ISAC), an organization of state and local government officials coordinated by the Center for Internet Security (CIS) pursuant to funding from CISA, *see EI-SAC, Center for Internet Security* (last visited Fed. 22, 2023)

(“The EI-ISAC is federally funded by CISA.”), <https://www.cisecurity.org/ei-isac>. Specifically, the “Government” “stakeholders” listed under the EIP’s “Four Major Stakeholder Groups” are CISA, GEC, and the EI-ISAC. Scully Ex. 1, at 30 (12).

1154. These “Government” stakeholders report misinformation to the EIP: “Government and civil society partners could create tickets or send notes to EIP analysts, and they used these procedures to flag incidents or emerging narratives to be assessed by EIP analysts.” *Id.*

1155. The CISA-funded EI-ISAC and CISA itself worked in collaboration with the EIP to report misinformation to social-media platforms: “[T]he EI-ISAC served as a singular conduit for election officials to report false or misleading information to platforms. By serving as a one-stop reporting interface, the EI-ISAC allowed election officials to focus on detecting and countering election misinformation while CIS and its partners reported content to the proper social media platforms. Additionally, the Countering Foreign Influence Task Force (CFITF), a subcomponent of CISA, aided in the reporting process and in implementing resilience efforts to counter election misinformation.” *Id.* at 31 (13).

1156. The EIP report mentions *The Gateway Pundit*, the website operated by Plaintiff Jim Hoft, 47 times. *See id.* at 51, 74, 76, 101, 103, 110, 112, 145, 150-51, 153, 155-56, 172, 175, 183, 194-95, 206-09, 211-12, 214-16, 226-27.²

1157. The EIP boasts that it “used an innovative internal research structure that leveraged the capabilities of the partner organizations through a tiered analysis model based on ‘tickets’ collected internally and from our external stakeholders. Of the tickets we processed, 72% were related to delegitimization of the election,” *i.e.*, core political speech. *Id.* at 10 (vi).

² Report pages 33, 56, 58, 83, 85, 92, 94, 127, 132-33, 135, 137-38, 154, 157, 165, 176-77, 188-91, 193-94, 196-98, 208-09.

1158. The EIP admits that the speech it targets for censorship is domestic, grassroots speech by American citizens: “The production and spread of misinformation was multidirectional and participatory. Individuals participated in the creation and spread of narratives. Bottom-up false and misleading narratives started with individuals identifying real-world or one-off incidents and posting them to social media. Influencers and hyperpartisan media leveraged this grassroots content, assembling it into overarching narratives about fraud, and disseminating it across platforms to their large audiences. Mass media often picked up these stories after they had reached a critical mass of engagement. Top-down mis- and disinformation moved in the opposite direction, with claims first made by prominent political operatives and influencers, often on mass media, which were then discussed and shared by people across social media properties.” *Id.* at 11 (vii). In other words, virtually everything it targets is quintessential First Amendment-protected political speech.

1159. This included censorship of highly visible political figures: “The primary repeat spreaders of false and misleading narratives were verified, blue-check accounts belonging to partisan media outlets, social media influencers, and political figures, including President Trump and his family.” *Id.* at 12 (viii).

1160. One key point that the EIP emphasizes is that it wants greater “access” to platforms’ internal data to achieve greater monitoring of Americans’ speech on social media. The EIP complains that “*a t r a s a r e a d a e s s t l a t r A s i d e r e d e t e r a l r e s e a r c h i t t e e t i e e s s l a t r l i e s a d i t e r e t i s .*” *Id.* (emphasis added). “API” stands for “Application Programming Interface,” so the EIP wants greater direct access to platforms’ internal data about so-called “misinformation” on their platforms. *See id.* This directly echoes the repeated demands from the White House and the Surgeon General that social-media platforms

provide access to their internal data about misinformation on their platforms, both to government and “researchers.” The relevant “researchers” include Stanford Internet Observatory and the other constituents of the EIP and the Virality Project, who are working hand-in-glove with federal officials.

1161. The EIP contends that not enough censorship was achieved during 2020 as a result of their lack of direct access to platforms’ APIs: “Many platforms expanded their election-related policies during the 2020 election cycle. However, application of moderation policies was inconsistent or unclear.” *Id.*

1162. The EIP recommends that platforms increase enforcement of censorship policies: “Impose clear consequences for accounts that repeatedly violate platform policies. These accounts could be placed on explicit probationary status, facing a mixture of monitoring and sanctions.” *Id.* at 14 (x).

1163. The EIP report acknowledges the contributions of Alex Stamos, Renee DiResta, Kate Starbird, Matt Masterson, Pierce Lowary, and Alex Zaheer. *Id.* at 16 (xii). All of these individuals have or had formal roles in CISA.

1164. The EIP is partially funded by the federal government: “Researchers who contributed to the EIP ... receive partial support from the U.S. National Science Foundation (grants 1749815 and 1616720).” *Id.* at 17 (xiii).

1165. In addition, the Atlantic Council, one of the four nonprofit organizations in the EIP, is partially government-funded. Kimmage Dep. 294:8-18.

1166. “The initial idea for the Partnership came from four students that the Stanford Internet Observatory (SIO) funded to complete volunteer internships at the Cybersecurity and

Infrastructure Security Agency (CISA) at the Department of Homeland Security.” Scully Ex. 1, at 20 (2).

1167. “The students approached SIO leadership in the early summer, and, in consultation with CISA and other stakeholders, a coalition was assembled with like-minded partner institutions.” *Id.*

1168. “The Election Integrity Partnership (EIP) was officially formed on July 26, 2020—100 days before the November election—as a coalition of research entities who would focus on supporting real-time information exchange between the research community, election officials, government agencies, civil society organizations, and social media platforms.” *Id.*

1169. As a key point in its “Operational Timeline,” the EIP lists a July 9, 2020, “Meeting with CISA to present EIP concept.” *Id.* at 21 (3). In other words, the Stanford Internet Observatory “present[ed]” the “EIP concept” to CISA two weeks before the EIP was formed. *Id.*

1170. The SIO’s EIP team was “led by ... Research Manager Renee DiResta ... and Director Alex Stamos.” *Id.* at 22 (4). The University of Washington’s “contributing team” was “led by ... Kate Starbird.” *Id.*

11 I. Alex Stamos and Kate Starbird are members of CISA’s Cybersecurity Advisory Committee. *See CISA Cybersecurity Advisory Committee*, Cybersecurity & Infrastructure Security Agency (last visited Feb. 24, 2023), <https://www.cisa.gov/resources-tools/groups/cisa-cybersecurity-advisory-committee>. Starbird chairs CISA’s Subcommittee on “Protecting Critical Infrastructure from Misinformation and Disinformation.” *See CISA Cybersecurity Advisory Committee*, Subcommittee Factsheet 1 (April 13, 2022), https://www.cisa.gov/sites/default/files/publications/CSAC%20Subcommittee%20Factsheet_April%2013%202022.pdf. Renee DiResta gives lectures on behalf of CISA. *See CISA, Cybersecurity*

Summit 1 Responding to Mis, Dis, and Malinformation, YouTube (Oct. 27, 2021), <https://www.youtube.com/watch?v=yNe4MJ351wU>.

1172. One of the EIP’s goals was to “flag policy violations to platforms.” Scully Ex. 1, at 24 (6).

1173. As noted above, the EIP describes “Government” as one of “four major stakeholders,” who both provided input into the “intake queue” for “tickets” (*i.e.*, reporting misinformation) and received feedback on “mitigation” (*i.e.*, censorship). *Id.* at 26 (8).

1174. The EIP tracked misinformation using “tickets,” which tracked “informational event[s]” that could encompass many social-media postings: “The EIP tracked its analysis topics and engaged with outside stakeholder organizations using an internal ticketing workflow management system. Each identified informational event was filed as a unique ticket in the system.” *Id.*

1175. “Tickets were submitted by both trusted external stakeholders (detailed in Section 1.4 on page 11) and internal EIP analysts.” *Id.* “Section 1.4” on pages 11-12 of the report identifies government as a trusted external stakeholder: “Trusted external stakeholders” include “government, civil society, social media companies, and news media entities.” *Id.* at 29-30 (11-12). Page 12 specifically identifies CISA, the EI-ISAC, and the State Department’s GEC as the EIP’s “Government” stakeholders. *Id.* at 30 (12) fig.1.3.

1176. A “ticket” could encompass many individual postings: “A single ticket could map to one piece of content, an idea or narrative, or hundreds of URLs pulled in a data dump.” *Id.* at 27 (9).

1177. The EIP’s managers both report misinformation to platforms and communicate with government partners about their misinformation reports: “The manager had the ability to tag

platform partners on a ticket for action. They also communicated with the EIP's partners in government, and could request further information from election officials if necessary," thus serving as a conduit for a back-and-forth about misinformation reports between government officials and platforms. *Id.* at 27-28 (9-10).

1178. The scope of the EIP's monitoring of Americans' speech on social media is enormous: "Team members from each of these tiers were divided into on-call shifts. Each shift was four hours long and led by one on-call manager. It was staffed by a mix of Tier 1 and Tier 2 analysts in a 3:1 ratio, ranging from five to 20 people. Analysts were expected to complete between two to five shifts per week. The scheduled shifts ran from 8:00 am to 8:00 pm PT for most of the nine weeks of the partnership, ramping up only in the last week before the election from 12-hour to 16- to 20-hour days with all 120 analysts on deck." *Id.* at 28 (10).

1179. The "Government" stakeholders flag misinformation to the EIP for censorship: "Government and civil society partners could create tickets or send notes to EIP analysts, and they used these procedures to flag incidents or emerging narratives to be assessed by EIP analysts." *Id.* at 30 (12).

1180. Of the "Four Major Stakeholder Groups" who participated in the EIP, the first listed is "Government," which includes three government entities: the Elections Infrastructure ISAC, CISA, and the State Department's GEC. *Id.*

1181. The EIP reports that CISA, CIS, and the EI-ISAC collaborated with the EIP in reporting misinformation: "In this election cycle, the EI-ISAC served as a singular conduit for election officials to report false or misleading information to platforms. By serving as a one-stop reporting interface, the EI-ISAC allowed election officials to focus on detecting and countering election misinformation while CIS and its partners reported content to the proper social media

platforms. Additionally, the Countering Foreign Influence Task Force (CFITF), a subcomponent of CISA, aided in the reporting process and in implementing resilience efforts to counter election misinformation.” *Id.* at 31 (13).

1182. The EI-ISAC jointly reports misinformation flagged by state and local election officials to CISA and to the EIP: “Content reported by election officials to the EI-ISAC was also routed to the EIP ticketing system. This allowed analysts to find similar content, ascribe individual content pieces to broader narratives, and determine virality and cross-platform spread if applicable. This analysis was then passed back to election officials via the EI-ISAC for their situational awareness, as well as to inform potential counter-narratives. Additionally, if an internally generated EIP ticket targeted a particular region, analysts sent a short write-up to the EI-ISAC to share with the relevant election official. This allowed the state or local official to verify or refute the claim, and enabled analysts to properly assess whether or not the content violated a platform’s civic integrity policies. In this way, the EIP demonstrated the upside of using the EI-ISAC coordinating body to connect platforms with authoritative voices to determine truth on the ground and help election officials effectively counter viral falsehoods about election infrastructure.” *Id.*

1183. The EIP created established channels for reporting misinformation to platforms for censorship: “The EIP established relationships with social media platforms to facilitate flagging of incidents for evaluation when content or behavior appeared to violate platform policies.” *Id.* at 35 (17).

1184. The EIP receives real-time reports on censorship actions from the platforms, who communicate directly with EIP managers about censorship through the EIP’s system: “Analysts conducted their initial assessment on all tickets, and, if content in a ticket appeared to be a violation of a platform’s published content policies, an analyst or manager added the platform representative

to the ticket. If questions arose, a manager communicated with the platform representative in the ticket comments. Analysts put the ticket back in the queue and updated the ticket to note if the content in question received a moderation action.” *Id.*

1185. Virtually all major social-media platforms participate directly in the EIP: “The EIP onboarded the following social media companies: Facebook and Instagram, Google and YouTube, Twitter, TikTok, Reddit, Nextdoor, Discord, and Pinterest.” *Id.*

1186. In the 2020 election cycle, the EIP “processed 639 in-scope tickets. 72% of these tickets were related to delegitimizing the election results.” *Id.* at 45 (27).

1187. The EIP had a high level of success in pushing the platforms to censor speech: “35% of the URLs we shared with Facebook, Instagram, Twitter, TikTok, and YouTube were either labeled, removed, or soft blocked.” *Id.* “In total, we believe the four major platforms we worked with all had high response rates to our tickets.” *Id.* at 55 (37). “We find, overall, that platforms took action on 35% of URLs that we reported to them.” *Id.* at 58 (40).

1188. The Center for Internet Security, which runs the EI-ISAC using funding from CISA, is a major reporter of misinformation to the EIP: “16% of tickets were filed by the Center for Internet Security (CIS), an election official community partner, in the form of tips.” *Id.* at 46 (28); *see also* Center for Internet Security, *EI-ISAC* (last visited Feb. 24, 2023), <https://www.cisecurity.org/ei-isac>.

1189. The EIP “prioritize[es] ... swing states over non-swing states.” Scully Ex. 1, at 46 (28).

1190. The EIP’s “dataset included 639 distinct, in-scope tickets.” *Id.* A “ticket” could be extremely broad, “map[ping] to” and entire “idea or narrative.” *Id.* at 27 (9). For example, the “SHARPIEGATE” ticket was submitted on November 4, 2020, to “try and consolidate all the

content” regarding the Sharpiegate story from “a variety of different states across Twitter, FB, TikTok, and Youtube.” *Id.* at 47 (29) fig.2.1.

1191. The EIP includes extensive collaboration with a “government partner” in its Sharpiegate ticket. *Id.* at 48 (30). Its internal ticket-management software (“Jira”) simultaneously allowed the “government partner” to communicate directly with the “platform partner” to debunk the online claim. *Id.* at 48 (30) fig.2.2.

1192. The EIP reports that it repeatedly flagged *The Gateway Pundit*, Plaintiff Jim Hoft’s website, as a purveyor of social-media misinformation: “The top misinformation-spreading websites in our dataset were ... thegatewaypundit[.]com, a far-right news website. 65% of these tickets involved an exaggeration of the impact of an issue within the election process.” *Id.* at 51 (33) (alteration in original).

1193. The EIP does not claim that most of *The Gateway Pundit*’s content was false, only that it involved the “exaggeration of the impact of an issue within the election process.” *Id.*

1194. As noted above, the EIP Report cites *The Gateway Pundit* 47 times. *See supra* paragraph 1156 and accompanying citation.

1195. The EIP “coded tickets based on whether they ... had an element of foreign interference. Interestingly ... less than 1% related to foreign interference.” Scully Ex. 1, at 53 (35). Thus, virtually all the speech targeted for censorship comes from American speakers.

1196. The EIP targeted speech for censorship or debunking in most tickets: “Of our 639 tickets, 363 tickets tagged an external partner organization to either report the content, provide situational awareness, or suggest a possible need for fact-checking or a counter-narrative.” *Id.* at 55 (37).

1197. “[G]roups that reported tickets include the State Department’s Global Engagement Center...” *Id.* at 60 (42). Daniel Kimmage testified that George Beebe of the GEC was in contact with the EIP. Kimmage Dep. 202:10-24. Kimmage attests that the GEC had “a general engagement with the EIP. ... the GEC was engaging with the partnership.” *Id.* at 214:11-19. In addition to Mr. Beebe, Adele Ruppe, who “liaised on election-related issues,” may have engaged with the EIP. *Id.* 214:23-215:5.

1198. In addition, left-wing advocacy groups like “MITRE, Common Cause, the DNC, the Defending Digital Democracy Project, and the NAACP” submitted tickets to the EIP. Scully Ex. 1, at 60 (42).

1199. The EIP indicates that the “misinformation” it targeted during the 2020 election cycle was core political speech of American citizens protected by the First Amendment: “Our analysis demonstrates that the production and spread of misinformation and disinformation about Election 2020 ... was participatory. In other words, these dynamics were not simply top-down from elites to their audiences, but were bottom-up as well, with members of the ‘crowd’ contributing in diverse ways—from posting raw content, to providing frames for that content, to amplifying aligned messages from both everyday members of the crowd and media (including social media) elites. Repeatedly, our data reveal politically motivated people sincerely introducing content they mistakenly believed demonstrated real issues with election integrity...” *Id.* at 181 (163). “Well-meaning, though often politically motivated, individuals repeatedly introduced this content into the broader information sphere, often via social media...” *Id.* at 182 (164).

1200. EIP analysts collected data from Twitter “contemporaneously,” and they also have access to “CrowdTangle and Facebook search functionality.” *Id.* at 199-200 (181-82).

1201. The EIP's tickets encompassed almost 5,000 URLs: "Through our live ticketing process, analysts identified social media posts and other web-based content related to each ticket, capturing original URLs (as well as screenshots and URLs to archived content). In total, the EIP processed 639 unique tickets and recorded 4,784 unique original URLs." *Id.* at 200 (182).

1202. These tickets and URLs encompass millions of social media posts, including almost 22 million posts on Twitter alone: "In total, our incident-related tweet data included 5,888,771 tweets and retweets from ticket status IDs directly, 1,094,115 tweets and retweets collected first from ticket URLs, and 14,914,478 from keyword searches, for a total of 21,897,364 tweets." *Id.* at 201 (183).

1203. The EIP "collected data from Twitter in real time from August 15 through December 12, 2020," and did so "[u]sing the Twitter Streaming API" to "track[] a variety of election-related terms The collection resulted in 859 million total tweets." *Id.* at 200-01 (182-83). Thus, the EIP had privileged access to Twitter's internal data about speech on its own platform.

1204. The EIP did not have privileged access to Facebook's internal data, however: "To understand how the information ecosystem looks from the perspective of Facebook and Instagram, we collected public posts through the CrowdTangle API from Facebook Groups, Facebook Pages, Facebook verified profiles and public Instagram accounts." *Id.* at 201 (183). This explains the White House's and Surgeon General's insistence in 2021 that Facebook grant "researchers" such as Renee Diresta access to Facebook's internal data.

1205. The EIP treats as "misinformation" truthful reports that the EIP believes "lack[] broader context." *Id.* at 203 (185).

1206. The EIP admits that it focuses on speech from the “political right” because it believes that the right spreads misinformation: “Influential accounts on the political right ... were responsible for the most widely spread of false or misleading information in our dataset. Right-leaning accounts also more frequently augmented their misinformation posts with narrative-related hashtags ... which persisted across multiple incidents and were shared millions of times in our dataset.” *Id.* at 204-05 (186-87).

B. The EIP Targets Plaintiff Jim Hoft and *T e a t e a d i t.*

1207. According to the EIP, “[t]he 21 most prominent repeat spreaders on Twitter ... include political figures and organizations, partisan media outlets, and social media all-stars. ... [A]ll 21 of the repeat spreaders were associated with conservative or right-wing political views and support of President Trump.” *Id.* at 205 (187).

1208. The EIP lists *The Gateway Pundit* as the second-ranked “Repeat Spreader[] of Election Misinformation” on Twitter, ranking it above Donald Trump, Eric Trump, Breitbart News, and Sean Hannity. *Id.* at 206 (188) tbl.5.2. In the 2020 election cycle, the EIP flagged *The Gateway Pundit’s* speech in 25 incidents with over 200,000 retweets. *Id.*

1209. The EIP claims that “[f]ar-right hyperpartisan media outlets also participated in a wide range of [Twitter] incidents, including The Gateway Pundit, which ranked #2 in the dataset.” *Id.* at 206 (188).

1210. In addition, the EIP lists *The Gateway Pundit’s* website as the domain cited in the most “incidents”—its website content was tweeted by others in 29,207 original tweets and 840,740 retweets. *Id.* at 207 (189) tbl.5.3. *The Gateway Pundit* ranks above Fox News, the New York Post, the New York Times, and the Washington Post on this list. *Id.*

1211. In fact, the EIP dedicates an entire subsection of its report to *The Gateway Pundit*. *Id.* at 214-16 (196-98). The EIP reports that “The Gateway Pundit was among the most active spreaders of election-related misinformation in our analyses. ... It appeared as a top repeat spreader through its website, its Twitter account, its YouTube channel, and its Instagram account.” *Id.* at 214 (196).

1212. The EIP report notes that “Twitter suspended [*The Gateway Pundit*’s] account on February 6, 2021,” indicating that *The Gateway Pundit*’s deplatforming on Twitter was the result of the EIP’s efforts. *Id.*

1213. The EIP states that “The Gateway Pundit was highly active throughout the election lifecycle, including during the weeks leading up to the election, when it repeatedly spread content—in distinct information incidents—that sought to undermine trust in mail-in voting specifically and the eventual election results more generally.” *Id.*

1214. According to the EIP, “[o]n Twitter, The Gateway Pundit’s account was highly retweeted across 26 different incidents (#2 among repeat spreaders). Evidence from our data suggest that its prominence was due both to production of its own material and to amplification (via original and quote tweets) of other partisan content.” *Id.* at 215 (197).

1215. According to the EIP, “[o]f all the domains linked to in our Twitter data, The Gateway Pundit’s website was connected to the largest number of incidents (46) while also garnering the most related original tweets (29,207) and retweets (840,750). Their YouTube channel appeared in five incidents, and their 13 incident-related videos had more than 4 million views on YouTube.” *Id.* at 215-16 (197-98).

1216. According to the EIP, “[t]he Gateway Pundit[’s] ... Instagram account was tied for #2 among repeat spreaders, appearing in 10 incidents for 20 posts that received more than 132,000 engagements.” *Id.* at 216 (198).

C. The EIP Induces Major Changes in Platform Censorship Policies.

1217. The EIP notes that “during the 2020 election, all of the major platforms made significant changes to election integrity policies, both as the campaigns kicked off and through the weeks after Election Day—policies that attempted to slow the spread of specific narratives and tactics that could potentially mislead or deceive the public....” *Id.* at 229 (211).

1218. The EIP notes that “[m]ajor social media platforms such as Facebook, Twitter, YouTube, Pinterest, and TikTok introduced changes to their community standards in the months leading up to the election and in the aftermath.” *Id.* at 230 (212).

1219. In particular, starting just over a month after the EIP launched, in “September 2020,” “[a] number of platforms announced the first updates to election-specific policies: making large additions; adding more clarity and specificity; or stating clearly that they will label or remove content that delegitimizes the integrity of the election.” *Id.*

1220. The policy changes reflected that the EIP and the platforms anticipated that they would have to target speech by *domestic* speakers, not supposed “foreign disinformation,” during the 2020 election: “[M]uch of the misinformation in the 2020 election was pushed by authentic, domestic actors, and platforms shifted their focus to address downstream harms related to the content itself. As a result, most subsequent updates introduced policies related to specific content categories.” *Id.* at 231 (213).

1221. The EIP lobbies platforms to “remove” so-called “repeat spreaders” like *The Gateway Pundit*, and complains that they are not removed often enough: “Despite what appeared

to be clear policy to penalize or remove repeat spreaders and high-profile disinformation actors, platforms appeared to shy away from using this particular intervention. In some cases, this was a result of a variety of ‘newsworthiness’ exceptions, which allowed some high-profile repeat spreaders, including politicians, to evade bans. Yet many of the repeat spreaders we saw were not politicians”—including *The Gateway Pundit*, among many others. *Id.* at 233 (215).

1222. The EIP indicates that it will continue its censorship activities in future elections: “The next election will have its own unique set of misinformation narratives, yet many of the tactics, dynamics, and basic structures of these narratives will likely remain the same.” *Id.* at 243-44 (225-26).

1223. The EIP reinforces this intention by calling for even more aggressive, more expansive censorship of social-media speech, including into other areas such as “public health”: “Doing nothing is not an option. ... Not pursuing structural policy change will accelerate our country’s slide toward extremism, erode our shared national and inclusive identity, and propel yet more individuals toward radicalization via mis- and disinformation. The problem is larger than elections: it spans politics, self-governance, and critical policy areas, including public health.” *Id.* at 251 (233). The EIP acted on this statement promptly by forming the “Virality Project” in 2021. *See infra.*

1224. The EIP proclaims that the “EIP’s novel structure, enabling rapid-response analysis and a multistakeholder reporting infrastructure, could prove effective to many information spaces blighted by pervasive misinformation,” in addition to election-related speech. *Id.* at 259 (241).

1225. The EIP calls for more aggressive penalties to enforce censorship on social media, in language that was copied and parroted by the demands of Jen Psaki and the Surgeon General: “Establish clear consequences for accounts that repeatedly violate platform policies.” *Id.* at 256

(238). “Prioritize quicker action on verified or influential accounts if they have already violated platform policies in the past.” *Id.* at 257 (239).

1226. The EIP even advocates for an express system of pre-publication approval for disfavored speakers—the ultimate prior restraint: “Consider implementing holding areas for content from high-visibility repeat spreaders, where content can be evaluated against policy before posting.” *Id.*

1227. The EIP proclaims that it offers “a whole-of-society response,” in words parroted by the Surgeon General’s Health Advisory. *Id.* at 259 (241).

1228. The EIP boasts that “[t]he EIP, in its structure and its operations ... *united government, academia, civil society, and industry*, analyzing across platforms, to address misinformation in real time.” *Id.* (emphasis added).

1229. The EIP states that “[t]he lessons from EIP should be both learned and applied. The fight against misinformation is only beginning. The collective effort must continue.” *Id.* at 259-60 (241-42).

1230. The EIP specifically advocates for a broader role for CISA in federal efforts to combat election-related “misinformation.” *Id.* at 252-53 (234-35).

1231. Alex Stamos, the director of the Stanford Internet Observatory who launched the EIP, publicly states that virtually all the speech targeted by the EIP is by domestic speakers engaging in core political speech. He has publicly stated: “almost all of this is domestic: right? ... It is all domestic, and the second point on the domestic, a huge part of the problem is well-known influencers you have ... a relatively small number of people with very large followings who have the ability to go and find a narrative somewhere, pick it out of obscurity and ... harden it into these narratives.” Scully Ex. 4, at 5 (Audio Tr. 2).

1232. Likewise, on October 3, 2020, at a CISA-hosted cybersecurity conference, Clint Watts of the EIP stated that election misinformation “is overwhelmingly more domestic than foreign this time around in 2020.” Scully Ex. 3, at 4 (Audio Tr. 2).

1233. At the same conference, Alex Stamos stated: “The bigger issue in 2020, is going to be domestic ... we have set up this thing called the [E]lection [I]ntegrity [P]artnership, so we went and hired a bunch of students. We're working with the University of Washington, Graphika, and DFRLab, and the vast, vast majority of the contact we see we believe is domestic. You know, some of it you can't tell, but a lot of it is coming from domestic blue checkmark verified elites; right? And so I think a much bigger issue for the platforms is elite disinformation. The stuff that is being driven by people who are verified that are Americans who are using their real identities.” *Id.* at 5 (Audio Tr. 3). He also stated, “the truth is, that the vast majority of these problems or the kind of problems in the information environment are domestic problems.” *Id.* at 6 (Audio Tr. 4).

1234. Alex Stamos has noted that the fear of government regulation pushes the platforms to respond to government pressure and increase censorship. On November 10, 2020, at a conference hosted by the Atlantic Council, Alex Stamos stated: “So, you know, on effectively pushing the platforms to do stuff ... they will always be more responsive in the places that are both economically highly important and that have *huge potential regulatory impact*, most notably right now that would be the United States and Europe.” Scully Ex. 4, at 6 (Audio Tr. 3) (emphasis added).

1235. On November 17, 2021, at a conference hosted by the Digital Publics Symposium, Kate Starbird of CISA’s Subcommittee and the University of Washington’s Center for an Informed Public, an EIP participant, stated: “Now fast forward to 2020, we saw a very different story around disinformation in the U.S. election. It was largely domestic coming from inside the United States.

... Most of the accounts perpetrating this ... they're authentic accounts. They were often blue check and verified accounts. They were pundits on cable television shows that were who they said they were ... a lot of the major spreaders were blue check accounts, and it wasn't entirely coordinated, but instead, it was largely sort of cultivated and even organic in places with everyday people creating and spreading disinformation about the election.” Scully Ex. 8, at 4 (Audio Tr. 2). She also stated: “So we see this – the disinformation campaign was top down ... but this campaign was also bottom up with everyday people sharing their own experiences, their own misperceptions of being disenfranchised or finding what they thought to be evidence of voter fraud.” *Id.* at 5 (Audio Tr. 3). These are the voices that the EIP silenced.

D. The Virality Project Expands EIP’s Censorship Work with Federal Officials.

1236. Soon after the 2020 election cycle, beginning in early 2021, the same four entities that launched the Election Integrity Partnership established a similar program to address COVID-19-vaccine-related “misinformation” on social media, which they called the “Virality Project.” See Scully Ex. 2 (containing Stanford Internet Observatory, et al., *The Virality Project, Memes, Magnets, and Microchips Narrative Dynamics Around COVID-19 Vaccines* (v.1.0.1 2022), <https://purl.stanford.edu/mx395xj8490>).

1237. The Virality Project’s final report, dated April 26, 2022, lists Renee DiResta as the principal Executive Editor, and lists Renee DiResta, Kate Starbird, and Matt Masterson as contributors. Scully Ex. 2, at 4 (i).³ Current and former CISA interns Jack Cable, Isabella Garcia-Camargo, Pierce Lowary, and Alex Zaheer are listed as “researchers and analysts” who participated in social-media “monitoring” for the project. *Id.*

³ Citations of this exhibit are formatted “Scully Ex. 2, at [page of exhibit] ([page of report]).

1238. The same four entities that operated the EIP launched the Virality Project (“VP”) in 2021: Stanford Internet Observatory, University of Washington’s Center for an Informed Public, Graphika, and the Atlantic Council’s Digital Forensics Research lab. *Id.* at 8-9 (1-2). Three new nonprofit entities were added as well. *Id.*

1239. According to its report, “[t]he VP team developed technology to identify emerging narratives, to understand what communities they appeared within, and to gauge their scope, speed, and spread. In addition, the analysts assessed social media platforms’ published policies to understand how (if at all) platforms might limit or action the spread of misleading vaccine-related content.” *Id.* at 9 (2). As discussed below, like the EIP, the VP took action to push “platforms [to] limit or action the spread of misleading vaccine-related content.” *Id.*

1240. According to the VP, “[v]accine mis- and disinformation was largely driven by a cast of recurring actors,” including “long-standing anti-vaccine influencers and activists, wellness and lifestyle influencers, pseudomedical influencers, conspiracy theory influencers, right-leaning political influencers, and medical freedom influencers.” *Id.*

1241. Like the EIP, the VP admits that the speech it targets is heavily speech by “domestic actors,” *i.e.*, American citizens: “Foreign ... actors’ reach appeared to be far less than that of domestic actors.” *Id.*

1242. Like the EIP, the VP indicates that it pushes platforms to adopt more aggressive censorship policies on COVID vaccine-related content: “While online platforms have made progress in creating and enforcing vaccine related policies, gaps still exist.” *Id.* at 10 (3).

1243. Like the EIP, the VP notes that it did not only observe and report on misinformation but took action to stop the spread of misinformation: “Detection, however, was only part of the

work. The Virality Project also sought to relate its findings to the public and to stakeholders in public health, government, and civil society.” *Id.*

1244. The VP indicates that it should increase the efficiency of having “government partners” share “tips” of misinformation with entities like the VP, stating that “[r]esearch institutions” should “[s]treamline a tip line process to make it easy for civil society and government partners to share observations. Establish a feedback loop to discuss what types of analysis or tips are most relevant.” *Id.*

1245. The VP strives to “[d]evelop and maintain clear channels of communication that enable federal, state, and local agencies to understand and learn from what might be happening in other regions. Federal Information Sharing and Analysis Centers (ISAC) are one path forward.” *Id.* at 11 (4).

1246. The VP recommends that the federal government “[i]mplement a Misinformation and Disinformation Center of Excellence housed within the Cybersecurity and Infrastructure Security Agency.” *Id.*

1247. The VP states that social-media “[p]latforms owe the public *transparency and accountability* as they face the challenges of deciding what to surface, what to curate, and how to minimize the virality of harmful false claims. Tech platform policies against public health misinformation should be clear and precise, and their enforcement should be consistently applied.” *Id.* (emphasis added). The Surgeon General copied this messaging verbatim in his Health Advisory, which he launched at the VP.

1248. The VP calls for more aggressive censorship of COVID-19 “misinformation,” stating: “To these ends, platforms should: Consistently enforce policies, particularly against recurring actors,” and “Continue to improve data sharing relationships with researchers.” *Id.* The

emphasis on “data sharing relationships” is directly echoed in the White House’s and the Surgeon General’s demands that platforms share their internal data with researchers.

1249. The VP boasts that the “Office of the Surgeon General incorporated VP’s research and perspectives into its own vaccine misinformation strategy,” and specifically cites the Surgeon General’s Health Advisory on this point. *Id.* at 11 (4) & 13 (6) n.5 (citing Off. U.S. Surgeon Gen., *Confronting Health Misinformation The U.S. Surgeon General’s Advisory on Building a Healthy Information Environment* (July 15, 2021), <https://hhs.gov/sites/default/files/surgeon-general-misinformation-advisory.pdf>).

1250. “Over the course of its seven months of work, the Virality Project observed narratives that questioned the safety, distribution, and effectiveness of the vaccines.” *Id.* at 11 (4).

1251. Like the EIP, the VP states that “[t]he enormity of the challenge demands a *whole-of-society response*,” *id.* at 12 (5) (emphasis added), and calls for more federal agencies to be involved through “cross-agency collaboration,” *id.* The Surgeon General adopted and echoed the VP’s call for a “whole-of-society” response.

1252. The VP admits that “it was not always clear what *was* misinformation; in the case of the novel coronavirus, it was often simply not yet clear what was true or where scientific consensus lay,” *id.* at 14 (7), and that “[g]round truth about COVID-19 was rapidly evolving, and even institutional experts were not always aligned on the facts,” *id.* at 15 (8).

1253. According to the VP, “[v]iral posts that claimed to have the answers to the public’s most pressing questions appeared online; fact-checkers struggled to evaluate them, and platforms wrestled with whether to leave them up or take them down. Social media influencers of varying backgrounds debated the merits and efficacy of masking, providing detailed breakdowns of their analyses in public posts.” *Id.*

1254. The VP attributes opposition to mask mandates and lockdowns to right-wing political ideology: “In the months before vaccines or treatments emerged, governments worldwide turned to preventative measures such as masking requirements and lockdowns. In the US, these measures were quickly framed as affronts to liberty by facets of the US right-wing political spectrum, turning individual responses to the virus into a function of political identity.” *Id.*

1255. The VP suggests that it flagged for censorship COVID-related posts with enormous engagement on social media, reporting for example that “[b]efore the major social media platforms began to take down [one] video—which was in violation of their COVID-19 misinformation policies—[it] amassed tens of millions of views and was shared into a wide variety of communities.” *Id.* at 16 (9).

1256. The speech that the VP decries is all quintessential First Amendment–protected speech. *See, e.g., id.* (“Several prominent anti-vaccine activists began to post regularly about COVID-19; their followings began to increase, despite prior platform efforts to reduce the spread of false and misleading claims from anti-vaccine figures. As the possibility of a vaccine became more of a reality as 2020 progressed, anti-vaccine activists focused on preemptively undermining uptake. Several of the vaccines in development used relatively novel mRNA technology, which afforded an opportunity to present them as untested, unsafe, rushed, or risky, even to audiences who had taken all previously recommended vaccines.”).

1257. “It was against this backdrop” of widespread First Amendment–protected speech on social media “that the Virality Project (VP) came together. A collection of research institutions had previously collaborated through the Election Integrity Partnership (EIP) to identify and understand the spread of election mis- and disinformation in the US during the 2020 presidential campaign. In December 2020, these partners jointly observed that the same tactics used to great

effect during the 2020 election were already in use to expand the spread of COVID-19 vaccine mis- and disinformation.” *Id.* The VP used the same tactics as the EIP to engage in “rapid response” to misinformation: “The Project’s broad array of institutions enabled information sharing and *rapid response* when false and misleading information percolated across social platforms.” *Id.* (emphasis added).

1258. The VP was overtly biased against “anti-vaccine” viewpoints from the beginning: “The Project’s original framing document articulated the threat: **A surge of anti-vaccine disinformation will pose significant challenges to the rollout and public adoption of COVID-19 vaccines in the United States.**” *Id.* (bold in original).

1259. Just like the EIP, the VP boasts that it is a “multistakeholder collaboration” that includes “government entities” among its key stakeholders: “The Virality Project adopted a *multistakeholder collaboration with civil society organizations, social media platforms, and government entities* to respond to misand disinformation around the novel vaccines.” *Id.* at 17 (10) (emphasis added).

1260. “The research institutions that comprised the Election Integrity Partnership—the Stanford Internet Observatory, the University of Washington’s Center for an Informed Public, the Atlantic Council’s Digital Forensic Research Lab, and Graphika—along with new partners the National Conference on Citizenship (NCoC)’s Algorithmic Transparency Institute and New York University’s Center for Social Media and Politics and Tandon School of Engineering—all elected to participate in this new initiative: the Virality Project.” *Id.*

1261. The VP report complains that “the internet has no editorial gatekeepers.” *Id.* at 18 (11).

1262. The VP decries the influence of “social media influencers” such as “Doctors” and “Mommy Bloggers.” *Id.* at 19 (12).

1263. According to the VP, “[t]hese influencers have adopted the best practices of communication in the internet age, and their effectiveness in drawing in online users is made evident by the mass followings they have acquired across social media sites: platforms as varied as Pinterest, Instagram, and YouTube...” *Id.*

1264. The VP targets misinformation “tactics” that involve speech that the VP does not contend is false or even falsifiable. It states that speakers “use tactics that have persisted over time, many of which have been used in service of spreading mis- and disinformation in contexts beyond the vaccine conversation; for example, the Election Integrity Partnership observed several of these tactics during the lead-up to the 2020 US election.” *Id.*

1265. These “tactics” include such things as “**Hard-to-Verify Content:** Using content that is difficult to fact-check or verify, such as personal anecdotes”; “**Alleged Authoritative Sources:** Using or pointing to information from an alleged public health official, doctor, or other authoritative source”; “**Organized Outrage:** Creating events or in-person gatherings, or using or co-opting hashtags”; and “**Sensationalized/Misleading Headlines:** Using exaggerated, attention-grabbing, or emotionally charged headlines or click-bait.” *Id.* (bold in original). Notably, none of these “tactics” involves false speech, and all are protected by the First Amendment.

E. The Virality Project Targets Plaintiff Jill Hines and Health-Freedom Groups.

1266. According to the VP report’s taxonomy, Plaintiff Jill Hines, the founder of Health Freedom Louisiana, constitutes a “medical freedom influencer[.]” who engages in the “tactic” of “**Organized Outrage**” simply because she “create[ed] events or in-person gatherings” to oppose

mask and vaccine mandates in Louisiana. *See id.* at 9, 19 (2, 12) (bold in original). But this “tactic” is First Amendment–protected activity.

1267. Another “tactic” decried by the VP is “**Group super-spreader:** An individual account sharing posts into multiple online groups.” *Id.* at 20 (13) (bold in original). This is also quintessential First Amendment expression.

1268. The VP report repeatedly emphasizes the problem of “health freedom” or “medical freedom influencers” like Plaintiff Jill Hines. It identifies “Liberty” as a “trope” of social-media disinformation: “*Liberty*: Individuals have the right to ‘**health freedom**’; no government or employer should be able to tell people what to put in their bodies.” *Id.* (italics in original) (bold added).

1269. The VP also identifies political and religious opinions—including well-established and widespread views—as “themes” and “tropes” of anti-vaccine “misinformation,” such as: “*Distrust of industry*: Vaccines are produced by profit-motivated pharmaceutical companies that have repeatedly concealed harm in pursuit of profit”; “*Religiosity*: Vaccines contain materials that are objectionable on religious grounds”; and “*Conspiracy*: ... Governments have covered up information proving vaccines are dangerous, [and] Doctors and politicians who advocate for vaccines have been bought off by ‘Big Pharma.’” *Id.*

1270. Like the EIP, the VP agrees that government pressure pushes social-media platforms to adopt more aggressive censorship policies: “Platforms had started adapting their policies to address vaccine misinformation in early 2019, spurred by public outcry, negative press coverage, and *government inquiries...*” *Id.* at 21 (14) (emphasis added).

1271. The VP boasts that its “analysts had to develop a nuanced and nimble understanding of what content constituted policy violations”—evidently because it was flagging content to platforms for censorship in real time. *Id.* at 21-22 (14-15).

1272. The VP extensively monitored and tracked Americans’ speech about COVID-19 and vaccines on social media: “To surface in-scope content, VP’s team of analysts were divided into topical detection teams, referred to as pods.... These pods ... enabled analysts to develop and ensure sustained familiarity with how the COVID-19 vaccine conversation was evolving within particular communities on public platforms.” *Id.* at 22 (15).

1273. This monitoring involved VP analysts reading and searching Americans’ social-media accounts in real time: “Analysts in each pod assessed emerging narratives that were within scope ... , surfacing content both via qualitative observation of the pages and accounts, and by using lists of common terms associated with vaccine hesitancy and long-standing anti-vaccine rhetoric.” *Id.*

1274. The VP states that “Anti-vaccine activists and influencers, including those discussed in the Center for Countering Digital Hate’s ‘Disinformation Dozen’ Report ... surfaced the greatest amount of content ...” *Id.* at 23 (16).

1275. This covert monitoring of Americans’ online speech about vaccine was extensive, sophisticated, and adaptive: “At the beginning of the project, analysts used broad search terms (“vaccine,” “jab”) to surface relevant content and incidents (specific events or stories), but gradually began to incorporate a combination of machine learning and hand coding to identify additional recurring narratives relevant to the four in-scope categories. This included terms related to medical freedom under “Vaccine Distribution,” or severe adverse effects and death under

“Vaccine Safety,” among others. As narratives and new keywords emerged throughout the analysis period, analysts continually refined their searches.” *Id.*

1276. This mass-social-media-surveillance project included federal agencies as key “stakeholders”: “The Virality Project established a nonpartisan, multi-stakeholder model consisting of health sector leaders, federal health agencies, state and local public health officials, social media platforms, and civil society organizations. These stakeholders provided tips, feedback, and requests to assess specific incidents and narratives, and each entity type brought specific expertise to bear on understanding COVID-19 vaccine hesitancy.” *Id.* at 24 (17).

1277. Thus, the VP’s “multi-stakeholder model” included government agencies and officials, including “federal health agencies” and “state and local public health officials,” working alongside “social media platforms” to combat vaccine-related “misinformation.” *Id.*

1278. The government “stakeholders” such as “federal health agencies” and “state and local public health officials” were among those who “provided tips” and “requests to assess specific incidents and narratives,” *i.e.*, flagging content for social-media censorship. *Id.*

1279. The VP emphasizes the role of “Federal government agencies” in the VP, including the CDC and the Office of Surgeon General: “**Federal government agencies** served as coordinators for national efforts. The Virality Project built strong ties with several federal government agencies, most notably the Office of the Surgeon General (OSG) and the CDC, to facilitate bidirectional situational awareness around emerging narratives. The CDC’s biweekly “COVID-19 State of Vaccine Confidence Insights” reports provided visibility into widespread anti-vaccine and vaccine hesitancy narratives observed by other research efforts.” *Id.* (bold in original).

1280. Social media platforms served as stakeholders alongside federal and state officials: “**Platforms** were the final stakeholders in the VP effort. Six social media platforms engaged with VP tickets—Facebook (including Instagram), Twitter, Google (including YouTube), TikTok, Medium, and Pinterest—*acknowledging content flagged for review and acting on it in accordance with their policies*. On occasion, platforms also provided information on the reach of *narratives previously flagged by VP*, which provided a feedback loop leveraged to inform the Project’s understanding of policies and ongoing research.” *Id.* at 25 (18) (bold in original) (italics added).

1281. Thus, the VP openly proclaims that it “flagged” “content ... for review” to platforms to “act[] on it in accordance with their policies.” *Id.* Government officials provided “tips” to the VP about misinformation on social media, and the VP flagged it for platforms for censorship.

1282. The VP emphasizes the importance of federal officials and social-media platforms in its collaboration on censorship: “As the effort progressed, *input from these partners was crucial* in defining the VP’s output formats and in surfacing where the impacts of vaccine mis- and disinformation were being felt offline.” *Id.*

1283. The VP engaged in continuous, ongoing communication with federal officials, platforms, and other stakeholders: “The Virality Project delivered 31 weekly briefings focused on increasing situational awareness and enabling the stakeholders working on countering vaccine mis- and disinformation to develop the most effective possible response.” *Id.*

1284. The VP boasts that it “provided strategic insights” to federal officials in combating misinformation: “Briefings directly informed counter-messaging efforts by public health stakeholders ... and public health officials (for example, the CDPH), and *provided strategic*

insights to government entities such as the OSG, CDC, and the Department of Health and Human Services.” Id. (emphasis added).

1285. Further, the “Stanford Internet Observatory and the Virality Project also hosted Surgeon General Vivek Murthy for a seminar on vaccine mis- and disinformation, including the rollout of the Surgeon General’s advisory on health misinformation.” *Id.* at 27 (20).

1286. Like the EIP, the VP used “tickets” to track social-media narratives, where each “ticket” could encompass many postings: “As part of the Virality Project, analysts created tickets documenting URLs of in-scope content. In total, 911 tickets were created, tracking both specific pieces of misinformation and broader narratives. At the end of the monitoring period, analysts had created 845 tickets tracking specific vaccine misinformation incidents (events or pieces of content) and 66 tickets tracking broad narratives.” *Id.* at 34 (27).

1287. The VP aimed, not just to track, but to “respond to” misinformation: “The Virality Project operated with a team of analysts drawn from across the partner organizations. Workflows were designed to detect, analyze, and *respond to* incidents of COVID-19 vaccine-related disinformation in online ecosystems.” *Id.* (emphasis added).

1288. “From February to August 2021, VP analysts *systematically monitored activity across social media platforms* to document emerging narratives and trends in public discourse while also tracking the popularity and spread of older content.” *Id.* (emphasis added).

1289. “The [VP] used the Jira Service Desk software to log mis- and disinformation incidents that were determined to be in scope for specific areas of the public COVID-19-related conversation. For each single incident of anti-vaccine mis- or disinformation surfaced during monitoring, an analyst filed a ticket that provided a brief description of the incident, including

engagement numbers at the time of creation and links to relevant social media posts.” *Id.* at 35 (28).

1290. The VP boasts that it targeted online speech for censorship before it could go viral, thus imposing massive prior restraints on the amplification of targeted content: “Tickets also enabled analysts to quickly tag platform or health sector partners to ensure their situational awareness of high-engagement material that appeared to be going viral, so that *these partners could determine whether something might merit a rapid public or on-platform response* (such as a label).” *Id.* at 37 (30) (emphasis added).

1291. The VP reported the content in 174 “tickets” to social-media platforms for censorship: “Managers gave all incident analyses a final review for quality-control purposes, to determine appropriate next steps and to make a final decision about whether tickets should be shared with external stakeholders. *Of the 911 incidents monitored, 1 were referred to platforms for potential action.*” *Id.* (emphasis added).

1292. Like the EIP, the VP appears to have had direct access to Twitter’s and YouTube’s internal data about speech spreading on its platform, but not Facebook’s: “The engagement data or video view data for links associated with each ticket was collected differently depending on the social media platform in question: Facebook and Instagram: CrowdTangle API; Twitter: Twitter API...” *Id.* at 38 (31).

1293. Like the Surgeon General and the White House, the VP complains that the platforms must make their internal data more available to VP: “Due to limited transparency from social media platforms, engagement is the closest proxy researchers can use to understand what content users are seeing on social media platforms. Metrics such as impression counts are generally unavailable to outside researchers.” *Id.*

1294. The VP’s monitoring tracked content with about 6.7 million engagements on social media per week, or over 200 million over the seven months of the reported project: “Average weekly engagement with content tracked across all Virality Project tickets was 6.7 million.” *Id.* at 39 (32).

1295. The vast majority of speech flagged and tracked by the VP was not false or incorrect speech: “The most commonly employed tactics were Hard-to-Verify Content and Alleged Authoritative Source.” *Id.* at 41 (34); *see also id.* at 42 (35) fig.2.6 (showing predominance of these two “tactics”).

1296. According to the VP, “[o]f the engagement captured by tickets, more than a third came from content primarily spread by accounts that demonstrated recurring success making content go viral; we refer to them here as ‘recurring actors.’” *Id.* at 41 (34).

1297. The VP boasts that it induced “platform action” against such “recurring actors” in 2021: “Recurring actors drove a majority of engagement in the first half of the study period, but fell off in importance after that, most likely due to platform action against certain users beginning in the late spring of 2021.” *Id.* at 43 (36).

1298. Like Jennifer Psaki at the White House, the VP repeatedly cites the Center for Countering Digital Hate’s report on the “Disinformation Dozen.” *Id.* at 23 & 32 n.43, 43 & 48 n.7, 111 & 129 n.179.⁴

1299. “Four distinct weeks during the monitoring period had incidents observed by Virality Project analysts that generated more than 10 million engagements.” *Id.* at 43 (36).

1300. One of these “Viral Incidents” tracked by the VP was: “In July, posts went viral expressing outrage at attempts by the Biden administration to engage in vaccine outreach.” *Id.* at

⁴ Report pages 16 & 25 n.43, 36 & 41 n.7, 104 & 122 n.179.

45 (38). This incident did not involve any vaccine-related misinformation at all, but core political speech: “the Biden administration used the phrase ‘door-to-door’ to describe a push for on-the-ground community-led efforts to persuade more Americans to get vaccinated. Prominent Republican politicians miscast this as a forced vaccination campaign by ‘Needle Nazis’ and a prelude to the government knocking on the door to take away guns.” *Id.* at 46 (39).

1301. The VP boasts that censorship enforcement was effective, especially in “deplatforming” key actors: “The decline of content from recurring actors midway through the monitoring period potentially reflects a policy impact, as deplatforming these actors led to an apparent reduction in false or misleading content.” *Id.* at 47 (40).

1302. The VP tracked and flagged “Claims that [supposedly] misrepresent ... vaccine mandates,” not just misinformation about the vaccines. *Id.* at 50 (43).

1303. According to the VP, “content” that “leveraged decontextualized statistics from the US Department of Health and Human Services’ Vaccine Adverse Event Reporting System (VAERS) database” is misinformation. *Id.* at 51 (44).

1304. According to VP, it was also misinformation when true adverse health events from vaccines were “shared absent context”: “Rare incidents documenting verified adverse health events, including blood clotting and heart inflammation, were shared absent context, often in an effort to present them as common and significant risks.” *Id.*

1305. According to the VP, discussing “breakthrough” cases and “natural immunity” was also misinformation: “False and misleading narratives related to efficacy sought to undermine the perceived benefits of vaccines. These narratives included stories of people diagnosed with COVID-19 after being vaccinated—“breakthrough” cases, particularly in the time of the Delta variant—to promote the idea that the vaccines aren’t effective. Later, the idea that natural

immunity from infection is superior to immunity from vaccination became a political talking point raised repeatedly by right-leaning political influencers, despite inconclusive scientific evidence.”

Id.

1306. According to VP, misinformation also included “discussions of vaccine passports and mandates (including months before any state or federal officials began advocating for them).”

Id.

1307. The VP also counts as misinformation “claims that the government was headed toward mandating an unsafe vaccine.” *Id.* The government did, of course, eventually mandate the vaccines for most Americans.

1308. The VP also treated Americans’ “long-standing mistrust of pharmaceutical companies’ profit motives” as part of anti-vaccine misinformation. *Id.*

1309. “Conspiracy Theories” that “assign blame to ... government” are also misinformation to be tracked and censored, according to VP. *Id.*

1310. According to VP, “personal anecdotes” about “vaccine injuries and severe side effects—ranging from rashes, to blood clots, to death” are also misinformation.” *Id.* at 52 (45).

1311. “Personal anecdotes often made their way into mainstream media coverage after gaining traction online. Distortions of official government statistics—most often from VAERS, described in more depth later in this section—were used both to reinforce the personal anecdotes and for focused misinformation solely discussing the statistics.” *Id.*

1312. According to VP, “stripp[ing] both individual stories and official statistics of important context” is misinformation. *Id.*

1313. According to VP, “adverse event stories” were objectionable because they were “employed to push back against vaccine mandates.” *Id.* at 52-53 (45-46).

1314. Like the White House and Dr. Fauci, the VP treats Alex Berenson as a major malefactor in spreading COVID-19 vaccine “misinformation.” *See id.* at 54, 57 (47, 50).

1315. Like the White House and Rob Flaherty, the VP flagged and tracked Fox News host Tucker Carlson as a spreader of vaccine misinformation: “*In May 1, Tucker Carlson misrepresented VAERS data on his talk show, decontextualizing it while claiming that 3,362 Americans had died following COVID-19 vaccinations between December 2020 and April 2021, equating to roughly 30 people every day.*” *Id.* at 57 (50) (emphasis added).

1316. Health Freedom groups, like Plaintiff Jill Hines’s group Health Freedom Louisiana, are particular targets of the VP’s tracking and censorship activities.

1317. The VP report includes an entire section on such groups: “Section 3.2.2 – Government Overreach and Medical Freedom Narratives.” *Id.* at 59 (52).

1318. According to the VP, “[o]ne of the primary long-standing themes of anti-vaccine distribution narratives is that mass vaccine distribution constitutes a government overreach. The movement sees vaccine mandates, including, historically, school vaccine requirements, as an assault on ‘health freedom’ or ‘medical freedom.’” *Id.*

1319. According to the VP, “[i]n 2020, following the emergence of COVID-19, these same health freedom groups expanded their vaccine protests to social distancing, masks, and other prevention measures.” *Id.* This includes Plaintiff Jill Hines.

1320. The VP describes the role of Facebook groups—also employed by Jill Hines—in organizing health freedom groups to oppose vaccine mandates: “groups emerged on platforms such as Facebook during the pandemic, with names specifically related to COVID-19 or mRNA vaccines, to assist in discoverability; some grew their numbers into the tens of thousands.” *Id.*

1321. The VP focused, not just on misinformation about vaccines, but political speech and political organizing against “vaccine passports and vaccine mandates”: “During the VP’s period of analysis, narratives about government overreach and medical freedom focused on two areas of controversy: vaccine passports and vaccine mandates.” *Id.*

1322. The VP treats as misinformation political speech and political opinions on these topics: “This amplification hinged upon misleading framing that suggested the implementation of any form of vaccine passport would be compulsory. In reality, the plans for many programs were entirely optional. Other framing from domestic right-leaning political actors created a portrait of governments as prying or snooping into citizens’ private matters.” *Id.* at (60) 53.

1323. The VP views virtually all conservative speech opposing government-imposed COVID mandates as misinformation: “Activists pushed the idea that through a passport system, governments and ‘Big Tech’ were limiting the public’s freedoms—situating the conversation within a larger set of narratives surrounding pandemic public health regulations like mask mandates, lockdowns, and social distancing.” *Id.*

1324. Like the EIP, the VP specifically flagged Jim Hoft’s *The Gateway Pundit* as a purveyor of misinformation and COVID “conspiracy theories: “Headlines sometimes hawked conspiracy theories: one Gateway Pundit headline, “The Great Reset: Big Tech and Big Pharma Join Forces to Build Digital COVID Vaccination Passport,” was a nod to groups such as QAnon.... The article alleged collusion between Big Tech and Big Pharma that would threaten ‘individual rights.’” *Id.* at 60-61 (53-54) & 68 (75) n.49 (citing Joe Hoft, *The Great Reset Big Tech and Big Pharma Join Forces to Build Digital COVID Vaccination Passport*, Gateway Pundit (January 17, 2021), <https://thegatewaypundit.com/great-reset-big-tech-big-pharma-joining-forces-build-digital-covid-vaccination-passport>).

1325. Other right-leaning speakers flagged by the VP include One America News Network, Breitbart News, and others. *Id.* at 60 (53).

1326. The VP attributes political successes such as state-level bans on vaccine passports to such supposed misinformation. *Id.* at 61 (54).

1327. The VP attributes opposition to vaccine mandates by employers to such supposed misinformation: “The backlash to COVID-19 vaccine requirements for employment and other activities parallels the conversation about vaccine passports. It, too, relies on and attempts to exacerbate distrust in public health officials and government institutions.” *Id.*

1328. According to VP, even truthful information about vaccine effects on health that are still being studied constitutes misinformation: “In early 2021, users on Twitter, Facebook, and Reddit reported unverified reproductive side effects, ranging from abnormal menstrual cycles to miscarriages and infertility. ... At the time there was no medical consensus on the vaccine’s effect on reproductive health, yet anti-vaccine activists presented the theory as fact and evidence of harm. Research is ongoing....” *Id.* at 66-67 (59-60).

1329. According to VP, even “videos that appeared to be created satirically” are misinformation when they “were taken seriously.” *Id.* at 68 (61).

1330. Alex Berenson is mentioned 49 times in the Virality Project report. *Id.* at 54, 57, 71, 73, 96-97, 122-23, 188-90, 195, 207-08.⁵

1331. “Health freedom” or “medical freedom” groups are discussed dozens of times in the VP report. The word “freedom” occurs 100 times, almost always in direct connection with a discussion of “health freedom” or “medical freedom” groups, influencers, or content. *See id.* at 6,

⁵ Report pages 47, 50, 64, 66, 89-90, 115-16, 181-83, 188, 200-01.

9, 20, 23, 59-62, 66, 70, 74, 77, 82, 84-86, 93-96, 105, 117-18, 121-22, 130-31, 137-38, 141, 143, 187, 197-98, 201, 204, 210, 220-22.⁶

1332. The VP defines “Medical freedom influencers” as actors who “are averse to government interference in individuals’ personal lives. While they explicitly advocate for “health freedom” or “vaccine choice,” these actors often propagate vaccine doubt by contextualizing the choice with misleading claims of vaccines’ adverse medical consequences.” *Id.* at 82 (75).

1333. Fox News host Tucker Carlson, who has wide audiences in Missouri and Louisiana, is cited 42 times in the Virality Project report. *See id.* at 57, 73, 87, 91-92, 98, 115, 119-20, 122-23, 193, 201, 208, 215-16, 218.⁷

1334. In fact, the VP report cites the entire Fox News channel as a source of vaccine misinformation: “Fox News has played a particularly pivotal role in spreading vaccine misinformation and anti-vaccine beliefs during the COVID-19 pandemic.... [B]etween June 28 and July 11, 2021, Fox News ran 129 segments about the COVID-19 vaccine on its cable broadcast; more than half of those segments included unverified claims that undermined vaccination efforts.” *Id.* at 91 (84).

1335. According to VP, “Fox News television host Tucker Carlson has been one of the most prominent and sensationalist spreaders of false or misleading information about vaccines throughout the COVID-19 pandemic.” *Id.*; *see also id.* at 91 (describing “Right-wing media personality Tucker Carlson” as part of a “cast of recurring characters” that influenced vaccine hesitancy in Spanish- and Chinese-speaking communities).

⁶ Report pages iii, 2, 13, 16, 52-55, 59, 63, 67, 70, 75, 77-79, 86-89, 98, 110-11, 114-115, 123-24, 130-31, 134, 136, 180, 190-91, 194, 197, 203, 213-15.

⁷ Report pages 50, 66, 80, 84-85, 91, 108, 112-13, 115-16, 186, 194, 201, 208-09, 211.

1336. The VP also cites Candace Owens and The Daily Wire as purveyors of vaccine misinformation. *See, e.g., id.* at 86, 92 (79, 85).

1337. The VP cites Robert F. Kennedy, Jr., a well-known anti-vaccine activist with wide followings in Missouri and Louisiana, as one of the most influential purveyors of vaccine misinformation. *Id.* at 83 (76). The VP describes Kennedy as “especially pernicious” because he has a large audience: “RFK Jr.’s activism is especially pernicious because, like other long-standing influencers, he has a large and committed following and has become somewhat of a household name in the US.” *Id.*

1338. The VP also cites America’s Frontline Doctors and its founder, Dr. Simone Gold, as a source of vaccine misinformation. *Id.* at 87-88 (80-81).

1339. The VP notes that “Simone Gold, a licensed emergency room physician, was the second most prominent PMI across Virality Project’s tickets. Gold is the leader of America’s Frontline Doctors.... Gold has been influential since the summer of 2020, when the White Coat Summit, an event broadcast online in which members of America’s Frontline Doctors spoke on the steps of the Supreme Court. The White Coat Summit promoted hydroxychloroquine both as a preventative measure and as a cure for COVID-19.” *Id.*

1340. The VP treats Dr. Joseph Mercola, another anti-vaccine speaker with wide audiences in Missouri and Louisiana, as a purveyor of vaccine misinformation. *Id.* at 87 (80). Again, the VP criticizes Mercola precisely because his speech reaches wide audiences. *Id.*

1341. The VP asserts that Gold’s “false and misleading claims about the COVID-19 vaccine” include core political speech like “encouraging her followers to boycott companies for their vaccine protocols” and “organizing a cross-country tour to fight back against ‘censorship, chaos, and the undeniable slide towards communism that lurks beneath the tyrannical lockdowns

for governmental ‘public health’ policy.’” *Id.* at 88 (81). To the VP, political “organizing” to oppose vaccine mandates and lockdowns constitutes a “false and misleading claim[.]” *Id.*

1342. The VP asserts that “the right-leaning media ecosystem differs from the rest of the media environment in ways that make it especially vulnerable to the spread of mis- and disinformation.” *Id.* at 91 (84).

1343. The VP states that “[t]he newest iteration of medical freedom, adapted for COVID-19, challenges the legitimacy of government or corporate vaccine mandates and public health interventions specific to COVID-19, including vaccine passport systems and masking requirements.” *Id.* at 93 (86).

1344. The VP states that “medical freedom” groups spread misinformation “across all 50 states”: “Medical freedom influencers (MFIs) active in the anti-COVID-19-vaccine movement were fairly distinct from other categories of influencer in that rather than hinging on a handful of key (and often celebrity-status) individuals, they spread their narratives via a franchise model *across all states.*” *Id.* (emphasis added).

1345. The VP indicates that it tracked and flagged “medical freedom” groups “at a messaging and organizing level,” *i.e.*, the level where Jill Hines was targeted: “As medical freedom activists have fought requirements imposed by states, cities, or private employers, they have learned from each others’ successes and failures—at a messaging and an organizing level—and have brought those lessons to their local communities. What one state does, another state will often echo.” *Id.* at 94 (87).

1346. Like Andrew Slavitt, the VP treats Alex Berenson as one of the “most significant influencer[s]” who opposes vaccines: “Alex Berenson is perhaps the most significant influencer who defies categorization. A former New York Times reporter and a bestselling novelist with no

specific anti-vaccine background . . . , Berenson . . . over time evolved into a key player in repeatedly spreading false and misleading information about the COVID-19 pandemic and vaccines. He underplayed the danger of the virus and challenged the efficacy of vaccines and masks, even as evidence supported their value as life-saving public health measures.” *Id.* at 96 (89) (providing an image of Berenson’s tweets).

1347. The VP disfavors Berenson because he reaches wide audiences and criticizes the government: “Berenson’s popular posts on Twitter notably claimed to be “digging up” or “uncovering” information that was hidden from the public about vaccine safety or effectiveness. In one incident in July 2021, Berenson amplified a conspiracy theory from a statement filed with a lawsuit from America’s Frontline Doctors stating that the government was covering up more than 45,000 vaccine-related deaths. Berenson’s 17-tweet thread, which received over 16,000 interactions on July 21, 2021, claimed that the CDC had “quietly more than DOUBLED” the number of deaths reported in VAERS, suggesting the CDC had misled the public.” *Id.* at 96-97 (89-90).

1348. The VP notes that Berenson had wide audiences nationwide when he was censored: “Twitter permanently deplatformed Berenson in August 2021 for repeated violations of Twitter’s COVID-19 falsehoods policy. At the time he lost his account, he had more than 200,000 followers.” *Id.* at 97 (90).

1349. The VP states that the government pushed for “accountability” from platforms in successfully pressuring them to adopt vaccine-related censorship policies in the years leading up to COVID-19: “During and after the [2018-19 measles] outbreaks, scientists and congressional leaders sought accountability from the platforms, inquiring about the extent to which vaccine

hesitancy among impacted communities had been exacerbated by misinformation on their products.” *Id.* at 131 (124).

1350. The VP provides a timeline of policy changes becoming more restrictive of vaccine-related misinformation that shows repeated tightening of policies by Facebook, Twitter, and YouTube once President Biden had been elected. *Id.* at 133 (126) fig.5.1.

1351. The VP calls for more aggressive censorship policies to target speech that is not false or incorrect and that constitutes core political speech: “While progress has been made since platforms first developed vaccine-related policies in 2019, clear gaps in platform policy exist with respect to moderating vaccine-related content, including posts that employ personalized stories, medical freedom claims, and misleading headlines and statistics.” *Id.* at 143 (136).

1352. The VP also calls for more aggressive action to “suppress content” and “deplatform accounts”: “In addition, policies about the actions platforms can take to suppress content, promote trusted voices, and deplatform accounts vary widely from platform to platform and are still not enforced consistently, both within and across platforms.” *Id.*

1353. Just like the Surgeon General, the VP demands “more transparency” for “external researchers” (like those at the VP, working closely with government) to oversee the platforms’ censorship efforts: “It should be noted that understanding the impact of platform policy is limited by what information is publicly available. It is crucial that platforms provide more transparency on each moderation approach and allow external researchers the ability to independently verify the success and impacts of these interventions.” *Id.*

1354. Like the Surgeon General, the VP argues that “a whole-of-society effort is needed” to stop the spread of so-called misinformation: “[A] whole-of-society effort is needed in which

stakeholders build robust and persistent partnerships to ensure that significant high-harm claims can be addressed as they arise.” *Id.* 147 (140).

1355. This “whole-of-society” effort includes an active role for the government in censoring disfavored speech: “The Virality Project sought to do just that by bringing together four types of stakeholders: (1) research institutions, (2) public health partners, (3) government partners, and (4) platforms. Our recommendations recognize the collective responsibility that all stakeholders have in mitigating the spread of mis- and disinformation...” *Id.*

1356. According to the VP, “The Virality Project offers an early template for structuring interaction between research institutions and nonacademic stakeholders (including government entities, health practitioners, and private companies).” *Id.*

1357. According to the VP, it used “ingenuity” to facilitate “the *intake* of tips from ... government partners”: “An area that required ingenuity was creating a framework for facilitating the *intake* of tips from civil society and government partners.... However, their tips are often highly valuable, so overcoming this challenge is a priority for future efforts.” *Id.* at 148 (141) (emphasis added).

1358. The VP recommends an even more “streamlined” process for “government partners” to provide “tips” of misinformation to be reported for censorship, and it notes that it received tips through “informal exchanges, such as Zoom meetings or calls with our partners”: “Streamline tip line processes for civil society and government partners. Set up an efficient channel for intaking external tips.... The Virality Project often had to leverage informal exchanges, such as Zoom meetings or calls with our partners, to receive the tips verbally or encourage additional reporting. In future projects, external reporting channels should be strengthened via an easier

means of reporting and increased access to the reporting channels, especially for partners on the ground (such as health practitioners or government health officials).” *Id.*

1359. The VP repeatedly cites the work of Surgeon General Murthy, noting that “[d]uring a July 15, 2021, panel with the Virality Project, US Surgeon General Vivek Murthy discussed the importance of vaccination by sharing his own story about COVID-19 ... alongside data around the effectiveness of the vaccines.” *Id.* at 149 (142). “In the context of vaccine misinformation specifically, some examples of engagement best practices can be found in the Virality Project’s July 15, 2021, hosted discussion with Surgeon General Vivek Murthy...” *Id.* at 150 (143).

1360. According to VP, “While the federal government (through DHHS, the CDC, and the Surgeon General) has ramped up its engagement and communications, more can be done moving forward. There are several areas where government officials can focus to improve their ongoing response to mis- and disinformation surrounding the COVID-19 vaccines.” *Id.* at 149-50 (142-43).

1361. These include “real-time response” to misinformation on the model provided by CIS and the EI-ISAC for election speech: “Federal, state, and local government officials should coordinate real-time response to emerging mis- and disinformation. ... For example, as voting-related mis- and disinformation arose in the 2020 presidential election, the Election Infrastructure Information Sharing and Analysis Center (EI-ISAC) served a critical role in sharing information with the Election Integrity Partnership and pushing its rapid response analysis back out to election stakeholders across all states... Moving forward, the government should support the establishment of such an information-sharing mechanism.” *Id.* at 150 (143).

1362. The VP recommends that the federal government “[i]mplement a Misinformation and Disinformation Center of Excellence (CoE) housed within the federal government,” which

“would centralize expertise on mis- and disinformation within the federal government at the Cybersecurity & Infrastructure Security Agency (CISA) with its existing mis- and disinformation team,” *i.e.*, Brian Scully’s group. *Id.*

1363. The VP’s “Recommendations to Platforms” reflect near-verbatim language used by the Surgeon General’s Health Advisory: “Consistently enforce policies against recurrent actors. ... While many platforms have improved transparency around content moderation, there is still inconsistent enforcement of policies, notably in the case of recurring actors. More consistency and transparency is needed around enforcement practices, particularly when prominent or verified accounts are involved. While past policy environments have been slower to enforce policies against prominent accounts, these are the accounts with the greatest potential for impact. If anything, they may merit closer scrutiny.” *Id.* at 152 (145).

1364. Likewise, the VP recommends that platforms “[c]ontinue to prioritize and improve data sharing. The Virality Project’s research would not have been possible without access to public platform data. For privacy reasons, some data understandably may be limited, but in general, establishing standardized guidelines about how platforms can share data with research institutions is needed.” *Id.* at 153 (146).

1365. “Notably, engagement numbers are the closest proxy that researchers have to understand what content users see on social media platforms. However, engagement is not the same thing as impressions, or user views—how many times a piece of content is seen by users. Ideally, access to user impression data would be available, allowing researchers to directly measure when and how content is surfaced to users by social media platforms. Unfortunately, social media platforms often do not make impression data available to researchers; as a result of this chronic

gap, assessing impact and reach, or the dynamics of platform curation, remains a significant challenge.” *Id.*

X. Federal Censorship Inflicts Grave, Imminent, and Ongoing Injuries on Plaintiffs.

1366. The foregoing conduct has inflicted and continues to inflict ongoing and imminent injuries on both the private Plaintiffs and the States of Louisiana and Missouri.

A. Defendants Gravely Injure the Individual Plaintiffs.

1367. The individual Plaintiffs provide undisputed evidence of how they have suffered from federally-induced censorship. Docs. 10-3 (Declaration of Dr. Jayanta Bhattacharya), 10-4 (Declaration of Dr. Martin Kulldorff), 10-5 (Declaration of Jim Hoft), 10-7 (Declaration of Dr. Aaron Kheriaty), 10-12 (Declaration of Jill Hines). The Government does not dispute this evidence.

1368. Dr. Bhattacharya attests that, “Because of my views on COVID-19 restrictions, I have been specifically targeted for censorship by federal government officials.” Doc. 10-3, ¶ 5. He notes that “[t]he Great Barrington Declaration received an immediate backlash from senior government officials who were the architects of the lockdown policies, such as Dr. Anthony Fauci...” *Id.* ¶ 13. “Because it contradicted the government’s preferred response to COVID-19, the Great Barrington Declaration was immediately targeted for suppression by federal officials.” *Id.* ¶ 14. “Instead, what followed was a relentless *covert* campaign of social-media censorship of our dissenting view from the government’s preferred message.” *Id.* ¶ 15.

1369. As a result of this “covert campaign,” Dr. Bhattacharya experiences ongoing injuries, including the de-boosting of search results in Google, *id.* ¶16; the removal of links to the Great Barrington Declaration in Reddit discussions, *id.*; the ongoing removal of a YouTube video discussing the Great Barrington Declaration and related issues with Governor DeSantis, *id.* ¶¶ 17-

18; the removal of personal Tweets, *id.* ¶¶ 25-26; the removal of LinkedIn posts, *id.* ¶¶ 28-29; and account termination by LinkedIn, *id.* ¶ 30.

1370. Dr. Bhattacharya observes that he lacks access to his colleagues’ speech and viewpoints as well, because “social-media censorship has not focused solely on the co-authors of the Great Barrington Declaration, but has swept in many other scientists as well: Twitter, LinkedIn, YouTube, Facebook, they have permanently suspended many accounts—including scientists.” *Id.* ¶ 31.

I . As Dr. Bhattacharya observes, “[t]hese censorship policies have driven scientists and others to self-censorship, as scientists ... restrict what they say on social-media platforms to avoid suspension and other penalties. *Id.* .

I . Dr. Bhattacharya attests based on personal experience: “Having observed and lived through the government-driven censorship of the Great Barrington Declaration and its co-authors, it is clear to me that these attacks were politically driven by government actors. ... One of the motivations for that was a motivation to create ... an illusion of consensus within the public that there was no scientific dissent against lockdowns. [T]he Great Barrington Declaration ... posed a political problem for them because they wanted to tell the public that there was no dissent. And so, they had to destroy us. They had to do a devastating takedown. *Id.* ¶ 32.

I . Dr. Kulldorff likewise attests that there is “an organized campaign against the Great Barrington Declaration,” Doc. 10-4, ¶ 14. He notes that the GBD “was censored on social media in an apparent attempt to prevent it from ... ‘getting a lot of attention,’” *id.* ¶ 15; including Google deboosting search results, *id.*, and Facebook removing content related to it, *id.* .

1374. Dr. Kulldorff also identifies an ongoing campaign of censorship against his personal social-media accounts, including censored personal Tweets on Twitter, *id.* .

censored posts criticizing mask mandates, *id.* 19 ongoing self-censorship to avoid further censorship penalties, *id.* ¶¶ 20, 27; removal of YouTube content, *id.* ¶ 21; removal of LinkedIn posts, *id.* ¶¶ 22-25; and the ongoing permanent suspension of his LinkedIn account, *id.* ¶ 26.

1375. Dr. Kulldorff has experienced direct censorship of his social-media speech in addition to the Great Barrington Declaration. For example, his Tweets questioning the efficacy of masking and criticizing government mask mandates have been censored and caused him to be suspended from Twitter. *Id.* ¶¶ 18-19.

1376. Dr. Kulldorff has also engaged in self-censorship to avoid being suspended or removed from social media: “Twitter is an important venue for communicating accurate public health information to the public. Because of the censoring, and the suspension of other scientists, I have had to self-censor myself on the platform.” *Id.* ¶ 20.

1377. Dr. Bhattacharya and Dr. Kulldorff’s roundtable discussion with Governor Ron DeSantis—which featured all three co-authors of the Great Barrington Declaration—was removed from YouTube. The roundtable discussion addressed the Great Barrington Declaration and its premises in detail. As Dr. Kulldorff recounts, “On March 18, 2021, I participated in a two-hour roundtable discussion with Governor Ron DeSantis in Florida, along with Dr. Sunetra Gupta at Oxford, Dr. Jay Bhattacharya at Stanford and Dr. Scott Atlas at Stanford. In this discussion, we made remarks critical of COVID-19 restrictions, including mask mandates on children. I stated that ‘children should not wear face masks, no. They don’t need it for their own protection, and they don’t need it for protecting other people either.’ ... Dr. Gupta stated that “to force [children] to wear masks and distance socially, all of that to me is in direct violation of our social contract.’ In the same roundtable, we also argued against vaccine passports. ‘Let’s try to argue against that

from the very beginning before it sort of takes off.’ Unfortunately, the video of the roundtable was removed by YouTube, which is owned by Google.” *Id.* ¶ 21.

1378. Dr. Kulldorff also experiences ongoing censorship on “LinkedIn, which is a popular communications platform among scientists and other professionals.” *Id.* ¶ 22-26. LinkedIn has blocked and removed his posts opposing vaccine mandates and promoting the benefits of natural immunity. *Id.* These included posts in which he and Dr. Bhattacharya “criticized the official Covid-19 response as formulated by Dr. Anthony Fauci.” *Id.* ¶ 25.

1379. Dr. Kulldorff states that he and other scientists engage in self-censorship to avoid being terminated from social-media platforms: “Twitter and LinkedIn are important venues for communicating accurate public health information to other scientists and to the public. Because of the censoring, and the suspension of other scientists, I have had to self-censor myself on both platforms. Sometimes by not posting important public health information.” *Id.* ¶ 27.

1380. Dr. Kulldorff notes that social-media censorship directly affects him as a *reader* of other scientists’ speech on social media, on an ongoing basis, by reducing his access to the thoughts and views of scientists who dissent from the government-mandated orthodoxy: “Social-media censorship has not focused solely on the co-authors of the Great Barrington Declaration but has swept in many other scientists as well. These censorship policies have driven scientists and others to self-censor, as scientists like me restrict what we say on social-media platforms to avoid suspension and other penalties. In fact, the most devastating consequence of censoring is not the actual posts or accounts that are censored or suspended, but the reluctance of scientists to openly express and debate scientific questions using their varied scientific expertise. Without scientific debate, science cannot survive.” *Id.* ¶ 28.

1381. Dr. Kheriaty, also, describes ongoing injuries from social-media censorship of views dissenting from the government-preferred narratives about COVID-19. He experiences an ongoing pattern of censorship and removals lasting over years: “I have always shared peer-reviewed research findings as well as my own opinions and perspectives on Twitter and LinkedIn. It was not until I began posting information about covid and our covid response policies, however, that I encountered censorship on the Twitter platform. This began in 2020 when I published an article on the adverse mental health consequences of lockdowns. The problem became more pronounced in 2021 when I shared my Wall Street Journal article and other information on ethical issues related to vaccine mandates.” Doc. 10-7, ¶ 11.

1382. As Dr. Kheriaty notes, “[t]he Twitter censorship took several forms.” *Id.* He describes suffering artificial limitations on the number of followers on his social-media accounts, *id.* ¶¶ 12-13; “shadow banning” of social-media posts that “challenge[] the federal government’s preferred covid policies,” *id.* ¶¶ 14-15; self-censorship to avoid further adverse consequences or permanent bans, *id.* ¶ 16; and removal of content from YouTube, *id.* ¶ 17. Dr. Kheriaty specifically notes that the problem of “shadow banning” his social-media posts is ongoing and increasing, as it “intensified in 2022.” *Id.* ¶ 15. Further, he notes that “[t]he pattern of content censored on these social media platforms mirrors closely the CDC and Biden administration policies.” *Id.* ¶ 18.

1383. Dr. Kheriaty describes the ongoing experience of shadow-banning: “I encountered evidence of this shadow-banning in 2021 before I was let go from the University after I started posting on covid topics, and the problem intensified in 2022 following my dismissal, as I continued to post frequently on the ethics of vaccine mandates for competent adults.” *Id.* ¶ 15.

1384. Dr. Kheriaty also experiences ongoing injury as a *reader* of other speakers’ content on social media, as government policies cause censorship and self-censorship of their content as

well: “I have several of my friends and colleagues—including Dr. Peter McCollough and Dr. Robert Malone—who were temporarily (McCollough) or permanently (Malone) banned from Twitter for posing peer-reviewed scientific findings regarding the covid vaccines.” *Id.* ¶ 16.

1385. Dr. Kheriaty also engages in self-censorship to avoid more severe penalties from the platforms: “Even though the ethics of vaccine mandates is among my areas of expertise, and an area that has impacted me personally and professionally, I am extremely careful when posting any information on Twitter related to the vaccines, to avoid getting banned. This self-censorship has limited what I can say publicly on topics where I have specific scientific and ethical expertise and professional experience.” *Id.* ¶ 16.

1386. Dr. Kheriaty observes a close link between this ongoing pattern of social-media censorship and speech that criticizes government policies: “The pattern of content censored on these social media platforms mirrors closely the CDC and Biden administration policies. In my experience using these platforms to discuss covid topics, any content that challenges those federal policies is subject to severe censorship, without explanation, on Twitter and YouTube—even when the information shared is taken straight from peer-reviewed scientific literature.” *Id.* ¶ 18.

1387. Plaintiff Jim Hoft attests both ongoing injuries and the imminent expectation of future injuries. Doc. 10-5. Hoft is the “founder, owner, and operator of the popular news website The Gateway Pundit (‘GP’), gatewaypundit.com. ... Since its founding in 2004, the Gateway Pundit has grown from a one-man blog to one of the internet’s largest destinations for conservative news and commentary. In 2021, The Gateway Pundit was ranked fourth on a list of top ten conservative news websites, ranked by monthly web searches, with over 2 million searches per month.” *Id.* ¶ 2. The Gateway Pundit has large social-media followings on multiple platforms: “In particular, GP’s Twitter account had over 400,000 followers before it was suspended. GP’s

Facebook account has over 650,000 followers. GP’s Instagram account has over 205,000 followers. GP’s YouTube account has over 98,000 followers.” *Id.* ¶ 3.

1388. Hoft notes that The Gateway Pundit’s “social media accounts have experienced censorship on all major social-media platforms,” which “has followed and reflected the calls for censorship from federal government officials, including in the Biden Administration.” *Id.* ¶ 4. These acts of censorship include suspensions from his Twitter account and another personal Twitter account, *id.* ¶¶ 6-7, 10; a permanent ban from his Twitter account, *id.* ¶ 8; labels applied to Twitter posts on personal accounts, *id.* ¶ 9; warning labels imposed on Facebook posts and other restrictions on his Facebook account, *id.* ¶ 12; permanent removal of content posted on Facebook, *id.* ¶ 13; prevention of sharing of Facebook-posted content, *id.*; removal of content from YouTube, *id.* ¶ 14; imposition of sanctions on Mr. Hoft’s followers for re-posting or amplifying his speech, *id.* ¶ 15; engaging in self-censorship to avoid permanent bans or other more serious sanctions from the social-media platforms, *id.* ¶ 16; and demonetization by Google, *id.* ¶ 19; *see also id.* ¶¶ 18-20.

1389. Hoft observes that “GP’s social media accounts have experienced censorship on all major social-media platforms, including its speech regarding COVID-19 issues and election security. In many instances, we have noticed that this censorship has followed and reflected the calls for censorship from federal government officials, including in the Biden Administration.” *Id.* ¶ 4. “For example, the current Administration has repeatedly called for censorship of social media speech regarding election integrity and so-called ‘COVID-19 misinformation.’ GP has experienced significant social-media censorship regarding its speech on both of those issues, including on Twitter, Facebook, and YouTube.” *Id.* ¶ 5.

1390. Hoft has experienced censorship for COVID speech that is now widely acknowledged to be true, such as a suspension from Twitter for claiming that the vaccines do not prevent infection, and the claim that COVID deaths are overcounted by including deaths from other causes: “On or about January 2, 2021, Twitter suspended GP’s Twitter account (@gatewaypundit) after it posted a tweet that stated, “Then It’s Not a Vaccine: Crazy Dr. Fauci Says Early COVID Vaccines Will Only Prevent Symptoms and NOT Block the Infection ...What?” *Id.* ¶ 6; *see also id.* ¶ 9.

1391. The Gateway Pundit also experienced censorship under Twitter’s “hacked materials” policy by retweeting the contents of Hunter Biden’s laptop. After a GP blogger “tweeted content related to Hunter Biden’s laptop,” “Twitter suspended the account on the ground that he ‘Violat[ed] our rules against posting or sharing privately produced/ distributed intimate media of someone without their express consent.’” *Id.* ¶ 10.

1392. Hoft also experiences a long list of acts of censorship from Facebook: “Facebook frequently imposed warning labels and other restrictions on our content, particularly content related to election integrity and COVID-19. Facebook’s censorship was so aggressive that I was forced to hire an assistant to monitor and address censorship on Facebook.” *Id.* ¶ 11; *see also id.* ¶ 12. Facebook imposes labels on Hoft’s content that require the reader, before viewing Hoft’s content, to click-through a Facebook-imposed screen that states: “The Gateway Pundit is an American far-right news and opinion website. The website is known for publishing falsehoods, hoaxes, and conspiracy theories.” *Id.* at 12. It also labels Hoft’s postings as “Missing Context” even when their truth is undisputed. *Id.* at 20-23. And it labels expressions of core political opinion as “Partly False.” *Id.* at 28; *see also id.* 29-58 (many other examples of such labeling and blocking from reposting on Facebook and Twitter).

1393. As Hoft notes, Facebook also prevents Hoft’s audiences from reposting or amplifying his content: “Facebook also [dis]courages (or otherwise outright prohibits) the public from sharing our content with their social networks.” *Id.* ¶ 13. Hoft describes this second-order censorship in detail: “The social-media platforms have extended their censorship policies to our followers as well. We have received numerous reports from followers that they have received temporary suspensions or other adverse actions from social-media platforms (such as seven-day suspensions of their Facebook accounts) for re-posting or amplifying our content. This chills our followers from re-posting, re-tweeting, or otherwise amplifying our content. The risk of being locked out of Facebook for seven days, or suffering other forms of censorship, deters our followers from amplifying our content on social media platforms, which reduces the reach of our message.” *Id.* ¶ 15.

1394. Hoft also describes ongoing self-censorship to avoid more severe penalties on social media: “These social-media censorship policies chill GP’s freedom of expression on social media platforms as well. To avoid suspension and other forms of censorship, we frequently avoid posting content that we would otherwise post on social-media platforms, and we frequently alter content to make it less likely to trigger censorship policies.” *Id.* ¶ 16.

1395. Hoft observes that the censorship of his content on social media closely tracks the censorship preferences of federal officials: “Based on my close observation of the patterns of censorship of GP’s social-media accounts and related accounts in recent years, I have strong reason to infer that federal government officials are directly involved in the censorship of our speech and content.” *Id.* ¶ 17. Hoft’s posts that have faced censorship include posts criticizing the FBI, *id.* at 9; and criticizing the administration of the 2020 election, *id.* at 11;

1396. Hoft continues to experience censorship, including up to the date he executed his declaration. For example, he received a strike on YouTube on May 14, 2022, and YouTube removed the video he had posted, for speech regarding election integrity that discussed the problem of election fraud and raised questions about the outcome of the 2020 Presidential election, including money Idaho illegally received from Mark Zuckerberg and other problems relating to voter fraud. *Id.* ¶ 14.

1397. Plaintiff Jill Hines is the “Co-Director of Health Freedom Louisiana, a consumer and human rights advocacy organization.” Doc. 10-12, ¶ 2. Hines’s “organization engages in public advocacy on behalf of Louisiana citizens on issues of health freedom and fundamental human rights. [Hines] ha[s] testified before the Louisiana legislature approximately 20 times on such issues.” *Id.* ¶ 3. Hines attests that, “Because our organization recognizes the need to educate and inform the public of their rights regarding state and federal laws concerning vaccinations, we have experienced social media censorship of our speech regarding vaccine information.” *Id.* ¶ 2. Hines has “approximately 13,000 followers each on Health Freedom Louisiana and Reopen Louisiana.” *Id.* ¶ 2. Among other things, Hines’ organization “advocate[s] against the imposition of mask mandates on children, especially during prolonged periods, as in schools.” *Id.* ¶ 4. Hines also “launched a grassroots effort called Reopen Louisiana on April 16, 2020 to help expand our reach on social media and take on the issues surrounding the continued government shutdown.” *Id.* ¶ 6.

1398. Hines describes continuous and ongoing censorship on social media from pressure wielded by federal officials: “In the last two years, any information that was not positive in nature or conveyed adverse events associated with shutdown or mitigation efforts was deemed ‘misinformation.’ Dr. Anthony Fauci has used the term repeatedly and it has been adopted by the

press and media.” *Id.* ¶ 5. Hines continues to suffer ongoing social-media censorship, and the acts of censorship include application of warnings on Facebook content, *id.* ¶ 8; the reduction of her reach to audiences on Facebook, *id.*; removal of content and sanctions, including 30-day suspensions, from Facebook, *id.* ¶ 9; 24-hour suspensions that prevented her from organizing people to advocate to the Louisiana legislature, *id.* ¶ 10; shadow-banning and dramatically restricting the reach of her speech to its audiences, *id.* ¶ 10; and the complete de-platforming of Facebook groups intended to organize Louisianans to petition their government, *id.* ¶¶ 13-14. Ms. Hines states that “[r]emoving our closed group at such a crucial time effectively stopped our ability to communicate with our representatives in the state legislature.” *Id.* ¶ 14. “To say the cards are stacked against me is an understatement.” *Id.* ¶ 16.

1399. Hines attests that the censorship campaign against her social-media speech is ongoing, noting that “[p]osts pointing to lack of safety of masking were and are targeted, as well as articles that mention adverse events of vaccinations, including VAERS data.” *Id.* ¶ 9. She continues to suffer specific, new acts of censorship, including right up to the time when she executed her Declaration on June 9, 2022: “The most recent restriction [was] in late May 2022.” *Id.* Ms. Hines notes that “[m]y personal Facebook page, and the Facebook pages of both Health Freedom Louisiana and Reopen Louisiana, are all under constant threat of being completely deplatformed. My personal account is currently restricted for 90 days.” *Id.* ¶ 12.

1400. Hines reports that acts of censorship of her COVID-19-related speech have occurred continuously up to the present: “Over the last year and a half since we noticed social-media censorship beginning in October 2020, my pages have been hit with numerous ‘fact checks’ and ‘community standards’ violations.” *Id.* ¶ 11.

1401. Hines has observed a link between the censorship that her groups have experienced and the public demands for censorship from federal officials: “Many similar threats from federal officials followed ... especially as covid became a public concern. In the last two years, any information that was not positive in nature or conveyed adverse events associated with shutdown or mitigation efforts was deemed ‘misinformation.’ Dr. Anthony Fauci has used the term repeatedly and it has been adopted by the press and media.” *Id.* ¶ 5.

1402. Social-media censorship dramatically reduces the reach of Hines’s speech: “our analytics showed that we were reaching approximately 1.4 million people in a month’s time on one of our Facebook pages, but after sharing photos of the mouths of children suffering from impetigo from long-term mask use, our page received a warning and our reach was reduced to thousands.” *Id.* ¶ 8.

1403. Hines experiences an ongoing campaign of social-media censorship that extends to the present, the date she executed her declaration: “This began a long series of attempts to censor our posts on Facebook and other social-media platforms. Posts pointing to lack of safety of masking were and are targeted, as well as articles that mention adverse events of vaccinations, including VAERS data. I was completely restricted from Facebook for 30 days starting in January 2022 for sharing the image of a display board used in a legislative hearing that had Pfizer’s preclinical trial data on it. The most recent restriction, in late May 2022, was for re-posting an Epoch Times article that discussed a pre-print study detailing increased emergency calls for teens with myocarditis following covid vaccination.” *Id.* ¶ 9.

1404. Censorship of Hines’s social-media speech directly impairs her efforts to engage in political organization to petition her government to change its policies: “One post in particular that was hit with a ‘community standards’ warning on October 6, 2020, was a ‘call to action’ asking

people to contact their legislators to end the governor’s mask mandate. On the same day, we were asking people to testify during the Legislature’s Second Extraordinary Session regarding a bill ... that would prohibit a covid vaccine employee mandate. I was prohibited from posting for 24 hours on all pages, including my own. When I was finally able to post again, our reach was significantly diminished, compared with our 1.4 million per month rate beforehand. Our page engagement was almost non-existent for months. It felt like I was posting in a black hole. Each time you build viewership up, it is knocked back down with each violation. Our current analytics show Reopen Louisiana is reaching around 98,000 in the last month and Health Freedom Louisiana is only reaching 19,000. There are warnings when you search for Health Freedom Louisiana. People that regularly interacted with our page were never heard from again. Some people who did find the page later on, asked us where we went.” *Id.* ¶ 10.

1405. Hines suffers repeated censorship on individual posts as well, including undisputedly truthful information: “Over the last year and a half since we noticed social-media censorship beginning in October 2020, my pages have been hit with numerous ‘fact checks’ and ‘community standards’ violations. Articles with health concerns related to mask wearing have been targeted ... as well as articles relating to pregnant women being vaccinated. ... Data taken directly from VAERS was flagged as misinformation and we received ‘fact checks’ for that as well, even if it contained a disclaimer about causation.” *Id.* ¶ 11.

1406. Hines attests that she is under current and constant threat of more severe censorship penalties, including deplatforming: “My personal Facebook page, and the Facebook pages of both Health Freedom Louisiana and Reopen Louisiana, are all under constant threat of being completely deplatformed. My personal account is currently restricted for 90 days.” *Id.* ¶12.

1407. Hines engages in self-censorship to avoid more severe penalties: “On many occasions, I have altered the spelling of words, used emoji’s, or placed links in comments to avoid censorship.” *Id.* ¶ 12.

1408. Hines’s health-freedom groups were completely deplatformed, inflicting a severe and direct injury on her ability to engage in political organization to amplify her message and petition the government: “two of our Facebook groups were completely deplatformed, effectively disbanding a group of more than two thousand people who were organized to engage in direct advocacy to our state legislature, on two separate occasions. There were two groups that were deplatformed: HFL Group and North Shore HFL. ... HFL Group had almost 2,000 people, and North Shore HFL had less than 500 before it was taken down.” *Id.* ¶ 13.

1409. This censorship directly interfered with the core political speech and advocacy of Hines and thousands of Louisianans: “The last post I made in our HFL Group on July 13, 2021, was a ‘call to action’ for the upcoming Veto Session, asking people to contact legislators regarding health freedom legislation. During the regular legislative session, we had two bills that were passed successfully, but both were vetoed by the governor, including a hugely popular bill that prohibited the addition of vaccine information on a state issued driver’s license. The other bill provided immunity from liability for businesses that did not impose a covid vaccine mandate. Removing our closed group at such a crucial time effectively stopped our ability to communicate with our representatives in the state legislature.” *Id.* ¶ 14.

1410. To this day, Hines’s political message, and those of thousands of Louisianans, is greatly diminished from this censorship: “After North Shore was deplatformed, we looked for alternatives for daily communication. We were to the point of speaking in code on Facebook, so

moving away from traditional social media was the only option. We currently have 80 members in a chat app called GroupMe. We have no statewide reach with that tool.” *Id.* ¶ 15.

1411. Censorship undercuts Hines’s ability to “effectively communicate with people,” including Louisiana state officials, about her political views: “It has been incredibly frustrating knowing that the government’s narrative is going unchallenged and that we have not been able to effectively communicate with people. Knowing that government agencies colluded with Facebook to suppress the messaging of groups like mine while paying exorbitant amounts to promote vaccinations and covid policies has been especially disheartening. To say the cards are stacked against me is an understatement.” *Id.* ¶ 16.

B. Defendants Gravely Injure Similarly Situated Speakers and Listeners.

1412. Plaintiffs’ un rebutted evidence demonstrates that other similarly situated speakers have suffered and are suffering similar, ongoing, and imminent injuries from government-induced censorship on social media.

1413. For example, Michael Senger had over 112,000 followers on Twitter, including in Missouri and Louisiana; he attests that he was twice suspended from Twitter and then permanently banned for posting Tweets critical of government policies for responding to COVID-19. Doc. 10-2, ¶¶ 4-8. He was temporarily suspended twice for tweets criticizing the FDA’s emergency approval of COVID vaccines and for posting a video document public officials’ statements on vaccine effectiveness. *Id.* ¶ 4-6. On March 8, 2022, he was permanently suspended from Twitter for posting a statement of core political opinion criticizing government policy, stating that “every COVID policy—from the lockdowns and masks to the tests, death coding, and vaccine passes—has been one, giant fraud.” *Id.* ¶ 7-8. This permanent suspension was inconsistent with Twitter’s own policies. *Id.* ¶ 10. Senger attests that the censorship inflicts ongoing harm on him, both

“personally and professionally”: “I discovered a gift that I had for writing and developed a network of thousands of intelligent people from all over the world with whom I had a close relationship discussing these and other issues. Now I have been silenced and cut off from all of them, with no viable way of getting that network back or promoting my work, seemingly for the sole crime of being too articulate in vocalizing my beliefs.” *Id.* ¶ 13.

1414. Jeff Allen is the proprietor of “NewsTalkSTL, a popular news talk radio station in the St. Louis, Missouri region,” which “enjoys a substantial Missouri audience.” Doc. 10-8, ¶¶ 2-3. His station posts content on YouTube, and he describes how the station “has been targeted by YouTube from the moment of its launch in July 2021” through the present, including flagging the station’s first promotional video, and issuing “strikes” for “COVID-related and election-related ‘misinformation.’” *Id.* ¶¶ 4-6. These include removing a video of a show that “featured discussion of timely COVID issues, including testing and vaccines and treatments,” and issuing a strike for that posting. *Id.* ¶¶ 9-10. His station “continued to receive strikes” from YouTube “in the first week of January and into February, 2022” for COVID-related content, *id.* ¶ 12. On March 14, 2022, Allen’s station aired a show on “election integrity” that did not claim any election was stolen, but discussed polling data indicating that many Americans have grave concerns about election integrity. *Id.* ¶¶ 13-14. On March 21, 2022, YouTube permanently removed the station’s channel as a result of that posting. *Id.* ¶ 15. “In so doing, YouTube deleted all of our content and prevented any more posts, silencing our voice and our expression from the platform entirely.” *Id.* ¶ 16.

1415. Allen has also experienced significant and ongoing censorship from Facebook: “Facebook has also targeted our content, pulling advertisements and issuing temporary suspensions, also for COVID and election-related ‘misinformation.’” *Id.* ¶ 18.

1416. Mark Changizi is a commentator on Twitter with 37,000 followers, including many in Missouri and Louisiana. Doc. 10-9, ¶ 7, 38. Changizi experiences longstanding and ongoing censorship on Twitter, including a first suspension on April 20, 2021 “for linking to an article on the safety and efficacy of face masks,” *id.* ¶ 18; additional suspension on June 25, 2021, *id.* ¶ 19; having his account secretly “heavily censored and deboosted,” meaning that “the user’s tweets are de-platformed—they appear in Twitter feeds much less frequently and replies to other posts may be hidden,” *id.* ¶ 20; covert loss of followers, much like Dr. Kheriaty, ¶ 21; and a permanent Twitter suspension on December 18, 2021, for tweets comparing the danger of COVID-19 to the flu and promoting the benefits of natural immunity, *id.* ¶ 23. He experiences similar shadow-banning by YouTube, as his “follower-ships at YouTube also plateaued and reversed despite the fact that [he] was very active,” *id.* ¶ 31. He observes that Twitter is also censoring his *private* direct messages to other Twitter users, *id.* ¶¶ 32-35. And two of his YouTube videos are also censored with their content removed from YouTube. *Id.* ¶ 36.

