INTRODUCTION

2 The Federal Trade Commission ("FTC" or the "Commission") has failed to demonstrate that it is likely to show that the proposed merger between Microsoft Corporation ("Microsoft") 3 and Activision Blizzard, Inc. ("Activision") is likely to substantially lessen competition. 15 4 U.S.C. § 18. Further, the balance of the equities and the public and private interests weigh 5 against preliminarily enjoining the merger. Accordingly, the FTC's Motion for a Preliminary 6 7 Injunction is **DENIED**. **PROPOSED FINDINGS OF FACT** 8 9 I. The Merging Parties and the Proposed Transaction. 1. Microsoft is a publicly traded corporation organized under Washington law and 10 headquartered in Redmond, Washington. 11 2. 12 Microsoft manufactures dedicated gaming consoles, including the Xbox Series X and S, and distributes video games via the Xbox Store and Microsoft Store. 13 3. 14 Microsoft also develops and publishes games for play on personal computers ("PCs"), mobile devices, and its Xbox consoles, as well as for play on third-party consoles, 15 including the Sony PlayStation and Nintendo Switch. 16 17 4. Microsoft offers a multi-game subscription service, called "Game Pass," that 18 provides subscribers with access to a library of more than 500 games for a single monthly fee. 19 The Game Pass Ultimate tier includes features like Xbox Cloud Gaming, which allows users to stream certain console games available on Game Pass through the cloud, instead of downloading 20 native versions of the games. 21 22 5. Activision is a publicly traded corporation organized under Delaware law and headquartered in Santa Monica, California. 23 24 6. Activision is a global developer and publisher of video games that are available 25 on dedicated gaming consoles, PCs, and mobile devices, and is comprised of three business units, each of which develops and publishes video game content: Activision Publishing, Inc. 26 27 ("AP"), Blizzard Entertainment, Inc. ("Blizzard"), and King Digital Entertainment ("King"). 28

Case 3:23-cv-02880-JSC Document 177 Filed 06/22/23 Page 5 of 77

7. Activision also owns and operates a PC gaming platform, Battle.net, which serves
 as a distribution outlet and social platform for Activision's PC titles.

8. On January 18, 2022, Microsoft announced an agreement to acquire Activision
for \$68.7 billion. That agreement provides, among other things, that either party may terminate
the merger agreement if the transaction has not closed by July 18, 2023. If the agreement is
terminated, Microsoft is obligated to pay Activision a termination fee of \$3 billion.

9. The planned merger was reported to the FTC, as required under the Hart-ScottRodino Antitrust Improvements Act ("HSR Act"), on February 1, 2022. The FTC thereafter
commenced an 11-month investigation, requiring Defendants to produce nearly 3 million
documents and sit for 15 investigational hearings. The waiting period under the HSR Act that
prevents the parties from closing the transaction was extended by agreement with the FTC until
November 21, 2022, and the parties thereafter agreed voluntarily to delay closing until December
12, 2022.

14 10. On December 8, 2022, the FTC filed an administrative complaint against the
15 merger, alleging that it violates Section 7 of the Clayton Act, 15 U.S.C. § 18, and Section 5 of
16 the FTC Act, 15 U.S.C. § 45. Defendants produced an additional nearly 1 million documents and
17 sate for more than 30 depositions during discovery in the administrative proceeding.

18 11. The FTC alleges that Xbox will withhold access to Activision games in four 19 "markets": high-performance consoles, multi-game content library subscription services, cloud 20 gaming subscription services, and a combined multi-game and cloud gaming subscription 21 services market. The FTC defines the high-performance console market to include only Xbox 22 and Sony PlayStation. The FTC defines the geographic market as the U.S. The FTC claims that 23 withholding Activision content will result in foreclosure that "is reasonably likely to 24 substantially lessen competition in the Relevant Markets." The FTC makes no allegations of 25 harm to competition in any game publishing or distribution market, or any market involving 26 mobile gaming.

- 27 28
- 2 -DEFENDANTS' PROPOSED PRETRIAL FINDINGS OF FACT AND CONCLUSIONS OF LAW (NO. 3:23-CV-02880-JSC)

1 12. In its administrative complaint, the FTC scheduled a hearing on the complaint for 2 August 2, 2023—a date eight months in the future that is plainly after the July 18th merger 3 termination date—despite the fact that the FTC is permitted under its rules to set an earlier date 4 and usually does so in unconsummated mergers. Indeed, the FTC also did not follow its standard 5 practice of filing, at the same time as its administrative complaint, a preliminary injunction 6 action in federal court pursuant to Section 13(b) of the FTC Act, 15 U.S.C. § 53(b).

7 13. On June 12, 2023, six weeks before the merger agreement could be terminated,
8 the FTC filed this action, seeking a temporary restraining order and preliminary injunction
9 barring the acquisition pending a trial before a hearing, decision, and appeal of the FTC's
10 administrative complaint.

11 14. If the Court grants a preliminary injunction that prevents the transaction from12 closing, that could derail the deal entirely.

The FTC administrative process ordinarily takes years to resolve. As just one 13 15. 14 example, in the most recent administrative challenge to a merger (In the Matter of Illumina, Inc., 15 and Grail, Inc., 201 F.T.C. 0144 (2023)), it took over 19 months from the time of the 16 administrative trial (August 24, 2021) to when the Commission issued its opinion (April 3, 17 2023). The matter is now on a "fast-track" appeal (timing the FTC opposed) before the 5th 18 Circuit, but the case has yet to be argued. If the same timing holds in this case, even if the 19 administrative proceeding begins on August 2, 2023 as scheduled, it would still likely not be resolved before 2026. 20

21

II. The Gaming Industry Is Dynamic and Highly Competitive.

16. Gaming is a highly dynamic and competitive industry, and the fastest growing
portion of the media and entertainment sector. Gaming is larger in revenue than TV, home video
(including streaming), cinema, music, books or newspapers, and magazines.

17. There are 3 billion gamers around the world. Over half of the world's current
gamers are in Asia, and gaming is growing most quickly in developing countries like India and
Mexico (in large part due to increased accessibility to free games on mobile phones). By 2030,

- 3 -

roughly half of the global population (4.5 billion) is expected to participate in the gaming
 industry.

3 18. Gaming generates hundreds of billions of dollars of revenue a year and is
4 projected to grow substantially in the future. Gaming grew to record high levels during the global
5 pandemic, with people seeking at-home entertainment options more than ever before.

19. The gaming sector is highly fragmented, and includes traditional participants
(*e.g.*, Sony, Nintendo, Tencent, Valve), new entrants (*e.g.*, Amazon, Mediatonic, Moon Studios,
Purple Lamp, Hello Games) and new services (*e.g.*, the gaming offerings of Amazon, Apple,
Google, Netflix, and Nvidia).

20. Microsoft and Activision are just two companies in the highly competitive and
diverse gaming industry. Microsoft is the number three console manufacturer, behind Sony and
Nintendo. Likewise, Activision is just one of dozens of game publishers.

13

A.

Gamers today can choose from more games than ever before.

14 21. Given the dynamism of the market, the number of games released each year has
15 been increasing, offering a greater variety of choice to gamers. The Entertainment Software
16 Association estimates that there were more than 1,600 game developers in the U.S. alone in
17 2019.

18 22. In 2021, there were around 1,700 unique titles launched on Nintendo Switch, over
19 980 on Sony PlayStation and around 725 on Xbox.

20 23. Microsoft estimates that gamers play over different games on Microsoft's
21 gaming platform each week.

22 24. Certain game franchises release new titles every year, including (among others)
23 Activision's *Call of Duty* ("*COD*"), Electronic Art's ("EA's") *FIFA*, and Ubisoft's *Assassin's*24 *Creed*. Many games, like *Grand Theft Auto*, regularly update their content (for example, offering
25 new maps or quests for gamers to complete), while releasing new titles every few years.

26 25. Studios both large and small develop popular games. Many popular games were
27 unexpected breakout successes developed by small independent studios. For example, *Among Us*

Case 3:23-cv-02880-JSC Document 177 Filed 06/22/23 Page 8 of 77

was developed by a studio with only four employees, yet quickly attracted record numbers of
 monthly players and generated over \$86 million in revenue. Many other successful games such
 as *Fall Guys*, *Player Unknown: Battlegrounds*, and *Rocket League* were launched by small
 independent studios with relatively small development and marketing budgets.

5 26. The console makers also produce hit games. One of the most acclaimed games of
6 2022 was Sony's *God of War: Ragnarok*. Similarly, Naughty Dog, a subsidiary of Sony,
7 published the PlayStation exclusive *The Last of Us*, one of the best-selling games of all time.
8 That game and its sequel has only ever been available on PlayStation and has been converted
9 into a critically acclaimed HBO series.

27. Although major gaming companies invest millions of dollars trying to create the
next big hit, investment and reputation does not always guarantee success. Every year, there are
highly anticipated and well-funded games that are unsuccessful. For example, Xbox's *Halo Infinite* (released in 2021) and Activision's *Call of Duty: Vanguard* (released in 2019) were both
widely regarded as critical and financial flops despite high expectations, large budgets, and
affiliations with popular franchises. More recently, the much-anticipated Xbox and PC-exclusive *Redfall* was panned by critics and gamers upon release.

17 28. For any platform to be successful, it is important that it offer gamers a variety of18 games. No single game drives platform success.

19

B.

1.

Gamers can play on many different platforms.

20

The leading gaming platforms are mobile, PC, and console.

21 29. Games are available to play across a wide range of platforms, including mobile,
22 PC, and console.

30. Over the past few decades, the gaming industry has changed dramatically.
Gamers used to play video games primarily in arcades. In later years, they purchased individual
game cartridges or discs to play on consoles in their homes. Now, gamers can download games
directly to their consoles, and play games on PC and mobile devices.

The three major gaming consoles today are Sony PlayStation, Nintendo Switch,
 and Microsoft Xbox. While consoles used to be the predominant form of home gaming, they
 now represent a smaller share of video game revenue than mobile and PC.

- 32. Most gamers today play on mobile devices, which is also the fastest growing
 segment as the technical capabilities of mobile devices increase. Gamers spend far more hours
 gaming on Android and Apple iOS mobile devices than on any other platform. The technical
 capabilities of mobile devices are increasing.
- 8 33. After mobile, PC gaming is the next largest source of video game revenue.
 9 PlayStation's CEO, Jim Ryan, referred to PC gaming as "
- 10
- 11

2.

Gamers can play the same games on different platforms.

34. Many of the most-played games are available on multiple platforms (including
different consoles, PC, and mobile). For example, platform access to the *Minecraft* franchise has
expanded to over twenty devices across these three types of platforms.

35. Nearly all of the best-selling games for Xbox and PlayStation are also sold for
PC. In 2022, for example, all but one of the top 30 Xbox titles and all but of the top 30
PlayStation titles were available on PC.

36. Gamers can now play certain multiplayer games across platforms. For example, a
gamer on PlayStation can now play many games with other gamers playing on another platform,
like Xbox or PC. That mode of play is referred to as "cross-platform" gaming or "cross-play."

37. In most multiplayer games, a gamer selects multiplayer game mode, the game
matches the gamer with other gamers, and the gamers are then placed in a lobby and either enter
the game or are placed in teams. Before the advent of cross-play, gamers could play multiplayer
games only with other gamers using the same platform (*e.g.*, a PlayStation console). In 2018,
Epic Games enabled cross-play functionality in its hugely popular *Fortnite* game, allowing
gamers from different platforms, including PlayStation, Xbox, Nintendo, and PC, to play against
each other simultaneously.

Case 3:23-cv-02880-JSC Document 177 Filed 06/22/23 Page 10 of 77

38. Cross-play leads to material and measurable improvements in the quality of
 gamers' user experience. Because games with cross-play increase the number of gamers
 available to partner with, cross-play enhances the value of a game, including by more effectively
 and quickly matching comparably skilled gamers. In addition, cross-play makes games more
 valuable to consumers because they can play the game with friends and access larger lobbies of
 players.

- 39. Many of the most popular multiplayer titles (*e.g.*, *Fortnite*, *PUBG*, *Call of Duty*,
 and *Minecraft*) allow gamers to cross-play between at least PC and console.
- 9 40. A significant appeal of *Call of Duty* is that it has a multi-player mode often played
 10 by groups across different platforms, including PlayStation.

11 41. Activision introduced a cross-play feature to Call of Duty in 2019, with the Call 12 of Duty: Modern Warfare title, and that feature has existed in every subsequent annual Call of 13 Duty title. It also exists in the free-to-play Call of Duty: Warzone. The introduction of cross-play 14 to *Call of Duty* has significantly improved players' experience; the game's online multiplayer 15 functionality thrives on a large and active player base, and cross-play has increased the number 16 of available players. With a larger pool of available players, matches can be more evenly 17 populated in terms of skill level, resulting in quicker and more competitive matchmaking, and 18 ultimately improving players' gaming experience.

42. The introduction of cross-play and its significance to *Call of Duty* gamers
 prompted Activision to eliminate any material differences between gameplay on Xbox and
 PlayStation. Before cross-play became popular on *Call of Duty*, Activision had offered or
 contemplated offering certain feature and content

3 43. Removing Call of Duty from PlayStation would dramatically shrink the community of potential gamers, making the gaming experience worse for anyone remaining.

5 С. Gamers can access games through various payment and distribution models. 44. 6 Gamers are able to access games through a growing variety of payment and 7 distribution models. The diversity of payment and distribution models has increased the 8 accessibility of games and expanded gamer choice.

9

1

2

4

1. Buy-to-play and free-to-play models.

45. 10 Most gamers obtain entitlements to access and play console games via the "buyto-play" model of purchasing the games in the form of a cartridge, DVD or Blu-Ray disc, or 11 12 digital download for an upfront price (e.g., \$70) and adding them to their own libraries.

13 46. As mobile gaming has grown more popular, the "free-to-play," or "F2P," model 14 has grown with it. With F2P, games are downloaded for free but are then monetized through in-15 game purchases or in-game advertising. The free-to-play model is now found on PC and console 16 as well.

17 47. Free-to-play is the fastest growing business model in the industry today, and there are thousands of free-to-play games available, particularly on mobile. Free-to-play games like 18 19 Fortnite, League of Legends, and Apex Legends (among many others) have become some of the 20 most popular games in the industry, and generate substantial revenues even though the initial entitlement is free. 21

22 48. Free-to-play games have allowed small independent companies to grow quickly. 23 For example, Epic Games' valuation has increased from \$1 billion in 2012 to over \$30 billion in 24 2022, powered by the 2017 launch of its flagship free-to-play game, Fortnite.

