Case No. 21-cv-00999-KJM-AC

**DECLARATION OF DAVID ELY IN
SUPPORT OF BRIEF OF CIVIL
RIGHTS AMICI'S OPPOSITION TO
DEFENDANTS' MOTION TO
DISSOLVE THE PRELIMINARY
INJUNCTION**

1 I, David Ely, declare:

2 1. I am the founder of Compass Demographics, a consulting and database
3 management firm specializing in projects involving Census and Election Data. I have
4 extensive experience managing redistricting projects, analyzing voting behavior, and
5 analyzing demographics. I received a Bachelor of Science in Mechanical Engineering and
6 Social Sciences from the California Institute of Technology in 1987. Attached hereto as
7 **Exhibit A** is a true and correct copy of my CV.

8 2. I have served as an expert and testified on behalf of the United States in
9 numerous cases involving voting rights issues, in which I performed analyses similar to
10 those used in this report. Courts have accepted my expert opinions and my expert opinions
11 have never been excluded under Daubert or any other standard. Courts have relied on my
12 expert opinions in a number of cases, finding them reliable and persuasive. Courts have
13 also relied on my expert opinions to support findings of racial discrimination and race-
14 based targeting. A list of some of the cases on which my expert opinions have been found
15 reliable is attached hereto as **Exhibit B**.

16 3. I am being compensated \$2,000.00 by Attorneys for Amici the American
17 Civil Liberties Union of Northern California and the Asian Law Caucus (collectively,
18 “Amici”) for my analysis in this case. I am independent and impartial. My compensation
19 does not depend on either my opinion or the outcome of this case.

20 4. Amici have asked me to determine whether Siskiyou County (“County”) has
21 enforced the County’s water-related ordinances and other common criminal and civil
22 violations against people of Asian-Pacific Islander (“API”) descent at a rate
23 disproportionate to their proportion of the general population. In particular, Amici
24 requested that I review data showing the County’s use of traffic stops, lien hearings,
25 cannabis cultivation citations, and its water-related ordinances to determine whether API
26 people were disproportionately targeted with detentions and citations.

27 5. To perform this review, Amici provided me with four different spreadsheets
28 containing information that I understand are drawn from the data provided by the County.

1 The first, attached hereto as **Exhibit C**, shows the driver name and computer-aided
2 dispatch (“CAD”) number for 1,158 traffic stops conducted by the Siskiyou County
3 Sheriff’s Office (“SCSO”) in 2021. The second, attached hereto as **Exhibit D**, shows a list
4 of names of individuals who were cited for cannabis cultivation under the Siskiyou County
5 Code. The third, attached hereto as **Exhibit E**, shows a list of names and case numbers for
6 individuals referred for prosecution under the County’s water-related ordinances. The
7 fourth, attached hereto as **Exhibit F**, shows a list of names and associated citations
8 numbers for property holders against whom the County filed liens in 2020 and 2021.
9 Amici requested that I analyze these four spreadsheets to determine what percentage of
10 each list were likely API names.

11 6. Based on my analysis, API people are significantly overrepresented in the
12 County’s enforcement of its water-related ordinances and other minor offenses. Despite
13 constituting only 2.6% of the County voting-age population at the 2020 Census, API
14 people constituted 27.4% of traffic stops, 61.1% of criminal referrals under the water-
15 related ordinances, 78.1% of cannabis cultivation citations, and 81.6% of liens that the
16 County has pursued. A table summarizing this data is attached hereto as **Exhibit G**.

17 7. In comparison, white people are significantly underrepresented in the
18 County’s enforcement of its ordinances and related laws. Despite constituting 76.5% of the
19 County voting-age population at the 2020 Census, white people constituted only 42.1% of
20 traffic stops, 8.0% of criminal referrals under the water-related ordinances, 10.6% of
21 cannabis cultivation citations, and 8.6% of liens.

22 8. These figures were created using an analysis of the surnames appearing in
23 the spreadsheets provided to me by Amici. Surnames are a commonly-used proxy for
24 ethnicity in determining the ethnic composition of a group of people identified by name
25 when ethnic self-identification is not practical. I have used this type of analysis extensively
26 to build databases to analyze voting behavior and measure potential voting strength in
27 districts, and as a foundation for expert reports in voting rights litigation. In this context,
28 this analysis can be used to determine racially disparate law enforcement practices.