1417. Changizi engages in self-censorship on social media to avoid more severe penalties, *id.* ¶¶ 39-42, and he has “become very careful about what I say on Twitter and YouTube (and Facebook and Instagram) to avoid suspension.” *Id.* ¶ 39.

1418. Changizi perceives a link between the censorship he experiences and pressure from federal officials, *id.* ¶¶ 43-47. He observes: “Twitter notoriously suspends only those who question the wisdom and efficacy of government restrictions, or who cast doubt on the safety or efficacy of the vaccines.” *Id.* ¶ 50. He also observes the pro-government bias in social-media censorship decisions: “there are no examples of Twitter suspending individuals who have spread misinformation from the other side—by, for example, exaggerating the efficacy of masks or the threat the virus poses to children.” *Id.* ¶ 51.

1419. Daniel Kotzin observes that his censorship at Twitter began in September 2021, after which he was suspended by Twitter four times, including a 24-hour suspension, two seven-day suspensions, and a permanent ban. Doc. 10-10, ¶¶ 11-12. He received these penalties for tweets questioning whether COVID vaccines reduce infection and transmission, referring to natural immunity, and criticizing government policies on lockdowns and mask mandates. *Id.* ¶¶ 13, 15, 17. He was permanently suspended on April 29, 2022, for a truthful tweet stating: “Myocarditis, pericarditis, blood clots, and strokes are known potential side effects of covid vaccination. That is not my idea of safe.” *Id.* ¶ 19.

1420. Kotzin attests that “[p]ermanent expulsion from Twitter has been devastating for me. I had spent 2 years building my Twitter following. Two years ago, I had fewer than 100 followers, and at the time of my permanent suspension I had nearly 32,000. When my account is suspended, I am unable to communicate with my followers.” *Id.* ¶¶ 21-23.

1421. Kotzin observes an increase in censorship on Twitter after the Surgeon General’s Request for Information issued on March 3, 2022. “Based on my observations and extensive Twitter use, many more accounts than usual have been suspended since the Surgeon General’s RFI on March 3.” *Id.* ¶ 25. This increase in censorship affected Kotzin directly: “Since the Surgeon General’s Request for “health misinformation” in March [2022] I have been suspended four times by Twitter, and have now been permanently banned.” *Id.* ¶ 35.

1422. Kotzin notes that suspension results in loss of one’s own prior expression: “When an account is permanently suspended, everything the person ever wrote is erased and cannot be accessed by anyone.” *Id.* ¶ 27.

1423. Kotzin describes that he “methodically self-censored” to avoid permanent suspension: “Since the [Surgeon General’s] RFI, many of us who are critical of government covid

policies have been regulating our speech more carefully than ever, because we have noticed that more of us are getting suspended than ever before, and we don't want to risk losing our audience. I considered the possibility of 'permanent suspension' to be such a devastating prospect that I methodically self-censored." *Id.* ¶¶ 28-29; *see also id.* ¶¶ 31-32.

1424. Kotzin observes a close link between social-media censorship and the federal government's policies and preferred narratives: "Twitter suspends only those who question the wisdom and efficacy of government restrictions, or those who cast doubt on the necessity, safety or efficacy of the vaccines. If all or almost all suspensions are targeted at critics of the government and government policies, and no or almost no suspensions are targeted at purveyors of factually incorrect information, then it is not 'misinformation' that is being censored, but criticism of the government." *Id.* ¶¶ 34-35.

1425. Joshua McCollum is a concerned parent in a school district in Missouri. Doc. 10-14, ¶¶ 1-4. Like Hines, he has experienced censorship that directly interferes with his ability to organize, associate with like-minded people, and petition his local government: "On or about July 28, 2021, in the midst of discussing with others a recent school board meeting related to masks, and whether FHSD would keep its policy of optional masking versus change their policy to mandatory masking, [McCollum] decided to launch an online petition to encourage the board members to keep their optional masking policy and *not* change to mandatory masking." *Id.* ¶ 9. Through his account on Nextdoor (a Meta/Facebook platform), he posted this petition on change.org, and "[t]he posting of this petition on change.org was the beginning of the shadow-banning and blocking of my Nextdoor account." *Id.* ¶ 11. Comments were blocked from his Nextdoor account, and then his Nextdoor account was suspended for one month for "spreading misinformation." *Id.* ¶¶ 12-14. This censorship prevented him from organizing, associating with

others, and petitioning his local government, when those on the other side of the issue were allowed to do so: “Subsequently, on August 12, 2021, FHSD decided to reinstate their mandatory masking policy, shortly after the voice of myself and the 280 fellow petition signers was suppressed. There were petitions encouraging reinstatement of mandatory masking, but our contrary petition was suppressed by Nextdoor. I am a parent simply trying to have a voice in my local school district and its policies regarding my own children, but social media has stooped down to censor even my voice within my local community.” *Id.* ¶¶ 15-17.

1426. Jessica Marie Gulmire is a freelance journalist for the Epoch Times who resides in Missouri, and has readership in Missouri and Louisiana. Doc. 10-15, ¶¶ 1-3. Gulmire has “been censored numerous times by Facebook and Twitter even before I joined The Epoch Times in the summer of 2021,” as her “personal posts regarding excessive COVID-19 measures and regarding the election were repeatedly flagged and taken down by Facebook and Twitter.” *Id.* ¶¶ 7-8. Her journalism for the Epoch Times has also been censored by Facebook, including an article questioning the evidence for vaccinating pregnant women with COVID-19 vaccines that was later validated by Pfizer documents, *id.* ¶¶ 10-13; and an article in March 2022 for The Federalist about the People’s Convoy of truckers in the United States supporting their Canadian counterparts, *id.* 18-19. She has also had eleven articles about “mask mandates, vaccines, lockdowns and mental health” censored on Pinterest, *id.* ¶ 17.

C. Defendants Gravely Injure the State Plaintiffs, Louisiana and Missouri.

1. Fundamental policies favoring freedom of speech for their citizens.

1427. Both Louisiana and Missouri have adopted fundamental policies favoring freedom of speech, without government-induced censorship, for their citizens. LA. CONST. art. I, § 7; MO. CONST. art. I, § 8.

2. Direct censorship of the States and their political subdivisions.

1428. Both Louisiana and Missouri, and their political subdivisions, have experienced direct social-media censorship on COVID and related issues. For example, Louisiana’s Department of Justice—the office of its Attorney General—was directly censored on YouTube for posting video footage of Louisianans criticizing mask mandates and COVID-19 lockdown measures on August 18, 2021—on August 18, 2021, just after the federal Defendants’ most vociferous calls for censorship of COVID “misinformation.” Bosch Decl., Doc. 10-13, ¶ 7.

1429. In addition, a Louisiana state legislator was censored by Facebook when he posted content addressing vaccinating children against COVID-19. Bosch Decl., Doc. 10-13, ¶ 9.

1430. St. Louis County, a political subdivision of Missouri, conducted public meetings regarding proposed county-wide mask mandates, at which some citizens made public comments opposing mask mandates. Flesh Decl., Doc. 10-6, ¶ 7. Missouri’s open-meetings law required St. Louis County to post publicly the videos of those meetings, but YouTube censored the entire videos of four public meetings, removing the content, because some citizens publicly expressed views that masks are ineffective. *Id.*

3. The States’ interest in following the uncensored discourse of their citizens.

1431. Patrick Flesch, Director of Constituent Services for the Missouri Attorney General’s Office, explains that he is “personally involved in, receiving, reviewing, and responding to thousands of communications from Missouri constituents per year.” Doc. 10-6, ¶ 3. He explains that being able to follow Missourians’ uncensored speech on social media is essential for him to do his job effectively, as understanding Missourians’ true thoughts and concerns on policy matters like election integrity and COVID-19 is necessary to craft policies and messages that are responsive to constituents’ actual concerns. Doc. 10-6, ¶ 3-4. This “includes monitoring activity

and mentions on multiple social media platforms, including Facebook, Twitter, and YouTube.”

Id. “I monitor these sorts of trends *on a daily or even hourly basis* when needed on behalf of the Office.” *Id.* (emphasis added). For example, regarding the censorship of St. Louis County’s video of its public meeting where citizens opposed mask mandates, Flesch notes: “This video is just the sort of information that is important for me to review, and yet it was unavailable for a critical period of time due to online censorship of speech questioning the efficacy of mask mandates.” *Id.* ¶ 7. Likewise, regarding YouTube censoring Jeff Allen’s radio station NewsTalkSTL, and Nextdoor censoring Joshua McCollum’s online petition, Flesch observes: “These examples are just the sort of online speech by Missourians that it is important for me and the Missouri Attorney General’s Office to be aware of.” *Id.* ¶¶ 9.

1432. As Flesch attests, “The kinds of speech discussed above and in the Complaint in this case—such as speech about the efficacy of COVID-19 restrictions, and speech about issues of election security and election integrity—are matters of core interest and high importance to me in my work on behalf of the AGO. When such speech is censored on social media, it makes it much harder for me to do my job and to understand what Missourians really are concerned about.” *Id.* ¶ 10.

1433. As Mr. Flesch explains in detail: “Issues regarding COVID-19 responses (such as mask mandates imposed by municipalities and school districts on schoolchildren) and election security and integrity have been of critical importance to Missourians in recent months and years. ... It is very important for me to have access to free public discourse on social media on these issues so I can understand what Missourians are actually thinking, feeling, and expressing about such issues, and so I can communicate effectively with them.” *Id.* ¶ 5. “[O]nline censorship of

free public discourse on social-media companies has hampered my ability to follow Missourians' speech on these issues." *Id.* ¶ 6.

1434. Ashley Bosch, Communications Officer for the Louisiana Department of Justice, attests on behalf of the State of Louisiana: "Part of my job is to gather and synthesize topical subject matters that are important to Louisiana citizens, on behalf of the Department." Doc. 10-13, ¶ 4. "Understanding what subject matters and issues are important to Louisianans is critical for the Department to formulate policies and messaging that will address the concerns expressed by our constituents." *Id.* This "includes monitoring activity and mentions on social media platforms, including Facebook, Instagram, Twitter, and YouTube." *Id.* Doc. 10-13, ¶ 4. "It is very important for me to have access to free public discourse on social media on these issues so I can understand what our constituents are actually thinking, feeling, and expressing about such issues, and so I can communicate properly with them." *Id.* ¶ 5. "Online censorship of Louisiana citizens by social media companies interferes with my ability to follow Louisianans' speech on these issues." *Id.* ¶ 6. Bosch notes that it is particularly important for her to follow Louisianan's speech on topics of federally-induced censorship: "For example, mask and vaccine mandates for students have been a very important source of concern and public discussion by Louisiana citizens over the last year." Doc. 10-13, ¶ 5. "Louisianans' speech about the efficacy of COVID-19 restrictions, and speech about issues of election security and election integrity are matters of great interest and importance to me in my work on behalf of the Louisiana Department of Justice." Doc. 10-13, ¶ 10.

1435. As noted above, Defendants' witness from the CDC, Carol Crawford, attests to exactly the same government interest in being able to read and follow the true, uncensored opinions of the government's constituents.

1436. Crawford admits that government communicators have a strong interest in tracking what their constituents are saying on social media: “It’s helpful for communicators to know what is being discussed because it helps improve our communication materials.” Crawford Dep. 53:10-12. Crawford emphasized this point multiple times: “as I mentioned before, it does help ... for communicators to know what conversations occurs on social media because it helps us identify gaps in knowledge, or confusion, or things that we’re not communicating effectively that we need to adjust.” *Id.* 54:15-20.

1437. Crawford said that CrowdTangle reports “would help us understand what was being discussed on social media about COVID, which helps us look for gaps in information, confusion about facts, things that we might need to adjust our communication materials for.” *Id.* 57:24-58:3. Crawford specifically expressed the concern that, if content was censored or removed from social-media platforms, government communicators would not know what the citizens’ true concerns were: She “was wondering if they delete the info will we know those myths or information so we could update communication activity. So if they were deleting content would we know what the themes were.” *Id.* 75:14-18. Accordingly, Crawford wanted to know, “would [CDC] be able to see in CrowdTangle or other reports ... what kind of themes were removed so we would still have the full picture of areas of confusion.” *Id.* 75:23-76:1.

4. States’ interest in fair, unbiased, open processes to petition state government.

1438. Social-media censorship directly interferes with the States’ interest maintaining fair, even-handed, and open processes for petitioning their own governments and political subdivisions. When one side of a debate can organize on Facebook or Nextdoor and petition the government, and the other side cannot because of social-media censorship, that means that state officials never receive a fair, unbiased presentation of their constituents’ views.

I 9. As noted above, social-media censorship has perverted state and local political processes by artificially restricting access to the channels of advocacy to one side of various issues. For example, social-media censorship prevented Louisiana advocacy groups from organizing effectively to advocate in favor of legislative action on issues of great public import. Hines Decl., Doc. 10-12, ¶¶ 13-14. Likewise, social-media censorship prevented a Missouri parent from circulating an online petition to advocate against mandatory masking at his local school district, a political subdivision of the State. McCollum Decl., Doc. 10-14, ¶¶ 9-17; *see also* Doc. 10-12, ¶¶ 13-14; Doc. 10-14, ¶¶ 9-17; Doc. 10-15, ¶¶ 11-16, 18-19.

I 10. Plaintiff Jill Hines explains that “two of our Facebook groups were completely deplatformed, effectively disbanding a group of more than two thousand people who were organized to engage in direct advocacy to our state legislature, on two separate occasions.” Doc. 10-12, ¶ 13. She attests that “[t]he last post I made in our HFL Group on July 13, 2021, was a ‘call to action’ for the upcoming Veto Session, asking people to contact legislators regarding health freedom legislation.” *Id.* ¶ 14. Suppressing these Facebook groups directly interfered with state officials’ ability to receive free and fair communications of their constituents’ concerns: “Removing our closed group at such crucial time effectively stopped our ability to communicate with our representatives in the state legislature.” *Id.*

5. State quasi-sovereign interests.

I 11. The States also assert quasi-sovereign interests in protecting the freedom of speech of a substantial segment of their population—*i.e.*, their citizens who are both speakers and audiences of speech on social media; and in ensuring that their citizens receive the full benefit of participation in the federal system—which includes, among other benefits, the full protection of the First Amendment.

1442. Based on the foregoing evidence, social-media censorship afflicts a substantial segment of the populations of both Missouri and Louisiana.

MOTION FOR PRELIMINARY INJUNCTION**

TABLE OF CONTENTS

INTRODUCTION1

BACKGROUND AND PROPOSED FINDINGS OF FACT5

I. For years, in response to public sentiment, social media companies have sought to identify and contain misinformation on their platforms5

 A. Since their emergence, social media companies have been economically incentivized to moderate content on their platforms.....5

 B. After the 2016 U.S. presidential election, social media companies took significant steps to combat election-related influence campaigns and misinformation on their platforms.9

 C. As the COVID-19 pandemic emerged, social media companies sought to address health misinformation on their platforms. 13

 D. Social media companies have long taken actions short of removal against “borderline content” that is not expressly prohibited by their content moderation removal policies. 15

 E. Bipartisan calls to revise or revoke Section 230 have repeatedly arisen over the years..... 19

II. Since 2017, Executive Branch agencies and officials have promoted authoritative information or expressed concerns with the spread of misinformation.....22

 A. The White House23

 1. White House Public Statements25

 a. White House Press Briefings (Jennifer Psaki).....25

 b. President Biden’s Comments28

 c. White House Communications Director Kate Bedingfield’s Comments.....29

 2. White House Private Statements30

 a. White House Requests for More Data about Misinformation on Facebook31

 b. No White House Demands for Changes to the Companies’ Content Moderation Policies or Practices Regarding COVID-1936

c.	White House Requests for Action on Fake and Doctored Posts and Accounts	37
B.	The Surgeon General	40
1.	The Advisory, the RFI, and Other Public Statements	42
2.	Direct Communications with Social Media Companies.....	45
3.	The Virality Project.....	49
C.	The Centers for Disease Control and Prevention (CDC)	51
1.	CDC’s Pandemic-Era Meetings with Social Media Companies.....	53
2.	CDC’s Responses to Social Media Companies’ Requests for Scientific Information Relating to Claims About COVID-19 or Vaccines.....	56
3.	CDC Emails Alerting Social Media Companies to Misinformation Themes Observed on Platforms and Providing Relevant Scientific Information	59
4.	CDC’s Two “Be on the Lookout Meetings” in May 2021	60
5.	A CDC Official’s One-Time Use of a Facebook Reporting Channel in 2021	62
6.	CDC’s Receipt of Bi-weekly Facebook COVID-19 Content Reports in 2021	62
D.	The Census Bureau	63
E.	Dr. Fauci, Former Director of the National Institute of Allergy and Infectious Diseases (NIAID)	64
F.	The Cybersecurity and Infrastructure Security Agency (CISA)	69
1.	CISA’s Mission and General Overview	69
2.	The Election Infrastructure Subsector	70
3.	The Center for Internet Security.....	72
4.	CISA’s Efforts to Build Resilience to Misinformation	74
a.	CISA’s Mis-, Dis-, and Malinformation (“MDM”) Team.....	74

b.	CISA’s Switchboarding Work During the 2020 Election Cycle	74
c.	CISA’s Meetings with Social Media Companies	80
d.	CISA’s Limited Involvement with the Election Integrity Partnership.....	84
G.	The State Department’s Global Engagement Center (GEC).....	86
H.	The Federal Bureau of Investigation.....	91
1.	FBI Efforts as to Foreign Influence and Election Misinformation	91
2.	The “Hunter Biden Laptop Story”.....	97
	LEGAL STANDARD	101
	ARGUMENT.....	102
I.	Plaintiffs fail to satisfy their burden of demonstrating that irreparable harm would result in the absence of a preliminary injunction.	104
A.	Plaintiffs cannot establish imminent, irreparable harm based on social media companies’ past content moderation decisions.	106
1.	The Individual Plaintiffs’ alleged harms stem from long-past content moderation decisions.....	107
2.	Plaintiff States’ alleged harms likewise stem from long-past content moderation decisions.....	112
B.	Plaintiffs cannot establish imminent, irreparable harm based on alleged past actions of federal officials.....	113
1.	Plaintiffs have not made the requisite showing of ongoing or imminent irreparable harm as to the White House Defendants.	115
2.	Plaintiffs have not made the requisite showing of ongoing or imminent irreparable harm as to CISA Defendants.	116
3.	Plaintiffs have not made the requisite showing of ongoing or imminent irreparable harm as to the CDC Defendants.....	118
4.	Plaintiffs have not made the requisite showing of ongoing or imminent irreparable harm as to the Census Defendants.	120

5.	Plaintiffs have not made the requisite showing of ongoing or imminent irreparable harm as to Dr. Fauci, in his former capacity as NIAID Director.	121
6.	Plaintiffs have not made the requisite showing of ongoing or imminent irreparable harm as to the GEC Defendants.	121
C.	Plaintiffs’ delay in seeking relief shows there is no immediate need for an injunction.	126
II.	Plaintiffs fail to show a likelihood of success on the merits.	128
A.	Plaintiffs lack Article III standing to bring any of their claims.	128
1.	Plaintiffs fail to establish any injury-in-fact.	130
2.	Plaintiffs fail to establish traceability and redressability.	131
B.	Plaintiffs are not likely to prevail on their First Amendment claims.	136
1.	Plaintiffs are not likely to prevail on their theory that any Defendant provided “such significant encouragement” as to convert private conduct into government conduct.	141
a.	Plaintiffs’ “significant encouragement” theory rests on a misunderstanding of Blum and its progeny.	141
b.	Plaintiffs fail to show that the White House has provided “such significant encouragement” as to render the White House legally responsible for social media companies’ independent decisions.	148
c.	Plaintiffs fail to show that OSG has provided “such significant encouragement” as to render OSG legally responsible for social media companies’ independent decisions.	160
i.	Surgeon General’s Public Statements	165
ii.	OSG’s Private Communications	167
iii.	The RFI.	168
2.	Plaintiffs fail to show “coercion” under <i>Bantam Books</i>	169
a.	Plaintiffs fail to connect purported coercion to specific acts harming them.	170
b.	Defendants made no threats and instead sought to persuade.	171

- c. Defendants consistently recognized social media companies’ authority over their platforms and no evidence shows they engaged in improper “pressure.” 180
 - i. White House Press Secretary 181
 - ii. White House Digital Director 182
 - iii. The Surgeon General 183
 - d. Officials’ remarks about potential § 230 amendments and antitrust enforcement raised legitimate policy questions and had no coercive effect. 185
 - i. Legislative Remarks and Hearings 186
 - ii. Executive Branch Remarks and Actions 190
- 3. Deception is not a freestanding basis for state action and is lacking here. 193
 - a. There is no “deception” test for state action..... 194
 - b. The record contradicts Plaintiffs’ allegations of deceit and trickery. 195
 - i. FBI..... 196
 - ii. Dr. Fauci, in his prior role as the Director of NIAID 200
- 4. Plaintiffs fail to show that any Defendant jointly participated in any particular content moderation decision. 213
 - a. Plaintiffs fail to show that, by sharing information about COVID-19, CDC or the Census Bureau jointly participated in any content moderation decision. 216
 - b. The FBI did not participate in “censorship” by sharing information about foreign malign influence efforts or potential election-related misinformation. 224
 - c. Plaintiffs fail to establish that CISA worked jointly with social media companies to violate the First Amendment..... 228
 - d. Plaintiffs fail to identify joint action by the Global Engagement Center and social media companies to remove any social media content. 237

e.	No “joint action” transformed the private conduct of the Election Integrity Partnership or the Virality Project into state action attributable to Defendants.	239
i.	EIP	240
ii.	The Virality Project.....	244
f.	Social media companies’ voluntary consultation with agencies for scientific and medical information about COVID-19 does not support a state action finding relating to “other agencies.”	248
5.	Even if Plaintiffs could show that any social media content moderation actions amount to state action, the Court cannot necessarily conclude that all of those content moderation actions violate the First Amendment.....	250
C.	Plaintiffs are not likely to prevail on their APA and Ultra Vires claims.	253
III.	Plaintiffs fail to satisfy the remaining preliminary injunction requirements.	257
IV.	Plaintiffs’ proposed injunction is improper.	261
A.	Plaintiffs’ proposed injunction lacks the specificity required by Federal Rule of Civil Procedure 65.....	262
B.	Plaintiffs’ proposed injunction is impermissibly overbroad.	264
CONCLUSION.....		275

11A Charles Alan Wright, Arthur R. Miller & Mary Kay Kane, *Federal Practice and
 Procedure* § 2948.1 (3d ed. 2013) 104

INTRODUCTION

The record in this case shows that the Federal Government promoted necessary and responsible actions to protect public health, safety, and security when confronted by a deadly pandemic and hostile foreign assaults on critical election infrastructure. Among those efforts, various agencies and officials spoke publicly and privately with social media companies to promote the Government’s message on issues of public health and safety, identify potential threats to election integrity and security on social media, and call the companies’ attention to misinformation spreading on their platforms.

Plaintiffs condemn these efforts as a wide-ranging “Censorship Enterprise” constituting “some of the most egregious First Amendment violations in American history.” Pls.’ Supp. Prelim. Inj. Br. at 1 (Dkt. 214) (“PI Supp.”). To do so, Plaintiffs press a far-ranging conspiracy theory in which dozens of federal agencies and officials, across multiple administrations, have allegedly coerced or colluded with every large-scale social media company to suppress speech and speakers expressing views on COVID-19 and election integrity that are “disfavored” by the current Administration. But Plaintiffs’ repetition of the word “censorship” and its equivalents does not cure the significant factual deficiencies in their theory—including that much of the challenged conduct occurred in the previous Administration—or transform sheer speculation into concrete proof. Indeed, despite receiving thousands of pages of documents and deposing multiple federal officials over an eight-month period, Plaintiffs fail to cite any evidence of past or (critically) imminent violations of their First Amendment rights to support their request for extraordinary preliminary relief. And when confronted with evidence that *undermines* their arguments, Plaintiffs urge the Court to simply disregard the facts and adopt Plaintiffs’ conclusory allegations and speculations instead. Although the Court accepted Plaintiffs’ factual allegations in ruling on

Defendants' motion to dismiss, allegations alone are not enough to justify preliminary injunctive relief. Plaintiffs must now back up their allegations with evidence. Their failure to do so necessarily means that they cannot meet any of the preliminary injunction requirements.

First, and most starkly, Plaintiffs cannot establish that they will suffer any ongoing or imminent irreparable harm in the absence of a preliminary injunction. In their more than 500 pages of briefing, Plaintiffs devote just *two sentences* to this dispositive factor. And the only argument Plaintiffs advance is that because they have alleged a First Amendment violation, irreparable harm must be assumed. But even when a First Amendment violation is alleged, a plaintiff still must establish that the allegedly ongoing or imminent harm is *real*. Plaintiffs' stale, nearly year-old declarations pointing to even older content moderation decisions fail to make that showing.

Second, Plaintiffs cannot establish a likelihood of success on the merits. To start, Plaintiffs lack Article III standing. They submit no evidence of an impending harm to a legally cognizable interest. Nor do they submit evidence supporting their far-fetched assertion that impending harms—whatever they may be—will result from the Government's alleged coercion of social media companies, rather than the companies' own economic interest in maximizing advertising revenues (the lifeblood of their businesses) and societal influences that inform the companies' content moderation decisions. Absent this type of evidence, Plaintiffs have no basis for concluding that social media companies, which have regulated content on their platforms since the industry's earliest days and which are not parties to this case, will spontaneously cease their content moderation efforts if the Court enjoins the Government from speaking.

Plaintiffs' claims fare no better on the merits. To succeed on their First Amendment claims, Plaintiffs must first make the difficult showing that a particular content moderation decision that harmed them is attributable to a particular Defendant. The Supreme Court has repeatedly held that

the government may be deemed responsible for private conduct only if (1) the government coerced, or significantly encouraged to the point of compelling, the private party into engaging in that conduct, or (2) the government jointly participated in that conduct to such an extent that the private party operated as a government actor. The record here contains no evidence satisfying these demanding standards. Rather, it shows that government officials expressed positions on matters of significant public concern—precisely what the Government is entitled to do, and indeed what the public expects. The Constitution preserves the Government’s right to encourage specific private behavior, such as joining a war effort, stopping the sale of cigarettes to children, and—in this case—reducing the spread of misinformation that undermines election security or the nation’s efforts to protect the public from the spread of a deadly disease. A social media company’s independent decision to follow the Government’s urgings does not transform the company’s conduct into government action.

Nor does the statutory environment alter the analysis. Plaintiffs make much of the fact that federal officials, including members of a separate branch of government, have advocated for reform to § 230 of the Communications Decency Act. Those calls for reform have come from Members of Congress from both major political parties, federal officials from multiple administrations, and Defendants and non-Defendants alike. That social media companies—like many other important companies—face the potential for legislative reform does not transform each and every suggestion or encouragement from a federal official into a potential constitutional problem. Yet adopting Plaintiffs’ legal theory would have precisely that result, thrusting courts into the role of policing every communication from any federal official to or about a social media company, and disabling federal officials from freely advocating in the public interest as to some

of the most critical actors in our society. Neither the state action doctrine nor the First Amendment warrants that result.

In tacit acknowledgement that they cannot satisfy the actual state action standard, Plaintiffs repeatedly urge the Court to water that standard down, or even to adopt Plaintiffs' newly created state action theories (such as "deception" or "collusion") instead. Plaintiffs then repeatedly mischaracterize the evidence to fit those newly fabricated theories. But no matter how Plaintiffs spin the law or the evidence, they fail to satisfy their burden of showing that any single Defendant is *responsible* for any particular content moderation decision under settled state action principles. And in the absence of any such evidence, Plaintiffs' claims do not vindicate any free speech interest. Rather, they simply seek to portray government speech on a range of topics with which Plaintiffs disagree as "censorship" and to invoke the authority of the Court to silence that speech. The First Amendment lends no support to that effort.

Plaintiffs face no greater likelihood of success on their ultra vires and Administrative Procedure Act (APA) claims. Those claims run up against several jurisdictional hurdles. And on the merits, Plaintiffs merely rehash their failed First Amendment claims and advance a claim of procedurally improper rulemaking that is specious on its face.

Third, the balance of harms tips sharply in favor of Defendants. Plaintiffs' interests in preventing interference with their First Amendment freedoms may be substantial in the abstract, but on this record, they are entirely speculative, and they are far outweighed by the Government's interest in speaking and taking action to promote the public interest. Plaintiffs' sweeping and vague proposed injunction would effectively muzzle the White House and multiple federal agencies, with dire consequences for law enforcement, national security, and public health interests that Defendants have the power and duty to protect. In particular, as explained in five agency

declarations filed with this brief, Plaintiffs' proposed injunction could prevent the dissemination of vital public health information, communications with social media companies about criminal activity in process on their platforms, and efforts to act on national security threats relating to international terrorism and election security. The resulting harm inflicted on society as a whole is reason enough to deny Plaintiffs' requested preliminary injunction.

Moreover, even if Plaintiffs could satisfy each of the requirements for a preliminary injunction, their proposed injunction should be denied because it fails to satisfy the specificity requirement of Federal Rule of Civil Procedure 65(d). The proposed injunction's numerous vague and undefined terms fail to put Defendants on reasonable notice as to what conduct is enjoined. The injunction is also overbroad, as it would sweep in a host of government conduct that does not implicate any protected First Amendment interest, while obstructing legitimate efforts by the Federal Government to fulfill its critical law enforcement, national security, and public health missions.

The Court should deny Plaintiffs' motion for a preliminary injunction.

BACKGROUND AND PROPOSED FINDINGS OF FACT

I. For years, in response to public sentiment, social media companies have sought to identify and contain misinformation on their platforms.

A. Since their emergence, social media companies have been economically incentivized to moderate content on their platforms.

1. Social media companies, such as Facebook, Twitter, and YouTube, are for-profit companies that allow users and advertisers to post content on their platforms subject to their terms of service. Since the emergence of the first social media companies in the early 2000s, these companies have moderated content uploaded to their platforms. *See, e.g., Making the Internet Safe for Kids: The Role of ISP's and Social Networking Sites: Hearing Before the Subcomm. on Oversight & Investigations of the H. Comm. on Energy & Com., 109th Cong. 214-16 (2006)*

(statement of Chris Kelly, Chief Privacy Officer, Facebook.com, Inc.); *see also id.* at 219 (statement of Michael Agnus, Executive Vice President & General Counsel, MySpace).¹ For example, as early as 2003, the earliest social media platforms (*e.g.*, Friendster) had terms of service that included content moderation provisions that barred, among other things, false and misleading information. Declaration of Dr. Stuart Gurrea (Gurrea Decl.) ¶¶ 12, 68 (Ex. 1). Over the years as social media companies grew and developed, including periods well before 2020, content moderation by the companies “has responded to evolving concerns, including terrorism, election interference, and public health concerns.” *Id.* Today, each major company requires users and advertisers to agree to extensive conditions—including conditions related to content moderation—in exchange for authorization to use its platforms.²

2. As Defendants’ expert economist Dr. Stuart Gurrea has explained, social media platforms are intrinsically economically incentivized to moderate content on their platforms because moderation contributes to retaining users and increasing their engagement. Gurrea Decl. ¶¶ 12, 44-46. (Ex. 1).³ Increased user numbers and engagement, in turn, increases the number of

¹ *See* Gurrea Decl. ¶¶ 12-13 (Ex. 1) (explaining that social media companies have moderated content since their emergence).

² *See* Gurrea Decl. ¶ 12 (Ex. 1).

³ Social media platforms are a type of two- (or multi-) sided market where, on one side of the platform, users interact with each other or access content and, on the other side, advertisers target consumers through the platform. Gurrea Decl. ¶ 33 (Ex. 1). Typically, social media platforms attract and maintain a large user base and collect user data—and users derive more value from the platforms as the number of users increase. *Id.* ¶ 34. On the other side of the platform, advertisers target users with specific demographic characteristics or interests, and social media platforms facilitate this targeted advertising by relying on user data. *Id.* ¶ 35. Advertisers on social media platforms want their products displayed on their platform in a manner that enhances the brand reputation of the product, as brand reputation affects consumer decisions. *Id.* ¶ 36. And because social media platforms primarily generate revenue through advertising, it is in their economic interest to attract a large user base and increase user engagement. *Id.* ¶ 39. Consequently, “social media platforms are incentivized economically to moderate content on their platforms because content moderation is a quality-control decision that impacts user engagement and advertising revenue.” *Id.* ¶ 42.

people viewing advertisements, thus resulting in an increase in both advertising revenues and platforms' profits. *Id.* ¶¶ 11, 41. In addition, content moderation that preserves or enhances the reputation and value of an advertiser's product directly makes the platform more valuable to the advertiser, and therefore increases advertising revenues and the platform's profits. *Id.* ¶¶ 12, 38, 48. Conversely, inadequate content moderation that is detrimental to user engagement likely will reduce advertising revenue because the value of a platform to advertisers depends on the level of user engagement and the quality of the user experience. *Id.* ¶¶ 12, 38, 45, 54, 62. This is particularly true for Twitter, Facebook, and YouTube, among others, as they operate under "particularly strong economic incentives to moderate content," because they rely on a large user base to attract advertisers and thus focus on retaining the large group of users who may be alienated by more extreme views. *Id.* ¶ 44.

3. Consistent with Dr. Gurrea's analysis, the social media companies themselves have commented publicly that they adopt and apply their content moderation policies based on customer and advertiser demands. For example, a former representative from Twitter recently explained in congressional testimony that the company has long seen the "lawful but awful . . . speech of a small number of abusive users drive away countless others." *See* Ex. 2 at 6 (*Protecting Speech from Government Interference and Social Media Bias, Part 1: Twitter's Role in Suppressing the Biden Laptop Story: Hearing Before the H. Comm on Oversight & Accountability*, 118th Cong. (2023)); *see also id.* at 5 (emphasizing the importance of "the health of the conversation"). Twitter's decision to adopt and apply content moderation policies "was based on customer research, advertiser feedback, Twitter's declining revenue, user growth, and stock price." *Id.*

4. Other social media platforms similarly have attested to the user and advertiser preferences that have long impelled platform content moderation policies and measures. For

example, a YouTube representative has explained that “advertisers typically do not want to be associated with controversial or sensitive content on YouTube,” and so the company allows content creators “the privilege of earning advertiser revenue,” or “monetization,” of the videos they post, only if those content creators “meet more restrictive criteria, including” certain “Advertiser-friendly Content Guidelines.” Declaration of Alexandra N. Veitch ¶¶ 17, 50, *Netchoice, LLC v. Paxton*, No. 21-cv-840 (W.D. Tx. Sept. 30, 2021), ECF No. 8-5 (Ex. 3). And similarly, “advertisers will not advertise on Facebook if they believe it is not effective at removing harmful content or content that violates [its] community standards. Indeed, people and advertisers have stopped using Facebook due to these concerns.” Declaration of Neil Potts ¶ 8, *Netchoice, LLC v. Paxton*, No. 21-cv-840 (W.D. Tx. Sept. 30, 2021), ECF No. 8-6 (Ex. 4); *cf. NetChoice, LLC v. Paxton*, 49 F.4th 439 (5th Cir. 2022) (vacating preliminary injunction and remanding), *pet’n for cert. filed*, No. 22-555 (U.S. Dec. 15, 2022).

5. Platform responses to advertiser concerns stem from real world experience. In 2017, for example, a wave of companies pulled their advertisements from YouTube for fear of association with “offensive or extremist videos,” before YouTube bolstered its policies and enforcement. *See* Ex. 84 at 2 (Brett Molina, *Many YouTube creators frustrated by changes in policies, practices*, USA TODAY (Apr. 5, 2018)) (“Major advertisers including AT&T and Verizon started pulling their business from YouTube in March 2017 after discovering their ads were appearing on offensive or extremist videos. YouTube parent company Google said it would start an ‘extensive review’ of its ad policies.”). In 2020, Facebook similarly was forced to address advertiser concerns when “[m]ore than 750 companies including Coca-Cola, Hershey and Unilever . . . temporarily paused their advertising on Facebook and its subsidiary Instagram” upon being “unimpressed with promises to better police hate speech.” Ex. 150 (Elizabeth Dwoskin &

Taylor Telford, *Facebook is working to persuade advertisers to abandon their boycott. So far, they aren't impressed.*, Wash. Post (Jul. 3, 2020)).⁴

B. After the 2016 U.S. presidential election, social media companies took significant steps to combat election-related influence campaigns and misinformation on their platforms.

6. Although social media companies have long moderated content on their platforms, *see* Gurrea Decl. ¶¶ 66-78 (Ex. 1), the 2016 U.S. presidential election marked a turning point for the companies. The U.S. intelligence community,⁵ a Department of Justice-appointed special counsel,⁶ and bipartisan majorities of the intelligence committees for both houses of Congress all concluded that Russian agents had interfered with the 2016 election, including by conducting an influence campaign on social media. *See, e.g.*, Ex. 7 at 14 (H. Permanent Select Comm. on Intell., Report on Russian Active Measures, H.R. Rep. No. 115-1110 (2018)) (finding that “Russian intelligence leveraged social media in an attempt to sow social discord and to undermine the U.S. electoral process”).⁷ Among its many findings, the House Permanent Select Committee on

⁴ Recent events, too, confirm that market forces demand that social media companies adopt and apply content moderation policies. For example, when Elon Musk in 2022 acquired control of Twitter and substantially relaxed its content moderation policies, Twitter lost half of its top advertisers, according to a report by Media Matters for America. *See* Ex. 5 at 2 (Halisia Hubbard, *Twitter has lost 50 of its top 100 advertisers since Elon Musk took over, report says*, Nat’l Public Radio (Nov. 25, 2022)). Twitter also is estimated to lose 32 million users over the next two years, including based on concerns about the proliferation of hate speech because of Mr. Musk’s relaxation of Twitter’s content moderation policies, according to a forecast by Insider Intelligence. *See* Ex. 6 at 2 (Mark Sweney, *Twitter ‘to lose 32m users in two years after Elon Musk Takeover,’* The Guardian (Dec. 13, 2022)).

⁵ *See* Ex. 8 (Office of the Director of National Intelligence, Background to “Assessing Russian Activities and Intentions in Recent U.S. Elections”: The Analytic Process and Cyber Incident Attribution (2017)).

⁶ *See* Special Counsel Robert S. Mueller, III, U.S. Dep’t of Justice, Report on the Investigation into Russian Interference in the 2016 Presidential Election (2019) (Redacted version released Apr. 18, 2019).

⁷ “Russia’s targeting of the 2016 U.S. presidential election was part of a broader, sophisticated, and ongoing information warfare campaign designed to sow discord in American politics and

Intelligence (“Committee”) concluded that “[h]acked material,” including material from the Democratic National Committee (“DNC”), “was disseminated through [a] myriad network of actors with the objective of undermining the effectiveness of the future administration.” Ex. 7 at 12. “This dissemination worked in conjunction with derisive messages posted on social media to undermine confidence in the election and sow fear and division in American society.” *Id.* The Committee opined further that, “[a]s a country, it is time for us to reflect, understand what happened, fix the discovered problems, and unify around the common purpose of countering any future influence campaigns by Russia or any other nation.” *Id.* at 10.

7. Demands for action from Congress and the public had a profound impact on the behavior of social media companies. *See* Gurrea Decl. ¶ 73 (Ex. 1) (“[t]rust and safety in the realm of political speech” became a “bigger concern” in the context of the 2016 U.S. presidential election). Congressional committees, for example, repeatedly called social media executives to testify in public hearings about what had gone wrong on their platforms in 2016, and how the companies would adjust their policies.⁸

8. Twitter understood that it was being “told in no uncertain terms, by the public and by Congress, that [it] had a responsibility to do a better job protecting future elections.” Ex. 10 at

society.” Ex. 9 at 75 (S. Select Comm. on Intelligence, Report, Russian Active Measures Campaigns and Interference in the 2016 U.S. Election, Volume II: Russia’s Use of Social Media, S. Rep. No. 116-290 (2020)).

⁸ *See, e.g.,* *Extremist Content and Russian Disinformation Online: Working with Tech to Find Solutions: Hearing Before the Subcomm. on Crime & Terrorism of the S. Comm. on the Judiciary*, 115th Cong. (2017); *Russia Investigative Task Force Hearing with Social Media Companies: Hearing before the H. Comm. on Intell.*, 115th Cong. (2017); *Social Media Influence in the 2016 U.S. Election: Hearing Before the S. Comm. on Intell.*, 115th Cong. (2017); *Foreign Influence Operations’ Use of Social Media Platforms (Company Witnesses), Hearing Before the S. Comm. on Intell.*, 115th Cong. (2018); *Securing U.S. Election Infrastructure and Protecting Political Discourse: Hearing Before the Subcomm. on Nat’l Sec. of the H. Comm. on Oversight & Reform*, 115th Cong. (2019).

3 (*Protecting Speech from Government Interference and Social Media Bias, Part 1: Twitter's Role in Suppressing the Biden Laptop Story: Hearing Before the H. Comm on Oversight & Accountability*, 118th Cong. (2023) (opening statement of Yoel Roth, Former Head of Trust & Safety, Twitter, Inc.). Moreover, Twitter was “economically incentivized to moderate low-quality content in the sphere of politics because it recognized that user engagement drove the majority of its revenues through advertising.” Gurrea Decl. ¶ 74 (Ex. 1). As Twitter explained in its Form 10-K annual report in December 2016, “[i]f people do not perceive our products and services to be useful, reliable and *trustworthy*, we may not be able to attract users or increase the frequency of their engagement with our platform and the ads that we display.” *Id.* (emphasis added) (quoting Twitter, Inc., Annual Report (Form 10-K) (Feb. 27, 2017)). To that end, in 2018, Twitter adopted a policy to prevent hacked materials from being placed on its platform, *id.*, and it removed at least 70 million bot (fake) accounts relating to political issues, Gurrea Decl. ¶ 74 (Ex. 1). And before the 2020 election, Twitter “updated [its] civic integrity policy to address misleading or disputed information that undermines confidence in the election, causes voter intimidation or suppression or confusion about how to vote or misrepresents affiliation or election outcomes.” Ex. 14 at 4 (*Censorship and the 2020 Election: Hearing Before the S. Comm. on the Judiciary*, 116th Cong. (2020)) (statement of Jack Dorsey, CEO, Twitter, Inc.). In response to calls from the public “to offer additional context to help make potentially misleading information more apparent,” Twitter applied labels to over 300,000 tweets concerning the 2020 election between October 27, 2020, and November 11, 2020. *Id.*

9. Facebook responded to the public’s calls as well. On November 18, 2016, Facebook CEO Mark Zuckerberg published an “update” on Facebook in response to “[a] lot” of Facebook users’ questions about “what we’re doing about misinformation” relating to elections. Ex. 11

(Mark Zuckerberg, Facebook (Nov. 18, 2016)). Mr. Zuckerberg assured the public that Facebook “take[s] misinformation seriously” and would be implementing a host of new measures to crack down on misinformation on the platform. *Id.* On January 4, 2018, Mr. Zuckerberg published a post on Facebook where he recognized that “Facebook has a lot of work to do—whether it’s protecting our community from abuse and hate, defending against interference by nation states, or making sure that time spent on Facebook is time well spent.” *See* Ex. 12 (Mark Zuckerberg, Facebook (Jan. 4, 2018)). Accordingly, Mr. Zuckerberg explained that his “personal challenge for 2018 is to focus on fixing these important issues” and that “[t]his will be a serious year of self-improvement[.]” *Id.* In October 2019, as the 2020 presidential election approached, Facebook redoubled its efforts, announcing that it was taking “several new measures to help protect the democratic process” in advance of the 2020 elections, including attempts to “[p]revent[] the spread of misinformation” through “clearer fact-checking labels[.]” Ex. 13 (Guy Rosen, et al., *Helping to Protect the 2020 US Elections*, Meta (Oct. 21, 2019)). Among other things, Facebook “built sophisticated systems to protect against election interference that combined artificial intelligence, significant human review and partnerships with the intelligence community, law enforcement and other tech platforms.” *See* Ex. 14 at 4 (statement of Mark Zuckerberg, CEO, Facebook). Further, Facebook “locked down new political ads in the week before the [2020] election to prevent misleading claims from spreading” and “strengthened [its] enforcement against malicious and conspiracy networks like Qanon”—all with the explanation that “[t]his is what people expect of [Facebook].” *Id.* Put simply, Facebook “heard resoundingly from [its] community that people do not want to see [election-related] misinformation and believe it is a problem.” *Id.* at 10.

C. As the COVID-19 pandemic emerged, social media companies sought to address health misinformation on their platforms.

10. The COVID-19 pandemic marked another turning point for social media companies. In early 2020, the emergence of the pandemic precipitated a public health crisis, loss of life, fear, and economic disruption across the country and the world. To date, more than 103 million Americans have reportedly contracted the virus, resulting in more than 6 million hospitalizations and 1.12 million deaths. Ex. 15 (*COVID Data Tracker*, Ctrs. for Disease Control & Prevention (last updated Apr. 25, 2023)). In January 2020, the Secretary of Health and Human Services (“HHS”) declared COVID-19 a public health emergency; in March 2020, then-President Trump declared a national emergency. *See* Declaring a National Emergency Concerning the Novel Coronavirus (COVID-19) Outbreak, Proclamation No. 9994, 85 Fed. Reg. 15,337 (Mar. 13, 2020).

11. In this pandemic environment, it became immediately apparent to global health authorities that COVID-19 misinformation, especially when it circulated on social media, could lead to death and intensify suffering worldwide. As the United Nations Secretary-General explained in a public statement, “[a]s soon as the virus spread across the globe, inaccurate and even dangerous messages proliferated wildly over social media, leaving people confused, misled, and ill-advised.” Ex. 16 (*COVID-19 pandemic: countries urged to take stronger action to stop spread of harmful information*, World Health Org. (Sept. 23, 2020)). The World Health Organization (“WHO”), together with the United Nations and other partners, called upon countries to “take stronger action to stop [the] spread of harmful information” relating to the pandemic. *Id.* In May 2020, WHO member states (including the United States) adopted a resolution recognizing that managing the “infodemic” of COVID-19 misinformation is “a critical part of controlling the COVID-19 pandemic[.]” *Id.* In June 2020, 132 countries (including the United States) signed onto a “cross-regional statement on ‘infodemic’ in the context of COVID-19” stating, among other

things, that “social media platforms” have “a clear role and responsibility in helping people to deal with the ‘infodemic.’” Ex. 17 at 2 (*Cross-Regional Statement on ‘Infodemic’ in the Context of COVID-19*, U.S. Mission to the United Nations (June 12, 2020)).

12. Well before these 132 countries called on them to act, social media companies had already begun adopting measures to curb the spread of COVID-19-related misinformation on their platforms. For some companies, including YouTube, Facebook, and Pinterest, this was not their first foray into curbing the spread of public health misinformation. See Gurrea Decl. ¶¶ 76-77 (Ex. 1). In a March 2020 blog post, Facebook explained that removing health misinformation from its platform was nothing new: “We’ve removed harmful [health-related] misinformation since 2018, including false information about the measles in Samoa where it could have furthered an outbreak and rumors about the polio vaccine in Pakistan where it risked harm to health and aid workers.” Ex. 18 at 3 (Nick Clegg, *Combating COVID-19 Misinformation Across Our Apps*, Meta (Mar. 25, 2020)). Beginning in January 2020, Facebook “applied this policy to misinformation about COVID-19 to remove posts that make false claims about cures, treatments, the availability of essential services or the location and severity of the outbreak.” *Id.* Twitter likewise introduced policies to “address content that goes directly against guidance from authoritative sources of global and local public health information.” Ex. 19 at 4 (Vijaya Gadde & Matt Derella, *An update on our continuity strategy during COVID-19*, Twitter Blog (Mar. 16, 2020; updated Apr. 1, 2020)).

13. These policies resulted in widespread content moderation by social media platforms in early 2020. Twitter reported that, during a two-week period in March 2020 alone, it had “removed more than 1,100 tweets containing misleading and potentially harmful content” and “challenged more than 1.5 million accounts which were targeting discussions around COVID-19 with spammy or manipulative behaviors.” *Id.* And Facebook reported in April 2020 that, “during

the month of March [2020], [it] displayed warnings on about 40 million posts related to COVID-19,” and had “removed hundreds of thousands of pieces of misinformation that could lead to imminent physical harm,” including “theories like physical distancing is ineffective in preventing the disease from spreading.” Ex. 20 at 5 (Guy Rosen, *An Update on Our Work to Keep People Informed and Limit Misinformation About COVID-19*, Meta (Apr. 16, 2020)).

14. As the nation’s pandemic response progressed, the companies consulted “guidance from the WHO and other health authorities” when updating their policies. *See* Ex. 18 at 3. For instance, in February 2021, following “consultations with leading health organizations[] including the [WHO],” Facebook expanded “the list of false claims [it would] remove to include additional debunked claims about the coronavirus and vaccines.” *See* Ex. 20 at 1-2. And in March 2021, Facebook consulted the “High Level Panel on Vaccine Confidence & Misinformation” (a coalition organized by the London School of Hygiene and Tropical Medicine and others) and the Vaccine Confidence Project (an international research group) about its approach to moderating vaccine-hesitant content. *See* Pls.’ Suppl. Br. Ex. A, at 42 (Dkt. 174-1) (email from Facebook executive). In September 2021, Google announced that YouTube would remove content containing false claims about COVID-19 vaccines—a decision that was reached in consultation with “local and international health organizations and experts,” including the WHO. Ex. 153 at 1 (YouTube Team, *Managing harmful vaccine content on YouTube*, YouTube Official Blog (Sept. 29, 2021)).

D. Social media companies have long taken actions short of removal against “borderline content” that is not expressly prohibited by their content moderation removal policies.

15. The companies’ efforts to limit the spread of misinformation on their platforms have been multifaceted. As one Twitter representative recently testified, “[c]ompanies like Twitter—teams like mine—have to exercise judgment about where to draw the line on [problematic] content and implement that judgment consistently at the scale of hundreds of millions of unique posts per

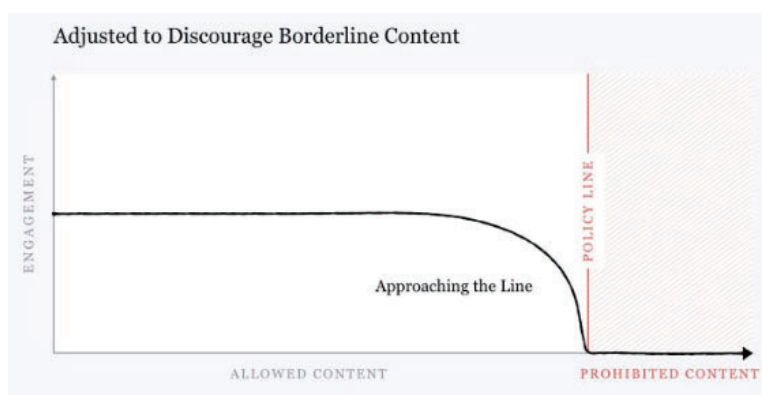

day.” See Ex. 10 at 4. One way in which the companies tackle this difficult task is by taking actions short of removal—including downgrading and labeling posts—against “borderline content,” or “content that [is] not prohibited” outright by a company’s community standards but that “come[s] close to the lines drawn by those policies.” Ex. 22 at 21 (Transparency Center, *Content Borderline to Community Standards*, Meta (Sept. 23, 2021)). Since 2018, Facebook, Twitter, and YouTube have each taken steps to discourage and demote borderline content.⁹

16. In a blog post, Facebook CEO Mark Zuckerberg explained the “basic incentive problem” that prompted the company to moderate borderline content. Ex. 23 at 7. According to Mr. Zuckerberg, “[o]ne of the biggest issues social networks face is that, when left unchecked, people will engage disproportionately with more sensationalist and provocative content.” *Id.* Even though users were more likely to engage with borderline content, they consistently reported to Facebook that such content “degrade[s] the quality of [Facebook’s] services.” *Id.* at 6. As Dr. Gurrea notes, these reports about “quality” are highly concerning to large platforms like Facebook because “low-quality content” drives advertisers and users away from the platform, see Gurrea Decl. ¶¶ 59-64 (Ex. 1)—even if, as Facebook acknowledges, people “engage with [it],” see Ex. 23 at 8 (“People consistently tell us these types of content make our services worse—even though they engage with them.”). But simply adjusting Facebook’s community standards categorically to require removal of more types of low-quality content would not solve the problem, because “no matter where [Facebook] draw[s] the lines for what is allowed, as a piece of content gets close to

⁹ See Ex. 23 at 6-9 (Mark Zuckerberg, *A Blueprint for Content Governance and Enforcement*, Facebook (Nov. 15, 2018), <https://perma.cc/ZK5C-ZTSX>); Ex. 24 at 2 (YouTube Team, *Continuing our work to improve recommendations on YouTube*, YouTube Official Blog (Jan. 25, 2019), <https://perma.cc/FH3M-KL6U>); Ex. 25 (Alex Kantrowitz, *Twitter is Going to Limit the Visibility of Tweets from People Behaving Badly*, BuzzFeed News (May 15, 2018), <https://perma.cc/RRU8-X4R3>) (quoting a statement from Twitter’s CEO).

that line, people will engage with it more on average—even when they tell us afterwards they don’t like the content.” *Id.* at 7. At the time of Mr. Zuckerberg’s post in 2018, the most concerning forms of borderline content were “click-bait and misinformation.” *Id.* at 8.

17. To address this problem, Mr. Zuckerberg announced that Facebook would address “borderline content so it gets less distribution and engagement.” *Id.* The announcement included the following graph:

Id. at 7. “By making the distribution curve look like the graph [above] where distribution declines as content gets more sensational,” Mr. Zuckerberg explained, “people are disincentivized from creating provocative content that is as close to the line as possible.” *Id.* Facebook’s goal was to “create a healthier, less polarized discourse where more people feel safe participating.” *Id.* at 9. And reducing the distribution of such content would address the consistent concern that Facebook heard from users that “these types of content make [its] services worse.” *Id.* at 8.

18. YouTube made a similar announcement in January 2019. *See* Ex. 24. YouTube announced that it was “taking a closer look at how [it could] reduce the spread of content that comes close to—but doesn’t quite cross the line of—violating [its] Community Guidelines.” *Id.* at 2. And “[t]o that end,” YouTube would begin “reducing recommendations of borderline content

and content that could misinform users in harmful ways.” *Id.* Specific examples included “videos promoting a phony miracle cure for a serious illness.” *Id.*

19. The companies’ approaches to borderline content have been extensively scrutinized—and, at times, criticized—by scholars and observers, in part because of a lack of transparency. As one commentator noted, reducing the visibility of content amorphously described as “approaching the line” means “not having to articulate an explicit policy; this gives platforms the flexibility to intervene around quickly emerging phenomena, go after content designed to elude prohibitions, and curtail content they ‘know’ is bad but have a hard time articulating why.” Ex. 26 at 12 (Tarleton Gillespie, *Reduction/Borderline content/Shadowbanning*, Yale-Wikimedia Initiative on Intermediaries & Info. (July 20, 2022)). These policies thus “avoid[] accountability, . . . and are not—yet—reported as part of the platform[s]’ transparency obligations.” *Id.*; see also Evelyn Douek, *Facebook’s “Oversight Board:” Move Fast with Stable Infrastructure and Humility*, 21 N.C. J. L. & Tech. 1, 42-43 (2019) (highlighting ways in which borderline content policies lack transparency).

20. The companies have moderated COVID-19 content under their borderline content policies, although they have not publicly provided extensive details as to how those policies are applied. In July 2021, Facebook announced that “[s]ince the beginning of the pandemic,” it had “labeled and reduced the visibility of more than 167 million pieces of COVID-19 content debunked by our network of fact-checking partners.” Ex. 27 at 3 (Guy Rosen, *Moving Past the Finger Pointing*, Meta (July 17, 2021)). And since September 2021, Facebook’s borderline content policy page has listed—among other kinds of borderline content—“[c]ontent that does not violate our COVID-19 or vaccine policies, but which shares misleading or sensationalized information about vaccines in a way that would be likely to discourage vaccinations.” Ex. 22 at 2. YouTube,

too, has noted that its work to “reduc[e] recommendations of borderline content” has been “foundational [to] ensuring that we limit the spread of COVID-19 related borderline content on our site.” Ex. 28 at 2 (*How has YouTube responded to the global COVID-19 crisis?*, YouTube, <https://perma.cc/3CCA-SNLE>) YouTube. Beyond highlighting their efforts generally, the companies have not catalogued the content that has been removed under their borderline content policies.

E. Bipartisan calls to revise or revoke Section 230 have repeatedly arisen over the years.

21. Enacted in 1996, § 509 of the Telecommunications Act of 1996, Pub. L. No. 104-104, 110 Stat. 56, 138-39 (codified at 47 U.S.C. § 230), commonly known as § 230, has been interpreted to immunize social media companies from liability for their content moderation decisions. In particular, paragraph (c)(1) states: “No provider . . . of an interactive computer service shall be treated as the publisher or speaker of any information provided by another information content provider.” 47 U.S.C. § 230(c)(1). Paragraph (c)(2) further provides:

No provider or user of an interactive computer service shall be held liable on account of —

(A) any action voluntarily taken in good faith to restrict access to or availability of material that the provider or user considers to be obscene, lewd, lascivious, filthy, excessively violent, harassing, or otherwise objectionable, whether or not such material is constitutionally protected; or

(B) any action taken to enable or make available to information content providers or others the technical means to restrict access to material described in paragraph [A].

47 U.S.C. § 230(c)(2). The statute also provides that “[n]o cause of action may be brought and no liability may be imposed under any State or local law that is inconsistent with this section.” *Id.* § 230(e)(3).

22. The problem Congress sought to solve in § 230(c) arose from a New York state trial court’s ruling that an internet service provider that had voluntarily deleted some messages from an

online message board was then “legally responsible for the content of defamatory messages that it failed to delete.” See *Fair Hous. Council of San Fernando Valley v. Roommates.com, LLC*, 521 F.3d 1157, 1162 (9th Cir. 2008) (discussing *Stratton Oakmont, Inc. v. Prodigy Servs. Co.*, No. 31063/94, 1995 WL 323710 (N.Y. Sup. Ct. May 24, 1995)). Congress responded to that ruling by “immuniz[ing] the removal of user-generated content” through § 230. *Id.* That is, § 230 “provides ‘Good Samaritan’ protections from civil liability for providers . . . of an interactive computer service for actions to restrict . . . access to objectionable online material.” H.R. Rep. No. 104-458, at 194 (1996) (Conf. Rep.), as reprinted in 1996 U.S.C.C.A.N. 10. In enacting § 230(c), Congress made findings describing online platforms as offering “a forum for a true diversity of political discourse, unique opportunities for cultural development, and myriad avenues for intellectual activity.” 47 U.S.C. § 230(a)(3). Accordingly, it is established that “the policy of the United States” is “to preserve the vibrant and competitive free market that presently exists for the Internet and other interactive computer services, unfettered by Federal or State regulation[.]” *Id.* § 230(b).

23. Bipartisan concerns about § 230 have been expressed for years, and efforts to reform or revoke § 230 have been made for nearly as long. For example, congressional inquiries, including in 2016 and in 2019, explored the concerns of some legislators about allegations of politically biased content moderation by online platforms that have asserted that § 230(c) immunizes them from liability for their content moderation decisions—concerns that then-President Trump echoed in 2019 and 2020.¹⁰ Then-President Trump tweeted: “REVOKE 230!” Ex. 31 at 1 (Donald J. Trump (@realDonaldTrump), Twitter (May 29, 2020, 11:15 AM)). In October 2021, then-

¹⁰ See, e.g., Ex. 29 (Letter from Senator John Thune to Mark Zuckerberg, Chairman and Chief Executive Officer, Facebook, Inc. (May 10, 2016)); Ex. 30 (*Stifling Free Speech: Technological Censorship and the Public Discourse: Hearing Before the Subcomm. on the Const. of the S. Comm. on the Judiciary*, 116th Cong. (2019)); Remarks by President Trump at the Presidential Social Media Summit, 2019 WL 3072280, at *15 (July 11, 2019).

Missouri Attorney General Eric Schmitt similarly tweeted: “Get rid of section 230 protections, treat them like common carriers, bust up #BigTech.” Ex. 32 at 1 (Eric Schmitt (@Eric_Schmitt) (Oct. 12, 2021, 3:06 PM)). Then-Attorney General William P. Barr observed in February 2020 that “[t]echnology has changed in ways that no one, including the drafters of [§] 230, could have imagined.” Ex. 33 at 2 (William P. Barr, Att’y Gen., Opening Remarks at the DOJ Workshop on Section 230: Nurturing Innovation or Fostering Unaccountability? (Feb. 19, 2020)). Four months later, then-Attorney General Barr issued several proposed recommendations to reform § 230 so as to “provide stronger incentives for online platforms to address illicit material on their services while continuing to foster innovation and free speech.” Ex. 34 at 1 (Press Release, U.S. Dep’t of Just., Justice Department Issues Recommendations for Section 230 Reform (June 17, 2020), <https://perma.cc/9S5E-JXLX>). Noting that the Department of Justice was “[r]esponding to bipartisan concerns about the scope of 230 immunity,” the recommendations “identified a set of concrete reform proposals to provide stronger incentives for online platforms to address illicit material[s] on their services while continuing to foster innovation and free speech.” *Id.* Among the recommendations was “to make clear that federal antitrust claims are not, and were never intended to be, covered by Section 230 immunity.” *Id.* at 2. In May 2020, former President Trump issued an Executive Order, entitled “Preventing Online Censorship,” in which he directed the Federal Government to narrowly construe protections against liability for social media companies in § 230 in light of the purported decisions of those companies to provide “warning label[s]” on the speech of some individuals but not others.¹¹ For his part, President Biden has also participated in the

¹¹ Exec. Order No. 13,925, Preventing Online Censorship, § 1, 85 Fed. Reg. 34,079, 34,079 (May 28, 2020), rescinded by Exec. Order No. 14,029, Revocation of Certain Presidential Actions and Technical Amendment, § 1, 86 Fed. Reg. 27,025 (May 14, 2021). Similarly, proposed legislation both before and after then-President Trump’s issuance of Executive Order 13925 sought to narrow § 230 and explored concerns by Republican legislators about online platforms’ “selective

public debate over § 230. *See* Mem. in Supp. of Defs.’ MTD at 12 (Dkt. 128-1) (“Defs.’ MTD”) (quoting 2d. Am. Compl. ¶ 313 (Dkt. 84)).

II. Since 2017, Executive Branch agencies and officials have promoted authoritative information or expressed concerns with the spread of misinformation.

24. Beginning with the Trump Administration and continuing into the Biden Administration, the White House and Executive Branch agencies have responded in myriad ways to societal concerns over misinformation, particularly on social media platforms, that could endanger public health or threaten the integrity of our electoral processes. For instance, since at least 2017, in the face of revelations about foreign influence targeting the Nation’s election infrastructure, agencies such as the Department of Homeland Security (“DHS”), the Federal Bureau of Investigation (“FBI”), and the predecessor agency to Cybersecurity and Infrastructure Security Agency (“CISA”) worked with various segments of society—including state and local election officials and technology companies—to share information that could be used to identify and prevent the dissemination of election-related misinformation circulated by foreign adversaries and others. Beginning in 2020, in response to the deadly COVID-19 pandemic, public health authorities such as Centers for Disease Control and Prevention (“CDC”) provided science-based, data-driven health information to protect the public against the virus’s spread and helped social media companies identify misinformation about COVID-19 circulating on their platforms. The Surgeon General and the White House later used their bully pulpits to call on social media companies to take more aggressive action, consistent with their own corporate policies, against health misinformation on their platforms.

ensorship” and lack of transparency in moderating content. *Compare* Ending Support for Internet Censorship Act, S. 1914, 116th Cong. (2019), *with* Limiting Section 230 Immunity to Good Samaritans Act, S. 3983, 116th Cong. (2020); Stopping Big Tech’s Censorship Act, S. 4062, 116th Cong. (2020); Platform Accountability & Consumer Transparency Act, S. 4066, 116th Cong. (2020).

25. In this action, Plaintiffs sue a total of 67 Federal agencies and official-capacity Defendants, in a sprawling Complaint that takes aim at numerous public statements and private communications by Executive Branch officials touching on matters of election security and the COVID-19 pandemic. Plaintiffs seek to treat this array of Executive Branch agencies and officials as a monolith, characterizing the disparate and independent actions of 67 different Defendants over multiple administrations as a single “Censorship Enterprise.” PI Supp. 1. Plaintiffs provide no factual or legal basis for treating these various actions collectively as part of a single “enterprise,” and the Court must consider whether preliminary injunctive relief is appropriate based on each Defendant’s alleged conduct. Below, Defendants describe the relevant actions that the White House and each of the federal agency and official-capacity Defendants have or have not taken over the last two administrations, which apparently form the basis of (but do not support) Plaintiffs’ request for sweeping and indiscriminate injunctive relief. *See also* Defs.’ Resp. to Pls.’ Proposed Findings of Fact in Supp. of Mot. for Prelim. Inj. ¶¶ 19-211 (“Defs.’ Resp. PFOF”) (filed concurrently with this brief).

A. The White House

26. By early 2021, hundreds of thousands of Americans had lost their lives to COVID-19, and the pandemic was still rampant. Indeed, 23,629 COVID-related U.S. deaths were reported during the week of January 6-13, 2021, which still remains the single highest weekly total of reported COVID-19 deaths in the United States.¹²

27. The Administration viewed social media as a powerful tool for promoting accurate, authoritative COVID-19 information, such as CDC guidance on vaccines, *see* Ex. 37 at 2 (*Press*

¹² Ex. 38 (*COVID Data Tracker: Trends in Number of COVID-19 Cases and Deaths in the US Reported to CDC, by State/Territory*, Ctrs. for Disease Control & Prevention (last updated Apr. 28, 2023)).

Briefing by Press Secretary Jen Psaki, The White House (July 16, 2021)) (discussing White House efforts to “meet people where they are” on social media), but was also concerned that misinformation relating to COVID-19 vaccines posed a critical threat to public health and contributed to preventable hospitalizations and deaths, *see* Ex. 36 at 19 (Defs.’ Supp. Rog. Resp. Related to Robert Flaherty). Accordingly, during the first several months of the Biden Administration, White House officials began speaking with social media companies about promoting more accurate COVID-19 information and to better understand what actions the companies were taking to curb the spread of COVID-19 misinformation. These officials included Andy Slavitt, former Senior Advisor for the COVID-19 Response,¹³ and Rob Flaherty, Director of Digital Strategy. Mr. Flaherty was responsible for overseeing the President’s engagements on social media and outreach to digital creators, among other things. *See* Ex. 36 at 19.

28. White House spokespeople—mainly former Press Secretary Jennifer Psaki—have spoken publicly about the President’s view that social media companies ought to curb the spread of misinformation related to COVID-19 on their platforms. Other White House officials—mainly Mr. Flaherty—have also had numerous private communications with social media companies on a wide range of topics, including COVID-19 misinformation. The record does not show a single instance in which these individuals threatened legal or regulatory action against companies that chose not to heed the Administration’s calls to address the COVID-19 misinformation circulating on their platforms. Nor does the record show that White House officials demanded that the companies change their content moderation policies or take action (regardless of existing policies) to address particular content that they view as potentially harmful COVID-19 misinformation. To

¹³ Mr. Slavitt served for four months before stepping down in June 2021. Ex. 39 (Maeve Sheehey, *Andy Slavitt stepping down from White House Covid-19 response role*, Politico (June 9, 2021)).

the contrary, although the Administration has long urged the companies to combat misinformation on their platforms and has provided general recommendations to that effect, it has made “crystal clear” its view that “[a]ny decision about platform usage and who should be on the platform is orchestrated and determined by private-sector companies,” and “not the federal government.” Ex. 37 at 31 (Ms. Psaki July 16, 2021, press briefing statement).

1. White House Public Statements

29. President Biden and his spokespeople have repeatedly expressed concerns about the spread of potentially harmful misinformation on social media, especially related to COVID-19. In these public statements, Ms. Psaki and others have emphasized that, as private entities, *platforms* bear the responsibility for setting and enforcing their own policies concerning misinformation—policies with which the Government, like members of the public, may or may not agree.

a. *White House Press Briefings (Jennifer Psaki)*

30. In 2021 and 2022, Ms. Psaki was regularly asked during White House press briefings for the President’s views on social media companies’ content moderation policies, particularly as they related to COVID-19 misinformation and whether the platforms should take action against former President Trump’s accounts. Ms. Psaki repeatedly emphasized that, as private actors, social media companies make their own decisions about whether and how to moderate content on their platforms. *See, e.g.*, Ex. 147 at 15 (*Press Briefing by Press Secretary Jen Psaki and Secretary of Agriculture Tom Vilsack*, The White House (May 5, 2021)) (noting that the President “believe[s] in First Amendment rights” and that “social media platforms need to make” “the decisions” regarding “how they address the disinformation [and] “misinformation [that] . . . continue to proliferate on their platforms”); *Press Briefing by Press Secretary Jen Psaki and Director of the National Economic Council Brian Deese*, 2021 WL 2310371, at *9 (June 4, 2021) (“[A]s always,

[whether to moderate content is] a decision for the company to make and any platform to make.”); *id.* at *10 (“This is a decision by a private-sector company.”).

31. The topic of COVID-19 misinformation was the focus of a July 15, 2021, joint press briefing with Surgeon General Vivek Murthy. Ex. 40 (*Press Briefing by Press Secretary Jen Psaki and Surgeon General Dr. Vivek H. Murthy*, The White House (July 15, 2021)). In that briefing, Ms. Psaki explained that the White House had been “in regular touch” with the platforms and “flagging . . . for Facebook” “problematic posts . . . that spread disinformation.” *Id.* at 10. In the following day’s briefing, she clarified that her reference to “flagging . . . problematic posts” was meant simply to reflect the Government’s practice of “regularly making sure social media platforms are aware of the latest narratives dangerous to public health” and of “engag[ing] with [platforms] to better understand the enforcement of social media platform policies.” Ex. 37 at 6. She emphasized that the Government does not “take anything down” or “block anything” and that platforms themselves, as “private-sector compan[ies],” “make[] decisions about what information should be on their platform[s].” *Id.* at 12. She reiterated this point three days later, on July 19: “It’s up to social media platforms to determine what their application is of their own rules and regulations.” *Press Briefing by Press Secretary Jen Psaki*, 2021 WL 3030746, at *16 (July 19, 2021).

32. In the July 15, 2021, Press Briefing, Ms. Psaki also mentioned four “proposed changes” concerning misinformation that the White House had “recommended” to social media companies. Ex. 40 at 10-11. Those recommendations were that (i) the platforms should “measure and publicly share the impact of misinformation on their platform[s]”; (ii) the platforms should “create a robust enforcement strategy that bridges their properties and provides transparency about the rules”; (iii) the platforms should “take faster action” against “harmful, violative posts”—that is, “posts that will be within their policies for removal [but] often remain up for days”; and (iv) the

platforms should “promote quality information sources in their feed algorithm.” *Id.* With respect to “creat[ing] a robust enforcement strategy,” Ms. Psaki noted that there are “about 12 people who are producing 65 percent of anti-vaccine misinformation on social media platforms,” and “[a]ll of them remain active on Facebook” despite being “banned” on other platforms “that Facebook owns.” *Id.* at 10. She did not recommend removing content relating to these twelve people’s accounts; instead, she made a factual statement about those accounts in support of her recommendation that platforms have strategies for “bridg[ing] their properties”—*i.e.*, applying consistent rules across multiple platforms owned by the same entity—and “provid[ing] transparency about the rules.” *Id.* These recommendations thus highlighted the need for transparency, consistency, and efficiency in the companies’ enforcement of their existing policies. And, mindful that the companies were responsible for decision-making regarding misinformation on their platforms, Ms. Psaki repeatedly noted that these proposals were not demands—they were “proposed” and “recommended” by the White House. *Id.*

33. The subject of content moderation on social media platforms continued to come up periodically during White House press briefings throughout 2021 and 2022, and Ms. Psaki continued to emphasize that content moderation decisions were the companies’ to make. *See, e.g.*, 2021 WL 3030746, at *16 (“It’s up to social media platforms to determine what their application is of their own rules and regulations.”); *Press Briefing by Press Secretary Jen Psaki*, 2022 WL 1468470, at *9 (May 10, 2022) (“[I]t’s the decision by a private sector company to make on who will or will not be allowed on their platforms.”). When Ms. Psaki was asked whether the Administration was “considering any regulatory or legal moves to possibly address disinformation on social media,” she responded: “That’s up to Congress to determine how they want to proceed moving forward.” 2021 WL 3030746, at *2. In October 2021, Ms. Psaki was asked again about

whether the White House supported policy reforms—specifically, reforms to § 230. *See Press Briefing by Press Secretary Jen Psaki*, 2021 WL 4587211, at *9 (Oct. 6, 2021). She reaffirmed the President’s view that “tech platforms must be held accountable for the harms that they cause” and expressed that the President “has been a strong supporter of fundamental reforms to achieve that goal, . . . includ[ing] Section 230 reforms [and] privacy and antitrust reforms as well as more transparency.” *Id.* Reiterating the White House’s view that Congress should lead any effort to propose policy reforms relating to misinformation, Ms. Psaki concluded, “[the President] looks forward to working with Congress on these bipartisan issues.” *Id.*

34. At a White House press briefing on April 25, 2022, Ms. Psaki was asked whether the White House was concerned about Twitter’s purchase by Elon Musk. Ms. Psaki stated:

No matter who owns or runs Twitter, the President has long been concerned about the power of large social media platforms, . . . [and] the power they have over our everyday lives; has long argued that tech platforms must be held accountable for the harms they cause. He has been a strong supporter of fundamental reforms to achieve that goal, including reforms to Section 230 [47 U.S.C. § 230], enacting antitrust reforms, requiring more transparency, and more. And he’s encouraged that there’s bipartisan interest in Congress.

Ex. 42 at 3 (*Press Briefing by Press Secretary Jen Psaki*, The White House (Apr. 25, 2022)).

Notably, Ms. Psaki spoke on this occasion about the myriad policy issues raised by the dominance of social media companies; she did not mention COVID-19 or misinformation in particular, nor was she asked about it. *See also* Defs.’ Resp. PFOF ¶¶ 123-130, 146-152, 155-162, 310-314.

b. *President Biden’s Comments*

35. On July 16, 2021, while President Biden was preparing to board Marine One, a reporter asked the President what his “message” was for “platforms like Facebook.” Ex. 45 at 2 (Question from Reporter to President Joseph R. Biden, Jr., in Washington, D.C. 2 (July 16, 2021)). The President responded: “They’re killing people. Look, the only pandemic we have is among the unvaccinated and they’re killing people.” *Id.* Three days later, President Biden was asked about

his earlier comment. He explained that he had just read that twelve individuals were responsible for sixty percent of the misinformation regarding COVID 19 circulating on social media—a statistic reported by the non-profit Center for Countering Digital Hate¹⁴—and clarified that “Facebook isn’t killing people. These 12 people are out there giving misinformation. Anyone listening to it is getting hurt by it. It’s killing people . . . the outrageous misinformation about the vaccine. That’s what I meant.” Ex. 43 at 2-3 (Question from Reporter to President Joseph R. Biden, Jr., in Washington, D.C. (July 19, 2021)). He further said, “[m]y hope is that Facebook, instead of taking [the comment] personally, . . . would do something about the misinformation,” thus repeating his policy view that social media companies—like every other sector in society—ought to do more to curb the harmful spread of COVID-19 misinformation on their platforms. *Id.* In that same interview, President Biden was asked whether he would “hold [social media companies] accountable if they don’t do more to stop the spread.” Ex. 43 at 3. He responded: “When you say hold accountable, I just want to – I’m not trying to hold people accountable. I’m trying to make people look at themselves, look in the mirror, think about that misinformation going to your son, your daughter, your relatives, someone you love. That’s all I’m asking.” *Id.* President Biden did not threaten any legal or regulatory action or make any demands. *See also* Defs.’ Resp. PFOF ¶¶ 153-154, 162-163.

c. *White House Communications Director Kate Bedingfield’s Comments*

36. On July 20, 2021, White House Communications Director Kate Bedingfield appeared on the television news program Morning Joe. Ms. Bedingfield was asked what the Biden Administration plans to do about COVID-19 misinformation on social media. Ms. Bedingfield explained that the “most important” thing was for people to obtain information from trusted

¹⁴ *See generally* Ex. 44 (Ctr. For Countering Digital Hate, *The Disinformation Dozen, Why Platforms Must Act on Twelve Leading Online Anti-Vaxxers* (Mar. 24, 2021)).

sources like their doctors, but with respect to social media platforms, “we all have a responsibility here,” including platforms and “news outlets.” Ex. 46 at 4 (Interview by Mika Brzezinski with Kate Bedingfield, Commc’ns Dir., White House, in Washington, D.C. (July 20, 2021)). The interviewer followed up by asking Ms. Bedingfield whether President Biden would support amending § 230 so that the platforms could no longer rely on its legal protection. *Id.* at 5. Ms. Bedingfield demurred by responding, “[w]ell, we’re reviewing that,” *id.*, before noting that the President had emphasized that “the people creating the content” are responsible for it, *id.* at 6. As Ms. Bedingfield explained, “it is a big and complicated ecosystem, and everybody bears responsibility to ensure that we are not providing people with bad information about a vaccine that will save their lives.” *Id.* Ms. Bedingfield did not threaten any legal or regulatory action against, or make any demands of, social media platforms during this interview.

2. White House Private Statements

37. White House aides—mainly, Mr. Flaherty—have had numerous conversations with representatives from Meta, Google, and Twitter about COVID-19 misinformation.¹⁵ In those conversations, Mr. Flaherty sought to better understand (i) the companies’ existing policies addressing the spread of misinformation or disinformation on their platforms, (ii) the actions those companies were taking to enforce those policies, and (iii) what the Government could do to assist social media companies in their efforts to address the spread of misinformation on their platforms.

¹⁵ Many of Mr. Flaherty’s communications with these companies did not concern mis- and disinformation. For example, the Administration has routinely partnered with the companies to promote the President’s messages on policy matters, such as when the White House and Instagram arranged for Olivia Rodrigo to visit the White House to encourage young people to get vaccinated against COVID-19, *see* Ex. 47 (MOLA_DEFSPROD_00016809), and when the President hosted a town hall meeting with “creators” on YouTube, *see* Ex. 48 (MOLA_DEFSPROD_00017159). In other communications, White House officials have reported accounts impersonating federal officials—in violation of federal law—and the President’s relatives—in violation of social media companies’ terms of service. *See infra*.

See Ex. 36 at 20. Mr. Flaherty “also encouraged social media companies to be transparent and share data concerning the prevalence of misinformation and disinformation on their platforms.” *Id.* At times, he “expressed frustration when he perceived platforms to be applying their policies inconsistently or to not be forthcoming in their assessment of the problems with misinformation and disinformation on their platforms.” *Id.*

38. The record is replete with examples of Mr. Flaherty asking the companies for information about the nature and extent of the COVID-19 misinformation they were seeing on their platforms. *See infra* Defs.’ Proposed Findings of Fact (“PFOF”) § II.A.2.a. As described further below, when specific proposals for policy changes by social media platforms were raised, Mr. Flaherty explicitly disclaimed that the White House supported them or was asking the companies to adopt them. *See infra* Defs.’ PFOF § II.A.2.b. White House officials did flag some content—mainly, imposter accounts—for the social media companies. *See infra* Defs.’ PFOF § II.A.2.c. When they did so, the companies reviewed the requests under their existing policies, and the White House neither threatened the companies nor demanded that they override their policies to accommodate the White House’s concerns. *See id.*; Defs.’ Resp. PFOF ¶¶ 34-122.

a. *White House Requests for More Data about Misinformation on Facebook*

39. An illustrative example of the White House’s focus on understanding misinformation trends on the platforms is an April 14, 2021, exchange during which Mr. Flaherty and Mr. Slavitt asked their respective contacts at Facebook to explain why a post by then-Fox News anchor Tucker Carlson—in which he discouraged Americans from getting vaccinated against COVID-19—was the most viewed post that day on Facebook.

40. By April 2021, the White House had already requested information several times from Facebook about the prevalent COVID-19 misinformation themes on its platform. *See, e.g.*, Dkt. 174-1 at 7 (February 8, 2021 email to Facebook: “do you have data on the actual number of

claims-related posts you've removed?"); Pls.' Jones Decl., Ex. G at 1 (Dkt. 214-9) (February 24, 2021 email to Facebook: "Can you give us a sense of volume on these [themes], and some metrics around [t]he scale of removal for each?"); *see also* Ex. 49 (MOLA_DEFSPROD_00017759) (email from Facebook representative to Mr. Flaherty noting that he might not be able to answer Mr. Flaherty's "questions on the data" in an upcoming meeting). For its part, Facebook would occasionally send the White House information from its public announcements about its misinformation policies, sometimes copied and pasted directly from an announcement's text. *See, e.g.*, Dkt. 174-1 at 5-6 (response that included text copied from Facebook's blog); *id.* at 8 (email from Facebook sharing publicly announced policy changes); *id.* at 9 (email from Facebook sharing "survey data on vaccine uptake" that it had published online).

41. On March 14, 2021, the *Washington Post* published a story about misinformation on Facebook that Mr. Flaherty perceived to be inconsistent with what Facebook had told White House officials previously, which frustrated Mr. Flaherty. According to the *Post*, Facebook was "conducting a vast behind-the-scenes study of doubts expressed by U.S. users about vaccines," which had revealed that "[j]ust 10 out of the 638 population segments [studied] contained 50 percent of all vaccine hesitancy content on the platform."¹⁶ Mr. Flaherty emailed the story to his contact at Facebook and wrote in the subject line: "You are hiding the ball[.]" Dkt. 174-1 at 12. By this he meant, as he later explained in another email, that he felt the *Post* had revealed that Facebook had access to "data on the impact of borderline content"—that is, content that does not violate Facebook's policies for removal, but which Facebook nonetheless moderates¹⁷—"and its

¹⁶ Ex. 50 at 2 (Elizabeth Dvoskin, *Massive Facebook study on users' doubt in vaccines finds a small group appears to play a big role in pushing the skepticism*, Wash. Post (Mar. 14, 2021)).

¹⁷ As Facebook has explained, "Some types of content, although they do not violate the letter of our Community Standards, are sensationalist or provocative and can bring down the overall quality

overlap with various communities,” which data Mr. Flaherty had previously asked for and which Facebook had not provided. Dkt. 174-1 at 11.

42. Mr. Flaherty explained that he was “not trying to play ‘gotcha’ with [Facebook],” but that the White House was “gravely concerned” about misinformation on Facebook and wanted to better understand how the Administration could be helpful in resolving the problem. *Id.* (“[W]e want to know that you’re trying, we want to know how we can help, and we want to know that you’re not playing a shell game with us when we ask you what is going on.”). In light of the *Post* story, Mr. Flaherty stated that he felt Facebook had not been forthcoming with him in their prior interactions. *Id.* Mr. Slavitt responded to the email thread and echoed Mr. Flaherty’s concerns, stating that “100% of the questions I asked have never been answered and weeks have gone by.” *Id.* at 10. He added: “Internally we have been considering our options on what to do about it,” evidently meaning Facebook’s lack of transparency about the trends it was seeing on its platform. *Id.*; *see also* Ex. 40 at 10 (Ms. Psaki calling for companies to “measure and publicly share the impact of misinformation on their platform”). There is no evidence that Mr. Slavitt was referring to (or that the White House actually took) retributive action of any kind, and no evidence that Facebook took action in response to Mr. Slavitt’s email.

43. Facebook responded to these emails on March 16, 2021, by committing to “getting [the White House] the specific information needed to successfully manage” the “rollout” of the new COVID-19 vaccine. Dkt. 174-1 at 10. Facebook explained that the information in the *Post* story was not “vetted internally” and offered to walk the White House through data that Facebook

of discourse on our platform, especially because people have frequently told us that they do not like encountering these forms of content.” Ex. 22 at 2.

had previously shared with the White House—data that had been published in a public report. *Id.*; *see also id.* at 9 (email attaching the data referenced in Facebook’s email about the *Post* story).

44. One month later, on April 14, 2021, Mr. Slavitt and Mr. Flaherty had an email exchange with Facebook regarding Tucker Carlson’s post asserting that vaccines are ineffective. Upon learning (likely through CrowdTangle)¹⁸ that Mr. Carlson’s post was the most viewed vaccine-related post on Facebook that day, Mr. Slavitt and Mr. Flaherty reached out to their respective contacts at Facebook. Mr. Slavitt wrote: “Number one on Facebook [today]. Sigh.” Dkt. 174-1 at 35. Mr. Flaherty wrote: “[T]he top post about vaccines today is [T]ucker Carlson saying they don’t work.” *Id.* at 22. He added: “Yesterday was Tomi Lehren [sic] saying she won’t take one. This is exactly why I want to know what ‘Reduction’ actually looks like—if ‘reduction’ means ‘pumping our most vaccine hesitant audience with [T]ucker Carlson saying it doesn’t ‘work’ then . . . I’m not sure it’s reduction!”¹⁹ In its response to both White House officials, Facebook explained that Mr. Carlson’s post was “not the most popular post about vaccines on Facebook [that day],” noting also that “[r]egardless of popularity, the Tucker Carlson video does not qualify for removal under [its] policies.” *Id.* at 34.

45. Mr. Flaherty responded by asking Facebook to help the White House understand how it was applying its content moderation policies: “I guess this is a good example of your rules in practice then—and a chance to dive in on questions as [to how] they’re applied,” wrote Mr.

¹⁸ CrowdTangle is a Facebook tool that allows users to “[m]onitor public information” about the reach of Facebook posts. Ex. 51 (*CrowdTangle*, Meta, <https://perma.cc/L7N2-CSK5>). “FEMA has been a user of CrowdTangle since 2015, and has used it to create real-time displays for their various regional teams to support their social media situational awareness efforts and help direct needs or information clarification.” Ex. 52 at 3 (MOLA_DEFSPROD_00018060).

¹⁹ “Reduction” is likely a reference to Facebook’s borderline content policy, under which Facebook has pledged since 2018 to combat misinformation by “reducing its distribution and virality.” Ex. 23 at 8.

Flaherty. *Id.* at 33. He went on to ask, among other things: “How was this [the Tucker Carlson video] not violative? . . . What exactly is the rule for removal vs demoting? Moreover: you say reduced and demoted. What does that mean?” *Id.* Mr. Flaherty ended his email by remarking: “[n]ot for nothing but last time we did this dance, it ended in an insurrection.” *Id.* at 34. Later that day, Mr. Flaherty followed up with another question: “And sorry—if this was not one of the most popular posts about the vaccine on Facebook today, then what good is [C]rowd[T]angle?” *Id.* at 33. When after two days Facebook still had not responded, Mr. Flaherty followed up (in frustration): “These questions weren’t rhetorical[.]” *Id.* Facebook thereafter responded with answers to Mr. Flaherty’s questions, including that Mr. Carlson’s post was not violative because “while [Facebook] remove[d] content that explicitly directs people not to get the vaccine, . . . [Facebook] reviewed this content in detail and it does not violate those policies.” *Id.* at 36.

46. The aforementioned exchanges demonstrates that, even in a moment of apparent (and atypical) frustration with Facebook, White House officials remained focused on obtaining information from social media companies to better understand the important problem of misinformation, as was true throughout their interactions with Facebook and other platforms. In the exchange, White House officials sought an explanation as to why a post by an influential figure that discouraged vaccination was surging in popularity given the company’s content moderation policies (hence Mr. Flaherty’s reference to “Reduction”). When Facebook responded that the post did not violate its community standards, White House officials did not demand (or even request) that Facebook remove the post or change its policies so that the post would be considered violative. Instead, the White House officials sought to learn more about how Facebook applied its policies—such as its little-understood “demoti[on]” policy for borderline content, *see supra* Defs.’ PFOF § I.D—and how the White House could use Facebook’s public-data resource (CrowdTangle) to

understand what Americans were seeing on the platform. Although Mr. Flaherty used strong language at times, this language reflected his frustration over not receiving answers to his repeated requests for information and the urgency of the public health crisis that the Administration was working to tackle—not threats or demands that Facebook change its content moderation policies or how they were enforced. Nor is there any evidence that Facebook subsequently changed its approach to applying its established policies, or took any action against the Tucker Carlson post, or any other post, as a result of the White House’s contacts. Defs.’ Resp. PFOF ¶¶ 81-82, 93-97.

b. *No White House Demands for Changes to the Companies’ Content Moderation Policies or Practices Regarding COVID-19*

47. Indeed, the record contains no evidence that White House officials demanded that social media companies adopt particular changes to their content moderation policies or the manner of their enforcement, or that action be taken against specific posts concerning COVID-19. Mr. Flaherty disclaimed the notion that he (or anyone at the White House) knew how best to combat misinformation on social media. *See, e.g.*, Dkt. 174-1 at 11 (“I will . . . be the first to acknowledge that borderline content offers no easy solutions.”). Moreover, on one occasion when Mr. Flaherty shared specific proposals with Facebook—proposals that were developed by third-party researchers—Mr. Flaherty emphasized that the White House was *not* asking Facebook to adopt those recommendations. *See generally* Defs.’ Resp. PFOF ¶¶ 34-211.

48. Specifically, on April 23, 2021, Mr. Flaherty sent Facebook’s representative an email with the subject “Research Suggestions.” Pls.’ Jones Decl., Ex. L at 1 (Dkt. 214-14). An outside group had recently “[b]rief[ed]” the White House on COVID-19 vaccine misinformation on Facebook. *Id.* Mr. Flaherty sent Facebook the outside group’s findings, which included specific recommendations, including that “Facebook should direct resources to equal policy enforcement around violative content and networks in non-English languages.” *Id.* at 2. In his cover email, Mr.

Flaherty explicitly noted that Facebook should not “read this as White House endorsement of these suggestions (or, also, as the upper bound of what our thoughts on this might be).” *Id.* at 1. He noted that he was sending the recommendations only in the “spirit of transparency” because the findings were “circulating around the building[.]” *Id.* On May 1, Facebook wrote to Mr. Slavitt, thanking “the [White House] team for sharing the research work” and providing “some details on where we’re developing work in this space (and where we aren’t).” Dkt. 174-1 at 41-42. The White House did not respond to this note with threats or demands to implement the outside group’s suggestions. *Id.* at 41. Instead, Mr. Flaherty repeated his typical questions about what Facebook was seeing on its platform. *Id.* (“Not to sound like a broken record, but how much content is being demoted, and how effective are you at mitigating reach, and how quickly?”).

c. *White House Requests for Action on Fake and Doctored Posts and Accounts*

49. At times, White House officials requested that social media companies remove fake accounts from their platforms—such as imposter accounts purporting to belong to members of the President’s family, or Dr. Fauci. *See* Ex. 53 at 1 (MOLA_DEFSPROD_00016598) (the President’s daughter-in-law); Dkt. 174-1 at 4 (the President’s grandchild); Ex. 54 at 1 (MOLA_DEFSPROD_00016939) (Dr. Fauci); Ex. 55 at 1-2 (MOLA_DEFSPROD_00017968) (a “fan account” for the President’s son). White House officials also flagged a doctored video of the First Lady. Dkt. 174-1 at 65.

50. It is not unusual for members of the public, or the victims themselves, to report imposter accounts or doctored content to social media platforms. Twitter, Facebook, and YouTube each prohibit imposter accounts and provide mechanisms for the public to report violations of their

imposter rules.²⁰ Indeed, in one instance when the White House flagged a fake account of one of the President’s family members, Twitter merely directed the White House to fill out its publicly available imposter form. Ex. 53 at 1. Understandably, however, some companies have a mechanism for the White House to submit expedited requests for removal of such information, since willfully impersonating a federal official is a federal crime, *see* 18 U.S.C. § 912, and could have dangerous consequences for public safety and national security. Those mechanisms, moreover, have been utilized by at least the prior two administrations. *See* Dkt. 174-1 at 3 (noting that Twitter offered the Biden Administration “the same system we had in place for the previous two administrations”).

51. The record demonstrates that the White House requested that the platforms review the above-mentioned incidents, *see* Ex. 54 at 2 (“Hi there –any way we can get this pulled down?”); Ex. 53 at 1 (“[This account] is an impersonation – and [the victim] has requested it be taken down.”); Dkt. 174-1 at 4 (“Please remove this account immediately”); *id.* at 65 (“[w]ould you mind looking at this video and helping us with next steps to put a label or remove it?”), and that the platforms accordingly evaluated the White House’s requests under their existing policies. When the platforms determined that the content was violative, it was removed. *See, e.g.*, Dkt. 174-1 at 4. When the content was not violative—as was the case with a doctored video of the First Lady circulating on Twitter—the platform declined to remove it. *Id.* at 63 (“After escalating this to our team, the [t]weet and video referenced will not be labeled under our synthetic and manipulated media policy.”). In the latter instance, the White House did not seek to compel Twitter to change its decision; it asked for “any other info” about why the content did not qualify for labeling, “in

²⁰ *See* Ex. 56 (*Account Integrity & Authentic Identity*, Meta, <https://perma.cc/DCR9-9FBY>); Ex. 57 (*Authenticity on Twitter*, Twitter Help Ctr., <https://perma.cc/6NVT-PS59>); Ex. 58 (*Impersonation policy*, YouTube Help, <https://perma.cc/R5BD-X6JB>).

order to help us understand the Twitter processes best.” *Id.* at 61. A White House official also requested the removal of a tweet by Robert F. Kennedy, Jr., regarding COVID-19 vaccines. As discussed further below, *see infra* Defs.’ Arg. § II.B.1, the record shows that the tweet had already been escalated for review by Twitter’s independent trust and safety team, which—applying its independent judgment—did not remove the tweet.

52. To be sure, White House officials sometimes used language reflecting urgency or exasperation when engaging with the social media companies about imposter accounts and doctored content. *See, e.g.*, Dkt. 174-1 at 58 (Mr. Flaherty observing that Twitter’s explanation was “Total Calvinball”). This language merely reflects the same frustration that Mr. Flaherty expressed when he perceived the platforms to be “applying their policies inconsistently or to not be forthcoming in their assessment of the problems with misinformation and disinformation on their platforms.” *See* Ex. 36 at 20. It does not reflect demands or threats of legal or regulatory retaliation.

53. Since the start of 2023, the landscape of White House COVID-19 efforts has changed dramatically. On April 10, 2023, the President signed into law a resolution terminating the national emergency related to the COVID-19 pandemic. *See* Joint Resolution of Apr. 10, 2023, Pub. L. No. 118-3, 137 Stat. 6. And HHS’s public health emergency is likewise due to end on May 11, 2023, in part because, “thanks to the [A]dministration’s whole-of-government approach to combating the virus, we are in a better place in our response than we were three years ago, and we can transition away from the emergency phase.” Ex. 67 at 1 (*COVID-19 Public Health Emergency (PHE)*, Dep’t of Health & Hum. Servs., <https://perma.cc/3HZ4-QM3G>). Moreover, recognizing that “transitioning out of the emergency phase is the natural evolution of the COVID response,” the White House plans to wind down its COVID-19 Response Team later this month. *See* Ex. 59

(Dan Diamond & Taylor Pager, *White House Disbanding its Covid-19 Team in May*, Wash. Post (Mar. 22, 2023)). The COVID-19 Response Team was charged, among other things, with “[o]rganizing the White House to combat COVID-19,” Exec. Order No. 13,987, 86 Fed. Reg. 7019, § 2 (Jan. 20, 2021), and included several White House staffers who communicated with social media companies about the spread of COVID-19 misinformation on their platforms, including Mr. Slavitt and other Defendants. *See* Ex. 60 at 1 (MOLA_DEFSPROD_00018067). Winding down the team and ending COVID-19 emergency declarations reflect that the Administration is reaching a new phase of its response to the virus. *See also* Defs.’ Resp. PFOF ¶¶ 188-211.

B. The Surgeon General

54. The U.S. Surgeon General is commonly referred to as the “Nation’s Doctor.”²¹ The Office of the Surgeon General (“OSG”) is housed within HHS, and the Surgeon General reports to the Assistant Secretary for Health.²² The Surgeon General does not have independent regulatory authority. *See, e.g.*, Reorganization Plan No. 3 of 1966, 31 Fed. Reg. 8855 (June 25, 1966) (transferring the Surgeon General’s powers to what is now HHS); Declaration of Max Lesko, Chief of Staff, Off. of the Surgeon Gen. ¶ 3 (“Lesko Decl.”) (Ex. 63). Rather, the Surgeon General’s role is primarily to draw attention to public health matters affecting the nation.²³ For example, Surgeons General have traditionally issued reports and calls to action on public health issues ranging from

²¹ *See* Ex. 61 at 1 (*About the Office of the Surgeon General*, U.S. Dep’t of Health & Hum. Servs., <https://perma.cc/AHX2-KGED>).

²² *See* Office of the Assistant Secretary for Health; Statement of Organization, Functions and Delegations of Authority, 52 Fed. Reg. 11,754, 11,754-55 (Apr. 10, 1987); *see also* Ex. 62 at 1 (*Office of the Assistant Secretary for Health Organizational Chart*, U.S. Dep’t of Health & Hum. Servs., <https://perma.cc/R5JF-URY9>).