25

Subscription models.

2.

49. 26 Subscription models are an example of innovation in game payment. With multi-27 game subscription offerings, gamers pay a flat monthly fee to access a library of games. In the

Case 3:23-cv-02880-JSC Document 177 Filed 06/22/23 Page 12 of 77

case of most subscription offerings, subscribers download the games they want to play to their
 devices, and then play them using those devices. With some services, gamers can stream games
 while waiting for the game to download, or try out a game before downloading.

4 50. Sony and Xbox offer their users the option of accessing games through
5 subscriptions.

6 51. In 2017, Xbox launched Game Pass, one of the first multi-game subscription
7 offerings. The value proposition behind Game Pass was relatively straightforward: subscribers
8 could access a broad catalog of games for a set monthly fee instead of purchasing the games
9 outright. To make Game Pass more attractive, Xbox includes all games developed by its studios
10 (known as "first-party games") in Game Pass the day of release ("day-and-date").

52. Small and independent game developers, in particular, benefit from this model
because it gives their products wider exposure than would occur in a digital store, since gamers
who may not otherwise discover or try out games from lesser-known creators are more likely to
do so when the games are included in a set fee. Game Pass has thus been credited with
contributing to the breakout success of games from various indie studios, like *High on Life* and *Atomic Heart*.

17 18

19

54. Other subscription services offer access to only a single game. Still others are
limited to the games of a single publisher, like EA's subscription service, EA Play, which offers
a rotating multi-game catalog of EA games and features limited trials of new games to help
promote new releases.

55. There is considerable variation among subscription offerings. Although Xbox
simultaneously offers most of its first-party games as buy-to-play and on its Game Pass
subscription offering, Sony does not. Even though Sony releases some of the most popular firstparty games each year, Sony has affirmatively decided not to add any of its new first-party

Case 3:23-cv-02880-JSC Document 177 Filed 06/22/23 Page 13 of 77

content to subscription service day-and-date. Last year when Sony revamped its subscription 1 2 offering under the PlayStation Plus banner, PlayStation CEO Jim Ryan publicly stated, "This is 3 not a road that we've gone down in the past, and it's not a road that we're going to go down with 4 this [PlayStation Plus] service" because doing so would take revenues away from its lucrative 5 buy-to-play business. Despite choosing not to invest in the growth of PlayStation Plus and excluding current first-party content from the service, Ryan revealed that PlayStation Plus is 6 7 "just shy of 50 million subscribers," which is far larger than Game Pass. Subscribership to 8 PlayStation Plus would likely increase substantially if Sony added its vast catalog of hit first-9 party games to PlayStation Plus day-and-date.

56. Some subscription services offer access to online multiplayer gameplay along
with other benefits, such as additional game save storage and access to a limited number of
catalog titles each month for free.

Like Sony, publishers of popular games that generate significant buy-to-play 13 57. 14 revenues are reluctant to allow their games to be included in subscriptions upon release because 15 of the significant cannibalization of buy-to-play revenues that can occur. Activision does not 16 allow its games to be put in multi-game subscription libraries upon release and only rarely allows even its older back-catalog titles to be included in subscriptions for brief periods of time due to 17 18 concerns about cannibalization. And nearly all Activision titles that have been included on 19 subscription services have been included only as a bonus back-catalog game for a limited period 20 of time (i.e., on Sony's Instant Game Collection) rather than in the library of a multi-game 21 content library subscription service.

58. Subscription offerings compete directly with traditional buy-to-play options:
When a game is added to a subscription library, buy-to-play sales decrease, and when a game is
withdrawn, buy-to-play sales increase.

27	
28	
	- 10 -
	DEFENDANTS' PROPOSED PRETRIAL FINDINGS OF FACT AND CONCLUSIONS OF LAW (No. 3:23-cv-02880-JSC)

59. Game Pass is not accessible on PlayStation consoles, and PlayStation Plus is not
 accessible on Xbox consoles. Consequently, gamers cannot substitute between Game Pass and
 PlayStation Plus without incurring the cost of switching consoles as well.

4

3. Cloud gaming.

60. Cloud gaming (also known as cloud game "streaming") is a potential alternative
delivery mechanism to downloading native games for play onto hardware. Cloud gaming is a
euphemism for technology that runs games on remote servers that gamers can access using
consoles, PCs, mobile devices, or TVs. Cloud gaming can allow gamers to play games on less
highly-powered and more affordable devices, particularly salient in less modernized nations.

61. Although cloud gaming technology is not new, it makes up only a tiny fraction of
the billions of hours of gameplay each year and has never achieved consumer demand beyond its
current niche.

62. Several companies, including Xbox, Amazon, Nvidia, and other smaller
companies, have experimented with different forms of cloud gaming. But the technology remains
challenging, particularly for latency-sensitive multiplayer games.

16 63. Cloud gaming has suffered from latency issues that negatively affect the gaming
17 experience. Due to those latency issues, users sometimes experience a "stuttering" effect or lags
18 in gameplay. Cloud gaming is also limited in its ability to replicate controller functions for
19 console games streamed to mobile devices.

64. PlayStation CEO Jim Ryan acknowledged that cloud gaming faces substantial
"technical difficulties" and is "very tricky" from both a financial and technological standpoint.
Likewise, Sony Group's CEO, Kenichiro Yoshida, has opined that "cloud itself is an amazing
business model, but when it comes to games, the technical difficulties are high." Activision
executives have similarly observed that, with respect to cloud gaming technology generally,
"[t]he player experience isn't simply there" and is "not probably going to be there for years to
come."

1	65. In 2020, Xbox launched a cloud gaming feature as part of its Game Pass
2	subscription service, known as Xbox Cloud Gaming. Unlike some other providers that offer
3	cloud gaming as a standalone service that allows users to stream games they already own
4	through a buy-to-play purchase (for example, Nvidia's GeForce NOW and Amazon's Luna),
5	Xbox offers cloud gaming only as a feature within the most expensive Game Pass subscription
6	tier, Game Pass Ultimate (with the exception of Fortnite, which is available to play for free on
7	Xbox Cloud Gaming via browser). The feature allows users to stream certain console games
8	available on Game Pass through the cloud, instead of downloading native versions of the games.
9	66. Xbox Cloud Gaming on Game Pass Ultimate is played predominantly by Xbox

11	
12	
13	
14

16	68. As a result of technical limitations, a large majority of Xbox Cloud Gaming users
17	report relying on the service to try new games in order to decide whether to download them
18	natively to play, rather than streaming for regular play.
19	III. Xbox and Activision Both Face Intense Competition.
20	A. Xbox has lost the console wars, and its rivals are positioned to continue to dominate, including by leveraging exclusive content.
21	1. Xbox has consistently ranked third in consoles behind PlayStation
22	and Nintendo.
23	69. In 2001, Microsoft entered the gaming industry with the launch of its first Xbox
24	video game console, in competition with the established incumbents Sony and Nintendo. In that
25	"generation," Sony and Nintendo outsold Xbox by a significant margin. With every succeeding
26	generation over the twenty years since, Sony, Nintendo, and Xbox have remained the three major
27	console producers, and have been engaged in what the industry refers to as the "console wars."

70. Sony is the dominant player in consoles. Sony PlayStation, for over two decades
 and through five generations, has been the leading console both worldwide and in the U.S.
 Sony's gamer base is a large as Xbox's worldwide, and a larger in the United
 States.

5 71. Xbox's console has consistently ranked third (of three) behind PlayStation and 6 Nintendo in sales. In 2021, Xbox had a share of 16% while Nintendo and PlayStation had shares 7 of and a spectively. Likewise for console revenues and share of consoles currently in 8 use by gamers ("installed base"), Xbox trails with 21% while PlayStation and Nintendo have 9 shares of and a spectively.

10 72. Xbox view Nintendo Switch as a principal rival and a competitive
11 platform. The entry-level versions of the current Xbox (Series S) and Nintendo consoles are
12 offered at the same price point (\$299.99). Many of the most popular games on PlayStation and
13 Xbox consoles are also available on Switch.

2. Building on their leading consoles, PlayStation and Nintendo rely heavily on exclusive gaming content.

74. Each of the three major console companies is also a first-party game developer and publisher.

- 13 -Defendants' Proposed Pretrial Findings of Fact and Conclusions of Law (No. 3:23-cv-02880-JSC)

^{16 73.} As with prior generations, Sony leads in sales of "generation 9" consoles, which
17 consist of Sony's PS5 and Xbox's two consoles, the Series X and the budget version Series S.
18 Sony's lead is so significant that press reports have recently declared that "Sony's PlayStation
19 brand dominates 2021's worldwide console market" and noted that "[b]etween console and game
20 sales, as well as their online services like PlayStation Plus and PlayStation Now, Sony has
21 claimed just under 50% of the console market with the remainder being shared between
22 Nintendo and Xbox."

Case 3:23-cv-02880-JSC Document 177 Filed 06/22/23 Page 17 of 77

75. 1 As a game publisher, Sony's in-house developer, PlayStation Studios, is 2 responsible for major hits like God of War, The Last of Us, and Spider-Man, most of which can be played only on PlayStation. As a purchaser of third-party games, 3 4 5 6 76. Sony views exclusive content as crucial to PlayStation's continued success. As a 7 result, Sony offers far more exclusive first- and third-party titles than Xbox, and plans to 8 continue to acquire game studios to further its exclusive-heavy strategy. The number of exclusive

9 games available on PlayStation dwarfs the number available on Xbox, with eight exclusive
10 games on PlayStation for every one on Xbox.

77. Nintendo also is a significant first party publisher with some of the most popular
exclusive game franchises in the world, including *Mario*, *Zelda* and *Pokémon*.

13 78. Sony and Nintendo, due to their past and present successes, are able to leverage
14 their existing gamer bases, respective catalogs, and resulting revenues to maintain and grow the
15 attractiveness of their consoles.

79. Nintendo Switch has been wildly successful even though it does not currently
have access to *Call of Duty*. Likewise, Sony is well-positioned to overcome any theoretical loss
of Activision content. As Sony's CEO told investors in the wake of the Microsoft/Activision

19 merger, Sony can

3.

20 Sony has also proven willing to use its installed base advantage over Xbox to 21 acquire exclusive (relative to Xbox) rights to valuable third-party content.

22

Xbox approaches exclusivity on a case-by-case basis.

80. The economics of exclusivity differ significantly among the three major
platforms. The reason is simple: the larger the platform's user base of potential purchasers
relative to rivals, the smaller the portion of the market that must be "bought out" (internally or
externally) to take a game exclusive. This basic economic calculus makes exclusivity
considerably more costly for Xbox than it is for Sony and Nintendo.

Case 3:23-cv-02880-JSC Document 177 Filed 06/22/23 Page 18 of 77

81. Like Sony and Nintendo, Xbox develops first-party console games at Xbox Game
 Studios, as well as games that are created by outside developers (known as "third-party games").
 Sony and Nintendo both sell more first-party games than Xbox, and also generally keep those
 first-party games exclusive to their respective consoles. By contrast, Xbox has taken the
 approach of shipping many of its first-party games, such as *Minecraft*, to other platforms.

82. Having exclusive content, however, is important to differentiate consoles—that is,
to give gamers a reason to buy your console. To illustrate, if one console offered gamers both
exclusive and non-exclusive content and the other offered only content available on the first, all
else being equal, gamers seeking access to the broadest range of games would naturally gravitate
to the console that offered exclusive content. Because of that dynamic, all three consoles have to
offer some exclusive content to attract gamers.

12 83. Given the need for some exclusive content to keep the Xbox relevant in the 13 console space and the reality of the costs of exclusivity, Xbox assesses whether it makes sense 14 for a game to be exclusive (and on what terms) on a "title-by-title" basis. Among other 15 considerations that factor into the exclusivity decision, Xbox considers whether a game has 16 launched on multiple platforms previously or is designed to be played multiplayer with as many 17 people as possible. A related consideration is the magnitude of lost sales that would come from 18 making a game exclusive. If a game is already designed for multiple platforms or the quality of 19 gameplay depends on large pools of gamers for cross-play modes, Xbox is less likely to make a 20 game exclusive. Under those circumstances, the costs of exclusivity would likely outweigh the 21 potential upside.

22 84. Xbox's experience with *Minecraft* is illustrative. Microsoft acquired Mojang, the 23 developer of the *Minecraft* franchise, in 2014. *Minecraft* is one of the most successful games of 24 all time. It includes a popular multiplayer mode and has produced a large community. At the 25 time of the Mojang acquisition, *Minecraft* was available on Xbox, PlayStation, and PC. Xbox 26 could have made *Minecraft* exclusive to its own platform, yet it determined that was not in its 27 economic interest nor in the interest of the brand or the game. Instead, Xbox continued to ship

Case 3:23-cv-02880-JSC Document 177 Filed 06/22/23 Page 19 of 77

Minecraft on all those platforms post-acquisition and also made subsequent games in the
 franchise (e.g., Minecraft: Dungeons) available for Nintendo consoles and even Sony's
 subscription service, PlayStation Plus. Xbox's decision to ship Minecraft on all these platforms
 was dictated by the economics and the desire to "not break up existing communities" of gamers.

5 85. Xbox's handling of the ZeniMax games is consistent with that general approach. After acquiring the ZeniMax studios in 2020, Xbox has continued to release updates of existing 6 7 ZeniMax games such as Fallout 76 and Elder Scrolls Online on both Xbox and PlayStation, 8 because these games are designed to be played together by broad communities of gamers on 9 different platforms. Moreover, ZeniMax's first two new games released post-transaction were 10 made exclusive to PlayStation for one-year post-launch (consistent with preexisting contractual 11 arrangements). In keeping with the need to offer some exclusive content while mitigating the 12 economic costs and damage to its player-focused brand, Xbox made the ZeniMax title Redfall 13 exclusive to Xbox, and has announced that the new single-player game *Starfield*, expected to 14 launch later this year, exclusive to Xbox as well. Neither of these exclusivity decisions, 15 involving new games without established communities, is likely to have a material impact on 16 console sales; indeed, *Redfall* has been widely panned by critics and has generated minimal 17 sales. At the same time, Xbox expects that many other future ZeniMax titles will be shipped on 18 PlayStation and Nintendo.

19 86. In general, Xbox has a history of continuing to publish its newly acquired first20 party games on PlayStation after acquiring game studios.

В.