1 9. An surname list was developed by the US Census Bureau from 2010 Census
2 data for use in demographic research. A document describing the development of the list is
3 attached as **Exhibit H**. In general, the list ascribes a probabilistic ethnic identity to any
4 surname that appears at least 100 times on the US Census. I have used this list extensively
5 in my work in numerous jurisdictions. I use the list to assign probabilistic values to
6 surnames to determine the likelihood that a given person is White, Black, API, American
7 Indian-Native, 2 or more races, or Hispanic-Latino. The probabilistic values are based on
8 self-identification by the census respondents. *E.g.*, the lists take into account, of the people
9 with a given surname, how many of the people with that surname self-identify as being of
10 a particular ethnicity. These lists are based on census responses from the entirety of the
11 United States.

12 10. Using this list and my corresponding databases, I assigned a probabilistic
13 value to each name in Amici’s provided lists. True and correct copies of spreadsheets
14 showing the results of my probabilistic analyses are attached hereto as **Exhibit I** (CAD
15 Reports), **Exhibit J** (Water-Related Ordinance Referrals), **Exhibit K** (Cannabis
16 Cultivation Citations), and **Exhibit L** (Lien Hearings). As these spreadsheets show, the
17 probabilistic likelihood for the vast majority of API surnames is above 90%.

18 11. It is likely that my analyses represent an undercount of the true percentage of
19 enforcement actions that the County takes against API people. Attached hereto as **Exhibit**
20 **M** is a set of four tables showing the names that my analysis did not denote as *any*
21 ethnicity because they do not appear at least 100 times on the US Census. From my
22 review, many of these names appear to belong to API people (*e.g.*, “YOA, QINGLIN”).
23 *See* Ex. M at 4.

24 12. Moreover, the surname-only analysis ascribes a low probabilistic API name
25 value to certain names that appear definitively API based on the individuals’ first names.
26 For instance, the surname “Lee” is a commonly appearing name on the list of CAD entries.
27 The database ascribes a 42% probability that this surname belongs to a white person and a
28 35% probability that the surname belongs to an API person. A closer look at the first

1 names in the data, though, shows that many of the people with the surname “Lee” are
2 likely API (e.g., “LEE, CHAN CHOY,” “LEE, CHENG,” “LEE, CHOR.”). *See* Ex. I at 8.

3 13. This report may be supplemented or revised in response to the discovery of
4 additional issues and information.

5 14. I declare under penalty of perjury that the foregoing is true and correct, and
6 that this declaration was executed at San Gabriel, California this 24th day of March,
7 2022.

DAVID R. ELY

Compass Demographics, Inc.

6575 N. Vista Street

San Gabriel, CA 91775

(626) 807-0719

E-mail: ely@compass-demographics.com

Employment:

2007 to present

David Ely is the president and founder of Compass Demographics, a consulting and database management firm specializing in projects involving census and election data, redistricting projects, demographic analysis, and analysis of voting behavior.

1986 to 2007

Director of Research for the Redistricting and Reapportionment practice of Pactech Data and Research, Pasadena, California. As Director of Research, Mr. Ely testified or consulted to counsel in a variety of litigation involving the configuration of election districts as well as providing database construction and redistricting consulting for numerous jurisdictions.

Education:

California Institute of Technology in Pasadena, CA with a B.S. in Social Sciences and Mechanical Engineering in 1987.

Redistricting Consulting

Activities include database construction, demographic and voter analysis, development of districting plans, public hearings and presentation of plans, technical assistance, and analysis of alternative redistricting plans.

EXHIBIT H

FREQUENTLY OCCURRING SURNAMES IN THE 2010 CENSUS

Joshua Comenetz

October 2016

INTRODUCTION

The 2010 Census Surname Table is the third in the U.S. Census Bureau's series of data products listing the most common surnames (last names) reported in the decennial U.S. census. The Census 2000 product was based on very different methods from the 1990 Census product, while the 2010 product is based on the methodology and programming used in 2000 with some revisions. This document first summarizes the methodological changes between 2000 and 2010, then describes the 2010 results and compares them with the 2000 surname list.

This report documents both the overall frequency of surnames (last names), as well as some of the basic demographic characteristics that are associated with surnames. The presentation of data in this report focuses on summarized aggregates of counts and characteristics associated with surnames, and the data do not in any way identify any specific individuals.

METHODOLOGY CHANGES

The 2010 surname project began as a replication of the 2000 project, using the same programming. This section describes ways in which the 2010 methods differed from the 2000 methodology that is described in Word et al. (2007). For the complete methodology employed in the 2010 project, please refer to both Word et al. (2007) and this document.