²³ *See* Ex. 64 at 1 (*Mission of the Office of the Surgeon General*, U.S. Dep’t of Health & Hum. Servs., <https://perma.cc/87KA-DMD9>); *see also* Waldo Dep. 26:1-11.

health literacy²⁴ to opioid addiction,²⁵ to—perhaps most famously—the health risks of smoking cigarettes.²⁶

55. The current Surgeon General, Dr. Vivek Murthy, took two such official actions relating to health misinformation in 2021 and 2022. In July 2021, Dr. Murthy issued a Surgeon General’s Advisory (“Advisory”) that called attention to the harms caused by the spread of misinformation and offered “recommendations” for various sectors of society, including social media platforms, to address such harms. And in March 2022, Dr. Murthy issued a Request for Information (“RFI”), published in the Federal Register, seeking comments from interested members of the public about health misinformation on social media. In addition to the Advisory and the RFI, Dr. Murthy made public statements reiterating the Advisory’s themes at a White House press briefing, at public events, and in interviews. In private, OSG held courtesy meetings with Facebook, Google, and Twitter to inform them of the Advisory’s release and its themes, and the Surgeon General held an additional meeting with Facebook on July 23, 2021 (at Facebook’s request) at which the Advisory’s themes were discussed. OSG has not flagged specific posts for social media companies or demanded particular actions from the companies (let alone any specific company), nor has it worked with the companies to moderate content on their platforms. Lesko Decl. ¶ 8 (Ex. 63). Moreover, OSG was not—and is not—involved in a coalition of researchers known as the “Virality Project.” Indeed, following the issuance of the Advisory and the RFI, the

²⁴ See generally U.S. Dep’t of Health & Hum. Servs., *Proceedings of the Surgeon General’s Workshop on Improving Health Literacy* (2006), <https://perma.cc/25F7-ABJ2>.

²⁵ See Ex. 66 (*U.S. Surgeon General’s Advisory on Naloxone and Opioid Overdose*, U.S. Dep’t of Health & Hum. Servs., <https://perma.cc/W9KJ-QPAW>).

²⁶ See generally U.S. Dep’t of Health, Education, & Welfare, *Smoking and Health: Report of the Advisory Committee to the Surgeon General of the Public Health Service* (1964), <https://perma.cc/Z2WJ-UWEN>.

Surgeon General's office has pivoted to "core issues" other than COVID-19-related misinformation. Waldo Dep. 114:6-115:5 (Dkt. 210-1).

1. The Advisory, the RFI, and Other Public Statements

56. Dr. Murthy was confirmed by the Senate on March 23, 2021, *see* 167 Cong. Rec. S1721 (daily ed. Mar. 23, 2021), and sworn into office on March 25. On July 15, 2021, Dr. Murthy published a Surgeon General's Advisory related to COVID-19 misinformation. *See generally* Waldo Ex. 11 (Dkt. 210-12) ("Advisory"). A Surgeon General's Advisory is a "public statement that calls the American people's attention to a public health issue" and provides "recommendations" as to "how that issue should be addressed." *Id.* at 3. A Surgeon General's Advisory does not impose any obligations on private parties.

57. The July 2021 Advisory states that health misinformation has "sowed confusion, reduced trust in public health measures, and hindered efforts to get Americans vaccinated." *Id.* at 16. The Advisory calls for a "whole-of-society effort" to "curb the spread of harmful misinformation," *id.* at 6-7, and it offers recommendations as to how various sectors can tackle the issue, *id.* at 8-15. For "technology platforms," the Advisory identifies eight recommendations, including "[a]ssess[ing] the benefits and harms of products and platforms and tak[ing] responsibility for addressing the harms," "[g]iv[ing] researchers access to useful data to properly analyze the spread and impact of misinformation," and "[p]rioriti[z]ing the early detection of misinformation 'super-spreaders' and repeat offenders." *Id.* at 12. The Advisory does not mention any particular social media post—or any individual responsible for such a post—that the Surgeon General would consider to be harmful misinformation. Nor does the Advisory demand any specific action of social media companies. To the contrary, the Advisory recognizes that "[d]efining 'misinformation' is a challenging task," *id.* at 17, and it encourages platforms to consider how to

“safeguard[] user privacy and free expression” while addressing the spread of health misinformation, *id.* at 6-7. *See also* Defs.’ Resp. PFOF ¶¶ 318-329.

58. On the date of the Advisory’s release, July 15, 2021, Dr. Murthy spoke at a virtual event hosted by the Stanford Internet Observatory and a joint press briefing with White House Press Secretary Jennifer Psaki. During the Stanford event, Dr. Murthy advised that “[i]f we want to fight health misinformation, we’ll need all parts of society to pull together,” which is “why this surgeon general advisory has recommendations for everyone.” Waldo Ex. 12 at 7-8 (Dkt. 210-13). He also described the Advisory’s recommendations at a high level. *Id.* At the White House briefing later that day, Dr. Murthy reiterated the same points, explaining that “we need an all-of-society approach to fight misinformation” and that the Advisory “has recommendations for everyone.” *See* Ex. 40 at 2. In response to journalists’ questions, he noted that the Advisory “ask[ed] [social media platforms] to step up” to address misinformation, but made no demands that they take action of any kind, or suggest that the Government would retaliate against them if they did not. *Id.*

59. After the Advisory’s release, Dr. Murthy spoke publicly about the importance of addressing health misinformation—as described in the Advisory—and the need for a “healthy information environment.” *See* Ex. 68 (Clay Skipper, *Surgeon General Dr. Vivek Murthy Sees Polarization as a Public Health Issue*, GQ (Mar. 11, 2022)); *see also* Ex. 69 (Rockefeller Foundation, *Building Public Health’s Defense Against Disinformation*, <https://perma.cc/M5EG-YJKG>) (announcing a February 14, 2022, virtual event on misinformation featuring Dr. Murthy). In these remarks, Dr. Murthy did not make demands or threaten legal action, nor did he call out specific social media companies or their users.

60. In March 2022, OSG published in the Federal Register an RFI seeking “input from interested parties on the impact and prevalence of health misinformation in the digital information

environment during the COVID-19 pandemic.” Impact of Health Misinformation in the Digital Information Environment in the United States Throughout the COVID-19 Pandemic Request for Information (RFI), 87 Fed. Reg. 12,712, 12,712 (Mar. 7, 2022). The RFI requested any comments by May 2, 2022. It sought information on a broad range of topics, including “[i]nformation about sources of COVID-19 misinformation” on social media and elsewhere, such as “specific, public actors that are providing misinformation” and “components of specific platforms that are driving exposure to information.” *Id.* at 12,714. The RFI emphasized, however, that “[a]ll information should be provided at a level of granularity that preserves the privacy of users.” *Id.* at 12,713. Like the Surgeon General’s Advisory, the RFI imposed no obligations; responses were purely voluntary. *See id.* at 12,712 (“You may respond to some or all of the topic areas covered in the RFI.”); *see also* Defs.’ Resp. PFOF ¶¶ 411-423.

61. On April 7, 2023, OSG published the comments it received in response to the RFI. Several social media companies submitted responses, including Twitter, Google, and Meta (Facebook). *See* Ex. 70 (RFI Responses Compiled, Dep’t of Health & Hum. Servs (Apr. 7, 2023)).²⁷ None of these companies’ responses indicates that they changed their content moderation policies, or moderated the content of any users, in response to the RFI (or any other action taken by OSG). *See id.* at 1-6 (Twitter); *id.* at 7-14 (Google); *id.* 15-24 (Meta). Twitter’s five-page response, for example, simply discusses the content moderation policies that Twitter was at that point applying and includes statistics concerning their enforcement. *Id.* at 1-6. Meta’s eight-page submission similarly discusses Facebook’s policies that were in place at the time, noting that the

²⁷ In response to the RFI, OSG received more than 7,500 pages of comments from various sectors of society, including from researchers, private firms, public health departments, and many individuals. Those comments are publicly available at <https://www.regulations.gov/comment/HHS-OASH-2022-0006-0002>. For convenience and feasibility, Defendants’ exhibit contains only the responses submitted by Twitter, Google, and Meta (Facebook). *See* Ex. 70.

document offers a “high-level” description of those policies and directing readers to view Meta’s website for “[m]ore details around our approach to misinformation.” *Id.* at 18. Google’s submission takes the same approach; it provides an overview of Google’s “efforts in addressing COVID-19 health misinformation and disinformation,” including Google’s efforts to “provid[e] authoritative content.” *Id.* at 13. OSG does not intend to take any formal action with respect to the RFI responses it received. *See* Lesko Decl. ¶ 10 (Ex. 63).

2. Direct Communications with Social Media Companies

62. On May 25, 2021, Dr. Murthy participated in an introductory call with Nick Clegg, President of Global Affairs at Facebook, and Mr. Slavitt. *See* Ex. 187 at 5 (Defs.’ Fourth Am. Combined Objections & Resp. to Pl. First Set of Prelim. Inj.-Related Interrogatories. On May 28, Mr. Clegg followed up by sending Dr. Murthy and Mr. Slavitt a biweekly “COVID insights report”—which described Facebook’s “most engaged or the most viewed posts,” Waldo Dep. 140:15-16—for May 3-15, 2021, Waldo Ex. 4 at 1 (Dkt. 210-5). Mr. Clegg also “highlight[ed] a few policy updates” that Facebook had announced publicly on May 27, and he shared “data [he] mentioned on [the] call” that “point to the positive (if not as publicly discussed) influence [Facebook was] having on attitudes towards vaccines[.]” *Id.*; *see also* Defs.’ Resp. PFOF ¶¶ 252, 282-286.

63. Before the Advisory’s July 15, 2021 release, Eric Waldo, then-Chief Engagement Officer for OSG,²⁸ arranged high-level “stakeholder calls with relevant parties,” also known as “rollout calls.” Waldo Dep. 18:20-21. The goal of the rollout calls was for OSG to “give [stakeholders] a heads-up that the advisory was going to come out” and to encourage them to

²⁸ Mr. Waldo no longer works at OSG. Katharine Dealy, OSG’s Director of Engagement, is his successor. Defs.’ Notice Regarding Substitution of Official-Capacity Defendants at 2 (“Defs.’ Notice of Substitution”) (Dkt. 263).

review the document when it became public. *Id.* at 18:20-21; 87:2-6. Mr. Waldo held rollout calls on July 12 and July 14 with representatives from Twitter and Google/YouTube, respectively. Ex. 187 at 35-36. These were cordial meetings. *See* Waldo Dep. 87:2-6. Indeed, representatives from Google/YouTube expressed agreement as to the importance of combating health misinformation and said they were “excited” to review the Advisory. *Id.* at 89:25-90:2. Due to scheduling conflicts, a rollout call with Facebook did not occur until the day after the Advisory was released, or July 16, 2021. *Id.* at 90:15-19. That meeting occurred on the same day that the President told reporters that persons spreading COVID-19 misinformation on Facebook were “killing people”—a comment that he clarified two days later, *see supra* at 28-29—which made the meeting “slightly awkward.” *Id.* at 92:25. Facebook and OSG did not discuss the President’s comments or Facebook’s sentiment towards it, however. *Id.* at 94:7-10; *see also* Defs.’ Resp. PFOF ¶¶ 153, 157, 217, 222, 223, 227, 254-258, 273, 287-292, 348-349.

64. On July 16, 2021—the same day that OSG and Facebook met to discuss the Advisory—Mr. Clegg reached out to Dr. Murthy to request a call regarding “how we can continue to work toward . . . shared goals” despite “disagreement on some of the policies governing [Facebook’s] approach[.]” Waldo Ex. 17 at 2 (Dkt. 210-16); *see also* Waldo Ex. 18 at 1 (Dkt. 210-17) (text message from Mr. Clegg to Dr. Murthy). Mr. Clegg noted that Facebook staff were feeling “a little aggrieved” by the President’s comments. Waldo Ex. 18 at 1 (Dkt. 210-17). In his email, Mr. Clegg mentioned that OSG and Facebook had met that day to discuss “the scope of what the White House expect[ed] from” Facebook. Waldo Ex. 17 at 2 (Dkt. 210-16). Mr. Waldo testified, however, that Mr. Clegg misunderstood the nature of OSG’s meeting with Facebook, which Mr. Waldo had attended (and Mr. Clegg had not). Waldo Dep. 236:21-25. At the July 16 meeting, OSG

had simply “walk[ed] over the . . . recommendations section” of the Advisory “at a high level.” *Id.* 91:7-16.

65. In addition, on July 17, 2021, Facebook published a document describing actions it was “already tak[ing] . . . on the eight recommendations from the Surgeon General” in the form of measures that Facebook had had in place since April 2020, more than a year prior to the Advisory. *See Ex. 71 (Taking action to combat COVID-19 vaccine misinformation, Facebook (July 17, 2021), <https://perma.cc/6R6J-ANNF>)*. The four-page document does not mention a single *new* action that Facebook would begin to take in light of the Surgeon General’s Advisory; rather, it describes ways in which Facebook was *already* addressing the Advisory’s recommendations. *Id.*

66. In response to Mr. Clegg’s meeting request, Dr. Murthy met virtually with Mr. Clegg on July 23, 2021. Dr. Murthy tried to set a “cordial” tone at the meeting and raised the issue of “wanting to have a better understanding of the reach of the mis- and disinformation” on Facebook. Waldo Dep. 107:1-2, 98:18-22. The “most specific questions were about understanding the data around the spread of misinformation and how we [are] measuring that,” *Id.* at 35:20-23, meaning “how we’re measuring the harm and the impact,” *Id.* at 36:14. He also reiterated that OSG’s “asking everyone to do more.” *Id.* at 107:13-14. According to Mr. Waldo, someone from OSG’s staff (Mr. Waldo could not recall whom) made a request of Facebook to explain “if they would share” what they were doing in response to the Advisory, “if anything.” *Id.* at 109:5-17. And an offer was made (again, Mr. Waldo could not recall by whom) to connect DJ Patil, the White House’s “data person,” with Facebook personnel, so that Dr. Patil could better understand Facebook’s data about the spread of misinformation. *Id.* at 112:1-10. Dr. Murthy did not demand specific actions or threaten legal consequences against Facebook if they were not taken. *See id.* at 35:20. *See also* Defs.’ Resp. PFOF ¶¶ 259-271, 352-368.

67. After the July 23, 2021 call, Dr. Murthy did not have further meetings about misinformation with Facebook. *See* Lesko Decl. ¶ 12 (Ex. 63). Nor did OSG request meetings on misinformation with other social media companies.²⁹ OSG concluded that such meetings “would [not] be a good use of Dr. Murthy’s time.” Waldo Dep. 115:1, 113:3-15. Mr. Waldo explained why OSG decided to deprioritize these meetings:

[OSG had] done the work that we intended vis-a-vis the advisory, which is the Surgeon General's role, to raise up the issue, bring attention to it, and then . . . we wanted to move on to other priorities and that, you know, our part of the relay race was over. We had -- we had raised up the flagpole that this is an issue of public importance and that hopefully researchers, nonprofits, citizens, whomever, relative stakeholders would take actions. But we weren't -- we're not a regulatory agency. We don't have oversight authority, et cetera. So it wasn't our job then to sort of show up with a clipboard, but rather we were trying to encourage the field to move forward and give permission structure where others might recognize that this is important and want to study it more, want to do more work in this area. But . . . Dr. Murthy wanted to focus on other core issues

Id. at 114:6-115:5.

68. For its part, Facebook followed up with OSG in several ways. First, Mr. Clegg thanked Dr. Murthy for his time on July 23, 2021, and expressed wanting to “make sure [he] saw the steps [Facebook] took just this past week”—or, since July 16—“to adjust policies on what we are removing with respect to misinformation.” Waldo Ex. 19 at 1 (Dkt. 210-18).³⁰ In that message, Mr. Clegg also expressed interest in “a regular cadence of meetings,” which never materialized because OSG “didn’t think [such meetings] would be worth [its] time given [OSG’s] competing

²⁹ Mr. Waldo participated in three meetings—two with Google in July and September 2021 and one with Facebook in August 10—at the companies’ request. Ex. 187 at 35-36. These were courtesy meetings that the companies requested to give OSG advance notice of announcements and work that they were doing on misinformation. *See* Waldo Dep. 66:16-23, 129:1-23.

³⁰ The record does not indicate clearly what these “steps” were. And, as discussed *infra*, Facebook’s announcement with respect to the Surgeon General’s Advisory did not describe any *new* action that Facebook would take. *See* Ex. 71. The document highlights ways in which Facebook was *already* following the recommendations laid out in the Advisory.

priorities.” Waldo Dep. 254:7-12. Second, Facebook occasionally sent OSG updates on its activities. For example, on August 23, 2021, shortly after the Food and Drug Administration (FDA) approved the Pfizer COVID-19 vaccine, a Facebook representative forwarded Mr. Waldo an email informing the White House that Facebook planned to update its misinformation policies to remove claims that there were no FDA-approved vaccines. Waldo Ex. 27 at 1 (Dkt. 210-23). Third, Facebook continued to send OSG—mainly, Mr. Waldo—its bi-weekly COVID insight reports. *See* Waldo Ex. 54 at 1 (Dkt. 210-46) (Facebook sending Mr. Waldo “the most recent two reports” from June 24 to July 8, 2022). Mr. Waldo did not “spend a lot of time looking at [the] reports,” Waldo Dep. 140:14-20, and he was not aware of any action taken by federal officials in response to the reports, *id.* at 141:14-16. As of December 2022, Mr. Waldo did not believe that he was still receiving those reports. *Id.* at 294:1-2. Mr. Waldo no longer works at OSG. *See* Defs.’ Notice Regarding Substitution of Official-Capacity Defendants at 2 (“Defs.’ Notice of Substitution”) (Dkt. 263).

3. The Virality Project

69. One of the Advisory’s recommendations for governments is to “[i]nvest in fact-checking and rumor control mechanisms where appropriate.” Advisory at 15. In support, the Advisory cites an online article written by individuals at the Stanford Internet Observatory and posted on a website for the “Virality Project.” *See id.* at 22 n.62 (citing M. Masterson, A. Zaheer, *et al.*, *Rumor control: A framework for countering vaccine misinformation*, Virality Project Policy Analysis (May 4, 2021) (Ex. 72)). The Virality Project is a “coalition of research entities focused on supporting real-time information exchange” about COVID-19 misinformation “between the disinformation research community, public health officials, civil society organizations, government agencies, and social media platforms.” Ex. 73 (*Announcing the Virality Project*,

Virality Project (Feb. 11, 2021), <https://perma.cc/9T3J-F2HG>). One of the lead entities responsible for the Virality Project is the Stanford Internet Observatory. *See id.*

70. The Virality Project issued a “final report” on February 24, 2022, which was later revised on April 26, 2022. Waldo Ex. 28 at 2 (Dkt. 210-24) (“Virality Project Report”). Among other things, the report describes a process by which Virality Project analysts “created tickets documenting URLs” of “both specific pieces of misinformation and broader narratives.” Virality Project Report at 27. According to the report, 174 “incidents” of misinformation were “referred to platforms for potential action.” *Id.* at 30. The Virality Project provided information to social media platforms, but had no control over content moderation, censorship, or labeling posts. *See Ex. 74 (Background on the SIO’s Projects on Social Media, Stanford Internet Observatory (Mar. 17, 2023)) (“SIO Statement”).* Rather, social media companies examined any reports sent to them by the Virality Project to determine if the content violated their policies and did not take action in cases where companies felt their existing policies were not violated. *Id.* Decisions to remove or flag tweets were made by the social media companies. *Id.*

71. The report also notes that the Virality Project “built strong ties” with OSG, Virality Project Report at 17, and that it “hosted [a] discussion with [Dr.] Murthy” on July 15, 2021, the day of the Advisory’s launch and Dr. Murthy’s virtual appearance at the event hosted by the Stanford Internet Observatory, *id.* at 143. But according to OSG’s Chief of Staff, Max Lesko, OSG “never provided any tip, flag, ticket, report, or other form of notification or input to the Virality Project concerning posts or accounts on social media.” *See Lesko Decl.* ¶ 16 (Ex. 63). Moreover, OSG did not understand the Stanford event on July 15, 2021, to be a Virality Project event, and it was not advertised as such. *Id.* ¶ 15; *see also* Waldo Ex. 12 at 1 (Dkt. 210-13) (advertising the July 15, 2021, event as being hosted by the Stanford Internet Observatory). Mr. Waldo, who led OSG’s

rollout of the Advisory, testified that he had never heard of the Virality Project. Waldo Dep. 207:10-14. Nor was he aware of any OSG involvement in the Virality Project. *Id.* at 207:18-21. He was not familiar with anyone at OSG or in the Federal Government reporting specific instances of misinformation on social media—referred to in the Virality Project report as “tickets”—to the Virality Project, either. *Id.* at 285:4-10.

72. The Virality Project has not been active since 2022. Its February 2022 report is self-described as a “final” report. *See* Virality Project Report. The project’s most recent “weekly briefing,” “policy analysis,” and “rapid response” posts—the only three categories of posts available on the Virality Project’s website—all occurred in August 2021.³¹ The final “weekly briefing” post from August 3, 2021, notes that it will be the project’s “last official briefing.” *See* Ex. 75 (*Virality Project Weekly Briefing # 32*, Virality Project (Aug. 3, 2021)). And the Virality Project’s Twitter account has made no posts since announcing the final report on February 24, 2022. *See* Ex. 76 (Virality Project, Twitter (Feb. 24, 2022, 2:08 PM), <https://perma.cc/6ADR-YCW7>). To the best of OSG’s knowledge, the Virality Project is no longer currently active, and OSG does not currently have any contact with it. Lesko Decl. ¶ 14 (Ex. 63). *See also* Defs.’ Resp. PFOF ¶¶ 1236-1265.

C. The Centers for Disease Control and Prevention (CDC)

73. CDC, a component of HHS, is a “science-based, data-driven, service organization that,” “[f]or more than 70 years,” has worked to “protect[] the public’s health.” Ex. 77 (*CDC 24/7: Saving Lives, Protecting People*, Ctrs. for Disease Control & Prevention, <https://perma.cc/Z53S-9J8S> (last updated Aug. 31, 2022)). Its mission is to “work[] 24/7 to protect America from health,

³¹ *See* Ex. 81 (*Weekly Briefings*, Virality Project, <https://perma.cc/W64T-2CXX>); Ex. 82 (*Rapid Response*, Virality Project, <https://perma.cc/9Z2L-KE5F>); Ex. 83 (*Policy Analysis*, Virality Project, <https://perma.cc/CZS2-KKSB>).

safety and security threats, both foreign and in the U.S.” Ex. 78 (*Mission, Role and Pledge*, Ctrs. for Disease Control & Prevention, <https://perma.cc/SU2B-Z6TR> (last updated Apr. 29, 2022)). To accomplish its mission, CDC “conducts critical science and provides health information” to prevent “expensive and dangerous health threats, and respond[] when [such threats] arise.” *Id.* CDC’s Office of Communications supports the agency’s mission by “[e]nsur[ing] CDC’s work is accessible, understandable, and actionable,” and by “[m]aximiz[ing] public trust in and credibility of CDC’s science, programs, and recommendations.” Ex. 79 (*Office of Communications (OC)*, Ctrs. for Disease Control & Prevention, <https://perma.cc/885U-GHJ8> (last updated Apr. 3, 2023)).

74. Carol Crawford works for the CDC Office of Communications as the head of its Division of Digital Media. Crawford Dep. 11:7-12 (Dkt. 205-1). In that role, Ms. Crawford provides leadership for CDC’s website and social media accounts. *Id.* at 11:14-19; Declaration of Carol Crawford, Director of CDC’s Division of Digital Media ¶ 3 (“Crawford Decl.”) (Ex. 80); *see also* Ex. 79. That includes convening personnel from across the agency to manage the CDC website and maintain social media accounts, coordinating CDC’s web content management system, and drafting policies and guidelines in that space. Crawford Decl. ¶ 3 (Ex. 80). Ms. Crawford has worked for CDC in various capacities for 34 years. *Id.* ¶ 1.

75. At various times during 2020-2022, CDC communicated regularly with several social media companies (such as Facebook) and sporadically with others (such as Twitter), primarily about promoting COVID-19 health information from CDC and also about COVID-19 misinformation on the companies’ platforms. When communicating with social media companies, CDC was either (1) responding to Facebook’s requests for science-based public health information; (2) proactively alerting Facebook, Twitter, and YouTube about false COVID-19 claims the agency observed on the platforms that could adversely affect public health; or

(3) advising the companies where to find accurate information about such claims on CDC's webpage. CDC also received bi-weekly summaries (in what were called "CrowdTangle reports") from Facebook about high-volume COVID-19 content circulating on its platform. CDC did not direct or encourage the development or enforcement of the companies' misinformation policies and did not direct or encourage them to take any particular actions with respect to any particular speakers³² or claims circulating on their platforms.

1. CDC's Pandemic-Era Meetings with Social Media Companies

76. Even before the COVID-19 pandemic, Ms. Crawford had occasional contacts with social media companies, primarily for the purpose of managing CDC's own social media accounts. At times, social media companies would reach out to CDC to partner with the agency on special projects such as promoting information about flu vaccines or addressing prescription drug overdoses. *Id.*

77. Early in the COVID-19 pandemic, Ms. Crawford and others from her office began to communicate regularly with representatives from certain social media companies about COVID-19. Those communications were largely prompted by the companies' efforts to "get[] [CDC's] credible information out to [their] audiences[.]" Crawford Dep. 181:25–182:1. Social media companies began regularly reaching out to CDC to ensure that the information they chose to promote on their platforms remained consistent with the latest CDC guidance on issues such as masking protocols or vaccine recommendations. Crawford Decl. ¶ 5 (Ex. 80). Google, for instance,

³² That includes the Individual Plaintiffs in this case. Crawford Dep. 264:2-18 ("Q: At any of your – in flagging any material for any of the social media issues, themes, facts, whatever you flag, can you say whether or not you flagged any information from the Great Barrington Declaration? A: I don't know what that is. Q: Okay. How about Jay Bhattacharya? Anything from him? A: I don't know who that is. Q: Marty Kulldorff. Anything from him? A: I don't know who that is. Q: Aaron Kheriaty. Anything from him? A: I don't know who that is. Q: Jim Hoft, or Gateway Pundit? A: I don't know who that is. Q: All right. And Jill Hines? A: I don't know who she is.").

would reach out to verify that the CDC web links appearing in its search results were accurate and up-to-date. *Id.* And Facebook reached out for help identifying CDC content that the company wanted to promote in its platform “group” pages. *Id.*

78. An email from Facebook to Ms. Crawford in early February 2020 illustrates the types of communications the platforms had with CDC. At that time, a representative from Facebook informed Ms. Crawford that the company had “been working to identify how [it] can support efforts to provide users with accurate and timely information about [the] coronavirus,” Crawford Ex. 2 at 2 (Dkt. 205-3), and was considering initiatives to “mak[e] it easier” for users to find “CDC-credible information,” Crawford Dep. 18:9-15. The same Facebook representative informed CDC that the company was already taking “steps to control information and misinformation related to [COVID-19],” including by “remov[ing] [] misinformation” on its platform and by directing users to the WHO’s webpage. Crawford Ex. 2 at 3-4 (Dkt. 205-3). What Facebook was looking to do in February 2020—and the reason it was reaching out to CDC then—was to “get CDC’s feedback on a few key initiatives that” the company was “considering launching in the coming days/weeks” to *promote* CDC information. *Id.* at 2. Facebook proposed three initiatives: (1) “proactive messages,” called ““Quick Promotions,”” “at the top of the News Feed to users in various countries about how to protect [themselves] from coronavirus,” which would point users to “credible websites including the WHO internationally, and the CDC in the US”; (2) a “Coronavirus Page serving up content that exists on other organizations’ [Facebook] pages including the CDC,” which users could find when they “search for information on coronavirus” on the platform; and (3) “a coronavirus ‘hub’ which would contain various modules including pages to follow, fundraisers that are happening on the platform related to coronavirus, and potentially a common set of FAQs.” *Id.* at 3. The email from Facebook included “design mocks” and asked for CDC’s “feedback” on various questions,

including whether CDC thought it “would be beneficial to launch” the “Quick Promotions” “in the US at this time[.]” *Id.*

79. Ms. Crawford responded that the agency believed there would be “great value” in adding “Quick Promotions” to Facebook’s newsfeed and suggested that “if we can rotate messages, there could be times [CDC] might want to address widespread myths like mask use or new issues.” *Id.* at 2. She also stated that CDC thought the two other promotions were “great” and would “love to be a part of [them].” *Id.* She noted that “[U.S.] users will need information directly from CDC and other federal/local organizations rather than international organizations,” and asked Facebook to “[l]et us know what you need.” *Id.*

80. Soon, officials from CDC and Facebook began meeting weekly “to exchange information about COVID.” Crawford Dep. 16:13-15. Later in the pandemic, CDC began meeting regularly with Google. *Id.* at 180:16-17. For a “short period of time,” CDC met regularly with Pinterest as well, *id.* at 180:23-24; and “on occasion,” CDC met with Twitter, *id.* at 180:24-25–181:1. While “misinformation was discussed” in those meetings, the meetings were “by and large . . . about things other than misinformation,”—in particular, about promoting CDC information relating to COVID on the social media companies’ platforms. *Id.* at 181:22-25. These regular meetings facilitated conversations about the latest COVID-19 information in the midst of a pandemic environment where CDC’s knowledge and understanding of the novel virus were evolving. Crawford Decl. ¶ 6 (Ex. 80).

81. CDC no longer has regular meetings with any social media company except for Google, and it has no regular or direct communications with any social media company about misinformation. *Id.* ¶¶ 6-12. The last regular meeting with Facebook personnel took place in the summer of 2021. *Id.* ¶ 8. It has been well over a year since CDC had a meeting with Twitter or

Pinterest that touched on misinformation. *Id.* ¶¶ 9-10. And while CDC currently meets regularly with Google, there is no evidence that those meetings have related in any way to misinformation since March 2022. *Id.* ¶ 11. Instead, the bi-weekly meetings with Google focus on topics such as the impact of the redesign of the CDC.gov website on search engine results. *Id.*

82. Moreover, even outside of meetings, CDC does not regularly, or directly, communicate with social media or technology companies about misinformation; nor does it have plans to do so. *Id.* ¶¶ 6-7. However, CDC has some occasional, indirect contact with personnel from social media or technology companies that may relate to misinformation. *Id.* For example, CDC personnel develop periodic “State of Vaccine Confidence Insight” reports, which are publicly available on its website, and which CDC periodically distributes to a wide list of email recipients that may include personnel from social media companies. *Id.* ¶ 7. CDC also funds and attends conferences that discuss misinformation and infodemic management, and personnel from social media companies may attend or speak at those conferences. *Id.* These occasional, indirect interactions concerning misinformation do not involve any requests or demands by CDC for a social media company to moderate any particular content on its platform. *See also* Defs.’ Resp. PFOF ¶¶ 434-530 (Facebook), 531-560 (Google), 561-589 (Twitter).

2. CDC’s Responses to Social Media Companies’ Requests for Scientific Information Relating to Claims About COVID-19 or Vaccines

83. On occasion, some social media companies reached out to Ms. Crawford via email to ask for information responsive to certain claims about COVID-19 or vaccines circulating on their platforms, and Ms. Crawford would respond on CDC’s behalf.

84. For example, at various times in 2021, Facebook emailed Ms. Crawford a list of claims (untethered to any particular post) and asked CDC to indicate whether they had been “debunked,” *see* Crawford Ex. 16 at 1 (Dkt. 205-17)—in other words, whether they were “false

and can lead to harm,” Crawford Ex. 17 (Dkt. 205-18), or “contribute to vaccine hesitancy or refusals,” Crawford Ex. 26 at 2 (Dkt. 206-26). After checking with the relevant subject-matter experts as necessary, Ms. Crawford would respond by indicating whether the claims were false and harmful, and sometimes directing the company to information available on CDC’s website that directly responded to the false claim. Crawford Dep. 129:11-22; Crawford Ex. 15 at 2 (Dkt. 205-16) (directing Facebook to CDC’s “facts and misses” page for more information in response to one of the false claims); Crawford Ex. 23 (Dkt. 205-24) (sending links to CDC webpages addressing the claims raised by Facebook). Nevertheless, CDC could not always provide conclusive answers to the claims Facebook sent the agency. And where scientific evidence was unavailable at the time, CDC would respond to Facebook’s inquiries with “[i]nconclusive.” *See, e.g.,* Crawford Ex. 16 at 1 (Dkt. 205-17).

85. When responding to Facebook, CDC did not instruct the company to remove or take any other action against posts or users promoting claims that CDC concluded were false and hazardous to public health. Crawford Dep. at 138:12-14. Indeed, Ms. Crawford understood that the scientific information CDC provided in its responses might inform Facebook’s own “policy making” and content moderation decisions, *id.* at 139:23-25-140:1-4, but that “CDC’s role” was never “to determine what” Facebook should or should not “do with the scientific information that [CDC] provided,” *id.* at 161:20-23. Nor do any communications between Facebook and Ms. Crawford indicate that she or anyone else from CDC ever told Facebook how to handle misinformation. Instead, Facebook made clear that it was “seeking [the agency’s] advice” on various issues to “help [*it*] determine the appropriate action to take on [certain] content[.]” *See* Crawford Ex. 26 at 4 (emphasis added) (Dkt. 205-26). At times, Facebook informed CDC about updates to its policies as a result of information it learned from CDC. *See id.* (noting actions the

company took against certain claims under its “current policy”); *id.* at 1 (informing CDC of “several updates” Facebook had made to its “COVID-19 Misinformation and Harm policy based on [CDC] inputs”). But the record contains no evidence that CDC ever demanded (or even asked) that Facebook implement any specific policy changes or even that Facebook report any such changes to the agency. *See also* Defs.’ Resp. PFOF ¶¶ 434-530.

86. Google (which owns YouTube) likewise requested CDC’s input on claims about COVID-19 vaccines circulating on YouTube’s platform. For instance, in March 2021, Google reached out to CDC to ask if a “vaccine expert[.]” from CDC could join a call where Google “plan[ned] to share a new list of . . . vaccine misinformation claims” that the company had compiled. Crawford Ex. 29 at 2 (Dkt. 205-29). Ms. Crawford agreed to “arrange[.] for a few [subject matter experts] to join the call[.]” *Id.* And in April of that year, Google again asked CDC if a vaccine expert could join a call “to follow up on some additional questions” from the company. Crawford Ex. 30 at 1 (Dkt. 205-30). Google also reached out with more technical questions, too. As vaccines were becoming available in 2021, Google notified CDC of updates the company planned to implement to its “vaccine general availability banner” as COVID-19 vaccines became available to new groups of people or CDC issued new guidance. *See* Crawford Ex. 42 at 3 (Dkt. 205-42) (Google asking CDC to verify whether Google’s “one liner on the latest booster shot guidance from the CDC/Vaccines.gov” was accurate and CDC confirming that it was). As with Facebook, CDC did not demand (or even ask) that Google take any action with respect to content on YouTube or information appearing in Google’s own banners. *See also* Defs.’ Resp. PFOF ¶¶ 531-549.

87. Most recently, in June 2022, Google requested CDC’s “evidence-based input” on health-related claims unrelated to COVID-19 or vaccines. Crawford Ex. 43 (Dkt. 205-43). CDC

did not substantively respond to that request because it concerned information that fell outside CDC's scope. Crawford Dep. 256:9-16. When asked in her deposition why she thought Google sent CDC this request, Ms. Crawford testified that she believed it was because CDC's "focus is not solely on COVID," and so Google likely "thought that [CDC] might be able to help" by providing input on "this [other] topic as well." *Id.* at 256:4-8. Contrary to Plaintiffs' assertion, *see* PI Supp. 33, this email exchange does not show that CDC is communicating with platforms about misinformation on other topics as well.

3. CDC Emails Alerting Social Media Companies to Misinformation Themes Observed on Platforms and Providing Relevant Scientific Information

88. At the same time, CDC occasionally pointed out to, or "flagged" for, Facebook or Twitter "issues" or "themes" about COVID-19 that the agency noticed had been circulating widely on the companies' platforms and referred the companies to information on CDC's website that addressed the claims. Crawford Ex. 9 at 1 (Dkt. 205-10); Crawford Dep. 87:13-25–88:1-2 (explaining that "flagging" meant simply "pointing out"). On occasion, CDC included specific social media posts as examples, to provide context or to clarify what the claims were. *Id.* at 90:14-23 (saying CDC "provided some examples of what we meant"). On May 6, 2021, for instance, Ms. Crawford emailed Facebook to point out "two issues [that] we are seeing a great deal of misinfo" about—"vaccine shedding and microchips"—and provided "some example posts." Crawford Ex. 9 at 1 (Dkt. 205-10). On May 10, 2021, Ms. Crawford sent the same email to Twitter, with example posts from its platforms. Crawford Ex. 34 at 4 (Dkt. 205-34). Ms. Crawford noted in her emails that CDC "plan[ned] to post something shortly to address vaccine shedding and" that she could "send that link soon." Crawford Ex. 9 at 1 (Dkt. 205-10); Crawford Ex. 34 at 4 (Dkt. 205-34). Ms. Crawford testified that, through these alerts, CDC was "trying to point out" to the social media companies the "[in]accurate information" circulating about COVID-19 "and [to] make the credible

information more available to users.” Crawford Dep. 88:25-89:6. The “goal,” in other words, was “to be sure that people ha[d] credible health information so that they [could] make the correct health decisions for themselves.” *Id.*

89. Ms. Crawford did not “know exactly what [the companies] might do with” the claims and posts flagged by CDC, nor did she ask the companies to take any particular action with respect to the claims or posts. *Id.* at 88:15-18; *see also id.* at 75:19-21. Neither she nor “anyone at CDC” advised a “social media company on how [it] should apply [its] policies to . . . a particular post[.]” *Id.* at 104:22-105:6. And the social media companies did not face any “consequence[s]” if they declined to “do anything with” the items “flagged” or pointed out by CDC. *Id.* at 88:19-22. Ms. Crawford simply believed “it was worth pointing out that” CDC was “going to have” responsive “information up soon” on its website, *id.*, which could assist the social media companies’ application of their own policies with respect to claims “widely circulating” on their platforms. *Id.* at 153:23-154:3. Ultimately, the social media companies themselves “made decisions about” how to handle the misinformation circulating on their platforms, “based on whatever policy they had.” *Id.* at 211:18-19; *id.* at 103:13-16 (discussing Facebook’s options). Ms. Crawford has “never seen [those] policies,” *id.*, or had input into their development or enforcement, *id.* at 105:12-19.

4. CDC’s Two “Be on the Lookout Meetings” in May 2021

90. In May 2021, CDC held two meetings—called “Be On the Lookout” or “BOLO” meetings—to discuss misinformation with social media platforms. Crawford Dep. 198:21-24; *id.* at 244:19-245:2; *see also* Crawford Decl. ¶¶ 14-16 (Ex. 80). Facebook, Twitter, and YouTube were invited to participate, Crawford Ex. 34 at 4 (Dkt. 205-34) (Twitter invite); Crawford Ex. 40 at 1 (Dkt. 205-40) (YouTube invite); *id.* at 3 (Facebook invite), and officials from the Census Bureau (“Census”) also participated in the meetings, *infra* Defs.’ PFOF § II.D.

91. The BOLO meetings emerged from an Interagency Agreement that CDC entered into with Census in January 2021. Crawford Decl. ¶¶ 13-14 (Ex. 80). The agreement allowed CDC to consult with Census “to learn how th[at agency] handled [online] misinformation” during the 2020 Census, to inform CDC’s response to COVID-19 misinformation circulating online. Crawford Dep. 111:1-6, 175:14-19. CDC sought Census’ assistance on this issue because CDC was “shorthanded” at the time, and Census “seemed to have more knowledge than [CDC] did.” *Id.* at 111:5-6. Census introduced CDC to the idea of BOLO meetings, which would provide a forum for CDC to “give examples” to social media companies of false health information circulating on their platforms and to point the companies to responsive scientific information available from CDC. Crawford Dep. 210:20-22. Participants from social media companies “could [then] follow up separately” with CDC to discuss any of the issues further. *Id.* Ms. Crawford “ran the BOLO meetings,” with the help of a Census contractor. *Id.* at 265:11-19. Census “drafted the slide deck,” which CDC edited, *id.* at 210:15-25; and Census explained how it “thought [CDC] should” present the information, based on how Census “had done it in the past.” *Id.* The PowerPoint slide decks presented COVID-19 misinformation narratives and contained example social media posts as illustrations. Crawford Decl. ¶ 14 (Ex. 80). During these presentations, CDC did not ask, let alone demand, that a company take a particular action with respect to the themes and example posts that were discussed at the BOLO meetings. *See* Defs.’ Resp. PFOF ¶¶ 550-562.

92. Two additional BOLO meetings were scheduled for the summer of 2021 but never occurred. Crawford Decl. ¶ 15 (Ex. 80). The first was cancelled due to a holiday; CDC emailed PowerPoint slides to the companies instead. *Id.*; Crawford Dep. 248:15-22. The second was cancelled because CDC had no information to share. Crawford Decl. ¶ 15 (Ex. 80). There have

been no BOLO meetings of this type since May 28, 2021, and no further meetings are anticipated.

Id.

5. A CDC Official's One-Time Use of a Facebook Reporting Channel in 2021

93. In the spring of 2021, Facebook and Twitter each separately suggested that CDC register to use the companies' respective "reporting channel" or "portal" set up by the company for entities such as CDC to report "misinformation or threats" that they observed on the platforms. Crawford Dep. 91:9-10; *id.* at 211:24-212:7. Ms. Crawford did not use Twitter's portal and does not recall anyone else from CDC ever being given access to the portal. *Id.* at 213:5-8. Ms. Crawford also did not use the Facebook reporting channel, but one other CDC official used it in the summer of 2021 to report a handful of "posts or threats" in a single submission. *Id.* at 92:3-5, 92:13-18; Crawford Decl. ¶ 18 (Ex. 80). CDC did not demand that Facebook take any particular action with respect to the few posts flagged through the reporting channel in the summer of 2021; and Facebook did not report back to CDC whether it took any action on those posts. Crawford Decl. ¶ 18. Ms. Crawford testified that she is unaware of any CDC official using a reporting channel since the summer of 2021. *Id.*; *see also* Defs.' Resp. PFOF ¶¶ 476-478.

6. CDC's Receipt of Bi-weekly Facebook COVID-19 Content Reports in 2021

94. Additionally, from January to December 2021, Facebook sent CDC bi-weekly reports, called "CrowdTangle COVID content report[s]," Crawford Ex. 6 at 2 (Dkt. 205-7) which provided a "summary of the higher volume conversations" about COVID-19 on the platform, Crawford Dep. 53:7-12, and included "pictures of [] posts" "as examples" of the conversations, *id.* at 149:6-7. These reports could be used by CDC to better "understand what[] [was] being discussed" on social media so that the agency could "update [CDC] communication material" in response. *Id.* at 148:11-15. Facebook personnel included a summary of "[h]ighly engaged . . . content," which was not limited to content considered "misinformation," in the cover

emails to which the reports were attached. *See, e.g.*, Crawford Ex. 7 at 1 (Dkt. 205-8) (including in the summary of highly engaged content “posts . . . about celebrating health care workers” and posts “shar[ing] news that kids over 12 can be vaccinated,” with “posts includ[ing] varied stances on support/opposition to the idea”). Ms. Crawford did not “personally do anything . . . with the CrowdTangle reports” aside from passing them along to others. Crawford Dep. 59:14-19; 52:6-10. CDC did not direct Facebook to take any action with respect to any information or example posts contained in the reports. The last CrowdTangle report CDC received from Facebook was in December 2021.³³

95. Before it began sending these summary CrowdTangle reports to CDC, Facebook had also allowed CDC, since March or April 2020, to “log into CrowdTangle and run [its] own reports or searches.” Crawford Dep. 77:9-13, 147:12-14. Ms. Crawford did not use CrowdTangle to run searches, but other teams from CDC may have done so. *Id.* at 148:11-15. In any event, to the extent anyone did run searches in CrowdTangle, that would not indicate any effort to influence Facebook’s applications of its content moderation policies. *See also* Defs.’ Resp. PFOF ¶¶ 440-452, 456, 471, 472, 507-10.

D. The Census Bureau

96. Although the Census Bureau worked with CDC on COVID-19 misinformation in the past, CDC has not “work[ed] with Census in quite some time.” Crawford Dep. 111:9-10. In particular, pursuant to a now-expired Interagency Agreement, *supra* Defs.’ PFOF § II.C.4, Census helped CDC organize the two BOLO meetings CDC hosted in May 2021. Crawford Dep. 210:10-

³³ Crawford Ex. 6 at 1-2 (Dkt. 205-7) (first report sent in January 2021); Dkt. 71-2 at 1 (email from Facebook attaching the “last insights report for this series” (emphasis removed)); *id.* 71-2 at 1 (email from Facebook attaching the “last insights report for this series” (emphasis omitted)); *id.* at 2 (email from Facebook noting that the “reports will be discontinued in Jan 2022” (emphasis omitted)); *id.* (Crawford thanking Facebook for sending the reports and stating that she “understand[s] the[y]’re] ending”).

25. To Ms. Crawford's knowledge, CDC's last meetings and communications with Census personnel about misinformation took place in the summer of 2021. Crawford Decl. ¶ 13 (Ex. 80).

97. Also in 2021, Facebook added Census to the distribution list for its CrowdTangle reports. Crawford Dep. 58:17-20; *id.* Crawford Ex. 6 at 1 (Dkt. 205-7). On one occasion, Ms. Crawford sent Facebook a few questions from Census seeking greater understanding about how the company applied its content moderation policies to certain types of misinformation. In particular, Census wanted to know Facebook's "approach" to "adding labels to" certain stories posted on its platform and why Facebook decided to remove certain posts that had been identified as containing misinformation. Crawford Dep. 76:2-77:1; Crawford Ex. 8 at 2 (Dkt. 205-9). Ms. Crawford testified that she "th[ought] that Census was at least periodically checking on things they had flagged," *id.* at 117:19-21, but there is no evidence that in "periodically checking on things" Census ever demanded or even asked a social media company to take specific action with respect to a particular post.

E. Dr. Fauci, Former Director of the National Institute of Allergy and Infectious Diseases (NIAID)

98. The National Institute of Allergy and Infectious Diseases ("NIAID") is an agency within the National Institutes of Health ("NIH"), which in turn is a component of HHS. *See* Ex. 85 (*List of Institutes and Centers*, Nat'l Insts. of Health, <https://perma.cc/YR83-TJMY>); Ex. 86 (*About NIH*, Nat'l Insts. of Health, <https://perma.cc/55BG-UDQU>). NIAID conducts and supports research to better understand, treat, and prevent infectious, immunologic, and allergic diseases and is responsible for "respond[ing] to emerging public health threats." Ex. 87 (*NIAID Mission*, Nat'l Insts. of Health, <https://perma.cc/8GVS-XSWM>). To that end, NIAID manages a diverse research portfolio concerning "many of the world's most intractable and widespread diseases," including

“tuberculosis and influenza, HIV/AIDS, biodefense,” COVID-19, and others. *Id.*; *see also* 42 U.S.C. § 285f.

99. From 1984 to 2022, Dr. Fauci was the Director of NIAID, serving under seven Republican and Democratic Presidents in that role. Ex. 88 (*Anthony S. Fauci, M.D., Former NIAID Director*, Nat’l Insts. of Health, <https://perma.cc/CSF2-XYNH>). During that time, he led the agency in tackling “newly emerging and re-emerging infectious disease threats including HIV/AIDS, West Nile virus, the anthrax attacks, pandemic influenza, various bird influenza threats, Ebola and Zika, among others, and, of course, most recently the COVID-19 pandemic.” Ex. 89 (*Statement by Anthony S. Fauci, M.D., Nat’l Insts. of Health* (Aug. 22, 2022), <https://perma.cc/RH8Z-P3X5>). In 2008, he was awarded the presidential medal of freedom—the highest honor available to federal civil servants—by President George W. Bush for his work on HIV/AIDS. Ex. 90 (*President Bush Honors Presidential Medal of Freedom Recipients*, The White House (June 19, 2008), <https://perma.cc/KE8X-4SPS>).

100. In January 2020, President Trump announced the formation of a Coronavirus Task Force, and named as its members Dr. Fauci and eleven other federal officials (including then-Secretary of Health and Human Services Alex Azar and then-Assistant to the President and Senior Advisor to the Chief of Staff Rob Blair). Ex. 91 (*Statement from the Press Secretary Regarding the President’s Coronavirus Task Force*, The White House (Jan. 29, 2020), <https://perma.cc/5VFS-LRZC>). The task force was “charged . . . with leading the United States Government response to the novel 2019 coronavirus and with keeping [the President] apprised of developments.” *Id.* In January 2021, after the change in administrations, Dr. Fauci was named President Biden’s Chief Medical Advisor, Fauci Dep. 10:17-22 (Dkt. 206-1), to advise the President on handling the COVID-19 pandemic, Ex. 92 (*Statement from President Joe Biden on*

the announcement of Dr. Anthony Fauci's Departure from NIAID, The White House (Aug. 22, 2022), <https://perma.cc/4KMA-PWH2>). After 50 years as a civil servant (and 38 of those years as Director of NIAID), Dr. Fauci recently retired from government service. Ex. 93 (*Dr. Anthony Fauci to Leave NIAID at the End of December*, Nat'l Insts. of Health (Dec. 7, 2022), <https://perma.cc/NLZ6-NY85>).³⁴

101. As the nation's leading infectious disease expert, Dr. Fauci assumed a critical role in the pandemic response during the last two presidential administrations, answering difficult questions about unsettled scientific matters in White House press briefings, congressional hearings, cable news programs, and other public platforms. Until his retirement at 82 years old, he worked tirelessly—maintaining 18-hour workdays³⁵—at the height of the pandemic. He has garnered numerous awards for leading the nation through an unprecedented public health crisis.³⁶

102. Dr. Fauci had only limited interactions with Facebook during 2020, and no involvement with other social media platforms. In March 2020, Facebook CEO Mark Zuckerberg sent Dr. Fauci an email invitation to participate in a “Facebook Live” event, in which Dr. Fauci answered Mr. Zuckerberg's questions about COVID-19 in a live broadcast on the Facebook platform. *See* Ex. 187 at 58-60; *see also* Fauci Ex. 23 at 2 (Dkt. 206-24). Mr. Zuckerberg began his invitation with a “note of thanks for [Dr. Fauci's] leadership and everything [he was] doing to make our country's response to this outbreak as effective as possible.” Fauci Ex. 23 at 3 (Dkt. 206-

³⁴ Dr. Hugh Auchincloss succeeded Dr. Fauci as the Acting Director of NIAID. *See* Defs.' Notice of Substitution at 2.

³⁵ Ex. 94 (Azmi Haroun, *Dr. Anthony Fauci, the US's top infectious-disease expert, shared a day in his life, and it's exhausting just reading it*, Insider (Dec. 4, 2020), <https://perma.cc/ML8H-HSB5>).

³⁶ *See, e.g.*, Ex. 95 (*2021 National Academy of Sciences Public Welfare Medal*, National Academy of Sciences, <https://perma.cc/B8CV-T76C>); Ex. 96 (*Anthony Fauci Named Recipient of AHA Award of Honor*, American Hospital Association (Apr. 21, 2022), <https://perma.cc/M2BL-EGJR>).

24). Mr. Zuckerberg continued by explaining that he “wanted to share a few ideas of ways [Facebook] could help . . . get [Dr. Fauci’s] message out.” *Id.* One idea was connected to Facebook’s forthcoming “Coronavirus Information Hub,” which would appear “at the top of Facebook for everyone” to help users “get authoritative information from reliable sources and . . . encourage people to practice social distanc[ing.]” *Id.* Mr. Zuckerberg thought that “it would be useful to include a video from [Dr. Fauci]” on this hub, “because people trust and want to hear from experts[.]” *Id.* Another idea was that Dr. Fauci participate in other “livestreamed Q&As” as part of a “series” that Mr. Zuckerberg was creating “with health experts to try to use [his] large following on the platform . . . to get authoritative information out as well.” *Id.* Dr. Fauci responded that Mr. Zuckerberg’s “idea and proposal sound terrific” and that he “would be happy to do a video for [the] hub.” *Id.* at 4. During the video, Dr. Fauci answered “important questions” from Mr. Zuckerberg about COVID-19 “public health measures.” Fauci Dep. at 177:2-8. Dr. Fauci has also participated in a small number of other livestreamed discussions with Mr. Zuckerberg to discuss COVID-19. *See* Ex. 187 at 58-60.

103. Otherwise, Dr. Fauci has had no interactions with any social media company about COVID-19 or misinformation related to COVID-19. Dr. Fauci has never asked a social media company “to remove misinformation from” its platform. Fauci Dep. at 152:21-24. Dr. Fauci does not “pay attention to what social media organizations like Google and YouTube and Twitter . . . do[.]” *Id.* at 239:21-24; *id.* at 241:6-13 (“I do not get involved in any way with social media. I don’t have an account, I don’t tweet, I don’t Facebook, and I don’t pay attention to that. . . . I don’t pay attention to what gets put up and put down on social media.”). He is unfamiliar with the companies’ policies. *See id.* at 241:14-25. And he has not been involved in any social media company’s decision whether, or how, to moderate particular content. *Id.* at 280:3-7; *id.* at

281:24-282:2. Indeed, Dr. Fauci has testified that rather than “interfering with other people’s ability to say what they want to say,” his method of “countering false information . . . is to try to [] flood the system with the correct information[.]” *Id.* at 357:8-13. *See also* Defs.’ Resp. PFOF ¶¶ 598-808, 840-852.

104. In April 2020, Dr. Fauci’s communications staff alerted Facebook of “fake Dr. Fauci accounts on [Facebook] and [Instagram],”—a federal crime, *see* 18 U.S.C. § 912—including one “particularly troubling” account that was also “selling masks[.]” Fauci Ex. 55 at 3-4 (Dkt. 207-19). “[A]ll but two” of the “accounts were removed for the impersonation of Dr. Fauci.” *Id.* at 3. The two that were not removed were apparently “fan accounts[.]” *Id.* Dr. Fauci was not involved in the communications with Facebook about the impersonating accounts and was not aware that the accounts existed.

105. Plaintiffs misconstrue the record when they assert that Dr. Fauci “approves of the removal of these accounts from social media because he thinks they are ‘a bad thing,’ even though they may include parody accounts.” PI Supp. 40. Links to the accounts to which Plaintiffs refer were included in an email chain that did not include Dr. Fauci, *see* Fauci Ex. 55 (Dkt. 207-19),³⁷ and Dr. Fauci was shown that email for the first time during his deposition. When asked about the accounts linked in the email, Dr. Fauci stated, “I don’t know what these are. I just got a bunch of links to them. I’m not sure what they are.” Fauci Dep. 311:7-9. Dr. Fauci speculated that, based on the email, it looked like his communications staff was “trying to get rid of fake accounts” on Facebook “because fake accounts are bad things, I believe.” *Id.* at 309:24-310:1. He went on to say: “I’m reading here that there are people that are using my name falsely and creating fake

³⁷ Although Plaintiffs repeatedly suggest the possibility that some accounts were parody accounts, they have introduced no such evidence, and the communications from NIAID staff clearly show that NIAID staff were only seeking the removal of accounts impersonating Dr. Fauci.

accounts which people in the communications staff [are] saying . . . is troubling because they're doing things like selling masks and doing things like that. So I think that it would be kind of appropriate for my communications staff to be concerned when people are falsely impersonating me." *Id.* at 310:8-16. When asked whether he was saying that "bad things," such as impersonating accounts, "should be removed from social media," Dr. Fauci responded, "No. I mean, I think when someone says they're me and they're not me, I think someone should take a close look at that." *Id.* at 311:22-312:1. And when asked whether "someone" should "take a close look at other false statements on social media," Dr. Fauci testified, "That's not my lane. I don't – I never get involved in that, nor do I concentrate on that, so I don't have an opinion on that. Like I've told you . . . now . . . I can repeat it for the hundredth time, I really don't get involved in social media issues." *Id.* at 312:2-9. *See also* Defs.' Resp. PFOF ¶¶ 809-825.

F. The Cybersecurity and Infrastructure Security Agency (CISA)

1. CISA's Mission and General Overview

106. The Cybersecurity and Infrastructure Security Agency ("CISA"), a component of DHS, has a broad statutory mandate to "coordinate with" Federal and non-Federal entities (including international entities) "to carry out the cybersecurity and critical infrastructure activities of the Agency, as appropriate[.]" 6 U.S.C. § 652(c)(2). To accomplish its mission and manage risks to the nation's election infrastructure, CISA works collaboratively with state and local governments, election officials, federal partners, and private sector partners. Declaration of Geoff Hale, Lead for Election Security and Resilience, Nat'l Risk Mgmt. Ctr., CISA ¶ 6 ("Hale Decl.") (Ex. 97). This includes working in a nonpartisan manner with state and local election officials—among others, officials from Missouri and Louisiana, as discussed below—as the trusted and

expert voices within their communities to equip the American public with accurate information about the conduct and security of elections. *Id.*³⁸

2. The Election Infrastructure Subsector

107. In January 2017, based on the vital role that elections play in the United States, DHS officially designated election infrastructure as a critical infrastructure subsector. Hale Decl. ¶ 4 (Ex. 97). This designation recognizes that the disruption of U.S. election infrastructure would have a devastating impact on the country. *Id.* “Election infrastructure” refers to an assembly of systems and networks, including, among other things, voter registration databases and associated IT systems, IT infrastructure and systems used to manage elections, voting systems and associated infrastructure, storage facilities for election and voting system infrastructure, and polling places. *Id.* ¶ 5. CISA reduces the risk to U.S. critical infrastructure by, among other things, building resilience to disinformation. *Id.* ¶ 9.

108. The official designation of election infrastructure as “critical infrastructure” also resulted in the creation of the “Election Infrastructure Subsector,” which builds election infrastructure resilience by focusing on a wide range of election-related systems and assets, such as storage facilities, polling places, centralized vote tabulation locations used to support the election process, and related information and communications technologies. *Id.* ¶ 23. Like all critical infrastructure sectors, the Election Infrastructure Subsector is supported by two councils:

³⁸ In furtherance of its mission, CISA provides publicly available resources on election security for both the general public and election officials at all levels. Hale Decl. ¶ 7 (Ex. 97). Examples of these resources include an Election Infrastructure Insider Threat Mitigation Guide, CISA’s partnership with the FBI to publish election-security-related public service announcements, and the compilation of a toolkit of free services and tools intended to help state and local government officials, election officials, and vendors enhance the cybersecurity and cyber resilience of U.S. election infrastructure. *Id.* In addition, CISA provides numerous voluntary and no-cost election security services, such as cybersecurity assessments, cyber threat hunting, cyber incident response, and training and exercises to state and local government officials and private sector election infrastructure partners. *Id.* ¶ 8.

a government coordinating council (“GCC”) and a sector coordinating council (“SCC”). *Id.* ¶¶ 24, 27.

109. The Election Infrastructure Subsector GCC (“EIS-GCC”) is comprised of state, local, and Federal Government departments and agencies, which share information and collaborate on best practices to mitigate and counter threats to election infrastructure. *Id.* ¶ 29. The EIS-GCC Executive Committee is chaired by CISA, and its members include the U.S. Election Assistance Commission Chairperson, the National Association of Secretaries of State (“NASS”) President, the National Association of State Election Directors (“NASED”) President, and a local government election official. *Id.* ¶ 30. Notably, Louisiana is a member of NASS, and both Louisiana and Missouri are members of NASED. *Id.* ¶ 33. The Louisiana Secretary of State has been a member of the EIS-GCC since May 2018. *Id.* ¶ 31. He served as an EIS-GCC Executive Committee member from the summer of 2021 to the summer of 2022, while he was the NASS President. *Id.* The Missouri Secretary of State served as an alternate member of the EIS-GCC from 2018-2019. *Id.* ¶ 32.

110. The Election Infrastructure Subsector SCC (“EI-SCC”) comprises owners or operators with significant business or operating interests in U.S. election infrastructure systems or services. Its mission is “to advance the physical security, cyber security, and emergency preparedness of the nation’s election infrastructure,” and it accomplishes this mission through the voluntary actions of the infrastructure owners and operators represented in the EI-SCC. *Id.* ¶ 34. The EI-SCC is governed by a five-member Executive Committee. *Id.* ¶ 35. Although CISA is not a member of the EI-SCC, it serves as the secretariat and provides various administrative functions. *Id.* ¶ 36.

111. After the 2020 election, the EI-SCC and EIS-GCC launched a Joint Managing Mis/Disinformation Working Group to coordinate infrastructure security efforts across the subsector. *Id.* ¶ 38. The Working Group provides a forum through which the Election Infrastructure Subsector can identify challenges in mitigating the risks posed by disinformation impacting election infrastructure and produce resources for addressing these risks. *Id.* ¶ 39. To date, the Joint Managing Mis/Disinformation Working Group has published two guides to assist state and local election officials and industry providers with preparing for and responding to risks associated with disinformation: (1) the Rumor Control Page Start-Up Guide, which is designed for use by state, local, tribal and territorial government officials and private partners seeking to dispel inaccurate election security-related information by sharing accurate information; and (2) the MDM Planning and Incident Response Guide for Election Officials, which is designed for SLTT election officials and to help them understand, prepare for, and respond to disinformation that may impact the ability to securely conduct elections. *Id.* ¶ 40.

112. CISA supports the Joint Managing Mis/Disinformation Working Group by providing administrative and substantive support, such as facilitating working group meetings and helping to draft working group products. *Id.* ¶ 41. The Working Group does not engage with social media companies, and it does not flag or report potential disinformation to social media or technology companies. *Id.* ¶ 43.

3. The Center for Internet Security

113. The Center for Internet Security (“CIS”) is a non-profit organization that exists to “make the connected world a safer place by developing, validating, and promoting timely best practice solutions that help people, businesses, and governments protect themselves against pervasive cyber threats.” *Id.* ¶ 44; Ex. 98 (*About Us*, Ctr. For Internet Sec., <https://perma.cc/456L-TUHD>). It is home to the Multi-State Information Sharing and Analysis Center (“MS-ISAC”) and

the Elections Infrastructure Information Sharing and Analysis Center (“EI-ISAC”). Hale Decl. ¶ 44 (Ex. 97).

114. The MS-ISAC serves as a central cybersecurity resource for state, local, tribal and territorial government entities. *Id.* ¶ 45. It is a membership-based organization that includes more than 14,000 organizations and all fifty states, including Plaintiffs Missouri and Louisiana. *Id.* ¶ 46. The MS-ISAC members receive direct access to a suite of cybersecurity services and cybersecurity informational products including, but not limited to, cybersecurity advisories and alerts, vulnerability assessments, incident response support, secure information sharing, tabletop exercises, and malicious domains/internet protocol reports. *Id.* ¶ 47.

115. The EI-ISAC, which was founded in 2018, is an organization managed by CIS with membership open to all state, local, tribal and territorial organizations that support election officials. *Id.* ¶ 48. Membership in the EI-ISAC is voluntary and free for participants. *Id.* ¶ 49. The EI-ISAC supports the rapidly changing cyber and critical infrastructure security needs of U.S. elections offices and offers a suite of election-focused cyber defense tools, including threat intelligence products, incident response and forensics, threat and vulnerability monitoring, cybersecurity awareness, and training products. *Id.* ¶ 48.

116. DHS has provided financial assistance to CIS through a series of cooperative agreement awards, managed by CISA, to provide specified cybersecurity services to state, local, tribal, and territorial government organizations through the MS- and EI-ISACs. *Id.* ¶ 50. DHS has limited the use of funds to cybersecurity services intended to detect, prevent, respond to, mitigate, and recover from cyber threats, vulnerabilities and risk. *Id.* DHS approved scope of work for the cooperative agreements has never funded CIS to perform disinformation-related work, including the reporting of potential election-related disinformation to social media platforms. *Id.* ¶ 51.

4. CISA's Efforts to Build Resilience to Misinformation

a. CISA's Mis-, Dis-, and Malinformation ("MDM") Team

117. CISA's Mis-, Dis-, and Malinformation ("MDM") Team leads CISA's efforts to build resilience to disinformation targeting critical infrastructure. Scully Dep. 16:4-6 (Dkt. 209-1) The MDM Team, which was formerly known as the Countering Foreign Influence Task Force, was established in 2018 in CISA's predecessor agency. *See* Ex. 187 at 77. CISA builds this resilience through public awareness and engagement and seeks to reduce the impact of disinformation targeting election infrastructure. Scully Dep. 346:15-348:1. In general, CISA develops publications for public awareness and education, as well as publications for key stakeholders to help them understand how disinformation works and the steps they can take to mitigate risks. *Id.* at 16:7-15; Hale Decl. ¶ 14 (Ex. 97) (describing creation of graphic novels focusing on disinformation tactics through fictional stories and development of infographic explaining foreign influence campaigns). CISA also conducts analysis of open-source reporting. Scully Dep. 16:16-25. In addition, CISA engages or has engaged with different stakeholders, including civil society groups, federal partners, and private sector organizations, such as social media and technology companies. *Id.* at 16:16-22; Ex. 187 at 77.

b. CISA's Switchboarding Work During the 2020 Election Cycle

118. "Switchboarding" refers to a process by which CISA forwarded to social media companies election-related information that state and local election officials (or other stakeholders, such as NASS and NASED) had identified as misinformation. Scully Dep. 17:1-14, 23:19-24:2, 303:11-304:5. Those companies then decided how to handle the forwarded content based on their own policies. *Id.* at 17:15-21. During the 2020 election cycle, CISA provided switchboarding services primarily for state and local election officials, but also for other election infrastructure stakeholders. *Id.* at 16:16-25.

119. For the 2020 election cycle, much of the potential election security-related disinformation CISA received from state and local election officials was shared by those officials through CIS. Hale Decl. ¶ 71 (Ex. 97); Scully Dep. 59:9-60:17, 119:5-120:5.³⁹ When that happened, election officials would email the potential disinformation to CIS, which would then forward the information to CISA and others, including the Election Integrity Partnership (“EIP”), discussed below. Scully Dep. 16:16-25.⁴⁰ CISA did not fund CIS or the MS- or EI-ISAC for any of the work they provided in relation to the reporting of potential election security-related disinformation to social media or technology companies during the 2020 election cycle. Hale Decl. ¶ 77 (Ex. 97). In addition, officials in Plaintiff States Louisiana and Missouri were among those who shared potential misinformation with CISA or CIS for purposes of it being sent to social media companies. *Id.* ¶ 70; Ex. 100 (MOLA_DEFSPROD_00007488); Ex. 101 (MOLA_DEFSPROD_00007646); Ex. 102 (MOLA_DEFSPROD_00010719); Ex. 103 (MOLA_DEFSPROD_00008681); Ex. 104 (MOLA_DEFSPROD_00010774); and Ex. 105 (MOLA-DEFSPROD_00008610).

120. Before establishing its switchboarding operation, CISA met with social media companies and reaffirmed its “position” to “never ask [the companies] to take any specific

³⁹ CISA also received potential disinformation in two other ways. Scully Dep. 119:5-120:5. The first was that election and other officials would send information to CISA Central, which is CISA’s operations center. *Id.* at 119:5-120:5. The second was that election and other officials would directly contact CISA employees. *Id.* at 119:5-120:5.

⁴⁰ In addition, CISA understands that CIS would share reports of potential election security-related disinformation with other organizations with which it had its own independent relationships, such as with the EIP for further analysis and with NASS and NASED for situational awareness. Hale Decl. ¶ 74 (Ex. 97). At a certain point in the 2020 election cycle, CIS began forwarding the potential election security-related disinformation received from state and local election officials directly to the relevant social media or technology companies and would include CISA on the email for situational awareness, as well as others, including the EIP. *Id.* ¶ 75. CISA took no action on these emails sent by CIS, other than frequently recording them in an internal spreadsheet that CISA had created. *Id.*

actions,” and to leave it to the companies to “make decisions based on their terms of service.” Scully Dep. 241:23-242:5. Consistent with that position, when CISA transmitted to social media companies potential misinformation identified by local and state officials, CISA’s protocol was to include the following notice stating that it was not requesting that the social media companies take any particular action:

The Cybersecurity and Infrastructure Security Agency (CISA) of the U.S. Department of Homeland Security (DHS) is not the originator of this information. CISA is forwarding this information, unedited, from its originating source – this information has not been originated or generated by CISA. This information may also be shared with law enforcement or intelligence agencies.

CISA affirms that it neither has nor seeks the ability to remove or edit what information is made available on social media platforms. CISA makes no recommendations about how the information it is sharing should be handled or used by social media companies. Additionally, CISA will not take any action, favorable or unfavorable, toward social media companies based on decisions about how or whether to use this information.

In the event that CISA follows up to request further information, such a request is not a requirement or demand. Responding to this request is voluntary and CISA will not take any action, favorable or unfavorable, based on decisions about whether or not to respond to this follow-up request for information.

See, e.g., Ex. 106 at 1 (MOLA_DEFSPROD_00008499); Hale Decl. ¶ 72 (Ex. 97).

121. Normally, CISA would receive a note from a social media company acknowledging that it had received CISA’s email, but CISA often did not receive a similar note reporting what action was ultimately taken. Scully Dep. 177:7-178:8. If a social media company needed additional information from an election or other official, CISA tried to facilitate the information sharing. *Id.* at 219:25-220:13.

122. Consistent with the fact that social media companies independently evaluated whether certain information violated their terms of service, they from time to time concluded that forwarded posts did not violate their content moderation policies and therefore took no action. *See,*

e.g., Ex. 105 at 1 (MOLA_DEFSPROD_00008610) (email from Twitter stating that the “[t]weet was not determined to be a violation of our rule”); Ex. 107 at 1 (MOLA_DEFSPROD_00008640) (email from Twitter concluding that certain tweets violated its terms of service while others did not); Ex. 108 at 1 (MOLA_DEFSPROD_00009505) (email from Twitter stating “[t]weet was not in violation of our Civic Integrity Policy”); Ex. 109 at 1 (MOLA_DEFSPROD_00010711) (email from Twitter stating that the tweets were not in violation of their policies and would not be actioned); Ex. 110 at 1 (MOLA_DEFSPROD_00010794) (email from Twitter stating “internal review of account data indicates [the account] is not suspicious”); Ex. 111 at 1 (MOLA_DEFSPROD_00010376) (email from Twitter stating the tweet did not violate its civic integrity policy).

123. On occasion at the request of election officials, CISA would ask social media companies to report back on how, if at all, they had addressed misinformation CISA had flagged on behalf of those officials. Scully Dep. 163:17-164:17. Over time, however, the companies began reporting directly to the election officials what actions, if any, they took concerning potential misinformation. *Id.* at 164:8-25. *See also* Defs.’ Resp. PFOF ¶¶ 972-977, 1076-1082.

124. CISA discontinued its switchboarding work after the 2020 election cycle and has no intention to engage in switchboarding for the next election. Scully Dep. 21:19-25; 265:13-19; Hale Decl. ¶ 78 (Ex. 97). In April or May 2022, CISA leadership decided that CISA would no longer play a switchboarding role, in part because it was resource intensive. Scully Dep. at 22:1-23; 62:15-22. Although CIS had requested that DHS provide funding for CIS’s 2022 switchboarding efforts, DHS declined. Hale Decl. ¶ 79 (Ex. 97). It is CISA’s understanding that during the 2022 election, social media companies engaged directly with CIS and election officials with any misinformation concerns. Scully Dep. 265:20-266:13. Although CISA was copied on CIS’s communications with

social media companies in 2020, it was not copied on any such communications in 2022. *Id.* at 266:14-16.

125. Plaintiffs contend, based on a November 10, 2021, “Cyberscoop” article, that CISA intended to expand its disinformation efforts, PI Supp. 58; *see also* Pls.’ Proposed Finding of Fact ¶ 1106, (“Pls.’ PFOF”) (Dkt. 214-1) (referring to “Cyberscoop” article and claiming that “CISA publicly states that it is expanding its efforts to fight disinformation heading into the 2024 election cycle”); Pls.’ PFOF ¶ 1114 (citing same November 2021 article where CISA Director Easterly is quoted as saying that CISA is “beefing up its misinformation and disinformation team”). While CISA anticipated and publicly stated that its MDM Team would grow, the size of the team has remained constant and the scope of CISA’s disinformation mission has not expanded. Hale Decl. ¶¶ 12-13 (Ex. 97); *see also* Defs.’ Resp. PFOF ¶¶ 1094-1122.

126. Regarding CISA’s 2022 election-related work, CISA endeavored to mitigate the risks posed by disinformation by providing updates to CISA’s Election Security Rumor vs. Reality webpage, discussed *infra* at 79, and the “Tactics of Disinformation” resilience guide, which highlighted examples of the tactics used by disinformation actors and outlining proactive measures to mitigate the effectiveness of such tactics. Hale Decl. ¶¶ 64, 66 (Ex. 97). CISA also partnered with the FBI to publish a public service announcement on information manipulation tactics related to the 2022 midterm elections. *Id.* ¶ 67; Scully Dep. 303:11-304:5. And CISA sought to amplify the voices of state and local election officials through its social media platforms and other public forums. Hale Decl. ¶ 64 (Ex. 97).⁴¹

⁴¹ Over the past several years, CISA has done a limited amount of disinformation-related work concerning other critical infrastructure sectors, but none of that work has concerned communications with social media companies concerning content on their platforms. Hale Decl. ¶ 16 (Ex. 97). For example, during the COVID-19 pandemic, and in relation to the Healthcare and Public Health Sector, CISA provided support to the sector and produced two public guidance

127. The “Election Security Rumor vs. Reality” webpage was “designed to address common disinformation narratives by providing accurate information related to elections.” *See* Ex. 112 (*Election Security Rumor vs. Reality*, CISA (Nov. 4, 2022), <https://perma.cc/VV2B-57BT>); Hale Decl. ¶ 15 (Ex. 97). CISA developed this website to provide accurate information about false election rumors spreading in the public domain. Scully Dep. 290:18-23. The page was designed to “inform voters and help them build resilience against foreign influence operations and disinformation narratives about election infrastructure.” *See* Ex. 112. Although the page was designed for voters, social media companies also have used the rumors page as a source to debunk content on their platforms. Scully Dep. 290:12-17. Notably, both Louisiana and Missouri have similar websites that seek to promote accurate information concerning elections and COVID-19.⁴² In fact, the Missouri Secretary of State’s election misinformation page expressly links to CISA’s resources concerning election misinformation.⁴³

documents. *Id.* ¶ 17. In addition, in support of the President’s Unified Coordination Group for domestic preparedness and response regarding any potential impacts of Russia’s invasion of Ukraine on the United States, a group that was in operation from January 2022 to April 2022, CISA personnel provided situational awareness reports based on publicly available third-party reporting and also provided support to build resilience to disinformation related to the crisis for the purpose of being prepared should foreign influence operations increase their targeting of U.S. critical infrastructure. *Id.* ¶ 18. And in relation to the Financial Services Sector, CISA has been working with the Treasury Department on a public guide to help the sector understand disinformation and the risks it poses. *Id.* ¶ 19. That guide is still in development, and work currently is on pause because other, urgent tasks have taken priority. *Id.*

⁴² *See* Ex. 113 at 3-8 (*Social Media Resources*, Mo. Dep’t of Health & Senior Servs., <https://perma.cc/6U4G-Y44L>) (providing “rumor control” resources regarding COVID-19); Ex. 114 at 1 (*Election Security*, Mo. Sec’y of State, <https://perma.cc/LW4Y-9TLJ>); Ex. 115 at 1-2 (*COVID-19 Stay at Home Order*, Off. of the Governor, <https://perma.cc/2HMS-RBBU>) (providing accurate information concerning Louisiana’s COVID-19 stay at home order); Ex. 116 (*Get Election Information: Frequently Asked Questions*, La. Dep’t of State, <https://perma.cc/F72W-4VMB>).

⁴³ *See* Ex. 114 at 3 (linking to CISA, *The War on Pineapple: Understanding Foreign Intelligence in 5 Steps* (2019) (Ex. 117)); *id.* (linking to Dep’t of Homeland Sec., *Social Media Bots Overview* (2018) (Ex. 118)).

c. *CISA's Meetings with Social Media Companies*

128. In furtherance of its mission to improve the security and resiliency of critical infrastructure, CISA participated in meetings with social media companies and others concerning misinformation, including (1) recurring U.S. Government (“USG”)-Industry meetings (and preparatory meetings in advance of these meetings); (2) CISA Cybersecurity Advisory Committee (“CSAC”) quarterly meetings; (3) CISA CSAC, Protecting Critical Infrastructure from Misinformation and Disinformation subcommittee meetings; and (4) meetings convened by the EIS-GCC and the EI-SCC Joint Managing Mis/Disinformation Working Group. *See* Ex. 187 at 42-44. Contrary to Plaintiffs’ insinuation that these meetings “provide[d] avenues for government officials to push for censorship of disfavored viewpoints and speakers online,” Pls.’ Mem. in Supp. of Mot. for Prelim. Inj. 27, (“PI Br.”) (Dkt. 11-1), Plaintiffs have failed to adduce any evidence that any such alleged “push” for censorship occurred during these meetings.

129. *USG-Industry meetings.* For example, the USG-Industry meetings, which began in 2018 and continued through 2022, included federal agency participants from CISA, DHS, the FBI, the Department of Justice (“DOJ”), and the Office of the Director of National Intelligence (“ODNI”), as well as social media company participants from Google, Facebook, Twitter, Reddit and Microsoft, and on occasion Verizon Media, Pinterest, LinkedIn, and the Wikimedia Foundation. *See* Ex. 187 at 42-43; Scully Dep. 31:10-16. The topics discussed generally included information sharing around election risks, briefs from the industry, threat updates, and highlights and upcoming “watch outs.” *Id.* at 43. CISA’s role at these meetings generally involved educating social media platforms on how elections function and are administered, as well as potential threats to election security. Scully Dep. 224:22-25:9. Much of the discussion at these meetings involved cybersecurity issues, as well as discussions about then-ongoing physical threats to poll workers. *Id.* at 235:11-22. CISA has not participated in the USG-Industry meetings since the 2022 general

election, *see* Hale Decl. ¶ 69 (Ex. 97), and currently, there is no plan to resume participation in these meetings. Scully Dep. 32:9-11.

130. Although concerns about misinformation and disinformation were also discussed during these agency-industry meetings, they did not involve “pushes” to censor misinformation or disinformation. *Id.* at 39:12-25. For example, CISA discussed the development of informational products it had created to promote resilience to disinformation, such as a general disinformation resilience guide highlighting examples of the tactics use by foreign disinformation actors and outlining proactive measures to mitigate the effectiveness of such tactics entitled the Tactics of Disinformation. *Id.* at 39:12-18; Hale Decl. ¶ 66 (Ex. 97). Other agencies, including DOJ, FBI, ODNI, and DHS, would participate and provide unclassified, high-level reviews or strategic intelligence briefings on these topics. Scully Dep. 25:10-23. The social media companies would share high-level trend information from public reporting they had released. *Id.* at 40:2-41:15. For example, members of the intelligence community discussed malign foreign actors who potentially were going to launch disinformation operations. *Id.* at 39:19-25; *see also* Defs.’ Resp. PFOF ¶¶ 861-866, 978-990.

131. *CISA CSAC meetings.* Established under the National Defense Authorization Act for Fiscal Year 2021, Pub. L. No. 116-283, 134 Stat. 3388 (NDAA), the CISA CSAC operates as a federal advisory committee, governed by the Federal Advisory Committee Act, to provide recommendations to CISA on topics related to its cybersecurity mission. *See* Ex. 119 (*CISA Cybersecurity Advisory Committee*, CISA, <https://perma.cc/G6BW-LKDR>); Ex. 120 (*CISA Cybersecurity Advisory Committee (CSAC) Charter*, CISA, <https://perma.cc/QU5C-ZT5F>). CSAC includes experts on cybersecurity, technology, risk management, privacy and resilience, and members employed or previously employed by, among others, social media and technology

companies. Ex. 120 at 2-3. The CSAC quarterly meeting agenda and summaries are available online, Ex. 121 (*CISA Cybersecurity Advisory Committee (CSAC) Meeting Resources*, CISA, <https://perma.cc/F6N9-2DF2>), and contrary to Plaintiffs' contention, a review of those materials fails to reflect any coercion or attempted censorship by the Federal Government of social media companies. Instead, these materials reflect the creation of a new, congressionally-mandated advisory committee, discussions about how CISA can better accomplish its mission of promoting the security and resilience of critical infrastructure such as by refining the national effort to identify and prioritize the most critical entities and infrastructure, improving efforts to strengthen the nation's cyber workforce, and enhancing public-private communication and collaboration in preventing and responding to cybersecurity incidents. *Id.*

132. *CISA CSAC, Protecting Critical Infrastructure from Misinformation and Disinformation Subcommittee (MDM Subcommittee) meetings.* In addition, the CSAC MDM Subcommittee, which was directed to stand down in December 2022 because it had completed the tasks for which it was created and provided its recommendations to CISA, had nothing to do with attempted censorship of content on social media platforms. *See* Ex. 187 at 43. The MDM Subcommittee did not discuss whether or how social media platforms should moderate content, either in specific cases or more generally. Ex. 122 at 9 (*Addressing false claims and misperceptions of the UW Center for an Informed Public's research*, Univ. of Wash. (Mar. 16, 2023)). Rather, the CSAC established the MDM Subcommittee for the purpose of evaluating and providing recommendations on potentially effective MDM resiliency efforts that fit within CISA's unique capabilities and mission. Ex. 123 (*CISA Cybersecurity Advisory Committee, Subcommittee Factsheet and 2022 Cybersecurity Advisory Committee (CSAC) Reports and Recommendations (2023)*). Like the CSAC Committee, the MDM Subcommittee operated transparently and details

about the MDM Subcommittee, its membership, reports, and recommendations, are posted on CISA's website. *Id.* Specifically, the MDM Subcommittee recommended that CISA take actions such as “shar[ing] up to date ‘best practices’ around how to proactively address and counter MDM based on the most recent research[,]” “[s]har[ing] information with state and local election officials[,]” and “[p]rotect[ing] the courts” from becoming the “target of an intensified campaign to undermine public trust in the legitimacy of their processes.” Ex. 124 at 1-2 (CISA Cybersecurity Advisory Committee, Report to the Director: Protecting Critical Infrastructure from Misinformation & Disinformation Information Sharing Around Foreign Adversary Threats to Elections (2022)). Nothing in these materials reflects an attempt by CISA to “push” social media companies to censor mis- or disinformation.

133. *EIS-GCC and EI-SCC Joint Managing Mis/Disinformation Working Group meetings.* Finally, as explained above, *see supra* Defs.’ PFOF ¶ 111, the EIS-GCC and EI-SCC Joint Mis/Disinformation Working Group, which was launched after the 2020 election, provides a forum through which the Election Infrastructure Subsector can identify challenges in building resilience against disinformation and produce resources to work towards this goal. *See* Ex. 187 at 44. Notably, the Secretary of State Office for Plaintiff Louisiana has been a member of the EIS-GCC since May 2018, and while serving as the NASS President from the summer of 2021 to 2022, the Louisiana Secretary of State served as an EIS-GCC Executive Committee member. Hale Decl. ¶ 31 (Ex. 97). In this capacity, Louisiana received regular briefings (usually every two weeks) on CISA’s election security efforts—including briefings on CISA’s disinformation resilience work—engaged in security planning activities for the Election Infrastructure Subsector and oversaw the management and activity of EIS-GCC working groups. *Id.* This included the oversight and management of the EI-SCC and EIS-GCC Joint Managing Mis/Disinformation Working Group.

Id. The Missouri Secretary of State Office was an alternate member of the EIS-GCC from 2018-19. *Id.* ¶ 32. In this capacity, the Missouri Secretary of State Office attended the EIS-GCC biannual meetings and activity participated in briefings on the Election Infrastructure Subsector’s security and resilience efforts. *Id.*

d. *CISA’s Limited Involvement with the Election Integrity Partnership*

134. The Election Integrity Partnership (“EIP”) was a private partnership formed in 2020 that included the Stanford Internet Observatory (“SIO”), the University of Washington, Graphika, and the Atlantic Council’s Digital Forensic Research Lab, and whose mission was to better understand the information environment around elections. *See* Scully Ex. 1 at vi (Dkt. 209-2) (The Long Fuse: Misinformation and the 2020 Election). The EIP’s “primary goals were to: (1) identify mis- and disinformation before they went viral and during viral outbreaks[;] (2) share clear and accurate counter-messaging[;] and (3) document the specific misinformation actors, transmission pathways, narrative evolutions, and information infrastructures that enabled these narratives to propagate.” *Id.* Among other actions, the EIP developed a ticketing system where trusted external stakeholders and internal EIP analysts could flag misinformation that EIP would then analyze and, depending on the nature of the information, could flag for social media companies for their awareness. *Id.* at 8-10; 18-19.

135. The EIP provided public factual findings to social media platforms, but had no control over content moderation, censorship, or labeling posts. Ex. 74 at 2. Rather, social media platforms examined any reports sent to them by the EIP to determine if the content violated their policies and whether and how to moderate the content. *Id.*; *see* Ex. 122 at 6 (stating that EIP’s “researchers made independent decisions about what to pass on to platforms, just as the platforms made their own decisions about what to do with our tips”); Ex. 125 at 3 (*A Statement from the Election Integrity Partnership*, Election Integrity Partnership (Oct. 5, 2022),

<https://perma.cc/LV9L-CNCR>) (“Each [social media] company made their own determinations on how to treat our reports.”). Content moderation decisions were independently made by social media platforms, and the EIP did not make recommendations to the platforms about what actions they should take. Ex. 74 at 2.

136. CISA involvement with the EIP was limited, and it did not found, fund, or have any role in the management or operation of the EIP. Hale Decl. ¶ 52 (Ex. 97); Ex. 122 at 7. During 2020, several Stanford University students interned at CISA on election security matters. Hale Decl. ¶ 53 (Ex. 97).⁴⁴ During their internships, CISA personnel and the interns discussed the challenges facing and the needs of election officials. *Id.*; Scully Ex. 1 at 2 (Dkt. 209-2). Based on lessons learned from the 2018 election, CISA employee Brian Scully shared with the interns his view that State and local election officials’ resources were insufficient to allow them to identify misinformation that targeted their jurisdictions. Scully Dep. 84:10-22. The interns then presented the lack of resources and challenges facing election officials to officials at the SIO. Hale Decl. ¶ 54 (Ex. 97). CISA personnel subsequently had a conversation with Alex Stamos, who worked for the SIO, and confirmed his understanding that the States were lacking in such resources. Scully Dep. 86:22-87:9; Hale Decl. ¶ 54 (Ex. 97).

137. In July 2020, the EIP was formed. Scully Ex. 1 at 21(3) (Dkt. 207-2). As the EIP was being stood up, and given its relationships with the election community, CISA connected the EIP with election stakeholders at NASS, NASED, and CIS, which, as discussed earlier, manages the MS-ISAC and the EI-SAC. Hale Decl. ¶ 58 (Ex. 97). And as it would with other nongovernmental organizations in the election community, CISA received a briefing from EIP in May or June 2022,

⁴⁴ Students who interned at CISA should only have performed CISA work during their internships with the agency, and they should not have performed any CISA work outside of their CISA internship, including while interning at SIO or supporting the EIP. Hale Decl. ¶ 61 (Ex. 97).

during which the EIP shared its plans for the 2022 midterms and lessons learned from the 2020 election. Scully Dep. 54:10-14; Hale Decl. ¶ 60 (Ex. 97).

138. CISA did not launch the EIP, and the EIP is not a government organization. Hale Decl. ¶ 56 (Ex. 97). CISA does not fund and has never funded the EIP. *Id.* ¶ 57. CISA generally did not share information with the EIP. Scully Dep. 73:25-74:2; 106:3-9. It did not submit tickets flagging potential misinformation to the EIP. Ex. 125 at 2 (“CISA did not send any examples of potential misinformation to EIP” and “EIP did not send any reports of false rumors or disinformation to social media companies on behalf of [DHS] or [CISA].”); Ex. 74 at 3 (stating that the EIP did not receive requests from CISA to eliminate or censor tweets); Ex. 122 at 7 (stating that CISA did not send content to the EIP to analyze, and the EIP did not flag content to social media platforms on behalf of CISA). CISA is not aware of any communications with the EIP about specific disinformation concerns. Scully Dep. 75:2-5. Presently, CISA is not doing any work with the EIP. Hale Decl. ¶ 63 (Ex. 97). *See also* Defs.’ Resp. PFOF ¶¶ 991-1075.

G. The State Department’s Global Engagement Center (GEC)

139. Disinformation from foreign state and foreign non-state actors is of critical concern to the United States. *See* Declaration of Leah Bray, Deputy Coordinator, Glob. Engagement Ctr., U.S. Dep’t of State ¶ 5 (Bray Decl.) (Ex. 142).⁴⁵ Indeed, Congress and the Executive Branch recognized before 2020 that private platforms’ enforcement of their own terms of service can be important in opposing activities of foreign adversaries, such as the ISIS terrorist organization, that

⁴⁵ For example, disinformation is one of Russia’s most important and far-reaching tools in support of its invasion of Ukraine. Bray Decl. ¶ 5 (Ex 142). Russia has operationalized the concept of perpetual adversarial competition in the information environment by encouraging the development of a disinformation and propaganda ecosystem. *Id.* This ecosystem creates and spreads false narratives to strategically advance Russia’s policy goals. *Id.* Russia’s intelligence services operate, task, and influence websites that present themselves as news outlets to spread lies and sow discord. *Id.* ¶ 6.

have sought to use social media platforms to disseminate anti-American propaganda.⁴⁶ Congress also explicitly recognized the need for government action to counter such dissemination when it mandated that the Department of State's Global Engagement Center (GEC) counter foreign propaganda and disinformation. Kimmage Dep. 26:5-12 (Dkt. 208-1). The GEC's mission is "to direct, lead, synchronize, integrate, and coordinate efforts of the Federal Government to recognize, understand, expose, and counter foreign state and foreign non-state propaganda and disinformation efforts aimed at undermining or influencing the policies, security, or stability of the United States[, its] allies[,] and partner nations." *See* 22 U.S.C. § 2656 note (Global Engagement Center).

140. The GEC plays a key role in coordinating U.S. government efforts and helping to lead a global response to such foreign malign influence. *See* Bray Decl. ¶ 7 (Ex. 142). A central part of this effort is exposing foreign state and non-state actors' disinformation tactics so that allied governments and partners abroad, including civil society organizations, academia, the press, and the international public, can conduct further analysis of their own and thereby increase collective resilience to disinformation and propaganda. *Id.*

141. The GEC carries out its statutory mission to counter propaganda and disinformation from foreign state and non-state actors along five lines of effort: (1) analytics and research,

⁴⁶ *See* Ex. 163 at 13 (*Global Efforts to Defeat ISIS: Hearing Before the S. Comm. on Foreign Rels.*, 114th Cong. (2016) (statement of Brett H. McGurk, Special Presidential Envoy)) (Twitter, Facebook, and YouTube "are . . . removing ISIL-related content from their platforms [W]e have widely publicized how anyone can report ISIL content on-line, so that platforms can remove it if the content violates a platform's terms of service, which it often does."); Ex. 164 at 3 (*Countering Terrorist Internet Recruitment: Hearing Before the Subcomm. on Investigations of the S. Comm. on Homeland Sec. and Governmental Affs.*, 114th Cong. (2016) (statement of Sen. Rob Portman)) ("[S]ocial media firms including Facebook and Twitter have stepped up their voluntary efforts to police their own terms of service, which prohibit incitements to terrorism. Twitter has closed more than 100,000 ISIS-linked accounts, and Facebook has actively worked to remove offending users while working in various ways to promote content to counter jihadist propaganda. Those actions have helped to degrade ISIS's social media megaphone. . . but its online presence remains strong.").

(2) international partnerships, (3) programs and campaigns, (4) exposure, and (5) technology assessment and engagement. *Id.* ¶ 4; *see also* Kimmage Dep. 26:24-27:19. GEC's Russia, People's Republic of China, Iran, and Counterterrorism teams seek to build societal and institutional resilience against foreign propaganda and disinformation abroad. Bray Decl. ¶ 4 (Ex. 142); Kimmage Dep. 28:5-10. The GEC plays a coordination role in the interagency's public exposure of foreign information influence operations, including the use of proxy sites and social media networks overseas. Ex. 126 (GEC, *About Us*, U.S. Dep't of State, <https://perma.cc/6U48-PE8Y>). The GEC hosts private sector technology demonstrations, assesses counter-disinformation technologies against specific challenges, and identifies technological solutions through overseas technology challenge programs. Bray Decl. ¶ 4 (Ex. 142). The GEC also has a resources team, an interagency coordination team, a Technology Engagement Team (TET), and a front office. Kimmage Dep. 28:5-19.

142. The GEC's TET holds meetings with social media companies and exchanges information concerning the propaganda and disinformation tools and techniques used by the United States' adversaries. Kimmage Dep. 29:14-30:14. These meetings rarely include discussions about specific content posted on social media because the meetings are at a higher, more conceptual level about what foreign actors are doing, rather than specific content. *Id.* at 30:20-31:3. The TET team also ran the disinfo-cloud, an information sharing platform that contained tools to counter propaganda and misinformation. *Id.* at 169:19-173:17. These tools could identify coordinated inauthentic activity on a social media platform by a foreign disinformation actor. *Id.* at 170:11-18.⁴⁷

⁴⁷ For a time, the TET had a location in Silicon Valley where one individual, Sam Stewart (named as Defendant Samaruddin K Stewart), was stationed. Kimmage Dep. 153:7-154:21. The purpose of the Silicon Valley location was to facilitate public/private coordination and broker constructive

143. The GEC front office engages with social media companies, primarily to build relationships with those companies to facilitate better communications at the working level. *Id.* at 31:12-20. The primary topics discussed at these meetings are the tools and techniques used by America's adversaries, including the campaigns being conducted by foreign propaganda actors like Russia, China, Iran, and terrorist organizations, as well as the narratives they are promoting. *Id.* at 32:11-19. The GEC also is in listening mode during these meetings for anything the social media companies want to share, although they typically have little to share. Kimmage Dep. 32:11-33:1. The social media companies have shared high-level information like a foreign disinformation campaign with a narrative, rather than specific content that would be part of that campaign. *Id.* at 33:14-34:2.

144. The GEC did not flag specific content for social media companies during the meetings between the GEC front office and social media companies and did not give the companies any directives. *Id.* at 34:13-36:5. The GEC's purpose in advising social media companies about disinformation campaigns was not to influence companies' internal decisions regarding content, but to deepen their understanding of the actions of malign actors seeking to undermine U.S. national security, in line with the GEC's congressional mandate. *Id.* at 36:6-37:7. In addition, the purpose of the GEC's liaisons with social media companies is not to stop the spread of online disinformation; rather, the GEC simply shares lessons learned, information about propaganda and disinformation techniques, and the campaigns and narratives of foreign propaganda and

engagements between the government and the tech sector, including social media companies, and academia and research. Kimmage Dep. 155:5-21. Mr. Stewart had conversations with social media companies in which the GEC shared information related to its mission to counter foreign propaganda and disinformation. *Id.* at 155:22-156:11. The social media companies also educated the GEC based on what sorts of propaganda and disinformation they were seeing. *Id.* at 157:11-23. Mr. Stewart no longer works for the GEC, and no one from the TET is currently working from the Silicon Valley location. *Id.* at 154:14-21, 272:17-25.

disinformation actors. *Id.* at 273:12-24. Sharing information can help social media companies to identify coordinated inauthentic activity or to understand what these actors are trying to achieve, as well as to understand the types of narratives they are promoting. *Id.* at 279:17-280:4. Providing this information to social media companies is the first step in social media companies' ability to address foreign propaganda on their sites, as "[s]olving a problem has to start with understanding the problem[.]" *Id.* at 280:9-281:3.

145. However, the GEC does not engage in any activities where the intention is to propose to social media companies that certain content should not be posted on their platforms. Kimmage Dep. 37:16-25. Indeed, "[t]he Global Engagement Center does not tee up actions for social media companies to take," and it "does not seek to influence the decisions of the social media companies." *Id.* at 38:2-3, 283:9-22; Bray Decl. ¶ 16 (Ex. 142) (explaining that the GEC's practice is not to request social media companies take any specific actions when sharing information with them).⁴⁸ Nor does the GEC seek to provide information that might inform social media companies' decisions concerning content moderation, or brief social media companies on their content

⁴⁸ In rare instances the GEC has flagged a specific post for a social media company when the circumstances involved potential threats to the safety of State Department personnel. Bray Decl. ¶ 17 (Ex. 142). In 2018, a colleague informed Mr. Kimmage, who was then acting Coordinator of the GEC, of a security situation in a Middle Eastern country where protestors were using a social media platform to communicate in ways that raised urgent security concerns, and the State Department was concerned for the safety of its personnel. *Id.*; Kimmage Dep. 38:12-39:25. Mr. Kimmage communicated directly with a social media platform and informed it of the State Department's concern. *Id.* Mr. Kimmage was "very specific" in his interaction with the social media company that this was a real time situation in which the State Department believed its personnel were at risk and asked the company to review the activity on these accounts to decide whether the content in question, which had been posted by foreign actors, violated its terms of service. *Id.* at 38:12-39:25, 40:1-3. Mr. Kimmage did not ask for anything to be removed from the site, but he did express concerns about the personal safety of State Department personnel. *Id.* at 38:12-39:25. Mr. Kimmage is unaware of what action, if any, the platform took in response to his identification of this issue, because it did not report back to him. *Id.* at 40:4-7.

moderation policies. Kimmage Dep. 38:4-11, 285:19-286:1.⁴⁹ Rather, whatever actions social media companies may take after receiving information from the GEC is left completely up to those companies. *Id.* at 273:12-274:8; *see also* Defs.’ Resp. PFOF ¶¶ 1123-1134.