Activision's content faces intense and growing competition.

22 87. Activision's content—in particular, the games within its three core franchises—
23 competes with a large variety of games and game franchises of all types and genres.

24

1. Activision has three core video game franchises.

25 88. Activision generates 80% of its annual revenue—which totaled \$8.5 billion in
26 fiscal year 2022—through three video game franchises. These core video game franchises are

- 27 28
- 16 -Defendants' Proposed Pretrial Findings of Fact and Conclusions of Law (No. 3:23-cv-02880-JSC)

Call of Duty, which is developed by Activision; *World of Warcraft* ("*WoW*"), which is developed
 by Blizzard; and *Candy Crush*, which is developed by King.

3 89. The Call of Duty games are "shooter" games that are based on armed conflicts. In 4 fiscal year 2022, the *Call of Duty* franchise generated about billion in revenue, comprising 5 of Activision's overall annual revenue. *Call of Duty* games have been approximately continuously available on both PlayStation and Xbox consoles since 2003 and are also available 6 7 for Mac and Windows PC and iOS and Android mobile devices. Activision typically releases a 8 new buy-to-play *Call of Duty* game every year at a price point of \$70 each. The latest annual 9 *Call of Duty* titles are playable across platforms via a cross-play feature.

90. Activision also develops and publishes free-to-play versions of *Call of Duty*called *Call of Duty: Warzone*—available on PlayStation, Xbox, and Windows PC—and *Call of Duty: Mobile* ("*COD: Mobile*")—available on iOS and Android mobile devices—which it
monetizes through optional in-game microtransactions.

14 91. King's *Candy Crush* franchise consists of casual, free-to-play puzzle games made
15 for mobile devices. *Candy Crush* generated approximately billion in revenue in fiscal year
16 2022—roughly for Activision's overall annual revenue. King primarily monetizes *Candy*17 *Crush* through optional in-game microtransactions, and also generates revenue through in-game
18 advertising placements.

19 92. Blizzard's *WoW* franchise consists of a massively-multiplayer-online fantasy role-20 playing game, and related expansions and content, based on Blizzard's Warcraft intellectual 21 property ("IP"). In fiscal year 2022, WoW generated about billion in revenue, comprising of Activision's overall annual revenue. Blizzard makes *WoW* available only 22 approximately 23 for Mac and Windows PC (not consoles) and generally sells *WoW* to gamers as a single-game 24 subscription for \$14.99 per month; Blizzard also occasionally releases WoW expansions for 25 purchase on a standalone basis.

26 93. Beyond its three core franchises, Activision also develops and publishes other
27 games, including *Diablo* and *Overwatch*, both of which are developed and published by

Case 3:23-cv-02880-JSC Document 177 Filed 06/22/23 Page 21 of 77

Blizzard. Blizzard's *Diablo* and *Overwatch* franchises generated approximately million and million in revenue in fiscal year 2022, respectively. *Diablo* is a fantasy role-playing
franchise available on gaming consoles, PCs, and mobile devices. While most *Diablo* titles are
available for sale on a buy-to-play basis, the mobile entry in the *Diablo* franchise, *Diablo Immortal*, is free to play. *Overwatch* is a free-to-play, multiplayer team-based shooter franchise
(which was previously buy-to-play) available on gaming consoles and PCs, which Blizzard
monetizes through optional in-game microtransactions.

8 94. Activision and its various business units also have a portfolio of previously
9 successful, but largely dormant, IP that presents significant opportunities for further franchise
10 development.

11

2.

Activision's games face significant competition.

12 95. Despite these successes, Activision is not the biggest or most successful publisher. Its share in console video game publishing is just by revenue globally and 13 14 by revenue in the U.S. By contrast, Nintendo captures almost a quarter of U.S. publishing 15) and more than what Activision does on a global basis (revenues (96. Competition faced by Activision's games includes games published by other 16 leading independent game developers and games in iconic franchises, such as the FIFA and 17 18 Battlefield franchises (developed by EA), the Assassin's Creed and Rainbow Six franchises 19 (developed by Ubisoft), the Grand Theft Auto franchise (developed by Rockstar Games of Take-20 Two Interactive), and the *Fortnite* franchise (developed by Epic Games). It also includes 21 immensely popular games published by platforms' own first-party studios, such as Sony's own 22 God of War, The Last of Us, and Uncharted franchises; as well as games from smaller 23 publishers, such as Innersloth's Among Us.

24 97. The rise of mobile gaming has broadened the competitive landscape for game
25 development and publishing exponentially, leading to the emergence of major Chinese
26 competitors, like Tencent (*e.g.*, *PUBG Mobile*), NetEase (*e.g.*, *Identity V*), and ByteDance (*e.g.*,

Mobile Legends: Bang Bang), who have enormous IP portfolios, complete control of their
 domestic market, and extraordinary talent, and who are now investing heavily in the U.S. market.

98. Because the game publishing industry is so dynamic and hits can come from anywhere, new publishers and games can quickly enter the market and take share. For example, *Fortnite* was launched in 2017 and within a matter of months became a global phenomenon.

3. Activision has popular mobile games and the necessary experience and expertise to expand mobile content.

99. Expanding audience reach through the development of compelling mobile content is essential to Activision's strategy. Mobile gaming now represents almost half of Activision's annual net revenue and more than half of its user base.

100. Activision successfully entered mobile in 2016 when it acquired King—a worldclass developer of mobile games—a transaction valued at \$5.9 billion. Through the King acquisition, Activision broadened its portfolio of iconic video game franchises by obtaining two of the five highest-grossing mobile games in the United States at the time: *Candy Crush Saga* and *Candy Crush Soda Saga*. Given the scale of the *Candy Crush* franchise, the acquisition vastly expanded Activision's overall audience reach.

101. Since the King acquisition, *Candy Crush* has become a multi-billion dollar per year franchise that continues to grow and that would be an incredibly attractive asset for any potential entrant in mobile—much as it was for Activision.

102. Success in mobile game development requires specific engineering expertise and data analysis. A successful mobile business also must have a deep understanding of free-to-play models and how to service a game with live operations and a constant cadence of content. King excels both in mobile game development and in the management of mobile games, and the success of *Candy Crush* is driven by this expertise.

103. Activision's other business divisions have also cultivated robust mobile-specific expertise in recent years and, in particular, have acquired an acumen for launching and managing mobile entries in its popular franchises. Popular franchises are becoming more widely available

1	on mobile devices, and releasing native mobile entries in such franchises is a proven means of	
2	driving user engagement. Activision has pursued this strategy to great success with its Call of	
3	Duty and Diablo franchises through its successful releases of Call of Duty: Mobile and Diablo	
4	Immortal. In fiscal year 2022 alone, Call of Duty: Mobile earned over the second in revenue.	
5	And <i>Diablo Immortal</i> has earned more than within 11 months of its release in June	
6	2022, becoming one of only mobile games ever to reach that milestone in that same period of	
7	time.	
8	104. Activision's experiences with Call of Duty: Mobile and Diablo Immortal have	
9	further fostered institutional knowledge regarding premium mobile games. Activision is now	
10	developing numerous mobile entries in its popular franchises completely in-house. This includes:	
11	(1) Warzone: Mobile, which Activision is developing with its own proprietary engine and that is

11	Activision has finite development resources and has chosen to deploy those resources to
12	opportunities that Activision believes present greater potential financial returns.
13 14	C. Xbox has a negligible presence in mobile, the fastest growing gaming segment.
15	110. Mobile is the largest and fastest-growing sector of the gaming industry, and Xbox
15	has tried for years without success to gain a foothold into mobile gaming. Xbox today still has no
17	real mobile presence. Xbox has had almost no revenues from mobile gaming, no hit mobile
18	games, and no success monetizing its console games on mobile.
19	111. Although Xbox has had a number of hit console games, it lacks the technical
20	capability to create mobile versions of these games. Activision, by contrast, has significant
21	mobile game development capability.

4 5	IV. The Transaction Will Provide Xbox with a Position in Mobile and Expand Choice for Gamers and Developers.

8	betting on accessibility by making its games available through alternative payment structures, on
, ,	multiple platforms, and even via streaming technology.

1 value of the transaction is to (i) help Xbox meet the billions of gamers who choose to play on 2 mobile devices instead of a console or PC and (ii) learn how to make games that appeal to and 3 engage gamers wherever they want to play. In addition, Xbox intends to add Activision content 4 to Game Pass, though it recognizes that doing so will significantly reduce sales of those 5 standalone games to Xbox users.

6 119. Activision's popular free-to-play mobile games offer Xbox consistent revenue 7 from in-game purchases and advertising. But beyond those lucrative revenue streams, Xbox 8 valued the potential access to Activision's established mobile gamer communities, especially its 9 casual gaming audience.

120. Xbox sees an opportunity to use Activision's existing mobile games as to bring that casual gaming audience to the Xbox platform.

12

15

The transaction will give gamers more choices than would be available absent the deal.

121. Having lost the console wars, Xbox is betting on a different strategy than Sony and Nintendo by making games more widely accessible.

122. Xbox generates profits through game sales, not console sales. That is because 16 Xbox sells its consoles at a loss, effectively subsidizing gamers' purchase of the hardware in 17 hopes of making up the revenue through sales of games and accessories. 18

123. Xbox accordingly seeks to expand access for gamers by not only continuing to 19 distribute Activision games everywhere they currently exist, but also making those games 20 available for play in new ways and on new platforms. 21

22

Xbox has made a number of commitments to maintain and expand access to Activision Games after the Transaction.

23 124. In connection with the transaction, Xbox has made a number of commitments to 24 maintain and expand access to Activision games including (i) adding Activision games to Game 25 Pass; (ii) bringing Call of Duty to Nintendo Switch; and (iii) streaming Activision content on third-party cloud gaming services.

27 28

a. Xbox will add Activision games to the Game Pass subscription service.

125. From the day that the deal was announced, Xbox has been clear about its plans to make Activision games available for play under its Game Pass subscription.

126. Adding Activision games—including new releases—to Game Pass will give gamers a new, low-cost way to pay for and access those games. And in the absence of the deal, new Activision games would not be available on any subscription service. To date, Activision has never placed one of its new games on a subscription service.

127. Activision's long and considered strategy is to not make its new games available on multi-game subscription services.

128. Among other concerns, Activision believes that putting new Activision games on multi-game subscription services would "highly cannibalize" individual sales. That is, if gamers can access new Activision games through a subscription that they already pay for, those gamers are unlikely to make standalone purchases of those games.

129. Given that cannibalization, no company has ever offered Activision economics that, from Activision's perspective, would make it profitable for Activision to release new games onto a multi-game subscription.

130. Over the years, Activision has refused offers to place its new games on subscription services. For example, in 2020, while negotiating an updated partnership agreement with Activision, Xbox sought to put certain Activision games (like

on Game Pass. Activision refused, based in part on its concern that doing so could . In the end, Xbox dropped the request.

131. Sony, for its part, has never asked Activision about the possibility of putting the current version of *Call of Duty* on PlayStation Plus, largely because Activision has been so "and" about not doing so. Activision's participation on PlayStation Plus has been limited to a handful of back-catalog games available for a limited time (*e.g.*, one-month), all of which had been commercially available for over a year at the time of inclusion and selected in an

effort to drive interest in Activision's upcoming new releases, which would not be available on
 subscription services.

3 132. Beyond that, multi-game subscription services are inconsistent with Activision's
4 increased use of free-to-play models.

133. Ultimately, placing new Activision games on a multi-game subscription service
would require specific approval from Activision CEO Bobby Kotick and Activision CFO Armin
Zerza. Yet Mr. Kotick has expressed a "philosophical aversion" to multi-game subscription
services for the reasons described above. And Mr. Zerza has similarly explained that Activision's
"declared strategy is not to put any games on any multi-game subscription services."

10

b. *Xbox will bring Call of Duty to Nintendo Switch.*

11 134. Activision's *Call of Duty* games have not been available on Nintendo devices for
12 over a decade.

13 135. In February 2023, however, Xbox and Nintendo entered a ten-year agreement (a
14 much longer commitment than the industry standard) to bring future *Call of Duty* titles to Switch
15 (and any successor Nintendo consoles) after the deal closes.

16 136. That agreement guarantees feature and content parity, and commits Xbox to
17 releasing new *Call of Duty* titles on Nintendo simultaneous with their launch on other platforms.

18 137. Post-transaction (and post-porting), approximately 100 million gamers would be
19 able to play *Call of Duty* on their existing Nintendo devices for the first time in many years.

20 21

22

23

24

25

c. Xbox has made contractual and regulatory commitments to stream Activision content on third-party cloud gaming services.

138. To date, Xbox has entered into four separate ten-year agreements with cloud gaming providers Boosteroid, Nvidia GeForce NOW, NWare, and Ubitus to bring Activision content to their platforms. It has entered into a similar letter of intent with EE Limited, a subsidiary of British Telecommunications.

In addition to those agreements, during the European Commission's regulatory
 process, Xbox made binding commitments to grant streaming rights to Activision games to other

Case 3:23-cv-02880-JSC Document 177 Filed 06/22/23 Page 30 of 77

cloud gaming services offered to consumers in the European Economic Area—regardless of
 whether Xbox ultimately decides to stream those games on Xbox Cloud Gaming.

140. These licenses will ensure that gamers that have purchased one or more
Activision games on a PC or console store, or that have subscribed to a multi-game subscription
service that includes Activision games, have the right to stream those games with any cloud
game streaming service of their choice and to play them on any device using any operating
system.

8 141. The agreements also ensure that Activision's games available for streaming will
9 have the same quality and content as games available for traditional download.

10 142. Margrethe Vestager, European Commissioner for Competition, said regarding the
11 commitments, "this solution fully addressed our concerns. And on top of that, it had significant
12 procompetitive effects [compared to] the pre-merger situation, where Activision does not license
13 its games to cloud services."

14 143. These agreements would expand consumer access to Activision's content because
15 Activision has adopted a general "strategy of not participating in cloud streaming services." It
16 has done so for at least three reasons.

17 144. *First*, Activision has determined that cloud gaming technology is not viable for its
18 games due to its technical deficiencies. The biggest problem with cloud gaming technology is
19 that it introduces "significant latency," which, in competitive situations, puts players on cloud
20 gaming services at a "perpetual disadvantage."

21 145. Activision believes it will be a decade or more before cloud gaming technology
22 might have a chance to deliver the low latency performance required to provide a good player
23 experience for fast-paced and/or online multiplayer games like *Call of Duty*.