Creation of the 2010 product started with raw data from the 2010 Census: the surnames provided by census respondents. These data were processed by the 2000 programming, applying edits described in Word et al. (2007), resulting in the initial 2010 draft product. The initial 2010 draft names list was extensively reviewed by a group of Census Bureau staff. Their findings were consolidated into a new set of edits, comprising updates or corrections needed to fix problems that arose in 2010 but not in 2000, or to fix problems that were partially addressed in the 2000 programming but were more widespread or complex in the 2010 data set. New programming, to add to the 2000 programs, was written to implement the new set of edits. Applying the new programming to the initial draft product resulted in a revised draft. The revised draft was reviewed to see if all of the new set of edits were addressed, and also compared with the 2000 product to see if changes in name frequency (name count, or number of times each name was reported in the census) over the decade made sense in light of general demographic trends. Several rounds of programming and review resulted in the publicly available 2010 surname product.

Edits applied in both 2000 and 2010 with variation

In the 2000 project, first names were extensively examined as part of the overall review of reported names. First names were used in 2010 only to the extent that the 2000 programming uses them as a component of its edits. We did not otherwise employ first names in the 2010 project.

In 2000, manual review (“eyeballing”) was conducted for names with a frequency of at least 300. Names with lower frequencies were not examined. In 2010, partly to compensate for the reduced role of first names, we conducted a much larger manual review. All names with a frequency of at least 10 were scanned by two or more reviewers, with an eye toward obvious erroneous entries (e.g., I LIVE ALONE), extraneous characters (SMITH--- rather than SMITH), spelling errors (JACKOSN rather than JACKSON), inclusion of suffixes (GONZALEZJR rather than GONZALEZ), and any other potential errors.

Edits and a correction newly applied in the 2010 product

Most edits applied in the Census 2000 names product were carried over to the 2010 product. Based on the manual review team’s work, we developed a list of additional corrections necessary to fix problems seen in the 2010 data. These included deletion of punctuation, spaces, suffixes, prefixes, and non-names, along with correction of obvious spelling errors, as summarized below.

One set of edits related to punctuation and spaces:

- All punctuation marks and spaces that were part of surnames were deleted. SMITH-JONES and SMITH JONES were changed to SMITHJONES. O’HARA and O HARA became OHARA.
- Many names on the raw list also contained extraneous punctuation. The punctuation was deleted, so, for example, SMITH--- became SMITH.
- All reported surnames consisting of two letters separated by a space (A A, C D) were deleted from the list.
- Names with more than two letters that contained extraneous spaces were edited to remove the spaces, e.g., S M I TH became SMITH.

Another group of edits removed suffixes and prefixes:

- JUNIOR, SENIOR, and THIRD were removed from the ends of names.
- JR and III were deleted from both the beginning and end of names.
- SR was deleted from the end of name only if the name had at least seven alphabetic characters, because several shorter names do end in SR while longer names ending in SR tended to include suffixes (e.g., NASR was kept, WILSONSR was changed to WILSON).
- II was deleted from the beginning or end of a name only if it was separated by a space, because a number of names do begin or end with II (NISHII was not changed, JONES II and II JONES were both changed to JONES).

- Similarly, J R and S R were deleted from the beginning or end of a name if they were separated from the rest of a name by a space (GONZALEZ S R became GONZALEZ).
- IV was deleted from the end of a name if separated by a space.

A third set of edits deleted and corrected names. The 2000 programming contains deletion and correction lists that were maintained and expanded for the 2010 project. For example:

- Except for NG, all 2-letter names that did not contain a vowel or Y were deleted (AA, AB, and BY were kept; DD and BC were deleted).
- Obvious non-names were deleted: for example, ABCDEFG, ADULT FEMALE, DECLINE TO STAT, DONT KNOW, NO NOMBRE, OOOOO, SAME AS ABOVE. The goal was to delete only entries that, like these, were very unlikely to be genuine surnames. Names that looked improbable but not impossible were kept, e.g., ANONYMOUS.
- Several obvious spelling errors were corrected. For example, JACKOSN became JACKSON, RODRIGU Z became RODRIGUEZ, WRGHT became WRIGHT.