H. The Federal Bureau of Investigation

1. FBI Efforts as to Foreign Influence and Election Misinformation

146. “Foreign influence operations,” as then-Deputy Assistant Attorney General Adam S. Hickey of the DOJ National Security Division explained in 2018 to the Senate Judiciary Committee, “include covert actions by foreign governments intended to affect U.S. political sentiment and public discourse, sow divisions in our society, or undermine confidence in our democratic institutions to achieve strategic geopolitical objectives.” Ex. 127 at 1 (*Election Interference: Ensuring Law Enforcement is Equipped to Target Those Seeking to Do Harm: Hearing Before the S. Comm. on the Judiciary*, 115th Cong. (2018) (statement of Adam Hickey, Deputy Assistant Att’y Gen., Dep’t of Just.), 2018 WL 2933298). A prominent example is found in the 2018 federal indictment “of 13 Russian individuals and three entities, including the Internet Research Agency (or IRA), for federal crimes in connection with an effort to interfere in the 2016 Presidential election. The defendants allegedly conducted what they called ‘information warfare against the United States,’ with the stated goal of ‘spread[ing] distrust towards the candidates and the political system in general.’” Ex. 128 at 1 (Adam. S. Hickey, Deputy Assistant Att’y Gen.,

⁴⁹ When asked at his deposition about any efforts by the GEC to influence social media companies’ content moderation decisions, Mr. Kimmage, the acting GEC Coordinator and Principal Deputy Coordinator from 2017 until June 2021, stated that he never had a conversation with social media companies during which he encouraged them to speed up the removal of posts. Kimmage Dep. 42:12-20, 47:16-20. Mr. Kimmage further testified that he is unaware of instances in which other GEC personnel expressed concern about specific content on a platform to a third party on the understanding that the party would convey that concern to the social media company. *Id.* at 55:20-56:8.

Remarks at Misinfo Con (Aug. 6, 2018), 2018 WL 3727551); *see also* Ex. 129 (Press Release, Dep't of Just., Grand Jury Indicts Thirteen Russian Individuals and Three Russian Companies for Scheme to Interfere in the United States Political System (Feb. 16, 2018), 2018 WL 920088) (DOJ news release describing indictment). It was to address such “information warfare” that the FBI in the fall of 2017 established the Foreign Influence Task Force (“FITF”). *See* Ex. 130 at 7 (*Oversight of the Federal Bureau of Investigation: the January 6 Insurrection, Domestic Terrorism, and Other Threats: Hearing Before the S. Comm. on the Judiciary*, 117th Cong. 1 (2021), 2021 WL 808994 (statement of Christopher Wray, Dir., FBI)).

147. Among the categories of activity by foreign governments that the FITF investigates and seeks to disrupt are “attempts by adversaries—hoping to reach a wide swath of Americans covertly from outside the United States—to use false personas and fabricated stories on social media platforms to discredit U.S. individuals and institutions”; “[t]argeting U.S. officials and other U.S. persons through traditional intelligence tradecraft”; “[c]riminal efforts to suppress voting and provide illegal campaign financing”; and “[c]yber attacks against voting infrastructure, along with computer intrusions targeting elected officials and others.” Ex. 131 at 1 (*Combating Foreign Influence*, Fed. Bureau of Investigation, <https://perma.cc/M4P7-6KFF>); *see* Declaration of Larissa L. Knapp, Exec. Assistant Dir., Nat'l Sec. Branch, FBI (“Knapp Decl.”) ¶¶ 10-20 (Ex. 157).

148. Government concern about foreign influence efforts directed to United States elections has continued beyond the 2016 election into the 2020 election season and beyond, including under the Trump Administration. The International Emergency Economic Powers Act, 50 U.S.C. §§ 1701 *et seq.*, grants the President broad authority to impose economic sanctions on foreign governments that threaten the security of the United States. Invoking that authority, President Trump in 2018 declared an emergency to deal with the unusual and extraordinary threat

presented by “the ability of persons located . . . outside the United States to interfere in or undermine public confidence in United States elections, including through the unauthorized accessing of election and campaign infrastructure *or the covert distribution of propaganda and disinformation.*” Exec. Order No. 13,848, 83 Fed. Reg. 46,843, 46,843 (Sept. 12, 2018) (emphasis added). Noting that “foreign powers have historically sought to exploit America’s free and open political system,” President Trump found that “the proliferation of digital devices and internet-based communications has created significant vulnerabilities and magnified the scope and intensity of the threat of foreign interference.” *Id.* The order required, *inter alia*, various national security officials, not later than 45 days after an election, to assess “any information indicating that a foreign government, or any person acting as an agent of or on behalf of a foreign government, has acted with the intent or purpose of interfering in that election.” *Id.* at 46,843-44. President Trump continued that emergency finding for the following two years. 84 Fed. Reg. 48,039 (Sept. 10, 2019); *see also* 85 Fed. Reg. 56,469 (Sept. 10, 2020) (President Biden continued that finding for two successive years).

149. Also, on March 2, 2020, the eve of “Super Tuesday” (when multiple states held primary contests), then-Attorney General Barr joined numerous other officials in a joint statement advising: “We continue to work with all 50 states, U.S. territories, local officials, political parties, and private sector partners to keep elections free from foreign interference.” Ex. 132 at 1 (Press Release, Fed. Bureau of Investigation, Joint Statement from DOS, DOJ, DOD, DHS, ODNI, FBI, NSA, and CISA on Preparations for Super Tuesday (Mar. 2, 2020), 2020 WL 996966). “Americans must also remain aware,” the joint statement continued, “that foreign actors continue to try to influence public sentiment and shape voter perceptions. They spread false information and propaganda about political processes and candidates on social media in hopes to cause confusion

and create doubt in our system. We remain alert and ready to respond to any efforts to disrupt the 2020 elections.” *Id.* Closer to Election Day, FBI and CISA, on September 22, 2020, issued an “announcement to raise awareness of the potential threat posed by attempts to spread disinformation regarding the results of the 2020 elections.” Ex. 133 at 1 (Press Release, Fed. Bureau of Investigation, Foreign Actors and Cybercriminals Likely to Spread Disinformation Regarding 2020 Election Results (Sept. 22, 2020), 2020 WL 5644950). “Foreign actors and cybercriminals,” the announcement continued, “could create new websites, change existing websites, and create or share corresponding social media content to spread false information in an attempt to discredit the electoral process and undermine confidence in U.S. democratic institutions.” *Id.* For example, an Iranian hacking group obtained unauthorized access to one local government’s computers and, before that intrusion was thwarted, could have displayed false results for the 2020 election on that government’s public-facing website. Ex. 134 at 1 (Joseph Menn, *Iran gained access to election results website in 2020, military reveals*, Wash. Post (Apr. 24, 2023)).

150. Elvis Chan, the Assistant Special Agent in Charge (“ASAC”) of the Cyber Branch for the FBI in San Francisco, assisted with FITF efforts by sharing with social media companies information the FBI developed in the course of malign-influence investigations. As a supervisor over FBI San Francisco cyber investigations, he has also shared information with social media companies about cyber investigations, which are different from malign-influence investigations. Chan Dep. 8:11-13, 100:11-12, 105:13-18 (Dkt. 204-1). The companies ASAC Chan met with most frequently were Facebook, Google, Twitter, and Microsoft. *Id.* at 210:19-25.

151. The USG-industry meetings ASAC Chan regularly attended included discussion of “hack-and-dump” (a.k.a. “hack-and-leak”) operations. *Id.* at 170:12-15, 171:9-11, 172:3-5.⁵⁰ Multiple FBI agents attended the USG-industry meetings, at which, before the 2020 election, the FBI warned social media companies about the potential for 2016-style Russian hack-and-dump operations. *Id.* at 172:17-173:13, 177:7-10. The FBI’s warnings, though not based on observed computer intrusions similar to those that occurred in 2016, followed from the assessment that because such a hack-and-dump operation had been deployed before (in 2016), it could be deployed again, given, for example, the skills of the Russian hackers shown in 2016. *Id.* at 173:18-174:13, 208:7-12. The FBI also voiced warnings at FITF-organized bilateral meetings with individual platforms. *Id.* at 181:6-11, 185:19-25, 189:24-190:13; *see also* Defs.’ Resp. PFOF ¶¶ 865-879.

152. In general, ASAC Chan met with the platforms’ trust and safety personnel monthly in connection with cyber or FITF investigations, although the frequency became weekly as the 2020 election approached. Chan Dep. 40:2-11, 40:44-50. On FITF matters, the FBI shared information with the platforms that was (1) *strategic* (concerning general foreign malign techniques or processes), or (2) *tactical* (describing attributes, or indicators, of particular social media accounts indicating they were being operated by foreign malign actors). FITF shared information about a foreign malign actor’s social media activity not based on the content or viewpoint expressed in a post, but rather on the determination that the account is part of a covert

⁵⁰ The paradigmatic or “best” example of a hack-and-dump or hack-and-leak operation was the one undertaken by members of Russia’s GRU military unit when they unlawfully intruded (“hacked”) into the computer networks of the Democratic Congressional Campaign Committee, the Democratic National Committee, and the presidential campaign of Hillary Clinton, and thereafter released (“dumped” or “leaked”) information stolen from those networks on the internet. Chan Dep. 13:7-15; *see, e.g.*, Ex. 135 at 1 (Press Release, Dep’t of Just., Grand Jury Indicts 12 Russian Intelligence Officers for Hacking Offenses Related to the 2016 Election (July 13, 2018), 2018 WL 3425704 (DOJ news release describing indictment charging 12 “Russian nationals for committing federal crimes . . . intended to interfere with the 2016 U.S. presidential election”)).

effort by a foreign malign actor. *See* Knapp Decl. ¶¶ 16-20 (Ex. 157). Platforms would use their own means to validate the FBI's views on whether particular accounts were being operated by Russian state-sponsored actors and whether to take them down. Chan Dep. at 29:14-30:10, 32:8-33:17. The FBI only shared information concerning accounts it attributed with *high confidence* to a foreign-state actor, and to date the FBI's attributions have always proven correct. *Id.* at 112:21-113:6. As Yoel Roth, former head of content moderation at Twitter, further explained in 2023 testimony before the House Oversight and Accountability Committee: "The FBI was quite careful and quite consistent to request review of the accounts, but not to cross the line into advocating for Twitter to take any particular action." Ex. 2 at 16. During 2020, ASAC Chan estimated that he shared tactical information with platforms "between one to five or one to six times per month." *Id.* at 100:21-24; *see also* Defs.' Resp. PFOF ¶¶ 905-924, 929-930.

153. The Russians' 2016 hack-and-leak operation provided an impetus for some platforms to change their service terms to state, among other things, that they would not allow posts of hacked materials because of concerns about the hacking victim's privacy. Chan Dep. 205:4-17, 248:10-16. Although ASAC Chan inquired whether platforms had made changes to their terms of service and what the changes were, he never suggested that any platform change a service term. *Id.* at 206:3-17, 250:17-21, 253:21-254:1. The platforms themselves "were actively looking for hack-and-leak operations" using detection methods that would identify hacked materials "put or uploaded onto their platforms." *Id.* at 204:18-24.

154. Also as part of its election integrity efforts, the FBI in San Francisco operated a 2020 election command post, starting on the Friday before the election and continuing through election night. The San Francisco Field Office was responsible for relaying to the platforms election-related time, place, or manner disinformation or malign-foreign-influence information on their platforms

as reported by other field offices and after agency review. Chan Dep. 162:10-163:20, 164:23-165:2, 168:10-20. The FBI operated on the ground that it is a potential crime to post false information about the time, place, or manner of an election. *Id.* at 270:2-13; *see* Knapp Decl. ¶¶ 21-24 (Ex. 157). During the 2022 midterm elections the FBI in San Francisco staffed the command post on Election Day only, based on its experience during the 2018 midterm elections, when the “volume of information . . . to be coordinated” was “very low.” Chan Dep. at 167:20-168: 9.

155. The FBI would convey such posts to platforms “to alert” them “to see if” the posts violated the platforms’ terms of service, and if the posts did so, the platforms “would follow their own policies, which may [have] include[d] taking down accounts.” *Id.* at 165:9-22; *see* Knapp Decl. ¶¶ 21-24 (Ex. 157). Platforms would sometimes reply that they had taken down the posts, while in other cases they would state that the flagged post did not violate platform terms of service. *Id.* at 165:23-167:3-14; *see also* Defs.’ Resp. PFOF ¶¶ 878-879, 925-928, 966-967.

2. The “Hunter Biden Laptop Story”

156. Plaintiffs allege that the FBI is responsible for “censorship” of the *New York Post*’s October 14, 2020, story concerning alleged contents of Hunter Biden’s laptop computer. PI Br. 23-24; *see* PI Supp. 27-29.

157. The evidence reflects that it was Twitter and Facebook, acting on their own initiative, that unilaterally determined what limits to impose on the dissemination of posts involving that story. Following the *New York Post*’s publication on October 14, 2020, Senator Hawley asserted that, “Twitter is blocking all tweets and direct messages that contain the URL for the Post article,” while “Facebook has stated that it is ‘reducing [the story’s] distribution on our platform,’ though the specifics of how Facebook will implement this remain opaque.” Ex. 136 at 1 (Press Release, Sen. Josh Hawley, Hawley Calls for FEC Investigation of Potential In-Kind Contributions from Twitter and Facebook to Biden Campaign (Oct. 14, 2020), <https://perma.cc/A7ST-3KQK>) (news

release reprinting Sen. Hawley letter to FEC). Twitter’s then-chief executive, Jack Dorsey, later represented to Congress in 2020 that, after the *New York Post*’s release of its article, the platform enforced its 2018 Hacked Materials Policy, which prevented sharing certain links from that newspaper’s Twitter account, “publicly or privately,” but “[r]eferences to the contents of the materials or discussion about the materials were not restricted under the policy.” Ex. 137 at 6 (*Censorship and the 2020 Election: Hearing Before the S. Comm. on the Judiciary*, 116th Cong. (2020), 2020 WL 13568471 (opening statement of Jack Dorsey, CEO, Twitter)). Application of the 2018 policy “prevent[ed] Twitter from being used to spread hacked materials.” *Id.* at 5. As a former attorney for Twitter, Vijaya Gadde, represented to Congress in 2023, Twitter initially decided the *New York Post*’s tweets about the story fell within that policy because the tweets contained “embedded images that looked like they may have been obtained through hacking,” and the result of Twitter’s initial decision was to “block[]” tweets and linked-to articles “embedding those source materials”—which did not prevent other “tweeting [about], reporting, discussing, or describing the contents of” the laptop. Ex. 2 at 5.

158. But “Twitter then “changed its policy within 24 hours and admitted its initial action was wrong. This policy revision immediately allowed people to tweet the original articles with the embedded source materials.” *Id.* Or, as Mr. Dorsey put it, Twitter changed course, and it “quickly updated” its “policy to limit its scope to only cover the removal of materials shared by hackers directly,” and subsequently restored the *New York Post*’s account. Ex. 137 at 6. Mr. Dorsey further explained: “We made a quick interpretation, using no other evidence, that the materials in the article were obtained through hacking, and according to our policy we blocked them from being spread.” Ex. 14 at 3. And Mr. Dorsey noted that Twitter “admitted this action was wrong and corrected it within 24 hours.” *Id.*

159. As Mr. Roth further testified in 2023 about Russian interference in the 2016 election: “Twitter and the entire social media industry were frankly caught with their pants down in 2016 and missed an opportunity to do the critical work of protecting election security.” Ex. 2 at 11. Mr. Roth testified that academics and researchers had reached this judgment after long study of Russian “active measures,” and that the most influential part of Russia’s campaign was the hack and leak in 2016 targeting John Podesta, Chairman of Hillary Clinton’s 2016 presidential campaign. *Id.* The incident involving Mr. Podesta served as “one of the animating concerns” for Twitter’s initial decision to limit the distribution of posts about the *New York Post*’s Hunter Biden story. *Id.* That decision was not motivated by coercion or pressure from the Federal Government. *Id.* No one from the Federal Government, the Biden campaign or the DNC directed asked Twitter to remove or take action against content concerning the New York Post story. *Id.* at 11, 25.

160. Plaintiffs contend that Mr. Roth previously acknowledged in a December 2020 declaration submitted in a Federal Elections Commission (“FEC”) proceeding that the Federal Government had informed Twitter of a potential hack and leak operation concerning Hunter Biden. PI Supp. 28. Yet Mr. Roth stated only that, in “regular meetings” he attended with the FBI, other Federal agencies, “and industry peers regarding election security,” he had “learned” that “there were rumors that a hack-and-leak operation would involve Hunter Biden.” Chan Ex. 8 (Roth Decl.) ¶¶ 10-11 (Dkt. 204-5). But Mr. Roth did not say in his 2020 declaration from whom he heard those rumors, or attribute them to Government personnel. Mr. Roth later clarified, in sworn congressional testimony in February 2023, that he intended to indicate in his FEC declaration that another social media company, not the Federal Government, had raised the possibility of a hack-and-leak operation concerning Hunter Biden. Ex. 2 at 11. Mr. Roth explained that the Federal Government did not share that perspective or provide information to Twitter concerning this issue.

Id.; *see id.* at 37 (“My recollection is that a representative of another tech company may have mentioned [the Hunter Biden hack-and-leak operation], but those meetings were several years ago. I truly don’t recall.”); *id.* at 43 (“I want to be clear that my statement to the FEC does not suggest that the FBI told me it would involve Hunter Biden. That’s a popular reading of the declaration but it was not my intent.”); *id.* at 46 (“My recollection is it was mentioned by another technology company in one of our joint meetings, but I don’t remember who.”). Documents that ASAC Chan sent to Twitter the “night before” the *New York Post* story broke “did not relate to Hunter Biden.” *Id.* at 12; *see also* Defs.’ Resp. PFOF ¶¶ 880-904.

161. ASAC Chan testified that no one brought anything to do with Hunter Biden’s laptop to his attention before the *New York Post*’s publication on October 14, 2020. Chan Dep. 229:21-230:19. At one bilateral meeting between the FBI FITF and Facebook after October 14, 2020, one of Facebook’s analysts asked if FBI had any information to share about the Hunter Biden investigation or case, and FBI personnel answered that the FBI had no comment. *Id.* at 213:11-19, 308:14-309:12. Other than the Facebook analyst’s inquiry and the FBI’s no-comment response, ASAC Chan was not aware of any communications related to the Hunter Biden laptop story between the FBI and Facebook, Chan Dep. 233:22-234:3, Twitter, *id.* at 233:8-21, Apple, Microsoft, *id.* at 234:6-7, or any other platform, *id.* at 234:4-5; *see also id.* at 227:24-228:1, 21-23, 229:6-14 (testifying that he did not recall any Federal Government personnel mentioning Hunter Biden’s name during meeting with Twitter). (The FBI is not commenting on the relevant investigation, which is ongoing.) Ex. 138 at 36-37 (*Annual World Wide Threats Hearing with Heads of the Intelligence Committee: Hearing Before H. Select Comm. on Intell.*, 118th Cong. (2023)).

162. ASAC Chan was not aware (until asked about the Roth Declaration at his deposition) of actions Twitter initially took to limit circulation of certain posts (containing “embedded source materials”) about the Post’s Hunter Biden laptop story. *Id.* at 232:18-21. As Mr. Roth explained, his “interactions with [ASAC] Chan and with the FBI almost entirely focused on what the FBI called malign[] foreign interference, things like Russian troll farms and Iranian involvement in the elections, not on any type of domestic” inquiry. Ex. 2 at 12.

163. As to Meta, in the October 25, 2022 letter by that company’s counsel to this Court, the platform stated that ASAC Chan “at no point in time advised Meta ‘to suppress the Hunter Biden laptop story.’ Nor did any of his colleagues.” Ex. A, Dkt. 96 at 2-3.⁵¹

LEGAL STANDARD

“A preliminary injunction is an extraordinary remedy never awarded as of right.” *Winter v. Nat. Res. Def. Council, Inc.*, 555 U.S. 7, 24 (2008); *Anderson v. Jackson*, 556 F.3d 351, 360 (5th Cir. 2009) (“Injunctive relief is an extraordinary and drastic remedy[] and should only be granted when the movant has clearly carried the burden of persuasion.”). Plaintiffs must “by a clear showing” establish that (1) they have a substantial likelihood of success on the merits; (2) they will suffer irreparable harm without an injunction; (3) the balance of equities tips in their favor; and (4) preliminary relief serves the public interest. *Mazurek v. Armstrong*, 520 U.S. 968, 972 (1997). Failure to satisfy any one of these requirements precludes injunctive relief, *see Allied Mktg. Grp., Inc. v. CDL Mktg., Inc.*, 878 F.2d 806, 809 (5th Cir. 1989), and Plaintiffs bear a heavy burden

⁵¹ Mr. Zuckerberg’s October 2020 congressional testimony that the FBI put the company on “alert” about a potential hack-and-dump operation does not show that ASAC Chan or the FBI advised Facebook regarding the “Hunter Biden Laptop Story.” PI Supp. 28; Pls.’ PFOF ¶ 902. ASAC Chan testified that what the FBI would have done was to ask the platform “how their terms of service would handle a situation” involving materials released from such an operation. Chan Dep. 247:22-248:1-4, 250:14-21. Twitter and Facebook said they would remove hacked materials if the platforms *themselves* were able to validate such materials were hacked. *Id.* at 252:24-253:4.

of persuading the district court that all four elements are satisfied, *Enter. Int'l, Inc. v. Corporacion Estatal Petrolera Ecuatoriana*, 762 F.2d 464, 472 (5th Cir. 1985). A plaintiff's burden is even higher where, as here, it seeks a preliminary injunction that would alter the status quo. *See, e.g., Martinez v. Mathews*, 544 F.2d 1233, 1243 (5th Cir. 1976). Preliminary injunctions that go "well beyond simply maintaining the status quo" are "particularly disfavored[]" and should not be issued unless the facts and law clearly favor the moving party." *Id.*

ARGUMENT

Contrary to Plaintiffs' hyperbole and speculation, the record confirms only that devoted civil servants did what government officials are expected to do: promote government policies, including through discussions with private parties, to help protect the public. *See Walker v. Tex. Div., Sons of Confederate Veterans, Inc.*, 576 U.S. 200, 208 (2015) ("[A]s a general matter, when the government speaks it is entitled to promote a program, to espouse a policy, or to take a position," otherwise "it is not easy to imagine how government would function"); *Bd. of Regents of Univ. of Wis. Sys. v. Southworth*, 529 U.S. 217, 235 (2000) ("the government" has the right to "speak[] . . . to promote its own policies or to advance a particular idea," and to the extent "the citizenry objects, newly elected officials later could espouse some different or contrary position"); *Nat'l Endowment for the Arts v. Finley*, 524 U.S. 569, 598 (1998) (Scalia, J. concurring) (it is "the very business of government to favor and disfavor points of view on . . . innumerable subjects"); *Rosenberger v. Rector & Visitors of Univ. of Va.*, 515 U.S. 819, 833 (1995) ("when the government" seeks to "promote a particular policy of its own it is entitled to say what it wishes").

The evidence demonstrates that during a pandemic that cost over a million Americans their lives, officials from the White House and OSG promoted an "all of society" effort to overcome this challenge, the likes of which our nation had not experienced in over a century. *See supra* Defs.' PFOF § II.A.-B. Public health officials at CDC and NIAID communicated with social media

companies to help promote accurate health information and address the spread of misinformation that could threaten additional lives. *See supra* Defs.’ PFOF § II.C.-E. FBI officials likewise communicated with social media platforms to help identify malign foreign actors seeking to exploit social media to further their objectives and undermine our national security. *See supra* Defs.’ PFOF § II.H. Similarly, officials at CISA sought to protect our democratic processes by sharing, with social media companies, reports received from persons of all political stripes, including from Plaintiffs Louisiana and Missouri, regarding election-related misinformation. *See supra* Defs.’ PFOF § II.F. None of the evidence demonstrates that any government official coerced or effectively compelled any social media company to take any action regarding content on its platforms. Rather, Defendants, like officials in prior administrations, used the bully pulpit, and other means of communication, to promote public health and safety—again, precisely what government officials are supposed to do. Ultimately, the social media companies—large, independent corporations—decided for themselves what would be carried on their platforms.

These types of government communications with social media companies are not unlawful, and indeed, are beneficial. Although Plaintiffs purport to argue otherwise, they point to no evidence demonstrating the type of coercion that the Supreme Court has held necessary to transform private decisions into state action. Instead, Plaintiffs ask this Court to recognize new legal theories of state action to justify a sweeping injunction that would hamstring, if not cripple, the Government’s ability to express its views on matters of critical public concern.

Plaintiffs’ motion should therefore be denied on the merits. But even if the Court believes Plaintiffs’ legal theories have merit, Plaintiffs cannot establish any irreparable harm to justify a preliminary injunction that would impair the Federal Government’s ability to communicate with private companies to promote national security and public safety.

I. Plaintiffs fail to satisfy their burden of demonstrating that irreparable harm would result in the absence of a preliminary injunction.

Plaintiffs have not “clearly carried the burden of persuasion” to show imminent irreparable harm, *Bluefield Water Ass’n v. City of Starkville*, 577 F.3d 250, 253 (5th Cir. 2009) (citation omitted), as “is required for injunctive relief.” *Montient Corp. v. Dondero*, 529 F.3d 532, 538 (5th Cir. 2008) (emphasis added); 11A Charles Alan Wright, Arthur R. Miller & Mary Kay Kane, *Federal Practice and Procedure* § 2948.1 (3d ed. 2013) (“Perhaps the single most important prerequisite for the issuance of a preliminary injunction is a demonstration that if it is not granted the applicant is likely to suffer irreparable harm before a decision on the merits can be rendered.”). To show irreparable harm, Plaintiffs must demonstrate “a *significant threat* of injury from the impending action, that the injury is *imminent*, and that money damages would not fully repair the harm.” *Humana, Inc. v. Jackson*, 804 F.2d 1390, 1394 (5th Cir. 1986) (emphases added).

Plaintiffs devote a mere two sentences of their 68-page supplemental brief to this indispensable factor. And they argue only that a preliminary injunction is warranted because they bring a First Amendment claim. PI Supp. 65. But merely asserting a First Amendment violation does not suffice. A First Amendment injury, like any other, must be imminent and non-speculative to satisfy the irreparable injury requirement. *See Google, Inc. v. Hood*, 822 F.3d 212, 227-28 (5th Cir. 2016) (“[I]nvocation of the First Amendment cannot substitute for the presence of an imminent, non-speculative irreparable injury.”); *see also Elrod v. Burns*, 427 U.S. 347, 373 (1976) (plurality opinion) (finding a preliminary injunction appropriate when it was “clear . . . that First Amendment interests were either *threatened or in fact being impaired* at the time relief was sought” (emphasis added)); *Ark. Project v. Shaw*, 775 F.3d 641, 663-64 (5th Cir. 2014) (“Federal courts are not obligated to grant an injunction for every violation of law,” and that the “court’s

power to order injunctive relief depends” on “whether plaintiffs have established . . . a reasonably certain threat of imminent harm.” (citation omitted)).

To demonstrate irreparable harm at the preliminary injunction stage, Plaintiffs must adduce evidence showing that the irreparable injury is likely to occur “*during the pendency of the litigation.*” *Justin Indus., Inc. v. Choctaw Secs., L.P.*, 920 F.2d 262, 268 n.7 (5th Cir. 1990) (emphasis added). After all, the very purpose of a preliminary injunction is “simply [to] preserve[] the status quo pending final determination of the action after a full hearing.” *SEC v. First Fin. Group of Tex.*, 645 F.2d 429, 435 n.8 (5th Cir. Unit A 1981). Plaintiffs make no effort to meet their heavy burden as to this critical element of the preliminary injunction requirements. In their two-sentence argument, they point to no evidence at all substantiating their irreparable harm claim. *See* PI Supp. 65. And although they allege, elsewhere in their brief, *see id.* at 56-57, vaguely defined harms to their interests as speakers or listeners for standing purposes, those purported harms fall far short of satisfying Article III’s requirements of “concrete and particularized” and “actual or imminent” injury. *Infra* Arg. § II.A.1.; *see also* Defs.’ MTD 18-31; Defs.’ Reply in Supp. of MTD 7-19 (“Defs.’ Reply”) (Dkt. 199). Much less do they show any *irreparable* injury likely to arise during the pendency of this suit on the merits.

For several reasons, the record undermines Plaintiffs’ claimed need for immediate relief. First, Plaintiffs rely on harms arising from social media companies’ *past* content moderation decisions, which provide no basis for *forward-looking* injunctive relief, preliminary or otherwise. Plaintiffs’ assertion that those past harms are “ongoing” or “imminent” are contradicted by the evidence: Plaintiffs’ previously banned accounts have been restored and Plaintiffs point to no recent social-media content that others posted (or wished to post) to which Plaintiffs have been denied access because of a company’s content moderation decision. Second, as the Government’s

response to the pandemic and attacks on election infrastructure have evolved to meet new challenges and changed circumstances, much of Defendants' conduct that Plaintiffs challenge is no longer occurring, and Plaintiffs have no entitlement to relief, especially preliminary injunctive relief, from conduct that has ceased. Moreover, Plaintiffs' assertion that Defendants are "expanding censorship efforts," PI Supp. 57, is speculative and unfounded. To support that assertion, Plaintiffs point to various policy statements and initiatives on issues relating to climate change, cyber bullying, and other topics unrelated to COVID-19 and election security—matters of public concern on which the Government is entitled to promote awareness as well as its own views on how they should be met. But Plaintiffs offer no evidence that any Defendant has spoken with a social media company about content moderation relating to such topics, or that any social media company moderates content relating to those topics (let alone that it does so at the demand of any Defendant).

Finally, even if Plaintiffs could otherwise show any ongoing or imminent harm, Plaintiffs' delay in seeking relief undermines any conclusion that such harm is irreparable and warrants emergency injunctive relief. The conduct of which Plaintiffs complain began years ago (by their own admission), and yet Plaintiffs waited until last May to bring suit, after which they then sought discovery, which has consequently delayed any relief they could obtain from their preliminary-injunction motion by nearly a year. That delay alone proves the absence of irreparable harm.

A. Plaintiffs cannot establish imminent, irreparable harm based on social media companies' past content moderation decisions.

To start, Plaintiffs cannot show imminent, irreparable harm based on the alleged past content moderation decisions of social media companies: "[h]arm that has *already* occurred," of course, "cannot be remedied by an injunction." *Pham v. Univ. of La. at Monroe*, 194 F. Supp. 3d 534, 548 (W.D. La. 2016) (quoting *Mountain Med. Equip., Inc. v. Healthyne, Inc.*, 582 F. Supp.

846, 848 (D. Colo. 1984)) (emphasis added). Plaintiffs acknowledge that “past injury is not redressable by injunctive or declaratory relief.” PI Supp. 62 (citing *Stringer v. Whitley*, 942 F.3d 715, 720 (5th Cir. 2019)). Yet they rely almost exclusively on content moderation decisions occurring long ago. The declarations supporting their request for emergency relief are nearly *one year old*—all of them executed in May or June 2022, before the Plaintiff States’ initial request for preliminary injunctive relief. Even those declarations point to actions taken by social media companies as long ago February 2021. *Infra* Arg. § I.A.1. Despite nearly one year’s time and access to voluminous discovery materials with which to update their declarations, Plaintiffs have adduced no evidence of recent content moderation decisions affecting their speech, or the speech of others with which they seek to engage. In the meantime, the social media accounts of the Individual Plaintiffs who were allegedly “permanently deplatformed” have apparently been restored. As explained further below, the outdated declarations and changed factual circumstances contradict Plaintiffs’ conclusory assertions that they are “experienc[ing] ongoing injury from censorship and face the imminent prospect of further censorship.” PI Supp. 57.

1. The Individual Plaintiffs’ alleged harms stem from long-past content moderation decisions.

The Individuals Plaintiffs’ declarations allege harms arising from past content moderation decisions affecting posts of their own or of other users they claim to follow. But those decisions primarily occurred between two and three years ago—in 2020 and 2021. *See* Bhattacharya Decl. ¶¶ 16-18 (Dkt. 10-3) (Google, Redditt, YouTube actions in February and March 2021); Kuldorff Decl. ¶¶ 9-15 (Dkt. 10-4) (Google, Redditt, YouTube actions in February and March 2021); *id.* ¶¶ 17-18 (Twitter and LinkedIn actions in 2021); Hoft Decl. ¶¶ 3, 6-8 (Dkt. 10-5) (Twitter action in January and February 2021); Kheriaty Decl. ¶ 11 (Dkt. 10-7) (Twitter action in 2020-2021); Hines Decl. ¶¶ 7-8 (Dkt. 10-12) (Facebook action in 2020). Even the most recent alleged content

moderation actions occurred, at the latest, in May 2022—roughly *one year* ago. Kulldorff Decl. ¶ 26 (LinkedIn action in January 2022); Hoft Decl. ¶ 14 (YouTube action in May 2022); Kheriaty Decl. ¶ 15 (Twitter action in 2021 and 2022); Hines Decl. ¶ 9 (Facebook action in January and May 2022).⁵² These actions, all of which had already occurred by “the time [Plaintiffs] brought this suit,” *Pham*, 194 F. Supp.3d at 548, cannot be remedied by any prospective injunctive relief, *infra* Arg. § II.A., and certainly not by *immediate* injunctive relief.⁵³ *See generally* Defs.’ Resp. PFOF ¶¶ 1367-1411.

Nor do past content moderation decisions show any “ongoing” or “imminent” harm, despite Plaintiffs’ conclusory assertions. The Individual Plaintiffs attempt to show an ongoing or imminent injury affecting their own speech on social media in two ways. First, three of the Individual Plaintiffs (Kulldorff, Hines, and Hoft), *see* Pls.’ Mem. Opp’n to Defs.’ MTD at 9 (“Pls.’ Opp’n to MTD”) (Dkt. 165) suggest that they are experiencing ongoing injury because one of their social media accounts had been “permanently suspended” or “banned.” *See* Hoft Decl. ¶ 8; Pls.’ PFOF ¶ 1369 (referencing the Bhattacharya Declaration’s reliance on the alleged termination of Dr. Kulldorff’s LinkedIn account, *see* Bhattacharya Decl. ¶ 30); Pls.’ PFOF ¶ 1388 (referencing the Hoft Declaration’s allegation that the Gateway Pundit has been permanently banned from Twitter, *see* Hoft Decl. ¶ 8); Pls.’ PFOF ¶ 1399 (referencing the Hines Declaration’s allegation

⁵² Plaintiffs also reference content moderation decisions occurring at unspecified points in time. *See, e.g.*, Bhattacharya Decl. ¶¶ 25-26 (asserting that Twitter “censored his tweet” and temporarily “locked [him] out of” his account “for three weeks” without specifying a date for either action), *id.* ¶¶ 28-29 (referencing conduct by Twitter at an unspecified past date). Their failure to identify when those decisions occurred necessarily means that they cannot show ongoing or imminent irreparable harm stemming from those decisions.

⁵³ The non-party declarations attached to the Complaint suffer the same flaw. Changizi Decl. ¶ 18 (Dkt. 10-9) (April 2021 Twitter conduct); *id.* ¶ 19 (June 2021 Twitter conduct); *id.* ¶¶ 20, 23 (December 2021 Twitter conduct); Senger Decl. ¶¶ 4-7 (Dkt. 10-2) (October 2021 and March 2022 Twitter conduct); Kotzin Decl. ¶ 13 (Dkt. 10-10) (September 2021 Twitter conduct); Kitchen Decl. ¶¶ 18, 32 (Dkt. 10-11) (September 2021 Medium conduct).

that Hines' personal account was "restricted for 90 days," *see* Hines Decl. ¶ 12⁵⁴). But as of today, all three individuals' accounts appear active: Kulldorff has an active LinkedIn page, *see* Declaration of Jasmine Robinson ¶ 2 (Ex. 139) ("Robinson Decl."), Hines has an active Facebook page, *id.* ¶ 3, and the Gateway Pundit has an active Twitter account, *id.* ¶ 4.⁵⁵ *See also* Defs.' Resp. PFOF ¶¶ 1369, 1388, 1399.

Second, the Individual Plaintiffs contend that they are experiencing an ongoing injury because of their choice to "self-censor[] to avoid more severe penalties from the platforms." Pls.' PFOF ¶ 1385; *see also id.* ¶ 1371 (Dr. Bhattacharya asserting that the companies' "policies have driven scientists and others to self-censorship," although not stating that he engages in "self-censorship" of his own speech), *id.* ¶ 1379 ("Dr. Kulldorff states that he and other scientists engage in self-censorship"), *id.* ¶ 1385 ("Dr. Kheriaty also engages in self-censorship"), *id.* ¶ 1394 ("Hoft . . . describes ongoing self-censorship"), *id.* ¶ 1407 ("Hines engages in self-censorship"). Yet Plaintiffs' own decision to limit what they say on social media or how they say it, based on a generalized fear of how any company might choose to apply its own policy, is a "self-inflicted injury" that does not confer standing, *Zimmerman v. City of Austin*, 881 F.3d 378, 389 (5th Cir. 2018), and thus does not suffice to show irreparable harm warranting immediate injunctive relief. Plaintiffs nowhere specify what content they seek to post online that a social media company might decide to moderate. Even if they had so specified, "the risk that" any content they post

⁵⁴ Hines also states that Facebook pages for two of her organizations, Health Freedom Louisiana and Reopen Louisiana, are "under constant threat of being completely deplatformed," Hines Decl. ¶ 12, but she offers no evidence to substantiate that claim, and she does not allege that they ever have been "deplatformed."

⁵⁵ The same is true of non-party declarants Daniel Kotzin and Amanda J. Kitchen. Kotzin alleged that his Twitter account was permanently suspended, *see* Kotzin Decl. ¶¶ 12, 19, but he now appears to have an active account, Robinson Decl. ¶ 5 (Ex. 139). Kitchen alleged that her Twitter account was "shadowbanned," *see* Kitchen Decl. ¶ 34, but she, too, appears to have an active and publicly viewable account, Robinson Decl. ¶ 6 (Ex. 139).

subsequently will be moderated by a social media company “is speculative and depends . . . on the actions of [those] third-party” companies. *Id.* at 390. That risk is particularly speculative here, where no Plaintiff identifies any content moderation measures applied to any of their posts in the last year. *See, e.g.*, Defs.’ Resp. to Pls.’ PFOF ¶ 1396 (responding to Hoft’s claim to have “experience[d] censorship” up to the date he executed his declaration the year prior, “on May 14, 2022”). Plaintiffs’ conclusory and speculative assertions to the contrary do not justify preliminary relief. *Winter*, 555 U.S. at 22 (plaintiffs must show that irreparable harm is “*likely*,” not just “possib[le]” “in the absence of an injunction”).

Moreover, to the extent the Individual Plaintiffs allege an interest in listening to, reading, or interacting with speech on social media, they fail to establish any ongoing or imminent irreparable harm to that interest either. The Individual Plaintiffs assert their own interest in receiving speech on social media for the first time in their supplemental brief, but they do so in conclusory fashion, citing no evidence that they have been precluded from receiving any particular speech because of a social media company’s particular content moderation decision. *See* PI Supp. 56 (arguing that “[t]he individual Plaintiffs assert violation of their First Amendment right to speak and listen freely without government interference,” but without specifying how such interests have been harmed). Indeed, the declarations they submitted nearly one year ago make no mention of any harm to their interests as “listeners”⁵⁶ as opposed to their interests as speakers. Instead, the Individual Plaintiffs assert an “interest in being able to read and follow the speech and writings that others post on social media” for the first time in their declarations supporting the motion to

⁵⁶ The declarations generally assert harm to *other* users’ right to engage with certain content because of content moderation decisions affecting the *declarants*’ own speech. *See, e.g.*, Kheriaty Decl. ¶¶ 9-10, 12, 14 (discussing his number of followers and ways in which they have allegedly been restricted from viewing Kheriaty’s posts). But they do not allege any harm to the declarants’ own interest in receiving any other users’ speech.

amend the complaint and for class certification. *See* 2d Bhattacharya Decl. ¶ 4 (Dkt. 227-5). Even if the Court were to consider those declarations, their contents would not move the Individual Plaintiffs any closer to showing imminent, irreparable harm based on this newly asserted interest.

Like Plaintiffs' allegations of harm to their interest as speakers, the allegations relating to their interest as listeners are entirely conclusory, speculative, and vague. For instance, Dr. Bhattacharya declares that he is "aware of others [he] follow[s] on social media engaging in self-censorship," 2d Bhattacharya Decl. ¶ 6, but he provides no factual details (including any timeframe) supporting that claim. He also asserts that he "frequently read[s] and listen[s] to the speech and writings on social media of other speakers and writers whom federal officials *may* have explicitly targeted for censorship," and lists various names, *id.* ¶ 5 (emphasis added), but he nowhere elaborates how, when, or by whom those speakers may have been "targeted for censorship" and how or when he has actually been prevented from receiving any speech from them on social media.⁵⁷ The remaining declarations are similarly vague and conclusory. *See* 2d Kulldorff Decl. ¶ 5 (Dkt. 227-6) (alleging that he "read[s] the writings and/or listen[s] to the speech of others who have been targeted for censorship on social media," without specifying how, when, or by whom those individuals have been "targeted for censorship"); 2d Kheriaty Decl. ¶¶ 5-6 (Dkt. 227-7) (same); 2d Hoft Decl. ¶¶ 6-7 (Dkt. 227-8) (same); 2d Hines Decl. ¶¶ 5-6 (Dkt. 227-9) (same). These assertions, devoid of any factual support, are woefully inadequate to show a likelihood of ongoing or imminent, irreparable harm to the Individual Plaintiffs' interest in receiving speech on social media that can be attributed to any of the Defendants, much less all of them.

⁵⁷ Other allegations are completely unconnected to the actions of a social media company and are thus irrelevant to the First Amendment claim in this case. *See, e.g.*, 2d Bhattacharya Decl. ¶ 6 (alleging that he has "heard from prominent signatories of the Great Barrington Declaration . . . [that] they have experienced" "retaliation" "*at work* for signing the document[]" (emphasis added)).

In short, none of the Individual Plaintiffs shows irreparable harm stemming from the content moderation decisions of social media companies.

2. Plaintiff States' alleged harms likewise stem from long-past content moderation decisions.

Nor do the Plaintiff States show any imminent, irreparable harm based on social media companies' content moderation decisions. Again, for the reasons explained in Defendants' motion to dismiss, none of the States' alleged harms constitutes a cognizable injury-in-fact for Article III standing. *See* Defs.' MTD 18-31. Even assuming they did, they still do not support Plaintiffs' request for preliminary injunctive relief, as they hinge on long-past conduct and thus fall far short of showing any likelihood of imminent, irreparable harm.

First, the Plaintiff States allege two instances of content moderation affecting their interest in speaking on social media. *See* 2d. Am. Compl. ¶ 461; Pls.' Opp'n to MTD 15-16. Those events, however occurred *in 2021*. Pls.' Opp'n to MTD 15-16. The States point to no interference with their own speech for nearly two years, much less interference for which Defendants could be deemed responsible.

Second, the States purport to identify six other "forms of imminent, continuing, irreparable injury." 2d. Am. Compl. ¶ 459.⁵⁸ Each of those alleged injuries, however, is derivative of their citizens' interests in speaking or engaging on social media. *See id.* ¶ 460 (alleging an interest in enforcing the free speech rights of their citizens); *id.* ¶ 462 (alleging an interest in receiving their residents' speech); *id.* ¶ 463 (alleging an interest in their residents' ability to use social media to petition the States); *id.* ¶ 464 (alleging an interest in Dr. Bhattacharya having a greater "impact"

⁵⁸ The Complaint alleges eight total interests, but Plaintiffs States have since abandoned their alleged interest in Dr. Bhattacharya's speech having a greater "impact" on social media, 2d. Am. Compl. ¶ 464. *See* Defs.' Reply 11 n.4; PI Supp. 57 (now asserting "seven specific" injuries, not including injury to Dr. Bhattacharya's speech).

on social media); *id.* ¶¶ 465-66 (alleging quasi-sovereign interests in vindicating the free speech rights of their residents); *id.* ¶ 467 (alleging an interest in vindicating the speech of all “listeners, readers, and audiences of social-media speech”). But even assuming States could establish standing based on asserted injuries to their residents, *contra, e.g., Kentucky v. Biden*, 23 F.4th 585, 596 (6th Cir. 2022) (citing *Massachusetts v. Mellon*, 262 U.S. 447, 486-86 (1923)), the States point to no recent content moderation decision affecting any of these asserted interests. Again, none of the Individual Plaintiffs’ (or the non-party social-media users’) declarations point to content moderation decisions occurring after May 2022. *See* Pls.’ PFOF ¶ 1431-42. The States present declarations from two employees who purport that the performance of their official duties has been impeded because of their inability to “follow” or “monitor” speech on social media, but those declarations likewise point to long-past conduct. Flesch Decl. ¶¶ 7-9 (Dkt. 10-6) (alleging impact from content moderation occurring, at the latest, in March 2022); Bosch Decl. ¶¶ 8-9 (Dkt. 10-13) (not including any details about the timing or circumstances of impact of alleged instances of moderated content).

Just like the Individual Plaintiffs’ injuries, the States’ alleged injuries based on long-past conduct fall far short of showing any imminent, irreparable harm warranting immediate injunctive relief. *See also* Defs.’ Resp. PFOF ¶¶ 1427-1442.

B. Plaintiffs cannot establish imminent, irreparable harm based on alleged past actions of federal officials.

Nor can Plaintiffs show imminent, irreparable harm based on the past actions of Defendants that they allege caused social media companies to moderate content on their platforms. Plaintiffs, of course, are harmed by *Defendants* only to the extent that *Defendants*’ conduct can be said to have compelled social media companies to act with respect to particular content on their platforms that Plaintiffs wished to disseminate or receive. *Bennett v. Spear*, 520 U.S. 154, 169 (1997) (alleged

injuries cannot be “th[e] result [of] the *independent* action of some third party not before the court[.]”). Thus, even assuming Plaintiffs could point to any current or imminent harm from a prior or future content moderation decision, they would still need to tie that harm to some ongoing or future conduct of a Defendant.

That means that the prior conduct of Defendants is irrelevant and cannot be the basis of emergency injunctive relief absent any indication that it is likely to recur (and imminently so). For instance, CISA discontinued its switchboarding activities after the 2020 election as non-governmental organizations stepped in to perform that important function, and focused its resources on other initiatives aimed at promoting election integrity. Switchboarding efforts that ceased over two years ago could not compel any social media platform’s current or future content moderation decisions concerning election content on their platforms, and thus do not show ongoing or imminent irreparable harm. Yet the majority of the conduct Plaintiffs seek to enjoin is exactly this type of past, completed conduct by Defendants having no ongoing or future effect. A preliminary injunction against that conduct is not only unnecessary, but improper: it would also constitute an improper “advisory opinion” having no real-world effect on Plaintiffs’ First Amendment rights. *See TransUnion LLC v. Ramirez*, 141 S. Ct. 2190, 2203 (2021) (“Under Article III, federal courts do not adjudicate hypothetical or abstract disputes.”). When assessing Plaintiffs’ need for preliminary injunctive relief, then, the Court must disregard Defendants’ past conduct that Plaintiffs have not shown is likely to recur during the pendency of this lawsuit.

The record does not show that the challenged actions of Defendants are occurring or are likely to recur during the pendency of this lawsuit.

1. Plaintiffs have not made the requisite showing of ongoing or imminent irreparable harm as to the White House Defendants.

Plaintiffs' claims against White House officials are based almost exclusively on public and private statements that occurred in 2021 at the height of a global pandemic that took more than a million U.S. lives. *See supra* Defs.' PFOF § II.A. The vast majority of White House officials' statements cited by Plaintiffs concerned the critical public health threat posed by mis- and disinformation about COVID-19 vaccines, and vaccine hesitancy more specifically, *see id.*, especially during the initial rollout of the first COVID-19 vaccine. *See, e.g.*, Ex. 140 at 1 (MOLA_DEFSPROD_00018153). The White House shared these concerns with global institutions like the World Health Organization and the United Nations—as well as nearly every country around the world—that acknowledged the “infodemic” of COVID-19 misinformation that was spreading on social media. *See* Ex. 17; *supra* Defs.' PFOF § I.C. To be clear, none of the White House officials' statements about COVID-19 misinformation was unlawful or made the White House responsible for any independent decisions by the social media companies. Urging all sectors of society, including social media companies, to accept their role in the Nation's collective effort to combat the coronavirus was (and remains) an essential element of the Government's duty and responsibility to lead that effort. But even setting the merits question aside, Plaintiffs have set forth no evidence demonstrating that the White House is now so engaged with social media companies about COVID-19 misinformation as to raise even the specter, much less the probability, of imminent irreparable harm.

To the contrary, the record shows that the White House's approach to the COVID-19 pandemic has markedly changed since 2021. In April 2023, President Biden signed a joint resolution into law that terminated the national emergency related to COVID-19, which had been in place since March 2020. *See* 137 Stat. 6. The declaration of national emergency did not merely

serve a signaling purpose, but rather reflected the Administration's view of the pandemic and enabled the Administration to exercise certain statutory authorities necessary to respond to the crisis. *See* 85 Fed. Reg. 15,337. HHS's public health emergency is likewise due to end on May 11, 2023. *See* Ex. 67 at 1 (“[T]hanks to the administration’s whole-of-government approach to combatting the virus, we are in a better place in our response than we were three years ago, and we can transition away from the emergency phase.”). And later this month, the White House will wind down its COVID-19 Response Team, which was the primary coordinator of the Administration’s response to the pandemic and which included several White House officials who are Defendants in this action and whose communications Plaintiffs cite in support of their motion. There is, accordingly, no evidence in the record of any current White House engagement with social media companies concerning COVID-19 misinformation that would support a claim that injunctive relief against the White House is needed. *See also* Defs.’ Resp. PFOF ¶¶ 188-211.

2. Plaintiffs have not made the requisite showing of ongoing or imminent irreparable harm as to CISA Defendants.

Plaintiffs’ arguments regarding CISA’s alleged violation of the First Amendment focus primarily on its switchboarding activities during the 2020 election cycle. PI Supp. 37-39. As noted above, CISA has re-focused its important election-security efforts elsewhere. Thus, CISA decided in April or May 2022 not to provide switchboarding services for the 2022 election cycle and has no intention of engaging in switchboarding for the next election. Scully Dep. 21:19-22:1-23; Hale Decl. ¶ 78 (Ex. 97). Indeed, the record shows that in 2022 CISA fulfilled its role of promoting election integrity through support for the development of two EI-SCC and EIS-GCC Joint Managing Mis/Disinformation Working Group guides to build resilience to misinformation; updates to the Rumor vs. Reality webpage; the development of the “Tactics of Disinformation” guide; Halloween-themed messages on social media to build awareness of the risks posed by

disinformation; a CISA-FBI public service announcement on information manipulation tactics concerning the 2022 midterm elections; and participation in the USG-Industry meetings, *see* Scully Dep. 303:10-304:5; Hale Decl. ¶¶ 64-69 (Ex. 97), but not through switchboarding.

Nonetheless, Plaintiffs insist that CISA continues to engage in switchboarding activities “through the present day,” pointing to an outdated statement that previously appeared on CISA’s website. PI Supp. 37; Pls.’ PFOF ¶¶ 976, 1120. But Mr. Scully explained during his deposition that this statement was inaccurate and should be changed to indicate that CISA’s switchboarding efforts are no longer occurring, in addition to stating that CISA did not engage in switchboarding activities in 2022. Scully Dep. 21:19-22:23, 366:21-367; Hale Decl. ¶ 78 (Ex. 97) (explaining that CISA did not engage in switchboarding for the 2022 election cycle and has no intention to engage in switchboarding for the next election). CISA’s website subsequently has been updated. *See* Ex. 141 (*Foreign Influence Operations and Disinformation*, CISA, <https://perma.cc/F46N-KZDU>).

Plaintiffs also point to CISA’s alleged “collaboration” with the EIP. PI Supp. 45-47. But CISA’s involvement with the EIP was generally limited to connecting it with election stakeholders in advance of the 2020 election, receiving a briefing from EIP in May or June 2022 during which EIP shared its lessons learned from the 2020 election and plans for the 2022 election (which was to work with state and local election officials), and attending public briefings provided by the EIP. Scully Dep. 54:10-25; Hale Decl. ¶¶ 58, 60, 62 (Ex. 97). CISA is not presently conducting any work with the EIP, *see* Hale Decl. ¶ 63 (Ex. 97), and Plaintiffs thus cannot establish any imminent, irreparable harm on this basis.

Finally, even if Plaintiffs contended that CISA’s meetings with social media companies in which misinformation generally was discussed violate the First Amendment (and they make no such argument), those meetings have largely ended as well. For example, CISA has not

participated in the USG-Industry meetings since the 2022 general election. Hale Decl. ¶ 69 (Ex. 97).⁵⁹ Similarly, the CSAC Protecting Critical Infrastructure from Misinformation and Disinformation Subcommittee was directed to stand down in December 2022 because it had completed its tasking and provided its recommendations to CISA. *See* Ex. 187 at 43. And although the EI-SCC and EIS-GCC Joint Managing Mis/Disinformation Working Group (Working Group) is still ongoing, its relevant work has consisted of the publication of two guides to help state and local election officials and industry providers prepare for and respond to risks of disinformation. Hale Decl. ¶ 40 (Ex. 97) (And, in any event, the Working Group does not engage with social media companies and does not flag or report potential disinformation to those companies, *id.* ¶ 43).

Plaintiffs cannot show any current or “certainly impending” irreparable harm from CISA’s past switchboarding activities, any involvement by CISA with the EIP, or CISA’s meetings with social media companies, as Plaintiffs have not shown that such activities are occurring or likely to recur during the pendency of this suit. *See also* Defs.’ Resp. PFOF ¶¶ 1094-1122.

3. Plaintiffs have not made the requisite showing of ongoing or imminent irreparable harm as to the CDC Defendants.

As to CDC as well, Plaintiffs’ challenge looks to past actions. First, Plaintiffs point to BOLO meetings involving CDC and social media companies, PI Supp. 32, but the record plainly shows that only two BOLO meetings ever took place, in May 2021, and there is no plan to restart those meetings now, two years later. Crawford Decl. ¶¶ 14-15 (Ex. 80). Second, Plaintiffs complain about “Facebook provid[ing] the CDC with regular biweekly ‘CrowdTangle’ reports,” PI Supp. 31, but Facebook stopped sending those reports to CDC in December 2021, *supra* Defs.’ PFOF § II.C.6., and Plaintiffs reference no record evidence showing any intent by Facebook to

⁵⁹ Plaintiffs’ factually unsupported claim that “[t]he MDM Team continues to communicate regularly and extensively with social-media platforms about misinformation and disinformation,” Pls.’ PFOF ¶ 978, is therefore incorrect. *See* Defs.’ Resp. to PFOF ¶ 978.

send them in the future. Third, Plaintiffs refer to questions Facebook posed to CDC about whether certain claims about COVID-19 and vaccines are false and can lead to vaccine hesitancy, because, in response to CDC's responses, Facebook may have chosen to remove certain claims. PI Supp. 32-33. They also point to similar requests from Google and Twitter. *Id.* But the last request about which Plaintiffs complain was made in the summer of 2022. Crawford Decl. ¶ 19 (Ex. 80). In any event, even if any of the above conduct were presently occurring, it would not constitute evidence of irreparable harm to Plaintiffs. None of the above provides evidence that any company is taking or will take action against particular speech (including speech by a Plaintiff) on its platform because it was coerced or effectively compelled by, or acting jointly with, the CDC Defendants.

Additionally, Plaintiffs assert that CDC "has regular meetings with social-media platforms about misinformation." PI Supp. 31. As a threshold matter, although CDC had "regular meetings" with certain platforms for a period of time, misinformation was only occasionally, and not regularly, discussed at those meetings. In any event, with the exception of Google, CDC has not had "regular meetings" with a social media company, about any matter, since 2021, *see* PI Supp. 31 (referencing PFOF paragraphs that cite emails documenting meetings during 2020 and 2021); rather, any meetings now are "more ad hoc." Crawford Dep. 180:16-21; *see also* Crawford Decl. ¶¶ 6-12 (Ex. 80). And even as to CDC's ongoing meetings with Google, there is no evidence that any such meeting has touched on anything relating to misinformation since March 2022, more than one year ago. Crawford Decl. ¶ 11 (Ex. 80).

Finally, as explained, *supra* Arg. § II.C.2., Plaintiffs misstate the record when they argue that CDC is "focusing on other topics" relating to misinformation "and communicating with platforms about" those topics as well. *See* PI Supp. 33. The testimony Plaintiffs cite for this assertion shows the opposite: In June 2022, Google asked for CDC's input on the veracity of health

claims unrelated to COVID-19 and vaccines, but CDC did not substantively answer the inquiry because it concerned a topic that CDC had not “dealt with.” Crawford Dep. 256:11-16. Thus, Plaintiffs’ counterfactual allegation that CDC is expanding the breadth of topics discussed with social media companies shows no irreparable harm. Regardless, even if CDC were communicating with a social media company about any topic relating to misinformation, that would not be enough on its own to show irreparable harm; again, Plaintiffs cite no evidence that a company is taking or will take action against speech (including speech by a Plaintiff) on its platform because of coercion or effective compulsion by, or joint participation with, the CDC.

In short, Plaintiffs cannot show any current or certainly impending irreparable harm from CDC’s past BOLO meetings, CDC’s receipt of CrowdTangle reports, actions taken by social media companies in response to CDC’s provision of scientific conclusions, or any “regular meetings” between CDC and “social-media platforms about misinformation.” While CDC remains committed, in the event of a future public-health emergency such as COVID-19, to promote public understanding of the disease, its dangers, prevention, and treatment, Plaintiffs point to no conduct in which CDC is now engaged, or soon likely to engage, as evidence of ongoing or imminent irreparable harm. The motion for preliminary injunction against CDC should be denied.

4. Plaintiffs have not made the requisite showing of ongoing or imminent irreparable harm as to the Census Defendants.

Plaintiffs include Census in their request for preliminary relief for one reason: Census advised and assisted CDC in 2021, pursuant to an Interagency Agreement, in connection with CDC’s efforts to address COVID-19 misinformation on social media. PI Supp. 31-32. Specifically, Census helped CDC host the two May 2021 BOLO meetings and worked with CDC to identify examples of misinformation circulating on the platforms. *Supra* Defs.’ PFOF § II.D. But Census’ past involvement with CDC—nearly two years ago—plainly provides no basis for preliminary

injunctive relief, and Plaintiffs offer no evidence that such involvement is likely to recur during the pendency of this suit. The motion for preliminary injunction against Census should be denied.

5. Plaintiffs have not made the requisite showing of ongoing or imminent irreparable harm as to Dr. Fauci, in his former capacity as NIAID Director.

Plaintiffs' requested injunction against NIAID is based solely on alleged past conduct by Dr. Fauci while he was the agency's Director. Dr. Fauci was a leading figure in the Nation's struggle against the coronavirus, and as such frequently used the bully pulpit to educate the American people about the virus and appropriate measures to protect themselves against it. But Dr. Fauci has retired from NIAID. Dr. Fauci cannot engage in any future government conduct on which Plaintiffs may stake their claimed need for preliminary injunctive relief (or any injunctive relief at all). Indeed, Plaintiffs do not even argue that they will likely be subject to imminent irreparable harm absent a preliminary injunction against NIAID. *See* PI Supp. 63-64 (arguing only that CDC, CISA, and White House officials are engaged in present-day conduct that is likely to cause "ongoing" or "imminent" injury). The motion for preliminary injunction against NIAID should be denied.⁶⁰

6. Plaintiffs have not made the requisite showing of ongoing or imminent irreparable harm as to the GEC Defendants.

Although their filings are not entirely clear on this point, Plaintiffs appear to allege that the GEC's reporting of misinformation to the EIP during the 2020 election cycle violates the First Amendment. PI Supp. 48. But Plaintiffs fail to explain how they are suffering any imminent, ongoing harm based on conduct that happened more than two years ago.

During the 2020 election cycle, the GEC discovered certain posts and narratives on social

⁶⁰ Additionally, because Plaintiffs do not allege any conduct by NIAID whatsoever that is independent of Dr. Fauci's conduct while he was the Institute's Director before retiring, it is unclear on what basis NIAID remains a Defendant in this case at all.

media and digital media that originated from, were amplified by, or likely to be amplified by foreign malign influence actors—like Russia, the People’s Republic of China, Iran, and their proxies—that sought to spread propaganda or disinformation about the 2020 election. *See* Bray Decl. ¶ 18 (Ex. 142). The GEC flagged these posts and narratives for the EIP on approximately 21 occasions. *Id.* Presently, the GEC is not doing any work with the EIP, *id.* ¶ 19, and there is no evidence that the GEC will do so in the future. Accordingly, Plaintiffs cannot establish any imminent, irreparable harm based on the GEC’s submission of a limited number of tickets regarding foreign malign influence to the EIP during the 2020 election cycle.

* * *

Perhaps acknowledging the absence of imminent, irreparable injury based on the allegations raised in their Complaint and their preliminary-injunction motion, Plaintiffs assert a new form of imminent harm in their supplemental brief—one stemming from what they describe as an alleged “expan[sion]” by Defendants of “their censorship efforts.” PI Supp. 57-58. In support of this conclusory argument, Plaintiffs cite public policy statements or initiatives by various Federal officials (some of whom are no longer in government⁶¹). *Id.* (alleging that the White House, CDC, CISA, DHS, and the EIP are “expanding” their efforts to “censor[]” speech on social media). But Plaintiffs fail to connect the alleged policy statements or initiatives in any way to any content moderation policies or actions of any social media company. *See id.* (citing various statements by Defendants without pointing to any resulting content moderation decision by a social

⁶¹ For instance, Plaintiffs spend several paragraphs in their PFOFs on reported statements by former White House National Climate Advisor Gina McCarthy in June 2022. *See* Pls.’ PFOF ¶¶ 201-03. Ms. McCarthy is no longer the White House National Climate Advisor, *see* Defs.’ Notice of Substitution at 2, and in any event, these statements were made nearly one year ago and thus show no imminent future harm. Nor do Plaintiffs allege that any social media company has taken action against any particular content as a result of Ms. McCarthy’s comments on this single occasion in June 2022.

media company). For that reason alone, Plaintiffs' speculative "expansion" theory should be disregarded. The Government's conduct, of course, can only cause injury to the Plaintiffs and is only relevant to Plaintiffs' First Amendment claims to the extent Plaintiffs allege and prove that it has actually *compelled* a particular content moderation decision *by a social media company*. In other words, mere policy statements or government initiatives do not constitute the First Amendment violation alleged here: the suppression of online content. But choices made by social media companies to moderate content on their platforms become *state* action attributable to Defendants only if Defendants' policy statements, initiatives, or other communications actually *coerce or effectively compel* a social media company into taking such actions. *Blum v. Yaretsky*, 457 U.S. 991, 1004 (1982). Plaintiffs' failure to connect the dots between the alleged "expan[ded]" government conduct and the actions of any social media company means they necessarily lack standing, or any First Amendment claim, relating to this conduct, and is *a fortiori* reason enough to dismiss these allegations as not probative of any irreparable harm.

By way of example, Plaintiffs point to the "Memorandum on the Establishment of the White House Task Force to Address Online Harassment and Abuse," issued by the President in June 2022. *See* PI Supp. 57 (citing Pls.' PFOF ¶ 204, in turn citing Pls.' Jones Decl., Ex. N. (Dkt. 214-16) ("Memorandum")). The Memorandum reflects a legitimate exercise of the President's inherent constitutional duty and authority to study matters adversely affecting the public welfare and to recommend appropriate solutions. It establishes a Task Force charged with "lead[ing] an interagency effort to address online harassment and abuse, specifically focused on technology-facilitated gender-based violence, and . . . develop[ing] concrete recommendations to improve prevention, response, and protection efforts through programs and policies in the United States and globally." Memorandum § 1.

Plaintiffs do not articulate what imminent, irreparable harm they face as a result of the Task Force or this nearly year-old Presidential Memorandum. Importantly, they do not assert that a social media company has taken, or plans to take, action against any content on its platform—much less action that would affect *Plaintiffs'* First Amendment interests—because it felt compelled to do so by any directive in the Presidential Memorandum. They do not even point to any language in the Memorandum itself that purports to require social media companies to take any particular action concerning content on their platforms.⁶² Plaintiffs reference the Memorandum's directive that the Task Force “submit periodic recommendations to the President on policies, regulatory actions, and legislation on technology sector accountability,” *id.* § 5(c), but a general instruction to provide *recommendations for potential* regulation, which is undefined and may never be adopted, does not amount to a threat to social media companies to take any specific action. Plaintiffs also fault the Memorandum's use of the phrase “gendered disinformation,” but they do not contend that any social media company will imminently moderate content that it deems to be “gendered disinformation.” The same is true of Plaintiffs' remaining assertions of imminent harm based on Defendants' alleged “expanding . . . censorship efforts,” which take scattershot aim

⁶² Moreover, Plaintiffs omit from their narrative that the Task Force carrying out the Memorandum's directives issued an initial “blueprint” for implementing the Memorandum, which further undermines Plaintiffs' speculations that they face imminent, irreparable harm. *See* Ex. 143 at 1 (*EXECUTIVE SUMMARY: Initial Blueprint for the White House Task Force to Address Online Harassment and Abuse*, The White House (Mar. 3, 2023)). The blueprint, which was summarized online by the White House on March 3, 2023, does not purport to direct social media companies to remove any category of speech from their platforms. *See id.* Rather, it recommends actions such as “strengthening coordination among Federal, state, Tribal, territorial and local law enforcement agencies to investigate and prosecute cyberstalking, image-based abuse, sextortion, and child sexual exploitation online,” among other things. *Id.* There is no obvious connection between Plaintiffs' purported interest in speech on social media and the work initiated by the Memorandum and summarized in the blueprint, and Plaintiffs make no effort to draw such a connection.

at various policies without articulating any connection to the conduct of a social media company.

See PI Supp. 57-58; Pls.' PFOF ¶¶ 998, 188-211, 1106-16.⁶³

Plaintiffs' failure to even attempt to draw such a connection illustrates that what Plaintiffs ultimately seek to enjoin is not the Defendants' purported coercion of social media companies, but instead the Executive's use of its inherent authority to resort to all available channels of communication, including but not limited to the "bully pulpit," to educate the public on the challenges we confront as a Nation and the measures that can and should be taken to overcome them. See *Pleasant Grove City v. Sumnum*, 555 U.S. 460, 468 (2009). But the First Amendment is not a tool for States, or individuals, to seek to muzzle the President or other Federal officials from generally expressing particular policy views or taking particular actions with which they disagree. The Government is free to "express[] a viewpoint," and "the First Amendment d[oes] not demand that the Government balance [its] message" to "maintain viewpoint neutrality." *Matal v. Tam*, 582 U.S. 218, 234-35 (2017). "When a government entity embarks on a course of action, it necessarily takes a particular viewpoint and rejects others." *Id.* at 234. Plaintiffs cannot show any Article III injury, much less an irreparable one, stemming from government statements and policy initiatives simply because they disagree with them. As none of the "expanded" conduct that Plaintiffs now seek to challenge is alleged to have coerced or otherwise induced any social media company into taking any particular action, much less action that injures any of the Plaintiffs, it cannot be the basis for awarding any injunctive relief.

⁶³ Plaintiffs argue that CDC is also expanding into "other topics," but, as explained, the evidence contradicts Plaintiffs' allegations. *Infra* Defs.' PFOF § II.C.2. Ms. Crawford simply testified that CDC provides public health information on "other topics" beyond COVID-19; however, Plaintiffs cite no evidence showing that CDC has substantively responded to a social media company's request for health information on any "other topics." See *id.*

C. Plaintiffs' delay in seeking relief shows there is no immediate need for an injunction.

Even if Plaintiffs could show any ongoing or imminent harm arising from actions occurring as far back as 2020, their substantial delay in seeking relief decisively undermines any assertion that such harms are irreparable. In First Amendment cases, as in any other, the “party requesting a preliminary injunction must generally show reasonable diligence.” *Benisek v. Lamone*, 138 S. Ct. 1942, 1944 (2018) (citing *Holmberg v. Armbrecht*, 327 U.S. 392, 396 (1946)); *id.* at 1945 (finding that, in a First Amendment political retaliation case, the “plaintiffs’ unnecessary, years-long delay in asking for preliminary injunctive relief weighed against their request”). “Absent a good explanation, a substantial period of delay militates against the issuance of a preliminary injunction by demonstrating that there is no apparent urgency to the request for injunctive relief.” *H.D. Vest, Inc. v. H.D. Vest Mgmt. & Servs. LLC*, No. 3:09-CV-00393, 2009 WL 1766095, at *4 (N.D. Tex. June 23, 2009); *see also Shenzhen Tange Li’An E-Com., Co. v. Drone Whirl LLC*, No. 1:20-CV-738, 2020 WL 5237267, at *4 (W.D. Tex. Sept. 2, 2020) (“Plaintiffs’ delay in seeking injunctive relief suggests a lack of urgency[.]”); *Citibank, N.A. v. Citytrust*, 756 F.2d 273, 276 (2d Cir. 1985) (“Delay in seeking enforcement of [the asserted] rights . . . tends to indicate at least a reduced need for . . . drastic, speedy action.”); *Charlesbank Equity Fund II v. Blinds To Go, Inc.*, 370 F.3d 151, 163 (1st Cir. 2004) (“[D]elay between the institution of an action and the filing of a motion for preliminary injunction, not attributable to intervening events, detracts from the movant’s claim of irreparable harm.”); *Ty, Inc. v. Jones Group, Inc.*, 237 F.3d 891, 903 (7th Cir. 2001) (“Delay in pursuing a preliminary injunction may raise questions regarding the plaintiff’s claim that he or she will face irreparable harm if a preliminary injunction is not entered.”); *Young v. Motion Picture Ass’n of Am., Inc.*, 299 F.2d 119, 121 (D.C. Cir. 1962) (“The delay in filing this action negatives any finding of urgency necessary to justify the interlocutory relief sought.”).

Courts have found that even a delay of “five months” or less “is sufficient to rebut a presumption of irreparable harm.” *H.D. Vest, Inc.*, 2009 WL 1766095, at *4; *see also Boire v. Pilot Freight Carriers, Inc.*, 515 F.2d 1185, 1193 (5th Cir. 1975) (finding that a delay of three months cut against granting immediate relief). Even a delay of *ten weeks* may be enough to show an absence of “urgent need for speedy action to protect [a] plaintiffs’ rights” through the issuance of a preliminary injunction. *Citibank*, 756 F.2d at 276.

Here, Plaintiffs have not waited mere months before seeking relief—they have waited *years*. Their Complaint alleges that Defendants or their “political allies” have been making threats against social media platforms “since *at least 2018*,” *see, e.g.*, Pls.’ PFOF ¶ 1 (emphasis added), and that they “expanded” their alleged “efforts” to coerce or collude with social media companies as soon as the Biden Administration took office in January 2021, *see, e.g.*, 2d. Am. Compl. ¶ 203. The Complaint further alleges that social media platforms began “respond[ing] to” such alleged “threats” “[s]tarting in or around 2020, *if not before*.” *Id.* ¶ 189 (emphasis added). And this past conduct was not newly discovered at the time Plaintiffs filed their Complaint—the vast majority of statements and other conduct at issue (*e.g.*, White House press conferences and Facebook Live events with Dr. Fauci, among other things) was public at the time they occurred. Indeed, since early 2020, Facebook has touted the efforts it has taken to promote accurate content about COVID-19 from global and local health experts, including the WHO and CDC. *See Ex. 144 at 19-20, 50-49* (Kang-Xing Jin, *Keeping People Safe & Informed About the Coronavirus*, Meta (Dec. 18, 2020), <https://perma.cc/2VJL-N2L5>) (February 26, 2020 update explaining that Facebook “direct[s] people to information from” CDC and the WHO; April 7, 2020 update discussing work with CDC). Yet Plaintiffs waited until May 2022 to bring this suit, *see Compl.* (Dkt. 1) (filed on May 5, 2022), and then waited another 40 days to move for preliminary relief, *see PI Mot.* (Dkt.

10) (filed on June 14, 2022). The preliminary-injunction motion has now been pending for nearly a year while Plaintiffs have sought voluminous discovery. Plaintiffs' nearly one-year-old request for relief from conduct that has been occurring since at least 2018 is anything but urgent.

Nor have Plaintiffs uncovered any new conduct during the pendency of this suit that arguably could justify their belated request for injunctive relief. Despite receiving thousands of pages of documents and dozens of interrogatory responses and taking the depositions of multiple federal officials, the allegations on which Plaintiffs rest their purported need for preliminary injunctive relief are largely the same as those asserted in their initial Complaint in May 2022 or in their Second Amended Complaint in October 2022. And as to Plaintiffs' conclusory assertion that "Defendants have expanded their social-media censorship activities" "[s]ince this lawsuit was filed," Pls.' PFOF ¶ 200 (*but see supra* Arg. § I.B.), Plaintiffs cite public statements or reports by various officials between June and August 2022, many months in the past.

Even if all of the conduct Plaintiffs challenge remained ongoing, Plaintiffs' failure to seek relief for such a substantial period of time undermines any urgency to grant that relief now, before the case is resolved on the merits. Because Plaintiffs fail to carry their heavy burden of showing irreparable harm—the most important factor for any request for preliminary injunctive relief—their motion for preliminary injunction should be denied.

II. Plaintiffs fail to show a likelihood of success on the merits.

A. Plaintiffs lack Article III standing to bring any of their claims.

For the reasons explained in Defendants' memorandum in support of their motion to dismiss, Defs.' MTD 16-43, Plaintiffs lack Article III standing to bring any of their claims. Although the Court held, in ruling on that motion, that Plaintiff States and the Individual Plaintiffs plausibly alleged Article III standing, *see* MTD Order 18-48 (Dkt. 224), Defendants respectfully disagree with the Court's analysis for the reasons stated in support of their motion to dismiss, and

hereby incorporate by reference and reassert those arguments in opposition to Plaintiffs' request for preliminary relief.

But even assuming Plaintiffs had alleged standing with sufficient plausibility to withstand a motion to dismiss, they fail to provide the evidence necessary to maintain standing for purposes of obtaining preliminary relief. As the parties invoking this Court's jurisdiction, Plaintiffs "bear the burden of establishing" the elements of Article III standing. *Lujan v. Defs. of Wildlife*, 504 U.S. 555, 561 (1992). Since these elements "are not mere pleading requirements but rather an indispensable part of the plaintiff's case, each element must be supported [] with the manner and degree of evidence required at the successive stages of the litigation." *El Paso Cnty. v. Trump*, 982 F.3d 332, 337–38 (5th Cir. 2020) (quoting *Lujan*, 504 U.S. at 561). And "[b]ecause a preliminary injunction 'may only be awarded upon a clear showing that the plaintiff is entitled to such relief,' the plaintiffs must make a 'clear showing' that they have standing to maintain the preliminary injunction." *Barber v. Bryant*, 860 F.3d 345, 352 (5th Cir. 2017) (citing cases). At this stage, then, Plaintiffs may not rest on "general allegations," *Lujan*, 504 U.S. at 561, but must allege specific facts clearly showing that they likely meet each Article III standing element to sustain their claims on the merits, *Barber*, 860 F.3d at 352.

Plaintiffs fail to make a clear showing that they have Article III standing for purposes of obtaining preliminary relief. They attempt to support their factual allegations with nearly year-old declarations, which make conclusory assertions contradicted by the record. Instead of presenting specific evidence of a current or imminent injury-in-fact fairly traceable to Defendants and likely to be remedied by injunctive relief, Plaintiffs' supplemental brief posits new legal theories in attempts to evade well-established standing requirements. These efforts fail.

1. Plaintiffs fail to establish any injury-in-fact.

Plaintiffs raise two new arguments that they have suffered an injury-in-fact. Both lack merit. First, Plaintiffs contend that the deposition testimony by CDC’s Director of Digital Media somehow constitutes an endorsement of the Plaintiff States’ purported “interest in being able to read and follow the uncensored speech and opinions of their constituents on social media.” PI Supp. 57. But even assuming the witness had testified about her views of the States’ alleged injuries—and she did not⁶⁴—her personal views would have no bearing on the legal question whether the States have asserted a cognizable injury to a sovereign or quasi-sovereign interest that they may vindicate in litigation against the Federal Government. They have not. As explained in Defendants’ motion to dismiss, among the various reasons the States’ all-encompassing right-to-receive-speech theory of standing fails, it is an overly broad and generalized grievance—an interest that the Supreme Court has consistently rejected as a basis for constitutional standing. *See* Defs.’ MTD 24 (citing, *e.g.*, *Whitmore v. Arkansas*, 495 U.S. 149, 160 (1990)). Second, Plaintiffs assert that they “face the imminent prospect of further” injury because of Defendants’ purported “expanding . . . censorship efforts.” PI Supp. 57. That argument fails for the reasons stated above. *Supra* Arg. § I.B.

Moreover, these arguments do not shore up the factual deficiencies in Plaintiffs’ allegations. As explained, Plaintiffs’ allegations of injury rest on dated declarations that focus on long-past conduct of Defendants and social media companies and shows that Plaintiffs’ purported fears of imminent injury stemming from a company’s content moderation decision are entirely speculative. *Supra* Arg. § I.A-B; *see also* Defs.’ Resp. PFOF ¶¶ 1367-1411, 1427-1442. And even if Plaintiffs had submitted any evidence of imminent harm from a social media company’s content

⁶⁴ Rather, the testimony related to CDC’s use of Facebook’s CrowdTangle tool. *See* Crawford Dep. 53:4-54:20, 57:22-58:3, 75:10-76:1, 81:10-14.

moderation decision, their conclusory assertions fall far short of making the “clear showing,” *Barber*, 860 F.3d at 352, required to attribute those decisions to the conduct of any *Defendant*, *infra* Arg. § II.A.2.—particularly when much of Defendants’ challenged conduct occurred in the past and is unlikely to recur during the pendency of this litigation, *supra* Arg. § I.B. In short, Plaintiffs’ failure to submit any evidence of actual or imminent harm is fatal to their efforts to show injury-in-fact, even assuming the alleged injuries are legally cognizable.

2. Plaintiffs fail to establish traceability and redressability.

Plaintiffs also cannot satisfy the causation and redressability requirements. To establish causation, they must show, with evidence, that any content moderation actions that social media companies are taking, or will imminently, take against them will occur as a “consequence of” or “as a result of” the challenged communications by Defendants. *Ford v. NYLCare Health Plans of Gulf Coast, Inc.*, 301 F.3d 329, 333 (5th Cir. 2002). To satisfy this standard, Plaintiffs must show that those content moderation actions would not occur “in the absence of” those communications. *Id.* “Causation” is not established if their alleged “injuries” are “the result of the independent action[s] of . . . third party” social media companies that are “not before the court.” *Inclusive Cmtys. Project, Inc. v. Dep’t of Treasury*, 946 F.3d 649, 655 (5th Cir. 2019). Plaintiffs thus cannot establish the requisite causal link if the content moderation actions at issue may just as well have occurred “as a result of” factors “unrelated to” Defendants’ communications, such as the social media companies’ independent judgment that content moderation is inherently valuable and/or economically advantageous. *Ford*, 301 F.3d at 333; *see also generally* Gurrea Decl. (Ex. 1).

Nor can Plaintiffs establish redressability based on mere speculation that an injunction against the challenged conduct would influence platforms’ regulation of Plaintiffs’ speech. “To satisfy redressability, a plaintiff must show that ‘it is likely, as opposed to merely speculative, that the injury will be redressed by a favorable decision.’” *Inclusive Cmtys.*, 946 F.3d at 655. If an

injunction against government conduct could “just as easily have no” effect on the content moderation actions social media companies may take against Plaintiffs, *id.* at 660, then Plaintiffs do not have standing.

Plaintiffs raise three new arguments in favor of the Article III causation and redressability requirements. Each is meritless. First, relying on tort and antitrust cases, Plaintiffs contend that they are likely to establish traceability on “aiding and abetting” and “conspiracy” theories. PI Supp. 59. They further contend that, because Defendants have engaged in “aiding and abetting” and “conspiracy,” the Court need not concern itself with the maxim that “Article III . . . requires that a federal court act only to redress injury that fairly can be traced to the challenged action of the defendant, and not injury that results from the independent action of some third party not before the court.” *Simon v. E. Ky. Welfare Rights Org.*, 426 U.S. 26, 42-43 (1976). Plaintiffs cannot sidestep applicable Article III requirements merely by invoking concepts of “aiding and abetting” and “conspiracy” and arguing for their application here in novel and abstract ways. The cases on which Plaintiffs rely do not involve requests for injunctive relief, but rather requests for damages, where a monetary recovery from any defendant would redress the plaintiff’s injuries, thus largely reducing the standing issue to questions of substantive aiding-and-abetting and conspiracy law.

Second, Plaintiffs argue that “even assuming” that the connection between Defendants’ conduct and Plaintiffs’ “other injuries” is “too attenuated,” “the injuries to the individual Plaintiffs’ First Amendment rights and to [the] Plaintiff States’ quasi-sovereign interests would still be fairly traceable to Defendants’ conduct.” PI Supp. 60. Plaintiffs’ argument in support of this contention is not a model of clarity. But to the extent Plaintiffs mean to argue that the traceability requirement is *easier* to meet in connection with the asserted First Amendment interests of the individual Plaintiffs and the States’ citizens, *see id.*, they are mistaken. Traceability, like injury-in-fact and

redressability, is an essential element of the “irreducible constitutional minimum of standing,” which plaintiffs in federal court “always have the burden to establish,” *Barber*, 860 F.3d at 352 (quoting *Lujan*, 504 U.S. at 560), even where free-speech interests are at stake. *see, e.g., Garzes v. Lopez*, 281 F. App’x 323, 325-26 (5th Cir. 2008). Indeed, traceability is “substantially *more* difficult to establish” in cases such as this one, where plaintiffs challenge the government’s conduct towards third parties. *Def. of Wildlife*, 504 U.S. at 562 (emphasis added) (citation omitted). Plaintiffs must show, as a factual matter, that any actions taken against them by social media companies are attributable to the allegedly unconstitutional government coercion of those private actors. And to obtain prospective relief in particular, they must show a non-speculative likelihood that future government actions will affect platforms’ conduct toward them—a showing they cannot come close to making. Plaintiffs’ contention that the traceability requirement is necessarily met here misses the mark.⁶⁵

Finally, Plaintiffs assert that there is “overwhelming evidence” that Defendants’ actions are the “direct and but-for cause” of their injuries and that those injuries would be redressed by their proposed injunction, PI Supp. 60, and they purport to provide several supporting “examples.” The evidence shows, however, that social media companies took independent action to moderate content on their platforms. *See, e.g., infra* Defs.’ Arg. § II.B.1.⁶⁶ Plaintiffs fail to point to any

⁶⁵ Plaintiffs are also wrong to suggest that they are relieved of any Article III standing requirement simply because they assert a First Amendment claim. *See Seals v. McBee*, 898 F.3d 587, 591 (5th Cir. 2018), *as revised* (Aug. 9, 2018) (in the Fifth Circuit, “requirements of standing are relaxed in the First Amendment context . . . but only as relating to the various court-imposed prudential requirements of standing;” plaintiffs “still must show that they satisfy the core Article III requirements of injury, causation, and redressability”).

⁶⁶ Here, as elsewhere, Plaintiffs emphasize that the White House allegedly “press[ed] for censorship of so-called ‘borderline’ content that *does not violate platform policies*, and thus would not be censored but for federal pressure.” PI Supp. 60. This contention betrays a fundamental misunderstanding of the platforms’ policies. The platforms have policies for moderating

evidence that the companies would change their approaches to content moderation in the absence of the Government's conduct. And it is not sufficient for Plaintiffs to point to "examples" of past conduct that allegedly supports standing. "[S]tanding is not dispensed in gross." *Town of Chester v. Laroe Ests., Inc.*, 581 U.S. 433, 439 (2017) (citation omitted). The relevant question is whether Plaintiffs have established a likelihood that they will suffer injury in the absence of an injunction and that an injunction would redress that injury. As Defendants have made clear throughout this litigation, Plaintiffs cannot lump together the conduct of sixty-seven actors, gesture vaguely at untold numbers of unspecified content moderation decisions made by social media companies over several years spanning multiple Administrations, and ipso facto establish a connection between them and a likelihood of redressability by citing a handful of "examples." Plaintiffs must establish that they will suffer cognizable injuries, that each of those injuries is fairly traceable to specific Defendants, and that a Court order is likely to redress those injuries.

Furthermore, on the present record, Plaintiffs' theory of causation cannot succeed in light of Defendants' evidence. In their complaint, Plaintiffs contended that "in the absence of Defendants' campaign for social-media censorship, market forces and other incentives would have restrained and did restrain social-media platforms from engaging in the social-media censorship alleged herein." 2d. Am. Compl. ¶ 478. In denying Defendants' motion to dismiss, the Court relied on this allegation to conclude that Plaintiffs had established that their alleged injuries were traceable to Defendants' claimed conduct. MTD Order 41-42. But even if that conclusion were correct as a matter of pleading, it cannot support Plaintiffs' standing at this stage; plaintiffs cannot obtain a preliminary injunction without supporting their allegations with evidence. *See Barber*,

"borderline" content; the reason it is referred to as "borderline" is that it does not violate the platforms' policies for *removal*, but the content does violate the platforms' policies for reduced distribution. *See supra* Defs.' PFOF § I.D.

860 F.3d at 352; *Vote.Org v. Callanen*, 39 F.4th 297, 303-04 (5th Cir. 2022) (holding that plaintiffs could not establish a likelihood of success on the merits for preliminary injunctive relief in the absence of evidence of standing). They have failed to do so.

Contrary to Plaintiffs' factually unsupported conclusion, there is no basis to conclude that platforms made the content moderation decisions in question as a result of government pressure, as opposed to other factors. For example, social media platforms have their own economic reasons for engaging in content moderation actions. Defendants have presented the expert opinions of Dr. Stuart Gurrea, an economist who specializes in industrial organization, economics, and finance. Gurrea Decl. ¶ 7 (Ex. 1). Dr. Gurrea conducted an economic analysis of Plaintiffs' claim that previously market forces "would have and did restrain social-media platforms" from moderating content, and concluded, based on analysis of the platforms' business model and the economic incentives under which they operate, that the claim lacked economic validity. *Id.* ¶¶ 10-13. He observed that platforms have moderated content since the earliest days of social media, and that while the scope of moderation has grown with the platforms' growth, the moderation of content related to both political matters and health matters, including vaccinations, dates back as far as 2016. *Id.* This analysis is supported by the undisputed evidence that nonparties—mainly the public, Congress, and (with respect to COVID-19) the global health community and 132 sovereign governments—asked that social media companies do more to combat the spread of election and COVID-19 misinformation on their platforms. *See supra* Defs.' PFOF § I. The companies even acknowledged that they were responding to that public sentiment. *See, e.g.*, Ex. 10 at 3 ("We were told in no uncertain terms, by the public and by Congress, that we had a responsibility to do a better job protecting future elections."). And as noted throughout this litigation, the particular types of content moderation to which Plaintiffs object preceded much of the Defendants' conduct on

which they premise their claims, underscoring the implausibility of their assertion that the platforms were acting in response to government conduct rather than for other reasons.

And as Dr. Gurrea observed, platforms have a strong incentive to moderate content because doing so is in their economic interests. Gurrea Decl. ¶¶ 43-58 (Ex. 1). Social media companies moderate content because it contributes to establishing, maintaining, and increasing the size and engagement of their user bases. *Id.* ¶ 44. The absence of content moderation can result in a decline of both. *Id.* ¶¶ 45, 48. An increase in user numbers and engagement typically results in an increase in advertising revenue, which in turn increases the platforms' profits. *Id.* ¶¶ 11, 30-42. In addition, content moderation that preserves or even enhances the reputation and value of an advertiser's brand or product directly makes the platform more valuable to the advertiser, and thereby also increases advertising revenues and the platform's profits. *Id.* ¶¶ 38, 61.

Accordingly, Plaintiffs have failed to identify evidence that would support their claim that any content moderation decisions that injured them were traceable to Defendants' conduct, rather than to the companies' independent business decisions driven by their economic interests, strong public sentiment, the opinions of the global health community, or some combination of all three factors (or any other factor not identified in this litigation). And even if they could make that showing regarding some past actions, their claim would still fail because they likewise cannot establish that an injunction would redress any injuries that they have suffered or have a non-speculative likelihood of suffering in the future. At this stage Plaintiffs carry the burden of establishing standing with evidence, and they have failed to do so.

B. Plaintiffs are not likely to prevail on their First Amendment claims.

Plaintiffs' First Amendment claims take aim at numerous independent and (most critically) unspecified content moderation decisions that multiple social media companies have made, over a course of years and across Administrations, to prevent the spread of content that the companies

deem to violate their policies concerning COVID-19 and election misinformation. Of course, as Plaintiffs acknowledge, “the Free Speech Clause prohibits only *governmental* abridgment of speech”; it “does not prohibit *private* abridgment of speech.” *Manhattan Cmty. Access Corp. v. Halleck*, 139 S. Ct. 1921, 1928 (2019). Thus, in *Halleck*, the Supreme Court recently explained: “[W]hen a private entity provides a forum for speech, the private entity is not ordinarily constrained by the First Amendment because the private entity is not a state actor. The private entity may thus exercise editorial discretion over the speech and speakers in the forum.” *Id.* at 1930. After all, the Court commented, “Benjamin Franklin did not have to operate his newspaper as ‘a stagecoach, with seats for everyone.’” *Id.* at 1931 (quoting F. Mott, *American Journalism* 55 (3d ed. 1962)).

Private action may be attributable to the Government, and subject to constitutional restraints, “only when [the government] has exercised coercive power or has provided such significant encouragement, either overt or covert, that the choice must in law be deemed to be that of the State.” *Blum*, 457 U.S. at 1004. And a determination of state action must begin “by identifying ‘the specific conduct of which the plaintiff complains’”—here, a specific content moderation decision—and tying it to a specific action by a particular government official. *Am. Mfrs. Ins. Co. v. Sullivan*, 526 U.S. 40, 52 (1999) (quoting *Blum*, 457 U.S. at 1004).

This is a high bar. Courts seldom attribute private conduct to the Government, and vice versa, out of respect for the “‘essential dichotomy’ . . . between public and private acts that [the Supreme Court] ha[s] consistently recognized.” *Id.* at 53 (quoting *Jackson v. Metro. Edison Co.*, 419 U.S. 345, 349 (1974)). Indeed, the Supreme Court has stressed that courts have an “*obligation*” to “‘preserv[e] an area of individual freedom by limiting the reach of federal law’ and avoi[d] the imposition of responsibility on [the Government] for conduct it could not control.” *Brentwood*

Acad. v. Tenn. Secondary Sch. Athletic Ass'n, 531 U.S. 288, 295 (2001) (emphasis added) (quoting *Nat'l Collegiate Athletic Ass'n v. Tarkanian*, 488 U.S. 179, 191 (1988)).

Plaintiffs here fall far short of satisfying the demanding standard that must be met before the Government may be held responsible for private conduct. They cannot demonstrate that any particular content moderation decision that allegedly harmed them “must in law be deemed to be that of” any particular government official, *Blum*, 457 U.S. at 1004, much less demonstrate that any such decision was attributable to the wide swath of government conduct that they challenge. To the contrary, this case demonstrates precisely why the standard for attributing private conduct to the Government is so high. Distilled to its essence, Plaintiffs’ argument is that social media companies may have been influenced by government officials expressing positions on matters of significant public concern, or law-enforcement agencies acting in furtherance of the Executive Branch’s national security responsibilities, or public health officials promoting science-based information to protect the public welfare as contemplated by federal statutes. The Constitution does not prohibit the government from engaging in such conduct, but rather contemplates that the Executive Branch will take care that the laws are faithfully executed and that, in doing so, the Government, through its officials, “has the right to speak for itself,” *Sumnum*, 555 U.S. at 467 (citation omitted), and the “freedom to select the messages it wishes to convey,” *Walker*, 576 U.S. at 207-08.

Plaintiffs cannot transform government officials’ efforts to carry out their responsibilities into impermissible coercion of (mostly unspecified) private content moderation by simply affixing conclusory (and inapt) labels to Defendants’ alleged conduct, *see, e.g.*, PI Supp. 1 (“pressure, threats, coercion, cajoling, collusion, demands, and trickery and deceit”); *id.* at 4 (“coercion, significant encouragement, and deception”); 2d. Am. Compl. ¶ 498 (“conspiring and colluding”),

or by inventing new state-action tests unsupported by precedent, such as making inapposite analogies to criminal law, *see, e.g.*, PI Supp. 6-7 (analogizing state action to accomplice liability).

Nor can Plaintiffs meet the demanding state-action standard by simply alleging the existence of an alleged “Censorship Enterprise.” In addition to using pejorative language to attempt to transform innocuous public statements into First Amendment violations, this formulation endeavors to treat 67 different federal agencies and officials as a single edifice. Plaintiffs’ “Censorship Enterprise” theory relies on two erroneous arguments. First, Plaintiffs contend that Defendants’ conduct “occurs against the backdrop of . . . public threats from senior federal officials who demand greater censorship from social-media platforms and threaten adverse legal consequences—such as repeal or reform of § 230’s liability shield, and antitrust enforcement—against the platforms if they do not increase censorship of disfavored viewpoints.” PI Supp. 15. Plaintiffs further contend that “President Biden and his aides lead this charge.” *Id.* As discussed above, much of the conduct that Plaintiffs challenge consists of policy recommendations by government officials or other public comments that the government is entitled to make. In particular, Plaintiffs’ challenge to the President’s exercise of his bully pulpit betrays a fundamental misunderstanding of constitutional law and threatens to trample on the President’s prerogatives. At the same time, Plaintiffs fail to identify any demands by any Defendants that social media companies take specific actions under the threat of specific consequences.

This first argument—that the challenged conduct by Defendants occurs “against the backdrop” of various statements by federal officials—also suffers from a fatal chronological contradiction. Many of the actions by Defendants challenged in this lawsuit occurred in 2020 (or earlier), during the previous Administration. This includes (1) nearly all of Plaintiffs’ challenges to the actions of Dr. Fauci and NIAID concerning COVID-19; (2) the FBI’s alleged involvement

in “censoring” the Hunter Biden laptop story, prior to the 2020 election; (3) the FBI’s referral of potential misinformation related to the 2020 election; (4) CISA’s “switchboarding” activities in advance of the 2020 election; and (5) the Election Integrity Partnership’s “ticketing” of potential misinformation for social media companies in advance of the 2020 election. Plaintiffs fail to explain how conduct that occurred before President Biden took office could be part and parcel of a “Censorship Enterprise” operated by the Biden Administration.

Second, Plaintiffs contend that there is “extensive evidence of the interconnected nature of the federal censorship activities,” and claim that “[t]he White House’s campaign of public threats against platforms demanding greater censorship, reinforced by its political allies in Congress and other senior federal officials, grants coercive force to *all* the censorship efforts of *all* the federal agencies involved.” Pls.’ Reply in Supp. of Mot. for Class Cert. & Leave to Amend Compl. at 7-8 (Dkt. 250). But they have failed to provide any evidence to support this assertion. Plaintiffs point to circumstances where, for example, the White House and OSG allegedly “collaborated” by participating in a joint press briefing, or where CDC “collaborated” with Census to host a couple of meetings with the social media companies. It is unremarkable for different components of the Executive Branch to work together at times, and certainly not indicative of coordination throughout the Federal Government on a common “censorship” objective. Nor does this mean that the statements or actions of one Defendant have any bearing on the nature of the statements or actions made by the sixty-plus other Defendants in this case.

In short, the Court must separately analyze the challenged actions of each individual Defendant to ascertain which, if any of them, is responsible for the alleged violations of Plaintiffs’ rights, and which, if any of them, may properly be enjoined going forward even assuming that they violated Plaintiffs’ rights at some point in the past. And, as discussed below, when the proper

analysis is conducted, it is clear that no Defendant has violated Plaintiffs' First Amendment rights, no Defendant is currently violating or about to violate Plaintiffs' First Amendment rights, and no Defendant, therefore, may be subject to an injunction.

1. Plaintiffs are not likely to prevail on their theory that any Defendant provided “such significant encouragement” as to convert private conduct into government conduct.

Plaintiffs first argue that the White House and OSG are responsible for the social media companies' content moderation decisions under a watered-down version of the state action test, which Plaintiffs refer to as a “significant encouragement” test. PI Supp. 5-15. In doing so, Plaintiffs ignore the state action requirement established by *Blum* and its progeny, and they further err by misconstruing the record. Neither the White House nor OSG is responsible for any social media company's decisions to take against any particular posts or individuals.

a. *Plaintiffs' “significant encouragement” theory rests on a misunderstanding of Blum and its progeny.*

Plaintiffs' “significant encouragement” theory purports to originate in *Blum's* pronouncement that the Government “can be held responsible for a private decision only when it has exercised coercive power or has provided *such significant encouragement*, either overt or covert, that the choice must in law be deemed to be that of the State.” *Blum*, 457 U.S. at 1004 (emphasis added). Contrary to Plaintiffs' assertion, *Blum's* reference to “such significant encouragement” as an alternative to coercion does not mean that the Government is responsible for private conduct “whenever ‘the Government d[oes] more than adopt a passive position’” toward it. PI Supp. 5 (quoting *Skinner v. Ry. Labor Execs. Ass'n*, 489 U.S. 602, 615 (1989)).⁶⁷

⁶⁷ Plaintiffs err in contending *Skinner* means that “[a] private party should be deemed an agent or instrument of the Government’ whenever ‘the Government did more than adopt a passive position toward the underlying private conduct.’” PI Supp. 5. Rather, *Skinner* teaches that “[w]hether a private party should be deemed an agent or instrument of the Government . . . necessarily turns on

Rather, the “dispositive question is always ‘whether the State has exercised coercive power or has provided *such* significant encouragement . . . that the choice must *in law be deemed to be that of the State.*’” *VDARE Found. v. City of Colo. Springs*, 11 F.4th 1151, 1161 (10th Cir. 2021) (quoting *Sullivan*, 526 U.S. at 52), *cert. denied*, 142 S. Ct. 1208 (2022).