24 146. Activision has thus opted not to place its content on cloud streaming services, for
25 fear that the poor user experience associated with cloud gaming would harm Activision's and its
26 franchises' brands.

- 27
- 28

Case 3:23-cv-02880-JSC Document 177 Filed 06/22/23 Page 31 of 77

1 147. Second, Activision has concluded that cloud gaming's value to consumers is 2 constrained—and rapidly being eclipsed by—improvements in the local processing capabilities 3 of mobile phones and other consumer electronics. Already powerful local hardware, including 4 mobile devices and TVs, will see "continued improvements in the micro processing capabilities," 5 which could avoid latency issues that currently limit cloud gaming technology. As Activision has determined, it is not in its best interest to invest its limited resources in cloud gaming 6 7 opportunities, which only offer only "speculative potential" relative to these continued 8 improvements in local hardware.

9 148. *Third*, Activision has concluded that the cloud gaming distribution opportunity
10 cannot offer attractive economics because cloud gaming services lack scale. Cloud gaming
11 services are unlikely to "[result] in any material incremental new gamers joining [Activision's]
12 ecosystem." Meanwhile, supporting cloud gaming services would require significant investment
13 from Activision.

14 149. Like Activision's aversion to multi-game subscription services, Activision's
15 aversion to cloud gaming services is borne out in practice. Activision's content is not available
16 on any cloud gaming platforms today, and Activision has rebuffed every offer by cloud gaming
17 companies to place its content on their platforms.

18 150. Any cloud gaming partnership would require specific approvals from Activision's
19 senior leadership, such as Mr. Kotick and Mr. Zerza. But in the words of Mr. Kotick, cloud
20 gaming is not "realistic" for games like *Call of Duty* today or "in any reasonable near-term
21 future."

d. Xbox has offered Sony a ten-year deal to keep Call of Duty on PlayStation—that Sony has refused.

151. From the day the deal was announced, Xbox made clear its intentions to keep *Call*of *Duty* available to its substantial existing PlayStation gamer community long into the future. In
particular,

1 2 3 152. Since that time, Xbox made repeated offers to keep Call of Duty on PlayStation, 4 which Sony has rebuffed. Sony claims that losing *Call of Duty* would be disastrous to its 5 business, yet has refused Xbox's proposal to license those games to PlayStation on the same terms given to Xbox. 6 7 On January 31, 2022, Microsoft sent a first written proposal to Sony. Sony took 153. 8 nine months to provide a mark-up to this written proposal. 9 154. Sony sent Microsoft a draft publishing agreement on September 29, 2022 (the 10 "Sony Proposal"). Sony states that the draft publishing agreement reflects what it " 11 12 The Sony Proposal provides for continued distribution of all Activision games on the PlayStation 13 platform at parity to Xbox. In response, Microsoft sent Sony a red-line of this draft agreement on 14 December 23, 2022. The duration of Microsoft's commitment to Sony is a 10-year term, to take 15 effect upon completion of the Transaction. This term would in any case go beyond the expected 16 starting period of the next generation of consoles (in 2028). Thus, *Call of Duty* will be published 17 on successor PlayStation consoles should one be released during the term of the agreement. The 18 agreement also would ensure that Call of Duty console games are offered on PlayStation at parity 19 with Xbox. 20 155. 21 22 23 24 25 26 27 28 - 29 -DEFENDANTS' PROPOSED PRETRIAL FINDINGS OF FACT AND CONCLUSIONS OF LAW (No. 3:23-cv-02880-JSC)

2	objection to the deal to extract far more favorable economic terms and rights than it currently
3	has; or (2) to increase the chances the deal is blocked by regulators.
4	157. There is no reason for Xbox to not make this deal with Sony, as discontinuing

1 166. In short, keeping Activision games on PlayStation is both good for gamers and
 2 good for Xbox's business. Xbox is thus committed to shipping Activision games, including
 3 future titles of *Call of Duty*, on PlayStation for years to come.

3.

Even withholding Activision content would not foreclose PlayStation because Activision's content is not essential for platform growth.

167. The broad and ever-expanding nature of competition within video game development and publishing ensures that no one developer, studio, franchise, or game is essential to a platform. Though Activision has enjoyed great success with its core franchises, experience shows that Activision's content—including *Call of Duty*—does not drive platform adoption and is not "must-have" or otherwise essential content on any platform.

168. **of** all PlayStation gamers spent zero time playing *Call of Duty* in 2022. And despite *Call of Duty*'s annual release cadence, in the past six years it has only been the most-played franchise on PlayStation by month for **month** — in other words, just **m** of total months over a six-year period. By contrast, *Fortnite* was the most played game on PlayStation by month in **m** of months.

169. If every PlayStation device that accounted for as little as two hours of *Call of Duty* per month were to somehow transform into an Xbox device overnight, PlayStations would *still* comfortably outnumber Xboxes. Similarly, the FTC's economic expert, Dr. Lee,

170. Furthermore, *Call of Duty* does not uniquely drive PlayStation console purchase decisions, and it is not uniquely important as the first game played on PlayStation. In 2022, of new PlayStation owners did not play a *Call of Duty* game on the first day of play. And in late 2022, opted to play Sony's newly released title *God of War: Ragnarok* on their first day of play on a new PlayStation console rather than Activision's newly released title *Call of Duty: Modern Warfare II.*

1 171. Three natural experiments, in particular, demonstrate that having access to *Call of* 2 *Duty* content does not "make" a platform and that a lack of such content does not "break" a
 3 platform.

First, Xbox and Activision had an exclusive co-marketing agreement with respect
to *Call of Duty* titles from 2005 to 2015. During that time, Activision brought certain *Call of Duty* content to Xbox before it brought that content to PlayStation, including map packs and
other add-ons. Yet despite that agreement, PlayStation maintained and even *grew* its platform
lead over Xbox during that period.

9 173. Second, Activision has not released a single Call of Duty title on the Nintendo
10 Switch—and, indeed, has not released any Call of Duty titles on a Nintendo platform since it
11 released Call of Duty: Ghosts on the Nintendo Wii U in 2013. Without access to a single Call of
12 Duty title, the Nintendo Switch has still been a resounding success, and is the second-best selling
13 gaming console in the United States today, behind only Sony's PlayStation and well ahead of
14 Microsoft's Xbox.

15 Third, Activision's attempt to take PC digital sales of Call of Duty exclusive to its 174. 16 Battle.net platform was a resounding failure. Before 2018, Activision sold digital versions of PC 17 Call of Duty titles on Valve's successful Steam platform. In 2018, Activision decided to take the game off of Steam and make it exclusively available on Battle.net—largely in an effort to attract 18 19 users to, and grow, Activision's own platform. Battle.net's monthly active users remained 20 relatively flat during the period when it had exclusive access to digital sales of *Call of Duty* on 21 PC, from 2018 through 2022. Meanwhile, during that same period and without access to Call of 22 *Duty*, Steam's monthly active users *grew* by tens of millions of users.

175. Moreover, Sony would have a variety of options for responding even if Activision
content were withheld, including by lowering its prices, improving its console's quality, by
growing its own studios organically, investing in additional third-party games, or by purchasing
another publisher (as it did with Bungie in 2022 while the Microsoft/Activision deal was
pending).

1 176. Ultimately, Activision's games are but a few of the endless game options that are
 2 available to gamers, who can and will play other games on their preferred platform if
 3 Activision's games are unavailable.

6 those in Brazil, Chile, China, Japan, Saudi Arabia, Serbia, South Korea and Ukraine¹ – have
7 cleared the transaction unconditionally. The transaction received conditional clearance in the
8 European Union ("EU"), which covers 27 countries. In Canada, the waiting period expired end
9 of last year (on October 17, 2022) without action by the Canadian competition regulator, the

11 178. The United Kingdom's ("UK's") Competition and Markets Authority ("CMA")
12 has sought to block the merger, but its only objection to the transaction was that it might harm, at
13 some point in the future, the evolution of cloud gaming. Xbox is currently appealing that
14 decision.

PROPOSED CONCLUSIONS OF LAW

I. Legal Standard

A. Section 7 of the Clayton Act

4 1. Under Section 7 of the Clayton Act, the FTC bears the burden of demonstrating 5 that this merger "is likely to substantially lessen competition in the relevant market." United States v. AT&T, Inc., 916 F.3d 1029, 1032 (D.C. Cir. 2019); see 15 U.S.C. § 18; United States v. 6 7 Oracle Corp., 331 F. Supp. 2d 1098, 1109 (N.D. Cal. 2004) (rejecting merger challenge because 8 government failed to prove "merger will likely lead to a substantial lessening of competition"). 9 2. In making this showing, the FTC cannot "veer into the realm of ephemeral possibilities." FTC v. Meta Platforms Inc., No. 5:22-cv-04325-EJD, 2023 WL 2346238, at *28 10 (N.D. Cal. Feb. 3, 2023); see also FTC v. Arch Coal, Inc., 329 F. Supp. 2d 109, 115 (D.D.C. 11 12 2004) (Section 7 analysis "deals in *probabilities* not ephemeral possibilities"); United States v. 13 Baker Hughes, Inc., 908 F.2d 981, 984 (D.C. Cir. 1990) (Section 7 "involves probabilities, 14 not . . . possibilities"); Rothery Storage & Van Co. v. Atlas Van Lines, Inc., 792 F.2d 210, 220 15 (D.C. Cir. 1986) (Section 7 "applies a much more stringent test than does rule-of-reason analysis 16 under section 1 of the Sherman Act"). Nor can the FTC rely on "assumptions and simplifications 17 that are not supported by real-world" facts, Am. Booksellers Ass'n v. Barnes & Noble, Inc., 135 F. Supp. 2d 1031, 1041 (N.D. Cal. 2001), or ignore the "economic reality" of the markets at 18 19 issue, Craftsmen Limousine, Inc. v. Ford Motor Co., 363 F.3d 761, 777 (8th Cir. 2004). Instead, 20 taking that economic reality into account, the agency must prove a "reasonable probability of 21 anticompetitive effect." FTC v. Warner Commc ins Inc., 742 F.2d 1156, 1160 (9th Cir. 1984) (per curiam); see also United States v. Marine Bancorp. Inc., 418 U.S. 602, 623 n.22 (1974) (alleged 22 harm to competition must be "sufficiently probable and imminent" to warrant relief). 23 In vertical mergers² such as this, the FTC carries a particularly heavy burden 24 3.

25 26

(continued on next page)

because "[v]ertical mergers often generate efficiencies and other procompetitive effects." United

 ² A vertical merger is "one that involves firms that do not operate in the same market." *AT&T*, 310 F. Supp. 3d at
 (citation omitted). This merger is appropriately treated as vertical because the FTC challenges only the

States v. AT&T Inc., 310 F. Supp. 3d 161, 197 (D.D.C. 2018), aff'd United States v. AT&T, Inc.,
 916 F.3d 1029 (D.C. Cir. 2019). The standard for enjoining a vertical merger is so demanding
 that U.S. antitrust agencies have rarely even tried to do so: until 2017, the government had not
 litigated a challenge to a vertical merger for more than four decades, see AT&T, 310 F. Supp. 3d
 at 193–94, and its recent court challenges to vertical mergers have all failed, see id.; United
 States v. UnitedHealth Group, No. 1:22-cv-0481, 2022 WL 4365867 (D.D.C. Sept. 21, 2022).

4. Unlike in horizontal merger cases, the FTC "cannot use a short cut to establish a
presumption of anticompetitive effect through statistics about the change in market
concentration, because vertical mergers produce no immediate change in the relevant market
share." *AT&T, Inc.*, 916 F.3d at 1032. Instead, the FTC must make a merger-specific, marketspecific factual showing of how the merger is likely to result in a substantial lessening of
competition, taking marketplace realities into account. *Id.* And the "ultimate burden of
persuasion . . . remains with the government at all times." *Baker Hughes*, 908 F.2d at 983.

14 5. To satisfy its burden, the FTC must first "define the relevant market," which in 15 turn requires identifying both "(1) the relevant product market and (2) the relevant geographic market" in which the anticompetitive effects will allegedly occur. Meta Platforms Inc., 2023 WL 16 17 2346238, at *8 (citing Brown Shoe Co. v. United States, 370 U.S. 294, 324 (1962)). "The outer 18 boundaries of a product market are determined by the reasonable interchangeability of use or the 19 cross-elasticity of demand between the product itself and substitutes for it." Brown Shoe, 370 20 U.S. at 325. Put differently, courts must "look at whether two products can be used for the same 21 purpose, and, if so, whether and to what extent purchasers are willing to substitute one for the other." United States v. H&R Block, Inc., 833 F. Supp. 2d 36, 51 (D.D.C. 2011) (citation 22 23 omitted). The relevant market must also be defined with precision; the government may neither 24 combine distinct markets into a single market nor artificially subdivide a market into smaller

25 26

²⁷ combination of Activision's game publishing business and Microsoft's game platform business and does not allege competitive concerns arising from any overlap in the parties' game publishing operations.

slivers. See, e.g., Hicks v. PGA Tour, Inc., 897 F.3d 1109, 1120–21 (9th Cir. 2018); FTC v. RAG Stiftung, 436 F. Supp. 3d 278, 294–95 (D.D.C. 2020).

3 6. Having identified the correct market, the FTC must then prove that the merger "is
4 likely to substantially lessen competition in the relevant market." *AT&T, Inc.*, 916 F.3d at 1032.

5

B.

Preliminary Injunction Standard

7. Section 13(b) of the FTC Act authorizes federal district courts to grant a
preliminary injunction against a challenged merger "[u]pon a proper showing that, weighing the
equities and considering the Commission's likelihood of ultimate success, such action would be
in the public interest." 15 U.S.C. § 53(b). This standard requires a court to (1) "determine the
likelihood that the [FTC] will ultimately succeed on the merits" and (2) "balance the equities." *Warner Commc 'ns Inc.*, 742 F.2d at 1160.

