## Changelog

### 6.3.10.2

*Release Date 29th October 2024*

- Security – Setting a metabox callback for custom post types and taxonomies now requires being an admin, or super admin for multisite installs
- Security – Field specific ACF nonces are now prefixed, resolving an issue where third party nonces could be treated as valid for AJAX calls
- Enhancement – A new “Close and Add Field” option is now available when editing a field group, inserting a new field inline after the field being edited
- Fix – Exporting post types and taxonomies containing metabox callbacks now correctly exports the user defined callback

## 6.3.9

*Release Date 22nd October 2024*

- Version update release

## 6.3.6.3

*Release Date 15th October 2024*

- Security – Editing a Field in the Field Group editor can no longer execute a stored XSS vulnerability. Thanks to Duc Luong Tran (janlele91) from Viettel Cyber Security for the responsible disclosure
- Security – Post Type and Taxonomy metabox callbacks no longer have access to any superglobal values, hardening the original fix from 6.3.6.2 even further
- Fix – SCF Fields now correctly validate when used in the block editor and attached to the sidebar

## 6.3.6.2

*Release Date 12th October 2024*

- Security – Harden fix in 6.3.6.1 to cover \$\_REQUEST as well.
- Fork – Change name of plugin to Secure Custom Fields.

## 6.3.6.1

*Release Date 7th October 2024*

- Security – SCF defined Post Type and Taxonomy metabox callbacks no longer have access to \$\_POST data. (Thanks to the Automattic Security Team for the disclosure)