Blum illustrates how high the bar is for “significant encouragement” to convert private conduct into state action. There, the plaintiffs—a class of Medicaid patients—contended that nursing homes violated the Due Process Clause by “discharg[ing] or transfer[ring] patients without notice or an opportunity for a hearing,” and the question was “whether the State [could] be held responsible for those decisions.” *Blum*, 457 U.S. at 993. The State “extensively” regulated the nursing homes in question, *id.* at 1004, including in ways that bore on the nursing homes’ transfer and discharge decisions. For example, State regulations required nursing homes “to make all efforts possible to transfer patients to the appropriate level of care or [to] home as indicated by the patient’s medical condition or needs,” and “impose[d] a range of penalties on nursing homes that fail[ed] to discharge or transfer patients whose continued stay [was] inappropriate.” *Id.* at 1008-09 (citation omitted). The State also had to “approve or disapprove continued payment of Medicaid benefits after a change in the patient’s need for services.” *Id.* at 1010. In short, the State placed various forms of regulatory pressure on nursing homes to discharge patients or transfer them to

the degree of the Government’s participation in the private party’s activities.” 489 U.S. at 614 (emphasis added) (citations omitted). It did not hold that state action is present “whenever” the Government participates to *any* degree in private-party conduct, and Plaintiffs tellingly cite no case supporting that interpretation. Also, *Skinner* found a sufficient degree of Government “participation” because the challenged regulations, which authorized employee drug and alcohol testing by private railroads, “removed all legal barriers” to testing by pre-empting contrary state law and collective bargaining agreements, and otherwise “made plain” the Government’s “strong preference for testing.” *Id.* at 615-16. In sharp contrast, this case involves no law or regulation that similarly requires or encourages particular content moderation decisions by social media companies.

lower levels of care, which “made possible and encouraged” the challenged private conduct. *Id.* at 1008 n.19. Yet the Court held that the plaintiffs had failed to establish state action, because the nursing homes’ “decision[s] to discharge or transfer particular patients . . . ultimately turn[ed] on medical judgments made by private parties.” *Id.* at 1008.

Similarly, in *American Manufacturers Mutual Insurance Co. v. Sullivan*, the Supreme Court reinforced the teaching that government encouragement of private acts must be “so significant[] . . . as to make the State responsible for it” to satisfy the state action requirement. 526 U.S. at 53. That case concerned the constitutionality of a Pennsylvania workers’ compensation statute that authorized (but did not require) insurers to withhold payments for the treatment of work-related injuries pending independent “utilization” review of whether the treatment was “reasonable” and “necessary.” *Id.* at 44-47. The Supreme Court held that a private insurer’s decision to withhold payment for a disputed medical treatment pending review did not constitute state action. *See id.* at 49-58. The challengers’ main argument was that, by amending the statute to grant insurers the “utilization review”—an “option they previously did not have”—“the State purposely ‘encouraged’ insurers to withhold payments for disputed medical treatment.” *Id.* at 53. The Court rejected that argument: “[T]his kind of subtle encouragement is no more significant than that which inheres in the State’s creation or modification of any legal remedy. We have never held that the mere availability of a remedy for wrongful conduct, even when the private use of that remedy serves important public interests, so significantly encourages the private activity as to make the State responsible for it.” *Id.* “The most that can be said of the statutory scheme,” the Court went on to observe, “is that whereas it previously prohibited insurers from withholding payment for disputed medical services, it no longer does so. Such *permission of a private choice* cannot support a finding of state action.” *Id.* at 54 (emphasis added); *see also White v. Commc’ns*

Workers of Am., AFL-CIO, Loc. 1300, 370 F.3d 346, 354 (3d Cir. 2004) (Alito, J.) (*Sullivan* rejected “the notion that the express legislative authorization of an act makes that act state action”).

Given these principles, the Fifth Circuit recently held that “[r]esponding agreeably to a request” is not evidence of “sufficiently strong ‘encouragement’” under *Blum. La. Div. Sons of Confederate Veterans v. City of Natchitoches*, 821 F. App’x 317, 320 (5th Cir. 2020). The plaintiff, the Sons of Confederate Veterans, applied to march in a city parade coordinated by a private business association. *Id.* at 318-19. In a letter, the Mayor asked the association to “prohibit the display of the Confederate battle flag in that year’s parade,” and two days later, the association denied the plaintiff’s request to march in the parade. *Id.* at 319. The plaintiff argued that the association’s decision amounted to “state action,” and was thus subject to a First Amendment claim. The Fifth Circuit disagreed, noting that the “Mayor’s letter” contained only “a request,” and that “the decision to deny the [plaintiff’s] parade application rested with the [association], not the City.” *Id.* at 320.

The Ninth Circuit, in a case similar to this one, recently joined the chorus of courts that have rejected an overly broad conception of “significant encouragement.”⁶⁸ In *O’Handley v. Weber*, the plaintiff-appellant argued that a California agency was responsible for Twitter’s moderation of his content because the agency’s mission included “prioritiz[ing] ‘working closely

⁶⁸ See also *VDARE*, 11 F.4th at 1162 (city’s decision not to provide “support or resources” to plaintiff’s event was not “such significant encouragement” as to transform a private venue’s decision to cancel the event into state action); *S.H.A.R.K. v. Metro Parks Serving Summit Cnty.*, 499 F.3d 553, 565 (6th Cir. 2007) (government officials’ requests were “not the type of significant encouragement” that would render agreeing to those requests to be state action); cf. *Campbell v. PMI Food Equip. Grp., Inc.*, 509 F.3d 776, 784 (6th Cir. 2007) (no state action where “government entities . . . did nothing more than authorize and approve a contract that provided tax benefits” or “incentives” “conditioned on [company] opening” local plant); *Gallagher v. Neil Young Freedom Concert*, 49 F.3d 1442, 1453 (10th Cir. 1995) (“Payments under government contracts and the receipt of government grants and tax benefits are insufficient to establish a symbiotic relationship between the government and a private entity.”).

with social media companies to be proactive” about misinformation, and because it had flagged one of his posts for Twitter as “disinformation.” 62 F.4th 1145, 1154 (9th Cir. 2023). Given the state agency’s relationship with the companies and its flagging of his post, the plaintiff-appellant argued that the agency had “provided significant encouragement, through its public statements and otherwise, to Twitter” to “suppress speech.”⁶⁹ In rejecting this argument, the Ninth Circuit explained that the “critical question” when evaluating whether state action exists under a “significant encouragement” theory is “whether the government’s encouragement is so significant that we should attribute the private party’s choice to the State, out of recognition that there are instances in which the State’s use of positive incentives can overwhelm the private party and essentially compel the party to act in a certain way.” *Id.*

Applying that standard to the facts before it, the *O’Handley* court held that the state agency had not “essentially compel[led]” Twitter to take any action against the plaintiff-appellant. *Id.* The panel noted that “[t]he [agency] offered Twitter no incentive for taking down the post that it flagged.” *Id.* Because the state agency “did nothing more than make a request with no strings attached,” and Twitter, in turn, “complied with the request under the terms of its own content moderation policy and using its own independent judgment,” appellant’s “significant encouragement” argument failed. *Id.*⁷⁰

Blum, Louisiana Division Sons of Confederate Veterans, Sullivan, and O’Handley make it clear that “significant encouragement” may only support a finding of state action if the Government’s conduct is “so significant” that the State has “essentially compel[ed] the [private]

⁶⁹ Appellant’s Reply Brief to Cal. Sec’y of State Shirley Weber at 13, *O’Handley v. Weber*, 62 F.4th 1145 (9th Cir. 2023) (No. 22-15071), 2022 WL 4389216.

⁷⁰ The court’s rejection of the Free Speech Clause claim based on lack of state action made it unnecessary to address whether a social media company’s decision to remove a post is a “constitutionally protected exercise[] of editorial judgment.” *O’Handley*, 42 F.4th at 1156 n.1.

party to act in a certain way.” *O’Handley*, 62 F.4th at 1158. The Government can be liable for choices made by private actors only if its conduct shows that the private actors’ choices “must in law be deemed to be that of the State.” *Blum*, 457 U.S. at 1004. Such governmental conduct can take the form of “coercion”—that is, “actual or threatened imposition of government power or sanction,” *Backpage.com, LLC v. Dart*, 807 F.3d 229, 230 (7th Cir. 2015)—or “significant encouragement”—that is, the provision of “positive incentives,” *O’Handley*, 62 F.4th at 1158. *Blum* thus accounts for the possibility that the Government can be legally responsible for private choices through positive inducements (encouragement) in addition to negative ones (coercion by threats of sanction). But in any scenario, the private conduct must be “essentially compel[led]” by the Government. *Id.* at 1158. If any less of a showing were enough to satisfy the state action requirement under a “significant encouragement” theory, then no plaintiff would ever need to demonstrate coercion—the threshold for significant encouragement would be lower and easier to satisfy. That reading of *Blum* makes little sense and is unsupported by precedent—it does not appear that another party has ever prevailed on a theory like the one Plaintiffs assert. *See* Defs.’ Reply 42 (refuting Plaintiffs’ reliance on inapposite cases). Indeed, despite multiple bites at the apple, Plaintiffs are unable to cite a single factually analogous case supporting their position.⁷¹

⁷¹ Plaintiffs’ reliance on *Adickes v. S.H. Kress & Co.*, 398 U.S. 144 (1970), is procedurally and substantively inapt. Contrary to Plaintiffs’ characterization, *Adickes* did not hold that the store’s denial of service to the black plaintiff “was government action if a police officer in the restaurant ‘communicated his disapproval’” to a restaurant employee. PI Supp. 5 (quoting *Adickes*, 398 U.S. at 158). Rather, the Court held that evidence of a policeman’s presence in the restaurant would “[leave] open to a jury . . . to infer from the circumstances that the policeman and a [defendant] employee had a ‘meeting of the minds’ before the store refused to serve her, and the policeman took the further step of arresting her. *Adickes*, 398 U.S. at 156-58. For that reason, the Court concluded that a genuine issue of material fact existed and reversed a grant of summary judgment in the defendant’s favor. Here, Plaintiffs must establish that they are likely to *prevail* on the merits, not just defeat a motion for summary judgment, and—at least as to “significant encouragement”—they advance a legally unprecedented theory of state action.

Moreover, the stringent standard articulated in *Blum*, *Sullivan*, and *O’Handley* reflects the law’s respect for the “essential dichotomy” between public and private action. *Sullivan*, 526 U.S. at 53. The Government should be entitled to zealously encourage private parties to act on a wide range of matters affecting the public interest without fear of penalty. *See Maher v. Roe*, 432 U.S. 464, 475-76 (1977) (“Constitutional concerns are greatest when the State attempts to impose its will by force of law; the State’s power to encourage actions deemed to be in the public interest is necessarily far broader.”). Indeed, the government-speech doctrine shields the Government against “paralyzing” restrictions on its ability to “urg[e]” private actors to take actions that it supports. *Matal*, 582 U.S. at 235.⁷² For example, “[d]uring the Second World War,” the Federal Government “produced and distributed millions of posters . . . urging enlistment, the purchase of war bonds, and the conservation of scarce resources.” *Id.* at 234-35. It would be “absurd” to claim that federal encouragement to join the war effort—even significant encouragement—“is the equivalent of forcing people to serve.” *Peery v. Chi. Hous. Auth.*, 791 F.3d 788, 790 (7th Cir. 2015). Of course, it remains true today that “[a] President frequently calls on citizens to do things that they prefer not to do—to which, indeed, they may be strongly opposed on political or religious grounds.” *Freedom From Religion Found., Inc. v. Obama*, 641 F.3d 803, 806 (7th Cir. 2011). It makes ample sense, then, that courts require more than a generalized showing of “significant encouragement” before government officials may be held liable for the decisions of private parties.

⁷² In its memorandum opinion denying Defendants’ motion to dismiss, the Court quoted *Matal* for the proposition that “[i]f private speech could be passed off as government speech by simply affixing a government seal of approval, government could silence or muffle the expression of disfavored viewpoints.” MTD Order 63 (quoting *Matal*, 582 U.S. at 235). That proposition has no bearing on this case. Unlike in *Matal*, which raised the question whether privately held trademarks are “government speech” simply because they are registered by an arm of the Federal Government, it is beyond dispute here that the Federal Defendants’ speech is government speech.

Plaintiffs contend that the White House and OSG have provided “such significant encouragement” to social media companies that they are responsible for those companies’ content moderation decisions. For the following reasons, Plaintiffs’ arguments should be rejected.

- b. *Plaintiffs fail to show that the White House has provided “such significant encouragement” as to render the White House legally responsible for social media companies’ independent decisions.*

Plaintiffs fail to show that White House officials provided “such significant encouragement” as to “essentially compel[]” any social media company to take any particular action. *O’Handley*, 62 F.4th at 1158.

As a threshold matter, Plaintiffs have not shown that the White House offered social media companies *any* “positive incentives” to remove or otherwise moderate users’ content on their platforms. *Id.* Plaintiffs’ only evidence of “encouragement” from the White House is an email in which Mr. Flaherty told YouTube that its reduction of “watch time” of “borderline content” by 70% was “impressive.” PI Supp. 9 (citation omitted). It is not plausible that Mr. Flaherty’s comment had any effect on YouTube or transformed the company’s conduct into government conduct. Otherwise, Plaintiffs’ “significant encouragement” theory relies exclusively on evidence of an alleged “pressure campaign” orchestrated by the White House, which is to say it is nothing more than their “coercion” theory under a different name. *Compare id.* at 8-10 (citing evidence of the White House’s “significant encouragement”), *with id.* at 14 (arguing that the White House’s “pressure campaign . . . discussed above” “constitutes coercion”). Again, to the extent that *Blum* offers “coerc[ion]” and “such significant encouragement” as distinct ways in which the Government can become “responsible” for private conduct, 457 U.S. at 1004, the latter does not simply encompass efforts to prod that fall short of compulsion, *see* PI Supp. 8 (arguing that Defendants’ conduct “rises to the level of coercion, as well as significant encouragement”). Because Plaintiffs have hardly pointed to any evidence of “encouragement”—let alone “such

significant encouragement” that White House officials “essentially compelled” any decisions by the social media companies—the “such significant encouragement” standard is inapplicable here.

It also bears emphasis that “[d]eciding whether a [alleged suppression of speech] is fairly attributable to the [Government] begins by identifying the *specific conduct* of which the plaintiff complains.” *Moody v. Farrell*, 868 F.3d 348, 352 (5th Cir. 2017) (emphasis added) (quoting *Cornish v. Corr. Servs. Corp.*, 402 F.3d 545, 550 (5th Cir. 2005)). This “specific conduct” requirement ensures that plaintiffs specify the *particular private action* that they wish to challenge as fairly attributable to the Government. *See Blum*, 457 U.S. at 1004 (the critical question is whether a private “choice” must “in law be deemed to be that of the State”); *Cornish*, 402 F.3d at 550 (explaining that the “specific conduct” at issue was a private employer’s termination of the plaintiff). Plaintiffs fail to address this critical step in the state action analysis. They highlight specific examples of White House “pressure,” PI Supp. 8, but with few exceptions—namely, Twitter’s suspension of Alex Berenson and removal of an imposter account—Plaintiffs make no attempt to connect the White House Defendants’ conduct to the specific conduct of any social media company. Simply alleging that the White House engaged in a “pressure campaign” (which it did not) is not enough to establish that the White House is responsible for any private choices; the Plaintiffs must identify which of the social media companies’ “choice[s]” the White House is responsible for, and they must explain *how* the White House is responsible for those choices. *Blum*, 457 U.S. at 1004. Those choices, moreover, must have a connection to Plaintiffs’ asserted harms.⁷³

⁷³ Plaintiffs overlook the fact that some White House communications in evidence have nothing to do with the claims asserted in this case. They make much, for example, of an email in which Flaherty said to Facebook, “Are you guys f**king serious?” *See* PI Supp. 9; Pls.’ PFOF ¶ 46 (Heading C., “Flaherty’s Profane Attack: “Are You Guys F**king Serious?”). That comment arose in the context of White House officials asking why the White House’s own Instagram account was experiencing a decrease in follower growth. Dkt. 174-1 at 55-56. It was not made in connection with any discussions of misinformation on social media. This comment does not make the White

Identifying the “specific conduct” at issue is especially important here, where Plaintiffs argue that numerous content moderation decisions made from 2020 to the present are “fairly attributable” to White House officials who did not take office until 2021. It is beyond dispute that the platforms have been moderating COVID-19 content pursuant to their terms of service, for reasons that include their own economic self-interest and public sentiment, since at least January 2020, well before any of the White House Defendants took office. *See supra* Defs.’ PFOF § I.C. And it is also undisputed that some content moderation that occurred in 2021 and 2022 resulted from the enforcement of company policies that predated the Biden Administration. Plaintiffs offer no explanation of which particular actions are attributable to Biden White House officials, as opposed to preexisting content moderation policies—or, for that matter, the other Defendants in this case, whom Plaintiffs separately accuse of influencing the social media companies’ decisions.

Even setting these fatal threshold deficiencies aside, Plaintiffs fail to establish that the White House is responsible for any social media company’s conduct. Plaintiffs seek to hold White House officials accountable for social media platforms’ content moderation decisions by citing public and private statements from these officials that, based on Plaintiffs’ allegations, may be divided into three categories: (1) requests for “more detailed information” about the companies’ content moderation practices, PI Supp. 8; (2) alleged “very specific demands” about how the platforms should change their policies to “increase censorship of disfavored speech,” *id.*; and (3) alleged “demand[s] [for] the removal of specific posts and accounts of disfavored speakers,” *id.* at 9. None of this alleged conduct makes the White House legally responsible for any social media company’s independent decision-making.

House responsible for *any* private conduct that forms the basis of the First Amendment challenges at issue. *See also* Defs.’ Resp. PFOF ¶¶ 138-140.

First, Plaintiffs erroneously contend that requests by White House officials—and Mr. Flaherty in particular—for “more detailed information” about COVID-19 misinformation make the White House responsible for companies’ content moderation decisions. PI Supp. 8. Plaintiffs rely on requests that Mr. Flaherty made of social media companies for information related to COVID-19 misinformation trends on their platforms and how the companies were enforcing their policies. *See, e.g.*, Dkt. 174-1 at 7 (“Can you share more about your framework here?”); *id.* at 14 (“Again, as I’ve said, what we are looking for is the universe and scale of the problem.”); Dkt. 71-3 at 24 (asking Meta for an explanation, “as we have long asked for, [of] how big the problem is, what solutions you’re implementing, and how effective they’ve been”); *see also* Pls.’ PFOF ¶¶ 43-44, 54, 57, 67-68, 112, 126, 175 (mischaracterizing Mr. Flaherty as “demand[ing]” “more information”). But Plaintiffs never demonstrate as a matter of fact, or explain as a matter of simple logic, how those *requests for information* from the companies could have so encouraged them to make *decisions* about content on their platforms as to render Mr. Flaherty (or any White House official) responsible for those decisions. Indeed, the Supreme Court has repeatedly rejected the notion that regulations requiring private actors to submit information to the Government are sufficient to render the Government responsible for private decisions. *See Blum*, 457 U.S. at 1006-07 (“We cannot say that the State, by requiring completion of a form, is responsible for the physician’s decision.”); *Sullivan*, 526 U.S. at 54-55 (same). That principle applies with even greater force here, where White House officials merely *requested* information from social media companies about misinformation on their platforms. *See La. Div. Sons of Confederate Veterans*, 821 F. App’x at 320 (“Responding agreeably to a request and being all but forced by the coercive power of a governmental official are different categories of responses.”).

In any event, it is inexplicable how Mr. Flaherty's efforts to obtain information about the companies' actions could have "essentially compel[led]" any specific content moderation decisions by the companies, *O'Handley*, 62 F.4th at 1158, and Plaintiffs offer no explanation in support of their position other than their *ipse dixit* characterizations of the facts. The purpose of Mr. Flaherty's requests was to better understand the companies' policies, how they were being enforced, and what the Administration could do to address key issues like vaccine hesitancy. *See* Ex. 36 at 20. The record of requests reflects these objectives; as Mr. Flaherty told YouTube in April 2021, he wanted to continue a dialogue about "what is going on under the hood" because he was "on the hook for reporting out" to others in the White House. Dkt. 174-1 at 39. Absent from the record are requests by Mr. Flaherty that the companies enforce or adjust their policies in specific ways to require "greater" moderation of COVID-19 misinformation, or that they remove or otherwise restrict access to specific posts, or the posts of specific groups or individuals regarding COVID-19 misinformation. *See also* Defs.' Resp. PFOF ¶¶ 34-122.

Second, Plaintiffs contend that White House officials made "very specific demands about how to increase censorship of disfavored speech." PI Supp. 8. They cite no evidence to support this assertion, apart from a single two-page email chain from April 22, 2021 to May 6, 2021, among a Facebook employee, Mr. Slavitt, and Mr. Flaherty (hereinafter "April 2021 email chain"). *Id.* (citing Pls.' PFOF ¶¶ 118-121, which cite Dkt. 174-1 at 41-42). Plaintiffs characterize this chain as evidence of the White House "demanding that Facebook monitor private events and deplatform the 'Disinformation Dozen,'" *id.*, but it does not support their argument. As discussed above, *see supra* Defs.' PFOF § II.A, on April 23, 2021, Mr. Flaherty sent Facebook "research work" about misinformation on social media that had been conducted by an outside group, with the subject line "Research *Suggestions*" and an explicit disclaimer that Facebook should not "read this as White

House endorsement of these suggestions.” Pls.’ Jones Decl., Ex. L at 1 (Dkt. 214-14) (emphasis added). On May 1, 2021, the Facebook representative provided reactions to the group’s findings, noting that it understood the “suggestions” had not come from within the White House. Dkt. 174-1 at 41; *see also* Defs.’ Resp. PFOF ¶¶ 118-121.

It bears repeating that the Executive Branch has broad “power” to “encourage” “actions deemed to be in the public interest.” *Maher*, 432 U.S. at 475-76; *see also Matal*, 582 U.S. at 235. The spread of COVID-19 related misinformation on social media was a matter of significant public concern—as reflected by the global effort to combat the COVID-19 “infodemic,” *see supra* Defs.’ PFOF § I.C., and the social media companies’ own misinformation polices. Just as the Government has a legitimate public-health interest in mounting an all-of-society effort to combat the spread of COVID-19, it has an interest in urging social media companies to help in that effort by curbing the spread of potentially harmful misinformation on their platforms. The companies, moreover, recognized that they had a role to play in combating the virus long before Mr. Flaherty (or any current Government official) entered office, *see id.*, and they made their own judgments as to how to meet the moment, *id.* Accordingly, even if Mr. Flaherty had sent the aforementioned “Research Suggestions” to Facebook with a note indicating the White House’s endorsement of those suggestions, no First Amendment issue would arise, because mere efforts to persuade private actors are “permissible government speech.” *O’Handley*, 62 F.4th at 1163.

Furthermore, the April 2021 email chain does not show that the White House was responsible for any action on Facebook’s part. Mr. Flaherty made clear that the “suggestions” from the outside group that briefed the White House were not urged—or even *endorsed*—by the White House. *Id.* Moreover, there is no evidence that Facebook engaged in any “specific conduct” as a result of these emails. *Moody*, 868 F.3d at 352. To the extent Plaintiffs argue that the April 2021

email chain renders the White House responsible for actions taken by Facebook against the Disinformation Dozen, that argument is belied by the record. For example, in response to the outside group's view that "12 accounts are responsible for 73% of vaccine misinformation," Facebook's representative explained that Facebook "continue[s] to review accounts associated with the [Disinformation Dozen], but many of those either do not violate our policies or have ceased posting violative content." Dkt. 174-1 at 42. He further noted that Facebook's preexisting "'Dedicated Vaccine Discouraging Entity' policy is designed to remove groups and pages that are dedicated to sharing vaccine discouraging content[,] and we continue to review and enforce" the policy against violative accounts "when we become aware of them." *Id.* Accordingly, not only did the White House *not* express the view that action should be taken against the Disinformation Dozen, but the evidence shows that Facebook continued to exercise its own independent judgment by declining to take any action against those accounts in response to the outside group's "suggestions." PI Supp. 8.

Third, Plaintiffs contend that White House officials "demand[ed] the removal of specific posts and accounts of disfavored speakers." *Id.* at 9. In support, Plaintiffs cite the following as examples: (1) Robert F. Kennedy Jr.; (2) Tucker Carlson and Tomi Lahren; (3) Alex Berenson; (4) the "Disinformation Dozen;" (5) "trending posts on Facebook;" (6) an imposter account of Dr. Fauci; and (7) a doctored video of First Lady Jill Biden. *Id.* It is not disputed that the White House requested the removal of some social media posts and accounts—mainly, imposter accounts. But none was a post made by or account belonging to any of the *Plaintiffs*. And none of these requests is sufficient to make White House officials legally responsible for any company's decision concerning the posts or accounts cited. The social media companies allow any citizen that encounters objectionable conduct to flag that content for the company and urge that it be removed

or otherwise addressed under the platforms' own policies.⁷⁴ It would be remarkable if the Government were powerless to do the same, even when posts implicate governmental interests or when the government has unique information that would be helpful to the platforms in applying their policies. And as discussed immediately below, the record demonstrates that some of these requests did not even include requests for the removal of posts. Where the White House did request removal of a post, each request was submitted for the company's consideration "with no strings attached;" and, in each instance that involved a request from the White House, the relevant social media company considered the request "under the terms of its own content-moderation policy and using its own independent judgment." *O'Handley*, 62 F.4th at 1158.

Several of Plaintiffs' purported examples contain no requests—let alone "demand[s]"—for the removal of content. For example, the White House's emails to Facebook about Tucker Carlson's Facebook Video (which included a reference to Lahren's post) did not contain requests to remove posts.⁷⁵ See *supra* Defs.' PFOF § II.A. And Plaintiffs' example of "trending posts on Facebook" is a reference to the April 2021 email chain, in which Mr. Flaherty again did not request the removal of any particular posts. In both instances, Mr. Flaherty simply asked for more information—albeit in some instances conveying frustration about the lack thereof—as to why trending posts did not violate Facebook's policies. See Dkt. 174-1 at 22 (Carlson) ("What exactly

⁷⁴ See, e.g., Ex. 21 (*How do I mark a Facebook post as false news?*, Facebook Help Ctr., <https://perma.cc/N8HZ-P7R4>); Ex. 35 (*Report Violations*, Twitter Help Ctr., <https://perma.cc/5MXZ-TAAM>); Ex. 41 (*Report inappropriate videos, channels, and other content on YouTube*, YouTube Help, <https://perma.cc/34HB-9CHL>).

⁷⁵ Flaherty instead explained that the Carlson and Lahren examples were "exactly why I want to know what 'reduction' means." Dkt. 174-1 at 22. As noted above, "[r]eduction" is likely a reference to Facebook's borderline content policy, adopted in 2018 to "reduc[e] the distribution and virality" of misinformation. Ex. 23 at 8 (Facebook's 2018 post about borderline content). Flaherty understandably wanted to know more about it because, as noted above, Facebook's borderline content policy enforcement is not transparent. See *supra* Defs.' PFOF § I.D.

is the rule for removal vs. demoting?"); *id.* at 41 (“trends”) (“[H]ow does something like this happen? . . . What is going on here?”).

The record does not support Plaintiffs’ argument that any action taken against the “Disinformation Dozen” must “in law be deemed to be that of” the White House. *Blum*, 457 U.S. at 1004. Plaintiffs again cite to the April 2021 email chain, PI Supp. 9, but as discussed above, that chain contains no indication that the White House endorsed the outside group’s research findings on those accounts. And in its response, Facebook explained that it had exercised its independent judgment to determine that the twelve accounts at issue were not violating its policies, and so it would not take any action against them. *See* Defs.’ Resp. PFOF ¶¶ 114-122. Plaintiffs also cite Ms. Psaki’s statement at the July 15, 2021, White House press briefing, but Ms. Psaki did not urge action against the Disinformation Dozen from the podium. *See* Defs. PFOF § II.A. The record shows, moreover, that Facebook not only took action regarding posts by the Disinformation Dozen in July 2021, but it did so again nearly a month later because it “violat[ed] [Facebook’s] policies.” Ex. 145 at 2 (Monika Bickert, *How We’re Taking Action Against Vaccine Misinformation Superspreaders*, Meta (Aug. 18, 2021), <https://perma.cc/27UC-N6QV>). As Facebook repeatedly noted at that time, when content posted by these twelve individuals did not violate the company’s policies—as determined by Facebook alone—it was not removed. *See id.* (“The remaining accounts associated with these individuals are not posting content that breaks our rules.”); *see also* Defs.’ Resp. PFOF ¶ 170.

Plaintiffs’ examples also underscore that, in *every* case of a White House request for action, the White House did so with no “strings attached” (*i.e.*, any form of actual encouragement or threat of sanction) and social media companies simply “complied with the request”—in the limited cases where they did, in fact, comply—“under the terms of [their] own content-moderation policy and

using [their] own independent judgment.” *O’Handley*, 62 F.4th at 1158; *see also La. Div. Sons of Confederate Veterans*, 821 F. App’x at 320 (“Responding agreeably to a request and being all but forced by the coercive power of a governmental official are different categories of responses . . .”). For example, when the White House asked Twitter to remove or label a doctored video of the First Lady, *see supra* Defs.’ PFOF § II.A, Twitter declined to do so because the video did not violate Twitter’s policies.⁷⁶ Dkt. 174-1 at 65. The White House did not seek to compel Twitter to reach a different conclusion; it instead asked for “any other info” about why the content did not qualify for labeling, “in order to help us understand the Twitter processes best.” *Id.* *See also* Defs.’ Resp. PFOF ¶¶ 180-187. By contrast, when the White House emailed Facebook in reference to an imposter account for Dr. Fauci—aptly named “AnthonyFauciOfficial”—and asked if there was “any way” to have it removed, Fauci Ex. 57 at 1-2 (Dkt. 207-21), Facebook independently determined that the account violated its existing policies and removed the account accordingly. Indeed, Facebook’s community guidelines at the time—which Instagram had incorporated by reference—stated that Facebook “do[es] not allow the use of our services and will disable accounts if you . . . [i]mpersonate others by . . . [c]reating an account assuming to be or speak for another person or entity.”⁷⁷ And it is against federal law to impersonate a federal official. *See* 18 U.S.C. § 912. This example falls well short of demonstrating that the decision to remove the Dr. Fauci imposter account “must in law be deemed to be that of the [White House].” *Blum*, 457 U.S. at 1004. *See also* Defs.’ Resp. PFOF ¶¶ 809-820. And again, it would be surprising if the First

⁷⁶ For this reason, there is no “specific conduct” to complain of with respect to this social media post—no action was taken, and so there is no “choice” that can be “deemed to be that of” the White House. *Blum*, 457 U.S. at 1004. And in any event, Plaintiffs cannot possibly show a cognizable injury to their First Amendment rights under these circumstances.

⁷⁷ Ex. 56 (choose “show older” in dropdown; then choose “Dec. 17. 2020”).

Amendment prohibited federal officials from notifying social media platforms about the existence of fraudulent accounts that violate their terms of service, while any private citizen is free to do so.

That leaves two examples involving posts by Robert F. Kennedy Jr. and Alex Berenson on Twitter. In both examples, the White House interacted with Twitter's government affairs staff. *See* Dkt. 174-1 at 2 (Kennedy), *id.* at Dkt. 71-7 at 86. It is not disputed that these employees "did not have any kind of decision-making authority over policy enforcement," Ex. 10 at 5, making the causal link between the government's action and the platforms' content moderation decisions even more attenuated.

With respect to Mr. Kennedy, on January 23, 2021, a White House official emailed Twitter to "flag" a tweet by Mr. Kennedy about the "wave of suspicious deaths among elderly" following their receipt of the COVID-19 vaccine, and to ask if it could be removed. Dkt. 174-1 at 2.⁷⁸ Several minutes later, Twitter's government affairs representative responded: "Thanks. We recently escalated this." *Id.* The record does not indicate whether any action was taken against the tweet. In fact, the tweet is currently available for viewing, which strongly suggests that Twitter declined to remove it. *See* Ex. 146. There is, accordingly, no indication of "specific conduct" by Twitter that the White House could be held responsible for in this case. *Blum*, 457 U.S. at 1004. And even if Twitter had taken action against the tweet, Twitter's response to the White House's email request indicates that, before the White House reached out, it had already "escalated" the tweet, meaning (almost certainly) that it had "escalated" the tweet for internal review according to Twitter's

⁷⁸ The tweet stated: "#HankAaron's tragic death is part of a wave of suspicious deaths among elderly closely following administration of #COVID #vaccines. He received the #Moderna vaccine on Jan. 5 to inspire other Black Americans to get the vaccine. #TheDefender." *See* Ex. 146 at 1 (Robert F. Kennedy Jr. (@RobertKennedyJr), Twitter (Jan. 22, 2021, 5:41 PM), <https://perma.cc/8QXJ-H78L>).

community standards. This reflects that Twitter made its decision “under the terms of its own content-moderation policy and using its own independent judgment.” *O’Handley*, 62 F.4th at 1158.

Plaintiffs fare no better with respect to Mr. Berenson. They cite an April 22, 2021, meeting between White House officials and Twitter representatives as evidence that the White House is responsible for Twitter “suspending Alex Berenson for the first time,” notwithstanding that the suspension did not occur until three months later, on July 16, 2021. PI Supp. 9 (citing Pls.’ PFOF ¶¶ 102-04, in turn citing Dkt. 71-7 at 86 and Pls.’ Jones Decl., Ex. J at 2-3 (Dkt. 214-12)). More specifically, Plaintiffs cite screenshots from an internal Twitter discussion about the meeting, in which Twitter employees allegedly noted that White House officials “had one really tough question about why Alex Berenson hasn’t been kicked off the platform.” *Id.* at 3. Another Twitter employee allegedly noted in the internal conversation, “I’ve taken a pretty close look at [Mr. Berenson’s] account and I don’t think any of it’s violative.” *Id.*

In his sworn interrogatory responses—which Plaintiffs fail even to acknowledge in their motion or proposed findings of fact—Mr. Flaherty described the April 22 meeting in detail:

Mr. Flaherty recalls participating in a meeting with Twitter employees on Zoom, in or around the Spring of 2021, at which Alex Berenson was mentioned. Mr. Flaherty recalls Andrew Slavitt also attending that meeting and he believes, but is not sure, that Lauren Culbertson from Twitter attended the meeting. Mr. Flaherty further recalls the meeting was about vaccine hesitancy and Twitter’s efforts to combat disinformation and misinformation on the platform. As the meeting was ending, Mr. Flaherty recalls Mr. Slavitt expressing his view that Twitter was not enforcing its content guidelines with respect to Alex Berenson’s tweets, and that employees from Twitter disagreed with that view. Mr. Flaherty also recalls that Mr. Slavitt suggested at the end of the meeting that Mr. Flaherty would follow up with Twitter employees about that subject. Mr. Flaherty does not recall following up with Twitter on the subject of Mr. Berenson, but he does recall being later called within probably a week or two by a Twitter employee, who Mr. Flaherty thinks was Todd O’Boyle, who indicated that Twitter would not be removing Mr. Berenson because Mr. Berenson had not violated Twitter policies at that time. That is the last time that Mr. Flaherty recalls discussing Mr. Berenson with employees from Twitter.

Ex. 36 at 57.

This evidence shows that White House officials inquired about Twitter’s enforcement of its policies without coercing or “essentially compel[ing]” any action. *O’Handley*, 62 F.4th at 1158. Indeed, it is not disputed that at the time of the April 22, 2021, meeting Twitter believed—and so told the White House—that Mr. Berenson was not violating Twitter’s policies. *See* Ex. 36 at 57. That belief provided the sole basis for Twitter’s decision not to deplatform Mr. Berenson in April 2021. *Id.* Accordingly, there is no evidence that the White House was responsible for any action by Twitter arising out of the April 2021 meeting, nor is there any evidence supporting Plaintiffs’ suggestion that the April 2021 meeting resulted in Twitter’s action against Mr. Berenson three months later. *See also* Defs.’ Resp. PFOF ¶¶ 102-04.

In short, Plaintiffs have adduced no evidence to support their claim, and therefore have no likelihood of succeeding on their claim, that the White House “so significant[ly] encourage[d]” any social media companies to take action against any posts or accounts (much less *Plaintiffs’* posts or accounts) that the actions taken by those companies “must in law be deemed to be [those] of the [Government].” *Blum*, 457 U.S. at 1004.

c. *Plaintiffs fail to show that OSG has provided “such significant encouragement” as to render OSG legally responsible for social media companies’ independent decisions.*

Plaintiffs are also unlikely to prevail on their claim that the Surgeon General engaged in “such significant encouragement” that any of their alleged injuries were “essentially compel[led]” by OSG. *O’Handley*, 62 F.4th at 1158. The Surgeon General’s mission is to “protect, promote, and advance the health and safety of the United States” by, among other things, “raising awareness about health threats” and “stimulating action nationwide on public health issues.” Lesko Decl. ¶ 3 (Ex. 63). The Surgeon General relies on his “bully pulpit”—that is, his “visibility as the Nation’s

Doctor”—to carry out that mission. *Id.* OSG possesses no enforcement or regulatory authority over private parties, including social media companies. *Id.*

Plaintiffs’ characterizations of OSG’s conduct as constituting “demands,” “pressure,” and “threat[s]” are illustrative of the fundamental flaws in their case. *See* PI Supp. 10-13. Consider, for example, Plaintiffs’ assertion that the Surgeon General’s Health Misinformation Advisory “explicitly demands greater censorship from social-media platforms.” PI Supp. 11. The Advisory itself overwhelmingly refutes that assertion.

The Advisory states in clear terms that it is a “public statement that *calls the American people’s attention* to a public health issue and provides *recommendations* for how that issue should be addressed.” Advisory at 3 (emphasis added). Its recommendations are framed exclusively in precatory language, rather than mandatory language. It explains what various sectors of society “can” do to address health misinformation, including eight recommendations for “what technology platforms *can* do.” *Id.* at 12 (emphasis added). Among the things that the Advisory says “governments can do” is:

Convene federal, state, local, territorial, tribal, private, nonprofit, and research partners to explore the impact of health misinformation, identify best practices to prevent and address it, issue recommendations, and find common ground on difficult questions, including appropriate legal and regulatory measures that address health misinformation while *protecting user privacy and freedom of expression*.

Id. at 7 (emphasis added). In short, the Advisory indicates that it is nonbinding, uses only precatory language, and recommends that stakeholders (including private parties) “[c]onvene” to “find common ground” while accounting for “freedom of expression.” And of course, the Advisory is an *advisory*, not an order. *See Hart v. Facebook, Inc.*, No. 22-cv-737, 2022 WL 1427507, at *7 (N.D. Cal. May 5, 2022) (“Surgeon General Murthy’s ‘22-page advisory’ document is, well, advisory.”). *See also* Defs.’ Resp. PFOF ¶¶ 318-329.

It is therefore not true that the Advisory “explicitly demands greater censorship from social-media platforms.” PI Supp. 11. Indeed, it is difficult to imagine how OSG could have been clearer about the nonbinding, non-rights-infringing nature of the Advisory. Plaintiffs, for their part, make no effort to grapple with the language in the Advisory that contravenes their argument. Nor do they grapple with the fact that adopting their reading of the Advisory would have the effect of transforming private action into government action whenever a private party decides it will answer the Government’s precatory call to action. As one district court explained in this exact context, “vague government advisory documents . . . are issued annually by the thousands and do not secretly transform large swathes of the private sector into state actors.” *Hart*, 2022 WL 1427507, at *7. And Plaintiffs fail to cite any analogous cases supporting their argument that the Advisory “provide[s] such significant encouragement” to social media companies that any of their decisions “must in law be deemed to be that of [OSG].” *Blum*, 457 U.S. at 1004. At least two courts have rejected that very argument. *See Hart*, 2022 WL 1427507, at *7 (holding that the Surgeon General’s Advisory “do[es] not secretly transform large swathes of the private sector into state actors”); *Changizi v. HHS*, 602 F. Supp. 3d 1031, 1056 (S.D. Ohio 2022) (“[T]o the extent the RFI and July Advisory affect Plaintiffs at all, those effects stem from Twitter’s ‘independent actions.’” (citation omitted)), *appeal filed*, No. 22-3573 (6th Cir. June 6, 2022). This Court should do the same.

Moreover, as with their arguments about the White House Defendants, Plaintiffs fail again to identify any “specific conduct” that OSG “essentially compel[ed].” *O’Handley*, 62 F.4th at 1158.⁷⁹ The only suggestion of specific conduct is Plaintiffs’ contention that, “[i]n response to the

⁷⁹ Plaintiffs contend that Facebook “agreed to additional data-sharing demanded by the Surgeon General.” PI Supp. 11. Setting aside the fact that there is no evidence to support the contention that Dr. Murthy “demanded” anything from Facebook, “additional data-sharing” is not complained of

Advisory, Facebook reported a series of more aggressive steps against misinformation, including deplatforming the Disinformation Dozen and adopting more restrictive policies.” PI Supp. 12. That argument is facially deficient; “[r]esponding agreeably to a request” is not evidence of government responsibility for private conduct. *La. Div. Sons of Confederate Veterans*, 821 F. App’x at 320. Were it otherwise, the Government would be severely restricted from expressing its views on matters of public concern. *See Summum*, 555 U.S. at 467-68.

Even assuming, however, that Facebook’s “response” to the Advisory could somehow satisfy the standard articulated in *Blum*, the evidence here falls short. Plaintiffs cite emails from Facebook to OSG on July 21 and July 23, 2021. *See* Waldo Exs. 16, 19. In the first email, Facebook thanked OSG for “providing more context to the ongoing discussion around the Surgeon General’s recent announcement” and followed up about “questions [OSG] asked in the meeting focused on CrowdTangle, data on online interventions, and Facebook’s borderline content policies.” Waldo Ex. 16 at 1 (Dkt. 210-15). Nothing in this email indicates that Facebook took *any* action in response to the Advisory; Facebook instead followed up with *information* about its *existing* policies. *Id.* at 1-2. In the second email, sent on July 23, a Facebook employee summarizes his understanding of a meeting with Dr. Murthy earlier that day, including that he “wanted to make sure [Dr. Murthy] saw the steps [Facebook] took this past week to adjust policies on what we are removing with respect to misinformation, as well as steps taken to further address the ‘disinfo dozen.’” Waldo Ex. 19 at 1 (Dkt. 210-18). Again, nothing in this email indicates that Facebook took any action *in response* to the Advisory, Facebook’s meetings with OSG, or any other conduct by OSG. And it bears repeating that even if OSG had requested that Facebook make the changes mentioned in that

in this action—it has no conceivable relationship with the content moderation that Plaintiffs accuse Defendants of conducting. The same is true of Facebook’s provision of “biweekly reports on misinformation” to OSG. *Id.* at 12. In any event, those reports were provided voluntarily.

email (which it did not), nothing in the record indicates that Facebook did anything other than “comply with the request” using “its own independent judgment,” *O’Handley*, 62 F.4th at 1158, for reasons related to its own economic interest, *see* Gurrea Decl. ¶¶ 10-81 (Ex. 1); *see also* Defs.’ Resp. PFOF ¶¶ 259-261, 346-348.

Any doubt about Facebook’s “response” to OSG’s private (and public) communications can be put firmly to rest by Facebook’s contemporaneous public statements about the Advisory and the Disinformation Dozen. On July 17, 2021—two days after the Advisory was released—Facebook announced that it had “already taken action on all eight of the Surgeon General’s recommendations,” and it published a four-page document describing policies that Facebook *already had in place* well before the Advisory issued. Ex. 27 (publishing Facebook’s response to the Advisory); *see also* Ex. 71 at 1 (Facebook’s response to the Advisory). The four-page document does not describe any new actions that Facebook was taking in response to the Advisory; rather, it discusses steps that Facebook had been taking since as far back as April 2020. *See* Ex. 71. Likewise, in August 2021, Facebook posted an update explaining actions taken against the Disinformation Dozen. Ex. 145. The post describes a “debate” among “people” about the Disinformation Dozen, which stemmed from a third-party “report” on the Disinformation Dozen by the Center for Countering Digital Hate, which found that “12 people are responsible for 73% of online vaccine misinformation on Facebook.” *Id.* Facebook vigorously disputes that claim, observing that it is “baseless” and that the center relied on an overly narrow sample size. *Id.* The post goes on to note that Facebook has removed misinformation that “violates [its] policies,” but “the remaining accounts associated with these individuals are not posting content that breaks our rules . . . or are simply inactive,” and so Facebook has not taken action against them. *Id.* These posts underscore that Facebook acted independently in its approach to misinformation, including

its analysis of the third-party “report” about the Disinformation Dozen and the “debate” surrounding that report.

Plaintiffs’ erroneous treatment of the Advisory typifies their mischaracterization of other evidence of OSG’s conduct in 2021 and 2022. They erroneously represent at least eight times that OSG has “demanded” actions by the social media companies. PI Supp. 10-13. More specifically, in addition to the Advisory, Plaintiffs seek to hold OSG accountable for content moderation by citing OSG’s public and private statements and documents, which may be divided into three categories: (1) the Surgeon General’s public statements; (2) OSG’s private communications with social media companies; and (3) the March 2022 RFI. Like the Advisory, none of this conduct “provide[s] such significant encouragement” to social media companies that any of their decisions “must in law be deemed to be that of [OSG].” *Blum*, 457 U.S. at 1004.

i. Surgeon General’s Public Statements

First, the Surgeon General’s public statements fall far short of rendering OSG responsible for any private conduct. To start, Plaintiffs have failed again to identify which “specific conduct” by any social-media company that has injured them could plausibly be attributed to any of the Surgeon General’s public statements. *Moody*, 868 F.3d at 352. As discussed above with respect to Plaintiffs’ claims against the White House, it is not enough for Plaintiffs to point to disparate statements by the Surgeon General, label them a “pressure campaign,” PI Supp. 10, and impliedly assert that years of private conduct must “be deemed to be that of” OSG as a result of that campaign, *Blum*, 457 U.S. at 1004. For the Court (and Defendants) to assess the validity of Plaintiffs’ arguments, Plaintiffs must identify which *specific* conduct was “essentially compel[ed]” by OSG. *O’Handley*, 62 F.4th at 1158. They have failed to do so.

Even more fundamentally, the Surgeon General’s public statements about health misinformation are paradigmatic examples of government speech on public policy, which does not transform private conduct into state action. “Broad stances like those embraced by the Surgeon General embody” the Government’s “right to ‘speak for itself[,] . . . say what it wishes,’ and to select the views that it wants to express.” *Changizi*, 602 F. Supp. 3d at 1054 (quoting *Summum*, 555 U.S. at 467-68). At no point in his public statements has the Surgeon General “demanded” that social media companies do anything—let alone that any specific company take action against any specific content or accounts. Nor has the Surgeon General “offered . . . incentive[s] for taking down [content]” or made “request[s] with . . . strings attached.” *O’Handley*, 62 F.4th at 1158. In his role of calling attention to important public health issues, the Surgeon General has chosen to highlight health misinformation as an issue that “we” the public ought to “demand” that everyone—including social media companies—“take responsibility for” resolving. *Waldo Ex. 33* at 1 (Dkt. 210-4). If private conduct were transformed into state action whenever the Government urged private action in this way, then the Government would be severely restricted in its ability to comment on public policy matters. *See Summum*, 555 U.S. at 467-68 (“[I]t is not easy to imagine how government could function if it lacked [the] freedom” to “select the views that it wants to express”).

Plaintiffs fail to address the government-speech doctrine in the context of the OSG’s public statements. Their only comment on the applicability of the government-speech doctrine in this case is to distinguish “opining in the abstract about disputed policy questions,” which in their view is protected speech, from “contacting social-media companies through backchannels and demanding . . . specific changes to their content-moderation policies and . . . concrete censorship action on particular items of speech.” *PI Supp. 7*. Assuming for the sake of argument that the line

Plaintiffs have drawn is appropriate, the Surgeon General's public comments on health misinformation fall comfortably on the protected side.

ii. OSG's Private Communications

Plaintiffs' reliance on OSG's private communications with social media companies suffers from the same flaws. As with the Advisory, Plaintiffs mischaracterize OSG's comments in these meetings as "demands" with no evidentiary support. PI Supp. 11 ("In private meetings, Dr. Murthy demands that the platforms perform 'defensive work' to remove misinformation."). The bulk of OSG's communications with the social media companies, however, involved discussing the Surgeon General's Advisory at a "high level." *See supra* Defs.' PFOF § II.B. OSG staff would tell the companies that they "hope[d]" they would review the Advisory and "would love to hear from [them] after it comes out, if you think there's ways we can collaborate." Waldo Dep. 89:16-19; *see also id.* at 109:1-4 (OSG asked Facebook "whether or not they would share what they were doing in response to the [A]dvisory, if they were taking any actions"). There is nothing about these communications that suggests that OSG is responsible for any social media company's decisions, or that OSG somehow interfered with any company's independent judgment regarding specific content moderation decisions or policies.

Plaintiffs fail to offer any evidence that OSG significantly encouraged any action during its private meeting with Facebook on July 23, 2021, or that Facebook took any action in response. At Facebook's request, Dr. Murthy and OSG staff met with Facebook on July 23. *Id.* at 96:2-8. Dr. Murthy created a "cordial atmosphere," *Id.* at 107:1-2, and "want[ed] to have a better understanding of the reach of the mis- and disinformation" on Facebook, *Id.* at 98:18-22. Mr. Waldo did not recall OSG making any specific asks of Facebook, except that "specific questions were [asked] about understanding the data around the spread of misinformation and how we were

measuring that.” *Id.* at 35:20-23. And an offer was made to connect DJ Patil, the White House’s “data person,” to a person at Facebook, so that Dr. Patil could better understand Facebook’s data about the spread of misinformation. *Id.* at 112:1-10. It is inexplicable how this conversation could have rendered OSG responsible for any choices made by Facebook after the meeting.

Throughout this litigation, Plaintiffs have cited a *New York Times* article for the proposition that Dr. Murthy had “a series of ‘angry’ and ‘tense’ meetings with platforms to demand that they remove misinformation.” PI Supp. 11 (citing Pls.’ PFOF ¶¶ 341-344, which in turn cite Zolan Kanno-Youngs & Cecilia Kang, *‘They’re Killing People’: Biden Denounces Social Media for Virus Disinformation*, N.Y. Times (July 16, 2021)). Plaintiffs cited that article as justification for obtaining expedited discovery in support of the instant motion. *See, e.g.*, Pls.’ Supp. Br. Addressing Fifth Circuit’s Deposition Order at 22 (Dkt. 137). Having now obtained written and deposition discovery from OSG, Plaintiffs can point to *no* evidence that Dr. Murthy ever had an “angry” or “tense” meeting with social media companies. The record demonstrates just the opposite: Mr. Waldo testified that he was “skeptical” of the *Times*’s reporting. *See also* Lesko ¶ 13 (Ex. 63) (stating that there was no meeting where Dr. Murthy “angrily” said anything to Facebook, and “[t]o the extend the article can be read to suggest otherwise, it is wrong”). Unsurprisingly, Plaintiffs fail even to acknowledge this contrary evidence and continue to cite the *Times* article. PI Supp. 11. In this respect, as with every other claim against OSG, Plaintiffs have failed to carry their burden of showing that they are likely to succeed on the merits of their First Amendment claim. *See also* Defs.’ Resp. PFOF ¶¶ 253-92.

iii. The RFI

Plaintiffs argue that the Surgeon General’s March 2022 RFI “demand[ed] information from platforms about the spread of, and how to track, misinformation on their platforms.” PI Supp. 13.

The RFI did no such thing. The RFI states in clear terms: “The Office of the Surgeon General *requests* input from interested parties on the impact and prevalence of health misinformation in the digital information environment during the COVID-19 Pandemic Please feel free to respond to as many topics as you choose.” 87 Fed. Reg. at 12,712-13 (emphasis added). It also instructs that respondents should not submit their users’ “personally identifiable information.” *Id.* at 12,713; *see also id.* (“All information should be provided at a level of granularity that preserves the privacy of users.”). “Plaintiffs, in other words, have not plausibly established that the RFI is anything other than what it purports to be: a request.” *Changizi*, 602 F. Supp. 3d at 1055. *See also* Defs.’ Resp. PFOF ¶¶ 411-421.

Moreover, Plaintiffs have not pointed to any specific conduct that has harmed them as a result of the RFI, or is imminently likely to do so. On April 7, 2023, OSG published the responses to the RFI. *See* Ex. 70 (excerpt of RFI responses). Those responses give no indication that the companies took action against any users in response to the RFI. The companies submitted information about the policies they already had in place—policies that were independently devised by the companies—and “metrics” about the enforcement of those policies. Twitter, for example, submitted a five-page document that provides a high-level overview of its actions related to COVID-19, including a description of Twitter’s policies since March 2020. Ex. 70 at 1-6. According to Twitter, since 2020, its “enforcement teams . . . challenged 11.7 million accounts, suspended 6,599 accounts and removed over 77,287 pieces of content worldwide.” *Id.* at 3. Twitter’s submission does not say anything about taking new action, let alone in response to the RFI or OSG’s conduct more generally.

2. Plaintiffs fail to show “coercion” under *Bantam Books*.

Plaintiffs also contend that the White House and the Surgeon General engaged in “pressure campaigns” against the social media companies that constituted “coercion,” and further assert that

“the other agencies discussed herein, such as CISA, the FBI, CDC, NIAID, and the GEC,” also engaged in “coercion” akin to that in *Bantam Books, Inc. v. Sullivan*, 372 U.S. 58 (1963), “because of the background threats from senior federal officials, including both Defendants and their political allies,” either to repeal or reform § 230, or to escalate antitrust enforcement. PI Supp. 14-15. Here, too, they have shown no likelihood of success on the merits of their contention that the content moderation decisions made by social media companies resulted from “exercise[s] [of] coercive power” by Defendants, *Blum*, 457 U.S. at 1004, whether through their public remarks or in private discussions with the companies. Even if certain Defendants asked or urged the companies to do more to address misinformation on their platforms, the record reflects that any ensuing content moderation decisions they made ultimately “rested with” those companies. *See La. Div. Sons of Confederate Veterans*, 821 F. App’x at 320.

a. *Plaintiffs fail to connect purported coercion to specific acts harming them.*

Plaintiffs’ coercion theory stumbles out of the gate because it improperly attempts to characterize as state action broad swathes of platform conduct covering entire categories of misinformation, instead of concrete applications of platforms’ policies to particular social media posts or accounts. But to give rise to state action not only must any purported government “pressure” be sufficiently coercive to render a third party’s actions attributable to the government, but such purported “pressure” must also be targeted at the *specific* actions that harmed the plaintiff. *See Bantam Books*, 372 U.S. at 61-62 (Free Speech Clause violation arose from state agency’s threats of prosecution if distributor did not remove “*certain designated books or magazines distributed by him* [that] had been reviewed by the [agency] and . . . declared . . . to be objectionable” (emphasis added)); *Backpage.com*, 807 F.3d at 230, 232 (sheriff’s letter demanded that two credit card issuers “prohibit the use of their credit cards to purchase any ads on” a particular website containing advertisements for adult services); *Okwedy v. Molinari*, 333 F.3d

339, 341-42 (2d Cir. 2003) (per curiam) (municipal official allegedly pressured billboard company to take down particular series of signs he found offensive). In all those cases—as in *Bantam Books*, and unlike in *Blum*—government officials had pressured the private entities in question to engage in (or refrain from) “the specific conduct of which the plaintiff complain[ed].” *Blum*, 457 U.S. at 1004.

In any event, Plaintiffs’ coercion theory is properly rejected, even assuming they could meet the specific conduct requirement—which they cannot.

b. *Defendants made no threats and instead sought to persuade.*

Plaintiffs mischaracterize Defendants’ statements and communications as coercive, and their argument hinges on a fundamentally mistaken comparison between this case and *Bantam Books*, 372 U.S. 58. Plaintiffs contend that Defendants made “on-the-ground threat[s]” akin to those in *Bantam Books*, and that therefore the Defendants’ remarks cannot be characterized as “advice.” PI Supp. 14 (quoting *Bantam Books*, 372 U.S. at 68). That comparison is flawed, because it ignores the close connection between the state agency’s demands for the removal of particular publications and the threats of actual criminal enforcement at issue in *Bantam Books*. That connection is entirely absent here, where (other than Plaintiffs’ conjecture), there is no evidence that any Defendant asserted that the content moderation choices of social media companies would result in criminal (or civil) proceedings, or retaliatory government action of any kind. Plaintiffs therefore fail to recognize that under *Bantam Books* and the cases applying it, neither official reproach of private conduct nor calls for it to cease will give rise to state action so long as government officials do not pair their criticism—even of private speech—with threats of punishment.

Bantam Books involved Rhode Island’s Commission to Encourage Morality in Youth, empowered by law “to investigate and recommend the prosecution of all violations” of a Rhode

Island indecency law, including by deeming non-obscene publications objectionable for “sale, distribution or display” to persons below age 18. *See Bantam Books*, 372 U.S. at 60-62 & n.1. After deeming a publication “objectionable,” the Commission routinely notified the publication’s distributor not to carry it, threatening prosecution under the state obscenity law for failure to comply. *Id.* at 61-62. Moreover, the Commission’s notices warned recipients that the state attorney general “will act for” the agency “in case of non-compliance.” *See id.* at 62 n.5. Following the Commission’s notices local police officers conducted inspections to inquire whether the distributor had removed the books and magazines in question from circulation. *Id.* at 63. Typically, distributors would return the materials to the publisher rather than face court action. *See id.*

The Supreme Court held that, although the Commission’s notices were not themselves enforceable, compliance was nevertheless effectively compulsory because “[p]eople do not lightly disregard public officers’ thinly veiled threats to institute criminal proceedings against them if they do not come around[.]” *Id.* at 68. As the Court observed, the Commission’s “notices, phrased virtually as orders, reasonably understood to be such by the distributor, invariably followed up by police visitations, in fact stopped the circulation of the listed publications *ex proprio vigore*.” *Id.* (emphasis added). Thus, in *Bantam Books*, the Court determined “that even though the distributors would violate no law if they refused to cooperate with” the state agency, “compliance with the directives was [n]ot voluntary.” *Penthouse Int’l, Ltd. v. McAuliffe*, 610 F.2d 1353, 1355-56, 1360 (5th Cir. 1980) (injunction warranted under *Bantam Books* where county attorney used “calculated scheme that included public announcements in the local newspapers, systematic visits to retailers of the magazines in question, and a program of carefully timed warrantless arrests” under state obscenity statute to effectively terminate sale of plaintiffs’ magazines within county).

But here, Plaintiffs’ bid to extend *Bantam Books* fails, because the record shows Defendants did not “phrase” their statements “virtually as orders,” the companies’ reactions to Defendants’ statements did not show that the companies “reasonably understood” those statements “as orders” (“virtually,” or otherwise), and by no means were the statements “followed up” by law enforcement “visitations.” The record does not show any Defendant conveyed to any social media company that any exercise of criminal, civil, or regulatory authority against it would result from “non-compliance” with a Defendant’s preferences regarding content moderation. There simply is no showing of “threats to institute criminal proceedings,” or threats of any kind, akin to those in *Bantam Books*. Cf. *Multimedia Holdings Corp. v. Cir. Ct. of Fla., St. Johns Cnty.*, 544 U.S. 1301, 1305 (2005) (Kennedy, J., in chambers) (“[a]lthough it is true that ‘[p]eople do not lightly disregard public officers’ thinly veiled threats to institute criminal proceedings,’ *Bantam Books*, [372 U.S. at 68],” relief was unwarranted from allegedly coercive state court orders purportedly presaging prosecution where, *inter alia*, “there [was] no suggestion that the judge who entered the orders . . . could institute such a proceeding”).

Even where officials raise the prospect of government sanctions for disfavored conduct—evidence of which has not been shown here—any such “threats” must be more than fanciful to amount to coercion of a private entity such that private conduct becomes state action constrained by the Free Speech Clause. As the Ninth Circuit noted in rejecting a characterization of YouTube’s content moderation decisions as “state action,” remarks by government officials that “lack force of law” are “incapable” of sustaining a coercion theory. *Doe v. Google LLC*, No. 21-16934, 2022 WL 17077497, at *2 (9th Cir. Nov. 18, 2022) (unpublished). That is, public officials must remain free in the public interest to criticize the conduct, including the speech, of private parties without

fear of begetting “state action,” so long, as here, their remarks are “devoid” of “any enforceable threats.” *See VDARE*, 11 F.4th at 1163 (citation omitted).

Although the Fifth Circuit has not had occasion to examine the limits of *Bantam Books* for state action purposes, other circuits have repeatedly rejected efforts to expand its holding. For example, the Tenth Circuit in *VDARE* rejected a state action claim where a mayor had publicly encouraged a resort to “be attentive to the types of events they accept,” and the resort then cancelled its contract to host the organizational plaintiff’s conference. 11 F.4th at 1156-57, 1163-68, 1171-72 (citation omitted). The Third Circuit in *R.C. Maxwell Co. v. Borough of New Hope*, similarly rejected a claim of state action where a letter from the Borough Council caused a bank to remove the plaintiff’s billboards from the bank’s property, because in comparison to the threats of criminal prosecution in *Bantam Books*, the Council “could brandish nothing more serious than civil or administrative proceedings under a zoning ordinance *not yet drafted*.” 735 F.2d 85, 86 n.2, 88 (3d Cir. 1984) (emphasis added). And the Second Circuit in *Hammerhead Enters., Inc. v. Brezenoff*, similarly rejected an attempted *Bantam Books* analogy, where a municipal official sent letters urging department stores not to sell a disfavored board game, because the official’s agency lacked “administrative power” over New York department stores, and “no credible evidence suggest[ed] that any store decided not to carry the board game as a result of [the] letter.” 707 F.2d 33, 36-37 & n.2 (2d Cir. 1983). Such decisions show that “*Bantam Books* and its progeny draw a line between coercion and persuasion: The former is unconstitutional intimidation while the latter is permissible government speech.” *O’Handley*, 62 F.4th at 1163 (citing *Am. Family Ass’n v. City & Cnty. of S.F.*, 277 F.3d 1114, 1125 (9th Cir. 2002)). “This line holds even when government officials ask an intermediary not to carry content they find disagreeable.” *Id.*

The D.C. Circuit’s analysis in *Penthouse International* is also instructive. There, the U.S. Attorney General’s Commission on Pornography sent retailers a letter suggesting that if they continued to sell adult magazines, then they would be named in the Commission’s public report, and thus associated with promoting child abuse. As a result, one retailer that received the letter stopped selling adult magazines. *Playboy Enters., Inc. v. Meese*, 639 F. Supp. 581, 583-85 (D.D.C. 1986). In litigation brought by publishers of the magazines, the D.C. Circuit concluded that the letter “contained no threat to prosecute, nor intimation of intent to proscribe the distribution of the publications,” and therefore did not violate the First Amendment. *Penthouse Int’l, Ltd. v Meese*, 939 F.2d 1011, 1015 (D.C. Cir. 1991). The adult magazine plaintiff’s “threat” allegation “*with the rhetoric drawn out* says nothing more than that the Commission threatened to embarrass the [magazine’s] distributors publicly,” which was insufficient. *Id.* at 1016 (emphasis added). The D.C. Circuit did “not see why government officials may not vigorously criticize a publication for any reason they wish.” *Id.* at 1015. Indeed, “[a]s part of the duties of their office, these officials surely must be expected to be free to speak out to criticize practices, *even in a condemnatory fashion*, that they might not have the statutory or even constitutional authority to regulate.” *Id.* (emphasis added). Thus, the D.C. Circuit explained, “[a]t least when the government threatens no sanction—criminal or otherwise—we very much doubt that the government’s criticism or effort to embarrass the distributor threatens anyone’s First Amendment rights.” *Id.* at 1016.⁸⁰

⁸⁰ Plaintiffs err in comparing this case to *Backpage.com, LLC v. Dart*, 807 F.3d 229 (7th Cir. 2015). In *Backpage.com*, the county sheriff sent letters to Visa and MasterCard asking that they “immediately cease and desist from allowing [their] credit cards to be used to place ads on websites like Backpage.com,” which had an “adult” section on its classified advertisements forum. *Id.* at 230-31. The letters asserted that Visa and MasterCard had “the legal duty to file ‘Suspicious Activity Reports’ to authorities in cases of human trafficking and sexual exploitation of minors,” and cited the federal money-laundering statute, intimating that the “companies could be prosecuted for processing payments made by purchasers of the ads on Backpage that promote unlawful sexual activity, such as prostitution.” *Id.* at 232. The day after the sheriff sent the letters, his spokesperson

In agreement, other courts of appeals have held that “public officials may criticize practices that they would have no constitutional ability to regulate, so long as there is no actual or threatened imposition of government power or sanction.” *See, e.g., Am. Family Ass’n*, 277 F.3d at 1120, 1125 (no Free Speech Clause violation where municipal resolution urged “local television stations not to broadcast advertising campaigns aimed at ‘converting’ homosexuals”); *X-Men Sec., Inc. v. Pataki*, 196 F.3d 56, 68 (2d Cir. 1999) (rejecting Free Speech Clause claim where legislators were alleged to have “made accusations against [a private security company], asked government agencies to conduct investigations into its operations, questioned [the company’s] eligibility for an award of a contract supported by public funds, and advocated that [the company] not be retained,” and noting that court was “aware of no constitutional right on the part of the plaintiffs to require legislators to refrain from such speech or advocacy”); *see also Walker*, 576 U.S. at 208 (“[W]hen the government speaks[,] it is entitled to promote a program, to espouse a policy, or to take a position. In doing so, it represents its citizens[,] and it carries out its duties on their behalf.”); *Block v. Meese*, 793 F.2d 1303, 1314 (D.C. Cir. 1986) (Scalia, J.) (“[C]ontrol of government expression (which would *always* seem to fall in the category of political expression, the most protected form of speech) is no more practicable, and no more appealing, than control of political expression by anyone else.”).

informed Visa and MasterCard that if they did not “sever ties with Backpage and its imitators,” the sheriff would highlight their “*ties to sex trafficking*” at a press conference. *Id.* at 233. The sheriff also “contacted the Inspector General of the United States Postal Service and the FBI, urging them to investigate the lawfulness of alternative payment methods for Backpage’s sex ads.” *Id.* at 237. Visa and MasterCard thereafter stopped allowing use of their cards to purchase ads on the website. *Id.* at 232. The Seventh Circuit therefore concluded that the sheriff’s credible threats and actions had violated the free speech rights of Backpage. *Id.* at 231. In this case, by contrast, there is no evidence that a Defendant “intimat[ed]” to any particular company that criminal proceedings could ensue from its specific content moderation decisions, or even that any Defendant vowed to “urg[e]” law enforcement agencies “to investigate the lawfulness” of such decisions. *Id.* at 232, 237.

Plaintiffs fail to address the circuit decisions that have declined to extend *Bantam Books*. They instead rely (PI Supp. 14) on *Rattner v. Netburn*, 930 F.2d 204, 209-10 (2d Cir. 1991), a decision that also fails to support Plaintiffs. *Rattner* held that a letter from a village official to the local Chamber of Commerce could “*reasonably* be viewed as an *implicit* threat” to boycott local businesses or otherwise retaliate if the Chamber continued to carry statements by the plaintiff in its local newspaper. *Id.* at 210 (emphasis added); see *Zieper v. Metzinger*, 474 F.3d 60, 69 (2d Cir. 2007) (applying *Rattner*). But “consider[ing] the entirety of the defendants’ words and actions,” *id.* at 66, the evidence in *Rattner* showed that such a boycott “threat was perceived and its impact was demonstrable.” 930 F.2d at 210. Here, in contrast, no record evidence shows that social media companies “perceived” remarks by or communications from Defendants as “threats”—let alone that such a perception was objectively “reasonable,” or that it had any “impact” on the companies’ decisions. In addition, the threat of a commercial boycott in *Rattner* (omitted from Plaintiffs’ description of the case) “constituted a more direct economic sanction,” *Zieper*, 474 F.3d at 69, than anything like the backdrop of unspecified policy changes to § 230, and antitrust enforcement, that Plaintiffs rely on here. Indeed, none of the factors that the Second Circuit considers when evaluating claims of coercion-based state action—“(1) [officials’] word choice and tone; (2) the existence of regulatory authority; (3) whether the speech was perceived as a threat; and, perhaps most importantly, (4) whether the speech refers to adverse consequences”—supports finding state action in this case. See *Nat’l Rifle Ass’n of Am. v. Vullo*, 49 F.4th 700, 707, 715 (2d Cir. 2022), *petition for cert. filed*, No. 22-842 (U.S. Mar. 6, 2023).

To the contrary, when Defendants’ private communications and public statements are viewed in “the[ir] entirety,” *Zieper*, 474 F.3d at 66, they manifest Defendants’ consistent acknowledgment that social media companies exercise sole control over content moderation on

their own platforms, and cannot be viewed as having “crossed the line between attempts to convince and attempts to coerce.” *Vullo*, 49 F.4th at 707 (quoting *Zieper*, 474 F.3d at 66); *see also id.* at 716-19 (rejecting claim of coercion where, *inter alia*, official’s request “did not refer to any pending investigations or possible regulatory action” and “did not ‘intimat[e] that some form of punishment or adverse regulatory action [would] follow the failure to accede to [it]’”) (quoting *Hammerhead*, 707 F.2d at 39).⁸¹

In denying Defendants’ motion to dismiss, this Court remarked that a threat need not “be enforceable in order to constitute coercive state action,” and that “the government actor making the threat need not possess the *direct* power or decisionmaking authority to enforce [it].” MTD Order 62 & n.206 (emphases added). Although some courts have concluded that the directness of authority is “not necessarily dispositive,” *Okwedy*, 333 F.3d at 343-44, it “is certainly relevant,” *id.* at 343. Indeed, it is highly probative of whether a threat is objectively realistic, and not fanciful, and therefore may constitute coercion. And the stringent requirements for state action foreclose the notion that an official’s remarks become “coercive” where, as here, they are “devoid” of any

⁸¹ This case differs from *Okwedy*, even assuming that opinion reflects the Second Circuit’s current view of the law. *Cf. Vullo*, 49 F.4th at 716-18. In *Okwedy*, a minister contracted with a billboard company to display two billboards condemning homosexuality. 333 F.3d at 340. The borough president wrote a letter to the company criticizing the billboards and remarking that the company “derive[d] substantial economic benefits” from a “number of billboards” it owned in the borough. *Id.* at 342 (citation omitted). He also directed the company to contact his legal counsel to discuss the issues raised in his letter. *Id.* The company took the signs down that same day. *Id.* at 340. The Second Circuit concluded that between the borough president’s references to the “substantial economic benefits” the company received from its business within the borough, and his directive to contact the borough’s legal counsel, the company could reasonably fear that the president “intended to use his official power to retaliate against it if it did not respond positively to his entreaties.” *Id.* at 344. Here again, although some officials obviously expressed frustration over and dissatisfaction with overall trends in platform content moderation choices, that falls well short of showing that each Defendant manifested an “inten[t] to use his official power to retaliate against,” *id.*, any social media company if the company did not engage in any particular act (or acts) of content moderation.

threats even indirectly enforceable. *See VDARE*, 11 F.4th at 1163 (quoting *R.C. Maxwell*, 735 F.2d at 88-89); *Vullo*, 49 F.4th at 716-19; *see also Penthouse Int'l*, 939 F.2d at 1015 (no coercion where “the Advisory Commission had no . . . tie to prosecutorial power” “equivalent” to *Bantam Books*, “nor authority to censor publications,” but where instead it leveled “no threat to prosecute, nor intimation of intent to proscribe the distribution of the publications”); *cf. Multimedia Holdings*, 544 U.S. at 1305 (Kennedy, J., in chambers) (rejecting *Bantam Books*-based coercion claim where, *inter alia*, “there is no suggestion that the judge who entered the orders . . . could institute” allegedly feared “prosecution by virtue of the orders”). *VDARE*, *R.C. Maxwell*, *Penthouse International*, and *Vullo*, are the weight of authority on this point. As described above, each of those decisions rejected efforts akin to Plaintiffs’ here to expand *Bantam Books* because there was no “actual or threatened imposition of governmental power or sanction . . . ‘regulatory, proscriptive, or compulsory in nature.’” *Penthouse Int'l*, 939 F.2d at 1015 (quoting *Laird v. Tatum*, 408 U.S. 1, 11 (1972)).⁸²

In painting Defendants as making coercive “threats,” Plaintiffs also impermissibly ignore evidence reflecting Defendants’ recognition (and the companies’ too) that the companies remained firmly in “control” of their platforms, including how to handle specific content. *See O’Handley*, 62 F.4th at 1156-57. Government officials are free to “vigorously criticize” private actions “for any reason they wish.” *Penthouse Int'l*, 939 F.2d at 1015. And here, Defendants’ remarks, even

⁸² The other two cases cited in the Court’s Rule 12(b) ruling also do not support analogy to *Bantam Books*. *Peterson v. City of Greenville*, 373 U.S. 244 (1963), held that the management of a restaurant engaged in state action when it excluded African-American patrons because municipal law *required* the exclusion. *Id.* at 248. No such enactment purports to *require* the content moderation choices challenged here. In *National Rifle Ass’n of America v. Cuomo*, 350 F. Supp. 3d 94 (N.D.N.Y. 2018), although the District Court denied dismissal because it deemed the coercion allegations facially plausible, at a later stage of that action, the Second Circuit in *Vullo* essentially rejected the District Court’s reasoning.

those that ranked at most as “vigorous[] critici[sm],” consistently recognized their own ultimately advisory character: The officials clearly understood that what they said was advisory and “lack[ed] force of law.” *See Doe*, 2022 WL 17077497, at *2 (“acts . . . specifically directed at YouTube” that “lack force of law” are “incapable of coercing YouTube to do much of anything”). Thus, none of Defendants’ remarks on which Plaintiffs rely attempted to divest or succeeded in divesting any company of its autonomy and discretion to determine for itself which posts contained “misinformation,” and, if so, what to do about them.

c. *Defendants consistently recognized social media companies’ authority over their platforms and no evidence shows they engaged in improper “pressure.”*

Defendants address below the particular statements of the White House Press Secretary, the White House Digital Director, and the Surgeon General relied on by Plaintiffs, and then turn to Plaintiffs’ contention that “background threats” turned the remaining Defendants’ statements and actions into “coercion.” As we show, Plaintiffs’ attempt to depict remarks by various government personnel as a “pressure campaign” (PI Supp. 14, 18) is predicated on cherry-picking certain statements without regard to the context. That context shows that Defendants repeatedly acknowledged the social media companies’ independence and ultimate authority to make decisions regarding their terms of service and their application to particular content and accounts. Moreover, none of the challenged statements and communications threatened, overtly or otherwise, that “some form of punishment or adverse regulatory action [would] follow the failure to accede to” any of the government requests concerning misinformation on the companies’ platforms, let alone any specific requests (of which there were none) concerning Plaintiffs or their posts. *Hammerhead*, 707 F.2d at 39. The challenged remarks therefore were not “coercive” for state action purposes.

i. White House Press Secretary

During Press Secretary Psaki's May 5, 2021, press briefing, she expressed the President's view regarding social media platforms' "responsibility" to "stop amplifying untrustworthy content, disinformation, and misinformation, especially related to COVID-19, vaccinations, and elections." Ex. 147. Yet she also emphasized that the President "believe[s] in First Amendment rights" and that "social media platforms need to make" "the decisions" regarding "how they address the disinformation" and "misinformation" that "continue to proliferate on their platforms." Ex. 147; *see also supra* Defs.' PFOF § II.A.1; Defs.' Resp. PFOF ¶¶ 123-124.

Likewise, during the July 15, 2021 press briefing with the Surgeon General, Ms. Psaki remarked that the Government was "flagging . . . for Facebook" "problematic posts . . . that spread disinformation." Ex. 40. But at the next day's briefing she added that the Government does not "take anything down" or "block anything" and that social media platforms themselves, as "private-sector compan[ies]," "make[] decisions about what information should be on their platform[s]," Ex. 37. Ms. Psaki also reiterated that although government officials urged social media companies to address misinformation, the companies ultimately had to decide which strategies (if any) to adopt. "Any decision about platform usage and who should be on the platform," she explained, "is orchestrated and determined by private-sector companies. Facebook is one of them . . . [a]nd there are a range of media who are—also have their own criteria and rules in place, and they implement them. And that's their decision to do. That is not the federal government doing that." Ex. 37. And when the news media later asked whether the Administration was "considering any regulatory or legal moves to possibly address disinformation on social media," Ms. Psaki responded that it was "up to Congress to determine how they want to proceed moving forward." *Press Briefing by Press Secretary Jen Psaki*, 2021 WL 3030746, at *2; *see also* Defs.' Resp. PFOF ¶¶ 123-124, 141-162.

ii. White House Digital Director

In a similar vein, Mr. Flaherty's email correspondence with social media companies repeatedly manifests a shared understanding that Facebook and other companies remained fully in command of their content moderation decisions. Thus, when Facebook advised Mr. Flaherty that Tucker Carlson's video discouraging COVID-19 vaccination did not violate its standards, Mr. Flaherty *did not* demand that Facebook nevertheless remove the video, or insist that the company change a policy, or threaten retaliation if Facebook failed to comply. Instead, he sought to better *understand* Facebook's policies, how Facebook applied them, and how the White House could use the company's public-data resource, CrowdTangle, to understand what content Americans were being exposed to on the platform. *See supra* Defs.' PFOF § II.A.2.

Although Mr. Flaherty used strong language at times, such language does not show coercion because it lacked any accompanying assertion that adverse consequences would follow if Facebook did not change its content moderation decisions. And when Mr. Flaherty shared with Facebook specific proposals concerning misinformation developed by third-party researchers, he emphasized that the White House *was not* insisting that Facebook adopt those proposals. *Supra* Defs.' PFOF § II.A.2. The record fails to show that Mr. Flaherty threatened, or even alluded to, adverse consequences if the social media companies did not answer his questions, or if they declined to take action against particular posts or accounts. *See, e.g.*, Dkt. 174-1 at 33 (asking Facebook, without mentioning any possible sanction, "[h]ow" a Tucker Carlson video was "not violative" of Facebook policies, and asking "[w]hat exactly is the rule for removal vs demoting? Moreover: you say reduced and demoted. What does that mean?"). Tellingly, the companies did not respond to Mr. Flaherty's requests in a way indicating that they perceived Mr. Flaherty's questions about COVID-19 misinformation trends on their platforms, and how the companies were

enforcing their policies, to be “threats.” *See, e.g.*, Dkt. 174-1 at 42 (Facebook employee indicated understanding that the outside researchers’ “recommendations/observations” conveyed by Mr. Flaherty on April 23, 2021, had not come from within the White House). And far from instantly removing the “Disinformation Dozen” in the spring of 2021 after receiving the outside research “suggestions,” Facebook indicated that it would not do so because those 12 individuals “either d[id] not violate [its] policies or have ceased posting violative content,” and said so without any apparent concern that it would suffer any consequences at the Government’s hands for failing to remove them. Dkt. 174-1 at 42; *see also* Ex. 145 (“The remaining accounts associated with these individuals are not posting content that breaks our rules.”); Defs.’ Resp. PFOF ¶¶ 81, 82, 93-100, 116-122.

iii. The Surgeon General

The Office of the Surgeon General likewise manifested respect for social media companies’ control over their own platforms. The Surgeon General’s Advisory, for example, proposed a range of potential content moderation measures—including labeling posts that contain misinformation—and cautions that *companies* should assess for themselves whether any measure might have “unintended consequences” or unjustifiably impede “free expression.” The Advisory did not purport to make that assessment for the companies, and certainly did not expressly or implicitly threaten the companies with adverse legal consequences if the recommendations were not accepted—indeed, the Surgeon General would lack authority to impose legal consequences. *See* Lesko Decl. ¶ 3 (Ex. 63); *see also* Advisory at 12 (proposing that social media companies might address misinformation by, among other things, “[p]rovid[ing] information from trusted and credible sources”). To the contrary, the Advisory expressly recognized that “[d]efining misinformation is a challenging task, and any definition has limitations.” *Id.* at 17. The Surgeon

General thus expressly urged social media companies to exercise *their* discretion in a way that “avoid[s] conflating controversial or unorthodox claims with misinformation.” *Id.* See also Defs.’ Resp. PFOF ¶¶ 318-329.

Nor can the Surgeon General’s March 2022 RFI reasonably be characterized as coercive. The RFI merely sought information, including “[i]nformation about sources of COVID-19 misinformation” on social media and elsewhere. 87 Fed. Reg. at 12,713-14. Like the Surgeon General’s Advisory, the RFI imposed no obligations; responses were purely voluntary. See Lesko Decl. ¶ 6 (Ex. 63). This Court, in ruling on Defendants’ motion to dismiss, accepted as valid Plaintiffs’ characterization of the RFI as implicitly threatening to impose regulation. MTD Order 61. Whether or not that characterization was facially plausible under Rule 12(b)(6), Plaintiffs have not adduced any evidence that the RFI threatened any regulatory consequence or that such a consequence could have followed. On its face, the RFI states that “HHS will consider the usability, applicability, and rigor of submissions in response to this RFI and share learnings from these responses with the public,” and that the “inputs from stakeholders will help inform future pandemic response in the context of an evolving digital information environment.” See 87 Fed. Reg. at 12,713. Nothing in this RFI either expressly or implicitly threatened future regulation if social media companies failed to adopt content moderation policies and practices preferred by the Government. Indeed, as discussed above, the Surgeon General does not have independent regulatory authority, see, e.g., 31 Fed. Reg. 8855 (transferring the Surgeon General’s powers to what is now HHS), and thus cannot issue or enforce binding regulations. The RFI has not resulted in any proposed regulation. For their part, Plaintiffs cite no authority for the extraordinary notion that an agency’s publication of a request for information is coercive. Accordingly, Plaintiffs cannot

make a case of government coercion based on the Surgeon General's RFI. *See also* Defs.' Resp. PFOF ¶¶ 411-421.

d. *Officials' remarks about potential § 230 amendments and antitrust enforcement raised legitimate policy questions and had no coercive effect.*

Plaintiffs seek to overcome the fatal deficiencies in their coercion theory by contending that the Defendants' statements become coercive when viewed "against the backdrop" of alleged "threats" in Congress and from the Executive Branch to repeal or reform § 230, and to intensify antitrust enforcement against the companies. PI Supp. 15 (citing Pls.' PFOF ¶¶ 1-30). That contention is mistaken in several respects.

It bears emphasis from the outset that the record as a whole offers no evidence that certain legislators or Biden Administration officials have said they would refrain from advocating changes to § 230, or pursuing potential remedies under the antitrust laws, if social media companies intensified their content moderation measures as to any individual Plaintiff or particular residents of the Plaintiff States. Nor is there record evidence that a social media company has said that it took a particular content moderation measure because it inferred (let alone reasonably) the existence of a "threat" from any of the statements by Defendants. *See Hammerhead*, 707 F.2d at 37 (no coercion where official's remarks cannot "reasonably be interpreted as intimating that some form of punishment or adverse regulatory action will follow the failure to accede to the official's request"); *accord VDARE*, 11 F.4th at 1163-65; *R.C. Maxwell*, 735 F.2d at 88-89; *Penthouse Int'l*, 939 F.2d at 1014-16.

But even considering on their own terms, as we do below, the smattering of legislative and Executive Branch remarks on which Plaintiffs rely, they fail to show that Defendants "coerced" social media companies to do anything (let alone to do anything that violated Plaintiffs' Free

Speech Clause rights). All that occurred was part of a legitimate debate about § 230 and antitrust questions stemming from the economic ascendance of social media companies.

i. Legislative Remarks and Hearings

To start with Congress: The purported “backdrop” consists of several statements by individual *nondefendant* Representatives and Senators, but whether Defendants “threatened” or “coerced” entities in an unconstitutional sense “are conclusions and characterizations that must be supported” by evidence as to what Defendants, not nonparties “said and did.” *Vullo*, 49 F.4th at 716. Assigning “coercive” effect to legislator remarks would be especially improper because only collective action by Congress, not the views of individual legislators, may alter federal laws. *Cf. INS v. Chadha*, 462 U.S. 919, 951-52 (1983). The Ninth Circuit thus rejected individual legislators’ remarks as ground for characterizing YouTube’s content moderation as state action. *Doe*, 2022 WL 17077497, at *2-3. The court concluded that (1) “statements by House Speaker Nancy Pelosi on possibly removing the protection provided to social media platforms under” § 230, (2) a “letter by Representative Adam Schiff” “encouraging the curbing of COVID-related misinformation on social media platforms,” and (3) “a statement by Speaker Pelosi” at an academic “forum on COVID calling for greater accountability for ‘the division and the disinformation proliferating online,’” were insufficient to constitute coercion as a matter of law—including because individual legislators’ remarks “lack[ed] force of law, rendering them incapable of coercing YouTube to do much of anything.” *See id.* at *2.⁸³

⁸³ The Ninth Circuit’s rejection of individual legislator remarks as legally sufficient for coercion was presaged by several prior district court decisions. *See Informed Consent Action Network v. YouTube LLC*, 582 F. Supp. 3d 712, 723 (N.D. Cal. 2022) (“publicly expressed views of individual members of Congress—regardless of how influential—do not constitute action on the part of the federal government” (quoting *Daniels v. Alphabet, Inc.*, No. 20-cv-04687, 2021 WL 1222166, at *6 (N.D. Cal. Mar. 31, 2021))); *accord Trump v. Twitter, Inc.*, 602 F. Supp. 3d 1213, 1224 (N.D. Cal. 2022) (rejecting as insufficient to plausibly allege state action “ambiguous and open-ended

Plaintiffs fare no better in attempting to rely on various congressional hearings that the legislators purportedly “used . . . as forums to advance . . . threats of adverse legislation if social-medial platforms do not increase censorship.” Pls.’ PFOF ¶¶ 4-7 (citing hearings on July 29, 2020; November 17, 2020; and March 25, 2021—the first two of which occurred before the Biden Administration took office). Plaintiffs’ characterization of the hearings as “coercive” “overlook[s] Congress’s role as an investigatory body,” which includes legislative “studies of proposed laws, and ‘surveys of defects in our social, economic or political system for the purpose of enabling the Congress to remedy them.” *Trump v. Twitter*, 602 F. Supp. 3d at 1224 (quoting *Trump v. Mazars USA, LLP*, 140 S. Ct. 2019, 2031 (2020)). The statements Plaintiffs selectively quote fall “within the normal boundaries of a congressional investigation, as opposed to threats of punitive state action,” *id.* at 1224, given the unarguable legitimacy of Congress “conducting investigative hearings on potential legislation,” *see Schilling v. Speaker of U.S. House of Representatives*, --- F. Supp. 3d ---, 2022 WL 4745988, at *8 (D.D.C. Oct. 3, 2022) (citing, *inter alia*, *McSurely v. McClellan*, 553 F.2d 1277, 1286 (D.C. Cir. 1976)), *appeal filed*, No. 22-5290 (D.C. Cir. Nov. 4, 2022). The absence of Supreme Court decisions classifying legislative hearings as “coercing” private entities into becoming state actors is unsurprising given the leeway afforded to

statements to the effect that ‘we may legislate’ something unfavorable to Twitter or the social media sector”), *appeal filed*, No. 22-15961 (9th Cir. June 28, 2022); *Abu-Jamal v. Nat’l Pub. Radio*, No. 96-cv-0594, 1997 WL 527349, at *6 (D.D.C. Aug. 21, 1997) (radio network’s broadcasting decision was not state action where even if “individual members of Congress did call” network “in attempts to pressure it not to air” specified program, “not one of these people has any legal control over [network]’s actions”), *aff’d*, 159 F.3d 635 (D.C. Cir. 1998); *see also Buentello v. Boebert*, 545 F. Supp. 3d 912, 918 (D. Colo. 2021) (rejecting contention that state action doctrine applied to decision by an individual Member of Congress to block a follower of her personal Twitter account, noting that “member of Congress” holds “almost no power to act on behalf of the United States government”).

legislators—including via the Speech or Debate Clause, U.S. Const. art. I, § 6, cl. 1—to explore problems and potentially responsive enactments.

Nor could the legislators’ remarks and their comments at hearings reasonably have been understood by social media companies as “threats,” when “consider[ing] the entirety of” their “words and actions.” *Zieper*, 474 F.3d at 66. The companies understand, as do the courts, that “enacting a bill is rarely fast or easy.” *Trump v. Twitter*, 602 F. Supp. 3d at 1224. And although legislators of both political parties have proposed amendments to § 230 as the economic power and influence of social media companies has grown sharply in the last decade, no such change has actually been enacted. *Supra* Defs.’ PFOF § I.E.

The statute could perhaps one day be amended in a manner that would “alter the judgments” Congress “made in the past,” to account for “evolution” of social media companies since the statute became law in 1996. *Cf. Henson v. Santander Consumer USA Inc.*, 582 U.S. 79, 90 (2017) (Court did not “[d]oubt that the evolution of the debt collection business might invite reasonable disagreements on whether Congress should reenter the field and alter the judgments it made in the past”). But if the mere possibility of some (vague and unspecified) § 230 amendment were enough to constitute “coercion” triggering the state action doctrine here, then state action would be present *everywhere*. That is not the law.

Plaintiffs also err in relying (PI Supp. 16-17) on personal views expressed by FBI Assistant Special Agent in Charge (ASAC) Elvis Chan in his master’s thesis, and his testimony, that certain social media company employees he talked with felt what he called “pressure” from inquiries made during congressional hearings, and platform meetings with congressional staff, “after 2016.” *See* Chan Dep. 123:1-3 (“I don’t recollect any of them using the specific word ‘pressure,’ but that was how I interpreted our conversations.”); *id.* at 125:22. No Members of Congress or legislative staff

are defendants here, so even if Plaintiffs' characterization of ASAC Chan's testimony were correct, that would not show that *Defendants* "essentially compel[led]" platform decisions. *O'Handley*, 62 F.4th at 1158. Rather, as discussed above, the Constitution does not prohibit government officials from speaking their mind on matters of public concern, or of expressing their concerns in informal conversations. Rather, government officials may permissibly make public statements and advocate for change: "[O]fficials surely must be expected to be free to speak out to criticize practices, even in a condemnatory fashion," but "[a]t least when the government threatens no sanction," any such "effort to embarrass" a private entity is not an impermissible threat. *See Penthouse Int'l*, 939 F.2d at 1015-16.

Moreover, Plaintiffs offer no evidence that the "pressure" ASAC Chan described came from legislators and staff Plaintiffs characterize as Defendants' "political allies" (PI Supp. 15).⁸⁴ And ASAC Chan did not assert that what he called "pressure" was of such moment as to amount to "coercion" under the state action doctrine—that is a fanciful legal characterization Plaintiffs attach to ASAC Chan's testimony. *Cf. Doe*, 2022 WL 17077497, at *2-3 (House Speaker comments "on possibly removing the protection provided to social media platforms" under § 230 among events found insufficient to show "state action" under compulsion or nexus theories).

Also missing is evidence that the so-called "pressure" sought to compel action against specific posts or accounts, or that it was understood by (or acted on) by any company as such. To the contrary: Asked whether social media companies "changed their practices and became more

⁸⁴ For example, Plaintiffs emphasize (PI Supp. 16) a statement in ASAC Chan's master's thesis (which reflected only his academic views, not the FBI's views) that an October 31, 2017 Senate Judiciary Committee hearing "provided politicians with the occasion to exert pressure on the companies to make constructive changes to their platforms" (Chan Ex. 1 at 48-49 (Dkt. 204-2)), while entirely ignoring that the pertinent Senate committee hearing was chaired by a Republican Senator, because Republicans then held the Senate majority.

active in account takedowns” after the meetings with congressional staffers, ASAC Chan answered: “No. I would not connect those two events.” Chan Dep. 125:15-21. The “pressure” ASAC Chan testified about therefore did not have the effect on particular content moderation choices Plaintiffs contend it had. *See also* Defs.’ Resp. PFOF ¶¶ 945-961.

ii. Executive Branch Remarks and Actions

Also misconceived is Plaintiffs’ contention that remarks from President Biden or his Administration concerning potential amendments to § 230, or raising the prospect that the growing economic power of social media companies may implicate the antitrust laws, contributed to “coercion.” The Defendants here are within the Executive Branch, and could not unilaterally amend § 230, as that of course would require action by both houses of Congress and the President.

Moreover, the remarks Plaintiffs strain to depict as “coercive” did not telegraph that Defendants would press Congress to enact any particular legislation if social media companies did not intensify their content moderation. For example, Ms. Psaki said at an April 2022 news conference that “there are . . . *reforms that we think Congress could* take and [that] we would support taking, including *reforming* [§] 230, enacting antitrust reforms, requiring more transparency.” Ex. 42 (emphasis added); Pls.’ PFOF ¶ 197. But neither Ms. Psaki nor any other Defendant announced actual proposed language for any such amendment. The possibility of § 230 “reform” thus resembles the “zoning ordinance not yet drafted” that the Third Circuit in *R.C. Maxwell* ruled insufficient to support an analogy to the “criminal prosecution under existing statutes” threatened in *Bantam Books*: The mere prospect of “civil or administrative proceedings” under that undrafted ordinance, the court of appeals ruled, was an insufficient “quantum of governmental authority” to constitute “coercion.” *R.C. Maxwell*, 735 F.2d at 88. Indeed, the Supreme Court has never held that government officials’ references to (unspecified) statutory

“reform” (or even actual proposed legislation sent to Congress for consideration) could be “coercive.” Notably, then-Missouri Attorney General tweeted himself: “Get rid of section 230 protections, treat them like common carriers, bust up #BigTech.” Ex. 32. That shows Plaintiffs themselves did not behave as though government official calls for statutory reform (or even revocation) were inherently “coercive,” but rather were part of a legitimate debate.

It would in any event be extraordinary to prohibit the Executive Branch from identifying concerns about the conduct of businesses within the United States and asserting that a statutory amendment might be appropriate to address those concerns, merely because such statements on matters of public concern might influence the conduct of private actors in a way that affects speech. *Cf.* U.S. Const. art. II, § 3 (the President “shall” recommend to Congress “such Measures as he shall judge necessary and expedient”); *see also Youngstown Sheet & Tube Co. v. Sawyer*, 343 U.S. 579, 587 (1952) (Recommendations Clause assigns President “function[]” of “recommending . . . laws he thinks wise”).⁸⁵

⁸⁵ The “coercion” claim cannot be sustained by extrinsic statements of Mr. Biden before taking office. This Court’s ruling on the motion to dismiss accepted as plausible Plaintiffs’ allegations that comments candidate Biden made in January 2020 (about potential criminal or civil liability for Facebook and its executives due to misinformation on that platform) were “coercive.” *Compare* MTD Order 62 & n.203 (attributing comments to “President Biden”), *with* 2d. Am. Compl. ¶¶ 191-92 (discussing comments of “candidate” Biden) *and* Pls.’ PFOF ¶¶ 20-21 (same). But precedent does not support assigning coercive effect to such candidate comments. The candidate remarks at issue here are no more consequential than those in *Trump v. Hawaii*, 138 S. Ct. 2392 (2018). In assessing an unconstitutional discrimination claim there, the Court considered but ultimately rejected “extrinsic statements—many of which were made before the President took the oath of office,” where the statements did not overcome the facial neutrality of the President’s rationale for his action when he was in office. *Id.* at 2418-19. Leeway for candidate rhetoric is guaranteed by the Free Speech Clause, which “has its fullest and most urgent application precisely to the conduct of campaigns for political office,” *Buckley v. Valeo*, 424 U.S. 1, 15 (1976) (citation omitted). *Cf. Washington v. Trump*, 858 F.3d 1168, 1173-74 (9th Cir. 2017) (Kozinski, J., dissenting) (opining that “[n]o Supreme Court case—indeed no case anywhere that I am aware of—sweeps so widely in probing politicians for unconstitutional motives[,]” and given that “[c]andidates say many things on the campaign trail” that “are often contradictory or inflammatory,” reliance on candidate’s campaign statements is “unworkable”).

Plaintiffs' effort to depict as coercion limitations that could be placed on social media companies under the antitrust laws is similarly incomplete and incorrect. Plaintiffs have failed to show that any decision under the antitrust statutes bears a concrete nexus to Defendants' efforts to address misinformation on social media. Tellingly, Plaintiffs omit evidence of antitrust enforcement measures proposed or taken against social media companies that well predated the tenure of many Defendants and that also predated the misinformation-focused remarks Plaintiffs paint as coercive. For example, during the Trump Administration, then-Attorney General Barr explained in a speech in December 2019: "Concerns about online platforms have come from a wide variety of stakeholders, across the political spectrum. Indeed, almost every State AG is now participating in publicly announced antitrust investigations of Google and Facebook [W]e have a good cooperative relationship in these efforts." Ex. 148 at 2 (William P. Barr, Att'y Gen., Remarks at the National Association of Attorneys General 2019 Capital Forum (Dec. 10, 2019), 2019 WL 6715208). One example of such parallel federal and state allegations of antitrust violations by an online platform is found in *Federal Trade Commission v. Facebook, Inc.*, No. 20-cv-3590 (D.D.C.) (public redacted version of under-seal complaint filed Jan. 13, 2021, before President Biden entered office). There, the FTC alleged that conduct by Facebook, including acquisition of Instagram and WhatsApp, was harmful to competition. *See FTC v. Facebook, Inc.*, 581 F. Supp. 3d 34 (D.D.C. 2022) (denying motion to dismiss amended complaint). Notably, attorneys general for multiple states, *including the two State Plaintiffs here*, brought their own action predicated on similar antitrust allegations. *See New York v. Facebook, Inc.*, 549 F. Supp. 3d 6, 13 (D.D.C. 2021) (dismissing States' action), *aff'd sub nom. New York v. Meta Platforms, Inc.*, --- F.4th ---, 2023 WL 3102921 (D.C. Cir. Apr. 27, 2023). The commencement of the FTC's suit prior to the Biden Administration, and the two Plaintiff States' participation in a multi-state

antitrust action raising similar allegations, undermines Plaintiffs' contention that proposals for antitrust enforcement against platforms are inherently coercive "threats" (whether aimed at platform content moderation choices or anything else).