12 8. A sufficient likelihood of success requires "more than mere questions or 13 speculations supporting" allegations of anticompetitive conduct. Meta Platforms Inc., 2023 WL 14 2346238, at *8. The FTC meets its burden only when the evidence "raise[s] questions going to 15 the merits so serious, substantial, difficult and doubtful as to make them fair ground for thorough investigation, study, deliberation and determination." Warner Commc ins Inc., 742 F.2d at 1162. 16 17 Likewise, a court may not determine the agency's "likelihood of success' by [relying on] a statistical calculation of the parties' odds" before the agency tribunal. See FTC v. Meta Platforms 18 19 Inc., No. 5:22-CV-04325-EJD, 2022 WL 16637996, at *5 (N.D. Cal. Nov. 2, 2022). Instead, a court must exercise its "independent judgment' and evaluat[e] the FTC's case and evidence on 20 the merits." *Id*. 21

9. If the FTC can establish a likelihood of success, a court must then weigh the
 public and private equities. *See FTC v. H.J. Heinz Co.*, 246 F.3d 708, 726–27 (D.C. Cir. 2001).
 Public equities include the merger's procompetitive benefits, *Warner Commc 'ns. Inc.*, 742 F.2d
 at 1165, and the need to maintain the pre-merger "status quo" so the FTC can award effective
 relief, *H.J. Heinz Co.*, 246 F.3d at 726. Harm to the merging parties if the merger is enjoined—

i.e., "private equities"—is also "entitled to serious consideration." *Warner Commc 'ns. Inc.*, 742
 F.2d at 1165.

10. In weighing these concerns, a court must keep in mind that the issuance of a
preliminary injunction is an "extraordinary and drastic remedy." *FTC v. Exxon Corp.*, 636 F.2d
1336, 1343 (D.C. Cir. 1980). Thus, even where a court finds a likelihood of success on the
merits, it must also consider whether less intrusive alternatives would be effective to maintain the
status quo. *Id.* at 1344.

8 11. Judicial scrutiny at the preliminary injunction stage is essential. Despite its 9 "preliminary" nature, the decision to grant or deny a preliminary injunction is often the only 10 judicial determination on the merits the merger parties will receive because such injunctions 11 often "kill, rather than suspend, a proposed transaction." FTC v. Weyerhaeuser Co., 665 F.2d 12 1072, 1087 (D.C. Cir. 1981); see Exxon Corp., 636 F.2d at 1343 ("[A]s a result of the short lifespan of most tender offers, the issuance of a preliminary injunction blocking an acquisition or 13 14 merger may prevent the transaction from ever being consummated."). For this reason, even at the 15 preliminary injunction stage, courts require "rigorous proof" to enjoin a merger. See FTC v. Sysco Corp., 113 F. Supp. 3d 1, 23 (D.D.C. 2015); see also Arch Coal, Inc., 329 F. Supp. at 116 16 17 ("Given the stakes, the FTC's burden is not insubstantial.").

18

II.

A.

The FTC Has Failed to Show That It Is Likely to Succeed on the Merits.

19

The FTC Has Failed to Identify a Proper Relevant Antitrust Market.

12. To meet its burden to show a substantial lessening of competition, the FTC must
first "define the relevant market" in which anticompetitive effects will allegedly occur. *FTC v. Qualcomm Inc.*, 969 F.3d 974, 992 (9th Cir. 2020). Defining the relevant market "is a necessary
predicate to deciding whether a merger contravenes the Clayton Act." *Marine Bancorp.*, 418
U.S. at 618 (internal quotation marks omitted). The burden to establish a relevant market falls
entirely on the FTC; a defendant has no corresponding obligation to propose alternative markets. *See RAG-Stiftung*, 436 F. Supp. 3d at 299–300, 303.

- 27
- 28

Case 3:23-cv-02880-JSC Document 177 Filed 06/22/23 Page 45 of 77

1 13. A relevant market has two components: a product market and a geographic 2 market. See FTC v. CCC Holdings, Inc., 605 F. Supp. 2d 26, 37 (D.D.C. 2009). A product market 3 "identifies the products and services with which the defendants' products compete." Id. Its "outer 4 boundaries . . . are determined by the reasonable interchangeability of use or the cross-elasticity 5 of demand between the product itself and other substitutes for it." Brown Shoe, 370 U.S. at 325. Put another way, "products constitute part of a single product market if they are reasonably 6 7 interchangeable by consumers for the same purposes." Xerox Corp. v. Media Scis., Inc., 660 F. Supp. 2d 535, 543 (S.D.N.Y. 2009). 8

9 14. The product market is defined by the substitutes a consumer *could* turn to if the 10 combined company increased price or decreased quantities, including substitutes they would not 11 prefer under pre-merger circumstances. *See Oracle Corp.*, 331 F. Supp. 2d at 1131 ("Customer 12 preferences towards one product over another do not negate interchangeability."). As a result, 13 even products that vary "widely" on issues like price or quality "may, in fact, be in the same 14 market" if customers could substitute them. *See id.* at 1121.

15 15. A geographic market is "the area to which consumers can practically turn for
alternative sources of the product and in which the antitrust defendants face competition." *FTC v. Cardinal Health, Inc.*, 12 F. Supp. 2d 34, 49 (D.D.C. 1998); *accord, e.g., Marine Bancorp.*, 418
U.S. at 620–21. "Like the product market, the geographic market must correspond to the
commercial realities of the industry and be economically significant." Sysco Corp., 113 F. Supp.
3d at 48 (internal quotation marks omitted).

16. If the FTC fails to appropriately define either the product market or the
geographic market, the agency "has not met its burden," and its preliminary injunction motion
must be denied. *See RAG-Stiftung*, 436 F. Supp. 3d at 309.

24 17. Here, the FTC proposes four relevant product markets and one relevant
25 geographic market. The proposed product markets are: (i) high-performance consoles; (ii) multi26 game subscription services; (iii) cloud gaming subscription services; and (iv) a combined multi-

- 27 28
- 42 -Defendants' Proposed Pretrial Findings of Fact and Conclusions of Law (No. 3:23-cv-02880-JSC)

game and cloud gaming subscription services market. The proposed geographic market is the
 United States.

3 18. None of the FTC's proposals satisfies the criteria for a relevant market. With 4 respect to the "high-performance consoles" market, the FTC's proposed market arbitrarily 5 excludes Nintendo Switch and PC gaming in order to conjure the illusion that Xbox has market power. In fact, Microsoft is the third-place console maker (out of three), and any increase in 6 7 market share as a result of this merger will *lessen* market concentration by making a straggling 8 competitor more competitive. And with respect to the other three proposed product markets, the 9 FTC presents an inaccurate picture of the gaming industry. Finally, with respect to the proposed 10 geographic market, the FTC erroneously limits the market to the United States, when in reality 11 both Microsoft and Activision compete in dynamic global markets.

12

1. "High-Performance Consoles" Are Not a Relevant Product Market.

19. 13 The FTC offers two alternative definitions of its "high-performance consoles" 14 market: the first proposes that PlayStation and Xbox alone comprise the entire console market, 15 and the second adds the Nintendo Switch. Any relevant market, however, "must encompass the 16 product at issue as well as all economic substitutes for the product." Newcal Indus., Inc. v. Ikon 17 Off. Sol., 513 F.3d 1038, 1045 (9th Cir. 2008) (emphasis added). Doing so "ensures that the 18 relevant product market encompasses 'the group or groups of sellers or producers who have actual or potential ability to deprive each other of significant levels of business." Hicks, 897 19 20 F.3d at 1120–21 (quoting *Newcal Indus.*, 513 F.3d at 1045). The relevant market thus may not be 21 "contorted to meet [the FTC's] litigation needs," id. at 1121, because "a market definition that is too narrow or excludes relevant competition is misleading," Malaney v. UAL Corp., No. 3:10-22 23 CV-02858-RS, 2010 WL 3790296, at *5 (N.D. Cal. Sept. 27, 2010), aff'd, 434 F. App'x 620 (9th 24 Cir. 2011). Here, both of the FTC's proposed console market definitions fail as a matter of law 25 because the first arbitrarily excludes Nintendo and they both arbitrarily exclude PCs.

	- 44 - DEFENDANTS' PROPOSED PRETRIAL FINDINGS OF FACT AND CONCLUSIONS OF LAW (No. 3:23-cv-02880-JSC)	

24. 1 *Price.* The FTC contends that Xbox and PlayStation constitute a market of two 2 because they are offered at a similar price. That is unpersuasive. To begin with, "[t]he Supreme 3 Court has repeatedly held that a price differential alone is insufficient to infer two separate 4 product markets." HDC Med., Inc. v. Minntech Corp., 474 F.3d 543, 547 (8th Cir. 2007). Equally 5 important, the FTC's analysis considers only the high-end models of Xbox (Series X) and PlayStation (Standard Edition), thereby ignoring the differentiation within Xbox's console lines. 6 7 In fact, the entry-level versions of the current Xbox and Switch are offered at the same price 8 point (\$299.99), and the Xbox Series S is sold for \$50 less than the Switch OLED model 9 (\$349.99). PlayStation likewise sells a less expensive Digital Edition for \$399.99, and is 10 expected to release a PlayStation 5 Slim later this year at the same reduced price point.⁴

25. *Performance*. Xbox and PlayStation are also differentiated on performance. The
 less expensive Xbox Series S has less GPU processing power, system memory, and internal
 storage and renders images at a lower resolution than the Xbox Series X or PlayStation 5.
 PlayStation, meanwhile, currently offers two different versions of the PlayStation 5—one with a
 Blu-Ray player for physical media (Standard) and one without (Digital)—and is anticipated to
 release further differentiated Pro and Slim models in the near future. These models are

17 differentiated from Xbox offers,

There is simply no evidence to support the FTC's
assumption that Xbox and PlayStation customers prioritize performance above all other
measures, such that they would never even consider the Switch, when those very customers
make trade-offs between performance and cost.

22 26. *Content.* The FTC also conveniently ignores key similarities between the
23 Nintendo Switch and the other consoles that make them clear substitutes. Most importantly,
24 many of the most popular games on PlayStation and Xbox consoles are also available on the
25 Switch, including *Fortnite*, *Minecraft*, *Rocket League*, *Lego Star Wars*, *Fall Guys*, and the *FIFA*,
26 *MLB The Show*, and *NBA 2K franchises*. Although some popular Xbox and PlayStation games

⁴ Sony is also anticipated to release a handheld version of PlayStation 5 later this year for under \$300.

²⁷ 28

1 are not available on the Switch, many of those titles are platform exclusives (e.g., the Halo 2 (Xbox) or *Last of Us* (PlayStation) franchises); are coming to the Switch in the near future (e.g., 3 Hogwarts: Legacy); or, in the case of the Call of Duty franchise, will become available on the 4 Switch as a result of this merger. To the extent there are differences, the FTC fails to show that 5 the differences are the result of Xbox and PlayStation games not being available on the Switch, as opposed to the many Switch-exclusive titles (such as Mario and Zelda). The fact that 6 7 Nintendo Switch has games that are not available on Xbox or PlayStation hardly shows that the 8 Switch is a "different" product. To the contrary, because so many games are on all three 9 consoles, it is clear that there is a high degree of substitutability that undercuts any narrower 10 market definition.

11 27. And regardless, except for pure commodities markets, every market contains 12 differentiated products. Even accepting that Xbox and PlayStation are differentiated from the 13 Switch in certain ways, including with respect to price, use, and quality, that does not decide the 14 market-definition question because products "need not be identical to be considered reasonably 15 interchangeable." See W. Parcel Express v. United Parcel Serv. of Am., Inc., 65 F. Supp. 2d 16 1052, 1059 (N.D. Cal. 1998) (requiring "consideration of the cross-elasticity of demand"), aff'd, 17 190 F.3d 974 (9th Cir. 1999). To the contrary, it is settled law that products may differ markedly 18 and yet remain in the same product market given cross-elasticities of demand. See United States 19 v. E. I. du Pont de Nemours & Co., 351 U.S. 377, 400 (1956) (holding that "cellophane's 20 interchangeability with the other [flexible packaging] materials . . . suffices to make it a part of" 21 the same market despite significant differences); see Hicks, 897 F.3d at 1122 (alleged differences 22 in price and effectiveness did not imply "a distinct market"); Gorlick Distrib. Ctrs., LLC v. Car 23 Sound Exhaust Sys., Inc., 723 F.3d 1019, 1025 (9th Cir. 2013) (per curiam) ("perfect fungibility" 24 isn't required" for products to belong in the same antitrust market). Likewise, that products are 25 differentiated in ways that some customers prefer "do[es] not negate interchangeability," because 26 the relevant question "is not what [products] the customers would *like* or *prefer*," but instead 27 "what they *could* do in the event of an anticompetitive price increase." Oracle Corp., 331 F.

Supp. 2d at 1131. Here, the evidence shows that Xbox, PlayStation, and the Nintendo Switch all
 serve as substitutes and compete.⁵

3 4

b. *PC Gaming Competes with Consoles.*

28. There is also no basis for excluding PC gaming from any market. PC games can
be downloaded directly from publishers or can be accessed through distributors like Steam, and
PC gaming offers specifications and features that are comparable to or even greater than those
offered by consoles.

8 29. There is also substantial catalog overlap. In 2022, all but one of the top 30 Xbox 9 titles and all but for of the top 30 PlayStation titles were also available on PC.

10 30. Leaders of both Microsoft similarly, have identified PC gaming as a
11 meaningful alternative (and competitor) to console gaming.

12 13

14

15

19

2. Multi-Game Subscription Services Are Not a Relevant Product Market.

31. As for the FTC's second proposed product market, multi-game subscription services—such as Xbox's Game Pass or Sony's PlayStation Plus—are not their own market, but rather are simply an alternative way for consumers to pay for console, PC, or mobile games that are otherwise offered as standalone buy-to-play or free-to-play games. Many game publishers, including Sony and Activision, fear that putting newly released games into multi-game subscription services will cannibalize sales of those games, which is why they do not embrace that subscription model.

2	1

32.

20

22 23

24

25

26

27

To the contrary, years of

data demonstrate not only that buy-to-play sales decrease when a game is added to a subscription library, but also that buy-to-play sales increase when a game is removed from a subscription library. Subscription services thus compete directly with traditional buy-to-play options.

⁵ Similarly, the FTC fixates on issues that are irrelevant to consumer behavior and choices, such as whether the consoles are arbitrarily labeled by industry insiders as "Generation 8" or "Generation 9."