Finally, a small error in the classification of names by race in the 2000 programming was discovered and corrected. The 2000 and 2010 products use the same six Hispanic origin and race categories: Non-Hispanic White Alone, Non-Hispanic Black or African American Alone, Non-Hispanic American Indian and Alaska Native Alone, Non-Hispanic Asian and Native Hawaiian and Other Pacific Islander Alone, Non-Hispanic Two or More Races, and Hispanic or Latino origin. However, in the 2000 product the Non-Hispanic Native Hawaiian and Other Pacific Islander Alone group was combined with the Non-Hispanic Two or More Races group, rather than with the Non-Hispanic Asian Alone group. This misclassification affected only about 0.1 percent of people responding to Census 2000. For the 2010 product, we corrected the classification procedure, and people identifying as Non-Hispanic Asian Alone or Non-Hispanic Native Hawaiian and Other Pacific Islander Alone are grouped together.¹

SUMMARY OF RESULTS

Table 1 outlines the national distribution of surnames by frequency in the United States in the 2010 Census. About 6.3 million different surnames were reported by census respondents in 2010. Of these, 11 were reported more than a million times each, while 3.9 million, or 61.9 percent, were reported only once: unique surnames or unique variations of more frequent names (including errors resulting from the transcription of names handwritten on census forms). Surnames were recorded for 295 million people, or 95.5 percent of the population enumerated in the 2010 Census. This coverage is comparable to surname coverage in 2000 (95.9 percent of the population). All of the editing procedures applied to the 2010 Census surnames together affected about 7.7 million individual records, or 2.6% of the 295 million records that contained surnames.

The 50 most common surnames are summarized in Appendix Table A-1, which provides frequency, rank, and distribution by Hispanic origin and race groups. The Hispanic origin and

¹ In the rest of this document, Black is used interchangeably with Non-Hispanic Black or African American Alone; Hispanic is used interchangeably with Hispanic or Latino origin; Asian and Native Hawaiian and Other Pacific Islander is used interchangeably with Non-Hispanic Asian and Native Hawaiian and Other Pacific Islander Alone.

race groups are the same as used in the 2000 product (Word et al., 2007). The top five surnames are the same in both years (SMITH, JOHNSON, WILLIAMS, BROWN, JONES). Below the top five, the most notable change from 2000 to 2010 is the increasing prominence of predominantly Hispanic surnames. In 2000, the top 50 contained 10 surnames that were at least 90 percent Hispanic, and the top-ranked Hispanic surname (GARCIA) was ranked 8. In 2010, 12 of the top 50 were at least 90 percent Hispanic, and GARCIA was ranked 6.

Table 1. Surnames by frequency range and number of people: 2010

| Surnames | | | | People with these Surnames | | |
|-----------------|-----------|-------------------|---------------------------------|----------------------------|-------------------|---------------------------------|
| Frequency range | Number | Cumulative Number | Cumulative Proportion (percent) | Number | Cumulative Number | Cumulative Proportion (percent) |
| 1,000,000+ | 11 | 11 | 0.0 | 15,505,815 | 15,505,815 | 5.3 |
| 100,000-999,999 | 303 | 314 | 0.0 | 66,723,063 | 82,228,878 | 27.9 |
| 10,000-99,999 | 3,253 | 3,567 | 0.1 | 84,107,944 | 166,336,822 | 56.4 |
| 1,000-9,999 | 21,322 | 24,889 | 0.4 | 61,658,357 | 227,995,179 | 77.3 |
| 100-999 | 137,364 | 162,253 | 2.6 | 37,672,049 | 265,667,228 | 90.1 |
| 50-99 | 114,079 | 276,332 | 4.4 | 7,939,724 | 273,606,952 | 92.8 |
| 25-49 | 177,884 | 454,216 | 7.2 | 6,182,636 | 279,789,588 | 94.9 |
| 10-24 | 354,912 | 809,128 | 12.8 | 5,448,514 | 285,238,102 | 96.7 |
| 5-9 | 424,454 | 1,233,582 | 19.6 | 2,761,552 | 287,999,654 | 97.6 |
| 2-4 | 1,165,587 | 2,399,169 | 38.1 | 3,079,711 | 291,079,365 | 98.7 |
| 1 | 3,899,864 | 6,299,033 | 100.0 | 3,899,864 | 294,979,229 | 100.0 |

The next two tables look only at the 1,000 most frequent surnames. Table 2 shows the 10 names with the highest shares of identification with each Hispanic origin or race group—for example, 87.5 percent of people with the name WASHINGTON identified themselves as Black. There is little overlap among the six lists, highlighting the degree to which surnames vary among racial and ethnic groups in the United States.