Additionally, Plaintiffs' mischaracterization of § 230 as an unconstitutional subsidy akin to the one invalidated in *Norwood v. Harrison*, 413 U.S. 455 (1973), PI Supp. 50, rips that case from its context. There is of course no basis for interpreting *Norwood* as somehow dispensing with Plaintiffs' obligation to satisfy the established state action requirements under cases such as *Blum* before the acts of private social media companies can legally be attributed to Defendants. *Cf. Watts v. Northside Indep. Sch. Dist.*, 37 F.4th 1094, 1097-98 (5th Cir. 2022) (citing *Norwood* in the course of applying *Blum* and other state action precedents). The question presented in *Norwood* was not, as here, whether the State could be held responsible for the conduct of private parties. Rather, the question was whether the State's own conduct—furnishing free textbooks to segregated private schools—was itself constitutional. The Court held no, explaining "the Constitution does not permit the State to aid [racial] discrimination even when there is no precise causal relationship between state financial aid to a private school and the continued wellbeing of that school." *Norwood*, 413 U.S. at 465-66. "[T]he constitutional infirmity of the Mississippi textbook program," therefore, was "that it significantly aid[ed] the organization and continuation of a separate system of private schools which . . . may discriminate if they so desire." *Id.* at 467. Here, Defendants do not "operat[e]" or provide "significant[] aid" to private social media platforms in the first place, much less do so contrary to the affirmative constitutional obligation to refrain from racial discrimination. *See id.* at 465. Plaintiffs' reliance on *Norwood* is therefore misplaced.

3. Deception is not a freestanding basis for state action and is lacking here.

Next, Plaintiffs advance a newfound "deception" theory that relates only to two distinct allegations: (1) that the FBI is responsible for suppression of the Hunter-Biden laptop story; and

(2) that Dr. Fauci is responsible for suppression of a wide array of content relating to COVID-19. PI Supp. 18-29. These arguments lack merit. At the start, “deception” is not an independent legal basis for attributing a private entity’s acts to the Government under the state action doctrine. Instead, it is an invention of Plaintiffs’ own making, cut out of whole cloth to fit their allegations of First Amendment violations against the FBI and Dr. Fauci, which are plainly deficient under well-settled state-action doctrine. In any event, Plaintiffs’ new deception theory, even if it were legally tenable, is unsupported by the record. On the contrary, the record here squarely *rebutts* Plaintiffs’ allegations that the FBI or Dr. Fauci deceived (or attempted to deceive) anyone. Thus, neither the law nor the facts support Plaintiffs’ First Amendment claims based on a “deception” state-action theory.

a. *There is no “deception” test for state action.*

Neither the Supreme Court nor the Fifth Circuit has ever recognized “deception” as an independent test for “state action.” *See, e.g., Bass v. Parkwood Hosp.*, 180 F.3d 234, 241-42 (5th Cir. 1999) (listing “public function,” “compulsion (or coercion),” and “nexus or joint action” tests, without identifying “deception” as an independent state action test). Plaintiffs’ contention that “deception” is a distinct test for state action hinges on a mischaracterization of the Ninth Circuit’s decision in *George v. Edholm*, 752 F.3d 1206 (9th Cir. 2014).

In *George*, the Ninth Circuit denied summary judgment on the “state action” issue based on evidence that two policemen misrepresented the plaintiff’s medical condition to a (private) doctor “with the intent of inducing” the doctor to perform an allegedly illegal cavity search of the plaintiff resulting in the discovery of a plastic baggie containing cocaine. *Id.* at 1215. Critically, “there [was] evidence . . . that [two officers] . . . physically assisted [the private party] by turning [the plaintiff] on the table and holding his legs, and that [one officer] emphasized . . . the necessity for prompt action in removing the cocaine.” *Id.* at 1216. Thus, the issue for trial was whether the

policemen “provided ‘significant encouragement, either overt or covert,’ to [the doctor],” and “‘induce[d], encourage[d] or promote[d]” the doctor “to do what he would not otherwise have done,” “such that” the doctor’s “actions” were “attributable to the state,” without suggesting that “deception” was a distinct basis for such a finding. *Id.* Far from analyzing the purported misrepresentations as an adequate or independent test for state action, the Ninth Circuit considered those misrepresentations in applying the same state action tests the Fifth Circuit has identified. *Compare id.* at 1215, with *Bass*, 180 F.3d at 241-42. Indeed, the Ninth Circuit only concluded that the private doctor’s conduct “could be attributed to the state” because “a reasonable jury could conclude that [the officers] provided false information, encouragement, and *active physical assistance* to” the doctor. *George*, 752 F.3d at 1216 (emphasis added).

Neither *George* nor any of the other cases Plaintiffs cite suggests that evidence of misrepresentations independently suffices to show state action. To show that any social media content moderation action is attributable to some Defendant, Plaintiffs thus must satisfy one of the tests the Supreme Court *has* recognized, such as the coercion test.

b. *The record contradicts Plaintiffs’ allegations of deceit and trickery.*

In any event, the record rebuts Plaintiffs’ assertions that the FBI or Dr. Fauci, on behalf of NIAID, engaged in “deception.” Rather than evincing any deceptive conduct, the record shows that dedicated public servants used their knowledge and skill to provide information or other resources to the public as a whole, and private companies in particular, which social media companies may (or may not) have considered when determining whether and how to moderate certain categories of content on their platforms. Plaintiffs’ characterization of the government officials’ conduct as “deceitful” is, ironically, based on gross mischaracterizations of the evidence.

i. FBI

Plaintiffs contend that the FBI “engaged in a campaign of deception to induce social-media platforms to censor the Hunter Biden laptop story,” a contention built on two mistaken premises—that (1) the FBI “had no investigative basis” for warning platforms about hack-and-leak or hack-and-dump operations by Russian state-sponsored actors ahead of the 2020 election, and (2) platforms took content moderation measures against the “Hunter Biden laptop story” because FBI statements “left” them “with the clear impression that the Hunter Biden laptop materials were, in fact, hacked materials.” PI Supp. 27-29.

First, the snippet from ASAC Chan’s testimony that Plaintiffs cite, in which he stated that the FBI was “not aware of” hack-and-leak “operations that were forthcoming or impending,” when viewed in proper context, neither stated nor implied that the FBI lacked an “investigative basis” for its warnings, as Plaintiffs contend. *Id.* at 27-28 (quoting Pls.’ PFOF ¶ 893); *see* Chan Dep. 192:19-24. ASAC Chan testified: “[W]hat we mentioned was that there was the general risk of hack-and-leak operations, especially before the election. However, we were not aware of any hack-and-leak operations that were forthcoming or impending.” Chan Dep. 192:19-24. Plaintiffs lack any ground for arguing that the “general risk” ASAC Chan described was an inadequate basis for FBI’s general warnings to social media companies about the potential risk of hack-and-leak operations. Nor is there evidence the FBI misstated the basis for its warnings.

“Investigative basis” is an amorphous term Plaintiffs do not attempt to define, but in any event, the FBI did have a factual basis for the 2020 warnings. Start with the indictment the Government obtained in 2018 against 12 members of the GRU, a Russian Federation intelligence agency within the Main Intelligence Directorate of the Russian military, for committing federal crimes intended to interfere with the 2016 U.S. presidential election: Those GRU members

engaged in a well-documented effort to hack into the computer networks of the Democratic Congressional Campaign Committee, the Democratic National Committee, and the presidential campaign of Hillary Clinton, and then released that information on the internet. *See, e.g.*, Ex. 135. Because Russia had pursued a hack-and-dump effort in 2016, the FBI viewed it as “possible” Russia would do so again in 2020. Chan Dep. 221:3. The FBI’s warnings reflected an abundance of caution given the skills of the Russian hackers shown in 2016. *Supra* Defs.’ PFOF § II.H.1; Chan Dep. 173:18-174:13, 203:16-204:1, 208:7-12. The record does not support Plaintiffs’ apparent assumption that the FBI’s 2020 warnings were improper because the risk of a repetition was zero or negligible. And Plaintiffs do not even attempt to justify their further assumption that such warnings would *only* have been appropriate if the risk of recurrence of hack-and-dump efforts was so high as to be “*impending*.” PI Supp. 37 (emphasis added); *see also* Defs.’ Resp. PFOF ¶¶ 880, 893.

Plaintiffs also fail to address (let alone explain), statements during the Trump Administration that place the allegedly improper warnings Chan described in proper context. President Trump in 2018 declared an emergency to deal with the unusual and extraordinary threat presented by “the ability of persons located . . . outside the United States to interfere in or undermine public confidence in United States elections, including through the unauthorized accessing of election and campaign infrastructure *or the covert distribution of propaganda and disinformation*.” 83 Fed. Reg. at 46,843 (emphasis added). He repeated that finding twice, including on the eve of the 2020 election. 84 Fed. Reg. 48,039; 85 Fed. Reg. 56,469. “The Russian effort to influence the 2016 presidential election,” then Deputy Attorney General Rod J. Rosenstein noted in a July 2018 speech, “is just one tree in a growing forest. Focusing merely on a single election misses the point. As [Director of National Intelligence Dan Coats] made clear, ‘these

actions are persistent, they are pervasive, and they are meant to undermine America's democracy on a daily basis, regardless of whether it is election time or not.” Ex. 149 at 2 (Rod J. Rosenstein, Deputy Att’y Gen., Remarks at the Aspen Security Form (July 19, 2018), 2018 WL 3471764). Multiple Cabinet agencies went on to explicitly state in March 2020 that “foreign actors continue to try to influence public sentiment and shape voter perceptions,” and that “[t]hey spread false information and propaganda about political processes and candidates on social media in hopes to cause confusion and create doubt in our system.” Ex. 132 (joint statement of Mar. 2, 2020). Another announcement in September 2020 sought to “raise awareness of the potential threat posed by attempts to spread disinformation regarding the results of the 2020 elections.” That statement noted that “[f]oreign actors and cybercriminals could create new websites, change existing websites, and create or share corresponding social media content to spread false information in an attempt to discredit the electoral process and undermine confidence in U.S. democratic institutions.” Ex. 133 (FBI and CISA announcement of Sept. 22, 2020).

Although those statements did not use the hack-and-dump jargon, they show that FBI and other agencies raised serious concerns about foreign influence operations ahead of and close in time to the 2020 election, further undermining Plaintiffs’ notion that the FBI’s more particularized warnings to platforms about potential hack-and-dump operations before the 2020 election were somehow improper.

Second, the record shows the FBI did not raise the “Hunter Biden Laptop Story” in its warnings before October 14, 2020, when the *New York Post* “broke” that story. Rather, the record establishes that Twitter made the independent and temporary decision to limit circulation of the *New York Post* story on its platform, and that the decision did not involve the FBI in any way. *Supra* Defs.’ PFOF § II.H.2. Other than one inquiry by a Facebook analyst about what the FBI

could “share” about the Hunter Biden investigation after the *New York Post* published its story, and the FBI’s “no comment” response, ASAC Chan was not aware of any communications related to the Hunter Biden Laptop Story between the FBI and Facebook, Chan Dep. 233:22-234:3, Twitter, *id.* at 233:8-21, Apple or Microsoft, *id.* at 234:6-7, or any other platform, *id.* at 234:4-5.

Plaintiffs heavily rely on statements made in a declaration that Yoel Roth, Twitter’s former Senior Director for Trust and Safety, submitted to the Federal Elections Commission (FEC) in 2020. Plaintiffs emphasize (PI Supp. 38) Mr. Roth stated in that 2020 declaration that, in “regular meetings” he attended with the FBI and other agencies “and industry peers regarding election security,” he had “learned” that “there were rumors that a hack-and-leak operation would involve Hunter Biden.” Chan Ex. 8 (Roth Decl.) ¶¶ 10-11 (Dkt. 204-5). But Mr. Roth did not say in his 2020 declaration from whom he heard those rumors; much less did he attribute them to Government personnel. And Mr. Roth has clarified, in sworn congressional testimony in 2023, that he intended the declaration to state that another social media company, rather than the Federal Government, mentioned at a meeting that there was the possibility of a hack and leak operation concerning Hunter Biden. Mr. Roth explained that the Federal Government did not share that perspective or provide information to Twitter concerning this issue, emphasizing that his 2020 declaration “does not suggest that the FBI told [him] it would involve Hunter Biden.” Ex. 2 at 43; *see also id.* at 37, 46. Similarly, ASAC Chan’s testimony that he did not discuss the Hunter Biden Laptop Story with Facebook before October 14, 2020 reinforces the statement in the October 25, 2022 letter by Meta’s counsel to this Court that “ASAC Chan at no point in time advised Meta ‘to suppress the Hunter Biden laptop story.’ Nor did any of his colleagues.” Dkt. 96 at 2 (Ex. A).

The recent congressional testimony also refutes Plaintiffs’ assertion that the FBI in 2020 “induced” revisions to platform hacked materials policies or the application of those policies to

the “Hunter Biden Laptop Story.” PI Supp. 27. Twitter grounded its decisions concerning the *New York Post* story on a 2018 policy that “prevent[ed] Twitter from being used to spread hacked materials,” but decided within 24 hours that its initial decision was wrong and removed the restrictions. Ex. 137 at 5-6; Ex. 2 at 5; *see also* Defs.’ Resp. PFOF ¶¶ 880-904, 1083-1087.

ii. Dr. Fauci, in his prior role as the Director of NIAID

As with the FBI, Plaintiffs’ arguments regarding Dr. Fauci, in his prior role as Director of NIAID, are legally and factually meritless. Again, “deception” is not a cognizable basis for finding state action. The record is also utterly lacking factual support for Plaintiffs’ “deception” theory involving Dr. Fauci.

Plaintiffs assert that Dr. Fauci worked with former NIH Director Dr. Francis Collins or other Biden Administration officials to “orchestrate[] a series of campaigns of deceit to procure the censorship of viewpoints he disfavored on social media.” PI Supp. 19. Ultimately, Plaintiffs’ allegations amount to nothing more than a disagreement with the correctness of Dr. Fauci’s or other scientific experts’ conclusions about the origin, treatment, or prevention of COVID-19. They have nothing at all to do with content moderation on social media platforms, let alone violations of the First Amendment.

Indeed, Plaintiffs spend *seven pages* on arguments about (1) Dr. Fauci’s involvement in internal discussions among an international group of virologists about the origins of COVID-19, (2) whether Dr. Fauci correctly concluded that hydroxychloroquine is not an effective treatment for COVID-19, (3) Dr. Fauci’s views on the efficacy of face masks, (4) Dr. Fauci’s criticism of the “focused protection” strategy espoused by the Great Barrington Declaration, and (5) Dr. Fauci’s public expression of “horror” at people cheering over refusing a life-saving vaccine. PI Supp. 19-27. Strikingly absent from these discussions is any allegation that Dr. Fauci ever publicly

or privately spoke to any social media company about his views on the above issues—let alone that he did so in a manner that could be considered threatening or coercive (or “deceptive”). In fact, Dr. Fauci testified time and time again that he has never asked a social media company “to remove misinformation from one of [its] platforms,” Fauci Dep. 152:21-24, and indeed does not “pay attention to what social media organizations like Google and YouTube and Twitter . . . do,” *id.* at 239:21-24.⁸⁶ And despite Plaintiffs’ voluminous filings, they have provided no evidence to rebut this testimony.

So what is the resulting state action, and First Amendment violation, arising from Dr. Fauci’s internal discussions and public comments about COVID-19? According to Plaintiffs: “[s]ocial media platforms . . . follow[ing] Dr. Fauci’s lead,” “accepting [Dr. Fauci’s] proclamation[s]” as to the “scientific consensus,” and choosing to “censor[.]” content on their platforms that ran counter to that consensus. PI Supp. 25 (emphasis added). But the social media companies’ decisions to consider the conclusions of Dr. Fauci and other scientific experts when

⁸⁶ See also Fauci Dep. 99:5-9 (“You know, I’m so dissociated from social media. I don’t have a Twitter account. I don’t do Facebook. I don’t do any of that, so I’m not familiar with that. I’ve never gotten involved in any of that.”); *id.* at 210:3-8 (“So social media stuff, I don’t really pay that much attention to.”); *id.* at 213:13-16 (“Like I said, my association with social media is almost zero. I don’t have an account. I don’t tweet. I don’t pay attention to social media. I wouldn’t know how to access a tweet if you paid me.”); *id.* at 235:21-22 (“I don’t get involved in social media stuff.”); *id.* at 241:6-13 (“I do not get involved in any way with social media. I don’t have an account, I don’t tweet, I don’t Facebook, and I don’t pay attention to that. . . . I don’t pay attention to what gets put up and put down on social media.”); *id.* at 241:23-242:1 (“I don’t pay attention to social media issues. That’s something I don’t do. I don’t follow it. I don’t have an account. I don’t follow it.”); *id.* at 280:3-7 (“I’m not aware of anything being censored. Like I said multiple times—and I’ll repeat it again—I don’t follow what goes on social media, censoring or otherwise. That’s not something that I pay attention to.”); *id.* at 281:24-282:2 (“I don’t pay attention to that whole culture of social media censoring or not censoring. I’ve said that maybe 50 times today. That’s not what I do.”); *id.* at 312:8-9 (“I really don’t get involved in social media issues.”); *id.* at 357:8-13 (“My way of countering false information, and I’ve been on the record multiple times as saying that, is that my approach is to try to [] flood the system with the correct information as opposed to interfering with other people’s ability to say what they want to say.”).

determining what content to allow on their platforms does not make Dr. Fauci (or any other scientist) legally *responsible* for those decisions, *Blum*, 457 U.S. at 1004, and certainly does not amount to a First Amendment violation. A contrary conclusion would have far-reaching, and dangerous, ramifications. Accepting this theory of state action in the First Amendment context would mean that any time a government official expresses views or gives scientific advice, the official could be in danger of violating the First Amendment if a social media company simply considers those views or advice in its own decision-making process. Yet neither NIAID nor any other agency may presume to control whether or how a social media company, or any other third party, uses the health information that it makes public. To avoid running afoul of the First Amendment, then, NIAID—which is tasked with “advanc[ing] the understanding, diagnosis, and treatment of many of the world’s most intractable and widespread diseases,” including “tuberculosis and influenza, HIV/AIDS,” and COVID-19, *see* Ex. 86—would have to refrain from promoting critical health information that can save lives. It would be precluded from carrying out its statutory purpose to “conduct and support . . . research, training, *health information dissemination*, and” participate in “other programs with respect to” such diseases. 42 U.S.C. § 285f (emphasis added); *see also id.* § 284(b)(1)(F) (granting NIAID authority to “develop, conduct, and support public and professional education and information programs”). Plaintiffs’ proposed “deception” theory of state action must be rejected for this reason alone. *See Summum*, 555 U.S. at 467 (a government entity “is entitled to say what it wishes” (citation omitted)).

Indeed, it is worth noting that Plaintiffs seem to have constructed their amorphous deception theory—articulated for the very first time in their supplemental brief, despite Dr. Fauci being named in the original complaint in May 2022—to account for the complete absence of any evidence of communications between Dr. Fauci and social media companies about

misinformation. Earlier in this case, in justifying the deposition of Dr. Fauci, Plaintiffs claimed that “Dr. Fauci is *directly involved* in multiple, far-reaching social-media censorship campaigns against so-called COVID-19 ‘misinformation.’” Joint Stmt. Regarding Witness Depositions at 5 (Dkt. 86) (emphasis added). In seeking Dr. Fauci’s deposition, Plaintiffs expressed skepticism about the accuracy of NIAID’s interrogatory responses indicating that Dr. Fauci did not have any direct communications with social-media platforms about “censorship”; Plaintiffs insisted that, contrary to those responses, Dr. Fauci “acted on behalf of others” in procuring” “social media censorship.” *Id.* at 10. Now, tacitly acknowledging that Dr. Fauci’s deposition testimony failed to substantiate those assertions, Plaintiffs abandon them for an invented theory that turns not on Dr. Fauci’s interactions with social media companies (or any other relevant facts) but instead on unfounded speculation that Dr. Fauci sought to deceive the public about COVID-19. Yet the very notion that Dr. Fauci, together with highly respected scientists from around the world, orchestrated a “campaign to deceive” anyone—including social media companies—is built on distortions of the evidence and baseless attacks on Dr. Fauci’s credibility stemming from his testimony on matters irrelevant to Plaintiffs’ First Amendment claim.

§ *The Origins of COVID-19.* Plaintiffs’ primary “deception” theory is that Dr. Fauci worked with former NIH Director Dr. Francis Collins⁸⁷ and an official from a British research organization (Dr. Jeremy Farrar⁸⁸) to “discredit and suppress the opinion that SARS-CoV-2, the virus that causes COVID-19, leaked from a laboratory at the Wuhan Institute of Virology[.]” PI Supp. 19. According to Plaintiffs, the alleged conspiracy formed during a purportedly “clandestine . . . call” on February 1, 2020, during which the participants allegedly entered into a plan to

⁸⁷ Dr. Collins stepped down as Director of NIH in December 2021. Ex. 151 at 1 (*A Farewell to Dr. Francis Collins*, Nat’l Insts. of Health (Dec. 16, 2021), <https://perma.cc/5Q48-NJAD>).

⁸⁸ Dr. Farrar does not work for the United States Government and is not a Defendant in this case.

“manufacture the appearance of scientific consensus against the lab-leak theory,” *id.* at 21, which culminated in the publication of a research article by non-federal officials refuting that theory—all for the “purpose of . . . suppress[ing] the lab leak theory in both ‘main stream and social media,’” *id.* at 24 (citation omitted). Plaintiffs contend that the “conspiracy succeeded” when social media platforms decided to “aggressively censor[] the lab-leak theory well into 2021.” *Id.*⁸⁹

To support this accusation, Plaintiffs misconstrue internal discussions documented in email exchanges between Dr. Fauci and other scientists in early 2020. That correspondence flatly contradicts Plaintiffs’ deception theory. The record shows that, on February 1, 2020, Dr. Jeremy Farrar invited a group of international scientists (including Dr. Fauci and Dr. Collins) to participate in a call later that day. *See* Fauci Ex. 8 at 9-10 (Dkt. 206-9). The invitation stated that the “[i]nformation and discussion” was to be “shared in total confidence and not to be shared until agreement on next steps.” *Id.* at 10. Contrary to Plaintiffs’ characterization of this instruction, it plainly does not suggest that the call was meant to be “clandestine.” PI Supp. 21. On the contrary, the point was to allow for an initial convening of an “ad hoc group” to “air some thoughts” about the participants’ “current understanding” of the scientific data—while also identifying “the many gaps in [their] knowledge”—with the aim of obtaining a “broader range of input” going forward.

⁸⁹ Plaintiffs’ use of the phrase “lab-leak theory” implies that there is only one theory concerning how SARS-CoV-2, the virus that causes COVID-19, may have emerged from a laboratory in Wuhan, China. In fact, multiple diverging “lab-leak” theories have emerged. One theory is that SARS-CoV-2 was intentionally engineered in a laboratory and deliberately or accidentally released. Another is that SARS-CoV-2 was inadvertently created in a lab during serial passage experiments and accidentally spread beyond the lab. Yet another is that SARS-CoV-2 naturally occurred in the wild, was being studied in a lab, and was accidentally spread beyond the lab by infected researchers. *See* Pls.’ Jones Decl. Ex. AA at 6 (“Those suspecting a lab-related incident point to an array of possible scenarios, from inadvertent exposure of a scientist during field research to the accidental release of a natural or manipulated strain during laboratory work.”); Ex. 99 (Joel Achenbach, *What we know about covid-19’s origins, and what is still a mystery*, Wash. Post (Mar. 1, 2023)) (discussing “versions of the lab leak theory”).

Fauci Ex. 8 at 9 (Dkt. 206-9). Thus, the group’s next step after the call, according to Dr. Farrar, was to encourage “a body like the WHO . . . to ask or commission a group of scientists from around the world to ask [a] neutral question[:] ‘To understand the evolutionary origins of 2019-nCoV[.]’” *Id.* at 5. “In other words,” the goal was to develop “a completely open minded and neutral question” relating to the origins of COVID-19 and commission “the best minds” to consider it, “under the umbrella of a respected international agency.” *Id.* at 10. Doing so was “important for this epidemic and for future risk assessment and understanding of animal/human coronaviruses.” *Id.* at 5.

Most participants on the call also believed that a broader group should convene immediately, before the question of COVID-19’s origins became “polari[z]ed” and “people . . . start[ed] to look to who to blame”—which could “increase tension and reduce cooperation” necessary for objective inquiry. Fauci Ex. 8 at 7 (Dkt. 206-9). That would undermine the group’s shared goal of “really continu[ing] to pursue what actually happened in order to prepare for and prevent similar things from happening in the future.” Fauci Dep. 102:13-103:7.⁹⁰ For instance, Dr. Farrar noted that, already, “questions [we]re being asked by politicians, . . . in the scientific literature, [and] certainly on social and main stream media.” Fauci Ex. 8 at 7 (Dkt. 206-9). Thus, he found it imperative for a group to convene without delay “to consider the evolutionary origins of [the virus], with an open mind, neutral, and in a transparent way[.]” *Id.* In his view, immediate objective analysis might “prevent wild claims being made.” *Id.* That was so even if the issue “remain[ed] grey” after a group convened. *Id.* at 3. Dr. Farrar believed that even “grey, from a respected group, under the umbrella of let us say WHO, would in itself help!” *id.*

⁹⁰ Others identified another reason for urgency in addition to discovering the source of the virus: if the virus did come from a “non-human host, pre-adapted, it [could] threaten control efforts through new zoonotic jumps.” Fauci Ex. 8 at 6 (Dkt. 206-9).

After the call, the group continued internal discussions about various theories surrounding COVID-19's origins. Their email exchanges reflect a shared desire for "open minded and neutral" scientific inquiry, *id.* at 10, as several virologists voiced competing initial views on the theories surrounding the origins of the COVID-19 virus. Some opined that "a non-natural origin of 2019-nCoV is highly unlikely at present," *id.* at 7; others stated that they favored the view that the virus originated through events a laboratory, *id.* at 3-4; and others responded that their view "[wa]s completely neutral," *id.* at 7. Dr. Collins, for his part, conveyed that he "hadn't given much consideration to the idea of lab-based evolution by tissue-culture passage" that one scientist presented, and he agreed that the idea "[wa]s worth including on the list of options" to be examined. *Id.* at 3. And as Dr. Kristian Andersen expressed in another email to Dr. Fauci and Dr. Farrar, while "some of the features" of the virus "(potentially) look[ed] engineered" on an initial review of the data, he believed it was important to "look very critically at" the issue and "there [we]re still further analyses" to be done, so "opinions could still change." Fauci Ex. 6 at 1 (Dkt. 206-7). Amidst the uncertainty, what was clear to the participants was that the issue was "very complex," Fauci Ex. 8 at 5 (Dkt. 206-9), that they alone did not have all the answers, *id.* at 9, and that opinions could evolve as new information was considered, *id.*

Dr. Fauci's participation in these discussions was limited. He apparently did not respond at all to the email exchanges involving the entire group on the call or share his thoughts on the origins of COVID-19. Instead, he emailed Dr. Farrar separately on the afternoon of February 2, 2020, to apologize for taking "so long to weigh in on [Dr. Farrar's] e-mails," and to convey only that he agreed with the urgency of convening a broader group. *Id.* at 2 (including Dr. Collins and another NIH employee on the email). "Like all of us," Dr. Fauci wrote, "I do not know how this evolved, but given the concerns of so many people and the threat of further distortions on social

media, it is essential that we move quickly. Hopefully, we can get WHO to convene.” *Id.*; *see also* Fauci Dep. 126:13-18 (“[T]he theme of everything that was going on at the time” was to “get WHO moving on getting the convening . . . so that evidence and data could be openly discussed.”). That Dr. Fauci did not weigh in on the substantive question of the virus’s origin is entirely consistent with his deposition testimony. He testified that, because he is “not an evolutionary virologist,” he is “not qualified . . . to make any kind of definitive determination about whether a genome could or could not be a laboratory construct or experimentally manipulative.” *Id.* at 121:22-122:2. Accordingly, he “relied, as anyone would, [on] highly qualified, respected evolutionary virologists” to examine the evidence. *Id.* at 122:3-5.

Separately, and around the same time as the February 1, 2020 call, Dr. Andersen and four other expert virologists (two of whom may have been included on Dr. Farrar’s invitation to the February 1 call⁹¹) were looking into the issue further and developing a research paper with their analysis.⁹² Their paper, titled “The Proximal Origin of SARS-CoV-2,” was eventually published in *Nature Medicine*, a scientific journal,⁹³ on March 17, 2020. Fauci Ex. 24 at 3 (Dkt. 206-25) (with link to online publication). The paper stated that “[o]ur analyses clearly show that SARS-CoV-2 is not a laboratory construct or a purposefully manipulated virus.” *Id.* at 1.

⁹¹ Co-authors Dr. Andrew Rambaut (located in Edinburgh, UK) and Dr. Edward Holmes (in Sydney, Australia) are on the email chain following the February 1 call. Fauci Ex. 6 at 9 (Dkt. 206-7).

⁹² Plaintiffs allege that these virologists only began drafting their paper after the February 1 call, PI Supp. 21, but there is no evidence in the record indicating when the authors began their research. The evidence actually suggests that Dr. Andersen and Dr. Holmes were considering the issue and examining the data before the February 1 call. *See* Fauci Ex. 6 at 1 (Dkt. 206-7) (January 31, 2020 email from Dr. Andersen informing Dr. Fauci of his initial impressions in advance of the call, referring to an article that quotes him and Dr. Holmes).

⁹³ “*Nature Medicine* is a monthly journal publishing original peer-reviewed research in all areas of medicine on the basis of its originality, timeliness, interdisciplinary interest and impact on improving human health. . . . All editorial decisions are made by a team of full-time professional editors.” Ex. 152 at 1 (*Journal Information*, *Nature Medicine*, <https://perma.cc/2MD3-H6SV>).

Before the article's publication, Dr. Farrar had forwarded several drafts of the paper, which Dr. Holmes had sent to him, to Dr. Fauci and Dr. Collins. As with the email discussions after the February 1 phone call, Dr. Fauci testified that he had "very little input into" those drafts. Fauci Dep. 196:1-8. As Dr. Fauci explained, he would not have had much input because they "involve[d]" issues of "very complicated evolutionary virology of which [he is] not an expert." *Id.* at 124:9-14.⁹⁴ Indeed, the record contains no evidence that Dr. Fauci ever responded to Dr. Farrar's emails with any substantive input on the drafts.⁹⁵

These are the facts on which Plaintiffs attempt to build their claim against Dr. Fauci. But the facts contradict Plaintiffs' assertion that there was a "clandestine" call whose participants formed a conspiracy with the "stated purpose" of "suppress[ing] the lab-leak theory" on "social media." PI Supp. 24. On the contrary, the facts show that a group of international virologists sought to urgently and openly investigate "what actually happened" to cause the COVID-19 virus, before politics or the spread of unfounded theories in mainstream media and social media interfered with the objective inquiry needed to properly combat the virus and defend against the risk of future

⁹⁴ See also Fauci Dep. 114:4-15 ("I remember getting a paper and looking at it. I don't believe I had any substantive comments on it, just by reading it. Because that's not my lane, evolutionary virology."); *id.* at 120:10-20 ("My recollection is I really didn't have any meaningful comments on [the draft] because it . . . would be involved in a lot of complicated evolutionary virology that is not my lane."); *id.* at 124:21-24 ("I might have looked at [the draft], but I certainly didn't make any meaningful comments since this is outside of my lane of expertise."); *id.* at 127:10-13 ("Again, I had very little input or even interpretation of the . . . information because it was in an area that is not my area of expertise.").

⁹⁵ Plaintiffs assert that Dr. Andersen thanked Dr. Fauci for his "advice and leadership" in an email and suggest that provides evidence that Dr. Fauci played a significant role in the drafting of the paper. PI Supp. 23. But the cited email shows nothing of the sort. The cited email is from Dr. Andersen to Drs. Farrar, Fauci, and Collins. In it, Dr. Andersen thanks all of them for their "advice and leadership as we have been working through the SARS-CoV-2 'origins' paper," and informs them "that the paper was just accepted by Nature Medicine and should be published shortly (not quite sure when)." Fauci Ex. 22 at 1 (Dkt. 206-23). Dr. Andersen also shares "the accepted version" of the paper in order to "keep [them] in the loop[.]" *Id.*

outbreaks. Fauci Dep. 102:22. The facts show no agreement to attempt to “suppress” speech on any medium that promoted any particular theory of the virus’s origins.

Importantly, Plaintiffs reference not a single public or private communication by Dr. Fauci or anyone else about the “lab-leak” theory that was directed, publicly or privately, at a social media company. Instead, Plaintiffs pin the culmination of the alleged conspiracy to deceive on the following public and private statements: *First*, roughly one week after the article’s publication, Dr. Collins wrote on the “NIH Director’s Blog” online that the article refuted “outrageous claims that the new coronavirus causing the pandemic was engineered in a lab and deliberately released to make people sick.” *See* Fauci Ex. 25 at 1 (Dkt. 206-26). *Second*, in April 2020, Dr. Fauci responded to an email from Dr. Collins expressing concern about the “growing momentum” of the theory that COVID-19 started in a lab, Fauci Ex. 27 at 1-2 (Dkt. 206-28), with, “I would not do anything about this right now. It is a shiny object that will go away in times.” *Id.* at 2. *Third*, and also in April 2020, Dr. Fauci was asked at a White House press conference to address “concerns that th[e] virus was somehow manmade, [and] possibly came out of a laboratory in China,” Fauci Ex. 28 at 2 (Dkt. 206-29); he responded by explaining that a recent study by “highly qualified evolutionary virologists” found that the data were “totally consistent with a jump of a species from an animal to a human.” *Id.*⁹⁶ After the press conference, one member of the press reached out to Dr. Fauci’s office to obtain a copy of the study Dr. Fauci was referring to, and Dr. Fauci passed along three “links to the scientific papers and a commentary about the scientific basis of the origins of SARS-CoV-2,” including a link to “The Proximal Origin of SARS-CoV-2.” Fauci Ex. 29 (Dkt. 206-30).

⁹⁶ At the press conference, then-President Trump followed up after a brief line of questioning directed at Dr. Fauci by saying that he was “very satisfied with the decision [the Administration] made” to “listen[] to experts” and “many others.” Fauci Ex. 28 at 3 (Dkt. 206-29). Had the Administration not done so, the President said, “we could have lost more than 2 million people. I really believe that.” *Id.*

These statements, most of which simply promote information, and none of which was directed at a social media company, hardly show any effort to “suppress” the “lab-leak theory” on social media.

This evidence contradicts every premise on which Plaintiffs construct their novel and legally unsupported “conspiracy to deceive” narrative. That narrative is built on fiction, not fact. *See also* Defs.’ Resp. PFOF ¶¶ 598-756. Plaintiffs resort to baseless and irrelevant attacks on Dr. Fauci’s credibility. Woven throughout their elaborate reconstruction of the events is a request for the to Court disregard Dr. Fauci’s testimony as “not credible,” and, presumably, to accept Plaintiffs’ factually unsupported retelling of the events instead. *See* PI Supp. 20. Plaintiffs’ sole argument against Dr. Fauci’s credibility—that he, like any other deponent, responded with some variation of “I do not recall” in his deposition when he did not recall the answer to a question, *id.*—is spurious. Plaintiffs obscure the details that Dr. Fauci could not recall by referring, without elaboration, to a long string cite to paragraphs of their proposed findings of fact. *Id.*⁹⁷ Following the trail from that string cite to the deposition transcript reveals that the details Dr. Fauci could not recall were irrelevant and trivial matters such as: when and where he met a scientist years ago, Fauci Dep. 32:32-33:3; when he became aware of a particular article in 2020, *id.* at 31:21-32:3; who was copied on an email sent three years ago, *id.* at 55:5-8; whether he recalled, from eight years ago, the initiation of a grant he was not responsible for approving, *id.* at 21:21-22:23; what he remembered saying in a televised interview in July 2021, *id.* at 340:25, 342:13-18; and whether he was aware of communications between social media companies and other federal officials in which Dr. Fauci was not personally involved, *id.* at 328:20-329:7, among other immaterial matters.

⁹⁷ Elsewhere, Plaintiffs make the same accusation by simply citing nearly *the entire deposition transcript*. PI Supp. 20 (citing Pls.’ PFOF ¶ 620, in turn citing Fauci Dep. 22:21-352:18).

That Dr. Fauci—then responsible for running NIAID, with an annual budget of more than \$6 billion, 2,000 employees, and 1,300 funded principal investigators—could not remember these irrelevant and trivial details is unremarkable.⁹⁸ In any litigation, even as to relevant information, witness “memories fade” “with the passage of time.” *Star Sys. Int’l Ltd. v. Neology, Inc.*, No. 4:18-CV-00574, 2019 WL 679138, at *2 (E.D. Tex. Feb. 19, 2019) (citation omitted).

Plaintiffs do not explain how Dr. Fauci’s failure to remember such minutiae from between two and eight years ago “contradicts the documentary evidence” or otherwise undermines his credibility. Plaintiffs fail to substantiate their very serious suggestion that Dr. Fauci—who was testifying under oath—was deliberately withholding information. An unadorned string cite to their brief does not suffice. Nor does their submission of a cut and spliced audio-recording of Dr. Fauci’s deposition, which removes all context in which to assess his testimony and Plaintiffs’ serious accusations against him. If the Court chooses to watch the audiovisual-recording of Dr. Fauci’s deposition, Defendants urge the Court to watch the *full* recording—which shows Dr. Fauci making a concerted effort to answer each question as thoroughly as possible, and provide as many details as possible, even where his memory is hazy (despite being repeatedly cut off or instructed to provide *less* information by opposing counsel, *see* Fauci Dep. 47:5-21 (“paus[ing]” Dr. Fauci’s answer regarding details of the February 1, 2020 call and asking him “not to go off on . . . a tangent”); *id.* at 127:13-128:8 (interrupting Dr. Fauci’s response to counsel’s questions relating to the receipt of a draft research paper); *id.* at 134:6-135:12 (interrupting Dr. Fauci’s answer “provid[ing] context” about an email he sent to Dr. Farrar).

⁹⁸ *See also* Defs.’ Resp. PFOF ¶¶ 609, 612, 620, 628-630, 636, 642, 647, 651, 662-664, 666-668, 670, 685, 686, 690, 7702, 703, 708, 710, 722, 730, 733, 737, 746, 750, 753, 766, 772, 789, 798, 805, 807-809, 825, 849, 890-892.

In any event, Plaintiffs' baseless attacks on Dr. Fauci's credibility do not fill the gaping holes in their legally unsupported deception theory, which the evidence contradicts.

§ *Other COVID-19-related topics.* The remaining narratives supporting Plaintiffs' deception theory are likewise built on a contortion of the record and have nothing to do with content on social media platforms—and everything to do with Plaintiffs' substantive disagreement with the conclusions and recommendations of Dr. Fauci and other scientific experts, which is irrelevant to their First Amendment claim. Plaintiffs allege that, “[h]aving succeeded so dramatically in suppressing the lab-leak theory through deception, Dr. Fauci,” in coordination with others, “continued . . . the same tactic of deceptively creating a false appearance of scientific consensus to procure the censorship of disfavored viewpoints on social media.” PI Supp. 24. In support, Plaintiffs lodge a series of complaints about Dr. Fauci's views on issues such as the effectiveness of facemasks or particular treatments for COVID-19, among other things.

But none of Dr. Fauci's publicly or privately expressed views has any connection to speech on social media. Plaintiffs do not allege that Dr. Fauci discussed any of his views with a social media company, or that he demanded any company moderate content opposed to his views. Nor do Plaintiffs allege that a social media company made any particular content moderation decision because of any such demand. Instead, they assert that social media companies' content moderation decisions were consistent with (or “followed”) Dr. Fauci's publicly expressed views on various matters. PI Supp. 24-25. Yet the mere fact that social media companies may have considered the public statements of Dr. Fauci (or any other civil servant) in making their own decisions about what content to allow on their platforms does not suggest that Dr. Fauci intended to *deceive* any company into moderating content on its platform in a manner consistent with his views. *See* Defs.' Resp. PFOF ¶¶ 757-776 (regarding efficacy of hydroxychloroquine), 777-808 (regarding the Great

Barrington Declaration), 828-39 (masking), 840-852 (Alex Berenson). That is particularly so considering Dr. Fauci’s repeated testimony that he does not “pay attention to social media” Fauci Dep. 213:13-16. Rather, as Dr. Fauci testified, his “approach” to “countering false information,” “is to try to [] flood the system with the correct information as opposed to interfering with other people’s ability to say what they want to say.” *Id.* at 357:8-13. And he is entitled to take that approach. As the former Director of NIAID and Chief Medical Advisor to the President, Dr. Fauci was “entitled to say what [he] wishes . . . and to select the views that [he] want[ed] to express[.]” *Summum*, 555 U.S. at 467-68 (citations omitted). Finding that Dr. Fauci’s publicly (or privately) expressed views render him “*responsible for*,” *Blum*, 457 U.S. at 1004, the decision of a social media company and thus violates the First Amendment would, ironically, transform the First Amendment into a tool for muzzling routine government speech.

* * *

In short, Plaintiffs’ attempt to impugn the character of these public servants is built on a distortion of the factual record that, ultimately, is irrelevant to their First Amendment claims. Plaintiffs fail to show any likelihood of success on the merits of their newly constructed “deception” state-action theory, which lacks any factual or legal basis. A preliminary injunction against the FBI or NIAID on this basis is unwarranted.

4. Plaintiffs fail to show that any Defendant jointly participated in any particular content moderation decision.

Additionally, Plaintiffs contend that various Defendants acted as “joint participants” with, and both “conspired” and “colluded” with, social media companies, and so those companies content moderation decisions amount to state action. PI Supp. 29. As discussed below, Plaintiffs’ supporting facts are unsupported by the record and otherwise do not establish the type of joint action necessary to hold the Government responsible for private conduct.

To meet the state action requirement via the joint action test, a plaintiff must show that “the government act[ed] jointly with the private entity.” *Manhattan Cmty. Access Corp.*, 139 S. Ct. at 1928 (citing *Lugar v. Edmondson Oil Co.*, 457 U.S. 922, 941-42 (1982)). As with every other formulation of the state-action tests, the joint action inquiry “begins by identifying the specific conduct of which the plaintiff complains.” *Moody*, 868 F.3d at 352 (quoting *Cornish*, 402 F.3d at 550); *Cornish*, 402 F.3d at 550 (requiring the plaintiff to “establish ‘a sufficiently close nexus between the State and *the challenged action*,”—there, the termination of the plaintiff’s employment—“of the regulated entity” (quoting *Blum*, 457 U.S. at 1004)). The plaintiff must then show that, as to that particular private action, the Government “so far insinuated itself into a position of interdependence with the [private actor] that it was a joint participant in the enterprise.” *Bass*, 180 F.3d at 242 (quoting *Jackson*, 419 U.S. at 357); *see also Howard Gault Co. v. Tex. Rural Legal Aid, Inc.*, 848 F.2d 544, 555 (5th Cir. 1988) (state action found where there was “heavy participation” by the government in private decisions such that the “activities of the State” and the private parties were “interlocking”). In other words, the Government must have played an “indispensab[le]” and “meaningful role in the mechanism leading to the disputed act.” *Frazier v. Bd. of Trs. of Nw. Miss. Reg’l Med. Ctr.*, 765 F.2d 1278, 1287-88 (5th Cir.), *amended*, 777 F.2d 329 (5th Cir. 1985). This standard cannot be not satisfied based only on the private party’s “generalized relation with the state.” *Id.* at 1287. Instead, “the state” must have played an “affirmative role[] in the particular conduct underlying” the plaintiff’s “grievance.” *Id.* at 1286.

In addition, the plaintiff must show that the joint action flowed from an agreement between a private party and government official to achieve the “specific conduct of which the plaintiff complains.” *Moody*, 868 F.3d at 352-54 (“conspiracy or joint action” tests failed where those circumstances were lacking) (citation omitted). Applying that standard here, there is no meeting

of the minds, and thus no state action, where a social media company independently applies its terms of service to moderate content on its platform. *See O’Handley*, 62 F.4th at 1156 (holding that because “Twitter acted in accordance with its own content-moderation policy when it limited other users’ access to [plaintiff’s] posts and ultimately suspended his account[],” Twitter “did not operate as a state actor”); *Huber v. Biden*, No. 21-CV-06580-EMC, 2022 WL 827248, at *5 (N.D. Cal. Mar. 18, 2022) (dismissing conspiracy claim between the President and Twitter where Twitter suspended plaintiff’s account for violating company’s terms of service), *aff’d*, 2023 WL 17818543 (9th Cir. Dec. 20, 2022); *Doe v. Google*, No. 20-cv-07502-BLF, 2021 WL 4864418, at *5 (N.D. Cal. Oct. 19, 2021) (rejecting state action claim under joint action theory because there were “no allegations that Defendants invoked state or federal procedure to bring about the suspension of Plaintiffs’ accounts”), *aff’d*, 2022 WL 17077497 (9th Cir. Nov. 18, 2022). Plaintiffs cannot satisfy this “meeting of the minds” requirement by referring only to “generalized statements about working together to counteract the dissemination of election misinformation.” *O’Handley v. Padilla*, 579 F Supp. 3d 1163, 1184 (N.D. Cal. 2022), *aff’d sub nom.*, *O’Handley v. Weber*, 62 F.4th 1145 (9th Cir. 2023).

The Fifth Circuit has emphasized that the joint participation standard is not easily met. In *Howard Gault Co. v. Texas Rural Legal Aid, Inc.*, the Fifth Circuit held that a group of onion growers were functionally state actors when they pursued a lawsuit and a temporary restraining order to stop a labor strike. 848 F.2d at 555. The court found dispositive that the growers, seizing upon “deep-seated community hostility toward the strike,” hired attorneys who were at the same time “criminal district attorneys” and who repeatedly acted in their official capacity to collaborate in the lawsuit with “the Attorney General of the State of Texas” and the County sheriff. *Id.* As the court explained, “[t]he interlocking activities of the State . . . and the growers constituted a joint

effort” such that the growers’ conduct, “while not compelled by the state, was so ‘significantly encouraged, both overtly and covertly, that the choice must in law be deemed to be that of the state.” *Id.* (alterations omitted) (quoting *Blum*, 457 U.S. at 1004). The court was careful to “emphasize that the growers cannot be considered state actors merely because they invoked a state statute[;]” rather, “[i]t was the *heavy participation* of [the] state and state officials” in the growers’ lawsuit that satisfied the state action requirement. *Id.* (emphasis added).

In addition, the fact that social media companies may act on a large number of posts identified by a government agency does not demonstrate that the social media companies acted “jointly” with the Government:

That Twitter and Facebook allegedly removed 98 percent of the posts flagged by [the state] does not suggest that the companies ceded control over their content-moderation decisions to the State and thereby became the government’s private enforcers. It merely shows that these private and state actors were generally aligned in their missions to limit the spread of misleading election information. Such alignment does not transform private conduct into state action.

O’Handley, 62 F.4th at 1156-57.

Here, as a general matter, Plaintiffs’ “joint participation” theory fails because regardless of what Defendants allegedly communicated, the social media companies “retained ultimate control” over the content allowed on their platforms. *Frazier*, 765 F.2d at 1287-88. Defendants are not “indispensab[le]” to any “particular” content moderation actions, nor do they have access to the “mechanism” by which those moderation actions occur (the private platforms’ internal technical systems), much less play a “meaningful role” in that mechanism. *Id.* As explained below, Plaintiffs’ allegations with respect with specific Defendants fail for a number of other reasons.

- a. *Plaintiffs fail to show that, by sharing information about COVID-19, CDC or the Census Bureau jointly participated in any content moderation decision.*

Plaintiffs’ allegations against CDC and the Census Bureau do not demonstrate joint participation between those agencies on the one hand, and social media companies on the other, in

the companies' content moderation decisions. *See* PI Supp. 31-33. The claims against these agencies falter at the outset because Plaintiffs fail to “identif[y] [any] *specific*” content moderation decision by a social media company in which CDC and Census were purportedly heavily involved. *Moody*, 868 F.3d at 352 (emphasis added). Rather, Plaintiffs simply recite a grab bag of past communications between various employees of social media companies and CDC (and, occasionally, employees of Census). PI Supp. 31-33 (referencing various emails and meetings between the agencies and social media company employees). But mere communications between a private company and the Government do not transform the private company into a state actor. Such a theory of state action would yield untenable results—it “would effectively cause companies to cease communicating with” government officials, including “their elected representatives[,] for fear of liability.” *Doe*, 2021 WL 4864418, at *4-5 (finding that a “Twitter exchange between Rep. Schiff and YouTube CEO Susan Woj[c]icki” did not support a finding of state action). As with Plaintiffs' other overly broad conceptions of state action, this one, too, must be rejected.

Relying solely on an assortment of communications between social media companies and CDC (and sometimes Census), Plaintiffs ask the Court to infer, without evidence, that social media companies ceded “authority” to CDC and Census “to dictate what may and may not be posted on their platforms.” PI Supp. 32. Yet not a single one of the challenged communications comes close to evincing that CDC (or Census) had significant involvement with—much less ultimate authority over—social media companies' content moderation decisions. Rather, the record shows that the companies “retained ultimate control” over content allowed on their platforms. *Frazier*, 765 F.2d at 287-88.

To start, contrary to Plaintiffs' assertions, the mere existence of “regular meetings” with certain social media platforms, *see* PI Supp. 31, does not suffice to show that CDC was

“indispensab[le]” to the companies’ content moderation decisions, *Frazier*, 765 F.2d at 1287-88. Initially, although Plaintiffs characterize past meetings as being “about misinformation,” PI Supp. 31, the record shows otherwise. As Ms. Crawford testified, regular meetings with select social media platforms for a short time in 2021 were initiated for the purpose of *promoting* CDC’s understanding of information about COVID-19. Crawford Dep. 27:13-23, 181:19-182:2. Only occasionally did those meetings involve any discussions about misinformation. *Id.*; Crawford Decl. ¶¶ 5-6 (Ex. 80). And to the extent the meetings did touch on misinformation, the focus was on narratives that the companies or CDC observed circulating on platforms and the information available from CDC that would respond to those narratives. Crawford Decl. ¶ 6 (Ex. 80). But regardless of whether and to what extent meetings with social media companies involved discussions about misinformation narratives, that would not show that CDC had become so “heavily involved” in a company’s decision to moderate any particular content so as to attribute that content moderation decision to CDC. *Howard Gault*, 848 F.2d at 555. At most, it shows a “generalized relation” between the companies and CDC, which falls far short of demonstrate state action. *Frazier*, 765 F.2d at 1286. *See also* Defs.’ Resp. PFOF ¶¶ 435-589.

Nor does CDC’s mere receipt of Facebook’s CrowdTangle reports, *see* PI Supp. 31-32, show joint participation in any decision to moderate particular speech. As explained, the CrowdTangle reports provided summaries of high-engagement COVID-19 content on Facebook’s platform, regardless of whether that content was considered “misinformation.” *Supra* Defs.’ PFOF § II.C.6.; *see also* Crawford Dep. 53:8-10 (“[CrowdTangle is] a search of content on social media, and a summary of the higher volume conversations.”); Crawford Ex. 18 (Dkt. 205-19) (summary of COVID insight report that listed “news of shifting public health policies allowing people to return to work, school, and religious services” as among the most “highly engaging content”).

CDC did not use the reports to “monitor” speech for the purpose of removing particular posts, contrary to Plaintiffs’ unsupported assertions, *see* PI Supp. 31-32. As Ms. Crawford testified, CDC used the reports to understand the public’s concerns about COVID-19 and vaccines as expressed on social media and to “improve [its own] communication materials.” Crawford Dep. 53:7-12.⁹⁹ CrowdTangle is no evidence of joint participation in any particular content moderation decision. *See also* Defs.’ Resp. PFOF ¶¶ 440-452, 456, 471, 472, 485, 507-510.

Further, certain social media companies’ requests that CDC provide input on the science behind general claims about COVID-19 and vaccines shows no state action. According to Plaintiffs, CDC was doing more than providing input—it was “dictat[ing]” what companies could allow on their platforms. PI Supp. 32. Yet Plaintiffs cite no evidence whatsoever backing up that extravagant claim. The cited emails do not contain any discussions about specific posts and whether such posts should be permitted on the platforms. Rather, they show that Facebook asked CDC whether certain claims in the abstract (for instance that “vaccines caus[e] magnetism,” Crawford Ex. 16 at 2 (Dkt. 205-17) had been “debunked” by scientific sources or were “false and can lead to harm,” Crawford Ex. 17 (Dkt. 205-18)—or, as put elsewhere, were false and could lead to vaccine hesitancy, Crawford Ex. 26, at 4 (Dkt. 205-26). In response to these requests, CDC did not ask the platform to take any particular action against any particular content. Instead, CDC provided factual information, sometimes stating the claim had been “debunked,” other times stating the evidence was “inconclusive,” and often times pointing directly to publicly available

⁹⁹ Plaintiffs’ contention that CDC had “privileged access to use CrowdTangle,” *see* PI Supp. 32, likely refers to Facebook offering CDC the opportunity to log into the CrowdTangle platform to run its own reports about general categories of content circulating on the platform. *See* Crawford Dep. 77:9-14. Ms. Crawford did not use CrowdTangle for this purpose, but others at CDC may have. *See id.* at 50:1-4. Regardless, there is no evidence that anyone at CDC used CrowdTangle reports to collude with Facebook to remove or otherwise suppress particular posts or accounts.

and responsive information on the agency's website. *See, e.g., id.* at 1; *supra* Arg. § II.C.2. Plaintiffs cite a handful of similar exchanges that CDC had with Google and Twitter. *See* PI Supp. 33. These communications reflect social media companies' independent interest in CDC's understanding of the facts, as opposed to any effort by CDC to "dictate" to the companies what content they should allow on their platforms. *See also* Defs.' Resp. PFOF ¶¶ 435-589.

Plaintiffs find evidence of joint action from the fact that Facebook occasionally informed CDC that it had "updated its policies . . . based on the CDC's input" on the above requests. PI Supp. 33. But Plaintiffs offer no evidence that CDC was given advance notice of or in any way weighed in on Facebook's decisions about whether and how to update its misinformation policies. Those decisions rested entirely with Facebook. Plaintiffs also allege that CDC was aware that, in applying its policies, Facebook may have removed posts from its platform that made "debunked" claims. Pls.' PFOF ¶¶ 523, 525. But CDC's mere awareness that, applying its own policies, Facebook might remove hypothetical posts making claims that contradict CDC's science-based information about COVID-19 and vaccines, does not show that CDC "dictated" Facebook's decision to remove such posts, or that CDC otherwise entered into an agreement with Facebook to remove those posts. Again, as Ms. Crawford testified, it was not "CDC's role . . . to determine what" companies should "do with the scientific information that [CDC] provided." Crawford Dep. 161:20-23. And Plaintiffs cite no authority in support of the surprising proposition that a government entity cannot provide information to a social media platform upon request, regardless of whether the platform might use the information to inform its content moderation decisions.

At most, the evidence shows mere "acquiescence" by CDC in the company's independent decisions to moderate content—including potentially removing content—in reliance on CDC's science-based information. The Supreme Court "has never held that [the government's] mere

acquiescence in a private action converts that action into that of the [government].” *Flagg Bros. v. Brooks*, 436 U.S. 149, 164 (1978). Making that finding here would have especially problematic implications for the functioning of government and for private conduct. It would imply that social media companies are *precluded* by the First Amendment from choosing to rely on certain types of information—solely because it comes from the Federal Government—when determining how to implement their own terms of service. In other words, finding state action based on this conduct would restrict the decisionmaking of social media companies, not subject to constitutional constraints and endowed with First Amendment rights of their own, about the content of the speech that may be carried on their platforms. By the same token, holding CDC responsible for a social media company’s independent decision to rely on CDC’s information would subject the agency to constitutional liability in a host of unknown circumstances outside of its control. CDC cannot predict whether and how a social media company (or any other private company) may choose to use its information (much of it publicly available on its website) in carrying out the company’s own business policies. These are among the reasons that the Supreme Court has cautioned that state-action principles be construed so as to preserve the “‘essential dichotomy’ [] between public and private acts.” *Sullivan*, 526 U.S. at 53 (quoting *Jackson*, 419 U.S. at 349).

Similarly, the two BOLO meetings held in May 2021—in which CDC (with the help of Census) discussed misinformation narratives circulating online and where to find scientific information from CDC, *supra* Defs.’ PFOF § II.C.4, shows no joint participation in the companies’ content moderation decisions. Plaintiffs misconstrue the record when they assert that CDC and Census provided “lists and screenshots of specific posts that [the agencies’] believe[d] should be censored.” PI Supp. 32. In fact, the materials presented focused on misinformation “narratives,” Crawford Decl. ¶ 14 (Ex. 80); and while some slides included social media posts as clarifying

“examples,” neither CDC nor Census pressed the social media companies to “*cancel*,” or take any action relating to, those posts or any others. *Id.*; *see also* Defs.’ Resp. PFOF ¶¶ 550-562.

Next, Plaintiffs’ claim that CDC “asks platforms to provide reports about censorship,” PI Supp. 31, is evidentially unsupported and, in any event, shows no joint participation in any content moderation decision. Plaintiffs base their allegation on a March 2021 email exchange in which Ms. Crawford asked Facebook whether it could provide more information on the “*themes*” or “*types of COVID-19 misinfo[rmation]*” that Facebook had already removed. Crawford Ex. 44 at 3 (Dkt. 205-44) (emphases added); *see also* Defs.’ Resp. PFOF ¶¶ 455-458. Ms. Crawford testified that the reason for this request was to understand whether Facebook’s past, independent decisions to remove certain content from its platforms would affect what CDC viewed in the CrowdTangle reports. As she explained, the CDC team responsible for creating reports on “vaccine confidence” was concerned that if only “live posts” on Facebook were reflected in CrowdTangle reports, CDC might be unaware of other areas of confusion about COVID-19 vaccines reflected in removed posts. Crawford Dep. 258:1-11. Thus, CDC’s request was aimed at trying to understand the effects of Facebook’s decisions, not attempting to compel Facebook to take any particular action with respect to any particular post.

Relatedly, the record lends no support to Plaintiffs’ assertion that CDC inquires whether “specific content flagged by CDC and the Census Bureau has been removed,” or that Census “follows up to monitor whether platforms are removing” such content. PI Supp. 31. On the contrary, the evidence shows that CDC simply sought to understand *why* Facebook had taken down certain posts. *See* Crawford Ex. 8 at 1 (Dkt. 205-9) (email from CDC asking: “Were those [posts] re-evaluated by the [Facebook] moderation team or taken down for another reason?”). Indeed, Plaintiffs’ assertion that Census occasionally “check[ed]” to see whether things they might have

flagged or otherwise observed on Facebook had been removed, Crawford Dep. 117:19-21, confirms that Census did not know what action the company would take with respect to any specific content and was not “heavily involved” in the company’s content moderation decisions, *Howard Gault*, 848 F.2d at 555.

Finally, Plaintiffs state that “CDC’s and Census Bureau’s actions constitute significant encouragement[and] coercion,” in addition to “conspiracy or collusion.” PI Supp. 31. Yet Plaintiffs do not “discuss[]” any state-action theories relating to CDC conduct aside from their theory of “conspiracy or collusion.” It is Plaintiffs’ “obligation . . . to develop [those] arguments.” *Paez v. Wal-Mart Stores, Tex., LLC*, No. EP-20-CV-00321-DCG, 2022 WL 3216343, at *2 (W.D. Tex. Aug. 9, 2022). Having failed to do so, they have waived them. *See United States v. Scroggins*, 599 F.3d 433, 446 (5th Cir. 2010) (argument not adequately briefed is waived). In any event, there is no evidence that CDC or Census threatened adverse consequences if a social media company failed to take action concerning any particular post or account, or offered them significant incentives of encouragement to do so, as *Blum* requires. *Supra* Arg. § II.B.1-2. To the contrary, CDC never “instruct[ed]” a social media company “to do anything” with the information that was “debunked.” Crawford Dep. 138:12-14. CDC never “advise[d] or help[ed]” a social media company on the “enforce[ment] or appl[ication] of [its] policies to any particular social media post.” *Id.* at 105:1-19. CDC never required a social media company to take any particular action with any content the agency flagged as reflecting a misinformation theme that CDC’s scientific information could address. *Id.* at 87:13-88:18. The “consequence” to any social media company for failing to take action with respect to any particular content on its platform was “[n]othing.” *Id.* at 88:19-22.

In sum, none of the challenged conduct amounts to state action under any theory. Instead, the record confirms that social media platforms have exercised independent decision-making authority about whether and how to moderate content on their platforms, including content about COVID-19. Accordingly, there is no basis for attributing any decision of any social media company to CDC or Census. *See Blum*, 457 U.S. at 993. For all of these reasons, Plaintiffs are unlikely to succeed on the merits of their claims against CDC and Census.

b. *The FBI did not participate in “censorship” by sharing information about foreign malign influence efforts or potential election-related misinformation.*

The FBI shared information with platforms regarding particular accounts or websites that FBI had with high likelihood determined to be covertly operated by hostile foreign actors, Knapp Decl. ¶¶ 10-20 (Ex. 157), and, on or near the day of an election, posts (even by domestic sources) that the agency preliminarily had found to contain falsehoods regarding the time, place, and manner of voting in the impending election, *id.* ¶¶ 21-24. When the FBI did so, contrary to Plaintiffs’ contention (PI Supp. 34-36), each platform retained sole discretion over all content moderation decisions regarding the account or website at issue. The FBI shared information with “no strings attached,” such “that the social media companies c[ould] protect their platforms *as they deem[ed] appropriate.*” Chan Dep. 32:16-20 (emphasis added). The FBI “d[id] not control what” platforms would “do” with the shared information. *Id.* at 33:2. Because the private platforms never “ceded control” over those decisions to the FBI, Plaintiffs’ conspiracy theory of state action as to FBI has no likelihood of success. *O’Handley*, 62 F.4th at 1156. And Plaintiffs also disregard the narrow scope and the serious import to national security and to law enforcement of the information FBI shares with platforms.

In particular, the FBI’s Foreign Influence Task Force (FITF) shared information with the platforms that was (1) strategic (concerning techniques or processes through which foreign malign

actors operated), Chan Dep. 29:17-23, or (2) tactical (describing attributes, or “selectors,” including IP addresses and “hash values,” associated with particular social media accounts indicating their operators were foreign, such as the Russians), *id.* at 29:24-30:7, 30:10; *see* Knapp Decl. ¶¶ 10-20 (Ex. 157); *cf. United States v. Reddick*, 900 F.3d 636, 639 (5th Cir. 2018) (“hash value comparison allows law enforcement to identify” contraband “with almost absolute certainty, since hash values are specific to the makeup of a particular image’s data”). Platforms would “take the information that [FBI] share[d],” and then “validate” it “*through their own means*. And then *if they determine[d]* that these [were] accounts being operated by Russian state-sponsored actors, then they [would] take[] them down.” Chan Dep. 33:13-17 (emphasis added). Or, as Yoel Roth, formerly head of Twitter’s content moderation personnel, testified to Congress in 2023, the “FBI was quite careful and quite consistent to request review of the accounts, but not to cross the line into advocating for Twitter to take any particular action.” Ex. 10 at 16.

FITF shared information about a foreign malign actor’s social media activity *not* based on the content or viewpoint expressed in a post, but rather on the determination that the account is part of a covert effort by a foreign malign actor. *See* Knapp Decl. ¶¶ 16-20. That is, FITF would “only share information” about a particular social media account when the FBI had “high confidence” that the account “is attributed to a foreign-state actor.” Chan Dep. at 112:21-113:6. Put another way, FITF would only provide account-specific information after “gathering” appropriate “intelligence” and completing the declassification review. *Id.* at 111:13-112:8. Thus, when FITF “provided” platforms “with high confidence” information that particular accounts bore indications of foreign malign activity, the platforms then were “able to discover fake . . . accounts and take them down.” *Id.* at 32:21-24. Hostile foreign entities often exploit such fake online personas on social media sites created via false representations of the identity or other

characteristics of the account holder, including whether the holder is a person at all rather than a “bot” or automation.¹⁰⁰

In some instances, the platform’s own analytical work would lead the platform to find ten accounts connected to the one account about which FITF shared information, and the platform would then “take all of them down.” Platforms would only “sometimes” inform FITF “how many accounts were taken down” following FITF’s sharing of information. And when FITF “ask[s] for specifics,” platforms “don’t necessarily tell” FITF “all the time.” Chan Dep. 113:23-114:7; *see also* Defs.’ Resp. PFOF ¶¶ 860, 861, 867, 873, 889, 906-909, 918, 931, 938, 939, 942.

Similarly, as part of the FBI’s election integrity efforts FBI personnel, on or near the day of an election, would call platforms’ attention to accounts posting disinformation about the time, place, or manner of elections in various states. *Id.* at 162:10-163:3; *see* Knapp Decl. ¶¶ 21-24 (Ex. 157). A “hypothetical example” of such a post, which “would probably be flagged,” is one that asserted that “Political Party A” would “vote on Tuesday,” while “Political party B” would “vote

¹⁰⁰ As then-Deputy Attorney General Rod J. Rosenstein explained: “Together, bots and networks of paid trolls operating multiple accounts allow foreign agents to quickly spread disinformation and create the false impression that it is widely accepted.” Ex. 149 (Deputy Attorney General remarks of July 19, 2018); *see also* Kimmage Dep. 170:11-18, 279:17-280:4; Ex. 9 at 80 (“The spread of intentionally false information on social media is often exacerbated by automated, or ‘bot’ accounts.”); Ex. 154 at 2 (Press Release, Fed. Bureau of Investigation, 40 Officers of China’s National Police Charged in Transnational Repression Schemes Targeting U.S. Residents, (Apr. 17, 2023), 2023 WL 2968014) (describing *United States v. Yunpeng Bai, et al.* (E.D.N.Y. unsealed Apr. 17, 2023), which alleges that Chinese agents “created thousands of fake online personas on social media sites, including Twitter, to target Chinese dissidents through online harassment and threats,” and “disseminated . . . government propaganda and narratives to counter the pro-democracy speech of the Chinese dissidents . . . [Agents] created and maintained the fake social media accounts through temporary email addresses, posted official PRC government content, and interacted with other online users to avoid the appearance that [their] accounts were ‘flooding’ a given social media platform.”); Ex. 155 at 4 (Craig Timberg, *Secret trove offers rare look into Russian cyberwar ambitions*, Wash. Post (Mar. 30, 2023)) (describing documents of Russian defense contractor about “tactics for automating the creation of massive numbers of fake social media accounts for disinformation campaigns.”).

on Wednesday.” Chan Dep. 265:6-10. In the election security context, the FBI operated on the understanding that it is a potential election crime for a person in the United States (not simply a foreign person) to post deliberately misleading information about the time, place, or manner of casting a ballot. *Id.* at 270:2-13; *see, e.g., Anderson v. United States*, 417 U.S. 211, 225-26 (1974) (upholding 18 U.S.C. § 241 conviction for deceiving voters regarding which candidate was selected on their ballot where accused’s casting of fictitious ballots “injure[d] the right of all voters in a federal election to express their choice of a candidate and to have their expressions of choice given full value and effect”); *see also United States v. Mackey*, No. 21-cr-80, Dkt. 115 (E.D.N.Y. Mar. 31, 2023) (conviction for using Twitter to assert, among other things, that supporters of particular Presidential candidate could and should vote by posting specific hashtag on Twitter or Facebook, or by texting candidate’s first name to specific telephone text code); *United States v. Tobin*, No. 04-cr-216-01-sm, 2005 WL 3199672 (D.N.H. Nov. 30, 2005) (conviction for disruption of phone lines on election day).

In that regard, in 2020, the FBI San Francisco Field Office at which ASAC Chan works was responsible for relaying time/place/manner disinformation or malign-foreign-influence information to platforms. Chan Dep. 168:10-20. The FBI would convey such posts to platforms “to alert” them “to see if” the posts “violated” the platforms’ “terms of service,” and if the posts did so, the platforms “would follow their own policies, which may include taking down accounts.” *Id.* at 165:9-22 (emphasis added). Platforms would sometimes inform the FBI that they had taken down the posts, while in other instances they would state that a post at issue “did not violate” platform “terms of service.” *Id.* at 166:2-7; *see also* Defs.’ Resp. PFOF ¶¶ 879, 925-928, 966.

In the aftermath of Russian active interference in the 2016 Presidential Election, including via social media, the Senate Select Committee on Intelligence concluded: “Information sharing

between the social media companies and law enforcement must improve, and in both directions.” Consistent with that conclusion, the record shows that the FBI shared information with social media companies to counteract foreign malign influence efforts, and to raise platform awareness about posts with deliberately misleading information about the time, place, or manner of voting. But there is no evidence the FBI sought control over platform content moderation decisions, and no evidence the platforms ever ceded such control to the FBI. Plaintiffs’ “joint participation” theory thus fails against the FBI.

c. *Plaintiffs fail to establish that CISA worked jointly with social media companies to violate the First Amendment.*

Plaintiffs next contend that CISA “engages in extensive collusion with platforms on censorship” based primarily on the following activities: (1) “continuous meetings and coordination” between social media companies and CISA; and (2) CISA’s “flagging [of] content for censorship,” providing additional evidence of misinformation to social-media platforms, and platforms’ treatment of CISA as a “privileged reporter of misinformation.” PI Supp. 36-39. As discussed below, these activities neither individually nor collectively reflect any joint action depriving Plaintiffs of their constitutional rights.

▪ CISA’s Meetings with Social Media Companies. Plaintiffs first contend that CISA’s meetings with social media companies regarding general discussions of misinformation concerns support their claim of collusion. PI Supp. 37. Plaintiffs cite no authority to support the conclusion that meetings in which misinformation concerns generally were discussed—as an element of broader election-related security discussions—are sufficient to establish the requisite joint participation necessary for the Government to be responsible for private decisions, and indeed, the law is to the contrary. *See supra* at pp. 213-16.

In furtherance of its mission, CISA participated in regular meetings with social media companies about misinformation, including recurring USG-Industry meetings (and preparatory meetings in advance of these meetings); CISA Cybersecurity Advisory Committee (CSAC) quarterly meetings; CISA CSAC, Protecting Critical Infrastructure from Misinformation and Disinformation subcommittee meetings; and meetings convened by the EIS-GCC and the EI-SCC Joint Managing Mis/Disinformation Working Group. *See* Ex. 187 at 42-44. Contrary to Plaintiffs' factually unsupported claim that these meetings "provide avenues for government officials to push for censorship of disfavored viewpoints and speakers online," PI Supp. 27, Plaintiffs have failed to adduce any evidence that such alleged "push[es]" for censorship actually occurred during these meetings.

For example, the USG-Industry meetings, which began in 2018 (during the Trump Administration) and ended in 2022, included federal agency participants from CISA, DHS, the FBI, DOJ, ODNI, as well as technology company participants from Google, Facebook, Twitter, Reddit and Microsoft, and on occasion Verizon Media, Pinterest, LinkedIn, and the Wikimedia Foundation. Ex. 187 at 42-43; Scully Dep. 31:10-16.¹⁰¹ CISA never flagged or reported potential disinformation for social media or technology companies during or in connection with the USG-Industry meetings. Hale Decl. ¶ 68 (Ex. 97). Rather, the topics discussed generally included information sharing around election risk, briefs from the industry, threat updates, and highlights and upcoming watch outs. Ex. 187 at 43. For example, these meetings generally involved CISA educating social media platforms on how elections function and are administered, as well as potential threats to elections. Scully Dep. 224:22-25:9. Much of the discussions at these meetings

¹⁰¹ Plaintiffs claim that the USG-Industry meetings "have been ongoing for years and are continuing." PI Supp. 37. CISA has not participated in the USG-Industry meetings since the 2022 general election. Hale Dec. ¶ 69 (Ex. 97).

involved cyber security issues, as well as discussions about recurrent physical threats to poll workers. *Id.* at 235:11-22.

Although general concerns about misinformation and disinformation were discussed during these USG-industry meetings, they did not involve “pushes” to censor misinformation or disinformation, either in general or regarding specific individuals, posts, or accounts. *Id.* at 39:12-25. For example, CISA often reported on election infrastructure security, key election timelines, and publications designed to promote resilience to disinformation, such as a general disinformation resilience guide highlighting examples of the tactics use by foreign disinformation actors and outlining proactive measures to mitigate the effectiveness of such tactics entitled the Tactics of Disinformation. *Id.* at 39:12-18; Hale Decl. ¶ 68 (Ex. 97). Other agencies, including DOJ, FBI, ODNI, and DHS, would participate and provide unclassified, high-level reviews or strategic intelligence briefings. Scully Dep. 25:10-23. Members of the intelligence community discussed malign foreign actors who potentially were going to launch disinformation operations. *Id.* at 39:19-25. Industry participants would share high-level trend information from public reporting they had released. *Id.* at 40:2-41:15. In short, Plaintiffs have failed to provide any evidence that CISA or other federal agencies colluded with social media platforms during these meetings to deprive anyone of their constitutional rights, much less the rights of Plaintiffs. *See also* Defs.’ Resp. PFOF ¶¶ 861, 866, 978-990.

Similarly, the CISA CSCAC Committee quarterly meeting agenda and summaries, as well as participants, are all available on-line, Ex. 121, and contrary to Plaintiffs’ contention, a review of those materials fails to reflect any collusion between CISA and social media companies to deprive Plaintiffs (or anyone) of their constitutional rights through the removal of or other action against specific social media content. Instead, these materials reflect discussions concerning the

creation of a new, congressionally-mandated advisory committee; how CISA can better accomplish its mission of promoting the security and resilience of critical infrastructure such as by refining the national effort to identify and prioritize the most critical entities and infrastructure; improving efforts to strengthen the nation's cyber workforce; and enhancing public-private communication and collaboration in preventing and responding to cybersecurity incidents. *Id.*

In addition, the CSAC Protecting Critical Infrastructure from Misinformation and Disinformation Subcommittee (Subcommittee), which was directed to stand down in December 2022 because it had completed its taskings and provided its recommendations to CISA, did not involve any joint action by CISA and social media companies to remove or take any action concerning any social media content. *See* Ex. 187 at 43; Ex. 122 at 9 (stating that the MDM Subcommittee did not participate in, or recommend for others to participate in, any activities related to social media platform moderation or other activities that could be construed, even broadly, as “censorship”). Rather, CISA had established the Subcommittee for the purpose of evaluating and providing recommendations on potentially effective critical infrastructure-related counter-MDM efforts that fit within CISA's unique capabilities and mission. Ex. 123 at 1. Like the CSAC Committee, the Subcommittee operated transparently, and further details about the Subcommittee, its membership, and reports and recommendations, are posted on CISA's website, *Id.*; and Ex. 119. Specifically, the Subcommittee recommended that CISA take actions such as “shar[ing] up to date ‘best practices’ around how to proactively address and counter MDM based on the most recent research[,]” “[s]har[ing] information with state and local election officials[,]” and “[p]rotect[ing] the courts” from being the target of “an intensified campaign to undermine public trust in the legitimacy of their processes.” Ex. 124 at 1-3. Nothing in these materials reflects an attempt by CISA to “push” social media companies to censor mis- or disinformation or reflects

a conspiracy or collusion to deprive Plaintiffs—or anyone, for that matter—of their constitutional rights.

Finally, the EIS-GCC EI-SCC Joint MDM Working Group (Working Group), which was launched after the 2020 election, provides a forum through which the Election Infrastructure subsector could identify challenges in countering MDM and produce resources for addressing these challenges. *See* Ex. 187 at 44. CISA supports the Working Group by providing administrative and substantive support, such as facilitating meetings and helping to draft working group products. Hale Decl. ¶ 41 (Ex. 97). As noted above, the Louisiana Secretary of State oversaw the management and activity of the Working Group from the summer of 2021 to the summer of 2022. *Id.* ¶ 31.¹⁰² To date, the Working Group has published two guides to help state and local election officials and industry providers prepare for and respond to risks of disinformation. *Id.* ¶ 40.¹⁰³ The Working Group does not engage with social media companies, and it does not flag or report potential disinformation to social media or technology companies. *Id.* ¶ 43. Again, Plaintiffs have failed to adduce any evidence that these meetings involved federal agencies attempting to conspire or collude with social media companies to act on misinformation on their platforms, let alone a

¹⁰² The Louisiana Secretary of State has been a member of the EIS-GCC since May 2019, and while serving as the NASS President from the summer of 2021 to 2022 served as an EIS-GCC Executive Committee member. Hale Decl. ¶ 31 (Ex. 97). In this capacity, Louisiana received regular briefings (usually every two weeks) on CISA’s election security efforts, including briefings on CISA’s disinformation resilience work, and engaged in security planning activities for the Election Infrastructure Subsector. *Id.* In addition, the Missouri Secretary of State served as an alternative member of the EIS-GCC from 2018-2019 and attended the EIS-GCC biannual meetings and actively participated in briefings on the Election Infrastructure Subsector’s security and resilience efforts. *Id.* at ¶ 32.

¹⁰³ These publications include (1) the Rumor Control Page Start-Up Guide, which is designed for use by state, local, tribal and territorial government officials and private sector partners seeking to dispel inaccurate election security-related information by sharing accurate information; and (2) the MDM Planning and Incident Response Guide for Election Officials, which is designed for SLTT election officials and to help them understand, prepare for, and respond to disinformation that may impact the ability to securely conduct elections. Hale Decl. ¶ 40 (Ex. 97).

conspiracy to deprive Plaintiffs of their constitutional rights. *See also* Defs.’ Resp. PFOF ¶¶ 1011, 1235.

In short, like the allegations rejected by the Ninth Circuit in *O’Handley*, Plaintiffs’ “allegations establish, at most, a meeting of the minds to promptly address election misinformation, not a meeting of the minds to violate constitutional rights.” 62 F.4th at 1159.

▪ CISA’s Switchboarding Activities During the 2020 Election Cycle. Plaintiffs next claim that CISA’s conveyance of potential misinformation identified by state and local election officials—including officials from Plaintiffs Missouri and Louisiana, and membership associations in which officials from Missouri and Louisiana are members¹⁰⁴—to social media companies during the 2020 election cycle evinces a conspiracy to deprive Plaintiffs of their constitutional rights. PI Supp. 37-38. But this also fails to show that CISA was a joint participant in any content moderation action.

As discussed above, during the 2020 election cycle, CISA performed “switchboarding” work on behalf of state and local election officials. Scully Dep. 16:16-25. Switchboarding involved state and local election officials identifying for CISA information on social media that they believed constituted election-related misinformation, and CISA forwarding that information to social media companies for their informational awareness. *Id.* at 17:1-14; 23:19-24:2. Social media companies would then make independent decisions on the content that CISA forwarded to them based on the companies’ policies. *Id.* at 17:15-21.

¹⁰⁴ *See, e.g.*, Ex. 100; Ex. 101; Ex. 102; Ex. 103; Ex. 104; Ex. 105 and Hale Decl. ¶¶ 33, 70 (Ex. 97) (explaining that officials in Plaintiff States Missouri and Louisiana were among those who transmitted election security-related disinformation to CISA or CIS for the purpose of it being shared with the social media companies, that Louisiana is a member of NASS, and both Louisiana and Missouri are members of NASED).

When CISA set up its switchboarding function it met with social media companies and reaffirmed its “position that [CISA] would never ask them to take any specific actions, [and] that they should make decisions based on their terms of service.” *Id.* at 241:23-242:5. Accordingly, when CISA transmitted potential misinformation identified by state and local election officials to social media companies, CISA’s protocol was to include a notice stating that it was not requesting that the company take any particular action. *See, e.g.*, Ex. 106; Hale Decl. ¶ 72 (Ex. 97).

On occasion, at the request of election officials, CISA would ask social media companies to report back on how, if at all, they had addressed misinformation CISA flagged for the companies. Scully Dep. 163:17-164:17. Over time, however, the companies would report directly to the election officials about what actions, if any, they took concerning potential misinformation. *Id.* at 164:8-25.

Normally, CISA would receive a note from a social media company acknowledging that they received CISA’s email, but CISA often did not receive any kind of notification from a social media company regarding what decision it made concerning potential misinformation. *Id.* at 177:7-178:8. If a social media company needed additional information from an election official in order to make a decision about whether content violated its terms of service, CISA would try to support that effort. *Id.* at 219:25-220:13. For example, if state or local officials had made a public statement about potential misinformation, or could provide additional information about it, and a social media company asked for it, CISA would try to obtain that information for the company. *Id.* at 219:25-220:20.

The record in this case makes clear that social media companies made independent judgments in applying their content moderation policies to information that CISA “switchboarded” to them, and Plaintiffs concede as much. *See* Pls.’ PFOF ¶ 973 (quoting Brian Scully’s deposition

testimony that “the idea was that [the social media companies] would make decisions on the content that was forwarded to them based on their policies.”). For example, when CISA passed along information for social media companies’ awareness, the companies at times concluded that certain posts did not violate their content moderation policies and therefore determined that no action would be taken. *See, e.g.*, Ex. 105 at 1 (email from Twitter concluding that “Tweet was not determined to be a violation of our rule”); Ex. 107 at 1 (email from Twitter concluding that certain tweets violated its terms of service while others did not); Ex. 108 at 1 (email from Twitter stating “[t]weet was not in violation of our Civic Integrity Policy”); Ex. 109 at 1 (email from Twitter stating that the “Tweets to not be in violation of our policies” and that Twitter would “not take action on these Tweets”); Ex. 110 at 1 (email from Twitter stating “internal review of account data indicates [the account] is not suspicious”); Ex. 111 at 1 (email from Twitter stating “this tweet was not determined to violate our civic integrity policy”). *See also* Defs.’ Resp. PFOF ¶¶ 1076-1082.

Despite Plaintiffs’ voluminous preliminary injunction filings, nowhere do they identify facts supporting the notion that the social media companies failed to exercise their independent judgment in applying their content moderation policies. This is fatal to their claim of conspiracy. *See O’Handley*, 62 F.4th at 1158 (“The First Amendment does not interfere with this communication [between the Government and social media companies] so long as the intermediary is free to disagree with the government and to make its own independent judgment about whether to comply with the government’s request.”).

Furthermore, Plaintiffs fail to explain why CISA’s willingness to provide social media companies with additional context about misinformation identified by state and local governments reflects a “meeting of the minds” to deprive Plaintiffs of their constitutional rights. PI Supp. 39. Nothing about these activities negates the fact that social media companies independently applied

their content moderation policies in determining what action, if any, to take regarding potential misinformation.¹⁰⁵

d. *Plaintiffs fail to identify joint action by the Global Engagement Center and social media companies to remove any social media content.*

Plaintiffs also devote a paragraph of their brief to their claim that the State Department's Global Engagement Center (GEC) "colludes with social-media platforms on censorship," solely because it meets with social media companies about disinformation, including with the platforms' content moderation officials. PI Supp. 39-40.

But this too does not establish the type of "joint action" necessary to attribute private conduct to the Government. For example, the GEC's Technology Engagement Team (TET) meets with social media companies and exchanges information concerning the propaganda and disinformation tools and techniques used by the United States' adversaries. Kimmage Dep. 29:14-30:14. These meetings rarely include discussions about specific content posted on social media because the meetings are at a higher, more conceptual level about what foreign actors are doing, rather than specific content. *Id.* at 30:20-31:3.¹⁰⁶

¹⁰⁵ In a last-ditch effort to establish a conspiracy between CISA and social media companies Plaintiffs make two final arguments. First, they note that early in the 2022 election cycle a CISA employee asked social media companies to develop a one-page document that state and local election officials could use to help explain the social media companies' content moderation policies and how to report misinformation to the companies. PI Supp. 39. Second, Plaintiffs note that CISA runs an "operation center" on election day that engages in reporting misinformation to social media platforms. *Id.* Once again, Plaintiffs fail to explain how these activities reflect a deprivation of Plaintiffs' constitutional rights. In addition, nothing about these activities undermines the fact that social media companies independently apply their content moderation policies when potential misinformation was brought to their attention.

¹⁰⁶ Plaintiffs also claim that the fact that the GEC briefly had a liaison in Silicon Valley to connect with social media platforms is evidence of collusion. PI Supp. 39. Not so. For a time, the GEC had a location in Silicon Valley where one individual, Defendant Sam Stewart, was stationed. Kimmage Dep. 153:7-154:21. The purpose of the Silicon Valley location was to facilitate public/private coordination and broker constructive engagements between the Government and the technology sector, including social media companies, academia and research. *Id.* at 155:5-21. Mr.

Similarly, the GEC front office also engages with social media companies, primarily to build relationships with those companies to facilitate better communications at the working level. *Id.* at 31:12-20. The GEC did not flag specific content for social media companies during these meetings and did not give the companies any directives. *Id.* at 34:13-36:5. The GEC's purpose in advising social media companies about disinformation campaigns was not to influence social media companies' internal decisions regarding content, but to deepen their understanding of the actions of malign actors seeking to harm the national security, in line with the GEC's congressional mandate. *Id.* at 36:6-37:7. The GEC simply shared lessons learned, information about propaganda and disinformation techniques, and the campaigns and narratives of foreign propaganda and disinformation actors. *Id.* at 273:12-24. Sharing information can help social media companies identify coordinated inauthentic activity or to understand what these actors are trying to achieve, as well as to understand the types of narratives they are promoting. *Id.* at 279:17-280:4. Providing this information to social media companies is the first step in social media companies' ability to address foreign propaganda on their sites, as "[s]olving a problem has to start with understanding the problem." *Id.* at 280:9-281:3.

However, the GEC does not engage in any activities with the intention of proposing to social media companies that certain content should not be posted on their platforms. *Id.* at 37:16-25. Indeed, "[t]he Global Engagement Center does not tee up actions for social media companies

Stewart had conversations with social media companies in which the GEC shared information related to its mission to counter foreign propaganda and disinformation. *Id.* at 155:22-156:11. The social media companies also educated the GEC based on what sorts of propaganda and disinformation they were observing on their platforms. *Id.* at 157:11-23. Mr. Stewart no longer works for the GEC, and no one from the GEC is currently working from the Silicon Valley location. *Id.* at 154:14-21, 272:17-25. Plaintiffs have failed to identify anything collusive about these meetings.

to take,” and it “does not seek to influence the decisions of the social media companies.”¹⁰⁷ *Id.* at 38:2-3, 283:9-22. Nor does the GEC seek to provide information that might inform or influence social media companies’ decisions concerning the moderation of specific content. Kimmage Dep. 38:1-11; Bray Decl. ¶ 16 (Ex. 142) (stating that the GEC’s practice is not to request social media companies take any specific actions when sharing information with them).¹⁰⁸ Rather, whatever actions social media companies may take after receiving information from the GEC is left completely up to those companies. Kimmage Dep. at 273:12-274:8. *See also* Defs.’ Resp. PFOF ¶¶ 1123-1134.

In short, as with CISA, at most Plaintiffs have established that the GEC and social media companies were “generally aligned in their mission to limit the spread of misleading election

¹⁰⁷ In 2018, the GEC flagged a specific post for social media companies, and this involved the safety of State Department personnel. In this incident, a colleague of Mr. Kimmage, who was the then-Acting Coordinator of the GEC, informed him about a security situation in a Middle Eastern country where protestors were using a social media platform to communicate in ways that raised urgent security concerns, and the State Department was concerned for the safety of its personnel. Kimmage Dep. 38:12-39:25; Bray Decl. ¶ 17 (Ex. 142). Mr. Kimmage communicated directly with the social media platform and informed it that this was an ongoing concern. Kimmage Dep. 38:12-39:25. Mr. Kimmage was “very specific” in his interaction with the social media company that this was a real time situation where the State Department believed its personnel were at risk and asked the company to review the activity on these accounts to decide whether this content violated its terms of service. *Id.* at 38:12-39:25. Mr. Kimmage did not ask for anything to be removed from the sites, but he did express security concerns about the safety of State Department personnel. *Id.* at 38:12-39:25. These posts were from foreign actors. *Id.* at 40:1-3. Mr. Kimmage is unaware of what action, if any, social media companies took in response to his identification of this issue, because they did not report back to him. *Id.* at 40:4-7.

¹⁰⁸ When asked at his deposition about any efforts by the GEC to influence social media companies’ content moderation decisions, Daniel Kimmage, the acting GEC coordinator and principal deputy coordinator from 2017 until June 2021, stated that he never had a conversation with social media companies where he encouraged them to speed up the removal of posts. Kimmage Dep. 42:12-20, 47:16-20. Mr. Kimmage further testified that he is unaware of instances where someone at the GEC may have gone through a third party on the understanding that the party would convey a concern about content on a social media platform with a social media company. *Id.* at 55:20-56:8. Plaintiffs have failed to identify any evidence to the contrary.

information.” *O’Handley*, 62 F.4th at 1157. But such alignment falls far short of establishing that the GEC acted jointly with social media companies in acting against any particular content.

e. *No “joint action” transformed the private conduct of the Election Integrity Partnership or the Virality Project into state action attributable to Defendants.*

Plaintiffs next contend that “social-media companies work hand-in-glove with Defendants and their partners in state and local government, the Election Integrity Partnership, and the Virality Project to censor speech expressing viewpoints that Defendants disfavor.” PI Supp. 42. More specifically, Plaintiffs allege that certain Defendants are responsible for certain (unspecified) content moderation decisions made by social media companies due to two separate layers of alleged “joint participation”: (1) those Defendants allegedly worked jointly with the Election Integrity Partnership (EIP) and the Virality Project (VP) such that the EIP and the VP are state actors; and (2) the EIP and VP in turn worked jointly with social media companies to supposedly target certain content such that the social media companies are state actors.¹⁰⁹ *Id.* Plaintiffs are

¹⁰⁹ Plaintiffs contend that the EIP and VP acted as arms of the Federal Government due to the alleged level of involvement in the activities of those private organizations by CISA, the GEC, and the EI-ISAC. Plaintiffs claim that the EI-ISAC is a “government agency,” apparently because it receives funding from CISA. PI Supp. 42 (referring to the “CISA-funded EI-ISAC” as a “government agency”). Plaintiffs provide no legal or factual basis for its claim that the EI-ISAC is a government agency. As noted *supra*, at 73, the EI-ISAC is a voluntary organization managed by CIS with membership open to all state, local, tribal, and territorial organizations that support election officials. Hale Decl. ¶ 48 (Ex. 97). Plaintiffs cite no legal support for the proposition that the receipt of federal funding converts a private entity into an arm of the Federal Government. Indeed, Fifth Circuit precedent is to the contrary. *Fairley v. PM Mgmt.-San Antonio AL, LLC*, 724 F. App’x. 343, 344 (5th Cir. 2018) (affirming dismissal of section 1983 claim where plaintiff contended that nursing home’s receipt of federal funds converted the nursing home into a state actor). Moreover, the EI-ISAC is overseen by CIS, a non-profit organization, rather than the Federal Government. Scully Dep. 59:9-60-17; Hale Decl. ¶ 44 (Ex. 97). CISA did not fund CIS or the EI-ISAC for any of the work they provided in relation to the reporting of potential election security-related disinformation to social media or technology companies during the 2020 election cycle. *Id.* ¶¶ 50-51. Accordingly, any suggestion that the EI-ISAC is a Federal Government agency, or that its work can be imputed to CISA, lacks merit.

incorrect both as a matter of fact and as a matter of law, and they fail to establish a likelihood of success based on this state-action theory.

i. EIP

Plaintiffs contend that the EIP is pervasively entwined with CISA and the GEC such that the EIP is a state actor. PI Supp. 45. Plaintiffs are incorrect. To start, Plaintiffs mischaracterize the EIP. The EIP is a private partnership formed in 2020 that included the Stanford Internet Observatory, the University of Washington, Graphika, and the Atlantic Council's Digital Forensic Research Lab to better understand the information environment around elections. *See* Scully Ex. 1 at vi (Dkt. 209-2). The EIP's "primary goals were to: (1) identify mis- and disinformation before they went viral and during viral outbreaks; (2) share clear and accurate counter-messaging; and (3) document the specific misinformation actors, transmission pathways, narrative evolutions, and information infrastructures that enabled these narratives to propagate." *Id.* Among other actions, the EIP developed a "ticketing" system by which trusted external stakeholders and internal EIP analysts could flag misinformation that EIP would then analyze and, depending on the nature of the information, could flag for social media companies for their awareness. *Id.* at 8-10; 18-19.

The record reflects that several Stanford University students who interned at CISA and worked on election security matters came up with the idea for the EIP. *Id.* at 2; Hale Decl. ¶ 53 (Ex. 97). Based on lessons learned from the 2018 election, CISA personnel discussed with the interns a gap that existed in the resources of state and local election officials to identify misinformation that targeted their jurisdictions. Scully Dep. 84:10-22; Hale Decl. ¶ 53 (Ex. 97). Some of the Stanford students who interned at CISA independently made a presentation about this lack of resources to the Stanford Internet Observatory. Hale Decl. ¶ 54 (Ex. 97). Subsequently, CISA personnel had a conversation with Alex Stamos, who worked for the Stanford Internet

Observatory, one of the four organizations that comprised the EIP, and confirmed the existence of the gap in state and local resources. Scully Dep. 86:22-87:9; Hale Decl. ¶ 54 (Ex. 97). The Stanford Internet Observatory thereafter launched the EIP. Hale Decl. ¶ 55 (Ex. 97). CISA personnel's provision of feedback to interns about a gap in state and local election official resources and confirmation of that feedback to Mr. Stamos does not render the EIP a government body.

Furthermore, Plaintiffs do not provide any evidence that CISA or the GEC were entwined in the management or control of the EIP. Rather, Plaintiffs claim only that (1) CISA and the GEC were "major stakeholders" of the EIP; (2) CISA and the GEC provided information into EIP's "Intake Queue"; (3) the EIP receives some funding from a grant from the National Science Foundation and from Federal funding for the Atlantic Council (rather than from CISA or the GEC); and (4) "numerous current and former CISA personnel also have or had roles in the EIP." PI Supp. 42, 44.

Even assuming Plaintiffs were factually correct about each of these activities, which they are not, they have identified no legal authority to support the proposition that this minimal level of involvement rises to the level of management or control of the EIP. As an initial matter, CISA did not found, fund, or otherwise have any role in the management or operation of the EIP. Hale Decl. ¶¶ 52, 56-57 (Ex. 97); Ex. 122 at 7 ("CISA did not found, fund, or otherwise control the EIP."). Moreover, Plaintiffs overstate—and in some cases misstate—the evidence. For example, Plaintiffs contend that CISA and the GEC provided information to the EIP's "Intake Queue" for flagging misinformation for social media companies. But as Mr. Scully explained during his deposition, CISA generally did not share information with EIP, and CISA did not provide tickets flagging potential misinformation for the EIP. Scully Dep. 73:25-74:2; 106:3-9; *see* Scully Ex. 1 at 38 (Dkt. 209-2) (reflecting organizations that tagged alleged misinformation and not including CISA); Ex.

125 at 2 (“CISA did not send any examples of potential misinformation to EIP” and “EIP did not send any reports of false rumors or disinformation to social media companies on behalf of [DHS] or [CISA].”); Ex. 122 (stating that CISA did not send content to the EIP to analyze, and the EIP did not flag content to social media platforms on behalf of CISA); Ex. 74 (stating that EIP did not receive requests from CISA to eliminate or censor tweets).

And with respect to the GEC, during the 2020 election cycle, the GEC discovered certain posts and narratives on social media and digital media that originated from, were amplified by, or likely to be amplified by foreign malign influence actors—like Russia, the People’s Republic of China, Iran, and their proxies—that sought to spread propaganda or disinformation about the 2020 election. *See* Bray Decl. ¶ 18 (Ex. 142). The GEC flagged these posts and narratives for the EIP on approximately 21 occasions. *Id.* Plaintiffs fail to explain how the GEC’s limited submission of tickets to the EIP concerning foreign malign influence actors transforms the EIP into a state actor.

Furthermore, Plaintiffs fail to explain how funding by entities other than CISA or the GEC, such as a grant from the National Science Foundation and some Federal funding received through the Atlantic Council, reflects substantial entwinement in the EIP by CISA or the GEC. Many entities, such as universities, receive Federal funding and also engage in content moderation (for example, of student and faculty publications), and there is no basis for suggesting that the Federal government somehow becomes responsible for that content moderation under the First Amendment.

Finally, Plaintiffs substantially overstate the extent and relevance of the “roles” that certain CISA personnel have played at the EIP, and vice versa. Plaintiffs contend that “[n]umerous current and former CISA personnel also have or had roles in the EIP,” and that “key EIP personnel such as Alex Stamos, Renee DiResta, and Kate Starbird also have formal roles in CISA.” PI Supp. 44.

That is an overstatement, at best. First, Plaintiffs rely upon the EIP report’s acknowledgement of contributions to the report by Alex Stamos, Renee DiResta, Kate Starbird, Pierce Lowary, Alex Zaheer, and Matthew Masterson, in claiming that CISA was “pervasively entwined” with the EIP. *See* Pls.’ PFOF ¶ 1163. As explained in Defendants’ response to Plaintiffs’ proposed findings of fact, Messrs. Lowary and Zaheer’s contributions to the EIP report were in their roles at the Stanford Internet Observatory, and Mr. Masterson, a former CISA employee, was simply thanked by the EIP for his “additional feedback.” *See* Defs.’ Resp. to Pls.’ PFOF ¶ 1163 (citing Scully Ex. 1 at 16 (xii) (Dkt. 209-2)).¹¹⁰ Second, the “formal roles” Mr. Stamos and Ms. Starbird supposedly had at CISA were as members of CISA’s Cybersecurity Advisory Committee, an “independent advisory body” established in June 2021—after the 2020 election—that provides advice, consultation and recommendations to CISA on “the development, refinement, and implementation of policies, programs, and training pertaining to CISA’s cybersecurity mission.” *See* Ex. 119, at 1. And Plaintiffs identify no involvement of Ms. DiResta with CISA apart from a lecture she gave during a 2021 conference hosted by CISA. *See* Pls.’ PFOF ¶ 1171 (citing Cybersecurity Summit 2021: Responding to Mis, Dis, and Malinformation, YouTube (Oct. 27, 2021)). In short, Plaintiffs have failed to establish that CISA or the GEC were entwined in the management or control of the EIP.