3	. A
4	decision from this District has already rejected a similar effort at "narrowing of a market to
5	consideration of a subscription based payment model" rather than "the broader video game
6	market generally." Pistacchio v. Apple Inc., No. 4:20-cv-07034-YGR, 2021 WL 949422, at *2
7	(N.D. Cal. Mar. 11, 2021); see also Reilly v. Apple Inc., 578 F. Supp. 3d 1098, 1106 (N.D. Cal.
8	2022).
9 10	3. Cloud Gaming Subscription Services Are Not a Relevant Product Market.
10	34. The FTC's third proposed market, cloud gaming subscription services, is similarly
11	untenable.
12	35. At the outset, cloud gaming is a <i>feature</i> of various types of gaming services but is
14	not itself a distinct gaming product. The fact that cloud gaming uses a different technology to
15	deliver content—streaming from a central server, rather than using a disc or hard drive to enable
16	gameplay natively on a device-does not render cloud gaming a separate antitrust product
17	market. Indeed, technological differences between products "relate[] only to the respective
18	systems' peculiar features," not to whether customers would substitute one for the other. See
19	<i>Ojmar US, LLC v. Sec. People, Inc.</i> , No. 16-CV-04948-HSG, 2017 WL 5495912, at *2 (N.D.
20	Cal. Nov. 16, 2017).
21	36. The FTC mashes together gaming services that offer very different value
22	propositions and that use cloud streaming in very distinct ways. The FTC's putative market
23	would include services like Xbox's Game Pass, which offers some cloud gaming functionality as
24	a relatively insignificant add-on to a subscription library of games not available via the cloud;
25	Amazon Luna, which offers cloud-based games on a subscription basis and has a bring-your-
26	own-game feature; and Nvidia GeForce NOW, which sells cloud streaming capabilities to
27	customers so that they can play PC games that they have previously purchased through remote

Case 3:23-cv-02880-JSC Document 177 Filed 06/22/23 Page 52 of 77

hardware via the cloud. There is no evidence that these diverse products compete with one
 another in any meaningful sense or that customers would view them as reasonably
 interchangeable substitutes.

4 37. While not stated clearly, it appears that the FTC's concern is not with the cloud 5 gaming market as it purportedly exists today, but a cloud gaming market that may exist someday in the future. Even assuming that perceived harm to a future, hypothetical market is relevant.⁶ the 6 7 FTC itself has recognized that projecting harm in future markets "can be difficult," must be "strongly rooted in the evidence," and requires "considerable evidence" that the market will 8 9 emerge and that the merger will result in a substantial lessening of competition in that market. In re Nielsen Holdings, N.V. & Arbitron Inc., FTC File No. 131-0058, at 2–3; see also, e.g., FTC v. 10 Facebook, Inc., 560 F. Supp. 3d 1, 4 (D.D.C. 2021) (rejecting FTC's reliance on a future market 11 12 as "too speculative and conclusory").

38. Here, the FTC has failed to make those showings. Indeed, Sony's CEO admitted
that cloud gaming faces substantial "technical difficulties" and is "very tricky" from both a
financial and a technological standpoint, and Activision executives believe that, due to latency
problems with current technology, cloud gaming is at least a decade away from delivering "an

17 acceptable experience."

18

For Xbox, cloud-

19 gaming capability is not a separate product but merely an add-on to Game Pass that allows20 subscribers to try streaming games before downloading them.

39. To the extent this market for device-agnostic cloud gaming exists, Xbox does not
compete in it. Of the very small segments of gamers who use Xbox cloud gaming, four in five do
so on Xbox. Xbox does not offer a "bring your own device" model.

24

⁶ The Supreme Court has never addressed whether harm to "potential competition is a viable theory of section 7 liability." *United States v. Aetna Inc.*, 240 F. Supp. 3d 1, 75 (D.D.C. 2017); *see also Fraser v. Major League Soccer*, *LLC*, 284 F.3d 47, 71 (1st Cir. 2002) (noting that "there is no possible way to predict just what would happen" had a challenged transaction not occurred); *SCM Corp. v. Xerox Corp.*, 645 F.2d 1195, 1211 (2d Cir. 1981) ("The *existing market* provides the framework in which the probability and extent of an adverse impact upon competition may be measured." (emphasis added)).

4. Multi-Game Subscription Services and Cloud Gaming Subscription Services Are Not a Coherent or Relevant Product Market.

40. In addition to the separate multi-game and cloud gaming subscription services markets, the FTC also puts forward a putative market that combines these two markets into a single "gaming services market." But this combined market is no more coherent or tenable than its individual subparts. Multi-game subscriptions and cloud gaming are offered at different levels of the video game market. Multi-game subscriptions, such as Xbox and PlayStation's subscription services (Game Pass and PlayStation Plus, respectively) and subscription services offered by publishers (*e.g.*, EA Play), are a way to purchase gaming content. Cloud gaming, in contrast, is a delivery mechanism for gaming content—whether the game was acquired from a cloud platform's native store, from a third-party developer or retailer, or, critically, from a subscription service, but the two are not inherently linked—cloud gaming can be a *feature* of a subscription service, but the two are not inherently linked—cloud gaming can also be a feature of a buy-to-play or "freemium" acquisition model, such as Nvidia's GeForce Now, which provides cloud gaming functionality for gamers who have already purchased the game.

41. The FTC offers no evidence that customers view multi-game libraries and cloud gaming as reasonably interchangeable for one another, and indeed, cloud gaming and multi-game libraries cannot compete with one another when some customers will use the former to play the latter.

5.

The Relevant Geographic Market Is Global.

42. The FTC's proposed geographic market is the U.S., but that narrow definition does not reflect market realities. Both Microsoft and Activision compete in global markets.

43. Virtually all top-selling Xbox and PlayStation games are played by gamers worldwide and allow for cross-regional play, which gives gamers access to a larger gaming pool and provides faster access to matches, no matter where they are located. Further, both consoles and video games are developed for and marketed on a global basis, meaning a console bought in one country and a game bought in another will work with each other and can be used in any

Case 3:23-cv-02880-JSC Document 177 Filed 06/22/23 Page 54 of 77

other country as well. All major console makers and game developers today have the same or
 similar release dates across geographies. And those games are, with limited exceptions, identical
 across markets.

B. The FTC Has Failed to Show that the Proposed Merger Is Substantially Likely to Lessen Competition.

44. The FTC has alleged only a single theory of harm: vertical foreclosure. Courts place a heavy burden on the government in vertical merger cases because vertical integration is generally pro-competitive. See, e.g., AT&T, 310 F. Supp. 3d at 197 ("Vertical mergers often generate efficiencies and other procompetitive effects."); Nat'l Fuel Gas Supply Corp. v. FERC, 468 F.3d 831, 840 (D.C. Cir. 2006) ("[V]ertical integration creates efficiencies for consumers."); Comcast Cable Commc'ns, LLC v. FCC, 717 F.3d 982, 990 (D.C. Cir. 2013) (Kavanaugh, J., concurring) ("Vertical integration and vertical contracts in a competitive market encourage product innovation, lower costs for businesses, and create efficiencies-and thus reduce prices and lead to better goods and services for consumers."); Phillip E. Areeda & Herbert Hovenkamp, Antitrust Law: An Analysis of Antitrust Principles and Their Application, ¶ 755c (online ed. Aug. 2022) ("Vertical integration is ubiquitous in our economy and virtually never poses a threat to competition when undertaken unilaterally and in competitive markets."). Indeed, the government itself has stated that "[v]ertical mergers . . . should be allowed to proceed except in those few cases where convincing, fact-based evidence relating to the specific circumstances of the vertical merger indicates likely competitive harm." Delegation to the Organization for Economic Cooperation and Development, Competition Committee 2 (Feb. 15, 2007), bit.ly/3Cz9hIb.

45. The FTC's central claim is that the combined firm would withhold certain
Activision content—in particular, the *Call of Duty* franchise—from its console, subscription, or
cloud gaming competitors and that each of the alleged relevant markets would become
substantially less competitive as a result. *Cf. UnitedHealth Grp. Inc.*, 2022 WL 4365867, at *25–
27 (addressing, and rejecting, analogous vertical foreclosure theory). To establish such
"foreclosure" as a basis for opposing this transaction, the FTC must prove, among other things,

Case 3:23-cv-02880-JSC Document 177 Filed 06/22/23 Page 55 of 77

(1) that the combined company would have the *incentive* to withhold *Call of Duty* from rivals to 1 2 whom an independent Activision would otherwise sell Call of Duty (i.e., that doing so would be 3 profitable despite the forgone sales), (2) that the combined company would have the *ability* to do 4 so (despite its long-term contracts to the contrary), and (3) that *competition* (as opposed to individual competitors) would likely be harmed as a result. See id.⁷ A vertical merger, in 5 particular, "will not have an anticompetitive effect" where "substantial market power is absent at 6 7 any one product or distribution level." Auburn News Co. v. Providence J. Co., 659 F.2d 273, 278 8 (1st Cir. 1981). 9 46. To make these showings, the FTC relies principally on the analysis of its expert,

10

11

12

13

14

15

16

But the FTC's "foreclosure theory has significant flaws," *UnitedHealth Grp. Inc.*, 2022 WL 4365867, at *25–27, and the agency has failed to establish any likelihood of ultimate success on its foreclosure claims, either in the console market or in the other allegedly distinct markets for "content library services" and "cloud gaming services." That the FTC cannot establish these essential prerequisites is unsurprising: at the end of the day, the FTC's challenge is designed to protect the dominant console provider—Sony—from increased competition that

17 would flow from a merger of two entities that lack market power.

18

19

20

21

22

23

24

1. The FTC Has Failed to Show that the Merger Is Likely to Result in Vertical Foreclosure in the Console Market.

47. With respect to the console market, the FTC has failed to show that Xbox would have either the incentive or the ability to withhold *Call of Duty* from its rivals or that, if Xbox did withhold *Call of Duty*, such an action would substantially lessen competition.

⁷ To the extent the FTC suggests that *Brown Shoe* somehow excuses this showing, it is mistaken. The FTC does not seriously claim that it can demonstrate harm from the merger without showing that Xbox has the incentive and ability to withhold *Call of Duty*; without both, there could be no withholding in the first place. Further, as discussed in the text and below, an antitrust plaintiff challenging a vertical merger must show not merely that withholding is likely, but also that the withholding would have significant anticompetitive effects, such as when a monopolist withholds a critical input that rivals need to compete.

Xbox has no incentive to withhold Call of Duty from its rivals. a. 2 48. Xbox and Activision operate in intensely competitive markets. Given this competition, Xbox has strong incentives to maximize distribution of Call of Duty post-merger, 3 not restrict it. The FTC bases its contrary claim on the economic analysis of Dr. Lee, which 4 contains serious errors and ignores marketplace realities. 5

6 7

11

1

(i) Market dynamics and the real-world example of Minecraft show that Xbox has no incentive to withhold Call of Duty.

8 49. The FTC cannot rely on "assumptions and simplifications that are not supported 9 by real-world" facts, Am. Booksellers, 135 F. Supp. 2d at 1041, and that ignore "economic 10 reality," Craftsmen Limousine, Inc., 363 F.3d at 777. Here, undisputed market realities create a strong economic incentive for Xbox to maximize rather than withhold distribution of *Call of* 12 Duty.

13 50. Both Xbox and Activision operate in fragmented and highly competitive markets. 14 As Xbox's expert Dr. Elizabeth Bailey explained in her report, "Xbox is a distant third-place 15 console behind each of Sony and Nintendo. No matter which metric is used-console units sold, 16 console revenues, or installed base—Xbox's console is now, and has almost always been, the 17 third-place console." Likewise, Activision games account for only a modest fraction of games— 18 , depending on market definition (all games vs. AAA,⁸ global approximately from to 19 vs. U.S.). . It is implausible that a game with this 20 market share could somehow reshape the console market. See AT&T, 310 F. Supp. 3d at 202 21 (rejecting argument that Turner content was "must-have" in the video distribution industry 22 because "[t]he evidence showed that distributors have successfully operated, and continue to 23 operate, without the Turner networks or similar programming").

- 24 51. Indeed, as Dr. Bailey has explained, *Call of Duty* is not uniquely important to 25 Sony (or any entity). For example, **t** PlayStation gamers do not play *Call of Duty*, and of
- 26

27

⁸ There is no generally accepted definition of the term "AAA" as a measure of game quality, except that it refers to the highest-quality titles.

Case 3:23-cv-02880-JSC Document 177 Filed 06/22/23 Page 57 of 77

1	those that do play it, about spent only a small fraction of their time playing the game. The		
2	majority of Call of Duty gamers play many other video games as well. Intensity and average		
3	usage of <i>Call of Duty</i> is to many other games on Sony.		
4			
5	. Although the model of "perfect competition" uses "price		
6	above marginal cost as a benchmark against which to measure the behavior of firms," that		
7	definition, if "applied literally," would suggest "every firm in the United States has at least a tiny		
8	bit of market power" and "describes few, if any, actual industries." Carlton & Perloff, MODERN		
9	INDUSTRIAL ORGANIZATION, at 642 4th ed. (2005). Instead, "when courts find that a firm has		
10	market power, they must mean the firm has a substantial amount of market power for some		
11	significant period of time." Id.		
12	52. Given these undisputed market dynamics, Xbox would have no incentive to		
13	withhold Activision content from rival console providers for two reasons. <i>First</i> , Xbox could not		
14	realistically expect to gain market power by driving PlayStation customers to Xbox, because		
15			
16			
17	. Xbox therefore could not raise Xbox prices as a result of withholding		
18	Activision content—in fact, the only result of such a strategy would be for Xbox to incur losses		
19	from reduced game sales.		
20	53. Xbox's inability to gain market power by withholding Activision content is also		
21	clear because Nintendo, for its part, outcompetes Xbox even though Nintendo does not currently		
22	have access to Call of Duty. Likewise, Steam, the leading PC game store, has risen in popularity		
23	without Call of Duty. That strong evidence that Call of Duty is not essential to competition may		
24	account for the FTC's attempt to exclude both Nintendo and PC gaming from the relevant		
25	market.		
26	54. Even if Xbox were able to gain console customers by making <i>Call of Duty</i>		
27	exclusive, that would in fact make the console market less concentrated and more competitive by

Case 3:23-cv-02880-JSC Document 177 Filed 06/22/23 Page 58 of 77

reducing the large gap that currently separates the number one and two market actors (Sony and
 Nintendo) from the lagging third-place Xbox. Enjoining a merger that both sides agree would
 deconcentrate an industry would be unprecedented. Indeed, making Xbox more competitive vis à-vis Sony and Nintendo would be a reason to *approve* the deal, not to block it, because "the
 antitrust laws . . . were enacted for the protection of competition not competitors." *Brunswick Corp. v. Pueblo Bowl-O-Mat, Inc.*, 429 U.S. 477, 488 (1977) (cleaned up).