Most individual surnames do not reflect the diversity of the population as a whole. In many cases, over 90 percent of people reporting a name identify with just one of the six Hispanic origin or race groups. In contrast, few surnames are equally common in multiple Hispanic origin or race groups. Table A-1 shows something similar: almost all of the top 50 names show Hispanic origin and race patterns very different from the U.S. population as a whole.

Table 2. Top 1,000 surnames with the largest share in each Hispanic origin and race group: 2010

| NAME | RANK AMONG ALL SURNAMES | FREQUENCY | OCCURENCES PER 100,000 PEOPLE | PERCENT IN THIS GROUP | NAME | RANK AMONG ALL SURNAMES | FREQUENCY | OCCURRENCES PER 100,000 PEOPLE | PERCENT IN THIS GROUP |

Table 3 shows the 15 most rapidly increasing surnames that were among the top 1,000 in both 2000 and 2010, along with their Hispanic origin and race group characteristics. All 15 are predominantly Asian or Hispanic, except for ALI, a name with unusually great Hispanic origin and race diversity. This pattern reflects national population change between 2000 and 2010, when the Hispanic and Asian populations increased much more rapidly than the population as a whole.

Table 3. Fastest growing surnames among the top 1,000: 2000 to 2010

| NAME | FREQUENCY IN 2000 | FREQUENCY IN 2010 | NON-HISPANIC | | | | | PERCENT HISPANIC OR LATINO ORIGIN | PERCENT CHANGE IN FREQUENCY |
|-----------|-------------------|-------------------|---------------------|---|--|---|---------------------------|-----------------------------------|-----------------------------|

Source: U.S. Census Bureau, Census 2000 and 2010 Census.

Note: Hispanic origin and race percent distribution is from the 2010 Census.

The publicly released table of surnames includes all with a frequency of 100 or more. These 162,253 names cover 90 percent of the people with surnames recorded in the 2010 Census (see Table 1 in this document). The proportion of the population covered by the most frequent surnames increased slightly between 2000 and 2010. In 2000, 76.6 percent of the population reported a surname that had a frequency of 1,000 or more, while in 2010 that share increased to 77.3 percent—that is, “surname diversity” declined slightly over the decade.

Recent geographically diverse immigration might be expected to increase, rather than decrease, surname diversity. However, this has not happened, because most immigration is from Latin America and Asia, and Hispanic and Asian surnames are less diverse than the U.S. average. For the population as a whole in 2010, the 10 most frequent surnames accounted for just 4.9 percent of the population (Table 4), while to cover a quarter of the total population required 239 names.

The White population was more diverse than the national average in this respect, but in other groups the most common surnames were reported by a larger share of the population. The highest level of clustering is found in the Hispanic population, where just 26 surnames cover a quarter of the population and 16.3 percent of people reported one of the top 10 names. A similar pattern was seen for the Asian and Native Hawaiian and Other Pacific Islander population and for the Black population.

Table 4. Surname clustering by Hispanic origin and race groups: 2010

| Group | Percent of group covered by top 10 surnames | Number of surnames needed to cover 25 percent of group |
|--|---|--|
| Total population | 4.9 | 239 |
| White Alone | 4.5 | 319 |
| Black Alone | 13.0 | 43 |
| Asian and Native Hawaiian and Other Pacific Islander Alone | 13.4 | 41 |
| American Indian and Alaska Native Alone | 6.6 | 144 |
| Two or More Races | 6.2 | 196 |
| Hispanic or Latino origin | 16.3 | 26 |

ACKNOWLEDGEMENTS

Several rounds of review of the 2010 surname list were completed by William Bredemeyer, Derek Breese, Warren Davis, Delma Frankel, Myoung Ouk Kim, Danielle Kittredge, Julie VanEerden, and Tiffani Whaley. Aaron Dixon wrote programming to assist with quality review. Programming to apply edits and updates to the raw 2010 data was written by Hung Pham and Chandararith (Ricky) Phe. Robert Nunziata reviewed and updated the 2000 programming before the 2010 project began, and he and Brian Barenbaum advised on the 2010 names project. Robert Kominski and Charles Coleman provided useful background based on experience with the 2000 project. The final surname product, including this document, was reviewed by Aaron Dixon, James Fitzsimmons, and Marc Perry.