At bottom, Plaintiffs have failed to identify any factual or legal basis to establish that CISA or the GEC’s involvement with the EIP transformed the EIP into a state actor for purposes of the First Amendment. Plaintiffs accordingly cannot establish a substantial likelihood of success on this First Amendment theory. *See also* Defs.’ Resp. PFOF ¶¶ 1136-1235.

¹¹⁰ In addition, Mr. Stamos, Ms. DiResta, Mr. Lowary, and Mr. Zaheer contributed to the EIP report in their capacity as “students, staff, and researchers” for the Stanford Internet Observatory, and Ms. Starbird contributed to the report in her capacity as an employee of the University of Washington Center for an Informed Public. Defs.’ Resp. to Pls.’ PFOF ¶ 1163.

ii. The Virality Project

Plaintiffs next claim that “[f]ederal officials are pervasively entwined with the Virality Project.” PI Supp. 50. Plaintiffs argue that this entwinement between the Virality Project and OSG is established by the following six facts: (1) OSG “pushes platforms to share information with the Virality Project”; (2) OSG coordinated with the Virality Project on the Surgeon General’s Health Advisory; (3) the Surgeon General “repeatedly echoes the key messaging from the Virality Project”; (4) the Surgeon General launched his Health Advisory on Misinformation at an event hosted by the Stanford Internet Observatory, which is one of the groups that leads the Virality Project; (5) the Virality Project had “strong ties with several federal government agencies,” including OSG, and was involved in “flagging vaccine-related content on social media”; and (6) OSG “incorporated [the Virality Project’s] research and perspectives into its own vaccine misinformation strategy.” *Id.* None of these actions, either individual or collectively, establishes sufficient entwinement between OSG and the Virality Project to convert the private conduct of the Virality Project into state action. And as discussed *infra*, Plaintiffs have failed to establish certain of these alleged “entwinements” to begin with.

First, Plaintiffs have provided no evidence that OSG “pushes platforms to share information with the Virality Project.” PI Supp. 50. In support of this claim, Plaintiffs cite a portion of the deposition of Eric Waldo, a former senior advisor to the Surgeon General, where he discussed a conversation the Surgeon General had with an employee of Facebook. During this conversation, the Surgeon General raised the possibility of having external researchers validate the extent to which misinformation spreads on social media platforms. *Id.* at 50 (citing Waldo Dep. 35:20-26:2). But nowhere in this discussion does Mr. Waldo suggest that the Surgeon General asked Facebook to share information with the Virality Project (or any specific individual or entity),

much less that he “pushed” Facebook to do so. There is no evidence that the Virality Project was even mentioned in that conversation; Mr. Waldo, in fact, testified that he had never heard of the Virality Project. Waldo Dep. 207:10-21. (Plaintiffs also fail to explain what a request for Facebook to share information with the Virality Project would have had to do with “censoring” speech on Facebook.)

Second, Plaintiffs’ claim that the Surgeon General “coordinated” with the Virality Project on his Health Advisory also is unsupported by the record. For example, Mr. Waldo stated that he did not know who was consulted in the development of the Surgeon General’s Health Advisory because that work predated his time in the office. Waldo Dep. 37:13-22. Mr. Waldo explained that OSG coordinated the launch of the Health Advisory with Renee DiResta, who worked for the Stanford Internet Observatory. *Id.* at 37:23-38:8. And while the Stanford Internet Observatory was one of the founders of the Virality Project, Plaintiffs put forward no evidence that Ms. DiResta participated in the rollout of the Health Advisory as part of her work for the Virality Project rather than the Stanford Internet Observatory. *See* Waldo Dep. 283:2-18 (stating he was unaware of any involvement by OSG with the Virality Project but was aware that it had involvement with the Stanford Internet Observatory concerning the announcement of the Health Advisory); Lesko Decl. ¶ 15 (Ex. 63) (stating that OSG did not understand the launch of the Health Advisory to be a Virality Project event).

Third, there is no evidence that OSG “echo[ed] the key messaging from the Virality Project.” PI Supp. 50. The Virality Project’s final report (released in February 2022) postdated many—if not most—of the Surgeon General’s public and private statements on health misinformation that are included in the record, including the Health Misinformation Advisory (released in July 2021). There is no evidence that the Surgeon General was even aware of the

Virality Project’s “key messaging.” The fact that OSG and the Virality Project shared a view that misinformation related to COVID-19 could potentially be harmful—a view that is widely held, including by 132 countries’ governments, *see supra* at 13-14—is not evidence of entwinement of any kind.

Fourth, Plaintiffs have failed to produce any evidence that OSG “flagg[ed] vaccine-related content on social media” to the Virality Project. *See* PI Supp. 50. The only support Plaintiffs identify for this claim is a sentence in a Virality Project report that states: “The Virality Project built strong ties with several federal government agencies, most notably [OSG] and the CDC, to facilitate bidirectional situational awareness around emerging narratives.” *See* Scully Ex. 2 at 17 (Dkt. 209-3) (Virality Project Report). Plaintiffs provide no basis to equate facilitation of “bidirectional situational awareness around emerging narratives” with “flagging” “vaccine-related content on social media.” To the contrary, the record shows that OSG never provided any “tips, flags, tickets, reports, or other form of notification or input to the Virality Project concerning posts or accounts on social media.” Lesko Decl. ¶ 16 (Ex. 63).

More fundamentally, even if Plaintiffs could establish each of these facts, which they cannot, Plaintiffs have identified no evidence that OSG exercised any management or control of the Virality Project, so as to convert its activities into state action. *See Brentwood Acad.*, 531 U.S. at 295. Finally, Plaintiffs do not even attempt to argue that the Virality Project failed to utilize its own independent judgment in conducting its work, or that social media companies that received information from the Virality Project failed to do the same. *See Pikaluk v. Horseshow Ent., L.P.*, 810 F. App’x 243, 247 (5th Cir. 2020).

Accordingly, Plaintiffs have failed to establish a likelihood of success in establishing that the activities of the Virality Project constitute state action attributable to Defendants. *See also* Defs.’ Resp. PFOF ¶¶ 1236-1365.

* * * *

Neither the EIP nor the Virality Project is a state actor, and even if Plaintiffs could establish that they are, Plaintiffs have not shown that their actions, in turn, converted the content moderation decisions of any social media company into state action. That is to say, Plaintiffs do not provide any evidence that either of these organizations threatened or pressured any social media company to take action of any kind against particular content, or speakers, when flagging potential misinformation for the companies to independently evaluate under their terms of service.¹¹¹ Nor is there any evidence that any social media company regarded (or acted on) communications from the EIP, or the Virality Project, as threats or pressure to “censor” speech. Rather, the evidence is clear that both the EIP and the Virality Project simply flagged information for social media companies so that those companies could apply their independent judgment to determine whether the information violated their terms of service—terms to which all users agree. *See* Waldo Ex. 28 at 17 (Dkt. 210-3) (“Six social media platforms engaged with [Virality Project] tickets—acknowledging content flagged for review and acting on it in accordance with their policies”); Ex. 74 (noting that Twitter “examined any reports sent to it by the Virality Project to determine if the content was violating of its policies and did not take action in cases where Twitter felt its existing policies were not violated”); Scully Ex. 1 at 17 (Dkt. 209-2) (“The EIP established relationships with social media platforms to facilitate flagging of incidents for evaluation when content or

¹¹¹ Indeed, Plaintiffs’ misguided coercion theory is particularly inapt with respect to the EIP, as its activities began before the current Administration.

behavior appeared to violate platform policies[.]”); Ex. 125 at 3 (“Social-media platforms, not EIP, decided which action to take.”); Ex. 74 (stating that the EIP provided public factual findings to social media platforms, but had no control over content moderation, censorship, or labeling posts); Ex. 122 (stating that EIP’s “researchers made independent decisions about what to pass on to platforms, just as the platforms made their own decisions about what to do with our tips”).

Reflective of the fact that social media companies independently applied their terms of service when they received tips about potential misinformation from these organizations, the EIP reported that only 35% of the time potential misinformation was shared with companies was the misinformation “labeled, removed, or soft blocked.” Scully Ex. 1 at 27, 40 (Dkt. 209-2) (“No action was taken on 65%.”).

Here, Plaintiffs’ claims of state action are even weaker than the ones rejected in *O’Handley*, discussed *supra* at 214-16. Neither the EIP nor the Virality Project possesses any regulatory authority—indeed, they are private actors. There is no evidence that either the EIP or the Virality Project threatened or pressured social media companies when identifying potential misinformation for their consideration. Rather, the evidence reflects that the EIP and the Virality Project simply flagged misinformation for social media companies, and those companies then independently applied their terms of service. Plaintiffs cannot establish state action implicating the First Amendment under these circumstances.

f. *Social media companies’ voluntary consultation with agencies for scientific and medical information about COVID-19 does not support a state action finding relating to “other agencies.”*

Finally, Plaintiffs attempt to bring “other agencies” within the reach of their capacious joint-action theory through a series of meritless arguments that turn on mischaracterizations of the evidence. *See* PI Supp. 40-41. First, Plaintiffs posit that social media companies “routinely treat certain federal agencies, and “CDC in particular,” as fact-checkers having “authority to dictate”

what appears on their platforms. *Id.* at 40. As explained above, Arg. § II.B.4.a., that extravagant assertion lacks any evidentiary basis. As support, Plaintiffs point to Facebook’s requests for views about COVID-19 and vaccines from various agencies, including CDC and NIAID, when Facebook was assessing the validity of factual claims circulating on its platform. PI Br. at 40. But Plaintiffs point to no precedent teaching that Facebook’s (or any other company’s) voluntary choice to seek advice regarding available scientific and medical information about the virus and the vaccines can support a state action finding. And the cited correspondence does not indicate that, in voluntarily electing to treat the agencies as reliable sources of scientific information—even as “privileged” sources, as Plaintiffs put it—any company somehow surrendered its “plenary power to reexamine” agencies’ views, and “to reject them” when determining whether certain claims constituted “misinformation.” *Cf. Nat’l Collegiate Athletic Ass’n*, 488 U.S. at 194-95 (distinguishing *Bates v. State Bar of Ariz.*, 433 U.S. 350, 360 n.12, 362 (1977), in holding that a private association was not a state actor where public university “retained the authority to withdraw from the [private association] and establish its own standards”). There is no evidence that any agency demanded or implored that companies accord any deference to its views, dispositive or otherwise, or that companies take any particular action concerning any particular post.

Plaintiffs also point to a handful of instances in which NIAID communications staff notified a social media company of posts impersonating Dr. Fauci and asked for their removal; and they say that other officials made similar requests. PI Supp. 40. As noted, impersonating a federal official may violate both federal law, 18 U.S.C. § 912, and the social media companies’ own content moderation policies, *supra* at 157 (noting Facebook and Twitter mechanisms for the

public to report imposter accounts).¹¹² But as with the communications over the scientific validity of certain claims, these communications lack any support for Plaintiffs' extraordinary assertion that social media companies have ceded "ultimate authority," PI Supp. 40, to the Government to "dictate" what appears on their platforms.

Next, Plaintiffs assert that social media companies' efforts to amplify the Federal Government's perspectives on the health benefits of COVID-19 vaccines, among other topics, constitutes "collusi[ve]" state action. PI Supp. 41. That argument is also mistaken. The Constitution preserves the Government's leeway to craft and to put forward government views on matters of public import. *See Walker*, 576 U.S. at 207-08. The Government's willingness to have its views about vaccines promoted on social media reflects a commonsense interest in sharing what the Government viewed as important public health information on platforms capable of reaching a large share of the population in the middle of a deadly pandemic. Such a willingness does not reflect "collusion" between the Government and the social media companies to suppress Plaintiffs' preferred views of controversial issues that arose during the pandemic. Plaintiffs thus cannot show any likelihood of success on the merits of their claims against some category of "other agencies" that have supposedly "colluded" with social media companies to violate any Plaintiffs' First Amendment rights.

5. Even if Plaintiffs could show that any social media content moderation actions amount to state action, the Court cannot necessarily conclude that all of those content moderation actions violate the First Amendment.

In addition to suffering from numerous defects on its own terms, the sprawling and imprecise nature of Plaintiffs' legal theory also makes it impossible for them to pinpoint which content moderation decisions are attributable to Defendants, thus precluding the Court from

¹¹² Dr. Fauci was not involved in these requests and did not testify to his views on the removal of "parody" accounts, despite Plaintiffs' contrary assertions, *see* PI Supp. 40. *Supra* PFOF § II.E.

conducting the relevant First Amendment analysis. Plaintiffs presume, incorrectly, that each relevant content moderation decision would be subject to, and would fail, strict scrutiny. But content moderation actions may apply to different forms of speech, some of which merit less protection than others, or even none. And moderation actions against certain content may have critical national security justifications and would survive the highest level of scrutiny. The Court thus cannot assume that all relevant content moderation decisions necessarily violate the First Amendment.

Critically, Plaintiffs do not, and likely cannot, catalogue the types of speech that, allegedly, either currently is or will be subject to social media companies' moderation actions that are attributable to the Government. They identify examples of speech previously subject to moderation actions, but they seek injunctive relief relating to ongoing and future unspecified moderation actions. Given Plaintiffs' failure to submit evidence on the specific speech that is currently or will soon be subject to relevant moderation actions, the Court cannot conduct the analysis necessary to conclude that the moderation actions violate the First Amendment.

To begin with, some categories of speech—even if deemed “core political speech” as Plaintiffs label them—fall outside the protections of the Free Speech Clause. Thus, moderation actions against that speech would not necessarily violate the First Amendment, even if such actions are attributed to the Government (which they are not).

For example, the First Amendment permits “restrictions upon the content of speech in a few limited areas” without triggering scrutiny at all, including the areas of solicitation, aiding and abetting, fraud, conspiracy, and incitement. *United States v. Stevens*, 559 U.S. 460, 468 (2010) (citation omitted); see, e.g., *Giboney v. Empire Storage & Ice Co.*, 336 U.S. 490, 502 (1949). To take one of those areas: The Free Speech Clause “does not shield fraud.” *Illinois v. Telemarketing*

Assocs., Inc., 538 U.S. 600, 612 (2003); *see, e.g., Stevens*, 559 U.S. at 468; *Commodity Trend Service, Inc. v. CFTC*, 233 F.3d 981, 993 (7th Cir. 2000). And a “difference of opinion as to whether a product had any value at all d[oes] not bar a fraud order based on claims of far greater curative powers than the product could actually have.” *Reilly v. Pinkus*, 338 U.S. 269, 273 (1949) (discussing *Leach v. Carlile*, 258 U.S. 138, 139 (1922)). So, for example, if a user made a social media post intended to promote potential commercial uses of a drug as a remedy for COVID-19 via a fraudulent statement within the scope of the wire-fraud statute, 18 U.S.C. § 1343, the First Amendment would not protect that post, just as the First Amendment would not bar the Government from prosecuting the fraud.

In any event, even if strict scrutiny were to apply to some of the content moderation episodes, certain, relevant moderation actions may satisfy it. The Supreme Court has observed that although strict scrutiny sets a high bar, cases in which it is met “do arise.” *Williams-Yulee v. Fla. Bar*, 575 U.S. 433, 444 (2015) (quoting *Burson v. Freeman*, 504 U.S. 191, 211 (1992) (plurality opinion)). As explained below, Arg. §§ III, IV-B, *infra*, certain moderation actions taken by social media platforms concern malign foreign actors, and if Plaintiffs argue that those moderation actions are attributable to the Defendants, the Court would have to weigh whether those actions, with the ensuing national security benefits, satisfy strict scrutiny.

For example, when the speech in question implicates the Government’s foreign affairs and national security responsibilities, a Free Speech Clause claim does not automatically triumph over the exercise of those powers. *See Dep’t of the Navy v. Egan*, 484 U.S. 518, 527 (1988) (the Government’s interest in national security is “compelling”); *Guillot v. Garrett*, 970 F.2d 1320, 1324 (4th Cir. 1992) (Luttig, J.) (“[F]oreign policy [is] the province and responsibility of the Executive.” (quoting *Egan*, 484 U.S. at 529; *Haig v. Agee*, 453 U.S. 280, 293-94 (1981))); *Holder*

v. Humanitarian L. Project, 561 U.S. 1, 33-34 (2010). Some of the communications with social media companies that Plaintiffs challenge involved agencies, such as the FBI and the State Department, that are statutorily authorized, at a minimum, to address malign foreign-origin misinformation. At least as to the activities of such agencies concerning posts from hostile foreign governments or foreign non-governmental organizations (such as al-Qaida)—entities unable to seek shelter under the Free Speech Clause, *Agency for Int’l Dev. v. Alliance for Open Soc’y Int’l, Inc.*, 140 S. Ct. 2082 (2020)—Plaintiffs have not demonstrated a likelihood of succeeding on their claim under the First Amendment.

C. Plaintiffs are not likely to prevail on their APA and Ultra Vires claims.

Plaintiffs argue that the various alleged communications by Defendants—none of which has imposed any legal obligations on any party—are ultra vires because they were not expressly authorized by statute. PI Supp. 53-55. Government officials, however, need no express statutory authorization to simply engage in basic speech.

Although “an administrative agency’s power to promulgate legislative regulations is limited to the authority delegated by Congress,” *Bowen v. Georgetown Univ. Hosp.*, 488 U.S. 204, 208 (1988) (emphasis added), “an agency without legislative rulemaking authority may” still “issue . . . non-binding statements,” *Batterton v. Marshall*, 648 F.2d 694, 702 (D.C. Cir. 1980). A “legislative-type rule,” or “substantive rule,” is one that is “binding” or has the “force of law,” and “affect[s] individual rights and obligations.” *Chrysler Corp. v. Brown*, 441 U.S. 281, 302 (1979); see also *Walmart Inc. v. U.S. Dep’t of Just.*, 21 F.4th 300, 308 (5th Cir. 2021) (“Non-substantive rules” include “non-binding agency policy statements”); *Changizi*, 602 F. Supp. 3d at 1057 (“[A]gencies may issue ‘non-binding [policy] statements’ on various topics even if they lack ‘legislative rulemaking authority’ in relation thereto”) (citation omitted).

Here, none of the alleged communications at issue is a “legislative” or “substantive” rule that requires Congressional authorization. They are non-binding communications that impose no obligations, and confer no rights, on any person. No person or organization—including any social media platform or social media user—is required to take any action as a result of those communications. And none of those communications imposes any penalty on any party that declines to take any particular action. Those communications amount to routine government speech conveying a policy view, akin to public remarks made by any other government official. Indeed, government officials across multiple administrations have engaged in televised interviews or have held press conferences, and Plaintiffs never suggest all of those activities were expressly authorized by some statute.

Accordingly, Defendants did not require any Congressional authorization before expressing their views on social media practices.¹¹³ In any event, a government official has a right to engage in non-binding speech on matters the official finds important.¹¹⁴ *See Summum*, 555 U.S.

¹¹³ In ruling on Defendants’ motion to dismiss, the Court noted that, in its view, Plaintiffs had properly alleged that Defendants imposed a “prior restraint” on social media users, and thus their conduct required statutory authorization. *See* MTD Order 72. But Plaintiffs refer to no statement or action by any Defendant that legally restrained any communications by social media users. Any social media account restrictions are imposed by the platforms themselves, not by any Defendant.

¹¹⁴ Moreover, many of the Defendant agencies have been given broad, express statutory authority to carry out their respective missions, which would encompass relevant communications with social media companies. *See, e.g.*, 6 U.S.C. § 652 (CISA is charged with leading the national effort to understand, manage, and reduce risk to the nation’s cyber and physical infrastructure); 28 U.S.C. § 533, (the Attorney General may appoint officials to, inter alia, detect crimes against the United States and to conduct such other investigations regarding official matters under the control of the Department of Justice); 22 U.S.C. § 2656 note (GEC is formed “[t]o direct, lead, synchronize, integrate and coordinate efforts of the Federal Government to recognize, understand, expose, and counter foreign state and foreign non-state propaganda and disinformation efforts aimed at undermining or influencing the policies, security, or stability of the United States and United States allies and partner nations.”); 42 U.S.C. § 300u (HHS is authorized to “formulate national goals, and a strategy to achieve such goals, with respect to health information and health promotion . . . and education in the appropriate use of health care”); 42 U.S.C. § 284(b)(1)(F) (NIAID has the

at 467–68 (“A government entity has the right to ‘speak for itself’” and it “is entitled to say what it wishes . . . and to select the views that it wants to express,” otherwise “it is not easy to imagine how government could function”) (citations omitted). Thus, Plaintiffs cannot make a showing of ultra vires conduct based on nothing more than Government speech about, and with, social media companies. An ultra vires claim is valid only if a plaintiff can show that an official acted “without any authority whatever,” or without any “colorable basis for the exercise of authority.” *See Danos v. Jones*, 652 F.3d 577, 583 (5th Cir. 2011). Finally, Defendants incorporate by reference their argument that Plaintiffs have failed to identify a sovereign immunity waiver for their ultra vires claim. *See* Defs.’ Reply 36-39. Plaintiffs’ ultra vires claim thus fails.

For similar reasons, Plaintiffs’ APA claims fail as well. The APA provides a right to judicial review to persons suffering legal wrong because of, or adversely affected or aggrieved by, “agency action,” 5 U.S.C. § 702; *see id.* § 706(2), that is “final,” *id.* § 704, *see also Bennett*, 520 U.S. at 175. As shown by Defendants in support of their motion dismiss, Plaintiff have failed to allege—and now to establish—that they are challenging any conduct by Defendants that amounts to “agency action.” Defs.’ MTD 45-48.¹¹⁵

Nor have Plaintiffs met the finality requirement. To constitute “final agency action,” the action must be “identifiable” and “specific,” and must determine “rights or obligations” from

authority to “develop, conduct, and support public and professional education and information programs”).

¹¹⁵ The APA defines “agency action” as including “the whole or a part of an agency rule, order, license, sanction, relief, or the equivalent or denial thereof, or failure to act.” 5 U.S.C. § 551(13); *see also id.* § 551(4), (6), (8), (10), (11) (defining “rule,” “order,” “license,” “sanction,” and “relief”). Note that the President is not subject to the APA at all. *See Dalton v. Specter*, 511 U.S. 462, 470 (1994) (“The actions of the President . . . are not reviewable under the APA because . . . the President is not an ‘agency’”) (citation omitted). The President’s advisers are not considered agencies either. *Cf. Ass’n of Am. Physicians & Surgeons, Inc. v. Clinton*, 997 F.2d 898, 905 (D.C. Cir. 1993).

“which legal consequences will flow.” *Sierra Club v. Peterson*, 228 F.3d 559, 565 (5th Cir. 2000) (citation omitted). Additionally, the plaintiff “must show some *direct*, final agency action involving the particular plaintiff.” *Texas v. Rettig*, 987 F.3d 518, 529 (5th Cir. 2021) (emphasis added), *cert. denied sub nom. Texas v. Comm’r of Internal Revenue*, 142 S. Ct. 1308 (2022). Here, none of the alleged communications by Defendants constitutes “final agency action.” As explained above, those communications impose no requirement on any party, and so they do not determine any “rights or obligations.” *Peterson*, 228 F.3d at 565 (citation omitted). Nor do any of those communications “direct[ly]” affect any “particular plaintiff.” *Rettig*, 987 F.3d at 529 (citation omitted). To the extent they affect Plaintiffs at all, those effects would stem from the independent decisions of private social media companies, each of which is free to ignore Defendants. Thus, Defendants’ alleged communications do not constitute “final agency action,” and Plaintiffs’ APA claims fail for that reason alone.

Additionally, Plaintiffs’ APA claims also fail on the merits. Their contentions that Defendants have acted in “arbitrary [and] capricious” fashion and “contrary to constitutional right” all hinge on the flawed assertion underlying their First Amendment claim: that Defendants have imposed some legal restriction on speech. *See* PI Supp. 54. Their argument that Defendants have failed to observe the APA’s requirements for notice-and-comment rulemaking, *id.* at 55; *see* 5 U.S.C. § 553(b), is specious. Those requirements apply only to an agency’s promulgation of “final, legislative rules.” *See Flight Training Int’l, Inc. v. Fed. Aviation Admin.*, 58 F.4th 234, 240 (5th Cir. 2023). Defendants’ meetings and e-mails with social media companies, and their public remarks at press briefings, do not constitute APA “rule[s]” to begin with. 5 U.S.C. § 551(4) (defining a “rule” as “the whole or a part of an agency statement of general or particular applicability and future effect designed to implement, interpret, or prescribe law or policy”). Nor

are they “legislative” rules, that is, “rules having the force and effect of law . . . because they are promulgated pursuant to legislative authority delegated to the agency by Congress,” and that “modif[y] or add[] to a legal norm.” *Flight Training Int’l, Inc.*, 58 F.4th at 241 (citations omitted). Defendants’ actions meet none of these criteria. Finally, Defendants incorporate by reference the argument that Plaintiffs have also failed to establish that they are challenging any conduct that amounts to discrete “agency action,” and therefore that they have not established any waiver of sovereign immunity as to this claim. *See* Defs.’ MTD 45-48. Plaintiffs’ APA claims thus fail. Plaintiffs’ APA claims thus fail.

III. Plaintiffs fail to satisfy the remaining preliminary injunction requirements.

An injunction also is not appropriate because the balance of the equities and the public interest tip sharply in Defendants’ favor. *See Nken v. Holder*, 556 U.S. 418, 435 (2009) (holding that “[t]hese factors merge when the Government is the opposing party”). As an initial matter, given that Plaintiffs cannot establish the first two factors necessary to obtain an injunction, “it is clear they cannot make the corresponding strong showings [on the second two factors] required to tip the balance in their favor.” *Davis v. Pension Benefit Guar. Corp.*, 571 F.3d 1288, 1295 (D.C. Cir. 2009); *Mayo Found. for Med. Educ. & Rsch. v. BP Am. Prod. Co.*, 447 F. Supp. 3d 522, 535 (N.D. Tex. 2020) (declining to address the final two *Winter* factors because plaintiff could not establish the first two factors).

But even if Plaintiffs could satisfy one or both of those factors, the remaining *Winter* factors tip decisively in Defendants’ favor. Although there is no dispute that protecting First Amendment rights when they are genuinely at risk is in the public interest, the speculative risk of harm to Plaintiffs’ asserted interests must be weighed against the substantial, widespread obstruction of legitimate government functions that would result if the Court entered Plaintiffs’ proposed injunction—functions that are critical to the public welfare and the integrity of our democratic

processes. *See Winter*, 555 U.S. at 24 (“In exercising their sound discretion, courts of equity should pay particular regard for the public consequences in employing the extraordinary remedy of injunction.”) (citations omitted).

First, as also shown in the discussion of the proposed injunction’s overbreadth, *infra*, Arg. § IV.B, Plaintiffs’ proposed injunction would significantly hinder the Federal Government’s ability to combat foreign malign influence campaigns, prosecute crimes, protect the national security, and provide accurate information to the public on matters of grave public concern such as health care and election integrity. *See* Knapp Decl. ¶¶ 5-50 (Ex. 157); Declaration of Brandon Wales, Exec. Dir., CISA (“Wales Decl.”) ¶¶ 27-30 (Ex. 167); Crawford Decl. ¶¶ 20-23 (Ex. 80); Lesko Decl. ¶¶ 18-19 (Ex. 63); Bray Decl. ¶¶ 12-15 (Ex. 142). These government activities are essential to the nation’s welfare and safety, and outweigh the speculative First Amendment interests Plaintiffs assert here. *Def. Distrib. v. U.S. Dep’t of State*, 838 F.3d 451, 459 (5th Cir. 2016) (holding that any First Amendment interest by plaintiffs was outweighed by stronger interest of Federal Government in national security); *Am. Civil Liberties Union v. Clapper*, 785 F.3d 787, 826 (2d Cir. 2015) (recognizing maintenance of national security as “public interest of the highest order”); *Donald J. Trump for President, Inc. v. Way*, 492 F. Supp. 3d 354, 375 (D.N.J. 2020) (recognizing “that the public interest favors preserving the integrity of the election process”); *Beverly v. United States*, 468 F.2d 732, 741 n.13 (5th Cir. 1972) (in assessing request for stay pending appeal, court was “particularly mindful that the grant of a stay would be contrary to the public interest in the orderly investigation of criminal activities by a federal grand jury”); *cf. Spiegel v. City of Houston*, 636 F.2d 997, 1002 (5th Cir. Unit A 1981) (reversing preliminary injunction that “by its terms . . . in its overbreadth forbids good faith as well as bad faith law

enforcement activities”); *Roviaro v. United States*, 353 U.S. 53, 59 (1957) (recognizing “the public interest in effective law enforcement”).

The FBI, for example, routinely shares intelligence with private sector entities, including social media platforms, so that those entities can use that information to help protect the public. Knapp Decl. ¶ 15 (Ex. 157). Foreign malign actors (like Russia, the People’s Republic of China, and Iran) attempt to use social media to sway U.S. voters’ preferences and perspectives, shift U.S. policies, increase discord in the United States, and undermine the American people’s confidence in democratic institutions and processes. *Id.* ¶¶ 10-12. Across Administrations, the Executive Branch has recognized such operations as a profound threat to national security. *Id.* ¶ 11. Yet the proposed injunction could be understood to prevent the FBI from sharing, with social media platforms, intelligence about which accounts appear to be tools of foreign malign actors—preventing the platforms from taking appropriate action pursuant to their own terms of service.

The injunction also could be understood to prevent the FBI and the GEC from calling platforms’ attention to accounts used by foreign terrorist organizations, such as the Islamic State of Iraq and ash-Sham (ISIS) and al Qaeda, to recruit supporters and propagate their ideologies. *Id.* ¶¶ 25-31; Bray Decl. ¶ 14 (Ex. 142). Whereas the promotion of terrorist activities is typically a violation of a social media platform’s terms of service, platforms may not be able to identify terrorist content without access to FBI intelligence. Knapp Decl. ¶ 30 (Ex. 157). For example, the FBI is uniquely positioned to identify and share intelligence about code words and symbols being used by terrorist groups. *Id.* ¶ 48. Similarly, the GEC would be unable to flag for social media companies the kinds of propaganda and disinformation spread by foreign terrorist groups or state actors aimed at harming U.S. interests. Bray Decl. ¶ 14 (Ex. 142). As the FBI has explained:

[T]he Russian, Chinese, and Iranian governments, other foreign malign actors individuals or groups intent on preventing qualified voters from

voting, terrorists, cyber criminals, individuals or groups involved in crimes against children, and a wide variety of other criminals would benefit, and the American public and victims of crime would be harmed, if the court were to issue the proposed PI and if it were interpreted to prevent the FBI from communicating with social media platforms about criminal conduct, national security threats, and other threats on their platforms.

Knapp Decl. ¶ 5 (Ex. 157).

As this Court previously has recognized, “[i]n balancing the equities and considering the public interest, courts properly decline to second-guess the judgments of public health officials.” *Chambless Enter., LLC v. Redfield*, 508 F. Supp. 3d 101, 123 (W.D. La. 2020) (Doughty, J.). But that is precisely what the proposed injunction would do. As CDC has explained, the proposed injunction “could inhibit CDC from performing its essential education function, to the detriment of those whose health and well-being (and perhaps their lives) depend on the availability of accurate information about disease prevention and treatment,” Crawford Decl. ¶ 21 (Ex. 80), a function the agency has been faithfully carrying out for nearly 75 years.

Second, the proposed injunction, if granted, could be read to prevent the Government from speaking on issues of significant public concern. Popular rhetoric is a core aspect of the modern presidency. Yet Plaintiffs seek to enjoin Executive Branch officials from using the bully pulpit to express the President’s views. For example, Plaintiffs seek to prohibit, as “censorship,” public statements made by the White House Press Secretary during press briefings, outreach by the Surgeon General, and even off-the-cuff remarks made by the President to reporters. *See* PI Supp. 10 (“The White House makes detailed public demands for greater censorship, including at the White House press conferences on May 5, 2021 and July 15, 2021.”); *id.* (challenging President’s public statement that social media companies are “killing people”); *id.* at 11 (“The Surgeon General uses his ‘bully pulpit’ to pressure social-media platforms to censor disfavored viewpoints.”). As the Supreme Court has observed, “If every citizen were to have a right to insist

that no one paid by public funds express a view with which he disagreed, debate over issues of great concern to the public would be limited to those in the private sector, and the process of government as we know it radically transformed.” *Summum*, 555 U.S. at 468 (quoting *Keller v. State Bar of Cal.*, 496 U.S. 1, 12–13 (1990)). Plaintiffs’ proposed injunction, if granted, would significantly impair the public interest by curtailing the Federal Government’s ability to publicly express its views on matters affecting the public welfare and ensure an informed citizenry.

Together, these interests far outweigh Plaintiffs’ speculative fears that social media companies, whether under threat by or otherwise compelled by Defendants, will remove or otherwise restrict access to speech that Plaintiffs wish to engage in or with. Moreover, Plaintiffs’ overbroad injunction, which would significantly interfere with core Executive Branch functions as explained below, raises serious separation-of-powers concerns. The Supreme Court has repeatedly emphasized that Article III does not “grant unelected judges a general authority to conduct oversight of decisions of the elected branches of Government.” *California v. Texas*, 141 S. Ct. 2104, 2116 (2021); *cf. Juliana v. United States*, 947 F.3d 1159, 1171 (9th Cir. 2020) (affirming the dismissal of constitutional claims on redressability grounds because “it is beyond the power of an Article III court to order, design, supervise, or implement the plaintiffs’ requested remedial plan”), *denying reh’g en banc*, 986 F.3d 1295 (9th Cir. 2021). It is difficult to imagine a more overly expansive remedy than the broad injunction Plaintiffs propose, the enforcement of which would threaten to encroach on the Executive Branch’s prerogatives to speak on matters of public concern. Accordingly, if the Court reaches the balance of the equities and the public interest, it should conclude that those factors weigh heavily against granting the relief Plaintiffs seek.

IV. Plaintiffs’ proposed injunction is improper.

Plaintiffs’ proposed injunction is not only contrary to the public interest but also improper for several reasons. First, the proposed injunction lacks the specificity required by Federal Rule of

Civil Procedure 65(d)(1). Second, the proposed injunction is substantially overbroad because it would needlessly interfere with the performance of lawful Executive Branch activities that protect the public welfare. And it would also needlessly enjoin former and current federal employees sued in their official capacities when Plaintiffs also seek to enjoin the federal agencies where they are or were employed. Accordingly, the Court should reject Plaintiffs' proposed injunction, as further discussed below.

A. Plaintiffs' proposed injunction lacks the specificity required by Federal Rule of Civil Procedure 65.

Plaintiffs' proposed injunction is insufficiently precise. Rule 65(d)(1) requires that “[e]very order granting an injunction” must “state its terms specifically,” and “describe in reasonable detail—and not by referring to the complaint or other document—the act or acts restrained or required.” As the Supreme Court has explained:

The specificity provisions of Rule 65(d) are no mere technical requirements. The Rule was designed to prevent uncertainty and confusion on the part of those faced with injunctive orders, and to avoid the possible founding of a contempt citation on a decree too vague to be understood. . . . Since an injunctive order prohibits conduct under threat of judicial punishment, basic fairness requires that those enjoined receive explicit notice of precisely what conduct is outlawed.

Schmidt v. Lessard, 414 U.S. 473, 476 (1974) (citations omitted); *Atiyeh v. Capps*, 449 U.S. 1312, 1316-17 (1981) (Rehnquist, J., in chambers) (holding that an injunction requiring prison officials to accomplish a further reduction of the inmate population at three facilities by “at least 250” individuals by a date certain “falls short of [Rule 65’s] specificity requirement”); *Common Cause v. Nuclear Regul. Comm’n*, 674 F.2d 921, 926-27 (D.C. Cir. 1982) (holding that an injunction barring the NRC from closing to the public future meetings similar in nature to the meeting that gave rise to the action lacked the requisite specificity under Rule 65). As the Fifth Circuit has explained, an “injunction should not contain broad generalities,” but “must describe in reasonable

detail the acts restrained or required” and identify what specific policies are enjoined. *Scott v. Schedler*, 826 F.3d 207, 213-14 (5th Cir. 2016).

Plaintiffs’ requested injunction falls far short of the specificity requirement of Rule 65(d). Plaintiffs’ proposed, ambiguous injunction seeks to enjoin certain Defendants from “taking any steps” to “demand, urge, encourage, pressure, coerce, deceive, collude with, or otherwise induce any social-media company or platform for online speech” to “censor, suppress, remove, de-platform, suspend, shadow-ban, de-boost, deamplify, issue strikes against, restrict access to, demonetize,” or take “any similar adverse action” against “any speaker, content, or viewpoint expressed on social media.” PI Supp. 67-68. If Defendants are to understand these undefined terms by reference to the immense swath of conduct that, to Plaintiffs, amounts to coercion, encouragement, or joint participation, those terms could encompass any form of expression, public or private. The line between permissible and impermissible expression would be anyone’s guess.

Nor do Plaintiffs define the terms “censor,” “suppress,” “remove,” “de-platform,” “suspend,” “shadow-ban,” “de-boost,” “deamplify,” “issue strikes against,” “restrict access to,” or “demonetize,” many of which are conclusory labels (“censor,” “suppress”) or terms of art within the social media industry that the proposed injunction does not define (“shadow-ban,” “de-boost,” “deamplify”). Compounding those ambiguities is the proposed injunction’s attempt to prohibit Defendants from “otherwise induc[ing]” these actions or “any similar adverse action[s].” *See Scott*, 826 F.3d at 207; *M.D. ex rel. Stukenberg v. Abbott*, 907 F.3d 237, 272 (5th Cir. 2018); *Louisiana v. Biden*, 45 F.4th 841, 845-46 (5th Cir. 2022); *United States v. Phillip Morris USA Inc.*, 566 F.3d 1095, 1137 (D.C. Cir. 2009). In addition, the proposed injunction fails to specify the covered “social media compan[ies]” and “platform[s] for online speech,” or, if these terms are meant instead to refer to entire categories including companies not yet in existence, then the injunction

does not give them a precise definition. These vague, undefined concepts fail to put the Defendants on reasonable notice of what conduct is proscribed and improperly place Defendants at risk of contempt.¹¹⁶

B. Plaintiffs’ proposed injunction is impermissibly overbroad.

Even if Plaintiffs’ proposed injunction were sufficiently precise, it is radically overbroad. The proposed injunction would threaten to prevent Executive Branch agencies from performing functions essential to public safety and national security—functions that pose no threat to the First Amendment. Thus, the injunction would defy established principles barring equitable relief that is “more burdensome to the defendant[s] than necessary to provide complete relief to the plaintiffs.” *Califano v. Yamasaki*, 442 U.S. 682, 702 (1979); *Scott*, 826 F.3d at 211 (an injunction must be “narrowly tailor[ed] . . . to remedy the specific action which gives rise to the order as determined

¹¹⁶ These defects would not be cured by the proposal by amicus Children’s Health Defense, which would limit the proposed injunction to a prohibition against federal officials’ privately communicating with social media companies for the purpose of inducing them to censor constitutionally protected speech, as such an injunction would still lack the specificity required by Rule 65(d). See Br. *Amicus Curiae* of Children’s Health Def. 3-6 (Dkt. 262). For example, it is unclear what conduct would amount to “inducement” or what specific speech would be subject to constitutional protection and, therefore, subject to the injunction. See *Zamecnik v. Indian Prairie Sch. Dist.*, 619 F. Supp. 2d 517, 523 (N.D. Ill. 2007) (holding that a request for a preliminary injunction must “establish[] the speech at issue with sufficient specificity”); *Burton v. City of Belle Glade*, 178 F.3d 1175, 1200 (11th Cir. 1999) (holding that an injunction that ordered a City “not to discriminate” in the future lacked sufficient specificity). And an injunction that prevented Defendants from inducing the censorship of “constitutionally protected speech” would also constitute an impermissible “obey-the-law” injunction. See *SEC v. Life Partners Holding, Inc.*, 854 F.3d 765, 784 (5th Cir. 2017) (“Rule 65(d) therefore prohibits ‘general injunction[s] which in essence order[] a defendant to obey the law.’” (quoting *Meyer v. Brown & Root Constr. Co.*, 661 F.2d 369, 373 (5th Cir. 1981))); *Payne v. Travenol Lab., Inc.*, 565 F.2d 895 (5th Cir. 1978) (holding that “[t]he word ‘discriminating,’ like the word ‘monopolizing’ . . . is too general” and that “[s]uch ‘obey the law’ injunctions cannot be sustained” (citations omitted)). In addition, such an injunction would be improper because by focusing on the “purpose” of the communication (*i.e.*, “the purpose of inducing”), compliance with the injunction would turn on the intent behind each Defendants’ communication with a social media company—an unworkable standard that would simply result in endless hearings to determine whether Defendants had the requisite intent to violate the injunction in communicating with social media companies.

by the substantive law at issue”); *cf. INS v. Legalization Assistance Project of L.A. Cnty. Fed’n of Labor*, 510 U.S. 1301, 1305-1306 (1993) (O’Connor, J., in chambers) (emphasizing harm from “improper intrusion by a federal court into the workings of a coordinate branch of the Government”).

1. For example, the proposed injunction could be taken to apply to “a range of situations—some of which are completely unrelated to the allegations against the FBI and FBI officials in this lawsuit—in which it would be in the public interest and consistent with the FBI’s law enforcement and national security missions for the FBI to notify a social media platform of criminal conduct, national security threats or other threats on its platform.” Knapp Decl. ¶ 5 (Ex. 157). Yet the proposed injunction could be read to preclude Defendants from sharing intelligence on the use of online platforms to commit crimes ranging from fraud to the sexual exploitation of children,¹¹⁷ conduct that is not subject to First Amendment protection. *Id.* ¶¶ 5-50. *See, e.g., Seals*, 898 F.3d at 597 (holding that statute that regulated true threats and extortion did not implicate the First Amendment).

United States v. Mackey, No. 21-CR-80, 2023 WL 363595 (E.D.N.Y. Jan. 23, 2023), illustrates the overbreadth of Plaintiffs’ requested injunction. In *Mackey*, the United States charged the defendant with a violation of 18 U.S.C. § 241 based on his alleged participation in an online conspiracy to disenfranchise certain Twitter users by, *inter alia*, conducting a coordinated campaign to spread disinformation about voting procedures during the 2016 Presidential election.

¹¹⁷ The proposed injunction could potentially prevent the Government from alerting a social media provider that child sexual abuse material exists on its platform, thus triggering the provider’s statutory duties under 18 U.S.C. §§ 2251 *et seq.*, including the removal and reporting of such content. Knapp Decl. ¶ 43 (Ex. 157). Furthermore, the proposed injunction’s prohibition on ‘acting in concert with others’ could potentially prevent the National Center for Missing and Exploited Children (“NCMEC”) from working with government agencies and providers to keep child pornography off the internet. *Id.* ¶¶ 43-44.

Id. at *1. The district court rejected the defendant’s argument that the indictment violated his First Amendment rights, holding that “[t]his case is about conspiracy and injury, not speech.” *Id.* at *19. In so concluding the court observed that “[f]alse speech . . . may fall into categories historically exempted from First Amendment protection[.]” *id.*, and took particular note of the Supreme Court’s observation in *Minnesota Voters Alliance v. Mansky*, 138 S. Ct. 1876, 1899 n.4 (2018), that the government “may prohibit messages intended to mislead voters about voting requirements and procedures.” *Mackey*, 2023 WL 363595, at *22.¹¹⁸ Yet Plaintiffs’ proposed injunction would appear to bar federal law enforcement from alerting social media companies to the presence of such illegal activity on their platforms. Other examples of the proposed injunction’s gratuitous intrusions on the FBI’s law-enforcement activities are discussed in the declaration of Larissa L. Knapp, *see* Knapp Decl. ¶¶ 10-49 (Ex. 157).

2. The proposed injunction could similarly interfere with key functions statutorily assigned to CISA, such as the ability to share with platforms information that allows them to detect, prevent, and mitigate malicious cyber activity. Wales Decl. ¶ 26 (Ex. 167). For example, CISA’s declaration explains that in March 2023, a cybercriminal compromised a Voice over Internet Protocol (VoIP) company, causing the company unwittingly to distribute an altered version of its software to hundreds of thousands of customers. *Id.* ¶ 28.c. The altered software would initiate a connection to GitHub—a site that allows individual users to develop, host, and

¹¹⁸ The court further explained that “statutes that prohibit falsities in order to ‘protect the integrity of government processes’ (e.g., perjury statutes, laws barring lying to government officials, and those ‘prohibit[ing] falsely representing that one is speaking on behalf of the Government’) are properly within the government’s regulatory authority.” *Mackey*, 2023 WL 363595, at *21 (citation omitted). Accordingly, the district court rejected the defendant’s First Amendment challenge that characterized his deceptive tweets as “political speech” and concluded that his tweets are “most accurately characterized as a vehicle or means for illegal conduct.” *Id.* at *22.

download software and to comment on or contribute to one another's work—to download a file containing Internet addresses that the user's computer would then use to download malware. *Id.* To mitigate the harm caused by this crime, CISA contacted GitHub to learn whether the malicious file remained accessible. *Id.* If that conduct were regarded as encouraging GitHub to remove the file, as plaintiffs' theory would appear to suggest, the proposed injunction would hamper such efforts in the future. *Id.* Other potential harms to CISA should Plaintiffs' broad injunction issue are discussed in the declaration of Brandon Wales. *See* Wales Decl. ¶¶ 28-30 (Ex. 167).

3. In addition, the proposed injunction could be understood to interfere with important public-health functions. Because so many Americans use social media, the Surgeon General, in exercising his responsibility to promote healthy behavior, would typically ask social media platforms to take steps that help Americans make choices that improve their health. Lesko Decl. ¶ 19 (Ex. 63). The Surgeon General could, for example, ask platforms to take steps to prevent online bullying of children and teenagers, or to limit advertisements for tobacco, alcohol, or dangerous weight-loss products that could be seen by children or teenagers. *Id.* ¶ 20. But the proposed injunction could be understood to forbid that sort of advocacy if it is deemed to “encourage” platforms to take action against the content in question. *Id.*

Notably, Plaintiffs engage in the same type of advocacy with social media companies that their proposed injunction could be construed to prohibit. For example, in October 2019, Louisiana Attorney General Jeff Landry, on behalf of the National Association of Attorneys General, wrote a letter to Facebook, Craigslist and eBay “call[ing] upon you to join us in this shared responsibility to protect our youth, the Constitution and the integrity of the digital marketplace” by, among other things, “review[ing] the current content posted to [your] companies' websites and remove illegal postings for the sales and/or transfer of alcohol products.” Ex. 158 at 1 (Press Release, La. Dep't

of Just., Online Alcohol Sales Concern of Republican and Democrat Attorney Generals (Oct. 22, 2019), <https://perma.cc/4ZFX-TEP5>); Ex. 159 at 1 (Letter from Jeff Landry, La. Att’y Gen., et al., to Scott Schenkel, Interim Chief Exec. Officer, eBay (Oct. 22, 2019)). The letter also invited the companies to help “establish a work[ing] group with stakeholders from industry and government” to “discuss and establish realistic and effective protocols for internet platforms and content providers related to illegal and unlicensed alcohol sales via digital platforms.” Ex. 159 at 2.

Similarly, on behalf of 33 other state attorneys general, Attorney General Landry sent a letter to Facebook, eBay, Craigslist, Walmart and Amazon urging them “to more rigorously monitor price gouging practices by online sellers using their services” concerning COVID-19, including a request that the companies “[s]et policies and enforce restrictions on unconscionable price gouging during emergencies” and “[t]rigger price gouging protections prior to an emergency declaration.” Ex. 160 at 1 (Press Release, La. Dep’t of Just., 33 State Attorneys General Warn Amazon, Facebook, Ebay, Craigslist, Walmart: Online Marketplaces Are Not Exempt from Price Gouging Laws (Mar. 25, 2020), <https://perma.cc/X2BY-FHF5>). And in April 2021, Attorney General Landry joined a bipartisan letter to Twitter, among others, noting that the platforms were “being used to market and sell blank or fraudulently completed COVID vaccine cards bearing the [CDC] logo,” and stating expressing “deep[] concern[] about this use of [their] platforms to spread false and misleading information regarding COVID vaccines.” Ex. 161 at 1 (Letter from Nat’l Ass’n of Att’ys Gen., et al., to Jack Dorsey, CEO, Twitter, Inc., et al. (Apr. 1, 2021)). The letter requested that the platforms “take immediate action to prevent [their] platforms from being used as a vehicle to commit these fraudulent and deceptive acts that harm our communities.” *Id.* at 2. Among other requests, the letter indicated that platforms should “promptly tak[e] down ads or links identified through that monitoring.” *Id.* Plaintiffs’ position that they can combat potential

violations of state law on social media platforms through direct communications with those platforms, but that the Federal Government must be enjoined from taking similar action to curtail violations of federal law, highlights why their proposed injunction should be rejected.¹¹⁹

4. Relatedly, Plaintiffs' proposed injunction would preclude the White House and federal agencies from legitimately using the bully pulpit to advance their views on matters of public concern, raising serious separation-of-powers concerns. "A President frequently calls on citizens to do things that they prefer not to do—to which, indeed, they may be strongly opposed on political or religious grounds." *Freedom From Religion Found.*, 641 F.3d at 806. Indeed, popular rhetoric is a core aspect of the modern presidency—a tool that presidents have used to galvanize private actors for more than a century. See Jeffrey K. Tulis & Russell Muirhead, *The Rhetorical Presidency* 4 (2017 ed.). But a presidential request is not compulsion where "people are free to ignore the President's call." *Peery*, 791 F.3d at 791.

The same holds true for other Executive Branch officials. Because it would be impossible for the President to administer the entire Executive Branch alone, "the Constitution assumes that lesser executive officers will assist the supreme Magistrate in discharging the duties of his trust." *Seila L. LLC v. Consumer Fin. Prot. Bureau*, 140 S. Ct. 2183, 2197 (2020) (citation omitted). Limitations on the speech of other senior government officials, including White House staff and Cabinet members, therefore also threaten the President's constitutional prerogatives in administering the Executive Branch and articulating the administration's policy views. The

¹¹⁹ Plaintiffs' proposed injunction also could bar components of the Department of Justice or other agencies from working with social media companies to address dangerous TikTok "challenges," such as the one that recently resulted in the death of a 13-year-old who overdosed on Benadryl. Ex. 162 (Michelle Watson, Carma Hassan, *Benadryl TikTok 'challenge': A 13-year old died in Ohio after participating*, CNN (Apr. 18, 2023)).

Seventh Circuit has thus recognized that it is appropriate for federal officials and agencies generally to use the bully pulpit:

Government officials and agencies spend a great deal of time urging private persons and firms and other institutions to change their behavior (for example, to adopt healthier diets or use public transit more) without backing up their urging with coercion or the threat of it. Physically fit young men and women are encouraged to enlist in the armed forces, but there is no longer a draft, and so there is no coercion to enlist and it would be absurd to claim that encouraging enlistment is the equivalent of forcing people to serve.

Peery, 791 F.3d at 790-91.

Here, Plaintiffs’ proposed injunction could be read to preclude the Defendants from “urging” or “encouraging” social media companies to act consistent with an Administration’s views of the public interest. Indeed, Plaintiffs’ proposed injunction is so broad that it could be read to not only cover direct communications between Defendants and social media companies but could preclude federal officials from giving public speeches or press conferences by government officials where they “encouraged” social media companies to take certain actions, including actions against malign foreign influence actors, people who disseminate child sexual abuse materials, or people who improperly disclose classified documents. *See, e.g.*, Ex. 166 (Brett Samuels, *White House says social media companies have responsibility to manage platforms amid leaked document fallout*, The Hill (Apr. 13, 2023)). Indeed, under Plaintiffs’ theory, an Administration’s public statement recommending reforms to § 230 could be swept into the proposed injunction if it were deemed to be a veiled threat to social media companies. Plaintiffs have no First Amendment right that entitles them to muzzle such plainly legitimate Government speech. *See Sumnum*, 555 U.S. at 468 (citizens have no right to prohibit government speech with which they disagree); *Freedom From Religion Found.*, 641 F.3d at 806 (“Those who do not agree

with a President's statement may speak in opposition to it; they are not entitled to silence the speech of which they disapprove.”).

5. Furthermore, Plaintiffs' proposed injunction could conceivably be construed to preclude agencies from publishing election- and health-related information on their websites if a social media company were to rely upon that information in deciding whether information on its platform violated its terms of service. Under Plaintiffs' proposed injunction, such proposed publication on websites could be perceived as “encouraging” platforms to consider this information in applying their terms of service. Indeed, far from being speculative, Plaintiffs improperly challenge this precise conduct. *See, e.g.*, Pls.' PFOF ¶ 729 (“As was evidently intended, Dr. Collins's blog post immediately fueled media coverage attacking the lab-leak theory as a ‘conspiracy theory.’”); *id.* ¶ 1105 (“Scully admits that CISA was aware that ‘social media platforms were following the rumor page posted by CISA and using that as a debunking method for content on their platforms.’”).

Putting to one side that such publication via websites is classic government speech, an injunction that could be read to preclude Defendant agencies from publishing information on their websites on which social media companies might rely for purposes of applying their own content moderation policies would substantially obstruct Defendants' performance of their missions. *See* Crawford Decl. ¶ 21 (Ex. 80); Bray Decl. ¶ 14 (Ex. 142); Wales Decl. ¶ 28.a. (Ex. 167). It would leave Defendants in an impossible position where each agency post would risk drawing accusations of contempt depending on the unpredictable choices of social media companies concerning whether and how to act on that information.

For example, CISA developed a Rumors vs. Reality page on its website to provide accurate information about election rumors. Ex. 112; Scully Dep. 290:18-23. The page was “designed to

address common disinformation narratives by providing accurate information related to elections.” Ex. 112. The page “seeks to inform voters and help them build resilience against foreign influence operations and disinformation narratives about election infrastructure.” *Id.* Tellingly, despite their apparent objection to CISA’s maintenance of this website, Plaintiffs Louisiana and Missouri have similar websites that seek to debunk rumor and misinformation concerning both elections and COVID-19. *See* Ex. 113; Ex. 114; Ex. 115; Ex. 116. In fact, contrary to its position in this litigation, the Missouri Secretary of State’s election misinformation page expressly links to CISA’s resources concerning election misinformation. Ex. 114 (linking to CISA’s “The War on Pineapple: Understanding Foreign Intelligence in 5 Steps”; and “Social Media Bots Overview”).

Similarly, a “core part of CDC’s mission is to promulgate science-based, data-driven information about public health matters.” Crawford Decl. ¶ 21 (Ex. 80). Like CISA, social media companies may choose to rely on CDC-published information when determining whether certain posts violate their terms of service. *Id.* Yet, under Plaintiffs’ proposed injunction, this could be construed as a “step” to “encourage” a social media company to “suppress” or take “similar adverse action” against information that is counter to CDC-provided information. This is yet another example of the staggering overbreadth of Plaintiffs’ proposed injunction.

6. Plaintiffs’ proposed injunction is also overbroad because it seeks to preclude Defendants from “acting in concert” with “any such others who are engaged in the aforementioned conduct.” PI Supp. 68. Although it is unclear what conduct Plaintiffs seek to cover with this provision, as written the language could be read to mean that even if a Defendant is unaware that another entity has “engaged in the aforementioned conduct,” that Defendant could not “act[] in concert” with that entity for any purpose—even if that interaction has nothing to do with content moderation. This is an absurd and unworkable result, and the Court should reject such an

amorphous injunction that would cause significant harm to Defendants' operational interests. *See, e.g.,* Wales Decl. ¶ 29a-e (Ex. 167); Crawford Decl. ¶ 22 (Ex. 80).¹²⁰

7. Finally, Plaintiffs' proposed injunction is overbroad because it would not just apply to the Office of the White House Press Secretary and numerous agencies but also would extend to dozens of current and former federal employees sued in their official capacity. *See* PI Supp. 67-68).¹²¹ As the Fifth Circuit has recognized, an official capacity claim is essentially a claim against the agency and the official capacity claims therefore merge with those against the agencies. *Harmon v. Dallas Cnty.*, 927 F.3d 884, 891 (5th Cir. 2019) (citing *Turner v. Houma Mun. Fire & Police Civil Serv. Bd.*, 229 F.3d 478, 485 (5th Cir. 2000)) (observing that when "a defendant government official is sued in his individual and official capacity, and the city or state is also sued" the "official-capacity claims and the claims against the governmental entity essentially merge"); *Smith v. Town of Lake Providence*, No. 3:22-CV-01319, 2022 WL 16626762, at *7 (W.D. La. Oct. 17, 2022) (holding that official capacity claims brought against officers merged with claims against

¹²⁰ For example, Plaintiffs' overbroad proposed injunction could throw CDC's funding of research and other public health programs into jeopardy, thereby inhibiting CDC from carrying out core elements of its vital public health mission. Crawford Decl. ¶¶ 22-23 (Ex. 80). If a CDC-funded entity publicizes research that runs contrary to a narrative circulating on social media, and a social media company then takes steps consistent with its terms of service to limit that narrative, it is unclear whether CDC would be deemed to be "acting in concert" with "others" "engaged" in the "conduct" of "inducing" a social-media company to "suppress" or take "similar adverse action" against certain content, speakers or viewpoints. *Id.*

¹²¹ As another example of the overbreadth of the proposed injunction, Plaintiffs seek to enjoin DOJ and the State Department in addition to the component offices under their authority. *See* PI Supp. 68. But despite Plaintiffs' voluminous filings, they do not appear to have identified any evidence that these parent agencies have violated the First Amendment. For example, Plaintiffs identify DOJ only twice in their supplemental brief, and in both instances, it is in the context of meetings it attended with other federal departments and agencies, and in which misinformation generally was discussed. *Id.* at 34, 37. And Plaintiffs do not identify *any* conduct of the Department of State, which is only referenced twice in their brief, and, in both circumstances, it is simply to note that State is the parent agency of the GEC. *Id.* at 39, 44. Accordingly, any injunction in this case should not run against these agencies.

town). Indeed, “nothing [is] added by suing the [government official] in his official capacity.” *See Jungels v. Pierce*, 825 F.2d 1127, 1129 (7th Cir. 1987).

Plaintiffs fail to explain why an injunction against federal employees sued in their official capacity is necessary when they also seek to enjoin the agencies where these individuals are now or previously were employed. There is nothing added by seeking to enjoin individuals sued in their official capacity where the agencies also would be subject to the proposed injunction. Instead, enjoining those individuals would result in substantial confusion. For example, if the proposed injunction were to extend to individuals sued in their official capacity, when an official capacity Defendant leaves the Government, a successor would need to be identified. But identifying a successor is not always easy or obvious, as employee job descriptions and responsibilities change over time. Sometimes, there may not be a successor given changed agency priorities and organizational structures. Accordingly, given the potential confusion resulting from applying an injunction against a host of individuals and because the official capacity claims merge with the claims against the agencies and the Office of the White House Press Secretary, any injunction in this case should apply only to those agency Defendants.

In addition, Plaintiffs improperly seek to apply the injunction against former Federal Government employees sued in their official capacity and for whom no successor has been named, including: Andrew Slavitt; Clarke Humphrey; and Benjamin Wakana. PI Supp. 68; *see also* Defs.’ Notice of Substitution at 4. Any prospective injunctive relief against these former government employees sued in their official capacity is no longer available against them because they have no authority to act. *See Alvarez v. O’Brien*, No. 8:21-cv-303, 2022 WL 5209377, at *2 (D. Neb. Oct. 5, 2022) (citing *Tara Enters., Inc. v. Humble*, 622 F.2d 400, 401 (8th Cir. 1980) (holding that “because monetary damages are not sought nor any other relief which would be operative against

these defendants who no longer possess any official power, the action against them is, of course, moot”).” Nor are successors automatically substituted for these Defendants pursuant to Fed. R. Civ. P. 25(d), because these Defendants “did not hold an office for which a particular successor can be identified.” *Alvarez*, 2022 WL 5209377, at *2 (citations omitted). Accordingly, injunctive relief against former government employees for whom there are no successors is improper.

* * * *

Thus, even if the Court were to conclude that Plaintiffs are likely to prevail on the merits, that Plaintiffs have shown that they would suffer concrete and imminent irreparable harm in the absence of an injunction, and that Plaintiffs’ harm outweighs the detriment to the public interest of awarding them a properly drawn injunction, it would be profoundly and unnecessarily harmful to the public interest, and therefore unjustifiable, to impose the overbroad and vague injunction that Plaintiffs have proposed. If any injunction could be appropriate upon a finding that Plaintiffs are likely to prevail and face irreparable harm, it would need to be far more narrowly tailored to prevent the purportedly unlawful conduct that would cause Plaintiffs’ asserted injuries.

CONCLUSION

For the foregoing reasons, Plaintiffs’ motion for a preliminary injunction should be denied. If nevertheless the Court were to enter an injunction, Defendants respectfully request that the injunction be administratively stayed for seven days, to allow Defendants time to consider moving for a stay pending appeal.

An update on our continuity strategy during COVID-19

By

[Vijaya Gadde](#)

and

[Matt Derella](#)

Monday, 16 March 2020

Effective November 23, 2022, Twitter is no longer enforcing the COVID-19 misleading information policy.

To see all of the latest steps Twitter is taking in response to COVID-19, visit [covid19.twitter.com](https://blog.twitter.com/en_us/topics/company/2020/covid-19.html) (https://blog.twitter.com/en_us/topics/company/2020/covid-19.html).

Updated April 1, 2020

As the entire world faces an unprecedented public health emergency, we want to be open about the challenges we are facing and the contingency measures we're putting in place to serve the public conversation at this critical time. We are regularly working with and looking to trusted partners, including public health authorities, organizations, and governments to inform our approach.

We will keep three blog posts updated on a rolling basis and encourage everyone to consult with them regularly for updates:

- Our contingency strategy to protect the conversation (here)
- Our working guidance (https://blog.twitter.com/en_us/topics/company/2020/keeping-our-employees-and-partners-safe-during-coronavirus.html) to our employees and partners to keep them safe
- Our partnerships (https://blog.twitter.com/en_us/topics/company/2020/stepping-up-our-work-to-protect-the-public-conversation-around-covid-19.html) and public engagement strategies

Steps we're taking

As we continue to provide guidance to our employees (https://blog.twitter.com/en_us/topics/company/2020/keeping-our-employees-and-partners-safe-during-coronavirus.html) that they must work from home to support self-distancing efforts to slow the spread of COVID-19, we also need to operationally pivot our core efforts to keep people safe on Twitter.

Increasing our use of machine learning and automation to take a wide range of actions on potentially abusive and manipulative content. We want to be clear: while we work to ensure our systems are consistent, they can sometimes lack the context that our teams bring, and this may result in us making mistakes. As a result, we will not permanently suspend any accounts based solely on our automated enforcement systems. Instead, we will continue to look for opportunities to build in human review checks where they will be most impactful. We appreciate your patience as we work to get it right – this is a necessary step to scale our work to protect the conversation on Twitter.

How are we using automated technology during this time?

- To help us review reports more efficiently by surfacing content that's most likely to cause harm and should be reviewed first.
- To help us proactively identify rule-breaking content before it's reported. Our systems learn from past decisions by our review teams, so over time, the technology is able to help us rank content or challenge accounts automatically.
- For content that requires additional context, such as misleading information around COVID-19, our teams will continue to review those reports manually.

What you can expect if you file a report during this time:

- If you've reported an account or Tweet to us, it will take longer than normal for us to get back to you. We appreciate your patience as we continue to make adjustments.
- Because these automated systems don't have all of the context and insight our team has, we'll make mistakes. If you think we've made a mistake, you can let us know and appeal [here](https://help.twitter.com/forms/general) (<https://help.twitter.com/forms/general>).

We appreciate your patience as we work to keep our teams safe, while also making sure we're protecting everyone on Twitter. You can always continue to use hide replies, mute, block, reply filters, and the other [tools we offer](https://help.twitter.com/en/a-safer-twitter) (<https://help.twitter.com/en/a-safer-twitter>) you to control conversations on the service.

Keeping the service running and the Tweets flowing is one of our top priorities in these difficult times. Our work has never been more critical and our service has never been in higher demand. In the past few weeks, we have seen more and more people turn to Twitter to participate in the public conversation and follow what's happening in real time.

- The global conversation about COVID-19 and ongoing product improvements are [driving up total monetizable DAU \(mDAU\)](https://www.prnewswire.com/news-releases/twitter-withdraws-q1-guidance-due-to-covid-19-impact-301028477.html) (<https://www.prnewswire.com/news-releases/twitter-withdraws-q1-guidance-due-to-covid-19-impact-301028477.html>), with quarter-to-date average total mDAU reaching approximately 164 million, up 23% from 134 million in Q1 2019 and up 8% from 152 million in Q4 2019.
- We've also seen a 45% increase in our [curated events page](https://twitter.com/i/events/1219057585707315201?lang=en) (<https://twitter.com/i/events/1219057585707315201?lang=en>) usage and a 30% increase in Direct Message (DM) usage since March 6.

While many of our teams are [transitioning to working from home](https://blog.twitter.com/en_us/topics/company/2020/keeping-our-employees-and-partners-safe-during-coronavirus.html) (https://blog.twitter.com/en_us/topics/company/2020/keeping-our-employees-and-partners-safe-during-coronavirus.html), some of our infrastructure teams have physical responsibilities that are critical to keeping our data centers, and Twitter, up and running. These teams are operating under the "essential services" provisions dedicated in City, County and State orders to ensure business continuity. We couldn't keep the Tweets flowing without their daily dedication and hard work.

The combination of the new work environment and the increased load on our platform has placed unique stresses on our operations, requiring our engineering teams to work more closely together than ever to respond to new demands, and to

plan for the future. From our IT, Network and Product Engineering teams to our infrastructure and data center teams, we have collectively mobilized to ensure we are able to stay safe and productive under the stress of the new levels of traffic we're seeing on our service.

The effects of COVID-19 on Twitter have already surpassed any event we've seen, and it's possible that as the pandemic continues, we will see additional stress on our service. Beyond Twitter, COVID-19 has also had a far-sweeping impact on our supply chain partners. Whereas normally we'd have months of lead time to add hardware capacity for expected growth, in this case, manufacturing delays in China have compromised the supply chain, resulting in delays in deliveries to our data centers. Our Data Center, SiteOps, Supply Chain, Hardware Engineering and Mission Critical teams continue to manage the physical infrastructure that underlies the service -- expertly innovating to unlock additional capacity in existing supply.

Our teams are actively addressing areas where we need to add capacity to critical services, looking at how we can optimize existing technology to be more performant, and planning for how we might adjust to the way people are using Twitter during this time.

It's critical for Twitter to stay up and running through this global crisis. Our teams are focused, and as we make changes to our systems to meet these new demands, we will communicate openly. We will share what we've done, what we've learned, and if we see incidents, what we will do to recover as quickly as possible. Follow [@TwitterEng](https://twitter.com/twittereng) (<http://twitter.com/twittereng>) to stay up to date.

Broadening our definition of harm to address content that goes directly against guidance from authoritative sources of global and local public health information. Rather than reports, we will enforce this in close coordination with trusted partners, including public health authorities and governments, and continue to use and consult with information from those sources when reviewing content.

- We'll continue to prioritize removing content when it has a clear call to action that could directly pose a risk to people's health or well-being, but we want to make it clear that we will not be able to take enforcement action on every Tweet that contains incomplete or disputed information about COVID-19. This is not meant to limit good faith discussion or expressing hope about ongoing studies related to potential medical interventions that show promise.
- Since introducing these policies on March 18, we have removed more than 1,100 tweets containing misleading and potentially harmful content from Twitter. Additionally, our automated systems have challenged more than 1.5 million accounts which were targeting discussions around COVID-19 with spammy or manipulative behaviors. We will continue to use both technology and our teams to help us identify and stop spammy behavior and accounts.
- We may also apply the public interest notice (https://blog.twitter.com/en_us/topics/company/2019/worldleaders2019.html) in cases where world leaders (https://blog.twitter.com/en_us/topics/company/2019/publicinterest.html) violate the COVID-19 guidelines.

Under this guidance, we will require people to remove tweets that include:

- Denial of global or local health authority recommendations to decrease someone's likelihood of exposure to COVID-19 with the intent to influence people into acting against recommended guidance, such as: "social distancing is not effective", or actively encouraging people to not socially distance themselves in areas known to be impacted by COVID-19 where such measures have been recommended by the relevant authorities.
- Description of alleged cures for COVID-19, which are not immediately harmful but are known to be ineffective, are not applicable to the COVID-19 context, or are being shared with the intent to mislead others, even if made in jest, such as "coronavirus is not heat-resistant - walking outside is enough to disinfect you" or "use aromatherapy and essential oils to cure COVID-19."
- Description of harmful treatments or protection measures which are known to be ineffective, do not apply to COVID-19, or are being shared out of context to mislead people, even if made in jest, such as "drinking bleach and ingesting colloidal silver will cure COVID-19."
- Denial of established scientific facts about transmission during the incubation period or transmission guidance from global and local health authorities, such as "COVID-19 does not infect children because we haven't seen any cases of children being sick."
- Specific claims around COVID-19 information that intends to manipulate people into certain behavior for the gain of a third party with a call to action within the claim, such as "coronavirus is a fraud and not real - go out and patronize your local bar!!" or "the news about washing your hands is propaganda for soap companies, stop washing your hands".
- Specific and unverified claims that incite people to action and cause widespread panic, social unrest or large-scale disorder, such as "The National Guard just announced that no more shipments of food will be arriving for 2 months - run to the grocery store ASAP and buy everything!"
- Specific and unverified claims made by people impersonating a government or health official or organization such as a parody account of an Italian health official stating that the country's quarantine is over.
- Propagating false or misleading information around COVID-19 diagnostic criteria or procedures such as "if you can hold your breath for 10 seconds, you do not have coronavirus."
- False or misleading claims on how to differentiate between COVID-19 and a different disease, and if that information attempts to definitively diagnose someone, such as "if you have a wet cough, it's not coronavirus - but a dry cough is" or "you'll feel like you're drowning in snot if you have coronavirus - it's not a normal runny nose."

- Claims that specific groups, nationalities are never susceptible to COVID-19, such as “people with dark skin are immune to COVID-19 due to melanin production” or “reading the Quran will make an individual immune to COVID-19.”
- Claims that specific groups, nationalities are more susceptible to COVID-19, such as “avoid businesses owned by Chinese people as they are more likely to have COVID-19.”

Building systems that enable our team to continue to enforce our rules remotely around the world. We’re also increasing our employee assistance and wellness support for everyone involved in this critical work, and ensuring people’s privacy and security stay a top priority.

Instituting a global content severity triage system so we are prioritizing the potential rule violations that present the biggest risk of harm and reducing the burden on people to report them.

Executing daily quality assurance checks on our content enforcement processes to ensure we’re agile in responding to this rapidly evolving, global disease outbreak.

Engaging with our partners around the world to ensure escalation paths remain open and urgent cases can be brought to our attention.

Continuing to review the Twitter Rules (<http://twitter.com/rules>) in the context of COVID-19 and considering ways in which they may need to evolve to account for new behaviors.

As we’ve said on many occasions, our approach to protecting the public conversation is never static. That’s particularly relevant in these unprecedented times. We intend to review our thinking daily and will ensure we’re sharing updates here on any new clarifications to our rules or major changes to how we’re enforcing them.

Finally, we’re encouraged that our service is being used around the world to provide free, authoritative health information, and to ensure that everyone has access to the conversations they need to protect themselves and their families. For more, our dedicated COVID-19 Event (<https://twitter.com/i/events/1219057585707315201>) page has the

latest facts right at the top of your timeline, and we'll continue to share updates

[@TwitterSafety](https://twitter.com/TwitterSafety) (<https://twitter.com/TwitterSafety>) and [@TwitterSupport](https://twitter.com/TwitterSupport)

(<http://twitter.com/twittersupport>).

Subject: Misinformation on Twitter

Hello,

I wanted to flag the following tweets that include misinformation and/or false allegations of election fraud. There is no evidence to back any of these claims. There have been no reports or indications of fraudulent activity in Washington state for the 2020 general election.

Franklin County is the only county in Washington state that uses a version of Dominion software and hardware. The system in use has been certified, and we are not aware of any issues.

No counties in Washington state use GEMS.

Additionally, each county conducts post-election audits in the days after the election that are publicly observable, which provides another layer of protection to ensure the results they certify later this month are accurate. At the end of the certification period, each county will publish a reconciliation report that discloses details about all of the ballots issued, received, counted, and rejected during this election.

Afternoon,

We'd like Twitter to review recent posts from a Denver news channel that contains misinformation about a recent mailing from the Colorado Secretary of State's office:

<https://twitter.com/CBSDenver/status/1309652042021912576>

<https://twitter.com/CBS4Shaun/status/1309660915311079424>

The posts have been highlighted as containing false information by personnel from our office, other media sources, and others. At best, we'd suggest they be removed as promoting inaccurate and false information. At a minimum, we'd request they be labeled as "false".

For rapid contact, I'm reachable by text or Signal at 303-917-5880.

- Trevor

Matt and Geoff,

For awareness, Dominion's corporate Twitter account picked up a new follower today who raised an alert: @elbotxi (aka Ziggy Stardust).

<https://twitter.com/elbotxi>

Due to the Anonymous reference in the profile header complete with Guy Fawkes mask, we are flagging it mainly as a precaution. We noticed Ziggy is also following Scytl.

No unusual IT activity to report.

Regards,
Kay

Civil Action No. 22-cv-1213

DECLARATION OF LARISSA L. KNAPP
FEDERAL BUREAU OF INVESTIGATION

I, Larissa L. Knapp, hereby declare as follows, pursuant to 28 U.S.C. § 1746:

1. I am the Executive Assistant Director (EAD) of the National Security Branch (NSB) of the Federal Bureau of Investigation (FBI) in Washington, D.C. I have held this position since May 2022. As EAD of NSB, I oversee all national security investigative and intelligence operations, including counterintelligence, counterterrorism, and weapons of mass destruction cases, as well as the Terrorist Screening Center
2. Prior to becoming EAD of NSB, I was EAD of the FBI's Human Resources Branch, which includes the Human Resources, Security, and Training Divisions. While serving as EAD of the Human Resources Branch, I also led the FBI's business functions as the acting Associate Deputy Director. Prior to that, I served in various supervisory capacities in the FBI's Security Division, the Washington Field Office, the Directorate of Intelligence, and the Counterterrorism Division. I began my FBI career in 1997 as a Special Agent in the

New York Field Office, where I investigated criminal computer intrusion and intellectual property matters. In 2003, I transferred to the U.S. Virgin Islands to work multiple threats, including counterterrorism and criminal cases.

2. The statements contained in this declaration are based upon my personal knowledge, my background, training, and experience related to FBI investigations and operations, and my review and consideration of documents and information available to me in my official capacity.
3. Through the performance of my official duties, I have been advised of this civil action, in which Plaintiffs allege that the Biden Administration and various government agencies and officials pressure or coerce social media companies into censoring viewpoints and speakers that Defendants disfavor. I understand that the operative complaint in this matter includes the FBI and two FBI officials as defendants, along with numerous other government agencies and officials, and that the allegations concerning the FBI and FBI officials focus on the FBI's Foreign Influence Task Force.
4. I am advised that Plaintiffs have filed a Motion for Preliminary Injunction ("PI") that would apply to the FBI and certain other named defendants. I am submitting this declaration in support of the Government's memorandum of law in opposition to the PI motion, to address the impact of the proposed PI on the FBI's ability to carry out its national security and law enforcement missions.¹
5. I am advised that Plaintiffs make the following request regarding the scope of a PI:

The Court should enter a preliminary injunction preventing Defendants, and their agents, officers, employees, contractors and all those acting in concert with them, from taking any steps to demand, urge, encourage, pressure, coerce, deceive,

¹ This declaration only addresses the proposed PI's impact on the FBI's ability to carry out its missions. It does not attempt to address Plaintiffs' specific allegations regarding the FBI or its personnel.

collude with, or otherwise induce any social-media company or platform for online speech, or any employee, officer, or agent of any such company or platform, to censor, suppress, remove, de-platform, suspend, shadow-ban, de-boost, deamplify, issue strikes against, restrict access to, demonetize, or take any similar adverse action against any speaker, content, or viewpoint expressed on social media. The Court should also preliminarily enjoin Defendants from acting in concert with any others, including but not limited to persons and entities associated with the Center for Internet Security, the Election Integrity Partnership, and the Virality Project, to engage in the aforementioned conduct, and from acting in concert with any such others who are engaged in any of the aforementioned conduct.

As explained below, there is a range of situations—some of which are completely unrelated to the allegations against the FBI and FBI officials in this lawsuit—in which it would be in the public interest and consistent with the FBI’s law enforcement and national security missions for the FBI to notify a social media platform of criminal conduct, national security threats, or other threats on its platform. Thus, the Russian, Chinese, and Iranian governments, other foreign malign actors individuals or groups intent on preventing qualified voters from voting, terrorists, cyber criminals, individuals or groups involved in crimes against children, and a wide variety of other criminals would benefit, and the American public and victims of crime would be harmed, if the Court were to issue the proposed PI and if it were interpreted to prevent the FBI from communicating with social media platforms about criminal conduct, national security threats, and other threats on their platforms.

THE FBI’S ROLES AND RESPONSIBILITIES

6. The FBI’s mission is to protect the American people and uphold the Constitution of the United States. In carrying out that mission, the FBI defends the United States against terrorist and foreign intelligence threats, upholds and enforces the criminal laws of the United States, provides leadership and criminal justice services to federal, state, municipal,

and international agencies and partners, and engages in outreach and information-sharing with private sector entities. In order to defend the country from a range of national security and major criminal threats, the FBI uses an intelligence-driven and threat-focused approach, combining its investigative and intelligence operations to be more analytical and preventative, more aware of emerging threats, and better able to stop them before they turn into crimes, including acts of terrorism.

7. The FBI's top priority is protecting the United States from terrorist attacks. In carrying out the FBI's paramount mission of securing the nation from terrorism, criminal prosecution is just one of several means that the FBI uses to protect national security. Working closely with its partners, the FBI uses its investigative and intelligence capabilities to neutralize terrorist cells and operatives in the United States, to help dismantle extremist networks worldwide, and to cut off financing and other forms of support provided by terrorist sympathizers.
8. The FBI's second highest priority is to protect the United States against foreign intelligence, espionage, and cyber operations, and it has been given broad authorities in these areas that encompass both its law enforcement and counterintelligence responsibilities. Specifically, the FBI is the primary investigative agency of the federal government and is authorized to investigate all violations of federal laws that are not exclusively assigned to another agency.² The FBI has also been specifically designated to

² See 28 U.S.C. § 533, which provides that the Attorney General may appoint officials to, *inter alia*, detect crimes against the United States and to conduct such other investigations regarding official matters under the control of the Department of Justice and the Department of State as may be directed by the Attorney General. The Attorney General Guidelines on Domestic FBI Operations, found at <https://www.justice.gov/archive/opa/docs/guidelines.pdf>, states at p. 5 that as the primary investigative agency of the federal government, the FBI "has the authority and responsibility to investigate all violations of federal law that are not exclusively assigned to another federal agency. The FBI is further vested by law and by Presidential directives with the primary role of carrying out investigations within the United States of threats to the national security. This includes the lead domestic role in investigating terrorist threats

take charge of investigative work in matters relating to espionage, sabotage, subversive activities, and related matters.³ In addition, Executive Order 12333, as amended, establishes the FBI as the lead counterintelligence agency within the United States, and authorizes the FBI to conduct counterintelligence activities and collect, analyze, produce, and disseminate foreign intelligence and counterintelligence to support national and departmental missions.⁴

9. The FBI's remaining mission priorities include cyber crime, public corruption, civil rights, transnational criminal enterprises, white collar crime, and violent crime. Various federal statutes authorize the FBI to conduct investigations of federal crimes, make seizures and arrests, and serve warrants, both under national security authorities (title 50 of the U.S. Code) and law enforcement authorities (title 18 of the U.S. Code). For example, as relevant here, except with respect to certain offenses affecting the duties of the United States Secret Service, the FBI has primary investigative authority for all computer network intrusions relating to threats to the national security, including "cases involving espionage, foreign counterintelligence, [and] information protected against unauthorized disclosure for reasons of national defense or foreign relations . . ."⁵

EFFORTS TO COUNTER FOREIGN MALIGN INFLUENCE OPERATIONS

10. The United States is confronting multifaceted foreign threats seeking to influence our political, economic or national security conditions through subversive, undeclared,

to the United States, and in conducting counterintelligence activities to meet foreign entities' espionage and intelligence efforts directed against the United States."

³ 28 C.F.R. § 0.85(d).

⁴ See Executive Order 12333, as amended, § 1.7(g).

⁵ 18 U.S.C. § 1030(d)(2).

coercive, and criminal actions. Such foreign malign influence operations include foreign government attempts to sway U.S. voters' preferences and perspectives, shift U.S. policies, increase discord in the United States, and undermine the American people's confidence in our democratic institutions and processes.

11. Foreign malign influence is not a new problem. As stated in the July 2018 Report of the Attorney General's Cyber-Digital Task Force:⁶

Hostile foreign actors have long sought to influence, and subvert, our Nation's democratic institutions. Modern technology—including the Internet and social media platforms—has both empowered and emboldened foreign governments and their agents in their attempts to affect U.S. attitudes, behaviors, and decisions in new and troubling ways. . . . Foreign influence operations include covert actions by foreign governments intended to sow division in our society, undermine confidence in our democratic institutions, and otherwise affect political sentiment and public discourse to achieve strategic geopolitical objectives. Foreign influence operations can pose a threat to national security—and they can violate federal criminal law.

12. Russia, the People's Republic of China (PRC), and Iran are the most active in foreign malign influence operations aimed at the United States. According to the Mueller Report,⁷ the first form of Russian election influence came principally from a Russian organization called the Internet Research Agency, LLC (IRA), funded by Yevgeniy Viktorovich Prigozhin and companies he controlled:

The IRA conducted social media operations targeted at large U.S. audiences with the goal of sowing discord in the U.S. political system. . . . The IRA and its employees began operations targeting the United States as early as 2014. Using fictitious U.S. persons, IRA employees operated social media accounts and group pages designed to attract U.S. audiences. These groups and accounts, which addressed divisive U.S. political and social issues, falsely claimed to be controlled

⁶ Found at <https://www.justice.gov/archives/ag/page/file/1076696/download>. A July 2, 2018, letter from then-Deputy Attorney General Rod J. Rosenstein to then-Attorney General Jefferson B. Sessions III, which prefaces the Cyber-Digital Task Force report, states that in February 2018, Attorney General Sessions directed the formation of a Cyber-Digital Task Force to "undertake a comprehensive assessment of the Department's work in the cyber areas, and to identify how federal law enforcement can even more effectively accomplish its mission in this vital area."

⁷ Special Counsel Robert S. Mueller, III's March 2019 Report on the Investigation Into Russian Interference in the 2016 Presidential Election. Volume I of the Mueller Report is found at <https://www.justice.gov/archives/sco/file/1373816/download>.

by U.S. activists. . . . By the end of the 2016 U.S. election, the IRA had the ability to reach millions of U.S. persons through their social media accounts.

Mueller Report Vol I, at 14.⁸

13. Based on the FBI's national security and law enforcement responsibilities cited above, the FBI is the lead federal agency responsible for investigating foreign influence operations. In the fall of 2017, Director Christopher Wray established the Foreign Influence Task Force (FITF) to identify and counteract malign foreign influence operations targeting the United States. The FITF is led by the FBI's Counterintelligence Division and is composed of agents, analysts, and professional staff from the Counterintelligence, Cyber, Counterterrorism, and Criminal Investigative Divisions. It is specifically charged with identifying and combating foreign influence operations targeting democratic institutions and values inside the United States.
14. Initially, the FITF's efforts to combat foreign malign influence focused solely on the threat posed by Russia. Following the 2018 midterm elections, the FITF broadened its focus to confront malign foreign operations of the PRC, Iran, and other global adversaries. Currently, the PRC is at least as active as Russia in its malign foreign influence operations against the United States.
15. The FITF's work includes managing operations and field office investigations, and information and intelligence sharing with federal, state, and local government agencies, as well as with U.S. private sector entities. Specifically, with respect to U.S. social media platforms, the FBI, together with its Intelligence Community partners, may determine through investigation and intelligence gathering that an account that purports to be

⁸ On February 16, 2018, the IRA, Prigozhin, and others were indicted in connection with their operations to interfere with U.S. elections and political processes. See *United States v. Internet Research Agency LLC, et al.*, No.18-cr-00032 (D.D.C.).

controlled by a U.S. person is, in fact, controlled by a covert foreign malign actor. The operation of a social media account by a foreign malign actor under a false identity is typically a violation of a company's terms of service.⁹ In such cases, the FBI may share with social media companies the indicators or selectors regarding that account or that foreign actor, to include IP addresses, email accounts, social media accounts, website domain names, or file hash values, that will enable social media companies to conduct their own independent investigation into whether there is a violation of their terms of service. When that information is shared, it is the FBI's practice to convey to the company that the information is being shared for whatever action the company deems appropriate. The FBI's practice is to not pressure or coerce companies to take any action, and companies do not necessarily disclose to the FBI whether they took any action on a posting or account. But based on the information they do provide, sometimes they take action on a posting or account after receipt of information from the FBI and their own subsequent investigation, and sometimes they do not.¹⁰

16. A decision by the FITF to share information with a U.S. social media platform about a foreign malign actor's social media activity is not based upon the content or particular

⁹ It is my understanding that it may also be a violation of the Foreign Agents Registration Act, 22 U.S.C. § 611 et seq. or other criminal statutes depending on the circumstances, including, but not limited to: 18 U.S.C. § 371 (conspiracy); 18 U.S.C. § 1028A (aggravated identity theft); 18 U.S.C. § 951 (acting in the United States as an agent of a foreign government without prior notification to the Attorney General); 18 U.S.C. § 1030 (computer fraud and abuse); 18 U.S.C. §§ 1343, 1344 (wire fraud and bank fraud) and 52 U.S.C. §§ 30109, 30121 (soliciting or making foreign contributions to influence federal elections, or donations to influence state or local elections).

¹⁰ For examples of a social media platform's reporting on its enforcement of its terms of service, see Meta's November 13, 2018, report "More Information About Last Week's Takedowns" found at <https://about.fb.com/news/2018/11/last-weeks-takedowns/>; Twitter's October 8, 2020, blog "Disclosing networks to our state-linked information operations archive" found at https://blog.twitter.com/en_us/topics/company/2020/disclosing-removed-networks-to-our-archive-of-state-linked-information; and Meta's May 6, 2021, report "April 2021 Coordinated Inauthentic Behavior Report" found at <https://about.fb.com/news/2021/05/april-2021-coordinated-inauthentic-behavior-report/>.

viewpoint expressed in a posting but rather on the fact that the account is part of a *covert* effort by a *foreign* malign actor.

17. While the FBI is responsible for investigating violations of the Foreign Agents Registration Act (FARA), the FITF does not identify for U.S. social media companies postings by hostile foreign actors where the postings are not covert, regardless of the content. For example, the FITF would not identify for a U.S. social media platform a post or account overtly attributed to RT (formerly known as “Russia Today”), which is registered under FARA as an agent of a Russian government entity and maintains accounts on social media, including Facebook and Twitter.
18. The FITF’s efforts to combat foreign malign influence operations are consistent with the findings of the current and prior administrations regarding U.S. national security and foreign policy. On September 12, 2018, President Trump issued Executive Order 13848, which states that the President found “that the ability of persons located, in whole or substantial part, outside the United States to interfere in or undermine public confidence in United States elections including through the unauthorized accessing of election and campaign infrastructure or the covert distribution of propaganda and disinformation constitutes an unusual and extraordinary threat to the national security and foreign policy of the United States.” Based in part on this finding, the President declared a national emergency in accordance with section 202(d) of the National Emergencies Act, 50 U.S.C. § 1622(d), with respect to the threat of foreign interference in or undermining public confidence in United States elections. On September 10, 2019, and then again on September 10, 2020, President Trump found that this threat continued and therefore continued the national emergency he previously declared. President Biden also found that

this threat continues and therefore continued the national emergency declaration on September 7, 2021, and September 7, 2022.

19. Consistent with the findings by Presidents Trump and Biden, the media has reported that Yevgeniy Prigozhin—as previously noted, the primary funder of the IRA, who is charged with crimes relating to the IRA’s political and electoral interference operations in the United States—stated in 2022 that the Russians will continue to interfere in U.S. elections.¹¹
20. Thus, the Russian, PRC, and Iranian governments, and other foreign malign actors, would benefit, and the United States’ national security would be harmed, if the Court were to issue the proposed PI and if it were interpreted to prevent the FBI from notifying a social media company that a particular account on its platform is operated by a covert foreign malign actor. Such a ruling would serve as an open invitation for these foreign malign actors to step up their deceptive efforts to sow division within the United States, undermine our democratic processes and institutions, and steer policy and regulatory decisions in favor of their strategic objectives, and diminish our nation’s capacity to defend its interests on the world stage.

ELECTION-RELATED TIME, PLACE, AND MANNER DISINFORMATION

21. The U.S. Government and the American people have a compelling interest in maintaining the integrity of election procedures, and based on the authorities cited above, the FBI has been given responsibility to investigate three categories of federal election crimes:

¹¹ For example, see November 7, 2022, Associated Press article “Putin-linked businessman admits to US election meddling” found at <https://apnews.com/article/2022-midterm-elections-business-social-media-7fefa7ab0491b653f6094a4d090155fe>.

(1) voter/ballot fraud, (2) civil rights violations, and (3) campaign finance offenses. I understand that posting objectively false information on social media concerning the time, place, or manner of elections with the intent to prevent qualified voters from effectively voting may be a violation of 18 U.S.C. § 241, which makes it a crime to conspire to “injure” any person “in the free exercise or enjoyment of any right or privilege secured to him by the Constitution or the laws of the United States.”¹² For this reason, separate from the work of the FITF, the FBI and the DOJ work to counter efforts to prevent qualified voters from effectively voting by deceiving them as to the time, place, or manner of an election.

22. Specifically, in the days immediately preceding a presidential or mid-term election, and on election day itself, the FBI stands up “command posts” at FBI Headquarters and in its field offices across the country. The command posts in the field offices are staffed by FBI Special Agents, analysts, and support personnel, as is the command post at FBI Headquarters, but the latter is also staffed by attorneys from DOJ and the FBI Office of the General Counsel. The command posts facilitate the FBI’s and DOJ’s ability to address federal election crimes, including but not limited to civil rights violations, which may be occurring.

23. If an FBI field office is notified—for example, by a state election official—of a posting on a social media platform which contains objectively false information about the time, place, or manner of an election, the field office will conduct an initial review as to whether the posting appears to constitute a violation of 18 U.S.C. § 241 or evidence of such a violation. If so, the field office will relay the information to the FBI Headquarters

¹² See January 23, 2023, Memorandum and Order denying defendant’s motion to dismiss the indictment in *United States v. Douglass Mackey*, No. 21-cr-00080 (E.D. N.Y.), ECF No. 54.

command post, and the FBI and DOJ personnel at the command post will review the report and determine whether the posting appears to constitute a violation of 18 U.S.C. § 241 or evidence of such a violation. If it does, the report is passed to the FBI's San Francisco Division command post, which then relays the information to the social media platform.¹³ This relaying is done in an effort to minimize victimization where possible, rather than rely solely on potential prosecution as a means to protect the public. Again, the FBI does not pressure or coerce platforms into taking any action, but rather relies on the platforms to take whatever action they deem appropriate in light of their terms of service.

24. Thus, individuals or groups intent on deceiving U.S. citizens about the time, place, or manner of elections would benefit, and the public would be harmed, if the Court issues the proposed PI and if the PI were interpreted to prevent the FBI from sharing that information with social media platforms.

TERRORISTS USING SOCIAL MEDIA PLATFORMS

25. As noted above, preventing terrorist attacks remains the FBI's top priority. The FBI remains concerned that foreign terrorist organizations, such as Islamic State of Iraq and ash-Sham (ISIS) and al Qaeda and their affiliates, intend to carry out or inspire large-scale attacks in the United States.
26. Many terrorist organizations use various digital communication platforms, including social media, to reach individuals they believe may be susceptible and sympathetic to violent terrorist messages. Terrorists in ungoverned spaces—both physical and virtual—readily

¹³ Because most social media platforms are headquartered within the San Francisco Division's geographic area of responsibility, the San Francisco Division is the FBI's primary point of contact with social media platforms regarding election time, place, or manner disinformation.

disseminate propaganda and training materials to attract easily influenced individuals around the world to their cause. With the broad distribution of social media, terrorists can spot, assess, recruit, and radicalize vulnerable persons of all ages across the globe. These efforts are not new—see the attached September 21, 2012, letter from members of Congress to then-FBI Director Mueller about foreign terrorist organizations using Twitter to further their jihadist agendas.¹⁴

27. No group has been as successful at drawing people into its perverse ideology as ISIS, which has proven dangerously competent at employing such tools. Despite its loss of physical territory in Iraq and Syria, ISIS remains relentless in its campaign of violence against the United States and our partners. ISIS uses traditional media platforms as well as widespread social media campaigns to propagate its ideology. Like other foreign terrorist groups, ISIS advocates for lone offender attacks in the United States and Western countries via videos and other English language propaganda that have, at times, specifically advocated for attacks against civilians, the military, law enforcement, and intelligence community personnel.
28. ISIS and its supporters continue to aggressively promote its hate-fueled rhetoric and attract like-minded violent extremists with a willingness to conduct attacks against the United States and our interests abroad. The message is not tailored solely to those who overtly express signs of radicalization. It is seen by many who use messaging applications and participate in social networks.
29. Al Qaeda maintains its desire to both conduct and inspire large-scale, spectacular attacks. Because continued pressure has degraded some of the group's senior leadership, the FBI

¹⁴ The September 21, 2012, letter is attached hereto as Exhibit I.

assesses that, in the near term, al Qaeda is more likely to continue to focus on cultivating its international affiliates and supporting small-scale, readily achievable attacks in regions such as East and West Africa. Propaganda from al Qaeda leaders continues to seek to inspire individuals to conduct their own attacks in the United States and other Western nations.

30. Promotion or facilitation of terrorist activity is typically a violation of a social media platform's terms of service. Therefore, in some circumstances, the FBI provides social media platforms with notice, for whatever action they deem appropriate, that foreign terrorists or those promoting terrorism are using their platforms.¹⁵ The FBI's practice is to not pressure or coerce companies to take any action, and companies do not necessarily disclose to the FBI whether they took any action on a posting or account. However, the FBI's experience is that social media companies share the FBI's and the general public's interest in combatting terrorism and therefore will often (but not always) enforce their terms of service to prevent this activity on their platforms. By way of example, in a February 5, 2016, blog post, Twitter reported that since the middle of 2015, they had suspended over 125,000 accounts for threatening or promoting terrorist acts, primarily related to ISIS.¹⁶
31. Thus, ISIS, al Qaeda, and other terrorist groups who use social media to promote their agendas would benefit, and the risk to the American public from terrorism would

¹⁵ The FBI may learn of this activity through its national security investigations, from other members of the U.S. Intelligence Community, through foreign partners, or by other means. Social media activity by foreign terrorist organizations may or may not constitute a crime under U.S. law and may or may not be readily accessible to people in the United States—some U.S. social media platforms, like Facebook, are popular across the globe and foreign terrorist organizations or supporters may create Facebook groups in which they post terrorist propaganda in their native languages.

¹⁶ See https://blog.twitter.com/en_us/a/2016/combating-violent-extremism.

increase, if the proposed PI were issued and interpreted to prevent the FBI from notifying social media platforms of terrorist groups' activity on those platforms.

CYBER CRIMINAL ACTIVITY ON SOCIAL MEDIA PLATFORMS

32. Malicious cyber activity threatens the public's safety and our national and economic security, and over recent years, the FBI has seen a wider-than-ever range of cyber actors threaten Americans' safety, security, and confidence in our digitally connected world. Cyber-criminal syndicates and nation-states keep innovating ways to compromise our networks and maximize the reach and impact of their operations, such as by selling malware as a service or by targeting vendors to access scores of victims by hacking just one provider.
33. The FBI's cyber strategy is to impose risks and consequences on cyber adversaries. Our goal is to change the behavior of criminals and nation-states who believe they can compromise U.S. networks, steal financial and intellectual property, and put critical infrastructure at risk without facing risk themselves. To do this, we use our unique mix of authorities, capabilities, and partnerships to impose consequences on our cyber adversaries.
34. The FBI is the lead federal agency for investigating cyber attacks and intrusions. We collect and share intelligence and engage with victims while working to unmask those committing malicious cyber activities.
35. Social media platforms are frequently used by cyber criminals to commit crimes. For example, platforms typically provide for some type of direct messaging to users, which cyber criminals can use to conduct spear phishing attacks. Spear phishers target select groups of people with something in common—for example, they work at the same

company, bank at the same financial institution, attend the same college, or order merchandise from the same website. Using inside information that may have been obtained through hacking or by combing through websites, blogs, or social media platforms, cyber criminals send messages through the social media platform that look like the real thing to targeted victims, offering urgent and legitimate-sounding explanations as to why they need the victim's personal data. Victims are asked to click on a link inside the message that takes them to a phony but realistic-looking website, where they are asked to provide passwords, account numbers, user IDs, access codes, PINs, and alike. Once criminals have the victim's personal data, they can access their bank account, use their credit cards, and create a whole new identity using their information. Spear phishing can also trick the victim into downloading malicious codes or malware after they click on a link embedded in a message, which is an especially useful tool in crimes like economic espionage where sensitive internal communications can be accessed, and trade secrets stolen. Malware can also hijack the victim's computer.