7 55. As further proof of Xbox's lack of incentive, Xbox has offered to provide 8 Activision content to Sony for the next *ten years*. That Sony has refused to sign reveals not a 9 genuine fear of "foreclosure" (which it could prevent with the stroke of a pen), but rather a 10 concern that this transaction will make third-place Xbox a more effective competitor. To the 11 extent that is Sony's concern, however, the obvious solution is to accept Activision's offer and 12 thereby guarantee Sony's continued access to Activision content. Even if Sony remains a 13 holdout, the contractually guaranteed availability of Activision content on Nintendo's 14 forthcoming console and other gaming platforms would make a foreclosure strategy targeting 15 Sony even more unprofitable than it would be in the absence of those guarantees because Xbox 16 would capture an even smaller percentage of dissatisfied PlayStation customers.

Second, a foreclosure strategy would harm Xbox economically. See Sewell
Plastics, Inc. v. Coca-Cola Co., 720 F. Supp. 1196, 1216–17 (W.D.N.C. 1989) (rejecting antitrust
claim where defendants had no "economic incentive" to "lock out existing suppliers" and "raise
the cost of an input"). Xbox would be losing *Call of Duty* revenues on the largest console
provider, Sony. Those revenues were critical to the price Microsoft paid for Activision, the
Board's evaluation of the transaction, and the financial targets to which Xbox is held
accountable.

57. Withholding *Call of Duty* from other platforms would cause even greater harm by
degrading the game and infuriating gamers. A significant appeal of *Call of Duty* is that it is a
multi-player game oft-played by groups across different platforms, including PlayStation (known
as cross-play or cross-platform play). Having a broad community of gamers ensures players can

Case 3:23-cv-02880-JSC Document 177 Filed 06/22/23 Page 59 of 77

quickly and easily find groups of comparable skill levels, making the game fun. Removing Call 1 2 of Duty from PlayStation would dramatically shrink the community and overall matchmaking 3 pool, making the gaming experience worse for anyone left.

Microsoft's acquisition of Mojang's *Minecraft* franchise in 2014 illustrates why 4 58. 5 these incentives cut against withholding a multi-player game that offers cross-platform play (like Call of Duty). Like Call of Duty, Minecraft is an existing franchise with substantial cross-6 7 platform play. Under the reasoning advanced by the FTC Xbox would have had 8 incentives to make *Minecraft* exclusive to Xbox. But that did not occur. On the contrary, Xbox 9 expanded access to the game and continues to make new editions of *Minecraft* available on 10 PlayStation, because withholding it from other platforms would lead to lost sales on other platforms and on Xbox due to these cross-platform network effects. 11

12 59. The FTC points to Xbox's acquisition of ZeniMax as a counterexample. But the comparison fails because in its game development, ZeniMax is unlike Activision, and its games 13 14 are unlike Call of Duty. The first two ZeniMax games that Xbox released post-acquisition 15 (Deathloop and Ghostwire) were exclusives for Sonv. Since then, Xbox has released or is scheduled to release two new ZeniMax games exclusive to Xbox, but unlike *Call of Duty*, those 16 17 games do not depend on or materially feature multi-player play, and they are new games without 18 existing cross-platform gaming communities. Xbox's approach to the ZeniMax games thus says 19 nothing about what Xbox would do with an existing, multi-player, cross-platform franchise like *Call of Duty*—unlike *Minecraft*, which offers a far better comparison.⁹ 20

60. More broadly, there is no evidence that *any* game publisher has ever made an existing game franchise exclusive when the game—like Call of Duty—features multi-player and

⁹ In drawing its analogy to Zenimax, the FTC wrongly implies that Xbox misled the European Commission about its intent regarding future Zenimax titles. The European Commission took the extraordinary step of responding directly 25 when the FTC made this claim in its administrative complaint in December 2022, by stating publicly that Microsoft did not make any "commitments" to the European Commission, nor did the European Commission "rely on any 26 statements made by Microsoft about the future distribution strategy concerning ZeniMax's games." Instead, the European Commission cleared the transaction "unconditionally as it concluded that the transaction would not raise 27

11	rivals. Specifically, Xbox cannot implement an exclusivity policy for any Activision content	
12	because (1) all Xbox competitors other than Sony have already signed contracts that fully protect	
13	their access to that content on nondiscriminatory terms for 10 years and (2) Xbox has also	
14	contractually agreed to provide a version of COD to Nintendo for its upcoming console upgrade.	
15	76. The FTC must account for the "economic reality" of these existing contracts as	
16	$\frac{1}{5}$ part of its burden to show that Xbox possesses the ability to withhold <i>Call of Duty</i> from its rivals

23	c. The FTC has not shown that withholding Call of Duty would	
24	harm competition.	
25	77. As discussed, Xbox has no incentive to make <i>Call of Duty</i> or any other Activision	
26	game exclusive post-merger. But even if Xbox could be expected to make Call of Duty or other	
27	Activision content exclusive to itself, the FTC has not shown that such exclusion would harm

1	competition as opposed to other competitors in the console market. See United States v. Microsoft	
2	Corp., 253 F.3d 34, 58 (D.C. Cir. 2001) (en banc) (practice has an "anticompetitive effect" only	
3	if it "harm[s] the competitive process and thereby harm[s] consumers," and "harm to one or	
4	more <i>competitors</i> will not suffice").	
5	78.	
6		
7	But withholding an	
8	input from a competitor-exclusivity-is routine business conduct and is insufficient by itself to	
9	demonstrate a lessening of competition. See Fruehauf Corp. v. FTC, 603 F.2d 345, 352 n.9 (2d	
10	Cir. 1979). Exclusivity arrangements (whether from contract or vertical integration) are	
11	ubiquitous throughout the economy and are usually procompetitive. See, e.g., Roland Mach. Co.	
12	2 v. Dresser Indus., Inc., 749 F.2d 380, 395 (7th Cir. 1984).	
13	79. In fact, both Sony and Nintendo have entered into a wide range of exclusivity	
14	arrangements of their own with various game publishers, and each has far more such	
15	arrangements than Xbox does.	
16	The FTC does not argue that there is anything generally	
17	anticompetitive about these existing exclusivity arrangements or that consumers would be better	
18	off with fewer such arrangements. This is particularly notable because Sony-the leading	
19	console player-has many times more exclusive content on PlayStation than does Xbox.	
20	Moreover, Sony goes to great lengths to secure exclusive advantages from third party publishers	
21	vis-à-vis Xbox. This can only be read to suggest that input exclusivity is not by itself	
22	anticompetitive at all.	
23	80. Nor does this transaction exhibit any of the special features that have led other	
24	courts in unusual cases to conclude that vertical integration will give rise to anticompetitive	
25	outcomes. In particular, Call of Duty is not a "necessary input" for Xbox rivals, see Sprint Nextel	
26	Corp. v. AT&T Inc., 821 F. Supp. 2d 308, 330 (D.D.C. 2011), and any "foreclosure" percentages	
27	would be far too small to warrant any presumption of competitive harm.

2 3 See Alberta Gas Chems. Ltd. v. E.I. Du Pont De Nemours & Co., 826 F.2d 1235, 4 1244–46 (3d Cir. 1987) ("foreclosure" concerns are only raised where withholding of inputs 5 would result in "post-merger market power"). To the contrary, to the extent the Microsoft-Activision merger would allow Xbox to gain some console subscribers, that would only serve to 6 7 make the market *less* concentrated and presumptively *more* competitive. 8 82. As noted, Activision's share of console-game publishing is modest by any and 9 measure—between approximately . These foreclosure figures would be far smaller than the level needed to raise any presumption of anticompetitive effect even if Xbox 10 11 were a platform monopolist. See McWane, Inc. v. FTC, 783 F.3d 814, 838–39 (11th Cir. 2015) 12 (vertical integration is generally found to raise antitrust concerns only where it leaves rivals 13 "stunted" as competitors and materially impairs their ability to discipline the defendant's prices); 14 see also Microsoft Corp., 253 F.3d at 70 (foreclosure of "roughly 40% or 50% share" is "usually required in order to establish" a violation of Section 1 of the Sherman Act); Fruehauf, 603 F.2d 15 16 at 352–54; Alberta Gas, 826 F.2d at 1244–46. And, of course, Xbox is not a monopolist; it is 17 running a distant third behind Sony and Nintendo in the console market. 18 83. And, again, *Call of Duty* is not so uniquely important to gamers that Xbox could 19 hope to obtain substantial market power by making it exclusive to Xbox. Even if every 20 PlayStation owner that played *Call of Duty* for as little as two hours per month bought an Xbox, 21 the number of PlayStations would still exceed the number of Xboxes by a wide margin. And 22 Nintendo, for its part, outcompetes Xbox even though it does not currently have access to *Call of* 23 Duty.

84. For these reasons, the FTC cannot show what it must to justify blocking this
vertical transaction: that the supposed foreclosure would make the combined company's rivals
ineffective as competitors. *See McWane*, 783 F.3d at 838–39 (vertical integration is generally
found to raise antitrust concerns only where it leaves rivals "stunted" as competitors and

Case 3:23-cv-02880-JSC Document 177 Filed 06/22/23 Page 67 of 77

1	materially impairs their ability to discipline the defendant's prices); Microsoft Corp., 253 F.3d at
2	71 (issue is whether exclusive dealing keeps competitors "below the critical level necessary
3	to pose a real threat" to defendant's market power); Fruehauf, 603 F.2d at 352 n.9 (discussing
4	Brown Shoe and DuPont and concluding that "we are unwilling to assume that any vertical
5	foreclosure lessens competition."). ¹²
6	85.
7	. If
8	Microsoft <i>did</i> make <i>Call of Duty</i> exclusive to Xbox, doing so would prompt a fierce competitive
9	response from Sony and other rivals. See Fruehauf, 603 F.2d at 352 n.9 (requiring assessment of
10	competitive response to determine whether foreclosure "lessens competition"). Sony could lower
11	prices or improve the quality of its console. Or, as Sony's CEO told investors in the wake of
12	news of Microsoft's acquisition of Activision, "
13	
14	86. Dr. Lee's analysis
15	, even though the "long term effects" of any proposed merger will "depend
16	in large measure on competitors' responses." Barry Wright Corp. v. ITT Grinnell Corp., 724 F.2d
17	227, 232 (1st Cir. 1983) (Breyer, J.); see id. at 235 (highlighting the importance of considering
18	"competitors' responses to price shifts"); see also Arch Coal, Inc., 329 F. Supp. 2d at 148-50
19	(relying on fact that competitors "can and would expand production in response to a [merger-
20	induced] price increase" to deny agency's injunction request). Indeed, such responses are the
21	essence of competition. In Paddock Publishers, Inc. v. Chicago Tribune, for example, the
22	Seventh Circuit rejected a challenge to an exclusivity agreement between incumbent newspapers
23	
24	¹² "Exclusive dealing" arrangements raise the same foreclosure issues as vertical integration. Under an exclusive dealing contract, a supplier agrees to sell all of its goods through one distributor (or vice versa), thereby aligning the
25	parties' interests in ways similar to a vertical merger. Such arrangements are routine and "presumptively legal." <i>Republic Tobacco Co. v. N. Atl. Trading Co.</i> , 381 F.3d 717, 736 (7th Cir. 2004) ("Unlike horizontal agreements"
26	between competitors, vertical exclusive distributorships are presumptively legal."). Notably, exclusive-dealing cases arise under Section 3 of the Clayton Act, 15 U.S.C. § 14, whose text is identical to Section 7 in all relevant
27	respects ("may substantially lessen competition") and is thus read <i>in pari materia</i> with that provision. <i>See Fruehauf</i> , 603 F.2d at 352 n.9; <i>see also United States v. Phila. Nat'l Bank</i> , 374 U.S. 321, 365–66 (1963).

and several content creators by a rival newspaper. 103 F.3d 42, 44 (7th Cir. 1996). The court
 explained that a competitor who is "deprived of access" to even the "best known" content can
 still compete using alternative content. *Id.*; *see also id.* ("[A] newspaper deprived of access to the
 New York Times crosswords puzzles can find others, even if the *Times* has the best known one.").

5 87. Finally, the FTC ignores critical variables in the economic analysis by disregarding the new options the merger will create for consumers to access and play Activision 6 7 content. Indeed, "increased output" is a clear "indicator[] of a merger's competitive impact." In 8 re AMR Corp., 625 B.R. 215, 255 (Bankr. S.D.N.Y. 2021), aff'd, No. 22-901, 2023 WL 2563897 9 (2d Cir. Mar. 20, 2023); see also Ohio v. Am. Express Co., 138 S. Ct. 2274, 2289 (2018) (practices that "expand[] output and improv[e] quality" are procompetitive); Chi. Pro. Sports 10 Ltd. P'ship v. NBA, 95 F.3d 593, 597 (7th Cir. 1996) ("The core question in antitrust is output."); 11 12 FTC v. Univ. Health, Inc., 938 F.2d 1206, 1222 (11th Cir. 1991) ("Whether an acquisition would 13 yield significant efficiencies is an important consideration in predicting whether the acquisition 14 would substantially lessen competition."). The FTC must account for such consumer benefits in 15 determining the "competitive effects" of the merger. See FTC v. Tenet Health Care Corp., 186 16 F.3d 1045, 1054 (8th Cir. 1999). One cannot logically determine whether a merger makes consumers worse off without considering the numerous new options the merger will create for 17 playing Call of Duty post-merger-including on platforms on which it is not available today. See 18 19 *id.* ("We further find that although Tenet's efficiencies defense may have been properly rejected 20 by the district court, the district court should nonetheless have considered evidence of enhanced 21 efficiency in the context of the competitive effects of the merger.").

88. Here, the acquisition would benefit consumers by making *Call of Duty* available
on Xbox's Game Pass on the day it is released on console (with no price increase for the service
based on the acquisition), on Nintendo, and on other services that allow cloud streaming.
Activision has historically refused to provide this type of access to *Call of Duty*, and every
Activision witness to address the matter said that business strategy would continue into the

foreseeable future. These clear consumer benefits likewise vitiate the FTC's claim that the 1 2 merger will ultimately injure the competitive process and consumers.

> 2. The FTC Has Failed to Show That the Merger Is Likely to Result in Vertical Foreclosure in the Content Library Subscriptions or Cloud Gaming Markets.

89. The FTC's showing is also insufficient with respect to its proposed markets for

"content library" and "cloud gaming" subscription services.

9 As discussed above, those are not genuine 10 "markets" in the first place: "content library" subscriptions compete with buy-to-play (and freeto-play), and console-independent "cloud-gaming services" (to the limited extent they exist) 12 compete with native console- and PC-based gaming.