36. Social media is also a ripe platform for "malvertizing," in which cyber criminals post advertisements on social media that either link to fake login pages to steal credentials or have advertisements that end up linking to other pages that deceive victims into downloading malware.
37. As part of the FBI's effort to combat cyber crime, the FBI may in some circumstances notify social media platforms of spear phishing, malvertizing, or other fraud enabling activities on their platforms. These notifications may be about general trends that the FBI is seeing or about particular incidents. The FBI's practice is to not pressure or coerce companies to take any actions, and companies do not necessarily disclose to the FBI

whether they took any action on such fraud. In addition, the FBI has on occasion been contacted by companies when their social media accounts have been taken over by cyber criminals or when cyber criminals have established fraudulent accounts which appear to be operated by those companies and the companies have been unsuccessful in reaching the social media platforms directly to report the incident. On occasion, the FBI has relayed the incident to the social media platform.

38. Thus, cyber criminals who use social media platforms to commit their crimes would benefit, and the public would be placed at greater risk from cybercrime, if the Court were to issue the proposed PI and if it were interpreted to prevent the FBI from communicating with social media platforms about cyber criminal activity on their platforms.

CRIMES AGAINST CHILDREN ON SOCIAL MEDIA PLATFORMS

39. The FBI plays an important role in the effort to prevent violent crimes against children, to include contact offenses against children (production of child sexual abuse material (CSAM),¹⁷ sextortion, domestic travel to engage in sexual activity with children, and international travel to engage in sexual activity with children); sexual exploitation of children (online networks and enterprises manufacturing, trading, distributing, and/or selling CSAM); and trafficking of CSAM (distribution or possession). Social media is a major forum for criminals to engage in the heinous sexual exploitation of children and the trafficking of CSAM, and federal law requires electronic service providers, including social

¹⁷ The FBI and other entities involved in the prevention of violent crimes against children now use the term "child sexual abuse material" instead of "child pornography."

media platforms, to report certain online child sexual exploitation once the provider obtains actual knowledge of the facts or circumstances.¹⁸

40. The mission of the FBI's Crimes Against Children program is to (1) provide a rapid, proactive, and comprehensive ability to counter all threats of abuse and exploitation to children when those crimes fall under the authority of the FBI; (2) identify, locate, and recover child victims; and (3) strengthen relationships between the FBI and federal, state, local, tribal, and international law enforcement partners to identify, prioritize, investigate, and deter individuals and criminal networks exploiting children.
41. The FBI also works closely with the National Center for Missing & Exploited Children (NCMEC). NCMEC's CyberTipline receives reports of child sexual exploitation incidents via an online form and maintains a 24-hour hotline. FBI personnel assigned to the NCMEC review information that is provided to NCMEC's tip line and work to identify individuals suspected of any of the following: possession, manufacture or distribution of CSAM; online enticement of children for sexual acts; child sexual tourism; or other sexual exploitation of children. Once a potential suspect has been identified, investigators compile information and forward it to the appropriate FBI field office for investigation.
42. As is indicated on NCMEC's website,¹⁹ NCMEC works closely with electronic service providers, including social media platforms, on voluntary initiatives that many companies choose to engage in to deter and prevent the proliferation of online child sexual exploitation

¹⁸ See 18 U.S.C. § 2258A (reporting requirements of providers) and 2258E(6)(defining "provider" for purposes of sections 2258A through 2258E).

¹⁹ <https://www.missingkids.org/theissues/csam>.

images. Companies also receive notices from NCMEC about suspected CSAM on their servers.²⁰

43. The proposed PI's prohibition on "acting in concert with others" could potentially prevent NCMEC from working with the FBI to keep CSAM and other crimes against children from taking place on social media platforms. In addition, although the FBI does not routinely contact social media platforms directly to flag CSAM and other crimes against children on their platforms, there are situations where that would be warranted in order to prevent imminent or ongoing harm to children. For example, notification to the platform would be warranted if the FBI were aware of live streaming of sexual abuse of a child, a particular user in a chat room grooming children for exploitation, or a particular user committing ongoing sexploitation crimes against children.²¹
44. The proposed PI could potentially prevent NCMEC and the FBI from alerting a social media platform of CSAM or other crimes against children taking place on its platform. Thus, individuals involved in the production and dissemination of CSAM or involved in other heinous crimes against children taking place on social media would benefit, and children would be placed at greater risk of becoming their victims, if the Court were to issue the proposed PI, and if it were interpreted to apply to the FBI's efforts to prevent crimes against children.

²⁰ Pursuant to 18 U.S.C. § 2258C(a), NCMEC may provide certain information relating to any CyberTipline report, such as hash values or other unique identifiers associated with a specific visual depiction, to a provider in order to permit that provider to stop the online sexual exploitation of children.

²¹ In addition, 18 U.S.C. § 2258B(c)(2) requires providers to destroy CSAM images "upon a request from a law enforcement agency."

OTHER CRIMES AND SECURITY THREATS ON SOCIAL MEDIA PLATFORMS

45. In addition to the contexts discussed above, there may be other situations where it would be in the public interest for the FBI to notify a social media platform of criminal conduct or security threats on its platform.
46. For example, if properly classified national security information is illegally posted on a social media account and foreign adversaries become aware of it, that posting would reasonably be expected to cause some level of damage to national security.²² In such a situation, I expect that the FBI would ask the social media platform to remove the information.²³ There has also been public reporting that some foreign intelligence services use certain job networking platforms to recruit former government employees to provide classified information,²⁴ so in some circumstances it may be in the interests of national security for the FBI to notify a platform of that activity. There have also been cases where individuals have posted explicit threats against FBI personnel on social media or posted personal information of FBI personnel and federal judges in order to encourage violence against those individuals. In some circumstances, the FBI has asked platforms to take down

²² Under Executive Order 13526, section 1.2(a), the unauthorized disclosure of Top Secret information is reasonably expected to cause exceptionally grave damage to the national security; unauthorized disclosure of Secret information is reasonably expected to cause serious damage to the national security; and unauthorized disclosure of Confidential information is reasonably expected to cause damage to the national security.

²³ That situation did occur with respect to posting on Twitter, and Twitter removed the posting at the FBI's request. See Government's Sentencing Position, ECF NO. 47, in *United States v. James Robert Schweitzer*, No. SA CR 20-188-JLS (C.D. Cal.), attached hereto as Exhibit 2.

²⁴ See April 4, 2019, NBC News article titled "How a \$230,000 debt and a LinkedIn message led an ex-CIA officer to spy for China" found at <https://www.nbcnews.com/politics/national-security/how-230-000-debt-linkedin-message-led-ex-cia-officer-n990691>.

those postings.²⁵ A situation could also arise where the FBI might notify a social media platform that the sale of dangerous illegal drugs is taking place on the platform.

47. These are just examples. Given the broad scope of the FBI's national security and law enforcement missions, the wide range of activity taking place on social media, and the constantly emerging threats from criminals, foreign adversaries, and other hostile actors, it is not possible to predict all the situations that could arise that might prompt the FBI to notify social media platforms of criminal activity or security threats on their platforms. The terms of the proposed PI appear to be expansive in scope and to lack clear boundaries. It makes no exception for situations involving criminal activity or security threats on social media platforms, and appears to go far beyond enjoining efforts to unlawfully "pressure" or "coerce" social media platforms to take action. Thus, it would create a dangerous situation in which the FBI may not be able to communicate with social media platforms in order to protect the national security and targets of crime and security threats.

PRIVATE SECTOR OUTREACH AND INFORMATION SHARING

48. As previously noted, the FBI's approach to its law enforcement and national security mission is to prevent crimes and mitigate national security threats, where possible, before they do damage. A critical part of that approach is for the FBI to work with the private sector to enhance the FBI's understanding of the risks it confronts and its needs, and to furnish the private sector with information that will help it, and the people who depend on

²⁵ According to media reports, a similar situation recently occurred with respect to police officers with the Los Angeles Police Department. An individual posted photographs and other information about LAPD officers on a website and offered bounties for the killing of officers. The website was apparently posted on Twitter, and Twitter took down the posting at the request of the police union. See <https://abc7.com/twitter-killercops-account-suspended-los-angeles-police-union-lapd/13031738/>.

the services the private sector offers, to avoid becoming victims. With respect to social media platforms, the FBI on occasion provides the platforms with information about general trends in criminal activity or national security threats that might impact their platforms. For example, with respect to cyber crime, the FBI works hard to push important threat information to network defenders. The FBI also shares information about trends in disinformation operations by covert foreign malign actors, and about code words and symbols being used by terrorist groups on social media. The proposed PI is so vague and broad that it could raise a question whether that kind of outreach and information sharing would be covered under the PI, even if no particular social media posting is being flagged.

49. The proposed PI is so vague and broad that it might also be construed to cover general statements by FBI personnel—not necessarily even direct communications between the FBI and social media platforms—about trends in criminal activity. For example, if a social media platform becomes aware of congressional testimony by an FBI official that there are increasing reports of certain types of cyber crime, that certain terrorist organizations are becoming more active, or that crimes against children continue to be a serious problem, that might be regarded as “encouraging” the platform to be more proactive in policing its platform for terms of service violations. Viewed that way, the FBI could not make any statements or take any action that might influence or “encourage” social media platforms to protect their business and their users from criminal conduct or other conduct that violates their terms of service.

CONCLUSION

50. As stated above, the FBI’s national security and law enforcement missions include not only the investigation of crimes or threats that have already been carried out, but the prevention

of crimes and the protection of intended victims. Moreover, in the context of national security threats and criminal conduct by agents of foreign governments or by other foreign actors, those foreign actors may view themselves as beyond the reach of federal prosecutors, and so the threat of criminal prosecution may be not an effective deterrent. In those and other circumstances, the FBI's law enforcement and national security efforts are most effectively aimed at preventing the criminal conduct or mitigating the national security threat, and this may involve notifying social media platforms of criminal conduct and security threats on their platforms. Thus, to the extent it is applied to the FBI, the proposed PI would be contrary to the interests of the national security, the American public, and victims of crime. Rather, it would benefit the Russian, PRC, and Iranian governments, other foreign malign actors, individuals or groups intent on preventing qualified voters from voting, terrorists, cyber criminals, individuals and groups involved in crimes against children, and a wide variety of other criminals. For the foregoing reasons, I urge the Court to deny the request for a PI with respect to the FBI or any FBI officials.

I declare under penalty of perjury that the foregoing is true and correct to the best of my knowledge.

Executed this 1 day of May 2023

DEFENDANTS' OBJECTIONS AND RESPONSES TO PLAINTIFFS' PROPOSED FINDINGS OF FACT

Defendants object to Plaintiffs' attempt to "incorporate by reference the evidence, documents, and exhibits previously filed in this case," Plaintiffs' Proposed Findings of Fact (Pls.' PFOF) at 1, where those materials are not specifically cited in Plaintiffs' Memorandum in Support of Motion for a Preliminary Injunction, Dkt. 15; Plaintiffs' Supplemental Brief in Support of Motion for a Preliminary Injunction, Dkt. 214; and Plaintiffs' Proposed Findings of Fact, Dkt. 214-1. As the Fifth Circuit has recognized, "[j]udges are not like pigs, hunting for truffles buried in the record." *United States v. Del Carpio Frescas*, 932 F.3d 324, 331 (5th Cir. 2019) (quotation omitted). Plaintiffs' suggestion that the Court and Defendants scour the docket in this case to address "evidence, documents and exhibits" not specifically referenced in Plaintiffs' lengthy preliminary injunction filings that may—in their view—bear on preliminary injunction issues is inappropriate. Accordingly, Defendants' response appropriately is focused on the "evidence, documents, and exhibits" Plaintiffs expressly have identified in support of their preliminary injunction motion.²

I. The Campaign Of Public Threats Against Social-Media Platforms To Pressure Them To Censor More Speech on Social Media.³

1. Federal officials, including Defendants, have made a long series of public statements since at least 2018 demanding that social-media platforms increase their censorship of speech and speakers disfavored by these officials, and threatening adverse consequences – such as repeal or reform of Section 230 immunity under the Communications Decency Act, antitrust scrutiny or enforcement, increased regulation, and other measures – if the platforms do not increase censorship. The private communications between government officials and social-media platforms

² Defendants object to each of Plaintiffs' PFOFs to the extent that PFOF attributes to a deponent a legal characterization or conclusion contained in a question by counsel for Plaintiffs, on the ground that even when the deponent gave an affirmative response to such a question, any legal characterization or conclusion remained one by Plaintiffs, not testified to as fact by the deponent.

³ If Plaintiffs intend their headings to be proposed findings of fact, Defendants dispute them because they are argumentative and lack evidentiary support. Defendants respond to Plaintiffs' arguments in their opposition to Plaintiffs' preliminary injunction motion.

addressing disinformation, misinformation, and censorship set forth herein were made against the backdrop of these public threats.

RESPONSE: Disputed. The proposed finding of fact (PFOF) is argumentative, lacks citation to any evidence, and is contradicted by the record for all the reasons discussed below and in Defendants’ Opposition to Plaintiffs’ Motion for Preliminary Injunction (Opposition), to which the Court is respectfully referred.

2. The immunity provided by Section 230 of the Communications Decency Act is extremely valuable for social-media platforms, so threatening to amend or repeal that immunity is highly motivating to them. One commentator has aptly described Section 230 immunity as “a hidden subsidy worth billions of dollars,” stating: “Digital platforms enjoy a hidden subsidy worth billions of dollars by being exempted from any liability for most of the speech on their platforms (Section 230).” Glenn Decl. Ex. 11, Doc. 10-1 at 140. Another commentator has observed, “imperiling Section 230 is a fearsome cudgel against ever untouchable companies.” Glenn Decl. Ex. 13, Doc. 10-1 at 206.

RESPONSE: Dispute the statement that “threatening to amend or repeal [Section 230] is highly motivating” to social-media platforms as a vague characterization for which the PFOF cites no supporting evidence. Undisputed that Glenn Decl. Ex. 11, at 140, is accurately quoted, but note that Plaintiffs cite no evidence of record to support the economic validity of the “commentator’s” “descri[ption]” of Section 230’s value to social-media companies. Defendants further note that Glenn Ex. 11, Dkt. 10-1 at 51 n.123, cites to a letter signed by State Attorney Generals of both political parties (including the Attorney Generals of Louisiana and Missouri) asking members of Congress to revise Section 230 to impose liability for violations of state criminal law. *Id.* at 51, n.123. The final sentence is disputed because Plaintiffs’ partial quotation to an April 12, 2019 article lacks context. The full statement in the article reads as follows: “Whatever the political motivations, imperiling Section 230 is a fearsome cudgel against even tech’s most seemingly untouchable companies.” Glenn Decl. Ex. 13, Doc. 10-1 at 206. Defendants also note that the cited April 2019 article also observed that both Democratic and Republican legislators had expressed

interest in amending Section 230. *Id.* Finally, note that irrespective of any interest expressed in Section 230 reform, social media companies, by virtue of their business model, have powerful economic incentives to moderate content on their platforms to retain users and thereby maximize advertising revenues, and have been doing so since well before 2020. *See* Declaration of Dr. Stuart Gurrea at ¶¶ 1-81 (“Gurrea Decl.”) (Ex. 1).

3. The threat of antitrust scrutiny or enforcement is also a major motivator to social-media platforms. For example, Facebook CEO Mark Zuckerberg has stated that the threat of antitrust enforcement is “an ‘existential’ threat” to his platform. Glenn Decl. Ex. 12, Doc. 10-1 at 202.

RESPONSE: Disputed. The first sentence lacks citation to or support in the evidence of record. The second sentence does not accurately reflect Mr. Zuckerberg’s statement, lacks appropriate context, and fails to support the first sentence of the PFOF. The New York Times article referenced in Glenn Decl. Ex. 12, Dkt. 10-1 at 202, discusses lawsuits brought by the Federal Trade Commission (“FTC”) and “more than 40 states” accusing Facebook of “buying up its rivals to illegally squash competition” and calling for “the deals to be unwound[.]” Notably, among the States that brought the antitrust lawsuit were Louisiana and Missouri. *See New York v. Facebook, Inc.*, 549 F. Supp. 3d 6 (D.D.C. 2021) (No. 20-cv-3589), 2020 WL 7348667, at *4 (naming Louisiana and Missouri as plaintiffs). It is in the context of this antitrust lawsuit that Mr. Zuckerberg is quoted as stating that the breakup of the company is an “existential” threat. Glenn Decl. Ex. 12, Dkt. 10-1 at 202. This article has nothing to do with any threats of antitrust enforcement based on Facebook’s content moderation policies. Accordingly, this PFOF is irrelevant to any issue in this case. Note also that irrespective of concerns about antitrust enforcement, social media companies, by virtue of their business model, have powerful economic incentives to moderate content on their platforms to retain users and thereby maximize advertising revenues, and have been doing so since well before 2020. *See* Gurrea Decl. at ¶¶ 1-81 (Ex. 1).

A. Threats From Federal Elected Officials Pressuring Platforms to Censor Speech.

4. Then-Speaker of the House Nancy Pelosi stated on April 12, 2019: “I do think that for the privilege of 230, there has to be a bigger sense of responsibility on it. And it is not out of the question that that could be removed.” Glenn Decl. Ex. 13, Doc. 10-1, at 205 (“When asked about Section 230, Pelosi referred to the law as a ‘gift’ to tech companies that have leaned heavily on the law to grow their business.... ‘It is a gift to them and I don’t think that they are treating it with the respect that they should, and so I think that that could be a question mark and in jeopardy... I do think that for the privilege of 230, there has to be a bigger sense of responsibility on it. And it is not out of the question that that could be removed.’”).

RESPONSE: Undisputed, but further note that this PFOF is immaterial to any issue in this case and the concerns about Section 230 were bipartisan, *see* Glenn Decl. Ex. 13, Dkt. 10-1, at 205 (“In recent months, a handful of Republicans in Congress have [also] taken aim at the law.”). Note also that irrespective of interest expressed in Section 230 reform, social media companies, by virtue of their business model, have powerful economic incentives to moderate content on their platforms to retain users and thereby maximize advertising revenues, and have been doing so since well before 2020. *See* Gurrea Decl. ¶¶ 1-81 (Ex. 1).

5. Senator Richard Blumenthal stated on Nov. 17, 2020: “I have urged, in fact, a breakup of tech giants. Because they’ve misused their bigness and power. ... And indeed Section 230 reform, meaningful reform, including even possible repeal in large part because their immunity is way too broad and victims of their harms deserve a day in court.” Glenn Decl. Ex. 16, at 1; Doc. 10-1, at 225.

RESPONSE: Undisputed, but further note that this PFOF is immaterial to any issue in this case and the concerns about Section 230 were bipartisan. The concerns stated by Senator Blumenthal were widely shared by his Republican colleagues at that November 17, 2020, hearing. *See* Ex. 14 at 2⁴ (*Censorship and the 2020 Election: Hearing Before the S. Comm. on the Judiciary*, 116th Cong. 4 (2020) (Senator Graham: “And I think section 230 has to be changed because we

⁴ Throughout this document, citations to “Ex. [number]” that are not preceded by a name are Defendants’ exhibits filed concurrently with their Opposition to Plaintiffs’ Motion for Preliminary Injunction Motion and the instant Response to Plaintiffs’ Proposed Findings of Fact.

can't get there from here without change."); *id.* at 10 (Senator Cornyn: "We'll, I'm glad to hear both of our witnesses today say that section 230, that they are open to reform because I think it's fair to say the internet has outgrown section 230."); *id.* at 19 (Senator Cruz: "At the same time that big tech exercises massive power, it also enjoys massive corporate welfare. Through the effect of section 230, special immunity from liability that nobody else gets, Congress has given big tech, in effect, a subsidy while they become some of the wealthiest corporations on the face of the planet."); *id.* at 45 (Senator Blackburn: "My colleagues and I have ask[ed] you all repeatedly through the years for greater transparency and to accept responsibility you have chosen to do neither so it is going to be up to us to change existing law and to hold you to account on behalf of the American people section 230 the reforms that we are going to put in place will take away this liability shield that you have turned into an opaque wall . . .). Note also that irrespective of interest expressed in Section 230 reform, or any concern about antitrust enforcement, social media companies, by virtue of their business model, have powerful economic incentives to moderate content on their platforms to retain users and thereby maximize advertising revenues, and have been doing so since well before 2020. *See* Gurrea Decl. ¶¶ 1-81 (Ex. 1).

6. Senator Mazie Hirono tweeted on Feb. 5, 2021: "Sec 230 was supposed to incentivize internet platforms to police harmful content by users. Instead, the law acts as a shield allowing them to turn a blind eye. The SAFE TECH ACT brings 230 into the modern age and makes platforms accountable for the harm they cause." Glenn Decl. Ex. 55, at 1; Doc. 10-1, at 723.

RESPONSE: Undisputed, but immaterial to any issue in this case. Note also that irrespective of interest expressed in Section 230 reform, social media companies, by virtue of their business model, have powerful economic incentives to moderate content on their platforms to retain users and thereby maximize advertising revenues, and have been doing so since well before 2020. *See* Gurrea Decl. ¶¶ 1-81 (Ex. 1).

7. Defendants' political allies have repeatedly used congressional hearings as forums to advance these threats of adverse legislation if social-media platforms do not increase censorship of speakers, speech, content, and viewpoints they disfavor. They have repeatedly used such hearings to berate social-media firm leaders, such as Mark Zuckerberg of Facebook, Jack Dorsey of Twitter, and Sundar Pichai of Google and YouTube, and to make threats of adverse legal consequences if censorship is not increased. Such hearings include, but are not limited to, an antitrust hearing before the House Judiciary Committee on July 29, 2020; a Senate Judiciary Committee hearing on November 17, 2020; and a House Energy and Commerce Hearing on March 25, 2021.

RESPONSE: Disputed as argumentative characterizations lacking any citation to or support in the evidence of record. Note also that irrespective of interest expressed in Section 230 reform, or any concern about antitrust enforcement, social media companies, by virtue of their business model, have powerful economic incentives to moderate content on their platforms to retain users and thereby maximize advertising revenues, and have been doing so since well before 2020. *See* Gurrea Decl. ¶¶ 1-81 (Ex. 1).

8. The March 25, 2021 Joint Hearing of the Communications and Technology Subcommittee with the Subcommittee on Consumer Protection and Commerce, the Joint Statement of Democratic Committee Chairs stated: "This hearing will continue the Committee's work of holding online platforms accountable for the growing rise of misinformation and disinformation. ... For far too long, big tech has failed to acknowledge the role they've played in fomenting and elevating blatantly false information to its online audiences. Industry self-regulation has failed. We must begin the work of changing incentives driving social media companies to allow and even promote misinformation and disinformation." Glenn Decl. Ex. 17, at 1-2; Doc. 10-1, at 228-29.

RESPONSE: Undisputed, but further note that this PFOF is immaterial to any issue in this case. Defendants further note that interest in holding a hearing on this topic was bipartisan. Ex. 169 at 6 (*Disinformation Nation: Social Media's Role in Promoting Extremism and Misinformation: Hearing before the H. Comm. on Energy & Commerce, 117th Cong. (2021)*) (Ranking Member Bilirakis: "I've been thinking about this hearing since our side first requested this hearing last year," and "[t]he conclusion is my constituents simply don't trust you anymore."). Note also that irrespective of interest expressed in Section 230 reform, or any concern about antitrust enforcement, social media companies, by virtue of their business model, have powerful

economic incentives to moderate content on their platforms to retain users and thereby maximize advertising revenues, and have been doing so since well before 2020. *See* Gurrea Decl. ¶¶ 1-81 (Ex. 1).

9. At the same hearing, entitled “Disinformation Nation: Social Media’s Role in Promoting Extremism and Misinformation,” Representative Schakowsky stated: “[S]elf-regulation has come to the end of its road.... [Congress] is preparing to move forward with regulation and legislation. The regulation we seek ... must hold platforms accountable when they are used to ... spread misinformation.... All three of the companies that are here today run platforms that are hotbeds of misinformation and disinformation.” Jones Decl., Ex. A, at 1, 5. She also stated: “Self-regulation has not worked. They must be held accountable for allowing misinformation and disinformation to spread.” *Id.* at 7.

RESPONSE: Disputed to the extent this PFOF selectively quotes from Representative Schakowsky’s statements and takes her statements out of context. This PFOF is also immaterial to any issue in this case. Defendants refer the Court to the March 25, 2021 hearing transcript for the complete quote and context of Representative Schakowsky’s statement, *see* Ex. 169 at 5, and further note that the concerns raised by Representative Schakowsky were shared by Republican committee members, *id.* at 7 (Ranking Member Bilirakis: “The fear you should have coming into this hearing today isn’t that you are going to be [upbraided] by a member of Congress—it’s that our committee knows how to get things done when we come together. We can do this with you or without you and we will.”). Note also that irrespective of interest expressed in Section 230 reform, or any concern about antitrust enforcement, social media companies, by virtue of their business model, have powerful economic incentives to moderate content on their platforms to retain users and thereby maximize advertising revenues, and have been doing so since well before 2020. *See* Gurrea Decl. ¶¶ 1-81 (Ex. 1).

10. At the same hearing, Representative Doyle stated: “despite repeated promises to tackle this crisis, Facebook, Google, and Twitter instead routinely make minor changes in response to the public relations crisis of the day. ... It is now painfully clear that neither the market nor public pressure will force these social media companies to take the aggressive action they need to take to eliminate disinformation and extremism from their platforms. And therefore, it is time for

Congress and this committee to legislate and realign these companies' incentives. ... I question whether existing liability protections [*i.e.*, Section 230] should apply ... That is why you are here today, Mr. Zuckerberg, Mr. Pichai, and Mr. Dorsey.... Your business model itself has become the problem." *Id.* at 10-11.

RESPONSE: Disputed to the extent this PFOF selectively quotes from Representative Doyle's statement and takes his comments out of context. This PFOF is also immaterial to any issue in this case. Defendants refer the Court to the March 25, 2021 hearing transcript for the complete quote and context of Representative Doyle's statement, Ex. 169 at 7, and further note that the concerns expressed by Representative Doyle were shared by his Republican colleagues. *Id.* at 8-9 (Ranking Member Rodgers stating that "big tech is a . . . destructive force" and asking the social media companies in attendance at the hearing "why do you think you still deserve [section 230] protections today?"). Note also that irrespective of interest expressed in Section 230 reform, or any concern about antitrust enforcement, social media companies, by virtue of their business model, have powerful economic incentives to moderate content on their platforms to retain users and thereby maximize advertising revenues, and have been doing so since well before 2020. *See* Gurrea Decl. ¶¶ 1-81 (Ex. 1).

11. At the same hearing, Representative Rush accused the platforms of allowing "[m]isinformation, outlandish conspiracy theories, and incendiary content" to spread, and stated to the three CEOs of Google, Facebook, and Twitter: "There is only one comparison that remotely approaches the avarice and moral discrepancy of your companies, and that is the slavetocracy burden of our Nation's shameful and inhumane and most difficult dark days in the past." *Id.* at 13. He also stated to Jack Dorsey, "I can't wait until we come up with legislation that will deal with you and your cohorts in a very, very effective way." *Id.* at 14.

RESPONSE: Disputed to the extent this PFOF selectively quotes Representative Rush and takes his comments out of context. This PFOF is also immaterial to any issue in this case. Defendants refer the Court to the March 25, 2021 hearing transcript for the complete quote and context for his statements, Ex. 169 at 21, and further note that Representative Rush's concerns about how social media platforms were handling content on their platforms were shared by his

Republican colleagues, as well as former President Trump. *Id.* at 22 (Representative Upton stating “it sounds like everybody on both sides of the aisle is not very happy. I think we all believe that there is a lot of responsibility that should be shared for some of the issues that we’ve raised today by the three [witnesses], and I would just offer—or speculate, I guess you could say, that we’re going to see some changes in Section 236—230.”); *id.* (Representative Upton noting that former President Trump vetoed the Defense bill because “he wanted the total repeal” of section 230 and “didn’t get it.”). Note also that irrespective of interest expressed in Section 230 reform, or any concern about antitrust enforcement, social media companies, by virtue of their business model, have powerful economic incentives to moderate content on their platforms to retain users and thereby maximize advertising revenues, and have been doing so since well before 2020. *See* Gurrea Decl. ¶¶ 1-81 (Ex. 1).

12. At the same hearing, Representative Upton stated: “we are going to see some changes in Section 230.” *Id.* at 15.

RESPONSE: Disputed to the extent this PFOF selectively quotes Representative Upton’s statement. This PFOF is also immaterial to any issue in this case. Defendants refer the Court to the transcript of the March 25, 2021 hearing for Representative Upton’s complete comments, in context. *See* Ex. 169. Note also that irrespective of interest expressed in Section 230 reform, social media companies, by virtue of their business model, have powerful economic incentives to moderate content on their platforms to retain users and thereby maximize advertising revenues, and have been doing so since well before 2020. *See* Gurrea Decl. ¶¶ 1-81 (Ex. 1).

13. At the same hearing, Representative Eshoo demanded of Jack Dorsey, “why haven’t you banned the 12 accounts that are spewing its deadly COVID misinformation?” *Id.* at 17.

RESPONSE: Disputed to the extent it mischaracterizes Representative Eshoo’s question as a “demand,” and selectively quotes his testimony. Defendants refer the Court to the transcript

of the March 25, 2021 hearing for Representative Eshoo's complete comments. *See* 169. Defendants further note that in response to Representative Eshoo's question, Twitter's former CEO Jack Dorsey explained that "we won't take it down because it didn't violate our policy." *Id.* at 24. In addition, this PFOF is immaterial to any issue in this case. And note also that irrespective of interest expressed in Section 230 reform, or any concern about antitrust enforcement, social media companies, by virtue of their business model, have powerful economic incentives to moderate content on their platforms to retain users and thereby maximize advertising revenues, and have been doing so since well before 2020. *See* Gurrea Decl. ¶¶ 1-81 (Ex. 1).

14. At a hearing of the Antitrust subcommittee of the House Judiciary Committee on July 29, 2020, Representative Cicilline said to Mark Zuckerberg: "Mr. Zuckerberg. When a television station runs a false political advertisement, they're held liable for that. Why should Facebook or any other platform be different? ... It's hard to understand why Facebook shouldn't be responsible for those business decisions. ... Facebook gets away with it because you're the only game in town. There's no competition forcing you to police your own platform. Allowing this misinformation to spread can lead to violence. And frankly, I believe it strikes at the very heart of American democracy. ... American democracy has always been at war against monopoly power. ... These companies, as exist today, have monopoly power. Some need to be broken up, all need to be properly regulated and held accountable. ... The names have changed, but the story is the same. Today, the men are named Zuckerberg, Pichai, Cook, and Bezos." Jones Decl., Ex. B, at 9-11.

RESPONSE: Disputed because Plaintiffs' PFOF does not accurately cite to the transcript of the July 29, 2020, hearing, and misleadingly quotes different questions to suggest a single statement. This PFOF is also immaterial to any issue in this case. Defendants refer the Court to the July 29, 2020 hearing transcript for an accurate transcription of the exchange cited in this PFOF. *See* Ex. 170 at 34, 45 (*Online Platforms and Market Power, Part 6: Examining the Dominance of Amazon, Facebook, Google, and Apple: Hearing Before the Subcomm. on Antitrust, Commercial, & Administrative Law, 116th Cong. (2020)*). Note also that irrespective of any concern about antitrust enforcement, social media companies, by virtue of their business model, have powerful economic incentives to moderate content on their platforms to retain users and thereby maximize

advertising revenues, and have been doing so since well before 2020. *See* Gurrea Decl. ¶¶ 1-81 (Ex. 1).

15. On November 17, 2020, at a hearing of the Senate Judiciary Committee, Senator Blumenthal stated: “Now, Mr. Zuckerberg and Mr. Dorsey, you have built terrifying tools of persuasion and manipulation with power far exceeding the robber barons of the last Gilded Age. You have profited hugely by ... promoting hate speech and voter suppression. ... The destructive incendiary misinformation is still a scourge on both your platforms and on others. ... [W]hat appears on your platform ... is voter suppression and incendiary malicious misinformation. ... [A] series of hearings on big tech is long overdue on antitrust issues ... and Section 230. I have urged, in fact, a breakup of the tech giants because they’ve misused their bigness and power. Breaking off, for example, WhatsApp and Instagram [both Meta platforms].... And indeed Section 230 reform, meaningful reform, including even possible repeal in large part because their immunity is way too broad.... [F]oreign disinformation campaigns intended to interfere in our democracy.... What we’ve seen here are fighting words and hate speech that certainly deserve no free expression protection. ... Change is going to come, no question. Change is on the way and I intend to bring aggressive and targeted reform to Section 230.” Jones Decl., Ex. C, at 2-3. Soon thereafter, he demanded that Mark Zuckerberg (who was testifying before the committee) “commit to ... robust content modification playbook in this coming election, including fact-checking, labelling, reducing the spread of misinformation” to “tak[e] action against dangerous disinformation” and “malign tactics.” *Id.* at 4; *see also, e.g., id.* at 9 (Senator Coons demanding that Jack Dorsey explain why “you don’t have a standalone climate change misinformation policy”)

RESPONSE: Disputed to the extent Plaintiffs’ PFOF selectively quotes from Senator Blumenthal’s statements during a November 17, 2020, Senate Judiciary Subcommittee hearing and mischaracterizes his and Senator Coons’ questions as “demands.” This PFOF is also immaterial to any issue in this case. Defendants refer the Court to the complete transcript of the November 17, 2020, hearing for an accurate transcription of Senator Blumenthal’s statement. *See* Ex. 170. Note also that irrespective of interest expressed in Section 230 reform, or any concern about antitrust enforcement, social media companies, by virtue of their business model, have powerful economic incentives to moderate content on their platforms to retain users and thereby maximize advertising revenues, and have been doing so since well before 2020. *See* Gurrea Decl. ¶¶ 1-81 (Ex. 1).

16. On March 11, 2022, Representative Ro Khanna, the Chairman of the House Oversight and Reform Committee who is leading “an investigation of oil industry ‘misinformation’ and held two

days of hearings on the oil industry, tweeted: “Facebook is preventing us from taking action on climate change by allowing climate misinformation to spread. Congress must step up and hold them accountable.” Jones Decl., Ex. D. He also tweeted: “Misinformation being spread on social media is undermining our efforts to tackle climate change. As chair of the House Oversight Environment Subcommittee, I will be holding a hearing to hold social media companies accountable.” *Id.*

RESPONSE: Undisputed, but immaterial to any issue in this case. Defendants note that on May 29, 2020, then-President Trump tweeted “Revoke 230!” Ex. 31 (Trump tweet). Note also that irrespective of interest expressed in Section 230 reform, social media companies, by virtue of their business model, have powerful economic incentives to moderate content on their platforms to retain users and thereby maximize advertising revenues, and have been doing so since well before 2020. *See* Gurrea Decl. ¶¶ 1-81 (Ex. 1).

17. On April 20, 2022, twenty-two Democratic members of Congress sent a letter to Mark Zuckerberg of Facebook (n/k/a “Meta Platforms, Inc.”), demanding that Facebook increase censorship of “Spanish-language disinformation across its platforms” and threatening Congressional action if Facebook did not do so. The letter claimed that “disinformation” was a threat to democracy, and it made explicit threats of adverse legislative action if Facebook/Meta did not increase censorship: “The spread of these narratives demonstrate that Meta does not see the problem of Spanish-language disinformation in the United States as a critical priority for the health of our democracy. The lack of Meta’s action to swiftly address Spanish-language misinformation globally demonstrates the need for Congress to act to ensure Spanish-speaking communities have fair access to trustworthy information.” Glenn Decl. Ex. 18; Doc. 10-1, at 244-46.

RESPONSE: Disputed to the extent this PFOF takes the cited April 20, 2022, letter out of context, is immaterial to any issue in this case, and is an argumentative characterization rather than a statement of fact. Specifically, Plaintiffs’ PFOF fails to mention that the impetus for the Senators’ concern was Russian propaganda: “[s]ince the beginning of the year, Russian state-controlled outlets have made a concentrated effort to target Spanish-speaking communities to spread false-narratives leading up to, and in the aftermath of, the invasion of Ukraine.” Glenn Decl. Ex. 18, Dkt. 10-1 at 244; *id.* (“Kremlin-owned outlets are winning the information war with Spanish speakers.”) *id.* at 245 (“These lies are designed to undermine a resolute global response

necessary to stand against the Russian government’s aggression.”). Defendants refer the Court to the letter for an accurate statement of its contents. Note also that irrespective of interest expressed in Section 230 reform, or any concern about antitrust enforcement, social media companies, by virtue of their business model, have powerful economic incentives to moderate content on their platforms to retain users and thereby maximize advertising revenues, and have been doing so since well before 2020. *See* Gurrea Decl. ¶¶ 1-81 (Ex. 1).

18. Comments from two Members of the House of Representatives summarize this campaign of pressure and threats: “In April 2019, Louisiana Rep. Cedric Richmond warned Facebook and Google that they had ‘better’ restrict what he and his colleagues saw as harmful content or face regulation: ‘We’re going to make it swift, we’re going to make it strong, and we’re going to hold them very accountable.’ New York Rep. Jerrold Nadler added: ‘Let’s see what happens by just pressuring them.’” Glenn Decl. Ex. 14, at 2-3; Doc. 10-1, at 218-19.

RESPONSE: Disputed to the extent Plaintiffs’ PFOF is argumentative and relies on hearsay and journalistic characterization contained in an opinion article rather than citing to evidence of record. In addition, this PFOF is immaterial to any issue in this case. Note also that irrespective of interest expressed in Section 230 reform, or any concern about antitrust enforcement, social media companies, by virtue of their business model, have powerful economic incentives to moderate content on their platforms to retain users and thereby maximize advertising revenues, and have been doing so since well before 2020. *See* Gurrea Decl. ¶¶ 1-81 (Ex. 1).

B. Public Threats from President Biden and His Aides Pressuring Platforms to Censor.

19. Then-candidate and now-President Biden has led this charge. He has tripled down on these threats of adverse official action from his colleagues and allies in senior federal-government positions. His threats of adverse government action have been among the most vociferous, and among the most clearly linked to calls for more aggressive censorship of disfavored speakers and speech by social-media companies.

RESPONSE: Disputed. Plaintiffs’ PFOF is an argumentative mischaracterization lacking citation to or support in the evidence of record.

20. For example, on January 17, 2020, then-candidate Biden stated, in an interview with the New York Times editorial board, that Section 230 of the CDA should be “revoked” because social-media companies like Facebook did not do enough to censor supposedly false information in the form of political ads criticizing him—*i.e.*, core political speech. He stated: “The idea that it’s a tech company is that Section 230 should be revoked, immediately should be revoked, number one. For Zuckerberg and other platforms.” He also stated, “And it should be revoked. It should be revoked because it is not merely an internet company. It is propagating falsehoods they know to be false.... There is no editorial impact at all on Facebook. None. None whatsoever. It’s irresponsible. It’s totally irresponsible.” Glenn Decl. Ex. 19, at 27; Doc. 10-1, at 275.

RESPONSE: Disputed to the extent Plaintiffs’ PFOF selectively quotes from statements by then-candidate Biden and then improperly mischaracterize those partial quotes. Defendants refer the Court to the entirety of then-candidate Biden’s statement concerning Section 230 reform for a full and accurate understanding of its contents. Then-candidate Biden was answering a question concerning a letter his campaign had sent to Facebook “regarding an ad that falsely claimed that [he] blackmailed Ukrainian officials to not investigate [his] son.” *See* Glenn Decl. Ex. 19, at 29; Dkt. 10-1, at 275. Then-candidate Biden responded to the question by stating, among other things, that technology companies should be held to the same standards as traditional media and that “we should be setting standards not unlike the Europeans are doing relative to privacy.” *Id.* Note also that irrespective of interest expressed in Section 230 reform, social media companies, by virtue of their business model, have powerful economic incentives to moderate content on their platforms to retain users and thereby maximize advertising revenues, and have been doing so since well before 2020. *See* Gurrea Decl. ¶¶ 1-81 (Ex. 1).

21. Candidate Biden also threatened that Facebook CEO Mark Zuckerberg should be subject to civil liability and even *criminal prosecution* for not censoring such core political speech: “He should be submitted to civil liability and his company to civil liability.... Whether he engaged in something and amounted to collusion that in fact caused harm that would in fact be equal to a criminal offense, that’s a different issue. That’s possible. That’s possible it could happen.” *Id.* In other words, Biden’s message—not long before he became President of the United States—was that if Facebook did not censor political ads against him, Zuckerberg should go to prison. These two threats echoed the same threats made by numerous political allies of the President since 2019, cited above.

RESPONSE: Disputed to the extent Plaintiffs’ PFOF selectively and misleadingly quotes from then-candidate Biden and improperly seeks to characterize those partial quotes in an argumentative and rhetorical fashion, such as by referring to his comments as “threats” and characterizing statements as “core political speech.” Defendants refer the Court to the entirety of then-candidate Biden’s statement concerning Section 230 reform. *See* Glenn Decl. Ex. 19, at 29; Dkt. 10-1, at 275. The assertion that Mr. Biden stated “Zuckerberg should go to prison” if in future “Facebook did not censor political ads against him” is unsupported and plainly refuted by the cited excerpt: Mr. Biden stated only that Mr. Zuckerberg “should be submitted to civil liability and his company to civil liability, just like you would be here at The New York Times” for past acts. Mr. Biden stated that whether those past acts “amounted to . . . a criminal offense” was “a different issue,” without any reference to Facebook’s future handling of negative political ads about Mr. Biden. Note also that irrespective of interest expressed in Section 230 reform, social media companies, by virtue of their business model, have powerful economic incentives to moderate content on their platforms to retain users and thereby maximize advertising revenues, and have been doing so since well before 2020. *See* Gurrea Decl. ¶¶ 1-81 (Ex. 1).

22. During the presidential campaign, now-Vice President Harris made similar threats against social-media firms to pressure them to engage in more aggressive censorship of speakers, content, and viewpoints she disfavors. For example, in addition to the statements cited above, she stated in 2019: “We will hold social media platforms responsible for the hate infiltrating their platforms, because they have a responsibility to help fight against this threat to our democracy. And if you profit off of hate—if you act as a megaphone for misinformation or cyberwarfare, if you don’t police your platforms—we are going to hold you accountable as a community.” Glenn Decl. Ex. 20, at 1; Doc. 10-1, at 284.

RESPONSE: Disputed to the extent Plaintiffs’ PFOF reflects argumentative characterization of facts rather than facts, lacks evidentiary support, and is immaterial to the claims in this case. Specifically, Defendants dispute that the quoted statement from then-candidate Kamala Harris constitutes a “threat[] against social-media firms to pressure them to engage in

more aggressive censorship of speakers, content, and viewpoints she disfavors.” Defendants further note that the quoted statement by then-candidate Harris was made in the context of a discussion about “the growth of domestic terrorism in the United States (and elsewhere), and how those attackers used or embraced radically violent ideas on social media.” Glenn Decl. Ex. 20, at 1; Doc. 10-1, at 284. Defendants refer the Court to the cited statement for a full and accurate understanding of its contents. Additionally, note that irrespective of interest expressed in Section 230 reform, or any concern about antitrust enforcement, social media companies, by virtue of their business model, have powerful economic incentives to moderate content on their platforms to retain users and thereby maximize advertising revenues, and have been doing so since well before 2020. *See* Gurrea Decl. ¶¶ 1-81 (Ex. 1).

23. In or around June 2020, the Biden campaign published an open letter and online petition (ironically, on Facebook) calling for Facebook to engage in more aggressive censorship of core political speech and viewpoints that then-Candidate Biden disfavored. The open letter complained that Facebook “continues to allow Donald Trump to say anything — and to pay to ensure that his wild claims reach millions of voters. Super PACs and other dark money groups are following his example. Trump and his allies have used Facebook to spread fear and misleading information about voting.... We call for Facebook to proactively stem the tide of false information by no longer amplifying untrustworthy content and promptly fact-checking election-related material that goes viral. We call for Facebook to stop allowing politicians to hide behind paid misinformation in the hope that the truth will catch up only after Election Day. There should be a two-week pre-election period during which **all** political advertisements must be fact-checked before they are permitted to run on Facebook. ... Anything less will render Facebook a tool of misinformation that corrodes our democracy.” Glenn Decl. Ex. 23, at 1; Doc. 10-1, at 299.

RESPONSE: The first sentence is disputed. Plaintiffs’ PFOF reflects Plaintiffs’ argumentative characterization of facts rather than facts, lacks evidentiary support, and is immaterial to the claims in this case. Specifically, the assertion that Mr. Biden’s campaign “call[ed] for Facebook to engage in more aggressive censorship” is refuted by the cited portions of the statement themselves, which referred only to common content moderation measures such as fact-checking and declining to amplify content found to be untrustworthy. The PFOF is also

refuted by a portion of the petition that Plaintiffs omit, such as the campaign’s emphasis that these were intended only as “*recommendations* to fix the problems in Facebook’s platform that pose a threat to free and fair elections,” Glenn Decl. Ex. 23, at 1; Dkt. 10-1, at 299 (emphasis added). Defendants refer the Court to the cited document for a full and accurate understanding of its contents. In any event, this PFOF is immaterial to the issues presented in this case.

24. The online petition demanded that Facebook “[p]romote real news, not fake news,” “[q]uickly remove viral misinformation,” and “[e]nforce voter suppression rules against everyone—even the President [Trump].” Glenn Decl. Ex. 24, at 2; Doc. 10-1, at 304. The petition complained that Facebook “continues to amplify misinformation and lets candidates pay to target and confuse voters with lies.” *Id.* at 304. It demanded that Facebook “promote authoritative and trustworthy sources of election information, rather than rants of bad actors and conspiracy theorists,” “promptly remove false, viral information,” and “prevent political candidates and PACs from using paid advertising to spread lies and misinformation – especially within two weeks of election day.” *Id.* at 305.

RESPONSE: Disputed to the extent Plaintiffs’ PFOF argumentatively mischaracterizes the cited statements from the petition as “demand[s].” Additionally, the PFOF is immaterial to any issue in this case. Rather than “demanding” that Facebook take particular action, as reflected in the document, the Biden-Harris campaign “asked Facebook to take action—responsible action, action that is critical to the health of our democracy.” Glenn Decl. Ex. 24, at 2; Dkt. 10-1, at 305. Defendants refer the Court to the cited document for a full and accurate understanding of its contents.

25. On September 28, 2020, the Biden-Harris campaign sent a letter to Facebook accusing it of propagating a “storm of disinformation” by failing to censor the Trump campaign’s political speech, including social-media political ads. Glenn Decl. Ex. 25, at 3; Doc. 10-1, at 312. The letter accused Facebook of allowing “hyper-partisan” and “fantastical” speech to reach millions of people, and it demanded “more aggressive” censorship of Trump. *Id.*

RESPONSE: Disputed because Plaintiffs’ PFOF argumentatively mischaracterizes the cited document. The PFOF is also immaterial to any issue in this case. Specifically, the cited document does not “accuse[]” Facebook of “failing to censor the Trump campaign” or “demand[]

‘more aggressive’ censorship.” *See* Glenn Decl. Ex. 25, at 3; Doc. 10-1, at 310-12. Defendants refer the Court to the cited document for a full and accurate understanding of its contents.

26. On December 2, 2020—during the presidential transition—Biden’s former chief of staff and top technical advisor, Bruce Reed, publicly stated that “it’s long past time to hold the social media companies accountable for what’s published on their platforms.” Glenn Decl. Ex. 26, at 1; Doc. 10-1, at 314-15. This comment specifically referred to the amendment or repeal of Section 230 of the Communications Decency Act. *See id.* He also wrote: “Washington would be better off throwing out Section 230 and starting over.” *Id.*

RESPONSE: Disputed to the extent that Plaintiffs’ PFOF is irrelevant to any issue in this case and is lacking in context. Defendants refer the Court to the cited document for a full and accurate understanding of its contents. *See* Dkt. 10-1 at 314-15. Note also that irrespective of interest expressed in Section 230 reform, social media companies, by virtue of their business model, have powerful economic incentives to moderate content on their platforms to retain users and thereby maximize advertising revenues, and have been doing so since well before 2020. *See* Gurrea Decl. ¶¶ 1-81 (Ex. 1).

27. On July 16, 2021, President Biden stated that social-media companies are “killing people” by not censoring enough misinformation. Waldo Ex. 14, at 1.

RESPONSE: Disputed because Plaintiffs’ PFOFs fails to include President Biden’s full statement, lacks context, and argumentatively characterizes the statement. In response to the question “[On COVID misinformation,] what’s your message to platforms like Facebook?,” President Biden responded “They’re killing people. I mean, it really—they—look, the only pandemic we have is among the unvaccinated, and that—and they’re killing people.” Ex. 45 at 2 (Question from Reporter to President Joseph R. Biden, Jr., in Washington, D.C. 2 (July 16, 2021)) (transcript of exchange). President Biden later explained that he had just read that twelve individuals were responsible for sixty percent of misinformation concerning COVID-19 vaccines—a statistic advanced by the non-profit Center for Countering Digital Hate—and clarified

that “Facebook isn’t killing people. These twelve people are out there giving misinformation. Anyone listening to it is getting hurt by it. *It’s* killing people.” Ex. 43 at 2-3 (Question from Reporter to President Joseph R. Biden, Jr., in Washington, D.C. 2 (July 19, 2021)) (emphasis added). He further said, “[m]y hope is that Facebook, instead of taking [the comment] personally that somehow I’m saying Facebook is killing people . . . would do something about the misinformation That’s what I meant.” *Id.* at 2-3.

28. On January 3, 2022, an audio clip of President Biden played on Alyssa Milano’s podcast stated: “The unvaccinated are responsible for their own choices, but those choices had been shulled [sic] by dangerous misinformation on cable TV and social media. You know, these companies . . . are making money by ped[dling] lies and allowing misinformation that can kill their own customers and their own supporters. It’s wrong. It’s immoral. I call on the purveyors of these lies and misinformation to stop it. Stop it now.” Waldo Ex. 39, at 5 (Audio Tr. 4).

RESPONSE: Undisputed.

29. In September of 2022, the White House convened the “United We Stand” summit at which the President put social media companies on notice that Section 230 protections were at risk. “Tech platforms currently have special legal protections under Section 230 of the Communications Decency Act that broadly shield them from liability. This immunity extends beyond what the First Amendment requires and what newspapers and other media receive. It also effectively permits hate-fueled content mobilizing users to violence to be amplified on large tech platforms. President Biden has long urged fundamental reforms to Section 230, and . . . he reiterates his call for Congress to fundamentally reform Section 230.” Jones Decl., Ex. E, at 9.

RESPONSE: Disputed to the extent the first sentence of Plaintiffs’ PFOF reflects argument rather than facts and lacks evidentiary support. Plaintiffs’ PFOF is further disputed to the extent it takes statements in this document out of context and is immaterial to any issue in this case. Defendants further note that the summit included, among others, “bipartisan federal, state and local officials” and involved “bipartisan panels and conversations on countering hate-fueled violence, preventing mobilization to violence, and fostering unity.” Jones Decl., Ex. E, at 2. Note also that irrespective of interest expressed in Section 230 reform, social media companies, by virtue of their business model, have powerful economic incentives to moderate content on their

platforms to retain users and thereby maximize advertising revenues, and have been doing so since well before 2020. *See* Gurrea Decl. ¶¶ 1-81 (Ex. 1).

30. President Biden also stated in the same document: “Americans deserve to know how the algorithms that drive large tech platforms may amplify divisions and contribute to hate-fueled violence, among other critical harms. Consistent with those same principles for accountability, President Biden supports *requiring* platform transparency sufficient to allow the public and researchers to understand how and why such decisions are made, their potential effects on users, and the very real dangers these decisions may pose.” *Id.* (emphasis added).

RESPONSE: Undisputed, but note that President Biden’s views about platform transparency and Section 230 echo the views of Republican members of Congress. *See, e.g.,* Ex. 14 (*Senate Judiciary Committee Holds Hearing on Censorship and the 2020 Election* (Nov. 17, 2020) at 3 (Senator Graham: “My hope is that we change section 230 to incentivize social media platforms to come up with standards that are transparent and opaque [sic], that will allow us to make judgments about their judgments, that the fact checkers be known, that the community standards, who sets them, what are their biases, and give some direction to these companies because they have almost an impossible task.”).

II. The White House’s Public and Private Pressure Campaign on Platforms.

31. Many White House officials are involved in communicating with social-media platforms about misinformation, disinformation, and censorship. In response to a third-party subpoena, Facebook/Meta identified at least the following White House officials as engaged in such communications: Special Assistant to the President Laura Rosenberger, White House Partnerships Manager Aisha Shah, White House Counsel Dana Remus, and White House officials Andy Mr. Slavitt, Rob Flaherty, and Clarke Humphrey. Doc. 84, ¶ 379. Defendants’ discovery reveals many others. *See infra.*

RESPONSE: Disputed to the extent this PFOF mischaracterizes the referenced communications as regarding “censorship.” The evidence does not support that characterization.

See Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.⁵ Further disputed because this PFOF is unsupported by the evidence; it cites only to the operative Complaint, which alleges that the listed officials “may have” communicated with Facebook/Meta regarding “content moderation.” Dkt. 84 ¶ 379.

32. In response to a third-party subpoena, YouTube identified White House officials Benjamin Wakana and Rob Flaherty as engaged in such communications, and Defendants’ discovery reveals others. Doc. 84, ¶ 380. Defendants’ discovery reveals others. *See infra*.

RESPONSE: Disputed for the same reasons listed in Response to Pls.’ PFOF ¶ 31.

33. In response to a third-party subpoena, Twitter has disclosed the following White House officials as engaged in such communications: Deputy Assistant to the President and Director of Digital Strategy Rob Flaherty, White House Senior Advisor Andrew Mr. Slavitt, NSC staffer Katy E. Colas, Deputy Assistant to the President Joshua Geltzer, White House Digital Director Clarke Humphrey, Deputy Director of the Office of Digital Strategy Tericka Lambert, Press Secretary for the First Lady Michael LaRosa, NSC Director of Counterterrorism John Picarelli, Chief of Staff for the Office of Digital Strategy Hoor Qureshi, Director of Strategic Communications and Engagement Courtney Rowe, White House Associate Counsel Michael Posada, Associate Director for Communications Marissa Sanchez-Velasco, Deputy Director of Digital Strategy Christian Tom, and Strategic Director of Digital Communications Benjamin Wakana. Jones Decl., Ex. F, at 1. Defendants’ discovery has revealed others. *See infra*.

RESPONSE: Disputed for the same reasons listed in Response to Pls.’ PFOF ¶ 31. Further disputed because this PFOF is unsupported by the evidence; the document listing these names is titled “Twitter Final Production Agreement Second Supplemental Response to Request Number 5,” but it does not state what “Request Number 5” entailed or include any other context. Jones Decl., Ex. F, at 1.

A. Pressure in Private from Rob Flaherty, Andy Mr. Slavitt, and White House Officials.

34. The Biden White House’s demands for censorship began almost immediately upon taking office. On January 23, 2021, three days after Inauguration Day, at 1:04 a.m., Clarke

⁵ “Defs.’ PFOF” refers to Defendants’ Proposed Findings of Fact, contained in Defendants’ Opposition to Plaintiffs’ Motion for Preliminary Injunction filed concurrently with these responses. “Defs.’ Arg.” and “Arg.” refer to the Argument section of the same document (Defendants’ Opposition to Plaintiffs’ Motion for Preliminary Injunction).

Humphrey of the White House emailed Twitter, copying Rob Flaherty, with the subject line: “Flagging Hank Aaron misinfo.” Doc. 174-1, at 1. The email stated: “Hey folks – Wanted to flag the below tweet and am wondering if we can get moving on the process for having it removed ASAP.” *Id.* Humphrey then linked to a Tweet by anti-vaccine activist Robert F. Kennedy Jr., who is also a principal target of the Virality Project and a member of the so-called “Disinformation Dozen.” *Id.* Humphrey added: “And then if we can keep an eye out for tweets that fall in this same ~genre that would be great.” *Id.*

RESPONSE: Disputed to the extent this PFOF argumentatively mischaracterizes the White House as “demand[ing]” “censorship.” The evidence does not support this characterization. In the cited email Humphrey was “wondering if” the “process” for removal could be instituted. *See* Doc. 174-1, at 1. Further disputed because the cited email does not support the assertion that “Robert F. Kennedy Jr., . . . is also a principal target of the Virality Project and a member of the so-called ‘Disinformation Dozen.’” The cited e-mail also contains no evidence of threats or pressure by the White House to censor speech, or communications that Twitter regarded (or acted on) as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

35. “Flagging Hank Aaron misinfo” refers to the claim by anti-vaccine speakers that COVID-19 vaccines may have contributed to baseball legend Hank Aaron’s death. *See, e.g.,* <https://www.usatoday.com/story/news/factcheck/2021/01/26/fact-check-hank-aaron-death-unlikely-result-covid-19-vaccine/6699577002/>.

RESPONSE: Undisputed. *But see* Response to PFOF ¶ 34.

36. Twitter responded to Humphrey within 4 minutes, at 1:08 a.m. on January 23, 2021, stating: “Thanks. We recently escalated this.” Doc. 174-1, at 2.

RESPONSE: Undisputed. *But see* Response to Pls.’ PFOF ¶ 34.

37. The White House’s demands for censorship continued relentlessly, and their tone was arrogant, demanding, and peremptory. On Saturday night, February 6, 2021, at 9:45 p.m., Rob Flaherty emailed Twitter to demand the immediate removal of a parody or impostor account linked to Finnegan Biden, Hunter Biden’s adult daughter. Doc. 174-1, at 4. He stated: “Please remove this account immediately.” *Id.* He also stated: “I have tried using your form three times and it won’t work—it is also ridiculous that I need to upload my id to a form [to] prove that I am an authorized representative of Finnegan Biden.” *Id.*

RESPONSE: Disputed to the extent that this PFOF mischaracterizes the White House as making “demands for censorship [that] continued relentlessly,” and as adopting a “tone [that] was arrogant, demanding, and peremptory.” The evidence does not support these characterizations. In the February 6, 2021 email, Mr. Flaherty simply expressed frustration with Twitter’s process for reporting impersonation accounts. Doc. 174-1, at 4. The e-mail contains no evidence of threats or pressure by the White House to censor speech, or communications that Twitter regarded (or acted on) as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

38. Two minutes later, at 9:47 p.m., Twitter responded, “Thanks for sending this over. We’ll escalate for further review from here.” *Id.* Flaherty shot back, the same minute, “Cannot stress the degree to which this needs to be resolved immediately.” *Id.* Forty-five minutes later, at 10:32 p.m., Twitter responded, “Update for you – account is now suspended.” *Id.* at 3-4.

RESPONSE: Undisputed, except to the extent the statement argumentatively characterizes Mr. Flaherty’s response as having been “shot back.” Defendants further note that the cited e-mail contains no evidence of threats or pressure by the White House to censor speech, or communications that Twitter regarded (or acted on) as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

39. The next day, Sunday, Feb. 7, 2021, Twitter emailed Flaherty and described steps he could take to “streamline the process” for the White House’s demands for Twitter censorship. *Id.* at 3. Twitter offered to enroll White House officials in Twitter’s Partner Support Portal for expedited review of flagging content for censorship, recommending that Flaherty “**Designate a list of authorized White House staff for Twitter's Partner Support Portal.**” *Id.* (bold in original). Twitter stated: “We sent over instructions about this on January 28th and also discussed this with Christian [Tom] during our call on February 4th. This is the same system we had in place for the previous two administrations for their support issues, *as well as the transition and campaign teams*. Once you assign and we enroll these authorized reporters, whenever they submit a ticket through the Help Center it will be prioritized automatically, without having to contact our team, and you won’t need to add your personal information. To enroll your designated reporters to the Partner Support Portal, we simply need the list of @usernames (up to 10) that are registered with a White House email address.” *Id.* at 3 (italics added; underlines omitted).

RESPONSE: Disputed to the extent this PFOF argumentatively mischaracterizes Flaherty and/or the White House as making “demands for Twitter censorship” or “flagging content for censorship.” The evidence does not support these characterizations. The e-mail chain cited in this PFOF refers to Flaherty’s inquiry as a “request” for “expedited help.” *See* Dkt. 174-1 at 3. The cited e-mail also contains no evidence of threats or pressure by the White House to censor speech, or communications that Twitter regarded (or acted on) as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

40. Twitter noted that it had been recently bombarded with such requests for censorship from the White House: “we would prefer to have a streamlined process strictly with your team as the internal liaison. That is the most efficient and effective way to ensure we are prioritizing requests. In a given day last week for example, we had more than four different people within the White House reaching out for issues.” *Id.* at 3.

RESPONSE: Disputed to the extent this PFOF argumentatively mischaracterizes the White House as “bombard[ing]” Twitter with “requests for censorship.” The cited evidence does not support these characterizations. In the cited e-mail, Twitter’s representative stated only that multiple White House staff had recently been “reaching out for issues.” Dkt. 172-1 at 3. She did not say what those “issues” were. *Id.* The cited e-mail also contains no evidence of threats or pressure by the White House to censor speech, or communications that Twitter regarded (or acted on) as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

41. The next day, Monday, February 8, 2021, Facebook emailed Rob Flaherty, Courtney Rowe, and Clarke Humphrey of the White House to explain how it had recently expanded its COVID-19 censorship policies. Doc. 174-1, at 7-8. Facebook stated: “We wanted to make sure you saw our announcements today about running the largest worldwide campaign to promote authoritative COVID-19 vaccine information and expanding our efforts to remove false claims on Facebook and Instagram about COVID-19, COVID-19 vaccines and vaccines in general during the pandemic.” *Id.*

RESPONSE: Disputed to the extent this PFOF mischaracterizes Facebook’s announcement as concerning “COVID-19 censorship policies.” The cited evidence does not support that characterization. The cited e-mail also contains no evidence of threats or pressure by the White House to censor speech, or communications that Facebook regarded (or acted on) as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

42. Under the heading “**Combating Vaccine Misinformation**,” Facebook provided a detailed list of expanded censorship policies: “We are expanding our efforts to remove false claims on Facebook and Instagram about COVID-19, COVID-19 vaccines and vaccines in general during the pandemic. Since December [*i.e.* during the Biden transition], we’ve removed false claims about COVID-19 vaccines that have been debunked by public health experts. ... [W]e are expanding the list of false claims we will remove to include additional debunked claims about the coronavirus and vaccines. ... Groups, Pages and accounts on Facebook and Instagram that repeatedly share these debunked claims may be removed altogether. We are also requiring some admins for groups with admins or members who have violated our COVID-19 policies to temporarily approve all posts within their group. On Instagram, in addition to surfacing authoritative results in Search, in the coming weeks we’re making it harder to find accounts in search that discourage people from getting vaccinated....” *Id.* at 7-8 (bold in original).

RESPONSE: Disputed to the extent this PFOF mischaracterizes Facebook’s announcement as concerning “censorship policies.” The cited e-mail does not support that characterization, which is lacking critical context. Facebook announced that it was making these changes “following consultations with leading health organizations, including the World Health Organization (WHO).” Dkt. 174-1 at 8. The full announcement is available online. *See* Ex. 173 (*Reaching Billions of People With COVID-19 Vaccine Information*, Meta (Feb. 8, 2021), <https://perma.cc/KPC5-7273>). The cited e-mail also contains no evidence of threats or pressure by the White House to censor speech, or communications that Facebook regarded (or acted on) as such. In fact, the email shows that Facebook adopted these policies on its own initiative. Dkt. 174-

1 at 8. Any assertion to the contrary is unsupported by to the evidence as a whole. Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

43. This was not nearly enough for the White House. Within 19 minutes of receiving this email, Flaherty responded, pressing Facebook for more information about how strict the new policies are. *Id.* at 7. Quoting Facebook’s email in italics, he wrote: “This line, of course, stands out: *that repeatedly share these debunked claims may be removed altogether*. Can you share more about your framework here? May, of course, is very different than ‘will.’ Is there a strike policy, ala Youtube? Does the severity of the claims matter?” *Id.* at 7. He also asked for specific data on the application of the censorship policies: “And as far as your removal of claims, do you have data on the actual number of claims - related posts you’ve removed? Do you have a sense of how many are being flagged versus how many are being removed? Are there actions (downranking, etc) that sit before removal? How are you handling things that are dubious, but not provably false?” *Id.*

RESPONSE: Disputed to the extent this PFOF argumentatively mischaracterizes Facebook’s announcement as “not nearly enough” for the White House, Flaherty as “pressing” Facebook for more information about “how strict the new policies are,” and Flaherty asking for data on “the application of the censorship policies.” In the quoted email, Flaherty asked if Facebook “[c]an . . . share more about” its content-moderation “framework.” The cited e-mail contains no evidence of threats or pressure by the White House to censor speech, or communications that Facebook regarded (or acted on) as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

44. The next day, February 9, 2021, Flaherty followed up with Facebook with a demand for more information and an accusation (to be repeated) that Facebook’s failure to censor speech on its platforms causes “political violence”: “All, especially given the Journal’s reporting on your internal work on political violence spurred by Facebook groups, I am also curious about the new rules as part of the ‘overhaul.’ I am seeing that you will no longer promote civic and health related groups, but I am wondering if the reforms here extend further? Are there other growth vectors you are controlling for?” *Id.* at 6. Flaherty suggested an oral meeting to discuss: “Happy to put time on the calendar to discuss further.” *Id.*

RESPONSE: Disputed to the extent this PFOF mischaracterizes Flaherty’s e-mail as a “demand” and an “accusation” regarding a failure to “censor speech.” Those characterizations are

not supported by the cited e-mail or the evidence as a whole. Flaherty instead referred to “the Journal’s reporting on [Facebook’s] internal work on political violence” and said he was “curious” to know additional information. Dkt. 172-1 at 6. The cited e-mail contains no evidence of threats or pressure by the White House to censor speech, or communications that Facebook regarded (or acted on) as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

45. Facebook responded on February 9, 2021, with a detailed answer to each of Flaherty’s questions about the enforcement of its new policies. *Id.* at 5-6. Facebook also noted that “We are happy to discuss these and additional questions as per your recent note.” *Id.* at 5. Among other things, Facebook reported that it would “suspend the entire Page, Group, or account” in case of repeat violations; that it “will begin enforcing this policy immediately,” *id.* at 5; that for vaccine-skeptical content that does not violate Facebook’s policies, Facebook will “reduce its distribution and add strong warning labels with more context, so fewer people see the post,” *id.* at 6; and that Facebook was working to censor content that does not violate its policies in other ways by “prevent[ing] posts discouraging vaccines from going viral on our platforms; address[ing] content that experts believe dissuades people from getting the vaccine, but does not violate our misinformation policies, through the use of information labels; and prevent[ing] recommendations for Groups, Pages, and Instagram accounts that repeatedly push content discouraging vaccines,” *id.* at 6.

RESPONSE: Disputed. This PFOF contains several mischaracterizations and omissions of critical context from Facebook’s e-mail to Flaherty. *See* Dkt. 174-1 at 5-6. Facebook did not use the word “censor” or indicate that it would act against content that “does not violate its policies.” Rather, Facebook said: “Content which does not qualify for removal may be eligible to be fact-checked by our network of over 80 fact-checking organizations. *When one of our independent fact-checking partners debunk a post*, we reduce its distribution and add strong warning labels with more context, so fewer people see the post. We do not remove the content, but are focusing on improvement efforts that will help us to better address content that contributes to unfounded hesitancy towards the COVID-19 vaccine.” *Id.* (emphasis added). The cited e-mail contains no evidence of threats or pressure by the White House to censor speech, or

communications that Facebook regarded (or acted on) as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

46. Facebook advised Flaherty that it was relying on advice of “public health authorities” to determine its censorship policies: “In consultation with leading health organizations, we continuously expand the list of false claims that we remove about COVID-19 and vaccines during the pandemic. We remove claims *public health authorities* tell us have been debunked or are unsupported by evidence.” *Id.* at 6 (emphasis added).

RESPONSE: Disputed to the extent this PFOF mischaracterizes Facebook’s policies as “censorship policies.” The evidence does not support that characterization. Further, per Facebook’s initial announcement, “public health authorities” includes the World Health Organization. *See* Dkt. 174-1 at 8; *see also* Response to Pls.’ PFOF ¶ 42. The cited e-mail also contains no evidence of threats or pressure by the White House to censor speech, or communications that Facebook regarded (or acted on) as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

47. Facebook also promised Flaherty that it would aggressively enforce the new censorship policies: “We will begin enforcing this policy immediately, with a particular focus on Pages, Groups and accounts that violate these rules, and we’ll continue to expand our enforcement over the coming weeks.” *Id.* at 5.

RESPONSE: Disputed to the extent that this PFOF mischaracterizes Facebook’s message as “promis[ing] Flaherty that it would aggressively enforce the new censorship policies.” That characterization is unsupported by the cited e-mail; Facebook was not making a personal promise to Flaherty. Rather, Facebook had already posted identical language on its website one day earlier: “We will begin enforcing this policy immediately, with a particular focus on Pages, groups and accounts that violate these rules, and we’ll continue to expand our enforcement over the coming weeks.” Ex. 20 (Guy Rosen, *An Update on Our Work to Keep People Informed and Limit*

Misinformation About COVID-19, Meta (Apr. 16, 2020) (updated Feb. 8, 2021), <https://perma.cc/5GAL-5BSQ>). The cited e-mail contains no evidence of threats or pressure by the White House to censor speech, or communications that Facebook regarded (or acted on) as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

48. Facebook then followed up to “see when you would like to have a meeting arranged to speak to our misinformation team reps about the latest updates. They also have a more detailed misinformation analysis prepared based on the discussions/questions from the previous meetings during the transition time period.” *Id.* at 5.

RESPONSE: Undisputed. But the cited e-mail contains no evidence of threats or pressure by the White House to censor speech, or communications that Facebook regarded (or acted on) as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

49. This email makes clear that Flaherty, as part of the Biden transition team, had already engaged in “previous meetings” and “discussions/questions” with Facebook about censorship of COVID-19 misinformation on its platforms during the Presidential transition period from November 2020 to January 2021. *Id.*

RESPONSE: Disputed because this PFOF mischaracterizes the cited e-mail. The e-mail does not mention “censorship” or any prior meetings with Flaherty. The cited e-mail contains no evidence of threats or pressure by the White House to censor speech, or communications that Facebook regarded (or acted on) as such. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

50. On February 24, 2021, Facebook emailed Rob Flaherty with the subject “Misinfo Themes,” stating: “Following up on your request for COVID-19 misinfo themes we are seeing. All the below claims violate our updated Covid and vaccine misinformation policies that we announced earlier this month, and we are removing these claims from our platforms,” and she identified “Vaccine Toxicity,” “False Claims About Side Effects of Vaccines,” “Comparing the Covid Vaccine to the Flu Vaccine,” and “Downplaying Severity of COVID-19.” Jones Decl. Ex. G, at 1-2. Flaherty responded by inquiring for details about Facebook’s actual enforcement practices and for a report on misinformation that was not censored: “Can you give us a sense of

volume on these, and some metrics around the scale of removal for each? Can you also give us a sense of misinformation that might be falling outside your removal policies? Goes without saying, just because it's on your list for removal hasn't historically meant that it was removed, so I want to get a sense of the state of play here!" *Id.* at 1. Facebook promised to discuss this at an upcoming oral meeting: "Hope to cover a lot of that on Monday ... Can definitely go into detail on content that doesn't violate like below but could contribute to vaccine hesitancy." *Id.*

RESPONSE: Disputed to the extent that this PFOF mischaracterizes the cited e-mail. Flaherty did not ask for "a report," including a "report" about "censor[ed]" information, and Facebook did not "promise" him anything, as the e-mail states. The PFOF also omits that Facebook noted: "still working on data we can share, etc.," indicating that Facebook was still deciding what to share with the White House. Jones Decl. Ex. G, at 1. The cited e-mail contains no evidence of threats or pressure by the White House to censor speech, or communications that Facebook regarded (or acted on) as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.' PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

51. On March 1, 2021, White House officials Rob Flaherty and Clarke Humphrey, along with Joshua Peck of HHS, participated in a meeting with Twitter about misinformation. Jones Decl., Ex. H, at 1. The same day, after the meeting, Twitter emailed these officials and assured the White House that it would increase censorship of "misleading information" on Twitter: "Thanks again for meeting with us today. As we discussed, we are building on our continued efforts to remove the most harmful COVID-19 misleading information from the service We have also introduced a strike system that determines when further enforcement is necessary. ... As we said, we are committed to working with stakeholders in the public, private and non-profit sectors to address the reliability of covid information online and look forward to continued dialogue about joint efforts." *Id.* at 1.

RESPONSE: Disputed to the extent this PFOF (i) omits critical context and (ii) includes an argumentative mischaracterization that Twitter "assured the White House that it would increase censorship." Twitter sought this meeting with the White House to provide an "update on our work to combat covid misinformation while also sharing reliable covid information." *See* Ex. 174 at 2 (February 2021 email chain (Twitter) (MOLA_DEFSPROD_00017794)). On the same day as the meeting, Twitter announced updates to its policies. *See* Ex. 175 (Twitter Safety, *Updates to our*

work on COVID-19 vaccine misinformation, Twitter Blog (Mar. 1, 2021), <https://perma.cc/99TM-QWLD>). Twitter's thank you e-mail to the White House includes identical language from the announcement and says "[y]ou can read more about the announcement on our blog." Jones Decl., Ex. H, at 1. The announcement now includes a heading: "Effective November 23, 2022, Twitter is no longer enforcing the COVID-19 misleading information policy." Ex. 175 at 1. The cited e-mail also contains no evidence of threats or pressure by the White House to censor speech, or communications that Twitter regarded (or acted on) as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.' PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

52. From at least May 28, 2021 to July 10, 2021, a senior Meta executive repeatedly copied Mr. Slavitt on his emails to Surgeon General Murthy in which he assured the Surgeon General and the White House that Meta was engaging in censorship of COVID-19 misinformation according to the White House's demands. Doc. 71-4. Among other things, the Meta executive insisted that "We've expanded penalties for individual Facebook accounts that share misinformation." *Id.* at 9.

RESPONSE: Disputed on the basis that the cited document does not support the broad generalization that a Meta executive "repeatedly" "assured [Dr. Murthy] and the White House that Meta was engaging in censorship of COVID-19 misinformation to the White House's demands." To the contrary, there is no evidence that the White House or OSG requested or demanded such changes. Meta posted the quoted text online two days before e-mailing the White House, in a post that was unrelated to COVID-19: "**Expanding Penalties For Individual Facebook Accounts.** Since launching our fact-checking program in late 2016, our focus has been on reducing viral misinformation. We've taken stronger action against Pages, Groups, Instagram accounts and domains sharing misinformation and now, we're expanding some of these efforts to include penalties for individual Facebook accounts too." Ex. 176 at 3 (Facebook, *Taking Action Against People Who Repeatedly Share Misinformation*, Meta (May 26, 2021), [31](https://perma.cc/M75G-</p></div><div data-bbox=)

YQB8). The cited e-mail also contains no evidence of threats or pressure by the White House to censor speech, or communications that Facebook regarded (or acted on) as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

53. On March 12, 2021, referring to previous oral communications with the White House and HHS, Facebook emailed Flaherty “[f]ollowing up on our commitment to share our survey data on vaccine uptake.” Doc. 174-1, at 9. Facebook provided the White House with a detailed report and summary on the topic, and noted that the information had evidently been requested by or on behalf of “White House / HHS” officials: “Hopefully, this format works for the various teams and audiences within the White House / HHS that may find this data valuable.” *Id.*

RESPONSE: Disputed to the extent this PFOF omits critical context. Facebook had been conducting a survey on vaccine uptake in partnership with Carnegie Melon since April 2020; Facebook shared the results of that survey, which it also made public, with HHS and White House officials. *See* Ex. 177 (*COVID-19 Symptom Survey*, Meta (Mar. 12, 2021) (MOLA_DEFSPROD_00017641)). The cited e-mail contains no evidence of threats or pressure by the White House to censor speech, or communications that Facebook regarded (or acted on) as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

54. On March 15, 2021, at 3:20 a.m., Flaherty sent an email to Facebook acknowledging, “[g]ood insights here,” but then immediately pivoted to demand more and different data, linking a recent Washington Post article accusing Facebook of allowing the spread of information about vaccine hesitancy and QAnon, stating: “I’m more interested in the data that was outlined in the Washington Post (<https://www.washingtonpost.com/technology/2021/03/14/facebook-vaccine-hesitancy-qanon>) And what interventions you are testing/their effectiveness.” *Id.* at 9. This would become a standard tactic of the White House – linking to articles critical of Facebook in the press, and then demanding more information or actions based on those articles.

RESPONSE: Disputed to the extent this PFOF argumentatively mischaracterizes Flaherty as “demand[ing]” information or data or that his response reflected a “standard tactic,” of “demanding more information or actions” based on press articles. Neither the cited e-mail nor any other evidence supports those characterizations. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b

& II.B.2. Flaherty simply said on this occasion that he was “more interested” in a different kind of information. Dkt. 174-1 at 9. The cited e-mail contains no evidence of threats or pressure by the White House to censor speech, or communications that Facebook regarded (or acted on) as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

55. The day before, Sunday, March 14, 2021, at 11:13 p.m., Flaherty had emailed a link to the same article to Facebook (“<https://www.washingtonpost.com/technology/2021/03/14/facebook-vaccine-hesistancy-qanon>”), copying White House COVID-19 official Andrew Mr. Slavitt, with no more text in the email and the subject line: “You are hiding the ball.” *Id.* at 12.

RESPONSE: Undisputed. However, the cited e-mail contains no evidence of threats or pressure by the White House to censor speech, or communications that Facebook regarded (or acted on) as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

56. The next morning, Facebook responded by stating, “there is a misunderstanding on what this story is covering with respect to research that’s happening – I will call to clear up. Certainly not hiding the ball.” *Id.* at 11-12.

RESPONSE: Undisputed. However, the cited e-mail contains no evidence of threats or pressure by the White House to censor speech, or communications that Facebook regarded (or acted on) as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

57. Flaherty responded in accusatory fashion, referring to a series of at least three previous oral conversations in which the White House had demanded more information from Facebook about its censorship policies. *Id.* at 11. Flaherty made clear that the White House was seeking more aggressive action on “borderline” content—*i.e.*, content that *does not clearly violate Facebook’s own censorship policies* but the White House demands action against anyway. Flaherty wrote: “I don’t think this is a misunderstanding ... I’ve been asking you guys pretty directly, over a series of conversations, for a clear accounting of the biggest issues you are seeing on your platform when it comes to vaccine hesitancy, and the degree to which borderline content—as you define it-- is playing a role.” *Id.* at 11. Flaherty also referred to a series of meetings, including one-on-one meetings with Facebook (“1:1”): “I’ve also been asking for what actions you have been taking to mitigate it as part of your ‘lockdown’ - which in our first conversation, was

said to be in response to concerns over borderline content, in our 1:1 convo you said was not out of any kind of concern over borderline content, and in our third conversation never even came up.” *Id.*

RESPONSE: Disputed to the extent that the PFOF mischaracterizes the cited e-mail in multiple ways, including (i) referring to prior “demand[s] [for] more information” or “seeking more aggressive action, regarding “censorship,” (ii) using the term “borderline content” to mean content that does not violate Facebook’s policies, and (iii) describing Mr. Flaherty’s tone as “accusatory.” Mr. Flaherty sought clarification regarding information about the “biggest” vaccine hesitancy issues that he “asked” Facebook for, and about which he had received inconsistent answers. *See* Dkt. 174-1 at 11. The cited e-mail contains no evidence of threats or pressure by the White House to censor speech, or communications that Facebook regarded (or acted on) as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

58. Flaherty followed with a series of accusations that Facebook was deceiving and prevaricating with the White House about its “borderline” (*i.e. not violative*) content: “You said you would commit to us that you’d level with us. I am seeing in the press that you have data on the impact of borderline content, and its overlap with various communities. I have asked for this point blank, and got, instead, an overview of how the algorithm works, with a pivot to a conversation about profile frames, and a 45-minute meeting that seemed to provide you with more insights than it provided us.” *Id.* He accused Facebook of being the “top driver[] of vaccine hesitancy,” demanded action against “borderline” content, and stated that the White House wanted to be directly involved in those efforts: “I am not trying to play ‘gotcha’ with you. We are gravely concerned that your service is one of the top drivers of vaccine hesitancy- period. I will also be the first to acknowledge that borderline content offers no easy solutions. But we want to know that you’re trying, we want to know how we can help, and we want to know that you’re not playing a shell game with us when we ask you what is going on. This would all be a lot easier if you would just be straight with us.” *Id.*

RESPONSE: Disputed to the extent that this PFOF mischaracterizes Flaherty’s e-mail, which principally sought greater information concerning vaccine hesitancy on Facebook, as making “accusations,” “demand[ing]” greater action against “borderline” content, and seeking “direct[]” White House involvement in Facebook’s efforts. Dkt. 174-1 at 11. The cited e-mail

contains no evidence of threats or pressure by the White House to censor speech, or communications that Facebook regarded (or acted on) as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

59. Facebook responded on March 15, respectfully disputing the Washington Post’s reporting, but then saying to Flaherty: “We obviously have work to do to gain your trust. You mention that you are not trying to play ‘gotcha’ with us—I appreciate the approach you are taking to continued discussions. We are also working to get you useful information that’s on the level. That’s my job and I take it seriously--I’ll continue to do it to the best of my ability, and I’ll expect you to hold me accountable.” *Id.* at 10-11.

RESPONSE: Disputed to the extent that this PFOF omits critical context. Facebook also said: “I understand why you’d read the WaPo piece and come away feeling like we are not leveling with you” and disputed the article’s accuracy at length. Dkt. 174 at 11. The cited e-mail contains no evidence of threats or pressure by the White House to censor speech, or communications that Facebook regarded (or acted on) as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

60. The same day, March 15, 2021, Andrew Mr. Slavitt (who was copied on these exchanges between Facebook and Flaherty) weighed in, once again accusing Facebook of dishonesty in a series of oral meetings: “It would [be] nice to establish trust. I do feel like relative to others, interactions with Facebook are not straightforward and the problems are worse – like you are trying to meet a minimum hurdle instead of trying to solve the problem and we have to ask you precise questions and even then we get highly scrubbed party line answers. We have urgency and don’t sense it from you all. 100% of the questions I asked have never been answered and weeks have gone by.” *Id.* at 10.

RESPONSE: Disputed to the extent this PFOF characterizes Mr. Slavitt of accusing Facebook of “dishonesty” rather than expressing his “feel[ing]” that Facebook had not conveyed information about Facebook’s content moderation policies and practices with the level of detail and clarity he had hoped for. Regardless, the cited e-mail contains no evidence that the White House threatened or pressured Facebook to censor speech, or that Facebook regarded (or acted on)

communications with the White House as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

61. Mr. Slavitt then made an ominous statement threatening unspecified Executive action against Facebook in retaliation for Facebook’s perceived lack of cooperation with the White House’s demands on censorship of “borderline” (*non-violative*) content: “*Internally we have been considering our options on what to do about it.*” *Id.* at 10 (emphasis added).

RESPONSE: Disputed to the extent this PFOF mischaracterizes Mr. Slavitt’s general remark about internal White House consideration of “options” as “ominous,” “threatening” or referring to “retaliation” or “Executive action.” The reference to “Facebook’s perceived lack of cooperation with the White House’s demands on censorship of ‘borderline’ (non-violative content),” is also disputed as a mischaracterization of the record. In the cited e-mail, Mr. Slavitt was referring to Facebook’s perceived lack of transparency about its content moderation practices and policies. The cited e-mail also contains no evidence that the White House threatened or pressured Facebook to censor speech, or that Facebook regarded (or acted on) communications with the White House as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

62. On March 16, 2021, Facebook responded to Mr. Slavitt, again disputing the Washington Post’s reporting and respectfully explaining its position, but also promising to share information about vaccine hesitancy in “real time”: “We are absolutely invested in getting you the specific information needed to successfully manage the vaccine roll out.” *Id.* Facebook promised to increase information-sharing and proposed a detailed oral meeting on the topic: “But I understand your point regarding how we communicate, and that we need to share information with you in a way that prioritizes what we are seeing in as close to real time as possible. I’d like to set up a conversation with our research leads to walk your team through ongoing research we are currently conducting and our approach; and then we can prioritize sharing results as quickly as possible.” *Id.* Facebook also offered to speak to Mr. Slavitt by phone at any time. *Id.*

RESPONSE: Undisputed, but note that the cited e-mail contains no evidence that the White House threatened or pressured Facebook to censor speech, or that Facebook regarded (or acted on) communications with the White House as such. Any assertion to that effect is

unsupported by and contrary to the evidence as a whole. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

63. On March 19, 2021, Facebook had an oral meeting with White House officials, including Flaherty and Mr. Slavitt. Doc. 174-1, at 15. On Sunday, Facebook sent a follow-up summary of the meeting to Andrew Mr. Slavitt (“Thanks for taking the time to connect on Friday”), which noted that the White House (1) demanded a “Consistent Product Team [Point of Contact]” at Facebook, (2) demanded “Sharing Additional Data” from Facebook, (3) had asked about “Levers for Tackling Vaccine Hesitancy Content,” and (4) asked about censorship policies for the Meta platform WhatsApp. *Id.*.

RESPONSE: Disputed to the extent the PFOF mischaracterizes Facebook’s email as reflecting “demands” by Flaherty, rather than requests to identify a point of contact from Facebook’s Content Product Team or the sharing of additional data. The email (which Plaintiffs do not quote) does not support this characterization. Nor does the cited evidence support the PFOF’s characterization of Mr. Slavitt asking about WhatsApp “censorship policies.” Rather, the evidence establishes that Mr. Slavitt asked Meta about WhatsApp’s content moderation policy, a policy that all users agree to when they sign up for WhatsApp. Regardless, the cited e-mail contains no evidence that the White House threatened or pressured Facebook to censor speech, or that Facebook regarded (or acted on) communications with the White House as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

64. In the follow-up email, Facebook noted that, in direct response to White House demands, it was censoring, removing, and reducing the spread of content that did not violate its policies: “You also asked us about our levers for reducing virality of vaccine hesitancy content. In addition to policies previously discussed, these include *the additional changes that were approved late last week* and that we’ll be implementing over the coming weeks. As you know, in addition to removing vaccine misinformation, we have been focused on reducing the virality of content discouraging vaccines *that does not contain actionable misinformation*. This is *often-true content* ... but it can be framed as sensation, alarmist, or shocking. *We’ll remove these Groups, Pages, and Accounts when they are disproportionately promoting this sensationalized content.*” *Id.* at 15 (emphases added).

RESPONSE: Disputed to the extent this PFOF mischaracterizes Facebook’s email as reflecting “demands” by the White House, or that Facebook was “censoring” content that “did not violate its policies” in “response” to such “demands.” Facebook’s email expressly states that “[y]ou asked us about our levers for reducing virality of vaccine hesitancy content,” and further states that Facebook was adopting additional policy changes “that were approved late last week and that we’ll be implementing over the coming weeks.” Dkt. 174-1 at 15. This PFOF also argumentatively characterizes the cited e-mail by emphasizing various phrases. The cited e-mail also contains no evidence that the White House threatened or pressured Facebook to censor speech, or that Facebook regarded (or acted on) communications with the White House as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

65. Facebook also provided the White House with a detailed report on its censorship policies on WhatsApp: “WhatsApp’s approach to misinformation focuses on limiting the virality of messages, preventing coordinated abuse, and empowering users to seek out reliable sources of information both in and out of the product. Our product includes features to limit the spread of viral content, such as forward limits and labels, privacy settings to help users decide who can add them to groups, and simple ways for users to block accounts and make reports to WhatsApp if they encounter problematic messages. Additional limitations we placed in April 2020 on forwarding of messages that have been forwarded many times reduced these kinds of messages by over 70%.” *Id.*

RESPONSE: Disputed to the extent the PFOF mischaracterizes WhatsApp’s content moderation policies described above, to which all users agree, as “censorship policies.” The cited e-mail also contains no evidence that the White House threatened or pressured Facebook to censor speech, or that Facebook regarded (or acted on) communications with the White House as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

66. On March 22, 2021, Flaherty responded to Facebook, demanding much more detailed information and action about “sensationalized” content on its platforms. *Id.* at 14. Flaherty

noted that White House officials were demanding a plan from Facebook to censor non-violative content, *i.e.*, “looking out for your game plan on tackling vaccine hesitancy spread on your platform.” *Id.*

RESPONSE: Disputed to the extent the PFOF mischaracterizes Mr. Flaherty’s request as a “demand” for “much more detailed information and action” about “sensationalized content” or a “plan from Facebook to censor nonviolative content.” Mr. Flaherty’s email (which in large part Plaintiffs do not quote) does not support this characterization. Rather than “demand” anything, Mr. Flaherty’s email reflects that he was asking Facebook about “the universe and scale of the problem” and what Facebook thought “the biggest issue is.” Dkt. 174-1 at 14. The cited e-mail also contains no evidence that the White House threatened or pressured Facebook to censor speech, or that Facebook regarded (or acted on) communications with the White House as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

67. In this email, Flaherty badgered Facebook with a series of detailed requests for information about this issue of censoring vaccine-skeptical content that does not violate Facebook’s content-moderation policies, such as truthful but “sensational” content: “Again, as I’ve said, what we are looking for is the universe and scale of the problem. You noted that there is a level below sensational stories that get down-ranked, which took the form of general skepticism. ... [T]he problem does not sit in ‘microchips’-land, and ... it seems plausible that the things that drive the most actual hesitancy sit in ‘sensational’ and ‘skeptical.’” *Id.* Flaherty demanded more information and greater censorship of such non-violative “sensational” and “skeptical” content: “If you’re down ranking sensational stuff—great—but I want to know how effective you’ve seen that be from a market research perspective. And then, what interventions are being taken on ‘skepticism?’ ... [W]hat are you trying here, and again, how effective have you seen it be. And *critically*, what amount of content is falling into all of these buckets? Is there wider scale of skepticism than sensationalism? I assume given the Carnegie data and the studies I’ve seen in the press that you have this. ... As I’ve said: this is not to play gotcha. It is to get a sense of what you are doing to manage this.” *Id.* (italics in original).

RESPONSE: Disputed to the extent the PFOF mischaracterizes Flaherty as “badger[ing] Facebook with a series of detailed requests for information about this issue of censoring vaccine-skeptical content,” as inquiring about information concerning “content that does not violate

Facebook's content-moderation policies," and as "demand[ing] . . . greater censorship" of information that does not violate Facebook's content moderation policies. As he stated, Mr. Flaherty was trying to ascertain "the universe and scale of the problem" and "what [Facebook was] doing to manage [it]." The cited e-mail also contains no evidence that the White House threatened or pressured Facebook to censor speech, or that Facebook regarded (or acted on) communications with the White House as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.' PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

68. Flaherty also badgered Facebook for more information on Meta's censorship policies on the WhatsApp platform, pushing for greater censorship there: "On whatsapp, which I may seem like I'm playing gotcha, but I guess I'm confused about how you're measuring reduction of harm. If you can't see the message, I'm genuinely curious—how do you know what kinds of messages you've cut down on? Assuming you've got a good mousetrap here, that's the kind of info we're looking for above: what interventions you've taken, and what you've found to work and not work? And how effective are you seeing the good information on Whatapp be? Are you doing cross platform campaign work to try to reduce people's exposure on whatsapp?" *Id.* at 14.

RESPONSE: Disputed to the extent the PFOF argumentatively mischaracterizes Mr. Flaherty as "badgering" Facebook for information on Meta's "censorship" policies and "pushing" for "more censorship." Mr. Flaherty's email plainly states he is "looking for" more information about "interventions [WhatsApp has] taken," and says nothing about taking additional measures. The cited e-mail also contains no evidence that the White House threatened or pressured Facebook to censor speech, or that Facebook regarded (or acted on) communications with the White House as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.' PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

69. Flaherty concluded with an accusation of past dishonesty against Facebook and proposed frequent oral meetings to address the White House's issues: "You've given us a commitment to honest, transparent conversations about this. We're looking for that, and hoping we can be partners here, even if it hasn't worked so far. I know Andy [Mr. Slavitt] is willing to get on the phone with [a Facebook official] a couple of times per week if its necessary to get all of this." *Id.*

RESPONSE: Disputed to the extent the PFOF mischaracterizes Mr. Flaherty’s email as accusing Facebook of “dishonesty.” The cited e-mail also contains no evidence that the White House threatened or pressured Facebook to censor speech, or that Facebook regarded (or acted on) communications with the White House as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

70. Flaherty’s statement that the White House is “hoping we can be partners here, even if it hasn’t worked so far,” reinforced Mr. Slavitt’s previous implied threat that the White House would take some unspecified action against Facebook if it did not cooperate with the White House’s demands on censorship of vaccine-hesitant content, especially *non-violative* content, on Facebook’s platforms. *Id.*

RESPONSE: Disputed. The PFOF mischaracterizes the quoted remark (“hoping we can be partners . . .”) as a threat, mischaracterizes prior statements by Mr. Slavitt as a “previous implied threat” of retaliation, and refers to White House “demands [for] censorship” for which neither this PFOF nor any other provides evidence. The cited e-mail also contains no evidence that the White House threatened or pressured Facebook to censor speech, or that Facebook regarded (or acted on) communications with the White House as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

71. Facebook then agreed with Flaherty and Mr. Slavitt to schedule a meeting that Wednesday at 4:00 pm to discuss these issues. *Id.* at 13.

RESPONSE: Undisputed, but note that the cited e-mail contains no evidence that the White House threatened or pressured Facebook to censor speech, or that Facebook regarded (or acted on) communications with the White House as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

72. On April 9, 2021, Facebook sent Flaherty an email to respond to a long series of detailed questions from Flaherty about how the Meta platform WhatsApp was censoring COVID-19 misinformation. Doc. 174-1, at 17-21. All Flaherty’s questions were designed to probe and

pressure Facebook toward more aggressive censorship. *See id.* Facebook began by “noting some of the key differences between a private messaging app like WhatsApp, and social media like Facebook and Instagram. Approximately 90 percent of the messages sent on WhatsApp are one-to-one, and the majority of group chats include fewer than ten people. WhatsApp does not promote content, and users do not build audiences or discover new people as they would on social media.” *Id.* at 18. Flaherty responded to this: “Very aware. [Smiley face].” In other words, the White House was demanding information about speech on a *private* messaging app used for one-to-one private communication, and demanding greater censorship of speech on that app—and it was “very aware” that it was doing so. *Id.*

RESPONSE: Disputed. This PFOF mischaracterizes the cited emails by Mr. Flaherty, from which Plaintiffs do not quote (apart from the two words, “Very aware”). The emails include no questions about “censorship,” say nothing that could be taken as “prob[ing] [or] pressure[ing] Facebook towards more aggressive censorship,” or as demanding “greater censorship of speech on [WhatsApp].” The cited e-mail also contains no evidence that the White House threatened or pressured Facebook to censor speech, or that Facebook regarded (or acted on) communications with the White House as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

73. Facebook noted that “WhatsApp seeks to control the spread of misinformation and inform users through deliberate, content-agnostic product interventions – things like labeling and limiting message forwards.” *Id.* at 18. Facebook noted that the message-forwarding limits are “intended” to censor COVID misinformation, and that they actually reduced such speech by 70 percent, and Facebook admitted that these are “somewhat blunt tools” that prevent its users from sending many other forms of speech as well: “The forward limits ... are intended to reduce their spread. As mentioned in my earlier note, when WhatsApp rolled out the limitation for highly forwarded messages to one chat at a time in April 2020, this resulted in a 70% reduction of those messages globally. Of course, not all forwards are misinformation, so these are by nature somewhat blunt tools, but they are important ones – and ones that many other messaging services don’t provide.” *Id.*

RESPONSE: Disputed to the extent the PFOF argumentatively mischaracterizes WhatsApp’s application of its content-moderation policies, to which all users agree, as “intend[ing]” to “censor” information. The cited e-mail also contains no evidence that the White House threatened or pressured Facebook to censor speech, or that Facebook regarded (or acted on)

communications with the White House as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

74. After presenting Facebook with a series of questions (presented in bold and in red type in the email, *see id.* at 18-20), Flaherty summed up by demanding insight into Facebook’s internal information: “I guess I have the same question here as I do on Facebook on Instagram. Do you guys think you have this under control? You’re obviously going to say yes to that, so I guess the real question is, as ever: how are you measuring success? Reduction in forwarding? Measured impact across Facebook properties?” *Id.* at 20.

RESPONSE: Disputed to the extent the PFOF mischaracterizes Mr. Flaherty’s question as a “demand.” The evidence does not support this characterization. The cited e-mail also contains no evidence that the White House threatened or pressured Facebook to censor speech, or that Facebook regarded (or acted on) communications with the White House as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

75. Facebook responded by emphasizing that it was “reducing viral activity on our platform” through message-forward limits and other speech-blocking techniques as well: “On WhatsApp, reduction in forwards is just one of the signals that we use to measure how well we are doing in reducing viral activity on our platform. We also ban accounts that engage in mass marketing or scam behaviors - including those that seek to exploit COVID-19 misinformation. Our efforts in this space are more comprehensive than anything that our peers in private messaging or SMS do, and we are constantly innovating to stay ahead of future challenges.” *Id.* at 20.

RESPONSE: Disputed to the extent that this PFOF characterizes Facebook’s application of its technology as using “speech-blocking techniques.” Defendants also note that the cited e-mail contains no evidence that the White House threatened or pressured Facebook to censor speech, or that Facebook regarded (or acted on) communications with the White House as such. Any assertion to that effect is unsupported by and contrary to the evidence as a whole. *See* Defs.’ PFOF § II.A, Arg. §§ I.B.1 & II.B.1.b & II.B.2.

76. Facebook also offered to meet with the White House “Monday or anytime next week” to discuss its censorship efforts, to which Flaherty responded, “Hoor should be trying to land a time.” *Id.* at 17.