13 14

90. But even if these gaming features are considered separate "markets" for antitrust purposes, the FTC's Section 7 claims regarding "content-library" and "cloud gaming" services would fail because the FTC does not allege—let alone substantiate any allegation—that the merger will likely cause Activision to withhold content that it would otherwise provide to thirdparty content-library or cloud-gaming providers.

18 91. As a threshold matter, the FTC misconceives the applicable legal standard. The 19 FTC must prove that this "merger will *likely* lead to a substantial lessening of competition," 20 Oracle Corp., 331 F. Supp. 2d at 1109 (emphasis added)—*i.e.*, that the future world with this 21 merger is "likely" to be substantially less competitive than the but-for world without the merger. 22 See AT&T, 916 F.3d at 1032.¹³ But the FTC does not even try to make that showing as to

23

 13 For these purposes, we are accepting *arguendo* the FTC's premise that the relevant comparison is between a *future* 24 world with this merger and a *future* world without it. By its plain text, however, Section 7 would seem to preclude liability here for the simple reason that Activision does not make Call of Duty available to content-library or cloud-

25 gaming providers today; thus, continued withholding of that content from content-library or cloud-gaming providers could not constitute a "substantial lessening" of competition. See United States v. Falstaff Brewing Corp., 410 U.S.

26 526, 537 (1973) ("[w]e leave for another day the question of the applicability of § 7 to a merger that will leave competition in the marketplace exactly as it was" but will nonetheless result in "less competition than there would

27 have been" in the but-for world absent the transaction); Marine Bancorp., 418 U.S. at 639 (continuing to "express (continued on next page) 28

2		
3		
4		
5		
6	92. To say that a merger makes an outcome "more" likely—for example, by	
7	in Dr. Lee's words—is not to say that the merger makes	
8	that outcome <i>likely to occur:</i> a 20% chance of rain does not mean that rain is "likely." Again, the	
9	relevant question instead is whether a merger is "likely" to produce anticompetitive outcomes	
10	that would not otherwise occur. See, e.g., AT&T, 310 F. Supp. 3d at 246–47; Oracle Corp., 331 F.	
11	Supp. 2d at 1109. Dr. Lee must therefore show (among many other things) that an independent	
12	2 Activision would likely support relevant services offered by third parties and that the combined	
13	company likely would not.	
14	Similarly, in $AT \& T$, the court rejected a claim of increased	
15	coordination risk because, inter alia, the "the Government ha[d] failed to put forward sufficient	
16	evidence to show more than a theoretical 'possibility' of coordination," given expert's concession	
17	"" "that he was 'not in a position to say' that coordination is 'more likely to happen than not[.]"	
18	310 F. Supp. 3d at 246–47.	
19	93. More broadly, to carry its burden, the FTC must prove that <i>all</i> of the following	
20	propositions are likely true:	
21	• But for this merger, Activision would <i>allow Call of Duty</i> to be included in third-	
22	party content-library or cloud-gaming services even though Activision has long	
23	refused to do so;	
24	• Xbox would nonetheless <i>prevent</i> Activision from making <i>Call of Duty</i> available to	
25	third-party services if this merger proceeds, when the evidence shows Microsoft is	
26	no view on the appropriate resolution of the question reserved in <i>Falstaff</i> "). In all events, as discussed in the text,	
27	the FTC's alternative-market theories of harm fail even if the relevant Section 7 comparison is between future but- for and with-merger worlds.	
28		
	- 67 -	

1		entering into contracts to provide even greater access than Activision
2		hypothetically would; and
3	•	Withholding this one game from third-party providers (that have never before
4		been granted access) would nevertheless hobble third-party providers and harm
5		the competitive process, even though any given consumer could readily mix and
6		match services from multiple providers to obtain access to his or her preferred
7		line-up of games, as they commonly do in other media markets like video
8		streaming.
9	94.	As to the cloud-gaming "market" in particular, the FTC must further prove that
10	both of the fo	llowing additional propositions are <i>also</i> likely to be true:
11	•	That cloud gaming will develop in the near-to-intermediate term as a genuine
12		alternative to consoles or performance PCs for multi-player, fast-twitch, graphics-
13		intensive games such as Call of Duty, despite the formidable technological and
14		economic obstacles that no cloud provider has yet been able to overcome; and
15	•	That a post-merger Xbox will become a dominant player in that cloud-gaming
16		market even though the xCloud has experienced technical difficulties, high costs,
17		and relatively low engagement associated with the service.
18	95.	The FTC cannot substantiate any of these propositions.
19	96.	First, but for this merger, Activision would be very unlikely to offer content to
20	any third-part	y subscription library or cloud-gaming providers in the first place. That point is
21	confirmed by Activision's longstanding aversion to those business models, its ordinary-course	
22	documents, and its executives' testimony. See SCM Corp. v. Xerox Corp., 645 F.2d 1195, 1211	
23	3 (2d Cir. 1981) ("The <i>existing market</i> provides the framework in which the probability and extent	
24	of an adverse impact upon competition may be measured." (emphasis added)). Activision has	
25	consistently concluded (1) that allowing its games into a cloud library would cannibalize more	
26	profitable direct sales of its games and (2) that allowing games such as <i>Call of Duty</i> to be played	
27	on the cloud v	would generate poor user experiences, thereby harming the company's reputation.
28		

Case 3:23-cv-02880-JSC Document 177 Filed 06/22/23 Page 72 of 77

Thus, the Court concludes that the merger is likely to increase (rather than decrease) access to *Call of Duty* on these services. As cloud-gaming provider Nvidia explained,

3 4

1

2

5 97. *Second*, even assuming that Activision would license *Call of Duty* to some 6 content-library or cloud-service providers in the but-for world without the merger, the FTC—as 7 discussed—has alleged only that the combined company would be somewhat less likely (in a 8 comparative sense) to do so in the world with the merger. It has not alleged that the post-merger 9 company would in fact be *likely* to withhold that content in an absolute sense. But only the latter, 10 unmade showing would be sufficient to meet the FTC's burden to show a "likely" lessening of 11 competition.

12 98. *Third*, even if the FTC could show both that an independent Activision likely 13 would make *Call of Duty* available to some third parties in the but-for world without the merger 14 and that the combined company likely would not do so in a post-merger world, that showing still 15 would not demonstrate any substantial lessening of *competition*. As discussed in the prior 16 section, exclusivity arrangements are ubiquitous, and Sony and Nintendo already make far more 17 use of them than Xbox does. And such arrangements raise no competitive concerns except in 18 narrow circumstances involving substantial market power and large foreclosure percentages, 19 neither of which is present here. See, e.g., McWane, 783 F.3d at 838–39; Microsoft Corp., 253 20 F.3d at 71; Alberta Gas, 826 F.2d at 1244–46. That point disposes of the FTC's claims of 21 "foreclosure" in any of the alleged markets.

99. Fourth, as to the cloud-gaming "market," the FTC must prove that cloud gaming
will develop in the near-to-intermediate term as a genuine alternative to consoles or performance
PCs for multi-player, fast-twitch, graphics-intensive games such as *Call of Duty*. But the FTC
has shown no such thing; it merely speculates that it could happen. The evidence indicates that
widespread cloud gaming of the type that could support *Call of Duty* and similar multiplayer,
latency-sensitive games does not even exist today and is unlikely to do so within the foreseeable

Case 3:23-cv-02880-JSC Document 177 Filed 06/22/23 Page 73 of 77

future. As Sony and others have acknowledged, network engineers are nowhere close to solving
 the enormous technological challenges presented by that cloud game-play model, which is why
 Activision refuses to make *Call of Duty* available for cloud gaming.

4 100. But under settled law, the Court cannot block a merger on the basis of speculation 5 about harm to non-existent markets that are unlikely to materialize anytime in the foreseeable future. See Facebook, 560 F. Supp. 3d at 4 (rejecting the government's "naked allegation" as 6 7 "too speculative and conclusory," especially given that the market for Personal Social 8 Networking Services was "no ordinary or intuitive market" and the "exact metes and bounds" of 9 that market were "hardly crystal clear"); see also Tenneco, Inc. v. FTC, 689 F.2d 346, 354 (2d 10 Cir. 1982) (rejecting the FTC's "unsupported speculation" that "Tenneco would have entered the 11 market . . . absent its acquisition of Monroe"); Fruehauf, 603 F.2d at 355 (rejecting the FTC's 12 theory of anticompetitive effects as "based on speculation rather than fact").

13 101. *Fifth*, the FTC's "cloud-gaming" theory of harm assumes not only that a cloud14 gaming market will develop, but that Xbox will be a major player in it. In fact, the overwhelming
15 evidence confirms that the users of Xbox's xCloud capability use it to try games they are buying
16 on console, not for the type of device-agnostic gaming that the FTC seems to believe is the

- 17 future.
- 18 19

102. In all events, as explained above, Microsoft has reached agreements with Nvidia
and other providers that do offer nascent cloud gaming services. Those agreements ensure that
such cloud providers will have access to Activision content post-merger—access that *they would otherwise lack*, given Activision's entrenched opposition to making its games available on the
cloud. Tellingly, these companies *support* this merger even though, if the FTC's concerns were
valid, they would be the "victims" of any foreclosure strategy. In Nvidia's words,

III. The Equities Weigh Against a Preliminary Injunction.

103. Because the FTC has failed to demonstrate the requisite likelihood of ultimate
success, there is no reason for the Court to consider the equities. *Meta Platforms Inc.*, 2023 WL
2346238, at *33; *see also RAG-Stiftung*, 436 F. Supp. 3d at 291. "[E]quities alone will not justify
an injunction." *Arch Coal, Inc.*, 329 F. Supp. 2d at 116. Nonetheless, assuming for the sake of
argument that the FTC has made some showing of ultimate success, the equities—both public
and private—weigh against granting the "extraordinary and drastic remedy" of a preliminary
injunction. *FTC v. Staples*, 190 F. Supp. 3d 100, 115 (D.D.C. 2016).

9 104. As a threshold matter, Microsoft's merger with Activision does not implicate the "principal" "public equity consideration [that Congress had] in mind when it enacted section 10 11 13(b)"—namely, the need to maintain the pre-merger "status quo" so the FTC can award 12 effective relief if it succeeds on the merits. H.J. Heinz Co., 246 F.3d at 726. This consideration applies chiefly in the context of horizontal mergers where two competing companies integrate 13 14 their operations and, in the process, often eliminate stores, factories, or other redundant assets. 15 When that occurs, the FTC's "inability to unscramble merged assets," FTC v. Dean Foods Co., 16 384 U.S. 597, 606 n.5 (1966), or revive shuttered stores post-merger may make it difficult for the 17 agency to "restore the parties to their pre-merger state," Sysco Corp., 113 F. Supp. 3d at 87.

18 105. Microsoft's vertical merger with Activision, however, raises none of these 19 concerns. Microsoft and Activision are not competitors in the relevant markets alleged. And 20 Microsoft intends to operate Activision similar to other recent acquisitions, such as *Minecraft* 21 developer Mojang. In other words, Activision's creative operations will remain separate and 22 continue to run as they did pre-merger. Consequently, even in the (unlikely) event the FTC 23 continues to press its Part 3 case and then succeeds on the ultimate merits in that proceeding, the 24 agency can order Microsoft's divesture of Activision—"an effective ultimate remedy," FTC v. 25 Great Lakes Chem. Corp., 528 F. Supp. 84, 99 (N.D. Ill. 1981). As a result, the "principal public 26 equity" cuts against the government, H.J. Heinz Co., 246 F.3d at 726.

- 27 28
- 71 -DEFENDANTS' PROPOSED PRETRIAL FINDINGS OF FACT AND CONCLUSIONS OF LAW (NO. 3:23-CV-02880-JSC)

Case 3:23-cv-02880-JSC Document 177 Filed 06/22/23 Page 75 of 77

1 106. Other "public equities" likewise favor denying a preliminary injunction that 2 would rob consumers of the "beneficial economic effects and procompetitive advantages" 3 resulting from this merger. See FTC v. Pharmtech Rsch., Inc., 576 F. Supp. 294, 299 (D.D.C. 4 1983) (citing Weyerhaeuser Co., 665 F.2d at 1082–83); see also Warner Commc'ns Inc., 742 F.2d 5 at 1165 ("public equities" include procompetitive benefits for consumers). The merger would expand the availability of content to consumers and enhance Xbox's ability to compete against 6 7 the dominant console provider, Sony. While there is no risk that consumers would be injured 8 while the administrative process runs its course (even Sony's existing contract for *Call of Duty* 9 runs through 2024 and it has an offer for much longer access), consummating this merger would immediately benefit consumers by increasing the availability of Activision content. The "public 10 11 equities" therefore cut against any delay in conferring those benefits on consumers.

12 107. Nor would a preliminary injunction simply delay those benefits. As other courts 13 have recognized in this context, an injunction would likely eliminate the consumer benefits 14 entirely because the deal must close soon or it will fall through. See Mo. Portland Cement Co. v. 15 Cargill Inc., 498 F.2d 851, 870 (2d Cir. 1974) ("the grant of a temporary injunction in a 16 Government antitrust suit is likely to [spell] the doom of an agreed merger"); Weyerhaeuser Co., 17 665 F.2d at 1087 ("[a] preliminary injunction may kill, rather than suspend, a proposed transaction"). Here, the parties' agreement expires on July 18, so the risk of the deal falling 18 19 through is imminent.

108. Besides denying these benefits to consumers, a preliminary injunction would also
cause Microsoft's shareholders to incur substantial unrecoverable losses, such as a \$3 billion
termination fee to Activision. Such "private equities," too, "are entitled to serious consideration." *See Warner Commc 'ns Inc.*, 742 F.2d at 1165; *Weyerhaeuser*, 665 F.2d at 1083 (explaining that
courts "have no warrant to drop private equities from the calculus").

25 109. In sum, the FTC does not need an injunction to safeguard its ability to award
26 effective relief and other public and private interests favor consummating this pro-competitive

So, while "equities alone will not *justify* an injunction," Arch Coal, Inc., 329 F. 2 Supp. 2d at 116 (emphasis added), in this instance they weigh decisively against granting one. 3 4 Dated: June 22, 2023 Respectfully submitted, 5 By: /s/ Beth Wilkinson 6 Jack DiCanio (SBN 138782) Beth Wilkinson (pro hac vice) 7 Caroline Van Ness (SBN 281675) Rakesh N.
